

Mid-Year Farm Level Outlook for Missouri Representative Farms 2005-2009

Shaded areas of the cover page map are the home counties of representative farm panel members. Bolded lines on the map are boundaries for USDA-Missouri Ag Statistics Service crop reporting districts which correspond with rep farm regions in this report.

Mid-Year Farm Level Outlook Missouri Representative Farms 2005 – 2009

This mid-year farm level outlook looks at the impact of the new FAPRI August 2005 Baseline Update and estimates for 2005 yields from the Missouri Ag Statistics Service on the 40 Missouri representative farms. The FAPRI August 2005 Baseline Update reflects information available in mid-August 2005, including passage of the energy bill. This is intended to be an intermediate update to the FAPRI January 2005 Baseline.

This is an abbreviated report containing updated financial tables and risk graphs sorted into seven categories.

When comparing the results of this baseline to the January 2005 FAPRI Baseline, differences can be found in each category. In most cases, the near-term outlook shows the most change. Five of the seven categories show increased cash flow pressure in the near-term. This can be traced to lower yields in 2005 due to drought conditions across most of the state.

We have attempted to include impacts from the 2005 drought. We used estimates from the Missouri Ag Statistics Service from the August 1 crop report. The yield estimates for corn, soybeans, and wheat are by region (Table 1). However, for grain sorghum, cotton, and rice the yield estimates are for the state as a whole (Table 2). The percent change in yields were applied to the trend yield for each crop on each rep farm to establish an estimate of 2005 farm yields.

Table 1. 2005 Regional Yield Estimates and Percent Change from the 5 Year Average

District	Corn		Soybeans		Wheat	
	Estimate	(%)	Estimate	(%)	Estimate	(%)
Northwest	115	-6	37	1	53	5
North Central	101	-21	31	-14	48	-10
Northeast	61	-53	26	-35	56	-3

Feedgrain-soy Farms:

The nine farms in this category are impacted the most by the drought. The region hardest hit is the northeast. The cash margin or the amount left after paying all farm expenses, drops from \$35 per acre to a loss of \$7 per acre, assuming current yield estimates. This drop in cash margin of \$42 per acre in the northeast is the highest, but not the only region to experience lower returns in 2005 (Table 3).

Table 3. Drop in Cash Margin

District	\$/acre
Northwest	3
North Central	23
Northeast	42
West Central	14
Southwest	12

Cotton and Rice Farms:

The five farms in this category benefit in 2005 from the above average yield estimate for cotton and rice. Since each of these farms is located in the southeast district, it is projected that the drought will have minimal effects on corn yields (Table 1).

Crop-beef Farms:

The eight farms in this category feel the pinch of the drought in 2005. However, these farms are not affected as much as the feedgrain-soy farms because of continued strong beef prices in 2005.

Pork-crop Farms:

The five farms in this category are truly a mixed bag. Two of the farms strictly produce hogs. These two farms face more cash flow pressure in 2006 and 2007 due to lower hog prices in this baseline. The other three farms face the same price pressure on the pork side in 2006 and 2007, but also have to contend with lower yields on the crop portion of their operation in 2005.

Beef Farms:

The five farms in this category face increasing cash flow risk pressure throughout the projection period. Both fed cattle and feeder cattle prices peak in 2004 and decline through 2009 in this baseline.

Dairy Farms:

The six farms in this category benefit from a much stronger price in 2005 than was earlier projected. As a whole, this category has the strongest financial outlook.

Broiler-beef Farms:

The financial outlook for the two farms in this category have not changed much from the earlier baseline report. The farms continue to face high cash flow risk pressure until the poultry building note is paid off in 2006.

