Federal Register

The **FEDERAL REGISTER** (ISSN 0097–6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402 is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see *www.federalregister.gov.*

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge as one of the databases on GPO Access, a service of the U.S. Government Printing Office.

The online edition of the **Federal Register**, *www.gpoaccess.gov/nara,* available through GPO Access, is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 59, Number 1 (January 2, 1994) forward.

For more information about GPO Access, contact the GPO Access User Support Team, call toll free 1-888-293-6498; DC area 202-512-1530; fax at 202-512-1262; or via e-mail at *gpoaccess@gpo.gov.* The Support Team is available between 7:00 a.m. and 9:00 p.m. Eastern Time, Monday–Friday, except official holidays.

The annual subscription price for the **Federal Register** paper edition is $749 plus postage, or $808, plus postage, for a combined **Federal Register, Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is $165, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register,** including postage, is based on the number of pages: $11 for an issue containing less than 200 pages; $22 for an issue containing 200 to 400 pages; and $33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for $3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Printing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see *bookstore.gpo.gov.*

There are no restrictions on the republication of material appearing in the **Federal Register.**

FEDERAL REGISTER WORKSHOP

THE FEDERAL REGISTER: WHAT IT IS AND HOW TO USE IT

FOR: Any person who uses the Federal Register and Code of Federal Regulations.

WHO: Sponsored by the Office of the Federal Register.

WHAT: Free public briefings (approximately 3 hours) to present:

1. The regulatory process, with a focus on the Federal Register system and the public's role in the development of regulations.
2. The relationship between the Federal Register and Code of Federal Regulations.
3. The important elements of typical Federal Register documents.
4. An introduction to the finding aids of the FR/CFR system.

WHY: To provide the public with access to information necessary to research Federal agency regulations which directly affect them. There will be no discussion of specific agency regulations.

WHEN: Tuesday, June 8, 2010
9 a.m.–12:30 p.m.

WHERE: Office of the Federal Register
Conference Room, Suite 700
800 North Capitol Street, NW.
Washington, DC 20002

RESERVATIONS: (202) 741–6008

Title 3—

The President

Proclamation 8513 of April 30, 2010

Jewish American Heritage Month, 2010

By the President of the United States of America

A Proclamation

In 1883, the Jewish American poet Emma Lazarus composed a sonnet, entitled "The New Colossus," to help raise funds for erecting the Statue of Liberty. Twenty years later, a plaque was affixed to the completed statue, inscribed with her words: "Give me your tired, your poor, your huddled masses yearning to breathe free...." These poignant words still speak to us today, reminding us of our Nation's promise as a beacon to all who are denied freedom and opportunity in their native lands.

Our Nation has always been both a haven and a home for Jewish Americans. Countless Jewish immigrants have come to our shores seeking better lives and opportunities, from those who arrived in New Amsterdam long before America's birth, to those of the past century who sought refuge from the horrors of pogroms and the Holocaust. As they have immeasurably enriched our national culture, Jewish Americans have also maintained their own unique identity. During Jewish American Heritage Month we celebrate this proud history and honor the invaluable contributions Jewish Americans have made to our Nation.

The Jewish American story is an essential chapter of the American narrative. It is one of refuge from persecution; of commitment to service, faith, democracy, and peace; and of tireless work to achieve success. As leaders in every facet of American life—from athletics, entertainment, and the arts to academia, business, government, and our Armed Forces—Jewish Americans have shaped our Nation and helped steer the course of our history. We are a stronger and more hopeful country because so many Jews from around the world have made America their home.

Today, Jewish Americans carry on their culture's tradition of "tikkun olam"—or "to repair the world"—through good deeds and service. As they honor and maintain their ancient heritage, they set a positive example for all Americans and continue to strengthen our Nation.

NOW, THEREFORE, I, BARACK OBAMA, President of the United States of America, by virtue of the authority vested in me by the Constitution and the laws of the United States, do hereby proclaim May 2010 as Jewish American Heritage Month. I call upon all Americans to observe this month with appropriate programs, activities, and ceremonies to celebrate the heritage and contributions of Jewish Americans.

IN WITNESS WHEREOF, I have hereunto set my hand this thirtieth day of April, in the year two thousand ten, and of the Independence of the United States of America the two hundred and thirty-fourth.

Presidential Documents

Proclamation 8514 of April 30, 2010

National Day of Prayer, 2010

By the President of the United States of America

A Proclamation

Throughout our history, whether in times of great joy and thanksgiving, or in times of great challenge and uncertainty, Americans have turned to prayer. In prayer, we have expressed gratitude and humility, sought guidance and forgiveness, and received inspiration and assistance, both in good times and in bad.

On this day, let us give thanks for the many blessings God has bestowed upon our Nation. Let us rejoice for the blessing of freedom both to believe and to live our beliefs, and for the many other freedoms and opportunities that bring us together as one Nation. Let us ask for wisdom, compassion, and discernment of justice as we address the great challenges of our time.

We are blessed to live in a Nation that counts freedom of conscience and free exercise of religion among its most fundamental principles, thereby ensuring that all people of goodwill may hold and practice their beliefs according to the dictates of their consciences. Prayer has been a sustaining way for many Americans of diverse faiths to express their most cherished beliefs, and thus we have long deemed it fitting and proper to publicly recognize the importance of prayer on this day across the Nation.

Let us remember in our thoughts and prayers those suffering from natural disasters in Haiti, Chile, and elsewhere, and the people from those countries and from around the world who have worked tirelessly and selflessly to render aid. Let us pray for the families of the West Virginia miners, and the people of Poland who so recently and unexpectedly lost many of their beloved leaders. Let us pray for the safety and success of those who have left home to serve in our Armed Forces, putting their lives at risk in order to make the world a safer place. As we remember them, let us not forget their families and the substantial sacrifices that they make every day. Let us remember the unsung heroes who struggle to build their communities, raise their families, and help their neighbors, for they are the wellspring of our greatness. Finally, let us remember in our thoughts and prayers those people everywhere who join us in the aspiration for a world that is just, peaceful, free, and respectful of the dignity of every human being.

NOW, THEREFORE, I, BARACK OBAMA, President of the United States of America, by virtue of the authority vested in me by the Constitution and laws of the United States of America, do hereby proclaim May 6, 2010, as a National Day of Prayer. I call upon the citizens of our Nation to pray, or otherwise give thanks, in accordance with their own faiths and consciences, for our many freedoms and blessings, and I invite all people of faith to join me in asking for God's continued guidance, grace, and protection as we meet the challenges before us.

IN WITNESS WHEREOF, I have hereunto set my hand this thirtieth day of April, in the year of our Lord two thousand ten, and of the Independence of the United States of America the two hundred and thirty-fourth.

7 CFR Parts 760 and 783

Commodity Credit Corporation

7 CFR Part 1416

RIN 0560–AH96

Tree Assistance Program

AGENCY: Farm Service Agency and Commodity Credit Corporation, USDA.

ACTION: Final rule.

SUMMARY: This rule implements specific requirements for the Tree Assistance Program (TAP) authorized by the Food, Conservation, and Energy Act of 2008 (the 2008 Farm Bill). TAP provides disaster assistance to eligible orchardists and nursery tree growers to replant or rehabilitate trees, bushes, and vines that were lost due to natural disaster. Orchardists and nursery tree growers who commercially raise trees, bushes, and vines for which there were mortality losses in excess of 15 percent, after adjustment for normal mortality, are eligible for TAP payments. Eligible losses must have occurred between January 1, 2008, and September 30, 2011. This rule specifies how the TAP payments are calculated and when producers may apply for benefits. This rule also removes regulations for prior tree disaster assistance programs.

DATES: Effective Date: May 7, 2010.

FOR FURTHER INFORMATION CONTACT: Steven Peterson, Branch Chief, Production, Emergencies and Compliance Division, Farm Service Agency (FSA), U.S. Department of Agriculture (USDA), Mail STOP 0517, 1400 Independence Avenue, SW., Washington, DC 20250–0517. Telephone: (202) 720–5172; e-mail: *Steve.Peterson@wdc.usda.gov.* Persons with disabilities who require alternative means for communication (Braille, large print, audiotape, *etc.*) should contact the USDA Target Center at (202) 720–2600 (voice and TDD).

SUPPLEMENTARY INFORMATION:

Background: This rule implements the specific requirements for TAP as authorized by the 2008 Farm Bill (Pub. L. 110–246). Sections 12033 and 15101 of the 2008 Farm Bill authorize the Secretary of Agriculture (Secretary) to assist eligible orchardists and nursery tree growers that have incurred tree, bush, or vine mortality losses in excess of 15 percent, adjusted for normal mortality, due to natural disaster. TAP is a cost-reimbursement program, which means that payments are calculated based on estimated actual costs to replace or rehabilitate lost or damaged trees, bushes, or vines. The replacement and rehabilitation activities must take place within 12 months after the application is approved. Payment is not made until the activities are completed.

Amendments to the 2008 Farm Bill contained in the Consolidated Security, Disaster Assistance, and Continuing Appropriations Act, 2009 (Pub. L. 110–329), an Act to Amend the Commodity Provisions of the Food, Conservation, and Energy Act of 2008 and for other purposes (Pub. L. 110–398), and the American Recovery and Reinvestment Act of 2009 (Pub. L. 111–5, the Recovery Act) authorized minor changes in how TAP and the other standing disaster assistance programs are implemented. The basic core of the TAP is specified in the 2008 Farm Bill. The amendments extend the deadline for the required risk management "buy-in," discussed later in this document, exempt this rule from notice and comment rulemaking and Paperwork Reduction Act requirements, and allow the Secretary to provide equitable relief for producers who did not have risk management coverage.

TAP will be similar in scope to the 2005 Hurricane Tree Assistance Program specified in regulations in 7 CFR part 1416 and to the previous TAP authorized by the Farm Security and Rural Investment Act of 2002 (Pub. L. 107–171, commonly known as the 2002 Farm Bill) specified in regulations in 7 CFR part 783. The 2005 Hurricane TAP and TAP (as implemented by this rule) cover tree rehabilitation losses and practices that were not covered by the TAP authorized by the 2002 Farm Bill. The 2005 Hurricane TAP applied only in certain areas affected by hurricanes while this TAP and these regulations apply nationally. The previous programs were not subject to the adjusted gross income (AGI) limits and risk management purchase requirement that now apply to all the standing disaster programs authorized by the 2008 Farm Bill. TAP is now funded through the Agricultural Disaster Relief Trust Fund; the previous programs were limited to available funding. This rule implements the TAP regulations in 7 CFR part 760, subpart F, and removes the regulations for the previous two TAPs from 7 CFR part 783 and part 1416, subpart H.

General Eligibility Requirements

This rule implements the eligibility provisions for TAP, which is one of five Supplemental Agricultural Disaster Assistance programs authorized by the 2008 Farm Bill. Sections 12033 and 15101 of the 2008 Farm Bill authorize the Secretary to assist producers who have had crop and livestock losses due to adverse weather. FSA provides assistance through five different programs:

- Livestock Indemnity Program (LIP—referred to as Livestock Indemnity Payments in the 2008 Farm Bill),
- Livestock Forage Disaster Program (LFP),
- Emergency Assistance for Livestock, Honey Bees, and Farm-Raised Fish (ELAP),
- Supplemental Revenue Assistance Payments Program (SURE) (which covers losses to tree crops such as apples and citrus, but not the losses to trees covered by TAP), and
- Tree Assistance Program (TAP).

This rule implements TAP in 7 CFR part 760, subpart F. The LIP final rule, which was published in the **Federal Register** on July 2, 2009 (74 FR 31567–31578), revised 7 CFR part 760, subpart B, to provide the general eligibility requirements for all the Supplemental Agricultural Disaster Assistance programs including ELAP, LFP, LIP, SURE, and TAP. Subpart B specifies administration of the programs, general requirements to be an eligible producer, risk management purchase requirement, buy-in waivers, equitable relief, payment limitations, and other generally applicable requirements. Specific provisions for the other disaster assistance programs have been

implemented through separate rulemakings.

TAP will be administered by FSA using funds from the Agricultural Disaster Relief Trust Fund established under section 902 of the Trade Act of 1974 (19 U.S.C. 2497a). The disaster assistance programs authorized by the 2008 Farm Bill are permanent or "standing" programs that have similar scope to the previous ad hoc programs. The programs are provided for in two separate places in the 2008 Farm Bill. First, there is section 12033, which adds a new section 531 to the Federal Crop Insurance Act (7 U.S.C. 1501–1524). Second, there is section 15101, which adds sections 901 through 903 to the Trade Act of 1974. The provisions of the two sections as enacted are identical except that the provisions in Title XV of the 2008 Farm Bill contain the funding provisions for the program. Since then, there have been some amendments, but the two sections of the 2008 Farm Bill are considered to be interchangeable for the purposes of this rule, and an amendment to one is, as a practical matter, an amendment to the other.

The final rule uses the words "producer," "participant," and "eligible orchardist or nursery tree grower." "Producers" may apply for TAP. "Participants," who in most but not all cases are also "eligible orchardist or nursery tree growers," are those producers who meet the requirements to be eligible to receive TAP payments.

Payment Limitation

The 2008 Farm Bill limits how much a participant may receive from the Supplemental Agricultural Disaster Assistance programs.

In applying payment limitation for 2008 payments, subject to the provision of part 1400, no entity or individual can receive more than $100,000 per program year under TAP. This is an increase from the previous TAPs, which had a limit of $75,000 per year for payees who were considered separate payees under the part 1400 rules. For 2009 through 2011 payments, no individual or legal entity (excluding a joint venture or general partnership) may receive, directly or indirectly, more than $100,000 per program year under TAP. (A separate payment limit of $100,000 applies to total benefits that one person or legal entity may receive from LIP, LFP, ELAP, and SURE.)

For the purpose of determining payment limits, both indirect and direct benefits are counted by attribution. In the case of a legal entity, the same payment is attributed to the direct payee in the full amount, and to those that have an indirect interest in the entity commensurate with the amount of the interest. For example, under the attribution rules that apply to TAP, assume:

- Corporation A is in line to receive a $100,000 TAP payment,
- Corporation A is owned 50 percent by Individual A and 50 percent by Corporation B, and
- Corporation B is owned 30 percent by Individual B and 70 percent by Individual C.

If so, Corporation A, for payment limitation purposes would be considered to have received $100,000 and Individual C (who owns 70 percent of Corporation B, which owns half of Corporation A) would be considered to have indirectly benefitted by the amount of $35,000 (50 percent times 70 percent of the $100,000). Even though no part of the $100,000 was actually paid to Individual C, the amount of $35,000 would count against individual C's overall payment limitation from TAP. Assuming Individual C was already at the maximum payment limit, Individual C would not have been eligible to receive $35,000; as a result, the payment to Corporation A would be reduced by $35,000.

Additionally, a person or legal entity is limited to receiving payments on a cumulative total of 500 acres planted to trees, bushes, or vines that suffered losses occurring on or after January 1, 2008, but before October 1, 2011. The previous TAP authorized by the 2002 Farm Bill had the same acreage limit.

The amount of any payment for which a participant may be eligible under TAP may be reduced by any amount received by the participant for the same or any similar loss from any other USDA disaster assistance program.

In applying the limitation on AGI for 2008 payments, an individual or entity is ineligible for payment under TAP if the individual's or entity's average AGI exceeds $2.5 million for 2007, 2006, and 2005, under the provisions in 7 CFR part 1400 in effect for 2008. For 2009 through 2011 payments, the average AGI limitation provisions in 7 CFR part 1400 applicable to the Commodity Credit Corporation (CCC) commodity programs also apply to TAP. Specifically, for 2009 through 2011, a person or legal entity with an average adjusted gross nonfarm income, as defined in 7 CFR 1400.3, that exceeds $500,000 for the relevant base period will not be eligible to receive payments from TAP. Likewise, if a person with an indirect interest in a legal entity has an average nonfarm AGI over $500,000, then the payment to the legal entity will be reduced as calculated based on the percent of that person's indirect interest in the legal entity receiving the payment. For example, continuing with the assumptions in the example above, if Individual B had an average AGI that was over the limit, then the payment to Corporation A will be reduced by 15 percent (Individual B's 30 percent interest in Corporation B times Corporation B's 50 percent interest in Corporation A).

Payment and average AGI limits will be determined under regulations specified in 7 CFR part 1400 for CCC commodity programs. TAP is an FSA program, but the CCC regulations in 7 CFR part 1400 are adopted for this program. The relevant AGI period for TAP and the other disaster assistance programs for 2008 payments is the 3 calendar years that precede the program year involved, namely, 2005, 2006, and 2007. However, beginning with 2009, the AGI period is the 3 taxable years preceding the most immediately preceding complete taxable year. Thus for 2009 TAP benefits the base period would be the same as for 2008 benefits but would slide forward year by year in the subsequent years so that the base for 2010 benefits would be tax years 2006, 2007, and 2008.

The regulations in 7 CFR 1400.5 specify how payments will be attributed and how far the attribution will go. Attribution will be tracked through four levels of ownership in legal entities. The 2008 Farm Bill removes the previous "3 entity rule," so a person can now receive benefits attributed through an unlimited number of entities, subject to the payment limitation and the rules of attribution described in 7 CFR part 1400 and the text above. In addition to these limits, the 2008 Farm Bill imposes for TAP and other programs covered in part 760 certain special limitations on payments to individuals who are not citizens or to foreign corporations and these, which appear in the previously issued subpart B of part 763, are separate from the foreign person rules in 7 CFR part 1400. The limitations that apply in part 763 can be found specifically in 7 CFR 760.103(b).

Risk Management Purchase Requirement

To be eligible for TAP payments, producers must meet the risk management purchase requirement. The requirement is specified in 7 CFR 760.104. This is a new requirement; neither the 2005 Hurricane TAP nor the previous TAP required the purchase of crop insurance or NAP coverage.

The risk management purchase requirement specifies that eligible participants must have purchased insurance for each insurable crop on the

farm and for purposes of this program an individual or entity's farm is deemed to include the entirety of their farming operations no matter where located, in all counties and all states. A few exceptions allowed by the 2008 Farm Bill are discussed later in this section. An "insurable commodity" means an agricultural commodity for which the producer on the farm is eligible to obtain a policy or plan of insurance under the Federal Crop Insurance Act (FCIA) from the USDA's Risk Management Agency (RMA). A "noninsurable commodity" means a crop for which the eligible producers on a farm are eligible to obtain assistance through FSA's Noninsured Crop Disaster Assistance Program (NAP). In general, to be eligible for TAP payments, participants must have obtained crop insurance or NAP coverage, as may be applicable, for all of their crops.

Producers who did not purchase required coverage are not eligible for benefits unless an exception applies. Certain waivers for "socially disadvantaged farmers and ranchers," as well as "limited resource farmers and ranchers," and "beginning farmers or ranchers" are provided by the 2008 Farm Bill and specified in 7 CFR 760.107.

For the 2008 crop year, otherwise eligible producers who paid a certain buy-in fee were provided an exemption from the risk management purchase requirement that would otherwise apply if the buy-in fee was paid by September 16, 2008. By an amendment to the 2008 Farm Bill, a second buy-in permitted participants to buy-in for the 2008 crop year from February 17, 2009, up to May 18, 2009, to meet the risk management purchase requirement; however, the participant had to agree to buy crop insurance or NAP for the next crop year for the crops to which the buy-in applied. The 2008 buy-in fee was equal to the cost of the minimal catastrophic insurance coverage or NAP coverage, but did not, as with other buy-in exemptions in TAP, entitle the participant to such insurance or NAP coverage. Also, an amendment to the 2008 Farm Bill allows a 2009 crop buy-in if the 2009 Federal Crop Insurance Corporation (FCIC) sales closing date for a crop was prior to August 14, 2008. The deadline for the 2009 crop buy-in was January 12, 2009. In addition to these provisions, section 531(g)(5) of FCIA (and the corresponding provisions of the Trade Act of 1974; 7 U.S.C. 1531(g) and 19 U.S.C. 2497(g), respectively) have some more general provisions allowing the Secretary discretion to grant equitable relief to certain persons who lack coverage, as described below. The buy-in fees were different for 2008 and 2009.

If a producer is ineligible or otherwise barred from the risk management insurance program or NAP because of past violations and those insurance programs would otherwise be available to that producer absent such violations, that producer will also be ineligible for TAP.

Other circumstances preventing a producer from obtaining risk management coverage may be addressed on a case-by-case basis, and the Secretary or designee may determine a participant is eligible for TAP even if FCIA or NAP coverage was not timely obtained; 7 CFR 760.106, "Equitable Relief," provides for such relief. For example, equitable relief may, at USDA's discretion, be considered for participants who failed to meet the requirements of this rule because the 2008 Farm Bill was enacted after the closing date for purchasing the applicable insurance. Another example may be relief for a participant who made a late planting decision due to weather-related causes. Relief will not be considered or granted for producers who are in the RMA ineligibility tracking system as those persons by their own actions were unable to obtain insurance. Equitable relief is not an entitlement. A grant of such relief is discretionary in nature, and USDA's refusal to consider such relief or to grant a particular form of relief that is not specifically mandated by the 2008 Farm Bill or the program regulations will not be construed to be an adverse decision under either 7 CFR parts 11 or 780 (the common appeals regulations that apply to most FSA and CCC programs). There are, however, some cases in which the USDA National Appeals Division (NAD) has authority on its own to grant equitable relief and in all cases NAD, rather than FSA or CCC, decides the extent of its jurisdiction consistent with whatever authorities apply.

If an RMA pilot or Adjusted Gross Revenue (AGR) insurance program was the only insurance available in that area for that crop, buying that insurance program for that crop will satisfy the risk management purchase requirement for that crop. However, producers are not required to purchase pilot or AGR insurance program coverage in order to meet the risk management purchase requirement. Rather, producers can elect not to obtain pilot or AGR insurance program coverage and meet the risk management purchase requirement by obtaining either NAP coverage or by paying the buy-in fee, as may be applicable.

Producers who did not obtain risk management coverage for all eligible crops on a farm are ineligible for payment under TAP even if some crops had risk management coverage, unless an exception or waiver applies. The risk management purchase required for TAP eligibility refers to insurance on the crop and production, not on the underlying trees; further, the risk management purchase requirement includes crops that are not eligible for TAP. For example, if a producer's farm produces insured blueberries, insured apples, and corn, to be eligible for TAP payment the producer must either buy coverage on the corn or have made a "buy-in," when such option was available as specified in 7 CFR part 760, subpart B. Producers, who meet all the eligibility requirements, including risk management coverage, will qualify for payment. A producer who does not meet the risk management purchase requirement will not be eligible.

Eligible Losses and Eligible Producers for TAP

The 2008 Farm Bill provisions require TAP cost share payments to be made for eligible losses due to natural disasters. TAP provides a payment based on 70 percent of the cost of replacing trees, bushes, and vines, and 50 percent of other costs including removing, pruning, or salvaging damaged trees, bushes, and vines, or preparing the land to plant new ones. The payment eligibility "trigger" is mortality losses in excess of 15 percent, adjusted for normal damage and mortality. Normal mortality losses are those associated with the normal upkeep of the orchard or nursery in the region. Damage losses are not eligible for payment unless the 15 percent mortality trigger is met. The eligible mortality must have occurred between January 1, 2008, and September 30, 2011, due to natural disaster, as determined by the Secretary or his designee, during the calendar year for which benefits are requested, including losses due to plant disease, insect infestation, drought, fire, freeze, flood, earthquake, and lightning. As the preceding sentence suggests, "plant disease" for this program is, under the terms of the 2008 Farm Bill, considered to be a natural disaster. Commercially-grown trees, vines, and bushes are eligible. All the provisions described in this paragraph, which are implemented in this rule, are provisions specified in the 2008 Farm Bill over which FSA has little or no discretion.

The details in this rule on acceptable documentation of loss and the application process for payment are discretionary provisions. FSA based the

discretionary provisions of the program as specified in this rule on the rules and policies used for previous TAPs, because those rules and policies are known to the public and because they have worked well to provide benefits for the type of loss involved in this program.

The scope of TAP is substantially similar to the previous TAPs, with the following exceptions:

- Payment limitation and the risk management purchase requirement from the 2008 Farm Bill apply; the previous programs had a lower payment limit and did not have a risk management purchase requirement.
- TAP payment is now calculated based on 70 percent of the qualifying loss (the loss above 15 percent in excess of normal mortality); the previous programs provided payment based on 75 percent of that amount.
- TAP now also includes a 50 percent payment for removing or rehabilitating trees, bushes, and vines that were damaged; the previous program in 7 CFR part 783 for the TAP authorized by the 2002 Farm Bill did not have this provision but the 2005 Hurricane TAP in 7 CFR part 1416 included a 75 percent payment for such activities.
- Nursery tree losses are now eligible for TAP payments; the previous program in 7 CFR part 783 did not have this provision but the 2005 Hurricane TAP in 7 CFR part 1416 did. Nursery trees include ornamental, fruit, nut, or Christmas trees produced for commercial sale.
- TAP is funded through the Agricultural Disaster Relief Trust Fund; the previous programs were limited to available funding.

TAP payments will be calculated using cost share rates for the specific type of tree, bush, or vine lost or damaged and practice required to replant the stand or rehabilitate existing trees, bushes, or vines. The calculations will be made using FSA-approved categories of plants and practices. The categories will be the same as previous TAPs.

The threshold for TAP payment eligibility is a mortality loss to a stand of trees, bushes, or vines in excess of 15 percent above normal mortality. That is the same loss threshold as the previous programs. Normal losses, losses below the 15 percent threshold, and losses due to causes other than natural disaster will not be eligible for payment. For example, if 80 percent of the trees in the stand are lost, and normal mortality in that area for that type of tree is 2 percent, then payment will be calculated on the loss above 17 percent, which would be 63 percent. Payment would be equal to 70 percent of the costs to replace 63 percent of the original stand. If the stand was a total loss (100 percent loss), then payment would be equal to 70 percent of the costs to replace 83 percent of that stand (100 percent minus 17 percent).

The 2008 Farm Bill specifies that TAP is for losses due to "natural disaster," which the 2008 Farm Bill defines as "plant disease, insect infestation, drought, fire, freeze, flood, earthquake, lightning, or other occurrence, as determined by the Secretary." An eligible "other occurrence" will be determined by FSA's Deputy Administrator for Farm Programs (Deputy Administrator) on behalf of the Secretary. FSA has the authority to determine the eligibility of tree, bush, or vine losses caused by or categorized as an "other occurrence" depending on the disaster event resulting in the loss. This is not a change from the previous TAPs. Loss claims will be verified based on a physical inspection of the loss by an FSA representative.

Generally under this new TAP, eligible orchardists or nursery tree growers are producers who are considered to have planted the trees, bushes, or vines for commercial purposes for the annual production of a crop and who owned the stand of trees, bushes, or vines at the time the natural disaster occurred. The owner of the orchard will be considered to be the person who had planted the trees even though some of those trees might have been planted before the orchard was purchased. For clean-up expenses, such as pruning, the eligible producer may be a party who was leasing the trees at the time of the disasters. Also, the rule provides that in the event of a transfer of the eligible tree after the disaster, the successor may qualify for benefits in lieu of the preceding party if certain conditions are met. These rules appear to be consistent with the intent of the 2008 Farm Bill to provide benefits for all nurseries with otherwise qualifying losses and to provide for the continuing health of existing orchards that have suffered those losses.

Applying for TAP Payment; TAP Payment Calculations

There are three basic steps for a producer to obtain a TAP payment. The first step is to file an application at the FSA county office within 90 calendar days of the disaster event or date upon which the loss of trees, bushes, or vines is apparent to the producer. Producers who suffered a potentially eligible loss before this rule was published in the **Federal Register** must provide an application to the FSA county office within 60 calendar days after this rule is published.

The second step is a field visit to verify losses. After FSA receives the application, FSA staff will make a field visit and validate which practices are appropriate to address the losses. Upon verification, FSA will inform the producer of the approved eligible practices and estimated payment.

The third step is to complete the approved practices. The practices must be completed within 12 months of FSA approval. Payment will be made after the practices are completed.

Producers that suffer multiple losses during the calendar year may file multiple applications for payment. This rule specifies the documents that are required to show that practices are complete, such as receipts for labor costs, equipment rental, and purchases of seedlings or cuttings.

The TAP payment will be calculated based on the actual costs of the approved practices, or the rates established by the Deputy Administrator for the practices, whichever compensation amount is lower. The payment rate for replanting and replacement of eligible trees (those which involve greater than a 15 percent loss adjusted for normal mortality), bushes, or vines is 70 percent of the producer's actual costs so long as that 70 percent does not exceed the FSA approved rate for the practices involved and if 70 percent of the actual cost exceeds that rate then the producer will receive the FSA rate and no more. The rate for rehabilitation of eligible trees, bushes, or vines is generally 50 percent of the cost of pruning, removal, and other costs incurred for salvaging the existing plants, or in the case of plant mortality, to prepare land for replanting but here also the 50 percent amount cannot exceed the maximum allowable FSA rate. The 50 percent is only payable, however, for losses that reflect a greater than 15 percent loss taking into account normal mortality and damage.

A producer can be eligible for both categories of payment. For example, a producer who replaces lost trees can apply for both a 50 percent cost share payment to remove the lost trees and prepare the land, and a 70 percent cost share for the seedlings and labor to plant the new ones. If, for example, not all the vines in a stand are lost, a producer can apply for the 70 percent cost share to replace lost vines and the 50 percent cost share to prune and rehabilitate less severely damaged ones. If a practice, such as site preparation, is needed to both replant and rehabilitate trees, bushes, or vines, the producer must document the expenses

attributable to replanting versus rehabilitation. If that is not possible because, for example, the activity took place several years ago and the contractor who performed the work cannot provide a detailed breakdown, the FSA county committee will pro-rate payment based on physical inspection of the loss, damage, replanting, and rehabilitation. Producers who did not plant the trees, bushes, or vines that were lost, but have a history of commercial production, can be eligible for the 50 percent cost share category to remove lost trees and rehabilitate the damaged ones.

FSA, through the FSA State offices, will obtain recommendations from applicable State orchard and nursery organizations, State Cooperative Extension Services or, as applicable, the National Institute of Food and Agriculture, and other knowledgeable and credible sources, as FSA deems necessary and appropriate, to establish the normal mortality rate and damage rate for each type of tree, bush, or vine on a State-by-State basis. (Under the previous TAPs, normal mortality rates established for most eligible plant species were about one to three percent per year.)

SURE and TAP

In some cases, losses that are not eligible under TAP may be eligible for SURE payments, and vice versa. The SURE program covers losses to tree, vine, and bush crops that were covered by insurance or NAP, while TAP provides cost reimbursement payments to offset the cost of replacing or rehabilitating lost or damaged trees, vines, and bushes. The two programs pay for different types of losses, but if there were any overlap, benefits could be adjusted as needed.

The risk management purchase requirement for SURE includes some exceptions, such as not requiring risk management coverage for minor crops that do not apply to TAP. Therefore, risk management coverage that qualifies a producer for SURE may not qualify that same producer for TAP. If the risk management purchase does meet the requirements of both SURE and TAP, the producer may be eligible for payment under both programs.

Miscellaneous TAP Provisions

All owners, stands, and losses must meet the eligibility requirements provided in this rule. False certifications can carry serious consequences. FSA will validate information provided on applications through random spot-checks.

As specified in 7 CFR part 760 subpart B, participants receiving disaster assistance payments must keep records and supporting documentation for 3 years following the end of the year in which the application for payment was filed. This discretionary recordkeeping requirement is consistent with other FSA rules and programs, as well as with previous similar disaster assistance programs. Participants must allow FSA representatives to conduct a site inspection to verify that the TAP-funded practices have been completed.

Section 760.110 specifies that the appeal regulations specified in 7 CFR parts 11 and 780 apply. It also specifies that for all the new standing disaster programs, matters requiring FSA determinations that are not in response to, or result from, an individual disputable set of facts in a specific individual participant's application, are not matters that can be appealed under 7 CFR parts 11 or 780. These include, but are not limited to, general statutory or regulatory provisions that apply to similarly situated participants, national average payment prices, regions, crop definition, average yields, or similar items.

As specified in 7 CFR part 760 subpart B, restrictions apply to TAP including, but not limited to, benefit ineligibility resulting from violations of the highly erodible land and wetland conservation provisions specified in 7 CFR part 12.

Notice and Comment

The Consolidated Security, Disaster Assistance, and Continuing Appropriations Act, 2009 made the exemption from notice and comments provisions, contained in section 1601(c)(2) of the 2008 Farm Bill, applicable in implementing section 12033 of the 2008 Farm Bill. To the extent relevant, the exemption applies, we believe, to the corresponding provisions enacted in section 15101 since they are identical excerpt for the provisions for funding in 15101, which do not appear at all in section 12033. Otherwise, the provisions of the Consolidated Security, Disaster Assistance, and Continuing Appropriations Act, 2009 would have no meaning. Therefore, these regulations are exempt from the notice and comment requirements of the Administrative Procedures Act (5 U.S.C. 553), as specified in section 1601(c)(2) of the 2008 Farm Bill, which requires that the regulations be promulgated and administered without regard to the notice and comment provisions of 5 U.S.C. 553 or the Statement of Policy of the Secretary of Agriculture effective July 24, 1971, (36 FR 13804) relating to notices of proposed rulemaking and public participation in rulemaking.

Effective Date

In making this final rule exempt from notice and comment through section 1601(c)(2) of the 2008 Farm Bill, using the administrative procedure provisions in 5 U.S.C. 553, FSA finds that there is good cause for making this rule effective less than 30 days after publication in the **Federal Register.** This rule allows FSA to provide benefits to producers who suffered tree, bush, or vine losses caused by natural disasters. Therefore, to begin providing benefits to producers as soon as possible, this final rule is effective when published in the **Federal Register.**

Executive Order 12866

This rule has been designated as not significant under Executive Order 12866 and has not been reviewed by the Office of Management and Budget.

Regulatory Flexibility Act

This rule is not subject to the Regulatory Flexibility Act since FSA is not required to publish a notice of proposed rulemaking for this rule.

