Registration, Labeling and Inspection of Commercial Fertilizers; 1937

F. B. MUMFORD, *Director*

L. D. HAIGH AND E. W. COWAN, *Chemists*

INSPECTION

The Missouri Agricultural Experiment Station under the authority of the Missouri Fertilizer Law, are reporting herewith the results of inspection of fertilizer stocks and analysis of the collected samples, for the spring and fall seasons of the calendar year, 1937.

In the spring visits were made to 208 dealers and farmers located in 96 towns and 49 counties and 171 samples were obtained for analysis. In the fall 218 dealers, farmers and users of fertilizer were interviewed: this represented visits to 116 towns and 35 counties, and 263 more samples were drawn and brought to the station for analysis. Discrepancies in labeling, failures of producers to register and attach tags were noted and are reported upon in subsequent paragraphs.

THE MISSOURI FERTILIZER LAW

In the process of offering fertilizers for sale in Missouri the persons responsible are required under the law to carry out the following provisions:

(1) All brands, mixtures or materials to be so offered for sale must be registered before such sales are made. The following facts must be declared;—the name and address of the manufacturer, the name under which the fertilizer is sold, the guaranteed analysis giving the percentage of nitrogen, the percentage of available phosphoric acid and the percentage of water soluble potash. For a chemically undissolved bone the percentage of total phosphoric acid is used in place of available phosphoric acid. Registration must be filed before sales are made and is in force until the close of that calendar year. Registrations must therefore be filed annually by all companies. No registration fee is charged.

(2) Each separate package of fertilizer sold must have a label setting forth the same facts required in the registration and reading exactly the same as in the registration. Additional statements as to composition are permitted on the label, but these must be clearly stated as equivalents. The label must be on the outside of the container, conspicuously displayed, and must be plainly printed. The label may be printed directly on the container, or on a tag attached to the container.

(3) Each separate package of fertilizer sold must carry a registration tag or label, conspicuously seen on the outside of the package. The size of this tag will depend upon the weight of the contents of the package, and the year printed on the tag corresponds with the year of the registration on file and legally in force at the time the package is sold by the manufacturer. Registration tags are used to be attached to sacks, and sticker labels to paper or package containers, at the option of the manufacturer. These registration tags must remain attached to the package as long as the fertilizer contents are present. These tags remain upon the package during all subsequent sales regardless of the year. If the fertilizer is transferred to a new container and then offered for sale, the registration tag must be placed upon the new container. If the contents of any container are emptied into a number of smaller containers to be offered for sale, both labels and registration tags corresponding to the new size of the container and of the same year as the original tag, must be provided for each of the new containers. Registration tags of a year previous to the year of sale, must not be placed by the manufacturer on the sacks thus sold. Provision is made for the exchange of these tags for tags of the current year, for a small exchange charge. Application must be made to F. B. Mumford, Director, for this exchange, or for the purchase of all new tags.

The full text of the law setting forth the above provisions, giving information about size and cost of tags and duties of the administrators of the law, may be had on application to the Missouri Agricultural Experiment Station, Columbia, Missouri.

VIOLATIONS OF THE MISSOURI FERTILIZER LAW

The following violations of the Fertilizer Law were noted during the spring and fall seasons, 1937.

Violations with respect to registration.—Registration was not on file, at the time of sale, for the following stocks: Grogreen Fern Food from American Soda Products Co., sold to F. W. Woolworth and Co., St. Louis; 20 per cent Superphosphate and Old Fort Rais More 2-12-2 fertilizer, sold by Fort Smith Cotton Oil Co., to Cassville Seed Co., Cassville; Bushong and Co., Abesville; Crane Feed Store, Crane; Boots Milling Co., Springfield; Wagner Bros., Granby; Floyd Plant Food Money Maker 0-14-6, sold by Federal Chemical Co., to Farm Bureau Service Co., of Palmyra; G and O Plant Food from Goulard and Olena, New York sold to Sears Roebuck and Co., Kansas City; Pulverized Sheep Manure sold by Independent Packing Co., Kansas City, to Archias Seed Store, Sedalia; Kruse's Perfection

Plant Food from W. H. Kruse, St. Louis, being sold by the Flower Shop, Scruggs-Vandervoort-Barney Store, St. Louis; Master Bone Meal sold by Master Meat Products Co., Detroit, to S. S. Kresge's Store, St. Louis and St. Joseph.

Violations with respect to labeling.—Labels were entirely missing from a shipment of Darling's Pure Ground Bone sold to Farmers Exchange, Houston.

