**A New Form Of Biotechnology: Novel Data Logging Devices  
Reveal Secrets About The Lives Of Marine Animals**

Dr. Shaffer's research focuses on the ecology, physiology, and conservation of marine vertebrate species. Specifically, he uses novel smart technologies to study long-range movements, distribution, and behavior of wild seabirds and marine mammals. This new form of biotechnology is shedding light on the secret lives of marine animals that range widely over the open sea. Dr. Shaffer has used this technology to study animals in Alaska, Antarctica, the Arctic, and the tropical Pacific. Dr. Shaffer is an Associate Professor in the Department of Biological Sciences.