Environmental Evaluation

In May 2007, FSA prepared a Final Programmatic Environmental Assessment (PEA) to evaluate the environmental consequences associated with implementing the changes to the Tree Assistance Program in 2005 under Title X Subtitle C of the 2002 Farm Bill using funding authorized by Title III Section 3013 of the Emergency Supplemental Appropriations Act for Defense, the Global War on Terror, and Hurricane Recovery, 2006 (Pub. L. 109–234). In consideration of the analysis documented in the PEA and the reasons outlined in the Finding of No Significant Impact (FONSI), which was published in the **Federal Register** on April 13, 2007 (72 FR 18622–18623), consistent with the provisions of the National Environmental Policy Act (NEPA, 42 U.S.C. 4321–4347), the regulations of the Council on Environmental Quality (40 CFR parts 1500–1508), and FSA regulations for compliance with NEPA (7 CFR part 799), FSA has determined that the implementation of TAP consistent with the provisions of the 2008 Farm Bill, would not constitute a major Federal action that would significantly affect the quality of the human environment. Therefore, an environmental impact statement will not be prepared. The Final Programmatic Environmental Assessment (PEA) can be viewed at:

http://www.fsa.usda.gov/Internet/FSA_File/final_tap_ea5_2007.pdf and the FONSI can be viewed at: *http://www.fsa.usda.gov/Internet/FSA_File/tap_fonsi.pdf.*

Executive Order 12372

This program is not subject to Executive Order 12372, which requires consultation with State and local officials. See the notice related to 7 CFR part 3015, subpart V, published in the **Federal Register** on June 24, 1983 (48 FR 29115).

Executive Order 12988

This rule has been reviewed under Executive Order 12988. This rule is not retroactive and it does not preempt State or local laws, regulations, or policies unless they present an irreconcilable conflict with this rule. Before any judicial action may be brought regarding the provisions of this rule the administrative appeal provisions of 7 CFR parts 11 and 780 must be exhausted.

Executive Order 13132

The policies contained in this rule do not have any substantial direct effect on States, on the relationship between the Federal Government and States, or on the distribution of power and responsibilities among the various levels of government. Nor does this rule impose substantial direct compliance costs on State and local governments. Therefore, consultation with the states is not required.

Executive Order 13175

The policies contained in this rule do not impose substantial unreimbursed direct compliance costs on Indian tribal governments or have tribal implications that preempt tribal law.

Unfunded Mandates

This rule contains no Federal mandates under the regulatory provisions of Title II of the Unfunded Mandate Reform Act of 1995 (UMRA) for State, local, and tribal government or the private sector. In addition, FSA was not required to publish a notice of proposed rule making for this rule. Therefore, this rule is not subject to the requirements of sections 202 and 205 of the UMRA.

Federal Assistance Programs

The title and number of the Federal assistance program in the Catalog of Federal Domestic Assistance to which this rule applies is 10.082—Tree Assistance Program.

Paperwork Reduction Act

The regulations in this rule are exempt from the requirements of the Paperwork Reduction Act (44 U.S.C. Chapter 35), as specified in section 1601(c)(2) of the 2008 Farm Bill, which provides that these regulations be promulgated and administered without regard to the Paperwork Reduction Act.

E-Government Act Compliance

FSA is committed to complying with the E-Government Act, to promote the use of the Internet and other information technologies to provide increased opportunities for citizen access to Government information and services, and for other purposes.

List of Subjects

7 CFR Part 760

Dairy products, Indemnity payments, Pesticides and pests, Reporting and recordkeeping requirements.

7 CFR Part 783

Disaster assistance, Reporting and recordkeeping requirements, Trees.

7 CFR Part 1416

Agriculture, Citrus fruits, Disaster assistance, Fish, Livestock, Nursery stock.

■ For the reasons discussed above, the Farm Service Agency and Commodity Credit Corporation, USDA, amends 7 CFR parts 760, 783, and 1416 as follows:

PART 760—INDEMNITY PAYMENT PROGRAMS

■ 1. The authority citation for part 760 continues to read as follows:

Authority: 7 U.S.C. 4501; 7 U.S.C. 1531, 16 U.S.C. 3801, note, and 19 U.S.C. 2497; Title III, Pub. L. 109–234, 120 Stat. 474; Title IX, Pub. L. 110–28, 121 Stat. 211; and Sec. 748, Pub. L. 111–80, 123 Stat. 2131.

■ 2. Add Subpart F to read as follows:

Subpart F—Tree Assistance Program

Sec.

Subpart F—Tree Assistance Program

§ 760.500 Applicability.

(a) This subpart establishes the terms and conditions under which the Tree Assistance Program (TAP) will be administered under Titles XII and XV of the Food, Conservation, and Energy Act of 2008 (Pub. L. 110–246, the 2008 Farm Bill).

(b) Eligible orchardists and nursery tree growers will be compensated as specified in § 760.506 for eligible tree, bush, and vine losses in excess of 15 percent mortality, or, where applicable, 15 percent damage, adjusted for normal mortality and normal damage, that occurred in the calendar year for which benefits are being requested and as a direct result of a natural disaster.

§ 760.501 Administration.

The program will be administered as specified in § 760.102 and in this subpart.

§ 760.502 Definitions.

The following definitions apply to this subpart. The definitions in parts 718 and 1400 of this title also apply, except where they conflict with the definitions in this section.

Bush means, a low, branching, woody plant, from which at maturity of the bush, an annual fruit or vegetable crop is produced for commercial purposes, such as a blueberry bush. The definition does not cover plants that produce a bush after the normal crop is harvested such as asparagus.

Commercial use means used in the operation of a business activity engaged in as a means of livelihood for profit by the eligible producer.

County committee means the respective FSA committee.

County office means the FSA or U.S. Department of Agriculture (USDA) Service Center that is responsible for servicing the farm on which the trees, bushes, or vines are located.

Cutting means a piece of a vine which was planted in the ground to propagate a new vine for the commercial production of fruit, such as grapes, kiwi fruit, passion fruit, or similar fruit.

Deputy Administrator or DAFP means the Deputy Administrator for Farm Programs, FSA, USDA, or the designee.

Eligible nursery tree grower means a person or legal entity that produces nursery, ornamental, fruit, nut, or Christmas trees for commercial sale.

Eligible orchardist means a person or legal entity that produces annual crops from trees, bushes, or vines for commercial purposes.

FSA means the Farm Service Agency.

Lost means, with respect to the extent of damage to a tree or other plant, that the plant is destroyed or the damage is such that it would, as determined by FSA, be more cost effective to replace the tree or other plant than to leave it in its deteriorated, low-producing state.

Natural disaster means plant disease, insect infestation, drought, fire, freeze,

flood, earthquake, lightning, or other natural occurrence of such magnitude or severity so as to be considered disastrous, as determined by the Deputy Administrator.

Normal damage means the percentage, as established for the area by the FSA State Committee, of trees, bushes, or vines in the individual stand that would normally be damaged during a calendar year for a producer.

Normal mortality means percentage, as established for the area by the FSA State Committee, of expected lost trees, bushes, or vines in the individual stand that normally occurs during a calendar year for a producer. This term refers to the number of whole trees, bushes, or vines that are destroyed or damaged beyond rehabilitation. Mortality does not include partial damage such as lost tree limbs.

Seedling means an immature tree, bush, or vine that was planted in the ground or other growing medium to grow a new tree, bush, or vine for commercial purposes.

Stand means a contiguous acreage of the same type of trees (including Christmas trees, ornamental trees, nursery trees, and potted trees), bushes (including shrubs), or vines.

State committee means the respective FSA committee.

Tree means a tall, woody plant having comparatively great height, and a single trunk from which an annual crop is produced for commercial purposes, such as a maple tree for syrup, papaya tree, or orchard tree. Trees used for pulp or timber are not considered eligible trees under this subpart.

Vine means a perennial plant grown under normal conditions from which an annual fruit crop is produced for commercial market for human consumption, such as grape, kiwi, or passion fruit, and that has a flexible stem supported by climbing, twining, or creeping along a surface. Perennials that are normally propagated as annuals such as tomato plants, biennials such as the plants that produce strawberries, and annuals such as pumpkins, squash, cucumbers, watermelon, and other melons, are excluded from the term vine in this subpart.

§ 760.503 Eligible losses.

(a) To be considered an eligible loss under this subpart:

(1) Eligible trees, bushes, or vines must have been lost or damaged as a result of natural disaster as determined by the Deputy Administrator;

(2) The individual stand must have sustained a mortality loss or damage, as the case may be, loss in excess of 15 percent after adjustment for normal mortality or damage;

(3) The loss could not have been prevented through reasonable and available measures; and

(4) The trees, bushes, or vines, in the absence of a natural disaster, would not normally have required rehabilitation or replanting within the 12-month period following the loss.

(b) The damage or loss must be visible and obvious to the county committee representative. If the damage is no longer visible, the county committee may accept other evidence of the loss as it determines is reasonable.

(c) The county committee may require information from a qualified expert, as determined by the county committee, to determine extent of loss in the case of plant disease or insect infestation.

(d) The Deputy Administrator will determine the types of trees, bushes, and vines that are eligible.

(e) An individual stand that did not sustain a sufficient loss as specified in paragraph (a)(2) of this section is not eligible for payment, regardless of the amount of loss sustained.

§ 760.504 Eligible orchardists and nursery tree growers.

(a) To be eligible for TAP payments, the eligible orchardist or nursery tree grower must:

(1) Have planted, or be considered to have planted (by purchase prior to the loss of existing stock planted for commercial purposes) trees, bushes, or vines for commercial purposes, or have a production history, for commercial purposes, of planted or existing trees, bushes, or vines;

(2) Have suffered eligible losses of eligible trees, bushes, or vines occurring between January 1, 2008, and September 30, 2011, as a result of a natural disaster or related condition;

(3) Meet the risk management purchase requirement as specified in § 760.104 or the waiver requirements in §§ 760.105 or 760.107; and

(4) Have continuously owned the stand from the time of the disaster until the time that the TAP application is submitted.

(b) A new owner of an orchard or nursery who does not meet the requirements of paragraph (a) of this section may receive TAP payments approved for the previous owner of the orchard or nursery and not paid to the previous owner, if the previous owner of the orchard or nursery agrees to the succession in writing and if the new owner:

(1) Acquires ownership of trees, bushes, or vines for which benefits have been approved;

(2) Agrees to complete all approved practices that the original owner has not completed; and

(3) Otherwise meets and assumes full responsibility for all provisions of this part, including refund of payments made to the previous owner, if applicable.

(c) A producer seeking payment must not be ineligible under the restrictions applicable to citizenship and foreign corporations contained in § 760.103(b) and must meet all other requirements of subpart B of this part.

(d) Federal, State, and local governments and agencies and political subdivisions thereof are not eligible for payment under this subpart.

§ 760.505 Application.

(a) To apply for TAP, a producer that suffered eligible tree, bush, or vine losses that occurred:

(1) During calendar years 2008, 2009, or 2010, prior to May 7, 2010, must provide an application for payment and supporting documentation to FSA no later than July 6, 2010.

(2) On or after May 7, 2010, must provide an application for payment and supporting documentation to FSA within 90 calendar days of the disaster event or date when the loss of trees, bushes, or vines is apparent to the producer.

(b) The producer must submit the application for payment within the time specified in paragraph (a) of this section to the FSA administrative county office that maintains the producer's farm records for the agricultural operation.

(c) A complete application includes all of the following:

(1) A completed application form provided by FSA;

(2) An acreage report for the farming operation as specified in part 718, subpart B, of this chapter;

(3) Subject to verification and a loss amount determined appropriate by the county committee, a written estimate of the number of trees, bushes, or vines lost or damaged that is certified by the producer or a qualified expert, including the number of acres on which the loss occurred; and

(4) Sufficient evidence of the loss to allow the county committee to calculate whether an eligible loss occurred.

(d) Before requests for payment will be approved, the county committee:

(1) Must make an eligibility determination based on a complete application for assistance;

(2) Must verify actual qualifying losses and the number of acres involved by on-site visual inspection of the land and the trees, bushes, or vines;

(3) May request additional information and may consider all

relevant information in making its determination; and

(4) Must verify actual costs to complete the practices, as documented by the producer.

§ 760.506 Payment calculations.

(a) Payment to an eligible orchardist or nursery tree grower for the cost of replanting or rehabilitating trees, bushes, or vines damaged or lost due to a natural disaster, in excess of 15 percent damage or mortality (adjusted for normal damage or mortality), will be calculated as follows:

(1) For the cost of planting seedlings or cuttings, to replace lost trees, bushes, or vines, the lesser of:

(i) 70 percent of the actual cost of the practice, or

(ii) The amount calculated using rates established by the Deputy Administrator for the practice.

(2) For the cost of pruning, removal, and other costs incurred for salvaging damaged trees, bushes, or vines, or in the case of mortality, to prepare the land to replant trees, bushes, or vines, the lesser of:

(i) 50 percent of the actual cost of the practice, or

(ii) The amount calculated using rates established by the Deputy Administrator for the practice.

(b) An orchardist or nursery tree grower that did not plant the trees, bushes, or vines, but has a production history for commercial purposes on planted or existing trees and lost the trees, bushes, or vines as a result of a natural disaster, in excess of 15 percent damage or mortality (adjusted for normal damage or mortality), will be eligible for the salvage, pruning, and land preparation payment calculation as specified in paragraph (a)(2) of this section. To be eligible for the replanting payment calculation as specified in paragraph (a)(1) of this section, the orchardist or nursery grower who did not plant the stock must be a new owner who meets all of the requirements of § 760.504(b) or be considered the owner of the trees under provisions appearing elsewhere in this subpart.

(c) Eligible costs for payment calculation include costs for:

(1) Seedlings or cuttings, for tree, bush, or vine replanting;

(2) Site preparation and debris handling within normal horticultural practices for the type of stand being re-established, and necessary to ensure successful plant survival;

(3) Pruning, removal, and other costs incurred to salvage damaged trees, bushes, or vines, or, in the case of tree mortality, to prepare the land to replant trees, bushes, or vines;

(4) Chemicals and nutrients necessary for successful establishment;

(5) Labor to plant seedlings or cuttings as determined reasonable by the county committee; and

(6) Labor used to transplant existing seedlings established through natural regeneration into a productive tree stand.

(d) The following costs are not eligible:

(1) Costs for fencing, irrigation, irrigation equipment, protection of seedlings from wildlife, general improvements, re-establishing structures, and windscreens.

(2) Any other costs not listed in paragraphs (c)(1) through (c)(6) of this section, unless specifically determined eligible by the Deputy Administrator.

(e) Producers must provide the county committee documentation of actual costs to complete the practices, such as receipts for labor costs, equipment rental, and purchases of seedlings or cuttings.

(f) When lost stands are replanted, the types planted may be different from those originally planted. The alternative types will be eligible for payment if the new types have the same general end use, as determined and approved by the county committee. Payments for alternative types will be based on the lesser of rates established to plant the types actually lost or the cost to establish the alternative used. If the type of plantings, seedlings, or cuttings differs significantly from the types lost, the costs may not be approved for payment.

(g) When lost stands are replanted, the types planted may be planted on the same farm in a different location than the lost stand. To be eligible for payment, site preparation costs for the new location must not exceed the cost to re-establish the original stand in the original location.

(h) Eligible orchardists or nursery tree growers may elect not to replant the entire eligible stand. If so, the county committee will calculate payment based on the number of qualifying trees, bushes, or vines actually replanted.

(i) If a practice, such as site preparation, is needed to both replant and rehabilitate trees, bushes, or vines, the producer must document the expenses attributable to replanting versus rehabilitation. The county committee will determine whether the documentation of expenses detailing the amounts attributable to replanting versus rehabilitation is acceptable. In the event that the county committee determines the documentation does not include acceptable detail of cost allocation, the county committee will pro-rate payment based on physical inspection of the loss, damage, replanting, and rehabilitation.

(j) The cumulative total quantity of acres planted to trees, bushes, or vines for which a producer may receive payment under this part for losses that occurred between January 1, 2008, and September 30, 2011, will not exceed 500 acres.

§ 760.507 Obligations of a participant.

(a) Eligible orchardists and nursery tree growers must execute all required documents and complete the TAP-funded practice within 12 months of application approval.

(b) Eligible orchardist or nursery tree growers must allow representatives of FSA to visit the site for the purposes of certifying compliance with TAP requirements.

(c) Producers who do not meet all applicable requirements and obligations will not be eligible for payment.

PART 783—[REMOVED]

■ 3. Under the authority of 7 U.S.C. 8201 *et seq.,* 7 CFR part 783 is removed.

PART 1416—2006 EMERGENCY AGRICULTURAL DISASTER ASSISTANCE PROGRAMS

■ 4. The authority citation of part 1416 continues to read as follows:

Authority: Title III, Pub. L. 109–234, 120 Stat. 474; 16 U.S.C. 3801, note.

Subpart H—[Removed]

■ 5. Subpart H, consisting of §§ 1416.700 through 1416.705, is removed.

Signed in Washington, DC, on May 3, 2010.

Jonathan W. Coppess,

Administrator, Farm Service Agency, and Executive Vice President, Commodity Credit Corporation.

BILLING CODE 3410–05–P

DEPARTMENT OF JUSTICE

Bureau of Prisons

28 CFR Part 540

[BOP–1149]

RIN 1120–AB49

Inmate Communication With News Media: Removal of Byline Regulations

AGENCY: Bureau of Prisons, Justice Department.

ACTION: Interim final rule; technical correction.

SUMMARY: This document corrects the **DATES** section of an interim final rule published on Friday, April 23, 2010. In the interim rule, the Bureau of Prisons (Bureau) revised its regulations regarding inmate contact with the community to remove two current Bureau regulations that prohibit inmates from publishing under a byline, due to a recent court ruling invalidating Bureau regulation language containing this prohibition. The April 23, 2010, publication inadvertently omitted an effective date.

DATES: The interim final rule published April 23, 2010, at 75 FR 21163, is effective May 7, 2010. Comments are due by June 22nd, 2010.

ADDRESSES: Rules Unit, Office of General Counsel, Bureau of Prisons, 320 First Street, NW., Washington, DC 20534.

FOR FURTHER INFORMATION CONTACT: Sarah Qureshi, Office of General Counsel, Bureau of Prisons, phone (202) 307–2105.

SUPPLEMENTARY INFORMATION: This document corrects the **DATES** section of the publication on Friday, April 23, 2010 (75 FR 21163). The **DATES** section of that document should read as follows: "This rule is effective on [insert date of publication]. Comments are due by June 22nd, 2010." However, because that document did not include an effective date, this document announces the effective date of those provisions.

Coast Guard

33 CFR Part 165

[Docket No. USCG–2010–0162]

RIN 1625–AA00

Safety Zone; KFOG Kaboom, Fireworks Display, San Francisco, CA

AGENCY: Coast Guard, DHS.

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing a temporary safety zone in the navigable waters in San Francisco Bay in San Francisco, CA, in support of the KFOG Kaboom Fireworks Display. This safety zone is established to ensure the safety of participants and spectators from the dangers associated with the pyrotechnics. Unauthorized persons or vessels are prohibited from entering into, transiting through, or remaining in the safety zone without permission of the Captain of the Port or his designated representative.

DATES: This rule is effective from 7:45 a.m. on May 20, 2010, through 9:30 p.m. on May 22, 2010.

ADDRESSES: Documents indicated in this preamble as being available in the docket are part of docket USCG–2010–0162 and are available online by going to *http://www.regulations.gov,* inserting USCG–2010–0162 in the "Keyword" box, pressing Enter, and then clicking "Search." They are also available for inspection or copying at the Docket Management Facility (M–30), U.S. Department of Transportation, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue, SE., Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: If you have questions on this temporary rule, call Ensign Liezl Nicholas at 415–399–7442, or e-mail *D11–PF–MarineEvents@uscg.mil.* If you have questions on viewing the docket, call Renee V. Wright, Program Manager, Docket Operations, telephone 202–366–9826.

SUPPLEMENTARY INFORMATION:

Regulatory Information

The Coast Guard is issuing this temporary final rule without prior notice and opportunity to comment pursuant to authority under section 4(a) of the Administrative Procedure Act (APA) (5 U.S.C. 553(b)). This provision authorizes an agency to issue a rule without prior notice and opportunity to comment when the agency for good cause finds that those procedures are "impracticable, unnecessary, or contrary to the public interest." Under 5 U.S.C. 553(b)(B), the Coast Guard finds that good cause exists, as publishing a notice of proposed rulemaking (NPRM) with respect to this rule would be impracticable because the event would occur before the rulemaking process would be completed. Because of the dangers posed by the pyrotechnics used in these fireworks displays, the safety zones are necessary to provide for the safety of event participants, spectators, spectator craft, and other vessels transiting the event area. For the safety concerns noted, it is in the public interest to have these regulations in effect during the event.

Under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making this rule effective less than 30 days after publication in the **Federal Register.** Any delay in the effective date of this rule would expose mariners to the dangers posed by the pyrotechnics used in the fireworks display.

Basis and Purpose

The radio station KFOG will sponsor the KFOG Kaboom Fireworks Display on May 22, 2010, on the navigable waters of San Francisco Bay, CA. The fireworks display is meant for entertainment purposes. This safety zone establishes a temporary restricted area on the waters surrounding the fireworks launch site during loading of the pyrotechnics, and during the fireworks displays. This restricted area around the launch site is necessary to protect spectators, vessels, and other property from the hazards associated with the pyrotechnics on the fireworks barges. The Coast Guard has granted the event sponsor a marine event permit for the fireworks displays.

Discussion of Rule

From 7:45 a.m. on May 20, 2010, during the set up of the fireworks and until the start of the fireworks displays, the temporary safety zone applies to the navigable waters around the fireworks sites within a radius of 100 feet. From 9 p.m. until 9:30 p.m., the area to which the temporary safety zone applies will increase in size to encompass the

navigable waters around the fireworks launch site within a radius of 1,000 feet. The fireworks launch site will be located at 37°42′21.20″ N, 122°23′3.46″ W.

The effect of the temporary safety zones will be to restrict navigation in the vicinity of the fireworks sites while the fireworks are set up, and until the conclusion of the scheduled displays. Except for persons or vessels authorized by the Coast Guard Patrol Commander, no person or vessel may enter or remain in the restricted area. These regulations are needed to keep spectators and vessels a safe distance away from the fireworks barges to ensure the safety of participants, spectators, and transiting vessels.

Regulatory Analyses

We developed this rule after considering numerous statutes and executive orders related to rulemaking. Below we summarize our analyses based on 13 of these statutes or executive orders.

Regulatory Planning and Review

This rule is not a significant regulatory action under section 3(f) of Executive Order 12866, Regulatory Planning and Review, and does not require an assessment of potential costs and benefits under section 6(a)(3) of that Order. The Office of Management and Budget has not reviewed it under that Order.

Although this rule restricts access to the waters encompassed by the safety zones, the effect of this rule will not be significant. The entities most likely to be affected are pleasure craft engaged in recreational activities. In addition, the rule will only restrict access for a limited time. Last but not least, the Public Broadcast Notice to Mariners will notify the users of local waterway to ensure that the safety zone will result in minimum impact.

Small Entities

Under the Regulatory Flexibility Act (5 U.S.C. 601–612), we have considered whether this rule would have a significant economic impact on a substantial number of small entities. The term "small entities" comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000.

The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

Although this rule may affect owners and operators of pleasure craft engaged in recreational activities and sightseeing, it will not have a significant economic impact on a substantial number of small entities for several reasons: (i) This rule will encompass only a small portion of the waterway for a limited period of time; (ii) vessel traffic can pass safely around the area; (iii) vessels engaged in recreational activities and sightseeing have ample space outside of the affected areas of San Francisco, CA to engage in these activities; and (iv) the maritime public will be advised in advance of this safety zone via Broadcast Notice to Mariners.

Assistance for Small Entities

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we offer to assist small entities in understanding the rule so that they can better evaluate its effects on them and participate in the rulemaking process.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

Collection of Information

This rule calls for no new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

Federalism

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on State or local governments and would either preempt State law or impose a substantial direct cost of compliance on them. We have analyzed this rule under that Order and have determined that it does not have implications for federalism.

Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

Taking of Private Property

This rule will not cause a taking of private property or otherwise have taking implications under Executive Order 12630, Governmental Actions and Interference with Constitutionally Protected Property Rights.

Civil Justice Reform

This rule meets applicable standards in sections 3(a) and 3(b)(2) of Executive Order 12988, Civil Justice Reform, to minimize litigation, eliminate ambiguity, and reduce burden.

Protection of Children

We have analyzed this rule under Executive Order 13045, Protection of Children from Environmental Health Risks and Safety Risks. This rule is not an economically significant rule and does not create an environmental risk to health or risk to safety that may disproportionately affect children.

Indian Tribal Governments

This rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

Energy Effects

We have analyzed this rule under Executive Order 13211, Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use. We have determined that it is not a "significant energy action" under that order because it is not a "significant regulatory action" under Executive Order 12866 and is not likely to have a significant adverse effect on the supply, distribution, or use of energy. The Administrator of the Office of Information and Regulatory Affairs has not designated it as a significant energy action. Therefore, it does not require a Statement of Energy Effects under Executive Order 13211.

Technical Standards

The National Technology Transfer and Advancement Act (NTTAA) (15

U.S.C. 272 note) directs agencies to use voluntary consensus standards in their regulatory activities unless the agency provides Congress, through the Office of Management and Budget, with an explanation of why using these standards would be inconsistent with applicable law or otherwise impractical. Voluntary consensus standards are technical standards (*e.g.,* specifications of materials, performance, design, or operation; test methods; sampling procedures; and related management systems practices) that are developed or adopted by voluntary consensus standards bodies.

This rule does not use technical standards. Therefore, we did not consider the use of voluntary consensus standards.

Environment

We have analyzed this rule under Department of Homeland Security Management Directive 0023.1 and Commandant Instruction M16475.lD, which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321–4370f), and have concluded this action is one of a category of actions which do not individually or cumulatively have a significant effect on the human environment. This rule is categorically excluded, under figure 2–1, paragraph (34)(g), of the Instruction. This rule involves establishing, disestablishing, or changing Regulated Navigation Areas and security or safety zones.

An environmental analysis checklist and a categorical exclusion determination are available in the docket where indicated under **ADDRESSES.**

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, and Waterways.

■ For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 33 U.S.C. 1226, 1231; 46 U.S.C. Chapter 701; 50 U.S.C. 191, 195; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Pub. L. 107–295, 116 Stat. 2064; Department of Homeland Security Delegation No. 0170.1.

■ 2. Add § 165.T11–306 to read as follows:

§ 165.T11–306 Safety Zone; KFOG Kaboom, Fireworks Display, San Francisco, CA.

(a) *Location.* This temporary safety zone is established for a portion of the waters of San Francisco Bay in San Francisco, CA. The fireworks launch sites are located in position: 37°42′21.20″ N, 122°23′3.46″ W (NAD 83). From 7:45 a.m. on May 20, 2010, until 9 p.m. on May 22, 2010, the temporary safety zone extends to the navigable waters around the fireworks launch sites within a radius of 100 feet. From 9 p.m. until 9:30 p.m. on May 22, 2010, the area to which the temporary safety zones extends encompasses the navigable waters within a radius of 1,000 feet around the fireworks launch sites.

(b) *Definitions.* As used in this section, "designated representative" means a Coast Guard Patrol Commander, including a Coast Guard coxswain, petty officer, or other officer operating a Coast Guard vessel and a Federal, State, and local officer designated by or assisting the Captain of the Port San Francisco (COTP) in the enforcement of the safety zone.

(c) *Regulations.* (1) Under the general regulations in § 165.23, entry into, transiting, or anchoring within this safety zone is prohibited unless authorized by the COTP or the COTP's designated representative.

(2) The safety zone is closed to all vessel traffic, except as may be permitted by the COTP or a designated representative.

(3) Vessel operators desiring to enter or operate within the safety zone must contact the COTP or a designated representative to obtain permission to do so. Vessel operators given permission to enter or operate in the safety zone must comply with all directions given to them by the COTP or the designated representative. Persons and vessels may request permission to enter the safety zones on VHF–16 or through the 24-hour Command Center at telephone (415) 399–3547.

(d) *Effective period.* This section is effective from 7:45 a.m. on May 20, 2010 through 9:30 p.m. on May 22, 2010.

Dated: April 16, 2010.

P.M. Gugg,

Captain, U.S. Coast Guard, Captain of the Port San Francisco.

BILLING CODE 9110–04–P

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 54

[WC Docket No. 05–337, CC Docket No. 96–45; FCC 10–57]

High-Cost Universal Service Support, Federal-State Joint Board on Universal Service, Lifeline and Link-Up

AGENCY: Federal Communications Commission.

ACTION: Final rule.

SUMMARY: In this document, the Federal Communications Commission (Commission) concludes that dramatic increases in telephone subscribership in Puerto Rico over the last several years make it unnecessary to adopt a new high-cost support mechanism for non-rural insular carriers as proposed by Puerto Rico Telephone Company. The Commission finds that the existing non-rural high-cost support mechanism, operating in conjunction with the Commission's other universal service programs, is successfully increasing telephone subscribership in Puerto Rico and satisfies the requirements of the Communications Act of 1934, as amended, with respect to Puerto Rico. The Commission believes that the public would be best served by our focusing on comprehensive universal service reform, rather than developing a new non-rural insular high-cost support mechanism within the existing legacy universal service system.

DATES: Effective June 7, 2010.

FOR FURTHER INFORMATION CONTACT: Ted Burmeister, Wireline Competition Bureau, Telecommunications Access Policy Division, (202) 418–7389 or TTY: (202) 418–0484.

SUPPLEMENTARY INFORMATION: This is a synopsis of the Commission's Order in WC Docket No. 05–337, CC Docket No. 96–45, WC Docket No. 03–109, FCC 10–57, adopted April 16, 2010, and released April 16, 2010. This Order was also released with a companion Proposed Rule document that is published elsewhere in this **Federal Register** issue. The complete text of this document is available for inspection and copying during normal business hours in the FCC Reference Information Center, Portals II, 445 12th Street, SW., Room CY–A257, Washington, DC 20554. The document may also be purchased from the Commission's duplicating contractor, Best Copy and Printing, Inc., 445 12th Street, SW., Room CY–B402, Washington, DC 20554, telephone (800) 378–3160 or (202) 863- 2893, facsimile (202) 863–2898, or via the Internet at

http://www.bcpiweb.com. It is also available on the Commission's Web site at *http://www.fcc.gov.*

People with Disabilities: To request materials in accessible formats for people with disabilities (braille, large print, electronic files, audio format), send an e-mail to fcc504@fcc.gov or call the Consumer & Governmental Affairs Bureau at 202–418–0530 (voice), 202–418–0432 (tty).

Synopsis of the Order

I. Introduction

1. In this Order, we conclude that dramatic increases in telephone subscribership in Puerto Rico over the last several years make it unnecessary to adopt a new high-cost support mechanism for non-rural insular carriers as proposed by Puerto Rico Telephone Company (PRTC). In 2005, the Commission considered creating a separate high-cost universal service support mechanism for non-rural insular areas. At that time, telephone subscribership in Puerto Rico (a non-rural insular area) was 73.8 percent, far below the national average of 94.8 percent. By 2008—the most recent year for which data are available—subscribership in Puerto Rico had jumped to 91.9 percent. During the same period, Puerto Rico has experienced significant growth in disbursements from federal universal service support programs due in large part to changes the Commission made to its rules. Total high-cost support for Puerto Rico has risen from less than $140 million in 1998 to more than $215 million in 2008, an increase of nearly 54 percent, and low-income support has jumped from $1.16 million in 2001 to $23.4 million in 2008. Although subscription rates in Puerto Rico are still lower than the national average (98.2 percent in 2008), the substantial growth in universal service support and the commensurate increase in telephone subscribership represent significant changed circumstances since we issued the NPRM, 71 FR 1721, January 11, 2006, in 2005.

2. In light of these positive developments, we find that the existing non-rural high-cost support mechanism, operating in conjunction with the Commission's other universal service programs, is successfully increasing telephone subscribership in Puerto Rico and satisfies the requirements of section 254 of the Communications Act of 1934, as amended (the Act), with respect to Puerto Rico. Telephone subscribership in Puerto Rico is not yet at the same level as in the mainland United States, but the data before us indicate that the gap is closing rapidly and may well be eliminated entirely in the near future. The Commission, moreover, recently adopted a Joint Statement on Broadband that recommends comprehensive reform of universal service, and delivered to Congress a National Broadband Plan that recommends, among other things, transitioning legacy high-cost universal service support to a new high-cost program that would support broadband as well as voice services. We believe that the public would be best served by our focusing on comprehensive universal service reform, rather than developing a new non-rural insular high-cost support mechanism within the existing legacy universal service system. As we comprehensively reform universal service and implement the National Broadband Plan recommendations, we will strive to further increase telephone subscribership rates in Puerto Rico and to ensure that high-quality voice and broadband services are available in insular areas.

II. Order

3. In response to a proposal PRTC had submitted, the Commission's 2005 *NPRM* sought comment on the adoption of a stand alone universal service support mechanism for non-rural insular carriers. PRTC argues that the Commission must adopt its proposed embedded cost-based mechanism because: (1) Section 254(b)(3) compels the agency to address the unique characteristics of non-rural insular carriers with regime that is distinct from the existing generally applicable non-rural high-cost support mechanism; (2) the existing mechanism does not provide support that is sufficient to ensure reasonably comparable service and affordable rates in Puerto Rico; and (3) the forward-looking economic cost model that currently is used to determine PRTC's eligibility for high-cost model support does not accurately measure its costs. As discussed below, we conclude that the statute does not require us to adopt a separate insular support mechanism as proposed by PRTC.

1. Section 254 of the Act Does Not Require the Commission To Establish an Insular High-Cost Support Mechanism

4. PRTC asserts that section 254(b)(3) of the Act imposes upon the Commission a clear, non-discretionary duty to adopt a separate universal service mechanism for insular areas. We disagree. Section 254(b)(3) provides that "[c]onsumers in all regions of the Nation * * * should have access to telecommunications and information services that are "reasonably comparable" in terms of price and quality to "those services provided in urban areas." That provision also gives examples of the "consumers in all regions of the Nation" that must have such reasonably comparable service; they "include[e] low-income consumers and those in rural, insular and high cost areas." Nothing in the text or structure of the statute, however, requires the Commission to adopt a stand alone mechanism addressed to each of the enumerated examples of non-urban "consumers in all regions of the Nation." Congress in section 254 sought to achieve a result—reasonably comparable rates and services—but did not mandate that the Commission employ specific mechanisms to achieve that result. Rather, the statute leaves to the Commission's discretion the task of developing one or more mechanisms successfully to implement the broad "reasonable comparability" goal of section 254(b)(3).