Labels were incomplete as to the guaranteed analysis in the following cases: AA Half and Half Fertilizer sold by American Agricultural Chemical Co., to M. R. Kelly, Maywood; Big Crop Bone Meal and Superphosphate, sold by Armour Fertilizer Works to P. O. Foristell, Foristell; Red Steer Half and Half Fertilizer sold by Swift and Co. Fertilizer Works to Frank Cunningham, Montgomery City.

Labels on the goods of the Arkansas Fertilizer Co., and of the Newhouse Chemical and Supply Co., did not carry the brand names on the labels as given in the registration.

Violations with respect to the registration tags.—The following lots of fertilizer on sale were not provided with registration tags:

Sulphate of Ammonia sold by American Agricultural Chemical Co., to Bristol Supply Co., St. Joseph; Arcadian Nitrate of Soda and Arcadian Sulphate of Ammonia sold by the Thompson-Hayward Chemical Co., Kansas City and by the Harnden Seed Co., Kansas City; Big Crop 16 per cent Superphosphate sold by Armour Fertilizer Works to the Ozark Feed and Seed Co., Mountain Grove; 25 lb. sacks of Armour's Lawn and Garden Fertilizer sold to Beeny and Sons, Sheldon; Steer Head Raw Bone Meal and Special Lawn Fertilizer sold by Blood and Bone Fertilizer Corporation to Westover Nurseries, St. Louis; Interstate 16 per cent Superphosphate and Interstate Potato Special fertilizer sold by Crocker Packing Co., to Carlson Seed Co. and O. B. Davison Seed Co., Joplin, respectively.

Ford Ammonium Sulphate in 100 lb. sacks being sold by Lawler Grant Motor Co., St. Joseph, Mo.; Hoffman's Sheep Manure in package sold by A. H. Hoffman, Inc., to F. W. Woolworth Store, St. Louis; Darling's Pure Ground Bone sold by Darling and Co., to Farmers Exchange, Houston; Bone Meal Fertilizer and Moo-Cow Natural Fertilizer in packages sold by F. Rynveld and Sons, New York to F. W. Woolworth and Co., and Neismer Bros., St. Louis, respectively; Red Steer 4-8-6 fertilizer sold from Swift and Co., warehouse, Kansas City, Kansas, to Carrollton Feed and Grain Association, Carrollton, and to Jules Chapman, Henrietta, respectively; Red Steer Half and Half Fertilizer from Swift and Co., warehouse, Kansas City, Kansas, on hand at Hardin Farmers Exchange,

Hardin; V. C. 3-12-4 fertilizer sold to State Hospital No. 4, Farmington by Virginia Carolina Chemical Corporation.

Registration tags had been torn off from the following stocks:

Darling's Potato Special Fertilizer in the warehouse of the Carthage Cash Mercantile Co., Carthage; Big Crop Bone Meal in the warehouse of H. L. Shacklett, Golden City.

THE CHEMICAL ANALYSES SUMMARIZED

Table 1 is introduced into this report in order to express the results of all the different analyses of each company by means of a single number called the ratio number. Deficient results here and there appear in the reports of all companies but to what extent they affect the amount of overrun on other samples cannot be judged unless the entire data is reduced to one average value. This table shows the index figure or ratio number for each kind of fertilizer for each company and for all the companies taken together and the ratio number for all the fertilizers taken together of each company and for all the companies taken together. The method of calculating this ratio number from the percentages of plant food found, is given in the report for 1936 Bulletin 381.

The ratio number may be used to figure the value of any fertilizer from any company. If the lowest obtainable cash price of any brand be multiplied by the ratio number for that brand of each of the companies, the relative cash values of the brand as furnished by each company can be obtained.

Table 2 gives the number of deficiencies shown for each constituent by each company and for all the companies considered together. The samples this year show more deficiencies for all constituents than was exhibited last year. This caused a decrease in the final ratio number from 108.4 of last year to 106.2 this year.

TABLE 1.—SUMMARY OF AVERAGE VARIATIONS FROM MANUFACTURER'S GUARANTEE—SPRING AND FALL SAMPLES, 1937

| Manufacturer | Superphosphate | | Bone Fertilizer | | | Mixed Fertilizer | | | | All Fertilizers | |
|---|----------------|--|-----------------|---------------------------|-------------------------------------|------------------|---------------------------|--|--------------|-----------------|------------------|

RESULTS OF CHEMICAL ANALYSIS

The results obtained by chemical analysis on the 434 samples of fertilizer gathered by the inspectors are given in detail in Table 3. The samples obtained in the spring inspection are indicated by 6- in the first column to the left and the fall samples, correspondingly by 11-. The guaranteed analysis of each brand, is compared with the analysis of each single sample and with the average analysis, if there are a number of samples of the same kind. Black faced figures appearing in the percentage columns indicate that this result is below the guarantee, by a minute or a noticeable amount. An examination of some of these black faced figures in comparison with the guarantee, shows that the deficiency is so small that the fertilizing value of the material is hardly affected. Especially should it be mentioned that the black faced figures are not intended to indicate that the fertilizer in question is condemned for sale.

