

C CAN CAUSE CANCER

WILLIAM GILLESPIE

Urbana, Illinois

epidemiological scientific research confirms
curious doctors' uncertain suspicions
medical researchers announce conclusions:
c can cause cancer

American society's increasingly c-saturated
commercial discourse causes excessive
c accumulation, inciting toxic
uncontrollable microscopic cellular reproduction

scientists' conclusions recommend congress
consider creating alphabetic caps
reducing American c consumption
encouraging nontoxic typographic sources

can America's public reduce
c dependence? cutting back
crime, police, racism, hypocrisy
cars, illiteracy, corruption, capitalism?

(which carcinogenic character's innocent
connotations include: chocolate chip
cookies, cottage cheese, Captain
Crunch, childhood, genetic code)

can congress rescind alphabetic
convention, reduce c consumption?
CEOs, incensed conservative Republican
social critics cry "censorship!"