5. The Commission has taken multiple actions to implement section 254(b)(3)—both by expanding low-income (Lifeline and Link-Up) programs and by designing high-cost support mechanisms. Carriers in insular areas, just like carriers in non-insular areas, are eligible for support under the existing, generally applicable rural and non-rural high-cost support mechanisms. Indeed, carriers in Puerto Rico received $215.6 million in Interstate Common Line Support (a form of high-cost support) during 2008, and rural carriers in insular areas received $42.1 million in high-cost support. Likewise, Puerto Rico receives a substantial amount of low-income support—$23.4 million in 2008. As a result, Puerto Rico currently is the fourth largest recipient of federal high-cost support, the seventh largest recipient of federal low-income support, and the third largest net recipient of universal service dollars among the U.S. states and territories. Instead of creating a specifically tailored program for insular areas, we have chosen to date to comply with the principle in section 254(b)(3) by ensuring that carriers in insular areas are eligible for generally applicable support mechanisms.

6. We must additionally disagree with PRTC's reading of the 2005 *NPRM.* PRTC suggests that the language in the 2005 *NPRM* acknowledges, as a practical matter, the existence of a duty to address insular support separately from a single high-cost mechanism. The *NPRM* merely confirms, however, that in the Commission's view, section 254(b)(3) may authorize the adoption of a separate insular mechanism, but does

not mandate one. In particular, the Commission posited that "[t]here would be no need for a rural insular mechanism because all rural insular carriers already receive rural high-cost support." And the Commission sought comment not on whether section 254(b) requires a separate mechanism for non-rural insular carriers, but whether that statute even "provides the Commission with authority" to adopt one.

7. Although PRTC argues that we have failed to establish mechanisms to provide universal service support to non-rural insular areas, it appears that PRTC's primary objection is that it does not receive high-cost model support under the non-rural mechanism. On three prior occasions, we have declined to adopt PRTC's view that the non-rural high-cost support mechanism fails adequately to take into account cost characteristics and other conditions in Puerto Rico. Consistent with those prior decisions, we conclude that we have met our obligation under section 254(b)(3) by ensuring that carriers in insular areas are eligible for generally applicable support mechanisms, and we address PRTC's other objection further below.

2. The Commission's Universal Service Programs Provide Support That Is Sufficient To Ensure Reasonably Comparable Service and Affordable Rates in Puerto Rico

8. The Commission has long measured the success of its universal service policies on the basis of telephone penetration rates. In tentatively concluding that a non-rural insular mechanism should be adopted, the Commission in the *NPRM* relied heavily on an apparent decline in overall telephone subscribership in Puerto Rico during the period PRTC transitioned to the non-rural high-cost support mechanism. That assumption by the Commission may have been made on the basis of incomplete information at the time we issued the *NPRM.* In any event, it has been rebutted by marketplace developments over the four-plus years since we adopted the *NPRM.* During that period, Puerto Rico's telephone subscribership penetration rate has risen from approximately 73.8 percent in 2005 to 91.9 percent in 2008. And over that same four-year period, the gap in telephone penetration between Puerto Rico and the nation as a whole has been dramatically narrowed—from a deficit of 21 percentage points to one of just over six percentage points. Given this substantial change in circumstances since we issued the *NPRM,* we find that the non-rural high-cost support mechanism, acting in conjunction with our other universal service programs, produces sufficient support to achieve reasonably comparable service in Puerto Rico and non-insular areas consistent with section 254.

9. PRTC argues that a decrease in wireline telephone subscribership in Puerto Rico demonstrates that the non-rural high-cost support mechanism provides insufficient support. We disagree. The Commission measures telephone subscribership based on access to telecommunications service, regardless of whether such access is provided by traditional wireline service or by newer technologies, including wireless. This approach is consistent with our current universal service policies, which make high-cost support "portable" to any carrier that serves a particular customer, regardless of the technology used. Thus, on this record, a decline in wireline subscribership (as measured solely by PRTC's loss of switched access lines) is not determinative given the overall increase in telephone subscribership in Puerto Rico. Commission data show that competitive local exchange carriers served approximately 19 percent of all switched access lines in Puerto Rico as of June 2008, and the number of wireless subscribers in the Commonwealth more than doubled from approximately 1.1 million in 2001 to more than 2.4 million in 2007. Indeed, PRTC's own 2005 study concluded that "universal service is a virtual reality," because 92.8 percent of households surveyed in Puerto Rico had wireline or wireless service, and 44 percent of households had both. Accordingly, we believe it more likely that PRTC's line losses have resulted from customer migration to new service providers, not from the decisions of customers to terminate service entirely because high-cost support levels have rendered local service rates unaffordable. This decision to "cut the cord" reflects a trend occurring throughout the country.

10. PRTC further asserts that several communities and many customers in Puerto Rico have no access to telecommunications infrastructure (and, thus, no service) because PRTC has found it too costly to deploy facilities without federal high-cost loop support. We find that this claim does not justify the creation of PRTC's preferred non-rural insular support mechanism, within the current high-cost support framework, for several reasons. First, it is not clear in the record before us how many households on Puerto Rico lack access to wireline infrastructure that delivers basic voice service. To the extent that PRTC believes unique circumstances in Puerto Rico warrant additional high-cost support in order to extend broadband infrastructure, those arguments are more appropriately raised in the context of upcoming proceedings to consider the recommendations of the National Broadband Plan to reform the legacy high-cost support mechanisms to support broadband. Second, establishing a non-rural insular mechanism would not guarantee that PRTC would deploy infrastructure to expand service. Third, we are not persuaded that areas unserved by PRTC are without access to basic local telephone service from *any* provider today. Data from American Roamer show that mobile wireless coverage in Puerto Rico is nearly ubiquitous, and that wireless subscribership has more than doubled since 2001.

11. PRTC also claims that "[a]bsent sufficient federal support, carriers are forced to choose between fully investing in network development and expansion and raising rates to levels that could further diminish subscribership levels." There are no data in the record supporting this position, however. As we found in 2003, PRTC offered no evidence that the elimination of its high-cost loop support caused rate shock or rate comparability problems. While PRTC asserts that any increase in rates would negatively affect telephone subscribership in Puerto Rico, PRTC has placed no rate data in the record. Moreover, recent rate data submitted by Verizon show that PRTC's local service rates fall well below the national average urban rate, demonstrating that these rates are reasonably comparable to the rates paid by consumers in non-insular areas. We further note that PRTC submitted a study of telephone subscribership, which it claims is "useful in demonstrating that increases in residential wireline rates" in Puerto Rico "would not be inconsistent with public policy. Moreover, the relevance of PRTC's earlier (2004–2006) claim that it cannot invest in its network without additional high-cost support is substantially diminished, if not extinguished, by its later (2007) commitment—unqualified with respect to universal service support—to the Commission that it would invest more than $1 billion over five years to improve communications and information services in Puerto Rico.

12. In short, PRTC has not shown that the subscribership levels in Puerto Rico are related to excessively high local rates or that providing additional high-cost support would have any direct impact on facilities deployment or subscribership levels.

13. Although most of the increase in high-cost support disbursements to Puerto Rico is attributable to support received by other providers, notably PRTC's wireless affiliate and other mobile wireless service providers, those carriers (as much as PRTC) promote the universal service goals of the 1996 Act. The current universal service program does not embody a preference for service by any one carrier, or any one technology. Thus, the dramatic increase in high-cost support for wireless competitive ETCs in Puerto Rico relative to PRTC, the only wireline ETC, is entirely consistent with the high-cost program, as it is currently designed. As the Fifth Circuit explained, "the purpose of universal service is to benefit the customer, not the carrier," so "'[s]ufficient' funding of the customer's right to adequate telephone service can be achieved regardless of which carrier ultimately receives the subsidy."

14. A similar lack of evidence caused the Fifth Circuit Court of Appeals to reject a challenge to a cap the Commission had imposed on certain ILEC high-cost support mechanisms. The court in that case held that a single provider's reduced rate of return "does not establish that the cap [on certain ILEC high-cost support mechanisms] fails to provide sufficient service" to customers. "[T]he Act only promises universal service, and that is a goal that requires sufficient funding of customers, not providers." So long as the mechanism in place enables "customer[s] to receive basic telecommunications services, the FCC * * * is not further required to ensure sufficient funding of every local provider as well." Faced with record evidence showing that universal service for customers has dramatically improved since we adopted the *NPRM* in 2005, we reject PRTC's argument that the non-rural mechanism provides insufficient support to maintain affordable rates and reasonably comparable service in Puerto Rico.

15. Comments challenging the sufficiency of universal service support in Puerto Rico also fail to give weight to efforts by the FCC, the Puerto Rico Telecommunications Regulatory Board (TRB), PRTC, and competitive ETCs that have significantly increased the number of recipients of federal low-income support in Puerto Rico since 2003 and, commensurately, increased telephone subscribership. The Commission has taken steps to improve the effectiveness of the low-income support mechanism by expanding the federal default eligibility criteria for Lifeline/Link-Up to include an income-based criterion and additional means-tested programs. And to target low-income consumers more effectively, the Commission adopted outreach guidelines for Lifeline/Link-Up and issued a voluntary survey to gather data and information from states regarding the administration of the programs. Further, low-income consumers in Puerto Rico receive the maximum amount of Lifeline assistance available ($13.50 per month) due to the substantial contribution ($3.50 per month) provided by the Commonwealth. Importantly, the Commission has found a positive correlation between the amount of state Lifeline support and telephone subscribership penetration rates. We also found that the transfer of PRTC to América Móvil in 2007 was in the public interest based, in part, on América Móvil's extensive experience in designing products specifically for rural and low-income populations. Finally, we note again that through the operation of market forces, the wireless subscription rate in Puerto Rico has grown substantially, with low-income customers subscribing to wireless service in ever-increasing numbers, so that the customers of wireless competitive ETCs received more than one-third of total low-income support in 2008.

16. These combined public and private efforts have contributed to the dramatic growth in low-income support provided to the Commonwealth. Combined annual Lifeline and Link-Up support in Puerto Rico has grown from just over $1.16 million in 2001 to more than $23.4 million in 2008, ranking Puerto Rico as the seventh largest recipient of low-income support among the states and territories. This increase was driven by a dramatic expansion in the number of low-income support recipients, which grew from zero in 1997 to 188,000 in 2008. The Commission has previously attributed Puerto Rico's historically lagging telephone subscribership penetration rate to low per-capita income, not a high cost of service. PRTC acknowledges this fact. We therefore find the expansion of subsidies associated with the low-income support program significant given our prior finding that low-income support—*not* high-cost support—is the federal program best suited to address issues of affordability and subscribership in Puerto Rico. On the basis of the record before us, we are unpersuaded that providing additional high-cost support through a non-rural insular mechanism is needed to address the underlying concern that PRTC identifies regarding low telephone subscribership in Puerto Rico. While we emphasize that there is still work to be done, this dramatic narrowing of the gap in telephone subscribership between Puerto Rico and non-insular areas reinforces our long-held view that low-income support, in combination with our other universal service programs, is an effective means to address affordability and subscribership in Puerto Rico. As indicated in the companion NPRM, we seek comment on whether, due to the extraordinarily low income levels in Puerto Rico, it is appropriate to amend our rules to allow eligible low-income consumers in Puerto Rico additional support through the Link Up Program to offset special construction charges incurred if additional facilities are required to provide them with access to voice telephone service.

17. In summary, we agree with PRTC that "the Commission has created a set of complementary universal service programs that work in conjunction to ensure that all consumers have access to affordable and reasonably comparable telecommunications services." Indeed, in responding to the Tenth Circuit's *Qwest II* decision, we concluded generally that the non-rural high-cost support mechanism, acting in combination with the Commission's other universal service programs, provides sufficient support to achieve the universal service objectives set forth in section 254 of the Act. These programs have produced almost ubiquitous access to telecommunications services and very high telephone subscribership rates throughout the United States, including Puerto Rico. We therefore do not agree with PRTC that its loss of high-cost loop support from the legacy program that preceded the creation of the non-rural support mechanism rendered universal service support to Puerto Rico insufficient. As we recently explained, the Commission cannot reasonably evaluate the non-rural high-cost support mechanism in isolation. Sufficient support that satisfies the universal service objectives of Act—including reasonable comparability and affordability—can only be achieved through the totality of the Commission's universal service programs. Moreover, we reject PRTC's contention that the Commission views high-cost support and low-income support to be "mutually exclusive." To the contrary, we simply find that PRTC is not entitled to federal high-cost model support under the non-rural mechanism because its costs do not meet the eligibility threshold and, on the basis of this record, that total support provided to Puerto Rico through

the various universal service programs is sufficient to satisfy the objectives in section 254 of the Act.

18. We acknowledge that in the 2005 *NPRM,* the Commission tentatively concluded that "adopting a non-rural mechanism would have a limited impact on the universal service fund." PRTC estimates that a non-rural insular mechanism would provide PRTC with approximately $33 million in additional annual support based on 2004 data, which amounts to less than one percent of the total high-cost program. We are not persuaded, however, that the relatively limited financial impact of PRTC's proposal compels us to adopt it. Because universal service is funded by contributions from telecommunications carriers, which typically pass their contributions on to consumers, we must take care to avoid "excess subsidization of the universal service fund," which may actually "detract from universal service by causing rates to unnecessarily rise, thereby pricing some consumers out of the market." Moreover, as the D.C. Circuit recently held, we "must consider not only the possibility of pricing some customers out of the market altogether, but the need to limit the burden on customers who continue to maintain telephone service." In administering the universal service program, we take seriously our obligation to "strike an appropriate balance between the interests of widely dispersed customers with small stakes and a concentrated interest group seeking to increase its already large stake." Given our conclusion on this record that universal service support for Puerto Rico is sufficient under the Commission's existing universal service programs, we find that any additional high-cost support provided to PRTC cannot be justified under those existing programs.

3. The Application of the Commission's Forward-Looking Cost-Based Model for Determining Non-Rural High-Cost Support Adequately Addresses PRTC's Circumstances

19. The Commission determined in the *Universal Service First Report and Order,* 62 FR 32862, June 17, 1997, that non-rural carriers would receive support based on forward-looking economic costs (*i.e.,* costs estimated by the Commission's cost model), that the definition of rural carriers would exclude carriers of PRTC's size, and that a separate support mechanism for carriers serving insular areas was not warranted. As a result, although PRTC receives significant levels of Interstate Common Line Support, it does not receive high-cost model support or any specially targeted insular support today. In the *NPRM,* the Commission sought comment on a PRTC proposal that the Commission adopt a non-rural insular high-cost support mechanism based on the existing rural high-cost loop support mechanism, but with a cost threshold far below that currently used for rural telephone companies.

20. PRTC's proposal is predicated, in part, on its long-standing contention that the extreme weather and terrain conditions and high shipping costs in insular areas make the cost characteristics of even large insular carriers more like those of rural carriers. In the *Universal Service First Report and Order,* the Commission rejected this argument as grounds for providing PRTC high-cost support on the basis of embedded costs, finding that, "as a large telephone compan[y]," PRTC "should possess the economies of scale and scope to deal efficiently with the cost of providing service in their areas." We believe this reasoning still applies to PRTC. In approving license transfers associated with América Móvil's 2007 acquisition of PRTC, for example, we found that América Móvil "brings significant advantages of scale and scope to bear" in providing telecommunications services to consumers.

21. Even more significantly, record evidence in this proceeding reinforces our earlier decision. While PRTC claims that its costs are similar to those of rural carriers, PRTC's embedded costs are actually too low to make it eligible for support under the high-cost support mechanism that currently funds much smaller, rural telephone companies that do not enjoy the same economies of scale and scope. Only by lowering the rural mechanism's cost threshold significantly—from slightly more than $400 per loop to about $240 per loop (as proposed by PRTC)—would PRTC become eligible for the significant increase in high-cost loop support (about $33 million annually) that it has requested. Thus, based on PRTC's own embedded cost data in the record before us, we find that PRTC has not justified a departure from our prior determinations that, for purposes of high-cost support, PRTC should be treated as a non-rural carrier due to its size and resulting economies of scale and scope.

22. We also reject PRTC's claim that the non-rural forward-looking cost model fails accurately to represent insular costs. In particular, we do not find persuasive PRTC's arguments that it should receive high-cost support based on its embedded costs because the forward-looking economic costs produced by the high-cost model are less than PRTC's actual costs. First, PRTC's arguments do not address the central purpose of using forward-looking economic costs in the non-rural support model, which is to estimate the costs that would be incurred by an efficient provider of service. The Commission previously found that "variability in historic costs among companies is due to a variety of factors and does not simply reflect how efficient or inefficient a firm is in providing the supported services." Indeed, in this proceeding, PRTC has merely asserted that its costs are higher because it serves an insular area and has not addressed whether inefficiencies may have contributed to the difference. Second, PRTC argues that the national average costs used in the model are inappropriate for estimating the costs of serving insular areas and states that "it remains unclear the extent to which [PRTC's] costs were included in those national averages." In the *Tenth Report and Order,* 64 FR 67372, December 1, 1999, the Commission considered the use of a variety of data sources to determine input values in the high-cost model, including surveys of non-rural carriers. To the extent that PRTC declined to respond to a voluntary survey seeking cost data from carriers, the Commission could not include PRTC's cost data. Finally, PRTC's argument relies on inaccurate premises. For example, PRTC argues that the model's use of customer addresses from Puerto Rico results in erroneous customer locations that generate inaccurate results. In fact, the road surrogate method used by the model assumes an even distribution of customers along roads and does not attempt to precisely assign customer location based on addresses. PRTC also complains that "[a] comparison of the actual operating costs of other non-rural jurisdictions further calls attention to the disparate treatment of Puerto Rico." But it does not follow that the forward-looking cost model produces inaccurate results simply because Puerto Rico receives less high-cost model support than other jurisdictions. In any event, we find PRTC's "analysis" unpersuasive due to the manner in which it mixes statewide average embedded costs with support amounts from two different support mechanisms (*i.e.,* the rural and non-rural support mechanisms) that are based on two different methodologies (*i.e.,* embedded versus forward-looking costs).

23. PRTC's attacks on the accuracy of the forward-looking cost model are similar to arguments that the Commission rejected when it adopted

that model in the *Tenth Report and Order.* For example, in "explain[ing] why the model estimates higher costs in some states relative to others in a distribution that differs from carriers' book costs and from some observers' expectations," the Commission found that "[i]n general, * * * the states where the model estimated the highest costs were those states in which the territory served by the non-rural carriers, which are typically larger carriers, included more rural areas than in other states." This analysis is entirely consistent with the data in the record, which show that PRTC's embedded costs fall below the threshold for support under the rural high-cost support mechanism. Simply stated, PRTC has not persuaded us that the model fails to accurately measure its costs because PRTC has not demonstrated that its actual costs share the cost characteristics of rural carriers, as opposed to non-rural carriers. We further note that the Tenth Circuit in *Qwest I* upheld that Order (and our use of the cost model) against a similar challenge from Qwest, explaining that "while Qwest notes analytic problems with * * * the model it has not presented any evidence that the model overall produces such inaccurate results that it cannot form the basis of rational decision-making." Indeed, as the Tenth Circuit explained, "[t]he model is meant to estimate the costs of providing service," so "[i]t need not reflect physical reality in all aspects if it produces 'reasonably accurate estimates,' as the FCC has found it does." PRTC has provided no new evidence on this record that compels reconsideration of our previous conclusion that the cost model provides a reasonable means of determining appropriate levels of high-cost support. To the contrary, as noted, the record demonstrates a significant increase in telephone subscribership in Puerto Rico in the years since the *NPRM* was issued.

24. Nor do we believe that it would be in the public interest to transition PRTC from the non-rural mechanism to an entirely new high-cost support mechanism based on embedded costs, even on an interim basis. As a general matter, we have determined that the appropriate basis for high-cost support is forward-looking economic cost and have moved away from the use of embedded costs for determining universal service support wherever possible. We intend to continue that process, and agree with GCI that adoption of PRTC's proposal would be a step in the wrong direction.

4. Comprehensive Reform and the National Broadband Plan

25. The Commission has long recognized the need for comprehensive review and possible reform of universal service reform, and has sought comment on various proposals for comprehensive reform of the high-cost support mechanisms, rural as well as non-rural. Since the Commission originally adopted the non-rural high-cost mechanism in 1999, the telecommunications marketplace has undergone significant changes. While in 1996 the majority of consumers subscribed to separate local and long distance providers, today the majority of consumers subscribe to local/long distance bundles offered by a single provider. In addition, the vast majority of subscribers have wireless phones as well as wireline phones, and an increasing percentage of consumers are dropping their wireline phones in favor of wireless or broadband-based (voice over Internet protocol) phone services. Finally, an increasing percentage of carriers are converting their networks from circuit-switched to Internet protocol (IP) technology.

26. On March 16, 2010, the Commission adopted a Joint Statement on Broadband, which sets forth the overarching vision and goals for U.S. broadband policy and recommends comprehensive reform of universal service. The Commission also delivered to Congress the National Broadband Plan, which contains specific recommendations for reform. The National Broadband Plan recommends that all Americans should have access to affordable broadband service and proposes a comprehensive reform program to shift the high-cost universal service program from primarily supporting voice communications to supporting broadband platforms that enable many applications, including voice. As set forth in the National Broadband plan, a new Connect America Fund would provide universal service support in areas where there is no private sector business case to offer broadband platforms that are capable of delivering high-quality voice services because providers cannot earn enough revenue to cover the costs of deploying and operating broadband infrastructure and services.

27. The recommendations to transition the existing high-cost universal service mechanisms to a new broadband program further cause us to conclude that PRTC's requested reform, limited only to non-rural insular areas, should not be undertaken at this time. While we believe that we have fully addressed the insular support questions raised in the *NPRM*, we anticipate that our efforts to reform universal service support will be advanced further through future proceedings that follow from the National Broadband Plan. The Commission will release a notice of proposed rulemaking later this year that will address the high-cost universal service recommendations of the National Broadband Plan. We encourage parties with information about any unique cost characteristics of providing broadband service in insular areas, such as Puerto Rico, to participate in these forthcoming proceedings and submit any relevant data. Doing so will ensure that the Commission has the information necessary to determine the cost of deploying and operating a broadband infrastructure in insular areas.

28. In the interim, we find that it will further the public interest if PRTC remains subject to the non-rural support mechanism until comprehensive universal service reform is adopted, consistent with the recommendations contained in the National Broadband Plan. If PRTC were to receive additional support for voice service pursuant to its proposed non-rural insular mechanism, it likely would be more difficult to transition that support to focus on areas unserved or underserved by broadband.

III. Procedural Matters

A. Procedural Matters Related to the Order

1. Paperwork Reduction Analysis

29. This order does not contain new, modified, or proposed information collections subject to the Paperwork Reduction Act of 1995, Public Law 104–13. In addition, therefore, it does not contain any new, modified, or proposed "information collection burden for small business concerns with fewer than 25 employees," pursuant to the Small Business Paperwork Relief Act of 2002, Public law 107–198, *see* 44 U.S.C. 3506(c)(4).

2. Final Regulatory Flexibility Act Certification

30. As we are adopting no rules in this order, no regulatory flexibility analysis is required.

3. Congressional Review Act

31. The Commission will not send a copy of this order in a report to Congress and the Government Accountability Office pursuant to the Congressional Review Act because no rules are being adopted at this time.

B. Ex Parte Presentations

32. This proceeding shall be treated as a "permit-but-disclose" proceeding in accordance with the Commission's *ex parte* rules. Persons making oral *ex parte* presentations are reminded that memoranda summarizing the presentations must contain summaries of the substance of the presentations and not merely a listing of the subjects discussed. More than a one or two sentence description of the views and arguments presented is generally required. Other requirements pertaining to oral and written presentations are set forth in § 1.1206(b) of the Commission's rules.

List of Subjects in 47 CFR Part 54

Communications common carriers, High-Cost universal support, Reporting and recordkeeping requirements, Schools, Telecommunications, Telephone.

Federal Communications Commission.

Marlene H. Dortch,

Secretary.

BILLING CODE 6712–01–P

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 73

[DA 10–698; MB Docket No. 09–230; RM–11586]

Television Broadcasting Services; Seaford, DE

AGENCY: Federal Communications Commission.

ACTION: Final rule.

SUMMARY: The Commission grants the allotment of channel 5 to Seaford, Delaware. The Commission waived the freeze on the filing of new DTV allotments to initiate this proceeding and to advance the policy, as set forth in Section 331(a) of the Communications Act of 1934, as amended, to allocate not less than one very high frequency commercial television channel to each State, if technically feasible.

DATES: This rule is effective June 7, 2010.

FOR FURTHER INFORMATION CONTACT: Adrienne Y. Denysyk, Media Bureau, (202) 418–1600.

SUPPLEMENTARY INFORMATION: This is a synopsis of the Commission's *Report and Order*, MB Docket No. 09–230, adopted April 23, 2010, and released April 28, 2010. The full text of this document is available for public inspection and copying during normal business hours in the FCC's Reference Information Center at Portals II, CY–A257, 445 12th Street, SW., Washington, DC 20554. This document will also be available via ECFS (*http://fjallfoss.fcc.gov/ecfs/*). This document may be purchased from the Commission's duplicating contractor, Best Copy and Printing, Inc., 445 12th Street, SW., Room CY–B402, Washington, DC 20554, telephone 1–800–478–3160 or via the company's Web site, *http://www.bcipweb.com.* To request materials in accessible formats for people with disabilities (braille, large print, electronic files, audio format), send an e-mail to *fcc504@fcc.gov* or call the Consumer & Governmental Affairs Bureau at 202–418–0530 (voice), 202–418–0432 (tty).

This document does not contain information collection requirements subject to the Paperwork Reduction Act of 1995, Public Law 104–13. In addition, therefore, it does not contain any information collection burden "for small business concerns with fewer than 25 employees," pursuant to the Small Business Paperwork Relief Act of 2002, Public Law 107–198, *see* 44 U.S.C. 3506(c)(4). Provisions of the Regulatory Flexibility Act of 1980 do not apply to this proceeding.

The Commission will send a copy of this *Report and Order* in a report to be sent to Congress and the Government Accountability Office pursuant to the Congressional Review Act, *see* 5 U.S.C. 801(a)(1)(A).

List of Subjects in 47 CFR Part 73

Television, Television broadcasting.

■ For the reasons discussed in the preamble, the Federal Communications Commission amends 47 CFR part 73 as follows:

PART 73—RADIO BROADCAST SERVICES

■ 1. The authority citation for part 73 continues to read as follows:

Authority: 47 U.S.C. 154, 303, 334, 336.

§ 73.622 [Amended]

■ 2. Section 73.622(i), the Post-Transition Table of DTV Allotments under Delaware, is amended by adding channel 5 at Seaford.

Federal Communications Commission.

Clay C. Pendarvis,

Associate Chief, Video Division, Media Bureau.

[FR Doc. 2010–10865 Filed 5–6–10; 8:45 am]

BILLING CODE 6712–01–P

DEPARTMENT OF DEFENSE

Defense Acquisition Regulations System

48 CFR Part 252

Defense Federal Acquisition Regulation Supplement; Technical Amendment

AGENCY: Defense Acquisition Regulations System, Department of Defense (DoD).

ACTION: Final rule.

SUMMARY: DoD is issuing a technical amendment to the Defense Federal Acquisition Regulation Supplement (DFARS) to correct a reference to a paragraph in a FAR clause.

DATES: *Effective Date:* May 7, 2010.

FOR FURTHER INFORMATION CONTACT: Ms. Ynette R. Shelkin, Defense Acquisition Regulations System, OUSD (AT&L) DPAP (DARS), Room 3B855, 3060 Defense Pentagon, Washington, DC 20301–3060. Telephone 703–602–8384; facsimile 703–602–0350.

SUPPLEMENTARY INFORMATION: This final rule amends DFARS text at 252.204–7007, Alternate A, Annual Representations and Certifications, by correcting the paragraph reference to FAR 52.204–8 from paragraph (c) to paragraph (d).

List of Subjects in 48 CFR Part 252

Government procurement.

Ynette R. Shelkin,

Editor, Defense Acquisition Regulations System.

■ Therefore DoD is amending 48 CFR part 252 as follows:

■ 1. The authority citation for 48 CFR part 252 continues to read as follows:

Authority: 41 U.S.C. 421 and 48 CFR chapter 1.

PART 252—SOLICITATION PROVISIONS AND CONTRACT CLAUSES

252.204–7007 [Amended]

■ 2. Amend section 252.204–7007 by revising the clause date to read "(MAY 2010)" and the paragraph designation in the FAR provision to read "(d)".

BILLING CODE 5001–08–P

Proposed Rules

Federal Register
Vol. 75, No. 88
Friday, May 7, 2010

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

NUCLEAR REGULATORY COMMISSION

10 CFR Part 72

[NRC–2009–0538]

RIN 3150–AI75

List of Approved Spent Fuel Storage Casks: NUHOMS® HD System Revision 1

AGENCY: Nuclear Regulatory Commission.

ACTION: Proposed rule.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is proposing to amend its spent fuel storage cask regulations by revising the Transnuclear, Inc. (TN), NUHOMS® HD System listing within the "List of Approved Spent Fuel Storage Casks" to include Amendment No. 1 to Certificate of Compliance (CoC) Number 1030. Amendment No. 1 would modify the CoC to add Combustion Engineering 16x16 class fuel assemblies as authorized contents, reduce the minimum off-normal ambient temperature from −20 °F to −21 °F, expand the authorized contents of the NUHOMS® HD System to include pressurized water reactor fuel assemblies with control components, reduce the minimum initial enrichment of fuel assemblies from 1.5 weight percent uranium-235 to 0.2 weight percent uranium-235, clarify the requirements of reconstituted fuel assemblies, add requirements to qualify metal matrix composite neutron absorbers with integral aluminum cladding, delete use of nitrogen for draining the water from the dry shielded canister (DSC) and allow only helium as a cover gas during DSC cavity water removal operations, and make corresponding changes to the technical specifications.

DATES: Comments on the proposed rule must be received on or before June 7, 2010.

ADDRESSES: Please include Docket ID NRC–2009–0538 in the subject line of your comments. For instructions on submitting comments and accessing documents related to this action, see Section I, "Submitting Comments and Accessing Information" in the **SUPPLEMENTARY INFORMATION** section of this document. You may submit comments by any one of the following methods.

Federal Rulemaking Web Site: Go to *http://www.regulations.gov* and search for documents filed under Docket ID NRC–2009–0538. Address questions about NRC dockets to Carol Gallagher, telephone 301–492–3668, e-mail *Carol.Gallager@nrc.gov*.

Mail Comments to: Secretary, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001, ATTN: Rulemakings and Adjudications Staff.

E-mail Comments to: Rulemaking.Comments@nrc.gov. If you do not receive a reply e-mail confirming that we have received your comments, contact us directly at 301–415–1677.

Hand-deliver Comments to: 11555 Rockville Pike, Rockville, Maryland 20852, between 7:30 a.m. and 4:15 p.m. Federal workdays (Telephone 301–415–1677).

Fax Comments to: Secretary, U.S. Nuclear Regulatory Commission at 301–415–1101.

FOR FURTHER INFORMATION CONTACT: Jayne M. McCausland, Office of Federal and State Materials and Environmental Management Programs, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001, telephone (301) 415–6219, e-mail *Jayne.McCausland@nrc.gov*.

SUPPLEMENTARY INFORMATION:

Submitting Comments and Accessing Information

Comments submitted in writing or in electronic form will be posted on the NRC Web site and on the Federal rulemaking Web site *http://www.regulations.gov*. Because your comments will not be edited to remove any identifying or contact information, the NRC cautions you against including any information in your submission that you do not want to be publicly disclosed. The NRC requests that any party soliciting or aggregating comments received from other persons for submission to the NRC inform those persons that the NRC will not edit their comments to remove any identifying or contact information, and therefore, they should not include any information in their comments that they do not want publicly disclosed.

You can access publicly available documents related to this document using the following methods:

NRC's Public Document Room (PDR): The public may examine and have copied for a fee publicly available documents at the NRC's PDR, Room O–1F21, One White Flint North, 11555 Rockville Pike, Rockville, Maryland.

NRC's Agencywide Documents Access and Management System (ADAMS): Publicly available documents created or received at the NRC are available electronically at the NRC's Electronic Reading Room at *http://www.nrc.gov/reading-rm/adams.html*. From this page, the public can gain entry into ADAMS, which provides text and image files of NRC's public documents. If you do not have access to ADAMS or if there are problems in accessing the documents located in ADAMS, contact the NRC's PDR reference staff at 1–800–397–4209, or 301–415–4737, or by e-mail to *PDR.Resource@nrc.gov*.

Federal Rulemaking Web Site: Public comments and supporting materials related to this proposed rule can be found at *http://www.regulations.gov* by searching on Docket ID NRC–2009–0538.

For additional information, see the Direct Final Rule published in the Rules and Regulations section of this **Federal Register**.

Procedural Background

This rule is limited to the changes contained in Amendment 1 to CoC No. 1030 and does not include other aspects of the NUHOMS® HD System design. Because NRC considers this action noncontroversial and routine, the NRC is publishing this proposed rule concurrently as a direct final rule in the Rules and Regulations section of this **Federal Register**. Adequate protection of public health and safety continues to be ensured. The direct final rule will become effective on July 21, 2010. However, if the NRC receives significant adverse comments on the direct final rule by June 7, 2010, then the NRC will publish a document that withdraws the direct final rule. If the direct final rule is withdrawn, the NRC will address the comments received in response to the proposed revisions in a subsequent final rule. Absent significant modifications to the proposed revisions requiring

republication, the NRC will not initiate a second comment period on this action in the event the direct final rule is withdrawn.

A significant adverse comment is a comment where the commenter explains why the rule would be inappropriate, including challenges to the rule's underlying premise or approach, or would be ineffective or unacceptable without a change. A comment is adverse and significant if:

(1) The comment opposes the rule and provides a reason sufficient to require a substantive response in a notice-and-comment process. For example, a substantive response is required when:

(a) The comment causes the NRC staff to reevaluate (or reconsider) its position or conduct additional analysis;

(b) The comment raises an issue serious enough to warrant a substantive response to clarify or complete the record; or

(c) The comment raises a relevant issue that was not previously addressed or considered by the NRC staff.

(2) The comment proposes a change or an addition to the rule, and it is apparent that the rule would be ineffective or unacceptable without incorporation of the change or addition.

(3) The comment causes the NRC staff to make a change (other than editorial) to the rule, CoC, or TS.

For additional procedural information and the regulatory analysis, see the direct final rule published in the Rules and Regulations section of this **Federal Register**.