The nitrogen report appears in two columns,—the first column to the left indicates the percentage of total nitrogen present; the second column carrying the figures in italics, indicates the percentage of the total nitrogen which is soluble in water. If this figure is 66.6 or higher, the nitrogen is considered to be of satisfactory quality. If this result is below 66.6, the permanganate test is applied to determine its chemical activity. The result of testing the samples by the permanganate procedure indicate that the following samples contain nitrogen of inferior quality:— 6-44, 6-45, 6-46, 6-47, 6-97, 6-100, 6-106, 6-107, 6-108, 6-109, 6-110, 6-111, 6-116, 6-119, 6-171, 11-81.

Dealers and other buyers occasionally request analyses of registered fertilizers which they have purchased, a sample of which they have taken themselves. Such requests must be accompanied with the full reading of the label of the container from which the sample was taken. These are not considered official samples and the results cannot be considered a reliable indication of deficiency, even though such may appear on analysis. The report on all such samples sent in appears at the close of Table 3. For a reliable judge of composition, the report on the official samples should be consulted.

BUYING REGISTERED FERTILIZERS

A complete list of companies and their registered brands has been printed each year for the guidance of all fertilizer buyers. Table 4 gives this list for the calendar year of 1938. To all prospective purchasers we would say—buy only the brands and from the companies listed in this table. If you do not find the company or brand here, write to the Missouri Agricultural Experiment Station for information.

MISSOURI FERTILIZER SALES, 1937

Statistics on the sale of fertilizer in the state for 1937 by kind, grade, location, and season are set forth in Tables 5, 6 and 7. This data is assembled from the reports sent in by the various fertilizer companies, and are complete in the same ratio that the various companies have completely reported their shipments. As it is quite possible that some items have been omitted, these tables are marked —Approximate—.

Table 5 lists the tonnage of fertilizer, classified into the different kinds, which was sold in each county in the state during each shipping season.

Table 6 shows the tonnage of plant food which was contained in the fertilizer sold during the year.

Table 7 lists the tonnage of each brand of mixed fertilizer and each grade of superphosphate which was sold in the state during 1937, for all brands whose sales were at least 10 tons approximately.

The classification terms employed in these tables are defined as follows:

Bone.—Includes the fertilizers designated as Raw Bone, Steamed Bone, Blood and Bone. It is understood that this material contains matter only of an animal nature, and has not been treated chemically to change any of its plant food to more water soluble forms.

Superphosphate:—All grades of Acid Phosphate carrying guarantees of Available Phosphoric Acid only, from 16 per cent to 45 per cent.

Mixed Fertilizer, High Grade.—All brands having guaranteed percentages of either two or three of the fertilizer constituents, the sum of whose percentages totals 20 or more units. The bone and superphosphate mixture often called Half and Half is listed in this classification.

Mixed Fertilizer, Medium Grade.—Includes those brands containing two or three constituents whose guaranteed percentages, total not less than 14, but less than 20 units.

Mixed Fertilizer, Low Grade.—Brands having guaranteed percentages which total less than 14 units.

Miscellaneous.—Unmixed fertilizer materials, including potash salts, sulphate of ammonia, dried manure, nitrate of soda, cyanamid, etc., but not including bone and superphosphate.

TABLE 7.—TONNAGE OF SUPERPHOSPHATE AND THE LEADING FERTILIZER MIXTURES (BRANDS) SOLD IN MISSOURI IN 1937 (APPROXIMATE)

| Brand | Tonnage | Brand | Tonnage |
|---------------------|-----------|---------------|---------|
| 2-12-2 ----- | 20,390.63 | 0-14-7 ----- | 158.84 |
| 0-20-0 ----- | 13,586.66 | 4-8-8 ----- | 130.36 |
| 0-16-0 ----- | 6,249.61 | 4-10-6 ----- | 124.45 |
| 2-12-4 ----- | 5,690.83 | 0-43-0 ----- | 122.49 |
| 2-12-6 ----- | 3,108.74 | 0-12-6 ----- | 120.14 |
| 4-12-4 ----- | 1,435.06 | 3-12-4 ----- | 97.33 |
| 4-16-4 ----- | 1,074.40 | 10-6-4 ----- | 82.80 |
| 2-14-4 ----- | 756.09 | 0-14-2 ----- | 79.00 |
| 0-14-4 ----- | 688.36 | 0-12-4 ----- | 57.83 |
| Half and Half ----- | 534.62 | 4-8-12 ----- | 48.19 |
| 2-16-2 ----- | 493.32 | 3-18-3 ----- | 39.13 |
| 4-8-6 ----- | 423.62 | 10-8-6 ----- | 33.90 |
| 0-32-0 ----- | 353.63 | 8-16-16 ----- | 31.05 |
| 0-45-0 ----- | 334.36 | 9-18-18 ----- | 27.50 |
| 0-16-6 ----- | 255.25 | 2-10-2 ----- | 24.50 |
| 3-8-6 ----- | 251.84 | 1-12-3 ----- | 23.50 |
| 1-12-4 ----- | 202.20 | 16-20-0 ----- | 22.00 |
| 3-14-6 ----- | 195.92 | 11-48-0 ----- | 18.55 |
| 0-14-6 ----- | 195.66 | 5-10-4 ----- | 15.96 |
| 4-8-7 ----- | 169.27 | 9-7-2 ----- | 9.60 |

