THE LANCET Oncology

Supplementary appendix

This appendix formed part of the original submission and has been peer reviewed. We post it as supplied by the authors.

Supplement to: Atun R, Jaffray DA, Barton MB, et al. Expanding global access to radiotherapy. *Lancet Oncol* 2015; **16**: 1153–86.

The input values in this example apply to L-MIC.

- model estimates are based on a consensus among GTFRCC participants
- required FTEs of RO, MP, RTT and DO were computed through the activity-based approach, FTE of nurses and engineers were consensus-based.
- equipment costs are an agreed average, based on input from various available sources
- salaries and training costs were derived from survey data and corrected with data from LABORSTA, a database of labour statistics operated by the International Labour Organization .

*Cost values and salaries are in USD for the year 2013.

**Equipment QA is assumed to be performed outside working hours by MPs and engineers.

Table {TAB_SensSpecSABM_CapEx}: Sensitivity analysis in the operational costs, CapEx, allows for improved efficiency, longer treatment hours per day, and bulk purchasing savings. The combination of all three results in approximately 50% operating costs savings in the LIC and MIC countries. These can be applied alone or in concert. Operating cost savings are presented in [Sections 6&7](#).