List of Subjects in 10 CFR Part 72

Administrative practice and procedure, Hazardous waste, Nuclear materials, Occupational safety and health, Radiation protection, Reporting and recordkeeping requirements, Security measures, Spent fuel, Whistleblowing.

For the reasons set out in the preamble and under the authority of the Atomic Energy Act of 1954, as amended; the Energy Reorganization Act of 1974, as amended; the Nuclear Waste Policy Act of 1982, as amended, and 5 U.S.C. 553; the NRC is proposing to adopt the following amendments to 10 CFR part 72.

PART 72—LICENSING REQUIREMENTS FOR THE INDEPENDENT STORAGE OF SPENT NUCLEAR FUEL, HIGH-LEVEL RADIOACTIVE WASTE, AND REACTOR-RELATED GREATER THAN CLASS C WASTE

1. The authority citation for part 72 continues to read as follows:

Authority: Secs. 51, 53, 57, 62, 63, 65, 69, 81, 161, 182, 183, 184, 186, 187, 189, 68 Stat. 929, 930, 932, 933, 934, 935, 948, 953, 954, 955, as amended, sec. 234, 83 Stat. 444, as amended (42 U.S.C. 2071, 2073, 2077, 2092, 2093, 2095, 2099, 2111, 2201, 2232, 2233, 2234, 2236, 2237, 2238, 2282); sec. 274, Pub. L. 86–373, 73 Stat. 688, as amended (42 U.S.C. 2021); sec. 201, as amended, 202, 206, 88 Stat. 1242, as amended, 1244, 1246 (42 U.S.C. 5841, 5842, 5846); Pub. L. 95–601, sec. 10, 92 Stat. 2951 as amended by Pub. L. 102–486, sec. 7902, 106 Stat. 3123 (42 U.S.C. 5851); sec. 102, Pub. L. 91–190, 83 Stat. 853 (42 U.S.C. 4332); secs. 131, 132, 133, 135, 137, 141, Pub. L. 97–425, 96 Stat. 2229, 2230, 2232, 2241, sec. 148, Pub. L. 100–203, 101 Stat. 1330–235 (42 U.S.C. 10151, 10152, 10153, 10155, 10157, 10161, 10168); sec. 1704, 112 Stat. 2750 (44 U.S.C. 3504 note); sec. 651(e), Pub. L. 109–58, 119 Stat. 806–10 (42 U.S.C. 2014, 2021, 2021b, 2111).

Section 72.44(g) also issued under secs. 142(b) and 148(c), (d), Pub. L. 100–203, 101 Stat. 1330–232, 1330–236 (42 U.S.C. 10162(b), 10168(c),(d)). Section 72.46 also issued under sec. 189, 68 Stat. 955 (42 U.S.C. 2239); sec. 134, Pub. L. 97–425, 96 Stat. 2230 (42 U.S.C. 10154). Section 72.96(d) also issued under sec. 145(g), Pub. L. 100–203, 101 Stat. 1330–235 (42 U.S.C. 10165(g)). Subpart J also issued under secs. 2(2), 2(15), 2(19), 117(a), 141(h), Pub. L. 97–425, 96 Stat. 2202, 2203, 2204, 2222, 2244 (42 U.S.C. 10101, 10137(a), 10161(h)).

Subparts K and L are also issued under sec. 133, 98 Stat. 2230 (42 U.S.C. 10153) and sec. 218(a), 96 Stat. 2252 (42 U.S.C. 10198).

2. In § 72.214, Certificate of Compliance 1030 is revised to read as follows:

§ 72.214 List of approved spent fuel storage casks.

* * * * *

Certificate Number: 1030.

Initial Certificate Effective Date: January 10, 2007.

Amendment Number 1 Effective Date: July 21, 2010.

SAR Submitted by: Transnuclear, Inc.

SAR Title: Final Safety Analysis Report for the NUHOMS® HD Horizontal Modular Storage System for Irradiated Nuclear Fuel.

Docket Number: 72–1030.

Certificate Expiration Date: January 10, 2027.

Model Number: NUHOMS® HD–32PTH.

DEPARTMENT OF ENERGY

10 CFR Parts 430 and 431

[Docket No. EERE–2010–BT–CE–0014]

RIN 1904–AC23

Revisions to Energy Efficiency Enforcement Regulations

AGENCY: Office of Energy Efficiency and Renewable Energy and Office of the General Counsel, Department of Energy.

ACTION: Request for Information (RFI); request for comment.

SUMMARY: The U.S. Department of Energy (DOE or the "Department") intends to expand and revise its existing energy efficiency enforcement regulations for certain consumer products and commercial and industrial equipment covered under the Energy Policy and Conservation Act of 1975, as amended (EPCA or the "Act"). These regulations provide for manufacturer submission of compliance statements and certification reports to DOE, maintenance of compliance records by manufacturers, and the availability of enforcement actions for improper certification or upon a determination of noncompliance. To facilitate this process and to allow interested parties to provide suggestions, comments, and information, DOE is publishing this request for information. This request identifies several areas on which DOE is particularly interested in receiving information; however, any input and suggestions considered relevant to the topic are welcome.

DATES: Written comments and information are requested on or before June 7, 2010.

ADDRESSES: Interested persons are encouraged to submit comments using the *Federal eRulemaking Portal* at *http://www.regulations.gov*. Follow the instructions for submitting comments. Alternatively, interested persons may submit comments, identified by docket number EERE–2010–BT–CE–0014, by any of the following methods:

- *E-mail:* to *EnforcementRFI@hq.DOE.gov*. Include EERE–2010–BT–CE–0014 in the subject line of the message.
- *Mail:* Ms. Brenda Edwards, U.S. Department of Energy, Building Technologies Program, Mailstop EE–2J, Revisions to Energy Efficiency Enforcement Regulations, EERE–2010–BT–CE–0014, 1000 Independence Avenue, SW., Washington, DC 20585–0121. Phone: (202) 586–2945. Please submit one signed paper original.
- *Hand Delivery/Courier:* Ms. Brenda Edwards, U.S. Department of Energy,

Building Technologies Program, 6th Floor, 950 L'Enfant Plaza, SW., Washington, DC 20024. Phone: (202) 586–2945. Please submit one signed paper original.

Instructions: All submissions received must include the agency name and docket number or RIN for this rulemaking.

Docket: For access to the docket to read background documents, or comments received, go to the *Federal eRulemaking Portal* at *http://www.regulations.gov*.

FOR FURTHER INFORMATION CONTACT: Direct requests for additional information may be sent to Ms. Celia Sher, U.S. Department of Energy, Office of the General Counsel, Forrestal Building, GC–71, 1000 Independence Avenue, SW., Washington, DC 20585. Telephone: 202–287–6122. E-mail: *Celia.Sher@hq.doe.gov*; and Mr. Richard Karney, U.S. Department of Energy, Office of Energy Efficiency and Renewable Energy, Building Technologies Program, EE–2J, 1000 Independence Avenue, SW., Washington, DC 20585–0121. Telephone: 202–586–9449. E-mail: *Richard.Karney@ee.doe.gov*.

SUPPLEMENTARY INFORMATION:

Authority and Background: EPCA authorizes DOE to enforce compliance with the energy and water conservation standards (all references herein referring to energy use and consumption include water use and consumption; all references to energy efficiency include water conservation) established for certain consumer products and commercial equipment. 42 U.S.C. 6299–6305 (consumer products), 6316 (commercial and industrial equipment). To ensure that all covered products distributed in the United States comply with DOE's energy conservation standards, the Department has promulgated enforcement regulations that include specific certification and compliance requirements. See Title 10 of the Code of Federal Regulations (10 CFR) part 430, subpart F; 10 CFR part 431, subparts B, K, S, T, U, and V.

The Department is considering revising its enforcement procedures to ensure that all of its energy efficiency regulations are rigorously and consistently enforced. The Department is issuing this initial request for information to allow interested parties an opportunity to provide information that will assist DOE in reforming the existing enforcement process. This initial request will be followed by a notice of proposed rulemaking that will be based on the information received as a result of this notice and other data and information gathered by DOE.

Public Participation

A. Submission of Information

DOE will accept comments in response to this RFI under the timeline provided in the **DATES** section above. Comments submitted to the Department through the eRulemaking Portal or by e-mail should be provided in WordPerfect, Microsoft Word, PDF, or text file format. Those responding should avoid the use of special characters or any form of encryption, and wherever possible, comments should include the electronic signature of the author. Comments submitted to the Department by mail or hand delivery/courier should include one signed original paper copy. No telefacsimiles will be accepted.

Comments submitted in response to this notice will become a matter of public record and will be made publicly available.

The Department encourages interested parties to contact DOE if they would like to meet in person to discuss their comments. The Department's policy governing ex parte communications is posted on the Office of the General Counsel's Web site at: *http://www.gc.energy.gov/1309.htm*.

B. Issues on Which DOE Seeks Information

For this RFI, DOE requests comments, information, and recommendations on the following concepts for the purpose of revising current enforcement regulations in Parts 430 and 431 of 10 CFR. As set forth below, we seek comment on DOE's requirements for (1) Certification; (2) Enforcement Testing and Adjudication; (3) Verification Testing; (4) Waivers; and (5) the Application of our Regulations to Distinctive Products. The sequence of these proposals does not reflect any specific DOE preference.

(1) Certification Requirements

a. Under existing Department rules, manufacturers of covered products must satisfy a one-time certification requirement for each basic model. DOE would like to establish an annual certification requirement, similar to the Federal Trade Commission's (FTC) reporting requirements under the FTC's Appliance Labeling Rule (see 16 CFR 305.8). DOE is also considering options to consolidate filings with FTC, the Environmental Protection Agency (EPA) and other agencies, as appropriate, to reduce the reporting burdens on manufacturers. To the extent there are covered products not already required to file annual reports with FTC, this would increase the reporting burden on the manufacturers of those products. What are the costs and benefits of switching to an annual filing process for certification?

b. DOE is also considering implementing a recertification requirement when there is a change to a basic model that either increases or decreases energy efficiency or energy consumption. Section 10 CFR 430.62(b) presently provides for such reporting to DOE only if there is a change that increases energy consumption or decreases energy efficiency. This system creates a disconnect between the information certified to DOE and the energy consumption or energy efficiency of products actually on the market. DOE is looking for ways to have a more current and complete picture of the energy consumption and energy efficiency of the covered products being distributed in the U.S. Requiring recertification for any change in energy consumption or energy efficiency is one way to address this issue. With regard to recertification, should the Department establish a threshold percentage change in energy consumption or energy efficiency that must be reached before any recertification requirement is triggered? If we move to such a system, should the threshold percentage be product specific? Are there reasons why DOE should not require recertification for energy efficiency improvements? For example, would such a requirement create a disincentive to making such improvements? If so, to what extent? Are there alternative ways to address the Department's interest in obtaining more current and complete certification data?

c. In conjunction with the possible recertification requirement referenced above, DOE is interested in pursuing improvements to the manner in which basic model numbers are designated, so that the number that is provided to DOE for certification is clearly associated with the model number used to identify the unit in the market. A more unified numbering system would assist the Department and the public in identifying the market-based model number that corresponds with what is certified to DOE.

d. Under existing regulations, the sampling procedures to be used for compliance certification purposes are set forth in 10 CFR 430.24, and the sampling procedures to be used for enforcement testing (to determine compliance with the applicable energy conservation standard) are set forth in

Appendix B to Subpart F of Part 430. The Department seeks comment regarding any needed changes in the current sampling plans and the reasons the changes are warranted for a given product. DOE seeks comment on whether the sampling procedures for compliance certification and enforcement testing should be identical.

e. The regulations currently permit in-house, as well as independent, certification testing. In light of issues identified through DOE's recent enforcement efforts and the Government Accountability Office's recent report on ENERGY STAR, DOE requests comment on whether all covered products should be required to be independently tested for certification purposes.

f. Currently, the certification regulations allow a manufacturer or private labeler to elect to use a third party to submit certification reports to DOE. Should DOE continue to permit this practice? If so, what recourse should be available if a third party fails to follow through on filing for the manufacturer or labeler? Should that recourse be available if the third party fails just once to file on behalf of the manufacturer or labeler? Should DOE disallow a third party with a history of poor performance (*e.g.,* failure to submit certification reports, submission of inaccurate information, submission of incomplete information) from acting as a third party representative?

(2) Enforcement Testing and Adjudication

a. Pursuant to EPCA, DOE has authority to initiate enforcement actions to ensure compliance with its standards. The current regulations provide for enforcement testing upon DOE's receipt of written information that a covered product may be violating a standard. DOE contemplates revising its procedures to allow the Department more flexibility in its initiation of enforcement actions. For example, DOE is considering initiating and performing its own testing at the DOE-owned National Energy Technology Laboratory (NETL) Appliance Technology Evaluation Center (ATEC). DOE seeks comments on the use of its own facility for testing and the relationship of DOE testing as compared to industry testing.

In addition, DOE contemplates initiating enforcement actions, as needed, in response to credible information, or with reference to a set of established factors, such as: Manufacturer history of non-compliance; product class history of non-compliance; third party referrals from other regulatory agencies, advocacy groups, consumers, or competitors; models or technologies new to the marketplace; or other factors indicating that a model may not comply with the applicable standard. The Department seeks comment on this concept. Information relating to enforcement testing is also requested on the following:

(i) *Unit selection.* How should units be selected for enforcement testing? For example, should the units be manufacturer provided, supplied by the manufacturer's distributor, obtained off-the-shelf from a retailer, or should DOE have the ability to choose from any of these options? Should the cost allocation for the unit be the same regardless of how the product is obtained (*e.g.,* off-the-shelf or manufacturer provided)?

Under the current rules for enforcement testing, a manufacturer in receipt of a DOE test notice must ship a select number of units for testing as specified on the notice. In situations where the manufacturer keeps limited inventory, the manufacturer may need to build units specifically for enforcement testing, rather than providing DOE off-the-shelf, or already manufactured units. This creates a circumstance vulnerable to bias, which could undermine the overall effectiveness of enforcement testing. Are there suggestions regarding how the Department should address unit selection in these situations?

(ii) *Cost allocation for testing.* Should the cost of performing the enforcement testing be assumed by the manufacturer or DOE? Should the cost allocation of the testing be different if the product is found in compliance? What other factors should be taken into consideration when determining how to distribute the cost of testing?

(iii) *Sampling plan.* The Department seeks comment regarding any needed changes in the current enforcement sampling plans and the reasons the changes are warranted for a given product. As discussed above, the Department seeks comment regarding the adequacy of the current sampling plan for enforcement testing and whether the plans for enforcement and certification testing should be identical. *See* Part B, Section (1)d. above.

(iv) *Manufacturer role.* How should manufacturers be apprised of enforcement testing steps, including: Test set up; test conditions; and test data and reports? Should manufacturers have the opportunity to do additional testing? If so, what conditions and timeframe should govern such testing?

(3) Verification Testing

a. DOE is considering instituting a new requirement for periodic verification testing that would be applicable to all basic models certified with DOE. This requirement would be separate from enforcement testing and would be used to verify that the units distributed into commerce continue to be at the certified levels. DOE seeks comment on whether DOE should require manufacturers and/or private labelers to perform verification testing according to specified conditions and criteria.

b. With regard to such verification testing, the Department seeks comment on the following conditions and criteria:

Information Flow

(i) With what frequency should verification testing be required? What specific criteria should be used? Should this be an annual requirement?

(ii) What percentage of basic models should be verification tested annually, and how should units be selected? How many units of each model should be tested? What level of tolerance would be acceptable if only one unit is tested?

(iii) What level of information resulting from the verification testing should be communicated to DOE (*e.g.,* test data, test reports, final results)?

(iv) When and with what frequency should verification testing information be communicated to DOE? Should performance of verification testing be documented on the certification report?

(v) What steps should be taken if a basic model fails the verification testing? What information should be communicated to DOE and when should it be communicated?

(vi) What level of access should DOE and its representatives have to testing done pursuant to DOE regulations (such as the ability to observe testing)?

Testing Laboratories

(i) DOE contemplates that testing done to verify compliance would be performed by independent labs. What level of independence from the manufacturer should be required? We also seek comment on whether we should require that verification testing be done by a different lab than the lab that performed the certification testing.

(ii) DOE understands that some industry associations have in place or are currently developing verification testing programs. How should such industry verification programs tie into DOE's verification testing process? How would ties to such programs affect those manufacturers that are not members of industry associations? What information

should verification programs provide to DOE (*i.e.,* test reports) and with what frequency?

(iii) Should DOE require labs to be accredited to international standards such as International Organization for Standardization/International Electrotechnical Commission (ISO/IEC) 17025, or specifically accredited to perform DOE testing? Should labs that manufacturers use for verification testing be accredited by DOE? By an accreditation body like the National Institute of Standards and Technology's National Voluntary Laboratory Accreditation Program?

(iv) What conditions should DOE require for labs doing verification testing to ensure unbiased, consistent, and robust results? For example, should DOE require that all labs performing verification testing be calibrated with the same frequency, in order to ensure consistency across labs? Should all verification testing labs be required to participate in round robin testing? How should such round robin testing be conducted to ensure accurate and consistent lab results?

Cost

(i) Should verification testing be paid for by the manufacturer or private labeler? DOE requests comments regarding the cost burden placed on manufacturers for the above described verification testing. Please provide a detailed description of the costs and supporting information.

c. DOE seeks comment on whether it should conduct its own random verification testing of products separate from any required manufacturer verification testing. If so, what conditions and criteria should govern DOE performed verification testing?

(4) Waivers

Under existing regulations in 10 CFR 430.27, manufacturers have the option of seeking a waiver from the test procedure when a basic model contains a design characteristic that either prevents testing according to the prescribed test procedures or causes the test procedure to evaluate the basic model in a manner so unrepresentative of the model's true energy consumption characteristics as to provide materially inaccurate comparative data. DOE is considering establishing a mandatory waiver requirement, which would obligate manufacturers to obtain a waiver in those instances where the test procedure does not evaluate the energy or water consumption characteristics in a representative manner or where the test procedure yields materially inaccurate comparative data. This requirement would apply whether the product consumes more energy or less energy than would be measured by the applicable test procedure. DOE requests comments on this concept.

(5) Application of Regulations to Distinctive Products

DOE has an interest in creating a consistent, uniform enforcement framework across industries, manufacturers and products. Deviations from this approach must be justified based on distinctive product characteristics. We are interested in comments on the following questions relating to products that may justify unique approaches to certification, verification, and enforcement:

a. DOE understands some niche products or large commercial products are manufactured at very low quantities on a made-to-order basis. How should DOE's testing requirements and procedures be applied to these products? For example, how should units of these products be selected for testing?

b. Some products, such as electric motors, are distributed in commerce or imported into the U.S. as components of other products where the component product is not readily accessible. When products with regulated components are imported into the U.S., how can DOE best ensure that the components are compliant with U.S. regulations?

Docket: For direct access to the docket to read background documents, or comments received, visit the U.S. Department of Energy, Resource Room of the Building Technologies Program, 950 L'Enfant Plaza, SW., Suite 600, Washington, DC, 20024, (202) 586–2945, between 9 a.m. and 4 p.m., Monday through Friday, except Federal holidays. Please call Ms. Brenda Edwards at the above telephone number for additional information regarding visiting the Resource Room.

Procedural Requirements: Today's regulatory action has been determined not to be a significant regulatory action under section 3(f)(1) of Executive Order 12866, "Regulatory Planning and Review", 58 FR 51735 (Oct. 4, 1993).

Statutory Authority: 42 U.S.C. 6299–6305; 6316.

Issued in Washington, DC, on May 4, 2010.

Cathy Zoi,

Assistant Secretary, Energy Efficiency and Renewable Energy.

Scott Blake Harris,

General Counsel.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2010–0437; Directorate Identifier 2009–NM–130–AD]

RIN 2120–AA64

Airworthiness Directives; The Boeing Company Model 737–200, –300, –400, and –500 Series Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: We propose to adopt a new airworthiness directive (AD) for certain Model 737–200, –300, –400, and –500 series airplanes. This proposed AD would require repetitive inspections for cracking of certain fuselage frames and stub beams, and corrective actions if necessary. This proposed AD also provides for an optional repair, which would terminate the repetitive inspections. For airplanes on which a certain repair is done, this proposed AD would also require repetitive inspections for cracking of certain fuselage frames and stub beams, and corrective actions if necessary. This proposed AD results from reports of the detection of fatigue cracks at certain frame sections, in addition to stub beam cracking, caused by high flight cycle stresses from both pressurization and maneuver loads. We are proposing this AD to detect and correct fatigue cracking of certain fuselage frames and stub beams and possible severed frames, which could result in reduced structural integrity of the frames. This reduced structural integrity can increase loading in the fuselage skin, which will accelerate skin crack growth and could result in rapid decompression of the fuselage.

DATES: We must receive comments on this proposed AD by June 21, 2010.

ADDRESSES: You may send comments by any of the following methods:

- *Federal eRulemaking Portal:* Go to *http://www.regulations.gov*. Follow the instructions for submitting comments.
- *Fax:* 202–493–2251.
- *Mail:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue, SE., Washington, DC 20590.
- *Hand Delivery:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue, SE., Washington, DC 20590, between 9 a.m.

and 5 p.m., Monday through Friday, except Federal holidays.

For service information identified in this proposed AD, contact Boeing Commercial Airplanes, Attention: Data & Services Management, P.O. Box 3707, MC 2H–65, Seattle, Washington 98124–2207; telephone 206–544–5000, extension 1, fax 206–766–5680; e-mail *me.boecom@boeing.com*; Internet *https://www.myboeingfleet.com*. You may review copies of the referenced service information at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington. For information on the availability of this material at the FAA, call 425–227–1221.

Examining the AD Docket

You may examine the AD docket on the Internet at *http://www.regulations.gov*; or in person at the Docket Management Facility between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this proposed AD, the regulatory evaluation, any comments received, and other information. The street address for the Docket Office (telephone 800–647–5527) is in the **ADDRESSES** section. Comments will be available in the AD docket shortly after receipt.

FOR FURTHER INFORMATION CONTACT: Wayne Lockett, Aerospace Engineer, Airframe Branch, ANM–120S, FAA, Seattle Aircraft Certification Office, 1601 Lind Avenue, SW., Renton, Washington 98057–3356; telephone (425) 917–6447; fax (425) 917–6590.

SUPPLEMENTARY INFORMATION:

Comments Invited

We invite you to send any written relevant data, views, or arguments about this proposed AD. Send your comments to an address listed under the **ADDRESSES** section. Include "Docket No. FAA–2010–0437; Directorate Identifier 2009–NM–130–AD" at the beginning of your comments. We specifically invite comments on the overall regulatory, economic, environmental, and energy aspects of this proposed AD. We will consider all comments received by the closing date and may amend this proposed AD because of those comments.

We will post all comments we receive, without change, to *http://www.regulations.gov*, including any personal information you provide. We will also post a report summarizing each substantive verbal contact we receive about this proposed AD.

Discussion

We have received reports of fatigue cracks at certain frame sections, in addition to stub beam cracking. The fatigue cracking is caused by high flight cycle stresses from both pressurization and maneuver loads. Reduced structural integrity of the frames can increase loading in the fuselage skin, which will accelerate skin crack growth and could result in rapid decompression of the fuselage.

Relevant Service Information

We have reviewed Boeing Alert Service Bulletin 737–53A1254, Revision 1, dated July 9, 2009. The service bulletin describes procedures for, among other actions, repetitive detailed inspections for cracks in the body station (BS) 616 and BS 639 frame webs, inner chord, and outer chord, and the stub beam, and corrective actions if necessary. The corrective actions include repair of any cracking before further flight. The procedures also recommend contacting Boeing for repair instructions for certain cracking and repairing before further flight.

As an option to the detailed inspection, the service bulletin describes procedures for a high frequency eddy current (HFEC) inspection for cracks in the same areas, and repair of any crack found. The service bulletin also describes procedures for doing a detailed inspection of the inner chord along the length of the repair and around the fastener heads if a repair or preventative modification exists on the inner chord below the floor that prevents the accomplishment of the detailed or HFEC inspection in that area.

For airplanes on which a certain repair is done, the service bulletin describes procedures for repetitive detailed or HFEC inspections for cracking of the replacement frame section (frame webs, inner chord, and outer chord), and contacting Boeing for repair instructions if any crack is found, and repairing before further flight.

FAA's Determination and Requirements of This Proposed AD

We are proposing this AD because we evaluated all relevant information and determined the unsafe condition described previously is likely to exist or develop in other products of the same type design. This proposed AD would require accomplishing the actions specified in the service information described previously, except as discussed under "Differences Between the Proposed AD and Boeing Alert Service Bulletin 737–53A1254, Revision 1, dated July 9, 2009."

Differences Between the Proposed AD and Boeing Alert Service Bulletin 737–53A1254, Revision 1, Dated July 9, 2009

Although the service bulletin specifies economic inspections and repairs of BS 597 and BS 601 frames, this proposed AD would not require those inspections and repairs.

Although the service bulletin does not address accomplishing the inspections for airplanes on which fewer than 15,000 total flight cycles have been accumulated, this proposed AD would require the inspections on those airplanes.

The service bulletin specifies to contact the manufacturer for instructions on repairing cracks, but this proposed AD would require repairing cracks in one of the following ways:

- Using a method that we approve; or
- Using data that meet the certification basis of the airplane, and that have been approved by the Boeing Commercial Airplanes Organization Designation Authorization (ODA) that we have authorized to make those findings.

Costs of Compliance

We estimate that this proposed AD would affect 635 airplanes of U.S. registry. The following table provides the estimated costs for U.S. operators to comply with this proposed AD.

ESTIMATED COSTS

Action	Work hours	Average labor rate per hour	Cost per product	Number of U.S.-registered airplanes	Fleet cost
BS 616 and BS 639 inspection/lower frame and stub beam.	15	$85	$1,275, per inspection cycle.	635	$809,625 per inspection cycle.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. "Subtitle VII: Aviation Programs," describes in more detail the scope of the Agency's authority.

We are issuing this rulemaking under the authority described in "Subtitle VII, Part A, Subpart III, Section 44701: General requirements." Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

We determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

1. Is not a "significant regulatory action" under Executive Order 12866,

2. Is not a "significant rule" under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979), and

3. Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

You can find our regulatory evaluation and the estimated costs of compliance in the AD Docket.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. The FAA amends § 39.13 by adding the following new AD:

The Boeing Company: Docket No. FAA–2010–0437; Directorate Identifier 2009–NM–130–AD.

Comments Due Date

(a) We must receive comments by June 21, 2010.

Affected ADs

(b) None.

Applicability

(c) This AD applies to The Boeing Company Model 737–200, –300, –400, and –500 series airplanes, certificated in any category; as identified in Boeing Alert Service Bulletin 737–53A1254, Revision 1, dated July 9, 2009.

Subject

(d) Air Transport Association (ATA) of America Code 53: Fuselage.

Unsafe Condition

(e) This AD results from the detection of fatigue cracks at certain frame sections, in addition to stub beam cracking, caused by high flight cycle stresses from both pressurization and maneuver loads. The Federal Aviation Administration is issuing this AD to detect and correct fatigue cracking of certain fuselage frames and stub beams and possible severed frames, which could result in reduced structural integrity of the frames. This reduced structural integrity can increase loading in the fuselage skin, which will accelerate skin crack growth and could result in rapid decompression of the fuselage.

Compliance

(f) You are responsible for having the actions required by this AD performed within the compliance times specified, unless the actions have already been done.

Repetitive Inspections and Corrective Actions

(g) At the applicable time specified in paragraph (g)(1), (g)(2), or (g)(3) of this AD: Do a detailed or high frequency eddy current (HFEC) inspection for cracking of body station (BS) 616 and BS 639 frame webs, inner chord, and outer chord, and the stub beams; and do all applicable related investigative and corrective actions; by accomplishing all the actions specified in Part 1 of the Accomplishment Instructions of Boeing Alert Service Bulletin 737–53A1254, Revision 1, dated July 9, 2009, except as specified in paragraphs (i) and (j) of this AD. Do all applicable related investigative and corrective actions before further flight. Thereafter, repeat the inspection at intervals not to exceed 4,500 flight cycles since accomplishing the detailed inspection or at intervals not to exceed 9,000 flight cycles since accomplishing the HFEC inspection, as applicable.

(1) For airplanes on which no inspection of the BS 616 and BS 639 frames specified in Boeing Alert Service Bulletin 737–53A1254, dated February 17, 2005, has been done as of the effective date of this AD, and that have accumulated fewer than 55,000 total flight cycles as of the effective date of this AD: Inspect within 3,000 flight cycles after the effective date of this AD, or before the accumulation of 56,500 total flight cycles, whichever occurs first.

(2) For airplanes on which no inspection of the BS 616 and BS 639 frames specified in Boeing Alert Service Bulletin 737–53A1254, dated February 17, 2005, has been done as of the effective date of this AD, and that have accumulated 55,000 or more total flight cycles as of the effective date of this AD: Inspect within 1,500 flight cycles after the effective date of this AD.

(3) For airplanes on which a detailed or HFEC inspection of the BS 616 and BS 639 frames, specified in Boeing Alert Service Bulletin 737–53A1254, dated February 17, 2005, has been done as of the effective date of this AD: Inspect at the later of the times specified in paragraphs (g)(3)(i) and (g)(3)(ii) of this AD.

(i) Within 3,000 flight cycles after the effective date of this AD.

(ii) Within 4,500 flight cycles after the previous inspection done in accordance with Boeing Alert Service Bulletin 737–53A1254, dated February 17, 2005.

Post-Repair Repetitive Inspections and Corrective Actions

(h) For airplanes on which the repair specified in Part 4 of the Accomplishment Instructions of Boeing Alert Service Bulletin 737–53A1254, Revision 1, dated July 9, 2009, has been done: At the applicable time specified in paragraphs (h)(1) and (h)(2) of this AD, do a detailed or HFEC inspection for cracking of the replacement frame section (frame webs, inner chord, and outer chord); and do all applicable related investigative and corrective actions; by accomplishing all the actions specified in Part 1 of the Accomplishment Instructions of Boeing Alert Service Bulletin 737–53A1254, Revision 1, dated July 9, 2009, except as specified in paragraphs (i) and (j) of this AD. Do all applicable related investigative and corrective actions before further flight. Thereafter, repeat the inspection at intervals not to exceed 4,500 flight cycles since accomplishing the detailed inspection or at intervals not to exceed 9,000 flight cycles since accomplishing the HFEC inspection, as applicable.

(1) For airplanes on which a partial frame splice repair at BS 616 or BS 639 has been done, and the inner chord and web have been cold-worked: Inspect within 44,000 flight cycles after the repair has been done.

(2) For airplanes on which a partial frame splice repair at BS 616 or BS 639 has been done, and the inner chord and web have not been cold-worked: Inspect within 29,000 flight cycles after that repair has been done.

Alternative Inspection of Repaired or Modified Area

(i) For airplanes on which a repair or preventative modification exists on the inner chord below the floor which prevents the accomplishment of the detailed or HFEC inspection in that area as required by paragraph (g) of this AD: In lieu of inspecting that area, do a detailed inspection of the

inner chord along the length of the repair and around the fastener heads in accordance with Part 1 of the Accomplishment Instructions of Boeing Alert Service Bulletin 737–53A1254, Revision 1, dated July 9, 2009.

Exceptions to Service Information

(j) Where Boeing Alert Service Bulletin 737–53A1254, Revision 1, dated July 9, 2009, specifies to contact Boeing for repair instructions and repair: Before further flight, repair the cracking using a method approved in accordance with the procedures specified in paragraph (m) of this AD.

(k) Although Boeing Alert Service Bulletin 737–53A1254, Revision 1, dated July 9, 2009, specifies to submit information to the manufacturer, this AD does not include that requirement.

Terminating Action

(l) Doing the repair specified in Part 4 of Boeing Alert Service Bulletin 737–53A1254, Revision 1, dated July 9, 2009, terminates the repetitive inspection requirements of paragraph (g) of this AD for the repaired frame only.

Alternative Methods of Compliance (AMOCs)

(m)(1) The Manager, Seattle Aircraft Certification Office (ACO), FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. Send information to ATTN: Wayne Lockett, Aerospace Engineer, Airframe Branch, ANM–120S, FAA, Seattle Aircraft Certification Office, 1601 Lind Avenue SW., Renton, Washington 98057–3356; telephone (425) 917–6447; fax (425) 917–6590. Or, e-mail information to *9–ANM–Seattle-ACO–AMOC–Requests@faa.gov*.

(2) To request a different method of compliance or a different compliance time for this AD, follow the procedures in 14 CFR 39.19. Before using any approved AMOC on any airplane to which the AMOC applies, notify your principal maintenance inspector (PMI) or principal avionics inspector (PAI), as appropriate, or lacking a principal inspector, your local Flight Standards District Office. The AMOC approval letter must specifically reference this AD.

(3) An AMOC that provides an acceptable level of safety may be used for any repair required by this AD, if it is approved by an Authorized Representative for the Boeing Commercial Airplanes Organization Designation Authorization (ODA) that has been authorized by the Manager, Seattle ACO, to make those findings. For a repair method to be approved, the repair must meet the certification basis of the airplane.

Issued in Renton, Washington, on April 28, 2010.

Jeffrey E. Duven,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

Operations Specifications

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This proposed rule would clarify and standardize the rules for applications by foreign air carriers and foreign persons for operations specifications and establish new standards for amendment, suspension or termination of those operations specifications. The proposed rule would also apply to foreign persons operating U.S.-registered aircraft in common carriage solely outside the United States. This action is necessary to update the process for issuing operations specifications, and it will establish a regulatory basis for current practices, such as amending, terminating or suspending operations specifications.

DATES: Send your comments on or before August 5, 2010.

ADDRESSES: You may send comments identified by Docket Number FAA–2009–0140 using any of the following methods:

- *Federal eRulemaking Portal:* Go to *http://www.regulations.gov* and follow the online instructions for sending your comments electronically.
- *Mail:* Send comments to Docket Operations, M–30; U.S. Department of Transportation, 1200 New Jersey Avenue, SE., Room W12–140, West Building Ground Floor, Washington, DC 20590–0001.
- *Hand Delivery or Courier:* Take comments to Docket Operations in Room W12–140 of the West Building Ground Floor at 1200 New Jersey Avenue, SE., Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.
- *Fax:* Fax comments to Docket Operations at 202–493–2251.