THE BASICITY OF FERTILIZER RESIDUES

When mixed fertilizers are used which carry certain common ingredients, there is a tendency to leave a residue within the soil which has an acid reaction. If applications are continued year after year this acid residue may be harmful, because it tends to unduly increase the soil acidity. Especially would this be true where large applications of such fertilizers are made. Some crops thrive best in an acid soil, so that an acid forming fertilizer may be the best to use in such cases. As a consequence, an acid-forming condition of a fertilizer constitutes no ground for the condemnation of the fertilizer.

Tests have been made on the nature of the residues of the fertilizer sold in Missouri in 1937, to determine if these be non-acid or acid-forming. The results indicate that the largely used brands for grain crops, are either non-acid or only slightly acid, while certain others are acid-forming. In general the fertilizer companies have shown a commendable willingness to adjust the basicity of their mixtures, wherever crop growing conditions would seem to indicate that such was desirable.

HIGH GRADE FERTILIZER MIXTURES ARE PREFERABLE

For many years the Missouri Agricultural Experiment Station has recognized the advantage to be gained by the use of high grade fertilizer materials and have been recommending the use of superphosphates and mixtures which carry the larger amounts of plant food. Because of different soil conditions and different crop needs, the ratio or proportion of the different plant foods varies somewhat. Phosphoric acid is always the high constituent for this state, because of the major shortage of this constituent in Missouri soils.

Following are the ratios and the analyses recommended for Missouri conditions. These will be sufficient to meet the various needs of growing crops, due to soil variation and plant requirements.

Recommended Analyses

| Ratios | Minimum Analyses |
|--------|------------------|
| | 0-20-0 |
| 1-3-1 | 4-12-4 |
| 1-7-2 | 2-14-4 |
| 1-6-3 | 2-12-6 |
| 1-4-1 | 4-16-4 |
| 2-5-3 | 4-10-6 |
| 0-2-1 | 0-14-7 |

In addition to the above brands, 16 per cent Superphosphate, 2-12-2 and 2-12-4 fertilizer command a large sale in the state. While these brands are not specifically recommended they may be used as substitutes when other recommended brands are not available.

Regarding the use of these high analysis brands we cannot do better than repeat what has already been said in a previous publication¹. The higher the analysis of the fertilizer, the less the cost of overhead for each pound of plant food applied. For example, when two fertilizers are compared, one having double the per cent of plant food as the other, the overhead costs for mixing, bagging, and shipping are the same for each. The farmer would therefore have to apply only half as much of the concentrated fertilizer as the less concentrated one, and he would make a material saving in the cost per acre. Naturally, when the very concentrated fertilizers are used, that is, those containing 50 or 60 per cent of plant food, the application per acre is so reduced that sometimes it cannot be spread evenly with the ordinary drill, unless it is mixed with sand or some other material to give it more bulk. So long as the total amount of plant food does not exceed 30 to 35 per cent, however, there is little difficulty in drilling it evenly.

These recommended brands show a tendency toward an increase in sales in the state, but there is still a large amount of fertilizer sold in the state which is below 20 per cent of plant food. Because of the economical advantage to the user, the Missouri Experiment Station urges the use of the recommended brands and of other analyses exceeding 20 units in plant food where this is practical. The trend of fertilizer use will undoubtedly continue toward the use of materials and mixtures of higher plant food concentrations.

¹Bulletin 361, Missouri Agricultural Experiment Station.

FINANCIAL STATEMENT

Fertilizer Control Fund

of the

Missouri Agricultural Experiment Station
For the year ending December 31, 1937.**RECEIPTS**

| | |
|---|-------------|
| Balance January 1, 1937 | \$23,230.35 |
| Receipts from the sale of Tags 1937 | 31,452.70 |

DISBURSEMENTS
