

Public Abstract

First Name:Michael

Middle Name:Sebastian

Last Name:Finke

Adviser's First Name:John

Adviser's Last Name:Howe

Co-Adviser's First Name:

Co-Adviser's Last Name:

Graduation Term:SS 2011

Department:Business Administration

Degree:PhD

Title:BEHAVIORAL DETERMINANTS OF HOUSEHOLD FINANCIAL CHOICE: THREE ESSAYS

This dissertation examines household characteristics the impact financial decision making. The first essay explores the role of cognitive ability in numeracy, risk tolerance, credit decisions, wealth and retirement savings and asset allocation and finds that cognitive ability is an important predictor of financial decisions. The second essay develops a new instrument to measure time discounting and models asset accumulation and asset allocation and finds that a factor score of intertemporal behaviors is significantly related to both asset accumulation and asset allocation. The third essay documents the decline in basic financial knowledge among households over 60 using a new financial literacy instrument developed to more accurately capture a household's ability to make effective balance sheet, credit, investment, and insurance choices.