For more information on the rulemaking process, *see* the **SUPPLEMENTARY INFORMATION** section of this document.

Privacy: We will post all comments we receive, without change, to *http://www.regulations.gov*, including any personal information you provide. Using the search function of our docket Web site, anyone can find and read the electronic form of all comments received into any of our dockets, including the name of the individual sending the comment (or signing the comment for an association, business, labor union, etc.). You may review DOT's complete Privacy Act Statement in the **Federal Register** published on April 11, 2000 (65 FR 19477–78) or you may visit *http://DocketsInfo.dot.gov*.

Docket: To read background documents or comments received, go to *http://www.regulations.gov* at any time and follow the online instructions for accessing the docket, or, go to the Docket Operations in Room W12–140 of the West Building Ground Floor at 1200 New Jersey Avenue, SE., Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: Darcy D. Reed, International Programs and Policy Division, AFS–50, Flight Standards Service, Federal Aviation Administration, 800 Independence Avenue, SW., Washington, DC 20591; *e-mail: darcy.d.reed@faa.gov*; *Telephone:* 202–385–8078. For legal questions concerning this proposed rule contact Lorna John, Office of the Chief Counsel, Regulations Division, AGC–200, Federal Aviation Administration, 800 Independence Avenue, SW., Washington, DC 20591; *e-mail: Lorna.John@faa.gov; telephone:* 202–267–3921.

SUPPLEMENTARY INFORMATION: Under the Additional Information section of this preamble, you will find a discussion of how you can comment on this proposal and how the agency will handle your comments. Included in this discussion is related information about the docket, privacy, and handling proprietary or confidential business information. There is also a discussion on how you can get a copy of related rulemaking documents.

Authority for This Rulemaking

The FAA's authority to issue rules on aviation safety is found in title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority.

This proposed rule is issued under the authority described in Title 49 of the United States Code, Subtitle VII, Part A, Subpart III, Section 44701(a)(5). Under that section, the Administrator is charged with promoting safe flight of civil aircraft in air commerce by prescribing regulations and minimum standards for practices, methods, and procedures the Administrator finds

necessary to ensure safety in air commerce. Clarifying and standardizing the rules for application, amendment, suspension, or termination of operations specifications issued to foreign air carriers operating in the United States and to foreign air carriers or foreign persons conducting operations of U.S.-registered aircraft solely outside the United States enhances the FAA's oversight of U.S.-registered aircraft and those foreign air carriers' operations within the United States.

I. Background

Title 49 of the United States Code contains the basic authority for promoting safe flight of civil aircraft in air commerce and for regulating the global operations of U.S.-registered aircraft. For foreign air carriers serving the United States, the basic operating requirements are found in 14 CFR parts 91 and 129. The standards set forth in Annexes 1, 6, and 8 to the Convention on International Civil Aviation (the Chicago Convention), as implemented by the International Civil Aviation Organization (ICAO), also apply to the international operations of air carriers. *The applicable ICAO Annexes* are:

Annex 1—Personnel Licensing,
Annex 6—Part I, Operation of Aircraft—International Commercial Air Transport—Aeroplanes,
Annex 6—Part III, Operation of Aircraft—International Operations—Helicopters, and
Annex 8—Airworthiness of Aircraft.

ICAO Annexes contain the international standards for safety, regulation, and efficiency of air navigation. These international standards define the minimum level of safety necessary for the recognition by Contracting States to the Chicago Convention of certificates of airworthiness, certificates of competency and licenses that allow for the flight of aircraft of other States into or over their territories. They also provide for the protection of other aircraft, third parties, and property. As with all Contracting States to the Chicago Convention, the United States is obligated to recognize only those certificates of airworthiness, certificates of competency, and licenses issued or rendered valid by another Contracting State. The requirements under which these certificates or licenses are issued or rendered valid by the Contracting State must be equal to or above the minimum standards established by the Chicago Convention.

The FAA's authority over a foreign air carrier using foreign-registered aircraft is limited to overseeing compliance with all the applicable provisions of the Chicago Convention and its Annexes, and U.S. regulations for the flights conducted by the foreign air carrier into the United States. Adherence to these standards assures the foreign air carrier's ability to navigate and communicate safely within the U.S. National Airspace System (NAS) while protecting individuals and property on the ground.

To fulfill its oversight responsibilities, the FAA issues operations specifications to foreign air carriers and foreign persons. These operations specifications ensure a common understanding between the foreign air carrier or foreign person and the FAA. The FAA-issued operations specifications describe the scope of a foreign air carrier's operations into the United States, including any applicable authorizations and limitations, and a foreign person's maintenance responsibility for U.S.-registered aircraft operated in common carriage solely outside the United States. The FAA-issued operations specifications do not, however, affect or interfere with the responsibilities of the foreign Civil Aviation Authority (CAA) that issued an air operator certificate to the foreign air carrier. The foreign CAA maintains primary responsibility for the certification of the foreign air carrier and the continuing oversight of the air carrier or foreign person's operations in accordance with applicable ICAO standards.

II. Discussion of the Proposal

14 CFR part 129 prescribes the rules governing foreign air carrier operations within the United States and the operations of U.S.-registered aircraft solely outside the United States in common carriage. In order to meet international standards and the changing aviation environment, it is necessary to revise part 129. For example, the processes for application and amendment of operations specifications for U.S. operators subject to 14 CFR parts 121, 125, and 135 are described in part 119. However, there are no explicit provisions governing the application for, or amendment of, operations specifications issued to foreign air carriers or foreign persons in part 129, nor is there a provision in part 129 for the suspension or termination of operations specifications. Therefore, the FAA proposes to clarify the process for application, amendment, suspension, and termination of operations specifications issued to foreign air carriers and foreign persons.

This proposal would add three new sections to subpart A: § 129.5, Operations Specifications; § 129.7, Application, issuance, or denial of operations specifications; and § 129.9, Contents of operations specifications. This proposed rule would also amend the existing § 129.11 to specifically address amendment, suspension and termination of operations specifications.

Section 129.5 would define which foreign air carriers or foreign persons must hold FAA operations specifications and the effective period of such operations specifications. Current regulations require only foreign air carriers conducting operations into the United States to conduct their operations in accordance with operations specifications issued by the Administrator. Section 129.5 of the proposed rule would extend this requirement to a foreign air carrier or foreign person operating a U.S.-registered aircraft solely outside the United States in common carriage. Additionally, the FAA proposes to include a provision in § 129.5 requiring the foreign air carrier to keep each of its employees, and other persons used in its operations, informed of the provisions of its FAA-issued operations specifications that apply to that employee's or person's duties and responsibilities.

In § 129.7, the FAA proposes to include provisions governing the application, issuance, or denial of operations specifications. The application process for foreign air carriers is presently defined in § 129.11(b) and Appendix A of part 129. It contains outdated requirements that are no longer relevant to the FAA's safety oversight needs.[1] Also, unlike the process for domestic air carrier applicants, which allows more cooperation between the applicant and the FAA, current Appendix A of part 129 requires a foreign applicant to provide very specific information in a particular format. Requiring this degree of detail in form and content does not advance aviation safety and may limit the flexibility necessary to ensure the safety of the flying public. The FAA proposes to remove Appendix A and place general requirements in the new § 129.7(a). However, proposed § 129.7(b) would retain the current requirement in Appendix A, section VIII.B for the applicant to provide a written certification that the statements in the application are true. Using this approach allows the operations specification process to be easily revised

[1] An example of an outdated requirement is a listing of the type and class of certificate held by each flight crewmember employed in the proposed operation within the United States. This requirement is duplicative. Contracting states to the Chicago Convention are obligated to recognize as valid certificates and licenses issued by other contracting states.

and updated to meet the changing aviation environment and FAA safety oversight needs.

Upon issuance of the final rule, the FAA will revise the inspector handbook guidance with an updated application procedure for foreign applicants to obtain FAA-issued foreign operations specifications. The procedure would provide for greater interaction between the foreign applicant and the FAA and ensure that a foreign applicant's programs, systems, and intended methods of compliance are thoroughly reviewed and evaluated in light of U.S. requirements.

The proposed application procedure is as follows:

Preapplication. The foreign applicant makes an inquiry to the FAA regarding the process for obtaining operations specifications. The FAA will provide the foreign applicant with an application package and information on the operations specifications application process.

Formal Application. The responsible Flight Standards District Office (FSDO) will conduct an in-depth review of the foreign air carrier's formal application for operations specifications. Also, the responsible office will hold a formal application meeting to discuss the feasibility of the project and obtain any additional information or request corrections needed for its review.

Documentation. The responsible FSDO will review the applicant's documents in support of its request for issuance of mandatory and optional operations specifications.

Verification. The responsible FSDO will verify the foreign air carrier applicant's DOT economic authority and TSA security program approval (if required).

Issuance. The FAA will assign an operations specification designator and number, and the part 129 operations specifications will be generated and issued to the applicant for acceptance and signature. After issuance, the responsible FSDO will implement a comprehensive ongoing surveillance program.

Using this procedure would allow the FAA to verify that the foreign applicant's programs, systems, and intended methods of compliance have been approved or accepted by the State of the Operator. The information obtained during the application process would also provide the FAA with a basis to determine whether the applicant would be able to comply with all applicable FAA requirements while operating in the NAS.

For foreign air carriers or foreign persons who operate U.S.-registered aircraft in common carriage solely outside the United States, the FAA would provide a simplified application procedure.

Section 129.9 would define the content of operations specifications to be issued to either a foreign air carrier conducting operations within the United States, or a foreign air carrier or foreign person operating U.S.-registered aircraft solely outside the United States in common carriage. By specifying the content of the operations specifications in proposed § 129.9, applicants for these specifications would have clear standards for the submission of their application.

Current regulations do not contain provisions for the amendment, suspension or termination of operations specifications. For example, a foreign air carrier or foreign person may seek reconsideration of an adverse decision relating to its operations specifications using an informal process not established in the regulations. An operator may submit its petition for reconsideration through the FSDO, or an FAA Flight Standards Regional Office or FAA Headquarters. Therefore, there is a need to standardize and streamline all petitions for reconsideration through the office responsible for oversight of the foreign air carrier or foreign person.

The proposed rule would amend § 129.11 to address amendments, suspensions and terminations of operations specifications. The amendment process would be consistent with the process for amending operations specifications issued to domestic operators under part 119. Under the proposed rule, an applicant may apply for an amendment of its operations specification to the responsible FSDO, or the Administrator may amend operations specifications if the Administrator determines that safety in air commerce and the public interest require the amendment. Following an adverse decision, the applicant may submit a petition for reconsideration to the Director, Flight Standards Service within thirty (30) days after the date the foreign air carrier or foreign person receives a notice of the decision. The filing of the petition for reconsideration suspends the decision unless the Administrator determines that an emergency exists requiring immediate action to maintain safety in air commerce or air transportation. For suspension and termination, the FAA proposes to use a process similar to that used for amendments; however the Administrator may conduct consultations under relevant Air Services Agreements prior to suspending or terminating an operations specification.

The FAA proposes to amend § 129.13, the aircraft airworthiness and registration certificate requirements, to include recognition of the validity of certificates of airworthiness issued or validated by a State of the Operator under Article 83bis of the Chicago Convention. Currently § 129.13 requires airworthiness certificates for foreign air carriers to be issued or validated by the State of Registry and does not recognize Article 83bis agreements with the State of the Operator, although the U.S. obligation to accept those agreements is stated in inspector handbook guidance. The proposed amendment to § 129.13 would allow recognition of third-party transfers of airworthiness certificates under Article 83bis agreements registered with ICAO.

Similarly, the FAA proposes to amend § 129.15 to provide for the recognition of the validity of crew licenses (certificates) issued or validated by a State of the Operator under agreements whereby the State of Registry of an aircraft transfers certain oversight functions to the State of the Operator of the aircraft in accordance with Article 83bis of the Chicago Convention. Although this U.S. obligation is also currently stated in inspector handbook guidance, § 129.15 requires crew licenses (certificates) for foreign air carriers to be issued or validated by the State of Registry and does not recognize crew licenses or certificates transferred under Article 83bis agreements registered with ICAO.

Present regulations do not define how the FAA grants maintenance approval for U.S.-registered aircraft. Therefore, the FAA proposes to amend § 129.14 by changing the FAA approval process for the minimum equipment list (MEL) and maintenance programs of U.S.-registered aircraft used by foreign air carriers and foreign persons. Under this proposed rule, the FAA would grant maintenance program and minimum equipment list approval for U.S.-registered aircraft in FAA-issued operations specifications, which is the practice FAA field offices currently follow.

With the addition of §§ 129.5, 129.7, 129.9, and the amendments to § 129.11 and § 129.14, the FAA proposes to clarify the applicability of part 129 to certain operations of U.S.-registered aircraft operated solely outside the United States in common carriage by a foreign person or foreign air carrier. Therefore, § 129.1(b) would be revised to clarify that §§ 129.5, 129.7, 129.9, 129.11, 129.14, 129.20 and 129.24 and subpart B apply to U.S.-registered aircraft operated solely outside the

United States in common carriage by a foreign person or foreign air carrier.

As described in § 119.1(d), part 119 does not govern operations conducted under part 91, subpart K (when common carriage is not involved), nor does it apply to parts 129, 133, 137 or 139. However, the introductory sentence of § 119.3 requires application of the definitions included in § 119.3 to all of subchapter G, which includes parts 119, 121, 125, 129, 133, 135, 136, 137 and 139. Because not all of these parts are subject to the substantive requirements of part 119, it is not immediately clear that all of the definitions in § 119.3 apply to subchapter G, including part 129.

The FAA proposes to create a new part 110 which will set forth the general requirements applicable to all of subchapter G, including the definitions currently located in § 119.3. Section 119.3 is redesignated as § 110.2, and all of the references in parts 119, 121 and 135 of subchapter G to the definitions formerly contained in § 119.3 were changed to § 110.2. These changes to parts 110, 119, 121 and 135 are editorial in nature, and the FAA has made no substantive changes to any of the definitions transferred to the new part. Further, this editorial change will have no impact on the applicability of the definitions contained in 14 CFR part 1 to subchapter G, unless otherwise specified.

Additionally, the FAA proposes to eliminate the outdated reference to the Civil Aeronautics Board (CAB) in 14 CFR 129.1(a)(1). This revision is necessary since the CAB no longer exists, and all economic authority is now granted by the Department of Transportation (DOT).

Currently, § 129.11(a) requires foreign air carriers to comply with ICAO standards and recommended practices in part 1 of Annex 6 of the Chicago Convention; however, the Chicago Convention requires compliance with ICAO standards only. By amending § 129.11(a) to remove the incorrect reference to "recommended practices," the proposed rule would clarify the international standards applicable to foreign air carriers operating within the United States.

In 2007, FAA chartered the Part 129 Aviation Rulemaking Committee (ARC) to provide advice, guidance and recommendations on comprehensive changes to part 129. This proposed rule does not address the ARC's recommendations. The FAA will consider those recommendations in a future rulemaking.

To fulfill its oversight responsibilities, the FAA issues operations specifications to foreign air carriers and foreign persons to ensure a common understanding of the scope of their operations. Operations specifications describe: (1) The scope of a foreign air carrier's operations into the United States, including any applicable authorizations and limitations; and (2) Maintenance responsibility for U.S.-registered aircraft operated by foreign air carriers and foreign persons within or outside the United States. The foreign civil aviation authority is responsible for the certification and the continuing oversight of the air carrier or foreign person's operations in accordance with applicable ICAO standards.

The following table summarizes the proposed changes to existing provisions of parts 119 and 129, identifies new provisions, and references the relevant ICAO standard implemented in the rule, if applicable.

Existing part 119	Proposed new part 110
Definitions: Definitions applicable to part 129 are currently included in part 119, subchapter G. Since part 119 applies to certification requirements for part 135 and 121 operators, there is potential confusion concerning whether subchapter G applies to part 129.	*Definitions:* The proposal would remove definitions from subchapter G of part 119 and include them in a new part 110.
Existing part 129	**Proposed part 129 changes**
Ops Specs—Amendment, suspension or termination: Current regulations do not provide for the amendment, suspension, or termination of Operations Specifications. Information is currently in the Inspector Guidance.	*Ops Specs—Amendment, suspension or termination:* The proposal would provide a legal basis for the amendment, suspension, or termination of Operations Specifications.
Application process: The application process and requirements are outdated and impose an unnecessary burden on the operator and the FAA—No safety value (*e.g.,* Provide names, license type and class held by each flight crewmember to include en route training—Lufthansa employs numerous airmen that change constantly).	*Application process:* The proposal would remove outdated portions of Appendix A and place general requirements in the new § 129.7(a). Specific application processes will be contained in Inspector Guidance for easy updating. In addition, the proposal would clarify and standardize the rules for applications by foreign air carriers and foreign persons for operations specifications issued under 14 CFR part 129.
Appeal process for foreign operators: There is no formal administrative process for a foreign operator to appeal a decision to amend, suspend or terminate its operations specifications.	*Appeal process for foreign operators:* The proposal would provide an administrative appeals process allowing foreign operators and foreign persons to submit a petition for reconsideration to the Director, Flight Standards Service before seeking judicial review under 49 USC 46110.
Chicago Convention: There is no regulatory provision for the recognition of Article 83*bis* of the Chicago Convention. However, current FAA guidance contains this information. (**Note:** Article 83*bis* allows the transfer of certain functions and duties from the State of Registry to the State of the Operator under an agreement between the States concerned.)	*Chicago Convention:* The proposed rule allows the FAA to recognize crew licenses and/or airworthiness certificates issued or validated by a State of the Operator under agreements whereby the State of Registry of an aircraft transfers certain oversight functions to the State of the Operator in accordance with Article 83*bis* of the Chicago Convention.

III. Paperwork Reduction Act

This proposal contains the following new information collection requirements. As required by the Paperwork Reduction Act of 1995 (44 U.S.C. section 3507(d)), the FAA has submitted the information requirements associated with this proposal to the Office of Management and Budget for its review.

Title: Part 129 Operations Specifications.

Summary: This proposed rule would clarify and standardize the rules for applications by foreign air carriers and foreign persons for operations specifications issued under 14 CFR part 129 and establish new standards for

amendment, suspension and termination of those operations specifications. The proposed rule would also apply to foreign persons operating U.S. registered aircraft in common carriage solely outside the United States. This action is necessary to update the process for issuing operations specifications, and it will establish a regulatory basis for current practices, such as amending, terminating or suspending operations specifications.

Use of: This proposal would support the information needs of the FAA in order to maintain an adequate level of safety oversight.

Respondents (including number of): The likely respondents to this proposed information requirement are potential new applicants for operations specifications. The average number of respondents is approximately twenty-five each year.

Frequency: The FAA estimates five Flight Standards District Offices (FSDOs) will receive approximately five applications each per year.

Annual Burden Estimate: This proposal would result in an annual recordkeeping and reporting burden as follows: 75 hours annually.

The agency is soliciting comments to—

(1) Evaluate whether the proposed information requirement is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) Evaluate the accuracy of the agency's estimate of the burden;

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of collecting information on those who are to respond, including by using appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Individuals and organizations may send comments on the information collection requirement by August 5, 2010, and should direct them to the address listed in the Addresses section at the end of this preamble. Comments also should be submitted to the Office of Management and Budget, Office of Information and Regulatory Affairs, *Attention:* Desk Officer for FAA, New Executive Building, Room 10202, 725 17th Street, NW., Washington, DC 20053.

According to the 1995 amendments to the Paperwork Reduction Act (5 CFR 1320.8(b)(2)(vi)), an agency may not collect or sponsor the collection of information, nor may it impose an information collection requirement unless it displays a currently valid OMB control number. The OMB control number for this information collection will be published in the **Federal Register**, after the Office of Management and Budget approves it.

IV. International Compatibility

Consistent with U.S. obligations under the Chicago Convention, it is the FAA's policy to comply with ICAO standards to the maximum extent practicable. The proposed amendments will allow the FAA to carry out its obligations under the Chicago Convention by providing for the recognition of the validity of certificates of airworthiness and crew licenses issued or validated by a State of the Operator in accordance with Article 83*bis* of the Chicago Convention. Additionally, the provisions relating to the issuance of operations specifications are consistent with the ICAO standard for issuing operations specifications to operators conducting international air transportation.

The European Aviation Safety Agency (EASA) obtained competence from the European Parliament to regulate third country operators of aircraft engaged in commercial operations into, within or out of the European Community (EC) in 2008. Regulation (EC) No 216/2008 provides competence to EASA to issue and renew authorizations for third country operators and to amend, limit, suspend or revoke the relevant authorization. The FAA will continue to coordinate with EASA on methods to streamline the operations specifications process, as appropriate.

V. Regulatory Evaluation, Regulatory Flexibility Determination, International Trade Impact Assessment, and Unfunded Mandates Assessment

Proposed changes to Federal Regulations must undergo several economic analyses. First, Executive Order 12866 directs each Federal agency to propose or adopt a regulation only upon a reasoned determination that the benefits of the intended regulation justify its costs. Second, the Regulatory Flexibility Act of 1980 (Pub. L. 96–354) requires agencies to analyze the economic impact of regulatory changes on small entities. Third, the Trade Agreements Act (Pub. L. 96–39) prohibits agencies from setting standards that create unnecessary obstacles to the foreign commerce of the United States. In developing U.S. standards, the Trade Act requires agencies to consider international standards and, where appropriate, use them as the basis of U.S. standards. Fourth, the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4) requires agencies to prepare a written assessment of the costs, benefits, and other effects of proposed or final rules that include a Federal mandate likely to result in the expenditure by State, local, or tribal governments, in the aggregate, or by private sector, of $100 million or more annually (adjusted for inflation with base year of 1995).

For regulations with an expected minimal impact, the above-specified analyses are not required. The Department of Transportation Order DOT 2100.5 prescribes policies and procedures for simplification, analysis, and review of regulations. If it is determined that the expected impact is so minimal that the proposal does not warrant a full evaluation, a statement to that effect and the basis for it is included in proposed regulation.

This NPRM will have minimal economic impact because it does not propose to significantly change the rules regarding FAA's obligation for safety oversight of foreign air carriers and foreign persons under the Chicago Convention, but actually incorporates ICAO standards for acceptance of airworthiness certificates and crewmember licenses under Article 83*bis* of the Chicago Convention. This proposed rule also standardizes and clarifies the operations specification process. Accordingly, the FAA has determined as a result of the removal of outdated requirements in Appendix A, there may be a reduction in costs for foreign air carriers or persons who will need to apply for operations specifications. Due to streamlining and clarification of the application process, there may be a decrease in costs to foreign air carriers or persons. In addition, there will be some benefits to foreign air carriers and foreign persons by creating an administrative appeals process. The FAA requests comments from the public on the costs and benefits of this proposal, and the resulting determination that the proposals within the NPRM will have minimal economic impact.

Regulatory Flexibility Determination

The Regulatory Flexibility Act of 1980 (Pub. L. 96–354) (RFA) establishes "as a principle of regulatory issuance that agencies shall endeavor, consistent with the objectives of the rule and of applicable statutes, to fit regulatory and informational requirements to the scale of the businesses, organizations, and governmental jurisdictions subject to regulation. To achieve this principle, agencies are required to solicit and consider flexible regulatory proposals

and to explain the rationale for their actions to assure that such proposals are given serious consideration." The RFA covers a wide range of small entities, including small businesses, not-for-profit organizations, and small governmental jurisdictions.

Agencies must perform a review to determine whether a rule will have a significant economic impact on a large number of small entities. If the agency determines that it will, the agency must prepare an initial regulatory flexibility analysis as described in the RFA. However, if an agency determines that a rule is not expected to have a significant economic impact on a substantial number of small entities, section 605(b) of the RFA provides that the head of the agency may so certify and a regulatory flexibility analysis is not required. The certification must include a statement providing the factual basis for this determination, and the reasoning should be clear.

This proposed rule would clarify and standardize the rules for applications by foreign air carriers and foreign persons for operations specifications issued under 14 CFR part 129 and establish new standards for amendment, suspension and termination of operations specifications by incorporating current policies and procedures into the regulations. The proposed rule applies only to foreign air carriers and operations of U.S.-registered aircraft in common carriage solely outside the United States. Domestic operators are not impacted by this proposed rule. This proposed rule merely revises and clarifies FAA operations specifications application procedures; the expected outcome will not increase cost to any United States small entity. Therefore, the FAA certifies that this proposed rule will not have a significant economic impact on a substantial number of small entities.

International Trade Impact Assessment

The Trade Agreements Act of 1979 (Pub. L. 96–39), as amended by the Uruguay Round Agreements Act (Pub. L. 103–465), prohibits Federal agencies from establishing standards or engaging in related activities that create unnecessary obstacles to the foreign commerce of the United States. Pursuant to these Acts, the establishment of standards is not considered an unnecessary obstacle to the foreign commerce of the United States, so long as the standard has a legitimate domestic objective, such as the protection of safety, and does not operate in a manner that excludes imports that meet this objective. The purpose of this proposed rule is to ensure the safety of the American public, and it does not exclude imports that meet this objective. The statute also requires consideration of international standards and, where appropriate, that they be the basis for U.S. standards. The proposed rule considers and incorporates an international standard promulgated pursuant to the Chicago Convention and is consistent with current ICAO standards. The FAA has assessed the potential effect of this proposed rule and has determined that it will impose minimal costs on international entities and may provide cost-savings to these entities and thus have a neutral trade impact.

Unfunded Mandates Assessment

Title II of the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4) requires each Federal agency to prepare a written statement assessing the effects of any Federal mandate in a proposed or final agency rule that may result in an expenditure of $100 million or more (adjusted annually for inflation) in any one year by State, local, and tribal governments, in the aggregate, or by the private sector; such a mandate is deemed to be a "significant regulatory action." The FAA currently uses an inflation-adjusted value of $143.1 million in lieu of $100 million.

This NPRM does not contain such a mandate. Therefore, the requirements of Title II of the Act do not apply.

VI. Executive Order 13132, Federalism

The FAA has analyzed this proposed rule under the principles and criteria of Executive Order 13132, Federalism. We determined that this action would not have a substantial direct effect on the States, on the relationship between the Federal Government and the States, or on the distribution of power and responsibilities among the various levels of government, and, therefore, does not have federalism implications.

VII. Regulations Affecting Intrastate Aviation in Alaska

Section 1205 of the FAA Reauthorization Act of 1996 (110 Stat. 3213) requires the Administrator, when modifying regulations in title 14 CFR in a manner affecting intrastate aviation in Alaska, to consider the extent to which Alaska is not served by transportation modes other than aviation, and to establish appropriate regulatory distinctions. Because this proposed rule would apply to the application, amendment, suspension and termination of operations specifications of foreign air carriers that operate into the United States, the rule should not affect intrastate aviation in Alaska.

VIII. Environmental Analysis

FAA Order 1050.1E identifies FAA actions that are categorically excluded from preparation of an environmental assessment or environmental impact statement under the National Environmental Policy Act in the absence of extraordinary circumstances. The FAA has determined this proposed rulemaking action qualifies for the categorical exclusion identified in paragraph 312d and involves no extraordinary circumstances.

IX. Regulations That Significantly Affect Energy Supply, Distribution, or Use

The FAA has analyzed this NPRM under Executive Order 13211, Actions Concerning Regulations that Significantly Affect Energy Supply, Distribution, or Use (May 18, 2001). It has determined that it is not a "significant energy action" under the executive order, and it is not likely to have a significant adverse effect on the supply, distribution, or use of energy.

X. Additional Information

Comments Invited

The FAA invites interested persons to participate in this rulemaking by submitting written comments, data, or views. The FAA also invites comments relating to the economic, environmental, energy, or federalism impacts that might result from adopting the proposals in this document. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. The FAA asks that you send two copies of written comments.

The FAA will file in the docket all comments we receive, as well as a report summarizing each substantive public contact with FAA personnel concerning this proposed rulemaking. The docket is available for public inspection before and after the comment closing date. If you wish to review the docket in person, go to the address in the **ADDRESSES** section of this preamble between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. You may also review the docket using the Internet at the web address in the **ADDRESSES** section.

Availability of Rulemaking Documents

You can get an electronic copy of rulemaking documents using the Internet by—

1. Searching the Federal eRulemaking Portal (*http://www.regulations.gov*);

2. Visiting the FAA's Regulations and Policies web page at *http://www.faa.gov/regulations_policies/;* or

3. Accessing the Government Printing Office's web page at *http://www.gpoaccess.gov/fr/index.html.*

You can also get a copy by sending a request to the Federal Aviation Administration, Office of Rulemaking, ARM–1, 800 Independence Avenue, SW., Washington, DC 20591, or by calling (202) 267–9680. Make sure to identify the docket number, notice number, or amendment number of this rulemaking.

You may access all documents the FAA considered in developing this proposed rule, including economic analyses and technical reports, from the internet through the Federal eRulemaking Portal referenced in the paragraph above.

List of Subjects

14 CFR Part 110

Administrative practice and procedure, air carriers, aircraft, aviation safety, charter flights, reporting and recordkeeping requirements.

14 CFR Part 119

Administrative practice and procedure, air carriers, aircraft, aviation safety, charter flights, reporting and recordkeeping requirements.

14 CFR Part 121

Air carriers, aircraft, airmen, alcohol abuse, aviation safety, charter flight, drug abuse, drug testing, reporting and recordkeeping requirements, safety, transportation.

14 CFR Part 129

Air carriers, aircraft, aviation safety, reporting and recordkeeping requirements, security measures, smoking.

14 CFR Part 135

Air taxis, aircraft, airmen, alcohol abuse, aviation safety, drug abuse, drug testing, reporting and recordkeeping requirements.

The Proposed Amendments

In consideration of the foregoing, the Federal Aviation Administration proposes to amend chapter I of title 14, Code of Federal Regulations as follows:

1. Add part 110 to read as follows:

PART 110—GENERAL REQUIREMENTS

Sec.
110.1 Applicability.
110.2 Definitions.

Authority: 49 U.S.C. 106(g), 1153, 40101, 40102, 40103, 40113, 44105, 44106, 44111, 44701–44717, 44722, 44901, 44903, 44904, 44906, 44912, 44914, 44936, 44938, 46103, 46105.

§ 110.1 Applicability.

This part governs all operations conducted under subchapter G of this chapter.

§ 110.2 Definitions.

For the purpose of this subchapter, the term—

All-cargo operation means any operation for compensation or hire that is other than a passenger-carrying operation or, if passengers are carried, they are only those specified in §§ 121.583(a) or 135.85 of this chapter.

Certificate-holding district office means the Flight Standards District Office that has responsibility for administering the certificate and is charged with the overall inspection of the certificate holder's operations.

Commercial air tour means a flight conducted for compensation or hire in an airplane or helicopter where a purpose of the flight is sightseeing. The FAA may consider the following factors in determining whether a flight is a commercial air tour:

(1) Whether there was a holding out to the public of willingness to conduct a sightseeing flight for compensation or hire;

(2) Whether the person offering the flight provided a narrative that referred to areas or points of interest on the surface below the route of the flight;

(3) The area of operation;

(4) How often the person offering the flight conducts such flights;

(5) The route of flight;

(6) The inclusion of sightseeing flights as part of any travel arrangement package;

(7) Whether the flight in question would have been canceled based on poor visibility of the surface below the route of the flight; and

(8) Any other factors that the FAA considers appropriate.

Commuter operation means any scheduled operation conducted by any person operating one of the following types of aircraft with a frequency of operations of at least five round trips per week on at least one route between two or more points according to the published flight schedules:

(1) Airplanes, other than turbojet powered airplanes, having a maximum passenger-seat configuration of 9 seats or less, excluding each crewmember seat, and a maximum payload capacity of 7,500 pounds or less; or

(2) Rotorcraft.

Direct air carrier means a person who provides or offers to provide air transportation and who has control over the operational functions performed in providing that transportation.

DOD commercial air carrier evaluator means a qualified Air Mobility Command, Survey and Analysis Office (AMC/DOB) cockpit evaluator performing the duties specified in Public Law 99–661 when the evaluator is flying on an air carrier that is contracted or pursuing a contract with the U.S. Department of Defense (DoD).

Domestic operation means any scheduled operation conducted by any person operating any airplane described in paragraph (1) of this definition at locations described in paragraph (2) of this definition:

(1) Airplanes:

(i) Turbojet-powered airplanes;

(ii) Airplanes having a passenger-seat configuration of more than 9 passenger seats, excluding each crewmember seat; or

(iii) Airplanes having a payload capacity of more than 7,500 pounds.

(2) Locations:

(i) Between any points within the 48 contiguous States of the United States or the District of Columbia; or

(ii) Operations solely within the 48 contiguous States of the United States or the District of Columbia; or

(iii) Operations entirely within any State, territory, or possession of the United States; or

(iv) When specifically authorized by the Administrator, operations between any point within the 48 contiguous States of the United States or the District of Columbia and any specifically authorized point located outside the 48 contiguous States of the United States or the District of Columbia.

Empty weight means the weight of the airframe, engines, propellers, rotors, and fixed equipment. Empty weight excludes the weight of the crew and payload, but includes the weight of all fixed ballast, unusable fuel supply, undrainable oil, total quantity of engine coolant, and total quantity of hydraulic fluid.

Flag operation means any scheduled operation conducted by any person operating any airplane described in paragraph (1) of this definition at the locations described in paragraph (2) of this definition:

(1) Airplanes:

(i) Turbojet-powered airplanes;

(ii) Airplanes having a passenger-seat configuration of more than 9 passenger seats, excluding each crewmember seat; or

(iii) Airplanes having a payload capacity of more than 7,500 pounds.

(2) Locations:

(i) Between any point within the State of Alaska or the State of Hawaii or any territory or possession of the United States and any point outside the State of Alaska or the State of Hawaii or any territory or possession of the United States, respectively; or

(ii) Between any point within the 48 contiguous States of the United States or the District of Columbia and any point outside the 48 contiguous States of the United States and the District of Columbia.

(iii) Between any point outside the U.S. and another point outside the U.S.

Justifiable aircraft equipment means any equipment necessary for the operation of the aircraft. It does not include equipment or ballast specifically installed, permanently or otherwise, for the purpose of altering the empty weight of an aircraft to meet the maximum payload capacity.

Kind of operation means one of the various operations a certificate holder is authorized to conduct, as specified in its operations specifications, i.e., domestic, flag, supplemental, commuter, or on-demand operations.