Average return to operator assets (%)	7.6	6.4
Assumed operator debt, Jan 1, 2002 (%) ^e	19	27
Term debt capacity, Jan 1, 2005 (%) ^f	31	37
Cropland value in 2002 (\$ per acre)	1537	1585
Average operating expense/receipts (%)	45.7	53.5
Average whole-farm cash expenses excluding family living (\$/cow)	2,393	3,729
Livestock compensation payment (2002)	1017	1044
Total cash receipts (\$1000) ^a		
2002	139.89	204.29
2003	142.12	204.59
2004	144.27	209.04
2005	147.02	208.92
2006	144.31	206.04
2007	143.75	205.82
2008	141.43	203.32
2009	141.22	202.93
Average	143.55	205.41
Net cash farm income (\$1000) ^h		
2002	70.8	99.8
2003	73.5	98.1
2004	80.0	102.4
2005	80.8	99.6
2006	71.4	88.1
2007	71.9	88.6
2008	84.6	103.2
2009	81.7	99.3
Average	78.1	95.8
Return to family living (\$1000) ⁱ		
2002	20.1	23.2
2003	13.2	12.5
2004	16.9	11.7
2005	15.4	5.2
2006	1.8	-9.7
2007	30.6	37.3
2008	36.6	35.9
2009	35.0	26.1
Average	23.9	18.9
Average owner withdrawal assumed (\$1000) ^l	0.0	0.0
Beginning cash, 2005 (\$1000) ^k	50.2	48.4
Beginning cash/operating expenses (%) ^k	75.8	44.2
Probability of a cash flow deficit (%) ^l		
2005	1.0	12.0
2006	35.0	94.0
2007	1.0	1.0
2008	1.0	1.0
2009	1.0	1.0

Table Reference Notes

The term "average" in the financial tables always refers to an average of the variable for the five projection years 2005-2009.

- a. Cash receipts is total gross revenue from all sources, including cash sales in the market, insurance indemnities, and government payments for crops that may not be planted. For a minority of farms this figure also includes a relatively small income from custom farming activity.
- b. Planted acres may exceed total crop acres due to double and triple cropping practices. Forage crops are labeled as harvested acres for beef and dairy farms. These acres may be harvested mechanically (hay, haylage, silage) and/or grazed.
- c. Yield data are as reported by the panels via update meetings or surveys. Irrigated crops are denoted by "Irr," otherwise yields are dryland. Soybean yields are for full season crops.
- d. Cash risk outlook is scored based on the probability of cash flow deficit (see I) over two time periods. Near term is the calendar years 2005 and 06. Intermediate term is the period 2007-09. Low risk is less than a 25 percent chance of cash flow deficit in any year of the time period; moderate risk is 25 to 49 percent, high risk is 50 to 74 percent, and severe risk is greater than a 75 percent probability of a cash flow deficit.
- e. A beginning level of term debt on January 1, 2002 is assumed for each of the farms. Loan length is the same for all the farms, but interest rates are localized. The values of assets and liabilities, and therefore debt ratios, fluctuate from this starting point.
- f. Term debt capacity ratio is a crude estimate of the debt capacity limit for the farm going into the projection period. Projected receipts and expenses are used to estimate cash available for servicing debt. The loan calculations assume a ten-year loan at 7.5 percent interest. The debt ratio is calculated in relation to operator assets at fair market value.
- g. Government payments include all receipts provided through the commodity titles of the farm bills, including direct (fixed) payments, counter-cyclical payments, and marketing loan benefits. Dairy market loss payments and the livestock compensation program are included where applicable.
- h. Net cash farm income is total cash receipts less all farm operating expenses, i.e., all cash expenses for production including interest payments on all outstanding debt. (See Appendix A).
- i. Annual return to family living is the farm's after-tax bottom line for the given year. It is the residual after all other cash expenses are deducted from current year receipts. This calculation includes carryover debt, but not carryover cash from prior years. (See Appendix A).
- j. Owner withdrawal is the minimum amount assumed to be extracted from the business for household purposes. It is also used as a proxy for the value of managerial labor in determining rates of return.
- k. Beginning cash in 2005 is the cash reserve accumulated by the farm in the three historical years of the analysis. It is an estimate of the cash cushion the farm has going into the projection period, expressed as a percent of the projected operating expenses in 2005.
- l. Annual probability of cash flow deficit is the chance that total receipts will be less than total cash expenses as a result of price and production risk. Alternatively, it is the chance that returns to family living will be less than the minimum owner withdrawal (See Appendix A).
