

Ponencia presentada al ENMESH 2013. Tenth International Conference of the European Network for Mental Health Service Evaluation

<b>ABSTRACT FORM FOR INDIVIDUAL PRESENTATION</b>	
<b>ID</b>	Symposium S26 Access to health services for persons with mental health problems in Málaga (Spain)
<b>Invited speaker No.</b>	Berta Moreno-Küstner. GAP Research Group Department of Personality, Assessment and Psychological Treatment. Faculty of Psychology. University of Málaga (Spain) Biomedical Research Institute of Málaga: IBIMA
<b>Title</b> Max 150 characters (spaces included)	Prevalence and use of services in persons with schizophrenia and related disorders in Málaga (Spain)
<b>Abstract</b> Max 350 words	<p><b>Background/Objectives</b></p> <p>Very few studies have examined schizophrenia morbidity in Spain, using multiple sources of information. We performed a 1-year prevalence study of schizophrenia and related disorders in Málaga and the use of services in a population aged 14 years or older living in the mental health catchment area of Carlos Haya hospital (Málaga, Spain).</p> <p><b>Methods</b></p> <p>Data were obtained from multiple sources of information mainly clinical databases. We selected more than 4000 persons as “possible cases” and we consult case notes and key informant (general practice and psychiatrists) to confirm schizophrenic diagnoses and place of living.</p> <p><b>Results</b></p> <p>A total of 1808 patients, 1169 men and 639 women were included as cases in the study. The one year ICD-10 prevalence rate was 6,8 (6,5-7,1) per 1000 adult population. Almost 80% of cases were in contact with public mental health services. Responsibility for schizophrenic patients is mainly carried by mental health services.</p> <p><b>Discussion/Conclusion</b></p> <p>Health planning should be based on local data about prevalence and use of services. Multiple sources of information are essential for accurate estimation of prevalence of schizophrenia disorders.</p> <p><b>Grants</b></p> <p>This contribution was supported by the University of Málaga (Spain). International Excellence Campus “Andalusia Tech”.</p>
<b>Track/Theme</b>	<ul style="list-style-type: none"> <li>× t1 (Reducing socio-economic inequalities of places, individuals and services for better patients' recovery)</li> <li>t2 (Psychosocial interventions that promote better outcome and recovery)</li> <li>t3 (Changing patterns of psychotropic drug interventions in mental health systems)</li> <li>t4 (Improving communications skills for better mental health services)</li> </ul>
<b>Keywords</b> 4-6 keywords required	Prevalence, schizophrenia, epidemiology, use of services