Maximum payload capacity means:

(1) For an aircraft for which a maximum zero fuel weight is prescribed in FAA technical specifications, the maximum zero fuel weight, less empty weight, less all justifiable aircraft equipment, and less the operating load (consisting of minimum flightcrew, foods and beverages, and supplies and equipment related to foods and beverages, but not including disposable fuel or oil).

(2) For all other aircraft, the maximum certificated takeoff weight of an aircraft, less the empty weight, less all justifiable aircraft equipment, and less the operating load (consisting of minimum fuel load, oil, and flightcrew). The allowance for the weight of the crew, oil, and fuel is as follows:

(i) Crew—for each crewmember required by the Federal Aviation Regulations—

(A) For male flight crewmembers—180 pounds.

(B) For female flight crewmembers—140 pounds.

(C) For male flight attendants—180 pounds.

(D) For female flight attendants—130 pounds.

(E) For flight attendants not identified by gender—140 pounds.

(ii) Oil—350 pounds or the oil capacity as specified on the Type Certificate Data Sheet.

(iii) Fuel—the minimum weight of fuel required by the applicable Federal Aviation Regulations for a flight between domestic points 174 nautical miles apart under VFR weather conditions that does not involve extended overwater operations.

Maximum zero fuel weight means the maximum permissible weight of an aircraft with no disposable fuel or oil. The zero fuel weight figure may be found in either the aircraft type certificate data sheet, the approved Aircraft Flight Manual, or both.

Noncommon carriage means an aircraft operation for compensation or hire that does not involve a holding out to others.

On-demand operation means any operation for compensation or hire that is one of the following:

(1) Passenger-carrying operations conducted as a public charter under part 380 of this chapter or any operations in which the departure time, departure location, and arrival location are specifically negotiated with the customer or the customer's representative that are any of the following types of operations:

(i) Common carriage operations conducted with airplanes, including turbojet-powered airplanes, having a passenger-seat configuration of 30 seats or fewer, excluding each crewmember seat, and a payload capacity of 7,500 pounds or less, except that operations using a specific airplane that is also used in domestic or flag operations and that is so listed in the operations specifications as required by § 119.49(a)(4) of this chapter for those operations are considered supplemental operations;

(ii) Noncommon or private carriage operations conducted with airplanes having a passenger-seat configuration of less than 20 seats, excluding each crewmember seat, and a payload capacity of less than 6,000 pounds; or

(iii) Any rotorcraft operation.

(2) Scheduled passenger-carrying operations conducted with one of the following types of aircraft with a frequency of operations of less than five round trips per week on at least one route between two or more points according to the published flight schedules:

(i) Airplanes, other than turbojet powered airplanes, having a maximum passenger-seat configuration of 9 seats or less, excluding each crewmember seat, and a maximum payload capacity of 7,500 pounds or less; or

(ii) Rotorcraft.

(3) All-cargo operations conducted with airplanes having a payload capacity of 7,500 pounds or less, or with rotorcraft.

Passenger-carrying operation means any aircraft operation carrying any person, unless the only persons on the aircraft are those identified in §§ 121.583(a) or 135.85 of this chapter, as applicable. An aircraft used in a passenger-carrying operation may also carry cargo or mail in addition to passengers.

Principal base of operations means the primary operating location of a certificate holder as established by the certificate holder.

Provisional airport means an airport approved by the Administrator for use by a certificate holder for the purpose of providing service to a community when the regular airport used by the certificate holder is not available.

Regular airport means an airport used by a certificate holder in scheduled operations and listed in its operations specifications.

Scheduled operation means any common carriage passenger-carrying operation for compensation or hire conducted by an air carrier or commercial operator for which the certificate holder or its representative offers in advance the departure location, departure time, and arrival location. It does not include any passenger-carrying operation that is conducted as a public charter operation under part 380 of this chapter.

Supplemental operation means any common carriage operation for compensation or hire conducted with any airplane described in paragraph (1) of this definition that is a type of operation described in paragraph (2) of this definition:

(1) Airplanes:

(i) Airplanes having a passenger-seat configuration of more than 30 seats, excluding each crewmember seat;

(ii) Airplanes having a payload capacity of more than 7,500 pounds; or

(iii) Each propeller-powered airplane having a passenger-seat configuration of more than 9 seats and less than 31 seats, excluding each crewmember seat, that is also used in domestic or flag operations and that is so listed in the operations specifications as required by § 119.49(a)(4) of this chapter for those operations; or

(iv) Each turbojet powered airplane having a passenger seat configuration of 1 or more and less than 31 seats, excluding each crewmember seat, that is also used in domestic or flag operations and that is so listed in the operations specifications as required by § 119.49(a)(4) of this chapter for those operations.

(2) Types of operation:

(i) Operations for which the departure time, departure location, and arrival location are specifically negotiated with the customer or the customer's representative;

(ii) All-cargo operations; or

(iii) Passenger-carrying public charter operations conducted under part 380 of this chapter.

Wet lease means any leasing arrangement whereby a person agrees to

provide an entire aircraft and at least one crewmember. A wet lease does not include a code-sharing arrangement.

When common carriage is not involved or operations not involving common carriage means any of the following:

(1) Noncommon carriage.

(2) Operations in which persons or cargo are transported without compensation or hire.

(3) Operations not involving the transportation of persons or cargo.

(4) Private carriage.

Years in service means the calendar time elapsed since an aircraft was issued its first U.S. or first foreign airworthiness certificate.

PART 119—CERTIFICATION: AIR CARRIERS AND COMMERCIAL OPERATORS

2. The authority citation for part 119 continues to read as follows:

Authority: 49 U.S.C. 106(g), 1153, 40101, 40102, 40103, 40113, 44105, 44106, 44111, 44701–44717, 44722, 44901, 44903, 44904, 44906, 44912, 44914, 44936, 44938, 46103, 46105.

§ 119.3 [Removed and Reserved]

3. Remove and reserve § 119.3.

§ 119.51 [Amended]

4. Amend § 119.51(c)(1)(i) by removing the citation "§ 119.3" and adding the citation "§ 110.2" in its place.

§ 119.53 [Amended]

5. Amend § 119.53(e) by removing the citation "§ 119.3" and adding the citation "§ 110.2" in its place.

PART 121—CERTIFICATION: AIR CARRIERS AND COMMERCIAL OPERATORS

6. The authority citation for part 121 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40103, 40113, 40119, 41706, 44101, 44701, 44702, 44705, 44709, 44710, 44711, 44713, 44716, 44717, 44722, 46105.

§ 121.313 [Amended]

7. Amend § 121.313 by removing the citation "§ 119.3" and adding the citation "§ 110.2" in its place.

§ 121.582 [Amended]

8. Amend § 121.582 by removing the citation "§ 119.3" and adding the citation "§ 110.2" in its place.

PART 129—OPERATIONS: FOREIGN AIR CARRIERS AND FOREIGN OPERATORS OF U.S.-REGISTERED AIRCRAFT ENGAGED IN COMMON CARRIAGE

9. The authority citation for part 129 continues to read as follows:

Authority: 49 U.S.C. 1372, 40113, 40119, 44101, 44701–44702, 44705, 44709–44711, 44713, 44716–44717, 44722, 44901–44904, 44906, 44912, 46105, Pub. L. 107–71 sec, 104.

10. Amend § 129.1 by revising paragraphs (a)(1), (a)(2), and (b) to read as follows:

§ 129.1 Applicability and definitions.

(a) * * *

(1) A permit issued by the U.S. Department of Transportation under 49 U.S.C. 41301 through 41306, or

(2) Other appropriate economic or exemption authority issued by the U.S. Department of Transportation.

(b) Operations of U.S.-registered aircraft solely outside the United States.

In addition to the operations specified under paragraph (a) of this section, §§ 129.5, 129.7, 129.9, 129.11, 129.14, 129.20 and 24, and subpart B of this part also apply to operations of U.S.-registered aircraft operated solely outside the United States in common carriage by a foreign person or foreign air carrier.

* * * * *

11. Add § 129.5 to read as follows:

§ 129.5 Operations specifications.

(a) Each foreign air carrier conducting operations within the United States, and each foreign air carrier or foreign person operating U.S. registered aircraft solely outside the United States in common carriage must conduct its operations in accordance with operations specifications issued by the Administrator under this part.

(b) Each foreign air carrier conducting operations within the United States must conduct its operations in accordance with the Standards contained in Annex 1 (Personnel Licensing), Annex 6 (Operation of Aircraft), Part I (International Commercial Air Transport—Aeroplanes) or Part III (International Operations—Helicopters), as appropriate, and in Annex 8 (Airworthiness of Aircraft) to the Convention on International Civil Aviation.

(c) No foreign air carrier may operate to or from locations within the United States without, or in violation of, appropriate operations specifications.

(d) No foreign air carrier or foreign person shall operate U.S. registered aircraft solely outside the United States in common carriage without, or in violation of, appropriate operations specifications.

(e) Each foreign air carrier must keep each of its employees and other persons used in its operations informed of the provisions of its operations specifications that apply to that employee's or person's duties and responsibilities.

(f) Operations specifications issued under this part are effective until—

(1) The foreign air carrier or foreign person surrenders them to the FAA;

(2) The Administrator suspends or terminates the operations specifications; or

(3) The operations specifications are amended as provided in § 129.11.

(g) Within 30 days after a foreign air carrier or foreign person terminates operations under part 129 of this subchapter, the operations specifications must be surrendered by the foreign air carrier or foreign person to the responsible Flight Standards District Office.

(h) No person operating under this part may operate or list on its operations specifications any airplane listed on operations specifications issued under part 125 of this chapter.

12. Add § 129.7 to read as follows:

§ 129.7 Application, issuance, or denial of operations specifications.

(a) A foreign air carrier or foreign person applying to the FAA for operations specifications under this part must submit an application—

(1) In a form and manner prescribed by the Administrator; and

(2) At least 90 days before the intended date of operation.

(b) An authorized officer or employee of the applicant, having knowledge of the matters stated in the application, must sign the application and certify in writing that the statements in the application are true. The application must include two copies of the appropriate written authority issued to that officer or employee by the applicant.

(c) A foreign applicant may be issued operations specifications, if after review, the Administrator finds the applicant—

(1) Meets the applicable requirements of this part;

(2) Holds the economic or exemption authority required by the Department of Transportation, applicable to the operations to be conducted;

(3) Complies with the applicable security requirements of 49 CFR chapter XII;

(4) Is properly and adequately equipped to conduct the operations described in the operations specifications; and

(5) Holds a valid air operator certificate issued by the State of the Operator.

(d) An application may be denied if the Administrator finds that the applicant is not properly or adequately equipped to conduct the operations to be described in the operations specifications.

13. Add § 129.9 to read as follows:

§ 129.9 Contents of operations specifications.

(a) The contents of operations specifications issued to a foreign air carrier conducting operations within the United States under § 129.1(a) shall include:

(1) The specific location and mailing address of the applicant's principal place of business in the State of the Operator and, if different, the address that will serve as the primary point of contact for correspondence between the FAA and the foreign air carrier;

(2) The designation of an agent for service within the United States, including the agent's full name and office address or usual place of residence;

(3) The certificate number and validity of the foreign air carrier's Air Operator Certificate issued by the State of the Operator;

(4) Each regular and alternate airport to be used in scheduled operations;

(5) The type of aircraft and registration markings of each aircraft;

(6) The approved maintenance program and minimum equipment lists for United States registered aircraft authorized for use; and

(7) Any other item the Administrator determines is necessary.

(b) The contents of operations specifications issued to a foreign air carrier or foreign person operating U.S.-registered aircraft solely outside the United States in common carriage in accordance with § 129.1(b) shall include—

(1) The specific location and mailing address of the principal place of business in the State of the Operator and, if different, the address that will serve as the primary point of contact for correspondence between the FAA and the foreign air carrier or foreign person;

(2) The designation of an agent for service within the United States, including the agent's full name and office address or usual place of residence;

(3) In the case of a foreign air carrier, the certificate number and validity of the foreign air carrier's Air Operator Certificate issued by the State of the Operator;

(4) Any other business names under which the foreign air carrier or foreign person may operate;

(5) The type, registration markings, and serial number of each United States registered aircraft authorized for use;

(6) The approval of maintenance programs and minimum equipment lists for United States registered aircraft authorized for use; and

(7) Any other item the Administrator determines is necessary.

14. Revise § 129.11 to read as follows:

§ 129.11 Amendment, suspension, and termination of operations specifications.

(a) The Administrator may amend any operations specifications issued under this part if—

(1) The Administrator determines that safety in air commerce and the public interest require the amendment; or

(2) The foreign air carrier or foreign person applies for an amendment, and the Administrator determines that safety in air commerce and the public interest allows the amendment.

(b) The Administrator may suspend or terminate any operations specifications issued under this part if the Administrator determines that safety in air commerce and the public interest require the suspension or termination;

(c) Except as provided in paragraphs (f) and (g) of this section, when the Administrator initiates an action to amend, suspend or terminate a foreign air carrier or foreign person's operations specifications, the following procedure applies:

(1) The responsible Flight Standards District Office notifies the foreign air carrier or foreign person in writing of the proposed amendment, suspension or termination.

(2) The responsible Flight Standards District Office sets a reasonable period (but not less than 7 days) within which the foreign air carrier or foreign person may submit written information, views, and arguments on the amendment, suspension or termination.

(3) After considering all material presented, the responsible Flight Standards District Office notifies the foreign air carrier or foreign person of—

(i) The adoption of the proposed amendment, suspension or termination;

(ii) The partial adoption of the proposed amendment, suspension or termination; or

(iii) The withdrawal of the proposed amendment, suspension or termination.

(4) If the responsible Flight Standards District Office issues an action to amend, suspend or terminate the operations specifications, it becomes effective not less than 30 days after the foreign air carrier or foreign person receives notice of it unless—

(i) The responsible Flight Standards District Office finds under paragraph (g) of this section that there is an emergency requiring immediate action with respect to safety in air commerce; or

(ii) The foreign air carrier or foreign person petitions for reconsideration of the amendment, suspension or termination under paragraph (e) of this section.

(d) When the foreign air carrier or foreign person applies for an amendment to its operations specifications, the following procedure applies:

(1) The foreign air carrier or foreign person must file an application to amend its operations specifications—

(i) At least 90 days before the date proposed by the applicant for the amendment to become effective in cases of mergers; acquisitions of airline operational assets that require an additional showing to Department of Transportation for economic authority; major changes in the type of operation and resumption of operations following a suspension of operations as a result of bankruptcy actions, unless a shorter time is approved by the Administrator.

(ii) At least 30 days before the date proposed by the applicant for the amendment to become effective in all other cases.

(2) The application must be submitted to the responsible Flight Standards District Office in a form and manner prescribed by the Administrator.

(3) After considering all material presented, the responsible Flight Standards District Office notifies the foreign air carrier or foreign person of—

(i) The adoption of the applied for amendment;

(ii) The partial adoption of the applied for amendment; or

(iii) The denial of the applied for amendment.

(4) If the responsible Flight Standards District Office approves the amendment, following coordination with the foreign air carrier or foreign person regarding its implementation, the amendment is effective on the date the responsible Flight Standards District Office approves it.

(e) The foreign air carrier or foreign person may petition for reconsideration of a full or partial adoption of an amendment, a denial of an amendment or a suspension or termination of operations specifications.

(f) When a foreign air carrier or foreign person seeks reconsideration of a decision from the responsible Flight Standards District Office concerning the amendment, suspension or termination

of operations specifications, the following procedure applies:

(1) The foreign air carrier or foreign person must petition for reconsideration of that decision within 30 days after the date that the foreign air carrier or foreign person receives a notice of the decision.

(2) The foreign air carrier or foreign person must address its petition to the Director, Flight Standards Service.

(3) A petition for reconsideration, if filed within the 30-day period, suspends the effectiveness of any amendment, suspension or termination issued by the responsible Flight Standards District Office unless the responsible Flight Standards District Office has found, under paragraph (g) of this section, that an emergency exists requiring immediate action with respect to safety in air transportation or air commerce.

(g) If the responsible Flight Standards District Office finds that an emergency exists requiring immediate action with respect to safety in air commerce or air transportation that makes the procedures set out in this section impracticable or contrary to the public interest, that office may make the amendment, suspension or termination effective on the day the foreign air carrier or foreign person receives notice of it. In the notice to the foreign air carrier or foreign person, the responsible Flight Standards District Office will articulate the reasons for its finding that an emergency exists requiring immediate action with respect to safety in air transportation or air commerce or that makes it impracticable or contrary to the public interest to stay the effectiveness of the amendment, suspension or termination.

15. Amend § 129.13 by revising paragraph (a) to read as follows:

§ 129.13 Airworthiness and registration certificates.

(a) No foreign air carrier may operate any aircraft within the United States unless that aircraft carries a current registration certificate and displays the nationality and registration markings of the State of Registry, and an airworthiness certificate issued or validated by:

(1) The State of Registry; or

(2) The State of the Operator, provided that the State of the Operator and the State of Registry have entered into an agreement under Article 83*bis* of the Convention on International Civil Aviation that covers the aircraft.

* * * * *

16. Amend § 129.14 by revising paragraphs (a), (b)(4) and (b)(7) to read as follows:

§ 129.14 Maintenance program and minimum equipment list requirements for U.S.-registered aircraft.

(a) Each foreign air carrier and each foreign person operating a U.S.-registered aircraft within or outside the United States in common carriage must ensure that each aircraft is maintained in accordance with a program approved by the Administrator in the operations specifications.

(b) * * *

(4) The FAA operations specification permitting the operator to use an approved minimum equipment list is carried aboard the aircraft. An approved minimum equipment list, as authorized by the operations specifications, constitutes an approved change to the type design without requiring recertification.

* * * * *

(7) The aircraft is operated under all applicable conditions and limitations contained in the minimum equipment list and the operations specification authorizing the use of the list.

17. Revise § 129.15 to read as follows:

§ 129.15 Flight crewmember certificates.

Each person acting as a flight crewmember must hold a certificate or license that shows the person's ability to perform duties in connection with the operation of the aircraft. The certificate or license must have been issued or rendered valid by:

(a) The State in which the aircraft is registered; or

(b) The State of the Operator, provided that the State of the Operator and the State of Registry have entered into an agreement under Article 83*bis* of the Convention on International Civil Aviation that covers the aircraft.

Appendix A to Part 129 [Removed and Reserved]

18. Remove and reserve Appendix A to part 129.

PART 135—OPERATING REQUIREMENTS: COMMUTER AND ON DEMAND OPERATIONS AND RULES GOVERNING PERSONS ON BOARD SUCH AIRCRAFT

19. The authority citation for part 135 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 41706, 44701, 44702, 44705, 44709, 44711, 44713, 44715, 44717, 44722, 46105.

§ 135.127 [Amended]

20. Amend § 135.127(b)(1)(iii) by removing the citation "§ 119.3" and adding the citation "§ 110.2" in its place.

§ 135.127 [Amended]

21. Amend § 135.127(b)(2) by removing the citation "§ 119.3" and adding the citation "§ 110.2" in its place.

Issued in Washington, DC, on May 4, 2010.

Raymond Towles,

Acting Director, Flight Standards Service.

BILLING CODE 4910–13–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Parts 173, 174, 181, and 187

[Docket No. USCG–2003–14963]

RIN 1625–AB45

Changes to Standard Numbering System, Vessel Identification System, and Boating Accident Report Database

AGENCY: Coast Guard, DHS.

ACTION: Notice of proposed rulemaking.

SUMMARY: The Coast Guard proposes to amend its rules related to numbering of undocumented vessels and reporting of casualties. These changes would align and modernize terminology used in the Standard Numbering System (SNS), the Vessel Identification System (VIS), and casualty reporting; require validation of vessel hull identification numbers; require SNS vessel owners to provide personally identifiable information; and provide administrative flexibility for States. Together, the proposed changes would improve recreational boating safety efforts, enhance law enforcement capabilities, advance maritime security, and clarify requirements for all stakeholders.

DATES: Comments and related material must either be submitted to our online docket via *http://www.regulations.gov* on or before August 5, 2010 or reach the Docket Management Facility by that date. Comments sent to the Office of Management and Budget (OMB) on collection of information must reach OMB on or before August 5, 2010.

ADDRESSES: You may submit comments identified by docket number USCG–2003–14963 using any one of the following methods:

(1) *Federal eRulemaking Portal: http://www.regulations.gov*.

(2) *Fax:* 202–493–2251.

(3) *Mail:* Docket Management Facility (M–30), U.S. Department of Transportation, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue, SE., Washington, DC 20590–0001.

(4) *Hand delivery:* Same as mail address above, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The telephone number is 202–366–9329.

To avoid duplication, please use only one of these four methods. See the "Public Participation and Request for Comments" portion of the **SUPPLEMENTARY INFORMATION** section below for instructions on submitting comments.

Collection of Information Comments: If you have comments on the collection of information discussed in section V.D of this NPRM, you must also send comments to the Office of Information and Regulatory Affairs (OIRA), Office of Management and Budget. To ensure that your comments to OIRA are received on time, the preferred methods are by e-mail to *oira_submission@omb.eop.gov* (include the docket number and "Attention: Desk Officer for Coast Guard, DHS" in the subject line of the e-mail) or fax at 202–395–6566. An alternate, though slower, method is by U.S. mail to the Office of Information and Regulatory Affairs, Office of Management and Budget, 725 17th Street, NW., Washington, DC 20503, ATTN: Desk Officer, U.S. Coast Guard.

FOR FURTHER INFORMATION CONTACT: If you have questions on this proposed rule, write, call or e-mail Mr. Jeff Ludwig at 2100 2nd St., SW. Stop 7581, Washington, DC 20593–7581; telephone 202–372–1061, or e-mail *Jeffrey.A.Ludwig@uscg.mil*. If you have questions on viewing or submitting material to the docket, call Renee V. Wright, Program Manager, Docket Operations, telephone 202–366–9826.

SUPPLEMENTARY INFORMATION:

Table of Contents for Preamble

I. Public Participation and Request for Comments

We encourage you to participate in this rulemaking by submitting comments and related materials to us. All comments received will be posted without change to *http://www.regulations.gov* and will include any personal information you provide.

A. Submitting Comments

If you submit a comment, please include the docket number for this rulemaking (USCG–2003–14963), indicate the specific section of this document to which each comment applies, and provide a reason for each suggestion or recommendation. You may submit your comments and material online or by fax, mail, or hand delivery, but please use only one of these means. We recommend that you include your name and a mailing address, an e-mail address, or a phone number in the body of your document so that we can contact you if we have questions regarding your submission.

To submit your comment online, go to *http://www.regulations.gov,* click on the "submit a comment" box, which will then become highlighted in blue. In the "Document Type" drop down menu select "Proposed Rule" and insert "USCG–2003–14963" in the "Keyword" box. Click "Search"; then click on the balloon shape in the "Actions" column. If you submit your comments by mail or hand delivery, submit them in an unbound format, no larger than 8½ by 11 inches, suitable for copying and electronic filing. If you submit comments by mail and would like to know that they have reached the Facility, please enclose a stamped, self-addressed postcard or envelope.

We will consider all comments and material received during the comment period and may change this proposed rule based on your comments.

B. Viewing Comments and Documents

To view comments, as well as documents mentioned in this preamble as being available in the docket, go to *http://www.regulations.gov,* click on the "read comments" box, which will then become highlighted in blue. In the "Keyword" box insert USCG–2003–14963 and click "Search." Click the "Open Docket Folder" in the "Actions" column. If you do not have access to the internet, you may view the docket online by visiting the Docket Management Facility in Room W12–140 on the ground floor of the Department of Transportation West Building, 1200 New Jersey Avenue, SE., Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. We have an agreement with the Department of Transportation that allows you to use the Docket Management Facility.

C. Privacy Act

Anyone can search the electronic form of comments received into any of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, *etc.*). You may review a Privacy Act notice regarding our public dockets in the January 17, 2008 issue of the **Federal Register** (73 FR 3316).

D. Public Meeting

We do not plan to hold a public meeting. But you may submit a request for one to the docket using one of the methods specified under **ADDRESSES**. In your request, explain why you believe a public meeting would be beneficial. If we determine that one would aid this rulemaking, we will hold one at a time and place to be announced by a later notice in the **Federal Register.**

U.S.C. United States Code
VIS Vessel Identification System

III. Background

Coast Guard regulations in 33 CFR parts 173 and 174 implement two statutory mandates relating to undocumented vessels equipped with propulsion machinery of any kind. First, the regulations provide for a Standard Numbering System (SNS) that assigns unique identification numbers to those vessels, as required by 46 U.S.C. 12302. Each State voluntarily uses the SNS to number vessels that are registered in that State.[1] Second, the regulations provide for the uniform reporting by each State of recreational vessel casualty and accident data, as required by 46 U.S.C. 6102. We maintain a Boating

[1] If a State does not have a numbering system consistent with the SNS, or does not issue identification numbers to vessels registered in that State, the Coast Guard issues those vessels identification numbers under the SNS. "State" is defined in 33 CFR 173.3 as "a State of the United States, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, American Samoa, the Commonwealth of the Northern Mariana Islands, and the District of Columbia."

Accident Report Database (BARD) for this data.

We are also statutorily required to maintain a Vessel Identification System (VIS) that covers not only the undocumented vessels to which SNS applies, but also documented vessels and any vessel titled under State law (46 U.S.C. 12501). VIS makes vessel identification information available, for law enforcement or other purposes, to the Coast Guard and to States that voluntarily comply with its data sharing requirements. VIS was developed in coordination with relevant State agencies and became operational in 2007. To date, many States have opted to participate in VIS. VIS regulations appear in 33 CFR part 187.

Because of our role as the coordinator of the National Recreational Boating Safety Program, our leadership position in maritime law enforcement and maritime security efforts, and our partnership with other Federal and State agencies with similar responsibilities, we seek continual improvement in the efficiency and effectiveness of SNS, BARD, and VIS. This rulemaking proposes several changes that are intended to further those improvements. Many of the proposed changes were initially suggested by the National Boating Safety Advisory Council (NBSAC), a 21-member group that operates under the Federal Advisory Committee Act to advise the Coast Guard on recreational boating safety issues. NBSAC consists of seven representatives of State officials responsible for State boating safety programs; seven representatives of recreational vessel manufacturers and associated equipment manufacturers; and seven representatives of national recreational boating organizations and from the general public, at least five of whom must be representatives of national recreational boating organizations.

IV. Discussion of Proposed Rule

We propose the following changes. We intend to phase-in many of the most substantive proposed changes over three years, and we specifically invite public comment on whether that phase-in period is adequate.

Terminology alignment. We propose aligning the terminology used by SNS, BARD, and VIS to describe recreational vessels and their operation. This will leverage our ability to coordinate data from all three databases to facilitate boating safety, law enforcement, and maritime security purposes.

Terminology modernization and harmonization. We propose updating the terminology used by SNS, BARD, and VIS to reflect today's recreational boating environment. For example, we propose new language to recognize the increased use of personal watercraft, towed watersports, and pod drive propulsion systems; and updated terminology to describe how recreational vessels are operated. We will also harmonize language in our regulations with wording changes made in the 1983 revision of Title 46 of the U.S. Code.

Hull identification numbers (HINs). We propose requiring the States administering SNS to ensure that each SNS-registered vessel built after November 1, 1972, when the original HIN regulations took effect, has or obtains a valid HIN. Many vessels that are required to have a valid HIN either lack any HIN or have a HIN that does not comply with current requirements. This proposal is intended to help deter theft and improve law enforcement and maritime security capabilities by ensuring that law enforcement officers can readily identify vessels by their HIN and, in turn, identify their rightful owners.

Unique personal identifiers. For VIS vessel owners, we currently collect personally identifiable information (PII), like taxpayer identification numbers, as required by 46 U.S.C. 12501. This PII has high value for law enforcement and maritime security purposes because it provides unique information connecting individuals with the vessels they own. Additionally, 46 U.S.C. 12501(a)(2) and (b) require that the VIS contain the PII of the owners of vessels numbered under the SNS. Therefore, we propose requiring the collection of PII for SNS as well as VIS. This proposed change would align the SNS and VIS data elements that States must collect, which will facilitate law enforcement and maritime safety efforts by broadening and aligning the data available in these two systems, and may make it easier for States to decide to participate in VIS.

Administrative flexibility. We propose some changes that would provide additional administrative flexibility for States. For example, we propose adding waiver provisions to VIS regulations in 33 CFR 187.11. Waivers could allow a State to participate temporarily in VIS, despite the need for new State legislation or other action to bring the State into full compliance with our regulations, under a memorandum of agreement that sets conditions intended to ensure effective participation.

Table 1 shows how these changes would apply to specific sections of Title 33 of the CFR. It omits discussion of several non-substantive style or format changes made solely to improve clarity or internal organization.

TABLE 1—CHANGES PROPOSED FOR 33 CFR

CFR section affected	Proposed changes	Discussion
***Note:** Substantive changes proposed for sections marked with an asterisk (*) in this table would be phased in over three years.		
Purpose, § 173.1	Clarify that Part 173 has preemptive effect over State or local regulation.	Clarification.
Definitions, § 173.3	Add or revise definitions	Align with substantive changes elsewhere in the proposal.
Vessel number required, § 173.15	Substitute "State of principal operation" for "State in which the vessel is principally used."	Modernize/harmonize terminology.
Other numbers prohibited, § 173.19	Substitute "operate" for "use."	Modernize/harmonize terminology.
Certificate of number required, § 173.21	Substitute "operate" and "operated" for "use" and "used."	Modernize/harmonize terminology.
Inspection of certificate, § 173.23	Substitute "operating" for "using."	Modernize/harmonize terminology.
Location of certificate of number, § 173.25	Substitute "operate" for "use."	Modernize/harmonize terminology.
Removal of number, § 173.33	Substitute "operated" for "used."	Modernize/harmonize terminology.
Coast Guard validation sticker, § 173.35	Substitute "operate" for "use."	Modernize/harmonize terminology.
Applicability, § 173.51	Substitute "operated" for "used."	Modernize/harmonize terminology.

TABLE 1—CHANGES PROPOSED FOR 33 CFR—Continued

CFR section affected	Proposed changes	Discussion
Contents of report,* § 173.57	Amend current section so that it remains in effect only until January of the year following the third anniversary of the final rule's taking effect.	(c)(10), (c)(21)–(c)(24): Align and modernize/harmonize terminology.
	Add new (c), containing provisions that would take effect in January of the year following the third anniversary of the final rules's taking effect.	(c)(14), (c)(16): Facilitate accident investigations by collecting information about the owners of damaged property and about fire extinguishers on vessels involved in accidents. The phase-in period allows adequate time for transition and ensures a uniform date for revising the data to be reported in all States.
Where to report, § 173.59	Delete option of reporting accident elsewhere than in the State where the accident occurred.	Require report to be filed where accident occurred because this has greater relevance than a report to the State of principal operation or of certificate issuance.
Application for and issuance of certificate of number, § 173.71.	Authorize issuance of original or duplicate certificates.	Clarify authority and make it explicit. Modernize/harmonize terminology.
Duplicate certificate of number, § 173.73	Remove section	Transfer substance to § 173.71.
Validity of certificate of number, § 173.77	Substitute "operated" for "used."	*Modernize/harmonize terminology.*
Issuing authorities and reporting authorities, 33 CFR Part 173, Appendix A.	Substitute "operation" for "use."	*Modernize/harmonize terminology.*
Applicability, § 174.1	Clarify that Part 174 has preemptive effect over State or local regulation.	Clarification.
Definitions, § 174.3	Add or revise definitions	Align with substantive changes elsewhere in the proposal.
Verification of hull identification number,* § 174.16.	Require States to verify vessel's compliance with HIN requirements, or to assign valid HIN, using methods of the State's choice.	Per text discussion of HINs.
	Allow States up to three years to implement the changes.	Effective date is intended to give the states up to three years to implement the changes. States will have up to three additional years to update boat registration information depending on registration cycle.
Contents of application for certificate of number,* § 174.17.	Require unique personal identifier	Per text discussion of unique personal identifiers. Align and modernize/harmonize terminology.
	(c) Allow States up to three years to implement the changes.	Up to three years after final rule for States to implement changes. Up to three additional years for States to update boat registration.
Contents of a certificate of number,* § 174.19	Delete current option for owners of vessels with HINs to omit information about the vessel's make, manufacture date, length, type, hull material, propulsion method, and fuel; and make other minor changes.	Eliminate option, to facilitate data verification for law enforcement and maritime security purposes by ensuring that full information is available for enforcement or security personnel. Align and modernize/harmonize terminology.
	Allow States up to three years to implement the changes.	Up to three years after final rule for States to implement changes. Up to three additional years for States to update boat registration.
Temporary certificates,* § 174.21	Clarify, add HIN as required information, substitute "operated" for "used."	Per text discussion of HINs. Clarify and modernize/harmonize terminology.
	Allow States up to three years to implement the changes.	Up to three years after final rule for States to implement changes. Up to three additional years for States to update boat registration.
Forwarding of casualty or accident reports, § 174.121.	Add electronic submission option. Change address.	Allow for choices in reporting method, align with Federal e-Government initiatives, and update information.
Coast Guard address, § 174.125	Change address	Update information.
Purpose and applicability, § 181.1	Clarify that Part 181 has preemptive effect over State or local regulation.	Clarification.
Definitions, § 181.3	Add or revise definitions	Align with substantive changes elsewhere in the proposal.
Hull identification numbers required, § 181.23	Add new (b) (revise and relocate current language from § 181.31(c)).	Per text discussion of HINs.
	Substitute "agency designated by the issuing authority" for references to the State boating law administrator.	Provide flexibility for States to designate, as HIN number assignor, agencies other than the State boating law administrator.

TABLE 1—CHANGES PROPOSED FOR 33 CFR—Continued

CFR section affected	Proposed changes	Discussion
Manufacturer identification code assignment, § 181.31.	Remove (c) (relocated to § 181.23).	
How is a State's participation in VIS documented? § 187.11.	Revise section	Per text discussion of administrative flexibility.
What information must be collected to identify a vessel? § 187.103.	Add "of vessel" in (h), and revise (i)–(n)	Clarify (h) and align and modernize/harmonize terminology in (i)–(n).

V. Regulatory Analyses

We developed this proposed rule after considering numerous statutes and executive orders related to rulemaking. Below we summarize our analyses based on 13 of these statutes or executive orders.

A. Regulatory Planning and Review

This proposed rule is not a significant regulatory action under section 3(f) of Executive Order 12866, Regulatory Planning and Review, and does not require an assessment of potential costs and benefits under section 6(a)(3) of that Order. The Office of Management and Budget has not reviewed it under that Order.

A combined "Preliminary Regulatory Analysis and Initial Regulatory Flexibility Analysis" is available in the docket where indicated under the "Public Participation and Request for Comments" section of this preamble. A summary of the analysis follows:

Coast Guard regulations in 33 CFR parts 173 and 174 implement two statutory mandates relating to undocumented vessels equipped with propulsion machinery of any kind. First, the regulations provide for an SNS that assigns unique identification numbers to those vessels, as required by 46 U.S.C. 12302. Second, the regulations provide for the uniform reporting by each State [2] of recreational vessel casualty and accident data, as required by 46 U.S.C. 6102. The Coast Guard maintains a Boating Accident Report Database (BARD) that contains this information.

The Coast Guard is statutorily required to maintain a Vessel Identification System (VIS), which covers not only the undocumented vessels to which SNS applies, but also documented vessels and any vessel titled under State law. VIS comprises a nationwide information system for identifying recreational, commercial, and public vessels that are numbered or titled under the laws of a state or territory. VIS includes information identifying vessels, vessel owners and information to assist law enforcement officials in the investigation of stolen vessels or other legal investigation, such as fraud. That information includes the personally identifiable information required by 46 U.S.C. 12501(a)(2) and (b).

The Coast Guard proposes to amend its rules to promote uniformity between the Standard Numbering System (SNS), the Vessel Identification System (VIS), and Boating Accident Report Database (BARD).

The proposed changes would enhance the capabilities of Federal, State, and local boating safety and law enforcement officials. These proposed changes would result in additional costs and benefits. In general, this rulemaking would:

- Require issuance of a valid HIN to vessels that do not already have one. This would be phased in only as certificates of number are issued or renewed or upon the transfer of a vessel's ownership.
- Align terminology used by SNS, BARD, and VIS to describe recreational vessels and their operation.
- Modernize terminology to reflect statutory usage and current recreational vessel types, operations and equipment. States would have up to three years in which to update their systems to use the newer terminology.
- Require the collection of unique identification information for each vessel owner who applies for an SNS number. States would have up to three years in which to implement this change.
- Provide administrative flexibility for States to designate, as HIN number assignor, agencies other than the State boating law administrator.

We estimate that this proposed rule would affect approximately 12.4 million recreational vessels. The harmonization of terminology and the additional questions on the forms used to collect the data for the SNS would affect all recreational vessels. The harmonization of terminology and the additional questions on the forms used to collect information from boating casualties would affect those recreational vessels involved in boating accidents. There are approximately 5,094 boating accidents annually. Approximately 91 percent of recreational boats affected by this rulemaking appear to be in compliance with the HIN requirement already, leaving 9 percent potentially needing to have the HIN verified or affixed.[3]

The implementation of these requirements would begin in the third year of the effective date of the proposed rule, so costs would be incurred during the third year of the period of analysis. There would be a three-year implementation period for requirements from the third year through the fifth year. We estimated the total average costs of this rulemaking over a 10-year period as summarized in Table 1. Costs are presented as undiscounted and discounted estimates.

TABLE 1—SUMMARY OF COSTS

[Millions of dollars]

Year	Undiscounted	Discount rate	
		7%	3%
1	$0.0	$0.0	$0.0
2	0.0	0.0	0.0
3	16.5	13.5	15.1
4	10.2	7.8	9.0
5	7.9	5.6	6.8
6	3.8	2.5	3.2
7	3.8	2.4	3.1
8	3.8	2.2	3.0
9	3.8	2.1	2.9
10	3.8	1.9	2.8
Total	53.6	38.0	46.0

* Figures may not total due to rounding.

In the initial year of implementation (year 3), we estimate the cost of the rulemaking to be $16.5 million (undiscounted). We estimate the annual recurring costs to be $3.8 million (undiscounted) after the three-year implementation period. We estimate the total present value cost over a 10-year period of analysis to be $38.0 million,

[2] Throughout the Regulatory Analyses section, "State" refers not only to a State of the United States, but also to the Commonwealth of Puerto Rico, the Virgin Islands, Guam, American Samoa, the Commonwealth of the Northern Mariana Islands, and the District of Columbia.

[3] We obtained information on boat hull identification numbers from Info-Link, which is the company that administers the Coast Guard's Vessel Identification System.

discounted at 7 percent, and $46.0 million, discounted at 3 percent.

The main cost driver for this proposed rule is the verification of the HIN by the issuing authority with documentation or visual inspection of the vessel when no proper record of the HIN exists. The issuing authority, usually the State, would have the option to choose the most suitable verification method. For example, some States might require the vessel owner to take the vessel to a specific location for verification, while others might assign personnel to conduct verification at marinas or merely require the vessel owner to file a sworn compliance affidavit. The HIN verification makes up over 90% percent ($15.3 million, non-discounted) of the first-year cost of implementation and over 70% ($2.8 million, non-discounted) of the annual recurring cost after the three-year implementation period of this proposed rule.

In this rulemaking, the Coast Guard is proposing requirements that are intended to improve the information within various databases by increasing the quality of the information and by harmonizing terminology. This enhanced information and subsequent cross-reference between the databases is a benefit that would accrue to all users of these databases. The Coast Guard and other users of the SNS, VIS and BARD information utilize it in their decision-making processes. Sometimes these are decisions made by law enforcement in the field, such as boarding officers, in determining how best to investigate an accident involving a vessel.[4] The information would also prove useful in decision-making and analysis when it comes to future boating safety rulemakings.

Some of the benefits of the proposed HIN verification may accrue to the boat-owner or other entity associated with the vessel. For example, a verified HIN properly linked to the boat-owner can aid in the return of a stolen vessel.

The "Preliminary Regulatory Analysis and Initial Regulatory Flexibility Analysis" available on the docket provides additional detail on the costs and benefits of this rulemaking. The Coast Guard urges interested parties to submit comments that specifically address the economic impacts of this rulemaking. Comments can be made as indicated in the **ADDRESSES** section.

B. Small Entities

Under the Regulatory Flexibility Act (5 U.S.C. 601–612), we have considered whether this proposed rule would have a significant economic impact on a substantial number of small entities. The term "small entities" comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of fewer than 50,000 people.

A combined "Preliminary Regulatory Analysis and Initial Regulatory Flexibility Analysis" discussing the impact of this proposed rule on small entities is available in the docket where indicated under the **ADDRESSES** section of this preamble. A summary of the analysis follows:

The proposed rule would regulate recreational vessels. Individuals, such as the recreational vessel owners regulated by this rule, are not small entities under the definition of a small entity in the Regulatory Flexibility Act (RFA).[5]

We estimate that there are potentially 136,209 owners of recreational vessels used for commercial purposes that may be affected by parts of this rulemaking. Of these, there are potentially 12,259 owners of recreational vessels used for commercial purposes that may have to have the HIN of the vessel verified.

Based on available data, we determined that over 90 percent of these entities are small by SBA size standards. We found that small entities affected by this proposed rule were small businesses consisting of owners and operators in the industry categories of engine equipment manufacturing, boat dealers, hotels, business support services and amusement and recreation.

Based on our assessment of the impacts, we determined that all owners or operators affected by this rule would incur an economic impact of less than 1 percent of revenue. At this time, we have determined that this proposed rule would not have a significant economic impact on a substantial number of small entities under section 605(b) of the Regulatory Flexibility Act.

We are interested in the potential impacts from this proposed rule on small businesses and we request public comment on these potential impacts. If you think that your business, organization, or governmental jurisdiction qualifies as a small entity and that this rulemaking would have a significant economic impact on it, please submit a comment to the Docket Management Facility at the address under **ADDRESSES**. In your comment, explain why, how and to what degree you think this rule would have an economic impact on you.

C. Assistance for Small Entities

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this proposed rule so that they can better evaluate its effects on them and participate in the rulemaking. If the proposed rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please consult Jeff Ludwig, Office of Auxiliary and Boating Safety, 202–372–1061. The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247).

D. Collection of Information

This proposed rule affects three collections of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520). It would modify existing Office of Management and Budget (OMB) Collection of Information, OMB Control Number 1625–0003, "Coast Guard Boating Accident Report Form," OMB Control Number 1625–0070, "Vessel Identification System," and OMB Control Number 1625–0108, "Standard Numbering System for Undocumented Vessels."

As defined in 5 CFR 1320.3(c), "collection of information" comprises reporting, recordkeeping, monitoring, posting, labeling, and other, similar actions. The title and description of the information collections, a description of those who must collect the information, and an estimate of the total annual burden follow. The estimate covers the time for reviewing instructions, searching existing sources of data, gathering and maintaining the data needed, and completing and reviewing the collection.

The proposed rule would add to the recordkeeping and reporting

[4] See the Collection of Information OMB 1625–0108 supporting documentation for further information.

[5] These are individuals that do not use vessels for commercial purposes.

requirements of recreational vessel owners and agencies involved in issuing registrations for recreational vessels and reporting boating accidents.

The issuing authority would have to modify the Boating Casualty Report form, modify the Certificate of Number application and, in cases where necessary, verify that a HIN is properly affixed to the vessel and recorded. The owners of recreational vessels would have to answer more questions when they or their vessels are involved in a boating accident and when applying for a Certificate of Number. Owners of recreational vessels that do not have a properly fixed or recorded HIN would have to allow the issuing authorities to verify the HIN.

For additional detail and information on the burden of this proposed rule, see the Preliminary Regulatory Analysis available in the docket as listed under the "Public Participation and Request for Comments" section of this preamble. A summary of each collection amendment and associated burden follows:

Title: Coast Guard Boating Accident Report Form.

OMB Control Number: 1625–0003.

Summary of the Collection of Information: Federal regulations (33 CFR 173.55) require the operator of any vessel that is numbered or used for recreational purposes to submit an accident report to the issuing authority where the accident occurred.

Need for Information: 46 U.S.C. 6102(a) requires a uniform marine casualty reporting system, with regulations prescribing casualties to be reported and the manner of reporting.

Proposed Use of Information: The Coast Guard uses accident data and statistical information received from the current collection to establish National Recreational Boating Safety (RBS) Program goals, objectives, strategies and performance measures; report RBS Program performance to Congress in the performance and budget reports; identify possible manufacturer defects in boats or equipment; develop boat manufacturing standards; develop safe boating education and accident prevention programs; and publish accident statistics in accordance with Title 46 U.S.C. 6102.

Description of Respondents: Operators of recreational boats and governments of States.

Number of Respondents/Reports: The estimated number of respondents is 56, both current and revised. The revised estimated number of reports is 5,094 compared to the current estimate of 5,000. The higher number of reports is based on an increase in the average number of reports, not a programmatic change.

Frequency of Response: On occasion. Specifically, within 30 days of their receipt of a report as prescribed by 33 CFR 174.121 (Forwarding of casualty or accident reports).

Burden of Response: The estimated revised burden is 2,972 hours per year. The current burden is 2,500. There is an estimated 35-minute burden to a respondent for each report filed for an annual estimated burden of 2,972 hours for the estimated 5,094 reports (5,094 reports * 0.583 hours = 2,972 hours).

Title: Vessel Identification System.

OMB Control Number: 1625–0070.

Summary of the Collection of Information: The Coast Guard established a nationwide vessel identification system (VIS) and centralized certain vessel documentation functions. VIS provides participating States with access to data on vessels numbered by States. Participation in VIS is voluntary.

Need for Information: Title 46 U.S.C. 12501 mandates the establishment of a VIS. Title 33 CFR part 187 prescribes the requirements of VIS.

Proposed Use of Information: This information collection supports the strategic goals of the Department of Homeland Security, the Coast Guard and the Marine Safety, Security and Stewardship Directorate (CG–5).

Description of Respondents: Operators of recreational boats and governments of States.

Number of Respondents and Responses: The estimated number of respondents is 56, both revised and current. The revised estimate of the number of responses is 117,671 compared to the current 125,716. The decrease shown above is due to a reduction in the average number of responses and not a programmatic change.

Frequency of Response: Daily.

Burden of Response: The estimated burden has decreased from 5,829 hours to the revised estimate of 5,456 hours a year. Each response is expected to take approximately 3 minutes (117,671 responses * 0.046 hours = 5,456 hours; rounded).

Title: Standard Numbering System for Undocumented Vessels.

OMB Control Number: 1625–0108.

Summary of the Collection of Information: The SNS collects information on undocumented vessels and vessel owners. States submit reports annually to the Coast Guard on the number, size, construction, *etc.,* of the vessels they have numbered. That information is used by the Coast Guard in the publication of an annual "Boating Statistics" report required by 46 U.S.C. 6102(b), and for allocation of Federal funds to assist in carrying out the Recreational Boating Safety (RBS) Program established by 46 U.S.C. Chapter 131.

Need for Information: On a daily basis or as warranted, Federal, State, and local law enforcement personnel use SNS information from the States' numbering systems for enforcement of boating laws or theft and fraud investigations. In addition, when encountering a vessel suspected of illegal activity, information from the SNS increases officer safety by assisting boarding officers in determining how best to approach a vessel.

Proposed Use of Information: Federal, State, and local law enforcement personnel use SNS information from the States' numbering systems for enforcement of boating laws or theft and fraud investigations. The information is used by the Coast Guard for publication of an annual "Boating Statistics" report required by 46 U.S.C. 6102(b) and for allocation of Federal funds to assist States in carrying out the Recreational Boating Safety (RBS) Program established by 46 U.S.C. Chapter 131.

Description of Respondents: Operators of recreational boats and governments of States.

Number of Respondents and Responses: The estimated number of respondents is 56, both revised and current. The revised estimate of the number of responses is 4,644,142 compared to the current 4,333,333.

Frequency of Response: Daily as necessary.

Burden of Response: The revised estimate of the number of burden hours per year is 379,852 compared to the current burden hours of 286,458. There would be an average 5-minute burden per response for each report filed for an annual estimated burden of 379,852 hours for the estimated 4,644,142 responses.

There are no collection costs to the Federal Government for the SNS because States implement the program.

If you submit comments on the collection of information, submit them both to OMB and to the Docket Management Facility as indicated under **ADDRESSES**, by the date under **DATES**.

You need not respond to a collection of information unless it displays a currently valid control number from OMB. Before the Coast Guard could enforce the collection of information requirements in this proposed rule, OMB would need to approve the Coast Guard's request to collect this information.

E. Federalism

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on State or local governments and would either preempt State law or impose a substantial direct cost of compliance on them. It is well settled that States may not regulate in categories reserved for regulation by the Coast Guard.

The regulations in 33 CFR part 173 subparts A, B, and D, and Part 174 subparts A, B, and D, are issued pursuant to 46 U.S.C. 12301 and 12302 and expressly preempt conflicting State or local regulation.

The regulations in 33 CFR part 173 subpart C and part 174 subpart C are issued pursuant to 46 U.S.C. 6101. 46 U.S.C. 6101 states that "The Secretary shall prescribe regulations on the marine casualties to be reported and the manner of reporting." The statute requires, among other things, the reporting of the death of an individual, serious injury to an individual, material loss of property, material damage affecting the seaworthiness or efficiency of the vessel, and significant harm to the environment.

The Supreme Court has held that "Congress intended that the Coast Guard regulations be the sole source of a vessel's reporting obligations * * *" and that Coast Guard regulations promulgated pursuant to the authority of 46 U.S.C. 6101 were not intended by Congress "to be cumulative to those enacted by each political subdivision whose jurisdiction a vessel enters." *See* the decision of the Supreme Court in the consolidated cases of *United States* v. *Locke* and *Intertanko* v. *Locke,* 529 U.S. 89, 115–116 (2000). Therefore, the Coast Guard's view is that regulations issued under the authority of 46 U.S.C. 6101 for marine casualty reporting requirements have preemptive effect over State regulation in these fields, except to the extent that Congress requires the Coast Guard to allow State casualty reporting systems pursuant to 46 U.S.C. Chapter 131.

The regulations in 33 CFR part 181 are issued pursuant to 46 U.S.C. 4302. Under 46 U.S.C. 4306, Federal regulations establishing minimum safety standards for recreational vessels and associated equipment, and establishing procedures and tests required to measure conformance with those standards preempt State law, unless the State law is identical to a Federal regulation or a State is specifically provided an exemption to those regulations, or permitted to regulate marine safety articles carried or used to address a hazardous condition or circumstance unique to that State.

The regulations in 33 CFR part 187 are currently issued pursuant to 46 U.S.C. 2103. We are proposing to add 46 U.S.C. 12501 as an additional authority. Because State participation in the VIS is entirely voluntary, the regulations in 33 CFR part 187 do not have preemptive impact over State regulation in this field. However, once electing to participate, a State must comply with the requirements of this part to ensure integrity and uniformity of information in both the SNS and VIS.

The Coast Guard recognizes the key role State and local governments may have in making regulatory determinations. Additionally, sections 4 and 6 of Executive Order 13132 require that for any rules with preemptive effect, the Coast Guard must provide elected officials of affected State and local governments and their representative national organizations the notice and opportunity for appropriate participation in any rulemaking proceedings, and to consult with such officials early in the rulemaking process. Therefore, we invite affected State and local governments and their representative national organizations to indicate their desire for participation and consultation in this rulemaking process by submitting comments to the docket using one of the methods specified under **ADDRESSES**. In accordance with Executive Order 13132, the Coast Guard will provide a federalism impact statement to document (1) the extent of the Coast Guard's consultation with State and local officials that submit comments to this proposed rule, (2) a summary of the nature of any concerns raised by State or local governments and the Coast Guard's position thereon, and (3) a statement of the extent to which the concerns of State and local officials have been met.

F. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this proposed rule would not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

G. Taking of Private Property

This proposed rule would not effect a taking of private property or otherwise have taking implications under Executive Order 12630, Governmental Actions and Interference with Constitutionally Protected Property Rights.

H. Civil Justice Reform

This proposed rule meets applicable standards in sections 3(a) and 3(b)(2) of Executive Order 12988, Civil Justice Reform, to minimize litigation, eliminate ambiguity, and reduce burden.

I. Protection of Children

We have analyzed this proposed rule under Executive Order 13045, Protection of Children from Environmental Health Risks and Safety Risks. This rule is not an economically significant rule and would not create an environmental risk to health or risk to safety that might disproportionately affect children.

J. Indian Tribal Governments

This proposed rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it would not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

K. Energy Effects

We have analyzed this proposed rule under Executive Order 13211, Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use. We have determined that it is not a "significant energy action" under that order because it is not a "significant regulatory action" under Executive Order 12866 and is not likely to have a significant adverse effect on the supply, distribution, or use of energy.

L. Technical Standards

The National Technology Transfer and Advancement Act (NTTAA) (15 U.S.C. 272 note) directs agencies to use voluntary consensus standards in their regulatory activities unless the agency provides Congress, through the Office of Management and Budget, with an explanation of why using these standards would be inconsistent with applicable law or otherwise impractical. Voluntary consensus standards are technical standards (*e.g.,* specifications of materials, performance, design, or

operation; test methods; sampling procedures; and related management systems practices) that are developed or adopted by voluntary consensus standards bodies.

This proposed rule does not use technical standards. Therefore, we did not consider the use of voluntary consensus standards.

M. Environment

We have analyzed this proposed rule under Department of Homeland Security Management Directive 023–01 and Commandant Instruction M16475.lD, which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321–4370f), and have made a preliminary determination that this action is one of a category of actions which do not individually or cumulatively have a significant effect on the human environment. A preliminary environmental analysis checklist supporting this determination is available in the docket where indicated under the "Public Participation and Request for Comments" section of this preamble. This rule involves regulations which are editorial or procedural, such as those updating addresses or establishing application procedures; and regulations concerning manning, documentation, admeasurement, inspection, and equipping of vessels. We seek any comments or information that may lead to the discovery of a significant environmental impact from this proposed rule.

List of Subjects

33 CFR Part 173

Marine safety, Reporting and recordkeeping requirements.

33 CFR Part 174

Intergovernmental relations, Marine safety, Reporting and recordkeeping requirements.

33 CFR Part 181

Labeling, Marine safety, Reporting and recordkeeping requirements.

33 CFR Part 187

Administrative practice and procedure, Marine safety, Reporting and recordkeeping requirements.

For the reasons discussed in the preamble, the Coast Guard proposes to amend 33 CFR parts 173, 174, 181, and 187 as follows:

PART 173—VESSEL NUMBERING AND CASUALTY AND ACCIDENT REPORTING

1. The authority citation for part 173 is revised to read as follows:

Authority: 31 U.S.C. 9701; 46 U.S.C. 2110, 6101, 12301, 12302; OMB Circular A–25; Department of Homeland Security Delegation No. 0170.1.

2. Revise § 173.1 to read as follows:

§ 173.1 Purpose; preemptive effect.

This part prescribes requirements for numbering vessels and for reporting casualties and accidents to implement sections 6101, 6102, 12301, and 12302 of Title 46, United States Code. The regulations in subparts A, B, and D of this part have preemptive effect over conflicting State or local regulation. The regulations in subpart C of this part have preemptive effect over State or local regulation within the same field, except to the extent that Congress requires the Coast Guard to allow State casualty reporting systems pursuant to 46 U.S.C. Chapter 131.

3. Revise § 173.3 to read as follows:

§ 173.3 Definitions.

As used in this part:

Airboat means a vessel that is typically flat-bottomed and propelled by an aircraft-type propeller powered by an engine.

Auxiliary sail means a vessel whose primary method of propulsion is sail but has a secondary means of mechanical propulsion.

Cabin motorboat means a type of vessel propelled by propulsion machinery that provides enclosed spaces inside the structure of the vessel.

Certificate of number means a certificate issued by a State that meets the requirements of 33 CFR 174.19, containing vessel and vessel owner registration information for a vessel that is registered and issued a number in that State.

Houseboat means a motorized vessel that is usually non-planing and designed primarily for multipurpose accommodation spaces with low freeboard and little or no foredeck or cockpit.

Hull identification number or *HIN* means a serial number that meets the requirements of 33 CFR part 181, subpart C;

Inboard, in the context of an engine, means an engine mounted inside the confines of a vessel which turns a drive shaft that runs through the bottom of the hull and is attached to a propeller or water jet at the other end.

Inflatable boat means a vessel that uses air-filled flexible fabric for buoyancy.

Issuing authority means a State listed in Appendix A of this part as having a numbering system approved by the Coast Guard, or the Coast Guard where a State numbering system has not been approved.

Open motorboat means a type of vessel equipped with propulsion machinery which has an open load carrying area not protected from the entry of water by means of a continuous deck.

Operate means use, navigate, or employ.

Operator means the person who is in control or in charge of a vessel while it is in use.

Outboard, in the context of an engine, means an engine with propeller or water jet integrally attached which is usually mounted at the stern of a vessel.

Owner means a person who claims lawful possession of a vessel by virtue of a legal title or an equitable interest therein, which entitles him to such possession and includes co-owners.

Paddlecraft means a vessel powered only by a craft's occupant(s) using a single or double bladed paddle as a lever without the aid of a fulcrum provided by oarlocks, thole pins, crutches, or similar arrangements.

Permitted event means an organized water event of limited duration which is conducted according to a prearranged schedule and approved by the Coast Guard or by a State that has jurisdiction over the particular body of water on which the event will take place.

Person means an individual, firm, partnership, corporation, company, association, joint-stock association, or governmental entity and includes a trustee, receiver, assignee, or similar representative of any of them.

Personal watercraft means a vessel propelled by a water-jet pump or other machinery as its primary source of motive power which is designed to be operated by a person sitting, standing, or kneeling on the vessel, rather than the conventional manner of sitting or standing within the confines of the hull.

Pod drive means an engine mounted in front of the transom of a vessel and attached through the bottom of the hull to a steerable propulsion unit.

Pontoon boat means a vessel with a broad, flat deck that is affixed on top of closed cylinders which are used for buoyancy, the basic design of which is usually implemented with two rows of floats as a catamaran or with three rows of floats as a trimaran.

Reporting authority means a State listed in Appendix A of this part as having a numbering system approved by the Coast Guard, or the Coast Guard

where a numbering system has not been approved.

Rowboat means an open vessel manually propelled by oars.

Sail only means a vessel propelled only by sails.

State means a State of the United States, Guam, the Commonwealth of Puerto Rico, the Virgin Islands, American Samoa, the District of Columbia, the Commonwealth of the Northern Mariana Islands, and any other territory or possession of the United States.

State of principal operation means the State on whose waters a vessel is or will be operated most during a calendar year.

Sterndrive means an engine mounted in front of the transom of a vessel which is attached through the transom to a drive unit that is similar to the lower unit of an outboard. The engine turns a drive shaft that is attached to a propeller at the other end. A sterndrive is also known as an inboard-outdrive or an inboard-outboard.

Towed watersports means any watersports activity that takes place when towed or pulled behind a boat, including, but not limited to, waterskiing, wakeboarding, parasailing, and tubing.

Whitewater boating means any activity with a vessel on Class II and above rapid as determined by the six class International Scale of River Difficulty. This definition applies only to the sections of any river with such rapids and not the entire river.

§ 173.15 [Amended]

4. In § 173.15, remove the words "State in which the vessel is principally used" wherever they occur, and add, in their place, the words "State of principal operation."

§ 173.19 [Amended]

5. In § 173.19, remove the word "use" and add, in its place, the word "operate."

§ 173.21 [Amended]

6. In § 173.21(a) introductory text, remove the word "use" and add, in its place, the word "operate," and in paragraph (a)(1), remove the word "used" and add, in its place, the word "operated."

§ 173.23 [Amended]

7. In § 173.23, remove the word "using" and add, in its place, the word "operating."

§ 173.25 [Amended]

8. In § 173.25, remove the word "use" and add, in its place, the word "operate."

§ 173.33 [Amended]

9. In § 173.33(c), remove the word "used" and add, in its place, the word "operated."

§ 173.35 [Amended]

10. In § 173.35, remove the word "use" and add, in its place, the word "operate."

§ 173.51 [Amended]

11. In § 173.51(a) introductory text and (a)(1), remove the word "used" and add, in its place, the word "operated."

12. Revise § 173.57 to read as follows:

§ 173.57 Contents of report.

(a) Each report required by 33 CFR 173.55 must be in writing, dated upon completion, and signed by the person who prepared it.

(b) Until January 1, [FOURTH YEAR FOLLOWING THE YEAR OF THE EFFECTIVE DATE OF THE FINAL RULE], each report must contain, if available, at least the following information about the casualty or accident:

(1) Numbers and names of each vessel involved;

(2) Name and address of each owner of each vessel involved;

(3) Name of the nearest city or town, the county, the State, and the body of water;

(4) Time and date the casualty or accident occurred;

(5) Location on the water;

(6) Visibility, weather, and water conditions;

(7) Estimated air and water temperatures;

(8) Name, address, age, or date of birth, telephone number, vessel operating experience, and boating safety training of the operator making the report;

(9) Name and address of each operator of each vessel involved;

(10) Number of persons on board or towed on skis by each vessel;

(11) Name, address, and date of birth of each person injured or killed;

(12) Cause of each death;

(13) Weather forecasts available to, and weather reports used by, the operator before and during the use of the vessel;

(14) Name and address of each owner of property involved;

(15) Availability and use of personal flotation devices;

(16) Type and amount of each fire extinguisher used;

(17) Nature and extent of each injury;

(18) Description of all property damage and vessel damage with an estimate of the cost of all repairs;

(19) Description of each equipment failure that caused or contributed to the cause of the casualty;

(20) Description of the vessel casualty or accident;

(21) Type of vessel operation (cruising, drifting, fishing, hunting, skiing, racing, or other), and the type of accident (capsizing, sinking, fire, or explosion or other);

(22) Opinion of the person making the report as to the cause of the casualty, including whether or not alcohol or drugs, or both, was a cause or contributed to causing the casualty;

(23) Make, model, type (open, cabin, house, or other), beam width at widest point, length, depth from transom to keel, horsepower, propulsion (outboard, inboard, inboard outdrive, sail, or other), fuel (gas, diesel, or other), construction (wood, steel, aluminum, plastic, fiberglass, or other), and year built (model year), of the reporting operator's vessel;

(24) Name, address, and telephone number of each witness;

(25) Manufacturer's hull identification number, if any, of the reporting operator's vessel; and

(26) Name, address, and telephone number of the person submitting the report.

(c) Effective January 1, [THE FOURTH YEAR FOLLOWING THE YEAR OF THE EFFECTIVE DATE OF THE FINAL RULE], each report must contain, if available, at least the following information about the casualty or accident:

(1) Numbers and names of each vessel involved;

(2) Name and address of each owner of each vessel involved;

(3) Name of the nearest city or town, the county, the State, and the body of water;

(4) Time and date the incident occurred;

(5) Location on the water;

(6) Visibility, weather, and water conditions;

(7) Estimated air and water temperatures;

(8) Name, address, age or date of birth, telephone number, vessel operating experience, and boating safety training of the operator making the report;

(9) Name and address of each operator of each vessel involved;

(10) Number of persons on board (including people participating in towed watersports);

(11) Name, address, and date of birth of each person injured or killed;

(12) Cause of each death;

(13) Weather forecasts available to, and weather reports used by, the operator before and during the use of the vessel;

(14) Name, address, and telephone number of each owner of property damaged;

(15) Availability and use of personal flotation devices;
(16) Number and type of each fire extinguisher aboard the vessel;
(17) Nature and extent of each injury;
(18) Description of all property damage and vessel damage with an estimate of the cost of all repairs;
(19) Description of each equipment failure that caused or contributed to the cause of the incident;
(20) Description of the incident;
(21) Characteristics of the reporting owner's or operator's vessel, as follows:
(i) Make of vessel;
(ii) Model;
(iii) Model year;
(iv) Manufacturer's hull identification number, if any;
(v) Vessel type: Authorized terms are "open motorboat", "cabin motorboat", "air boat", "inflatable boat", "auxiliary sail", "sail only", "paddlecraft", "personal watercraft", "pontoon boat", "houseboat", "rowboat", or "other";
(vi) Overall length of vessel;
(vii) Horsepower;
(viii) Engine drive type: Authorized terms are "inboard", "outboard", "pod drive", "sterndrive", or "other";
(ix) Propulsion type: Authorized terms are "propeller", "sail", "water jet", "air thrust", "manual", or "other";
(x) Fuel: Authorized terms are "gas", "diesel", "electric", or "other";
(xi) Hull material: Authorized terms are "wood", "aluminum", "steel", "fiberglass", "plastic", "rubber/vinyl/canvas", or "other";
(22) Operation of vessel at time of incident: Authorized terms are "maintaining course and speed", "changing course" or "changing speed";
(23) Activity at time of incident: Authorized terms are "at anchor", "being towed", "commercial activity", "cruising", "docking/undocking", "drifting", "fishing", "fueling", "hunting", "launching", "making repairs", "racing", "rowing/paddling", "sailing", "scuba diving/snorkeling", "starting engine", "swimming", "tied to dock/moored", "towed watersports", "towing another vessel", "whitewater boating", or "other";
(24) Whether the incident took place during a permitted event (yes or no);
(25) Type of incident: Authorized terms are "capsizing", "carbon monoxide exposure", "collision with fixed object", "collision with floating object", "collision with vessel", "electrocution", "fall on/within a vessel", "fall overboard", "fire or explosion (fuel)", "fire or explosion (other)", "flooding/swamping", "grounding", "person leaves a vessel", "person ejected from vessel", "sinking", "towed watersports mishap", "struck by vessel", "struck by propeller or propulsion unit", "struck submerged object", or "other";
(26) Cause of incident, in the opinion of the person making the report, including whether or not alcohol or drugs, or both, was a cause or contributed to causing the incident;
(27) Name, address, and telephone number of each witness; and
(28) Name, address, and telephone number of the person submitting the report.

13. Revise § 173.59 to read as follows:

§ 173.59 Where to report.

The report required by 33 CFR 173.55 must be submitted to the reporting authority, listed in Appendix A of this part, where the casualty or accident occurred.

14. Revise § 173.71 to read as follows:

§ 173.71 Application for and issuance of certificate of number.

(a) The owner of a vessel to which 33 CFR 173.11 applies and for which a certificate of number is required may apply for that certificate to the issuing authority for the vessel's State of principal operation listed in Appendix A of this part. The application must be made in the manner specified by the issuing authority and must be accompanied by payment of any fee required by the issuing authority.

(b) Upon determination that the owner's application for a certificate of number complies with the requirements of paragraph (a) of this section, the issuing authority may issue a certificate of number.

(c) A duplicate certificate of number may be applied for and issued as provided by paragraphs (a) and (b) of this section, upon the owner's statement that the original certificate has been lost or destroyed.

§ 173.73 [Removed]

15. Remove § 173.73.

§ 173.77 [Amended]

16. In § 173.77(d), remove the word "used" and add, in its place, the word "operated".

Appendix A [Amended]

17. In Appendix A to Part 173, in paragraph (c), remove the word "use" and add, in its place, the word "operation".

PART 174—STATE NUMBERING AND CASUALTY REPORTING SYSTEMS

18. The authority citation for part 174 continues to read as follows:

Authority: 46 U.S.C. 6101 and 12302; Department of Homeland Security Delegation No. 0170.1(92).

19. Revise § 174.1 to read as follows:

§ 174.1 Applicability; preemptive effect.

This part establishes a standard numbering system for vessels and a uniform vessel casualty reporting system for vessels by prescribing requirements applicable to the States for approval of State numbering systems. The regulations in subparts A, B, and D of this part have preemptive effect over conflicting State or local regulation. The regulations in subpart C of this part have preemptive effect over State or local regulation within the same field, except to the extent that Congress requires the Coast Guard to allow State casualty reporting systems pursuant to 46 U.S.C. Chapter 131.

20. Revise § 174.3 to read as follows:

§ 174.3 Definitions.

As used in this part:

Airboat means a vessel that is typically flat-bottomed and propelled by an aircraft-type propeller and powered by an engine.

Auxiliary sail means a vessel whose primary method of propulsion is sail but has a secondary means of mechanical propulsion.

Cabin motorboat means a type of vessel propelled by propulsion machinery that provides enclosed spaces inside the structure of the vessel.

Certificate of number means a certificate issued by a State that meets the requirements of 33 CFR 174.19, containing vessel and vessel owner registration information for a vessel that is registered and issued a number in that State.

Charter fishing means a vessel carrying a passenger(s) for hire who is (are) engaged in recreational fishing.

Commercial fishing means a vessel that commercially engages in the catching, taking, or harvesting of fish which, either in whole or in part, is intended to enter commerce through sale, barter or trade.

Houseboat means a motorized vessel that is usually non-planing and designed primarily for multipurpose accommodation spaces with low freeboard and little or no foredeck or cockpit.

Hull identification number or *HIN* means a serial number that meets the requirements of 33 CFR part 181, subpart C.

Inboard, in the context of an engine, means an engine mounted inside the confines of a vessel which turns a drive shaft that runs through the bottom of the hull and is attached to a propeller or water jet at the other end.

Inflatable boat means a vessel that uses air-filled flexible fabric for buoyancy.

Open motorboat means a type of vessel equipped with propulsion machinery which has an open load carrying area not protected from the entry of water by means of a continuous deck.

Operator means the person who is in control or in charge of a vessel while it is in use.

Outboard, in the context of an engine, means an engine with propeller or water jet integrally attached, which is usually mounted at the stern of a vessel.

Owner means a person who claims lawful possession of a vessel by virtue of a legal title or an equitable interest therein, which entitles him to such possession and includes co-owners.

Paddlecraft means a vessel powered only by a craft's occupant(s) using a single or double bladed paddle as a lever without the aid of a fulcrum provided by oarlocks, thole pins, crutches or similar arrangements.

Person means an individual, firm, partnership, corporation, company, association, joint-stock association, or governmental entity and includes a trustee, receiver, assignee, or similar representative of any of them.

Personal watercraft means a vessel propelled by a water-jet pump or other machinery as its primary source of motive power which is designed to be operated by a person sitting, standing, or kneeling on the vessel, rather than the conventional manner of sitting or standing within the confines of the hull.

Pod drive means an engine mounted in front of the transom of a vessel and attached through the bottom of the hull to a steerable propulsion unit.

Pontoon boat means a vessel with a broad, flat deck that is affixed on top of closed cylinders which are used for buoyancy, the basic design of which is usually implemented with two rows of floats as a catamaran or with three rows of floats as a trimaran.

Reporting authority means a State listed in 33 CFR part 173, Appendix A, as having a numbering system approved by the Coast Guard, or the Coast Guard where a numbering system has not been approved.

Rowboat means an open vessel manually propelled by oars.

Sail only means a vessel propelled only by sails.

State means a State of the United States, Guam, the Commonwealth of Puerto Rico, the Virgin Islands, American Samoa, the District of Columbia, the Commonwealth of the Northern Mariana Islands, and any other territory or possession of the United States.

State of principal operation means the State in whose waters a vessel is or will be operated most during a calendar year.

Sterndrive means an engine mounted in front of the transom of a vessel which is attached through the transom to a drive unit that is similar to the lower unit of an outboard. The engine turns a drive shaft that is attached to a propeller at the other end. A sterndrive is also known as an inboard-outdrive or an inboard-outboard.

21. Add new § 174.16 to read as follows:

§ 174.16 Verification of hull identification number.

(a) As used in this section, "action" means an action by an issuing authority listed in 33 CFR part 173, Appendix A, to issue, renew, or update the ownership information for a certificate of number under this part.

(b) Effective [DATE 3 YEARS FROM EFFECTIVE DATE OF FINAL RULE], before taking any action relating to a vessel imported or manufactured on or after November 1, 1972, the issuing authority must determine whether the vessel has a HIN meeting the requirements of 33 CFR part 181, subpart C.

(c) If, pursuant to paragraph (b) of this section, the issuing authority determines that the vessel does not have a HIN meeting the requirements of 33 CFR part 181, subpart C, then before taking any action the issuing authority must:

(1) Assign such a HIN to the vessel; and

(2) Require the owner to make the vessel available to a representative of the issuing authority's State so that the representative can permanently affix the HIN to the vessel in compliance with 33 CFR part 181, subpart C.

22. Revise § 174.17 to read as follows:

§ 174.17 Contents of application for certificate of number.

(a) An application for a certificate of number must contain the following information:

(1) Name of owner;

(2) Address of owner;

(3) Owner identifier, which must be the owner's tax identification number; date of birth together with driver's license number; or other unique number;

(4) [Reserved]

(5) State of principal operation;

(6) Number previously issued by an issuing authority;

(7) Application type: Authorized terms are "new number", "renewal of number", or "transfer of ownership";

(8) Primary operation: Authorized terms are "pleasure", "rent or lease", "dealer or manufacturer demonstration", "charter fishing", "commercial fishing", "commercial passenger carrying", or "other commercial operation";

(9) Make and model of vessel;

(10) Model year;

(11) Hull identification number, if any;

(12) Overall length of vessel;

(13) Vessel type: Authorized terms are "open motorboat", "cabin motorboat", "air boat", "inflatable boat", "auxiliary sail", "sail only", "paddlecraft", "personal watercraft", "pontoon boat", "houseboat", "rowboat", or "other";

(14) Hull material: Authorized terms are "wood", "aluminum", "steel", "fiberglass", "plastic", "rubber/vinyl/canvas", or "other";

(15) Propulsion type: Authorized terms are "propeller", "sail", "water jet", "air thrust", "manual", or "other";

(16) Engine drive type: Authorized terms are "inboard", "outboard", "pod drive", "sterndrive", or "other";

(17) Fuel: Authorized terms are "gas", "diesel", "electric", or "other"; and

(18) Signature of the owner.

(b)(1) An application made by a manufacturer or dealer for a number that is to be temporarily affixed to a vessel for demonstration or test purposes may omit the information under paragraphs (a)(9) through (a)(17) of this section.

(2) An application made by an owner of a vessel without propulsion machinery may omit the information under paragraphs (a)(16) and (a)(17) of this section.

(c) For an issuing authority listed in 33 CFR part 173, Appendix A on [EFFECTIVE DATE OF FINAL RULE], the requirements of paragraphs (a) and (b) of this section apply on [DATE 3 YEARS FROM EFFECTIVE DATE OF FINAL RULE]. Between [EFFECTIVE DATE OF FINAL RULE] and [DATE 3 YEARS FROM EFFECTIVE DATE OF FINAL RULE], the issuing authority may continue to accept applications containing the contents required by that reporting authority prior to [EFFECTIVE DATE OF FINAL RULE].

23. Revise § 174.19 to read as follows:

§ 174.19 Contents of a certificate of number.

(a) Except as allowed in paragraph (b) of this section, each certificate of number must contain the following information:

(1) Number issued to the vessel;

(2) Expiration date of the certificate;

(3) State of principal operation;

(4) Name of owner;

(5) Address of owner;

(6) Primary operation: Includes pleasure, rent or lease, dealer or

manufacturer demonstration, charter fishing, commercial fishing, commercial passenger carrying, or other commercial operation;

(7) Hull identification number, if any;

(8) Make and model of vessel;

(9) Model year;

(10) Overall length of vessel;

(11) Vessel type: Includes open motorboat, cabin motorboat, air boat, inflatable boat, auxiliary sail, sail only, paddlecraft, personal watercraft, pontoon boat, houseboat, rowboat, or "other";

(12) Hull material: Includes wood, aluminum, steel, fiberglass, plastic, rubber/vinyl/canvas, or "other";

(13) Propulsion type: Includes propeller, sail, water jet, air thrust, manual, or "other";

(14) Engine drive type: Includes inboard, outboard, pod drive, sterndrive, or "other"; and

(15) Fuel: Includes gas, diesel, electric, or "other."

(b)(1) A certificate of number issued to a manufacturer or dealer for use on a vessel for test or demonstration purposes may omit the information under paragraphs (a)(7) through (a)(15) of this section if the word "manufacturer" or "dealer" is plainly marked on the certificate.

(2) A certificate of number issued for a vessel without propulsion machinery may omit paragraphs (a)(14) and (a)(15) of this section if the words "manual vessel" are plainly marked on the certificate.

(3) An issuing authority may print on the certificate of number a quotation of State boating regulations or other boating-related information, such as safety reminders, or registration or law enforcement contact information.

(c) For an issuing authority listed in Appendix A of this part on [EFFECTIVE DATE OF FINAL RULE], the requirements of paragraphs (a) and (b) of this section apply on [DATE 3 YEARS FROM EFFECTIVE DATE OF FINAL RULE]. Between [EFFECTIVE DATE OF FINAL RULE] and [DATE 3 YEARS FROM EFFECTIVE DATE OF FINAL RULE], the issuing authority may continue to issue certificates of number containing the contents in effect on [EFFECTIVE DATE OF FINAL RULE].

24. Revise § 174.21 to read as follows:

§ 174.21 Temporary certificates.

(a) An issuing authority may issue a temporary certificate of number, valid for no more than 60 days from its date of issuance.

(b) Each temporary certificate must contain the following information:

(1) Vessel's hull identification number, if any;

(2) Make of vessel;

(3) Length of vessel;

(4) Type of propulsion;

(5) State in which vessel is principally operated;

(6) Name of owner;

(7) Address of owner, including ZIP code;

(8) Signature of owner;

(9) Date of issuance; and

(10) Notice to the owner that the temporary certificate is valid for the time it specifies, not to exceed 60 days from the date of issuance.

(c) For an issuing authority listed in 33 CFR part 173, Appendix A on [EFFECTIVE DATE OF FINAL RULE], the requirements of paragraph (b) of this section apply on [DATE 3 YEARS FROM EFFECTIVE DATE OF FINAL RULE]. Between [EFFECTIVE DATE OF FINAL RULE] and [DATE 3 YEARS FROM EFFECTIVE DATE OF FINAL RULE], the issuing authority may continue to issue temporary certificates containing the contents in effect on [EFFECTIVE DATE OF FINAL RULE].

25. Revise § 174.121 to read as follows:

§ 174.121 Forwarding of casualty or accident reports.

Within 30 days of the receipt of a casualty or accident report, the reporting authority receiving the report must forward a paper or electronic copy of that report to the Commandant (CG–5422), U.S. Coast Guard, 2100 Second Street, SW., Stop 7581, Washington, DC 20593–7581.

26. Revise § 174.125 to read as follows:

§ 174.125 Coast Guard address.

The report required by 33 CFR 174.123 must be sent to the Commandant (CG–5422), U.S. Coast Guard, 2100 Second Street, SW., Stop 7581, Washington, DC 20593–7581.

PART 181—MANUFACTURER REQUIREMENTS

27. The authority citation for part 181 is revised to read as follows:

Authority: 46 U.S.C. 4302; Department of Homeland Security Delegation No. 0170.1 (92).

28. Revise § 181.1 to read as follows:

§ 181.1 Purpose and applicability; preemptive effect.

This part prescribes requirements for the certification of boats and associated equipment and identification of boats to which 46 U.S.C. Chapter 43 applies. The regulations in this part have the preemptive effect described in 46 U.S.C. 4306.

29. In § 181.3, revise the definition for "Manufacturer" and add, in alphabetical order, a definition for "State" to read as follows:

§ 181.3 Definitions.

* * * * *

Manufacturer means any person engaged in:

(1) The manufacture, construction, or assembly of boats or associated equipment; or

(2) The importation into the United States of boats, associated equipment, or components thereof.

* * * * *

State means a State of the United States, Guam, the Commonwealth of Puerto Rico, the Virgin Islands, American Samoa, the District of Columbia, the Commonwealth of the Northern Mariana Islands, and any other territory or possession of the United States.

30. Revise § 181.23 to read as follows:

§ 181.23 Hull identification numbers required.

(a) A manufacturer, as defined in § 181.3 of this part, must identify each boat produced or imported with two hull identification numbers (HIN) that meet the requirements of this subpart:

(1) A primary HIN affixed in accordance with §§ 181.29(a) and (c) of this subpart; and

(2) A duplicate HIN affixed in accordance with §§ 181.29(b) and (c) of this subpart.

(b) A person who manufactures or imports a boat for his or her own use and not for sale must obtain the required hull identification number in accordance with the requirements of the issuing authority listed in 33 CFR part 173, Appendix A for the boat's State of principal operation, as defined in 33 CFR 173.3, and make the boat available to a representative of the issuing authority who will permanently affix the HINs.

(c) No person may assign the same HIN to more than one boat.

31. Revise § 181.31 to read as follows:

§ 181.31 Manufacturer identification code assignment.

(a) Each person required by 33 CFR 181.23(a) to affix hull identification numbers must request a manufacturer identification code in writing from the Commandant (CG–54223), 2100 Second Street, SW., Stop 7581, Washington, DC 20593–7581. The request must indicate the manufacturer's name and U.S. address along with the general types and lengths of boats that will be manufactured.

(b) For boats manufactured outside of the jurisdiction of the United States, a U.S. importer must obtain a

manufacturer identification code as required by paragraph (a) of this section. The request must indicate the importer's name and U.S. address along with a list of the manufacturers, their addresses, and the general types and sizes of boats that will be imported. If a nation has a hull identification number system which has been accepted by the Coast Guard for the purpose of importing boats, it may be used by the importer instead of the one specified within this subpart. To request a list of those nations having such a numbering system, write to the Commandant (CG–54223), 2100 Second Street, SW., Stop 7581, Washington, DC 20593–7581.

PART 187—VESSEL IDENTIFICATION SYSTEM

32. The authority citation for part 187 is revised to read as follows:

Authority: 46 U.S.C. 2103, 12501; Department of Homeland Security Delegation No. 0170.1 (92).

33. Revise § 187.11 to read as follows:

§ 187.11 What are the procedures to participate in VIS?

(a) A State wanting to participate in VIS must inform the Commandant, in writing, describing its willingness and ability to comply with each requirement of 33 CFR 187.201. If the Commandant is satisfied that the State will comply fully with 33 CFR 187.201, the State will be allowed to participate in VIS and will be listed in Appendix A to this part, for so long as the Commandant determines that the State complies fully with 33 CFR 187.201.

(b) A State wanting to participate in VIS, but unable to comply with one or more requirements of 33 CFR 187.201, may participate in VIS under one or more waivers, for good cause shown. For purposes of this section, "good cause" includes the existence of State law prohibiting full compliance. A State wanting to participate in VIS under one or more waivers:

(1) So informs the Commandant, in writing;

(2) Describes the requirement or requirements for which waiver is sought, and the good cause for noncompliance; and

(3) Describes the steps the State intends to take to remove the good cause and the anticipated time needed to do so.

(c) The Commandant may allow a State to participate in VIS under one or more waivers, pursuant to a memorandum of agreement between the Coast Guard and the State.

(1) The memorandum of agreement recites the information provided by the State under paragraph (b) of this section, and is valid for not more than three years, during which time the State will be deemed to participate in VIS and be listed in Appendix A to this part.

(2) The State may withdraw from the memorandum of agreement and participation in VIS upon written notice to the Commandant. The Commandant may terminate the memorandum of agreement and the State's participation in VIS for noncompliance with the terms of the memorandum.

(3) Participation in VIS under one or more waivers beyond the term of the initial memorandum of agreement requires a new memorandum.

(4) If the good cause for waivers is eliminated within the term of the memorandum of agreement, the State may so inform the Commandant in writing. The Commandant may then consider the State to participate in VIS under paragraph (a) of this section.

34. Revise § 187.103 to read as follows:

§ 187.103 What information must be collected to identify a vessel?

A participating State must collect the following information on a vessel it has numbered or titled and make it available to VIS:

(a) Manufacturer's hull identification number, if any;

(b) Official number, if any, assigned by the Coast Guard or its predecessor;

(c) Number on certificate of number assigned by the issuing authority of the State;

(d) Expiration date of certificate of number;

(e) Number previously issued by an issuing authority;

(f) Make and model of vessel;

(g) Model year: Includes model year, manufacture year, or year built;

(h) Overall length;

(i) Vessel type: Authorized terms are "open motorboat", "cabin motorboat", "air boat", "inflatable boat", "auxiliary sail", "sail only", "paddlecraft", "personal watercraft", "pontoon boat", "houseboat", "rowboat", or "other";

(j) Hull material: Authorized terms are "wood", "aluminum", "steel", "fiberglass", "plastic", "rubber/vinyl/canvas", or "other";

(k) Propulsion type: Authorized terms are "propeller", "sail", "water jet", "air thrust", "manual", or "other";

(l) Engine drive type: Authorized terms are "inboard", "outboard", "pod drive", "sterndrive", or "other";

(m) Fuel: Authorized terms are "gas", "diesel", "electric", or "other"; and

(n) Primary use: Authorized terms are "pleasure", "rent or lease", "dealer or manufacturer demonstration", "charter fishing", "commercial fishing", "commercial passenger carrying", or "other commercial operation".

Dated: May 3, 2010.

Kevin S. Cook,

Rear Admiral, U.S. Coast Guard, Director of Prevention Policy.

[FR Doc. 2010–10723 Filed 5–6–10; 8:45 am]

BILLING CODE 9110–04–P

FEDERAL MARITIME COMMISSION

46 CFR Parts 520 and 532

[Docket No. 10–03]

RIN 3072–AC38

NVOCC Negotiated Rate Arrangements

AGENCY: Federal Maritime Commission.

ACTION: Notice of Proposed Rulemaking.

SUMMARY: The Federal Maritime Commission proposes a new exemption for non-vessel-operating common carriers agreeing to negotiated rate arrangements from certain provisions and requirements of the Shipping Act of 1984 and certain provisions and requirements of the Commission's regulations.

DATES: Written comments are due by June 4, 2010. If an interested party requests an opportunity to present oral comments to the Commission concerning the proposed regulatory changes by May 14, 2010, the FMC will hold a public meeting on May 24, 2010.

ADDRESSES: Submit all comments concerning this proposed rule to: Karen V. Gregory, Secretary, Federal Maritime Commission, 800 North Capitol Street, NW., Room 1046, Washington, DC 20573–0001. *secretary@fmc.gov.*

FOR FURTHER INFORMATION CONTACT: Rebecca A. Fenneman, Deputy General Counsel, Federal Maritime Commission, 800 North Capitol Street, NW., Room 1018, Washington, DC 20573–0001. (202) 523–5740. *generalcounsel@fmc.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

Submit Comments: Submit an original and fifteen copies of written comments in paper form, and submit a copy in electronic form (Microsoft Word 2007 or 2003) by e-mail to *secretary@fmc.gov* on or before June 4, 2010. Include in the subject line: "Docket No. 10–03 Comments on NVOCC Negotiated Rate Arrangements". Interested parties may also request an opportunity to present oral comments to the Commission at a public meeting to take place on May 24,

2010, at the Commission's Main Hearing Room, Room 100, 800 North Capitol Street, NW., Washington, DC 20573. Requests to present oral comments must be received by the Commission on or before May 14, 2010. The Commission will announce the time of the meeting, the order of presentation, and time allotment via its Web site and service on interested presenters.

On July 31, 2008, the National Customs Brokers and Forwarders Association of America, Inc. (NCBFAA) filed a petition with the Federal Maritime Commission (FMC or Commission), requesting the Commission exercise its authority under 46 U.S.C. 40103 to issue an exemption from provisions of the Shipping Act of 1984 (the Act) requiring non-vessel-operating common carriers (NVOCCs) to publish and/or adhere to rate tariffs for ocean transportation in those instances where they have individually negotiated rates with their shipping customers and memorialized those rates in writing. Petition No. P1–08, *Petition of the National Customs Brokers and Freight Forwarders Association of America, Inc. for Exemption from Mandatory Rate Tariff Publication* at 10 ("Petition"). Notice of the Petition was published on August 11, 2008 and comments on it were due by September 26, 2008. 73 FR 46625–02 (August 11, 2008).

On December 24, 2009, NCBFAA filed a motion for leave to supplement the record and submit a verified statement on behalf of DJR Logistics, Inc. By order served January 5, 2010, the Commission granted NCBFAA's motion, accepted the verified statement, and reopened the record for the limited purpose of receiving updated tariff cost information, and any replies thereto, from previous commenting parties of record by January 21, 2010.

A. The Petition

NCBFAA included as an attachment to its Petition a "Statement of Common Principles Concerning a Section 16 Exemption for NVOCCs," issued in 2004 and agreed to by the National Industrial Transportation League (NITL), NCBFAA, and the Transportation Intermediaries Association (TIA). NCBFAA also attached to the Petition supporting verified statements on behalf of eight ocean transportation intermediaries (OTIs) (Econocaribe Consolidators, Inc.; Kuehne + Nagel, Agent of Blue Anchor Line, Division of Transpac Container System, Ltd.; John S. Connor, Inc.; Panalpina, Inc.; American International Cargo Service, Inc.; Barthco Transportation Services, Inc.; DHL Global Forwarding; and C.H. Powell Company).

NCBFAA's proposal incorporated the following principles: the exemption is voluntary; the exemption would relate only to rates tariffs, not to rules tariffs; disputes relating to exempt contracts would be settled only under contract law; NVOCC Service Arrangements (NSAs), to the extent used, would continue to be filed with the Commission and NSA essential terms will continue to be published; exempt contracts would be memorialized in writing; the Commission would have access to documentation relating to exempt contracts; the exemption would not be construed to extend antitrust immunity to NVOCCs; and only NVOCCs that are licensed or registered ocean transportation intermediaries would be eligible to use the exemption.

B. Comments in Response to the Petition

Comments in response to the Petition were filed by members of Congress; two Federal government agencies; OTIs; associations; consultants; tariff publishers; and vessel-operating common carriers (VOCCs). Comments from members of Congress were received from Senator Bernard Sanders (Vermont); Representative Peter Welch (at-Large Vermont); and Representative Jerry Weller (11th District, Illinois). Comments were received from the following OTIs: A Customs Brokerage, Inc. (ABC); All Freight Transportation, Inc.; Alpha Sun International, Inc.; American International Forwarding; A.N. Deringer, Inc.; Balguerie; Camelot Company; Cargo-Link International, Inc.; CJ International, Inc.; CV International, Inc.; D.J. Powers Company, Inc.; DJR Logistics, Inc.; DJS International Services, Inc.; DT Gruelle Company; Diplomat Global Logistics; EMO Trans, Inc.; FedEx Trade Networks Transport & Brokerage; Fracht FWO; Global Fairways, Inc.; Global Link Logistics; Independent Brokerage, LLC; JAS Forwarding Worldwide; Logistics Worldwide USA, Inc.; Mid-America Overseas, Inc./Hanseatic Container Line Ltd.; Multimodal International Shipping; NACA Logistics (USA); New Direx; New England Groupage; Norman G. Jensen, Inc.; North American Logistics, Inc.; O.T.S. Astracon LLC; ProTrans International; RIM Logistics; R.S. Express, Inc.; Schenker, Inc.; SeaSchott; Serra International; Shipco Transport, Inc.; Superior Brokerage Services, Inc.; Trans-Border Global Freight Systems, Inc.; and USA Shipping, LLC.

The following associations filed comments in response to the Petition: Household Goods Forwarders Association of America, Inc.; National Industrial Transportation League (NITL); New York/New Jersey Foreign Freight Forwarders & Brokers Association, Inc.; Transportation Intermediaries Association; WorldWide Alliance; Florida Shipowners' Group, Inc. and World Shipping Council. Comments were received from the U.S. Department of Transportation (DOT) and the U.S. Department of Justice (DOJ).[1] Two consultants filed comments: ABS Consulting and Stan Levy Consulting, LLC (Levy). Comments were also filed by two tariff publishers: Distribution Publications, Inc. (DPI), and Global Maritime Transportation Services, Inc. (GMTS).

Supplemental comments were received from the following OTIs: Balguerie; DHL Global Forwarding; Global Fairways International Transportation & Logistics; Kuehne + Nagel, Inc.; North American Logistics, Inc.; O.T.S. Astracon LLC; Panalpina, Inc.; RIM Logistics, Ltd.; and Trans-Border Global Freight Systems, Inc. Supplemental comments were also received from NITL, Levy, and DPI.

II. Summary of the Comments

A. Initial Comments in Support of the Petition

Two members of Congress who filed comments in response to the Petition support granting the Petition on the grounds that tariff publication is expensive, adds little value to the shipping public, and is out of step with the modern ocean transportation environment (Welch at 1; Weller at 1). Senator Sanders noted that tariff publishing requirements have not been updated for a number of years and cost freight forwarders time and resources (Sanders at 1). The Department of Transportation states that it has supported exemption of NVOCCs from tariff filing since such relief was first sought (DOT at 2–3); the Commission's exemption for NSAs do not go far enough and impose unnecessary burdens and costs (*Id.* at 5–6); the 1998 Ocean Shipping Reform Act (OSRA) had made the requirements for exemption more flexible; and that other agencies have used their exemption authority to relieve regulatory burdens (*Id.* at 7–8). The Department of Justice also states that it has long supported an exemption for NVOCCs from all tariff publication requirements in order to produce the greatest competitive benefits. (DOJ at 1).

OTIs state that complying with tariff publication requirements is expensive, with estimates of annual expenditures

[1] The Department of Justice moved to file comments on February 5, 2010 and the Commission determined to accept these late-filed comments on February 17, 2010.

for compliance ranging from approximately $450 plus additional charges per rate item filed (Independent Brokerage, LLC at 2), to $200,000 (Global Link Logistics at 2; RIM at 2). They also state that NVOCCs' customers do not request tariff information and do not rely on tariffs, as rates are negotiated individually (American International Forwarding at 2; DT Gruelle Company at 1). In addition, they maintain that there are generally no rate disputes with shippers (Camelot Company at 2; Diplomat Global Logistics at 2). OTIs state that NSAs have not provided adequate relief from tariff publication requirements, and, as NSAs are required to be filed with the FMC and their essential terms published in a tariff, they do not provide cost savings. In addition, OTIs state that shippers balk at the contractual commitments required by NSAs (American International Forwarding at 2; DJR Logistics, Inc. at 2).

A number of OTIs state that since 2001, they have added costs associated with security requirements such as Customs-Trade Partnership Against Terrorism (C–TPAT) certification and the 24-hour advance manifest reporting requirement; and that, as small businesses, they need "regulatory offsets" so that their limited resources can be invested in programs that benefit the shipping public and contribute to the nation's security (New Direx, Inc. at 2–3; Superior Brokerage Services, Inc. at 2–3). Finally, several OTIs take the position that the proposed exemption should include charges as well as rates (Schenker, Inc. at 4–6; Shipco at 3–4), and Schenker, Inc. argues that rules should be exempt as well as rates and charges (Schenker, Inc. at 6).

The Household Goods Forwarders Association of America, Inc. (HGFAA) states that the publication of NVOCC rates for household goods movements is particularly burdensome, because these rates are door-to-door rates from inland point to inland point and are determined on an individual basis for each shipment through negotiations between competing NVOCCs and a shipper (HGFAA at 2). HGFAA states that tariff publication is of no benefit to household goods shippers, as published rates are limited in duration and geographic application and shippers of household goods do not use NVOCC tariffs to compare rates of various NVOCCs (*Id.* at 2–3).

NITL states that tariffs are rarely reviewed or consulted by shippers to determine ocean transportation pricing, and that they function more as a costly regulatory afterthought (NITL at 1). NITL argues that the proposed exemption meets statutory exemption standards and is likely to promote competition by reducing regulatory costs for NVOCCs, increasing their potential to offer competitive ocean rates to shippers (*Id.* at 5). With regard to detriment to commerce, NITL argues that the exemption would not be detrimental to commerce as it would allow NVOCCs to respond more efficiently to changing market conditions; establish a regime for NVOCC pricing that is consistent with regulation of intermediaries in other U.S.-based transportation industries; and would promote the growth of U.S. exports by placing a greater reliance on the marketplace (*Id.* at 6–7).

The New York/New Jersey Foreign Freight Forwarders & Brokers Association, Inc. (NYNJFFF&BA) argues that the tariff publication requirement inhibits the beneficial effects of competition for shippers (NYNJFFF&BA at 3); that the tariff publication requirement is costly and unnecessary in the contract carriage system that exists (*Id.* at 4); and that NSAs are not a viable option for most NVOCC movements (*Id.*).

The Transportation Intermediaries Association (TIA) states that FMC regulations require NVOCCs to keep complete accounting records for every shipment, and tariff publication requirements duplicate that requirement (TIA at 6). TIA states that intermediaries often act as both forwarder and NVOCC on different segments of a movement, and the way that these arrangements are expressed in tariff language can cause confusion (*Id.* at 8–9). The WorldWide Alliance (WWA) states that tariff publishing does not exist in any trade lanes other than those involving the U.S., and this puts U.S. traffic at a disadvantage as NVOCCs cannot respond as quickly to rate and charge fluctuations as they can in other non-U.S. trades (WWA at 2). ABS Consulting (ABS) states that NVOCC rate tariffs have become obsolete and no longer serve their original purpose (ABS at 1). In addition, ABS states that the current tariff publication process adds unnecessary costs to NVOCCs, and thus increases shipping rates (*Id.* at 2).

B. Initial Comments Opposing the Petition

Levy, DPI, and GMTS oppose granting the relief sought by the Petition. Levy argues that the Petition does not substantiate with facts that the requested exemption would not result in substantial reduction in competition or be detrimental to commerce, as based on Levy's assertion that NCBFAA has offered no new facts or information since its previous petition seeking the same relief was filed in 2003 (Levy at 4). Levy states that tariffs may not be used on a daily basis by shippers, but they provide a framework governing shipments so that when there is a cost or service issue, there is a legal tariff binding on all parties (*Id.* at 5). Levy states that if the exemption is granted, NVOCC shippers would lose the ability to use the FMC as a forum for complaints, contrary to the intent of the Act (*Id.* at 6). Finally, Levy argues that it is more appropriate for Congress to revise the Act and that the Petition should be denied, but that the FMC should initiate a proceeding to review and reform tariff regulations for both NVOCCs and VOCCs, to make tariff compliance less burdensome, tariffs more accessible, and tariff information more useful (*Id.* at 5, 7).

Tariff publishers DPI and GMTS state that tariffs published on their Web site are frequently used to verify rates in order to settle disputes (DPI at 13; GMTS at 7). FMC access to tariffs, the tariff publishers argue, is essential for the agency to monitor NVOCC activities and protect the public from violations of Section 10 of the Shipping Act (DPI at 13; GMTS at 10; DPI at 14), and the exemption would shift the cost and burden of enforcement away from the industry to the FMC and the public (GMTS at 10). DPI argues that granting the Petition would cause detriment to commerce because elimination of the 30-day notice requirement for tariff rates would produce rate quotations that would be valid for short periods of time. GMTS urges the Commission to clarify its regulations so that carriers reduce the number of published tariff items to those rates that actually move the cargo (*Id.* at 9).

Florida Shipowners' Group Inc. (FSG) (on behalf of Bernuth Lines, Ltd.; CMA CGM SA; Crowley Caribbean Services, LLC; Seaboard Marine, Ltd.; Sea Freight Line, Ltd.; and Tropical Shipping USA, LLC) states that NVOCCs compete with VOCCs in reselling VOCC transportation services to beneficial cargo owners, and eliminating tariff publication requirements for NVOCCs while leaving them in place for VOCCs will affect the competitive balance between them (FSG at 2). With regard to tariff costs, FSG states that the costs borne by VOCCs to develop and maintain vessels, equipment, and infrastructure needed to move international trade, dwarfs the costs borne by NVOCCs to comply with tariff requirements (*Id.* at 3). FSG states that Congress chose to retain the tariff publication requirement on both NVOCCs and VOCCs, and the FMC

should not remove that requirement from one class of competitors (*Id.*).

C. Other Comments

The World Shipping Council (WSC), a trade association of over 25 international liner shipping ocean carriers, takes no position on the Petition but offers corrections to inaccurate statements in the Petition. WSC states that neither vessel capacity nor container availability is connected with tariff publication (WSC at 2). WSC argues that claims of short-notice VOCC rate changes are inaccurate, as most NVOCCs structure their dealings with VOCCs through service contracts so that any rate changes would be mutually agreed (*Id.*). WSC states that the generalization that NVOCCs have greater numbers of customers than VOCCs is misleading, as some VOCCs deal with thousands of beneficial cargo owners and NVOCC customers, and this should be taken into consideration in connection with relative tariff filing burdens (*Id.* at 2–3).

D. Supplemental Comments Supporting the Petition

NCBFAA submitted a verified supporting statement from DJR Logistics (DJR), to supplement the record. DJR states that virtually every rate change by ocean carriers requires it to make multiple changes in its tariff rates, at a cost of between $3.25 and $13 per change (DJR at 2). DJR estimates its annual tariff publishing bill will be between $25,000 and $30,000 (*Id.*). DJR states that none of its customers review its tariffs. Instead, DJR memorializes rate changes via e-mails or other written communications (*Id.* at 3).

The OTIs submitting supplemental comments generally state that they have increased their tariff filings due to changes in VOCC rates and surcharges. Their average annual tariff publication costs are estimated to be from $2,000 (O.T.S. Astracon at 2), to $240,000 (DHL Global Forwarding at 2, based on stated average monthly costs of $20,000). Some of the OTIs state that a written quotation is the accepted practice in rate negotiation, and therefore there is always written communication that can be used by the FMC (*See, e.g.,* Kuehne + Nagel at 2; Panalpina at 1). Kuehne + Nagel and O.T.S. Astracon state that NSAs have not provided the relief needed from the burden and expense of tariff publication (Kuehne + Nagel at 1; O.T.S. Astracon at 2).

NITL states that the primary purpose of tariff publication, to prevent discriminatory pricing among shippers, is no longer a protection that is required or desired by shippers (NITL at 1). NITL states that the great majority of international ocean shipments move under service contracts, and therefore, tariffs are rarely reviewed by shippers to determine pricing (*Id.* at 1–2). NITL states that there are substantial costs associated with maintaining tariffs and these costs must either be passed on to shippers or absorbed by the NVOCC (*Id.* at 2). NITL argues that the proposed exemption would allow for a regulatory system that is more closely aligned with real time business practices (*Id.*).

E. Supplemental Comments Opposing the Petition

Levy states that when Congress decided to keep tariffs in 1984, it was mindful that it was continuing to impose a regulatory cost on carriers (Levy at 2). DPI also states that it publishes and maintains FMC tariffs for 1,019 NVOCCs, and in 2009, annual tariff costs for its NVOCC clients ranged from $400 to $75,000 (DPI at 4).

Levy states that tariffs are required to assist shippers and enable the FMC to fulfill its statutory duties (*Id.* at 3). DPI states that shippers can rely on tariff rates to be accurate, complete and in effect for 30 days; in the event of a dispute, the tariff can be easily accessed and reviewed (DPI at 5). DPI states that tariffs maintained at its Web site have been used thousands of times to verify rates in order to settle disputes (*Id.*). DPI states that tariffs help protect the public from violations by carriers of Section 10 of the Shipping Act, and enable the Commission to assist in resolving disputes (*Id.*). DPI argues that granting an exemption will produce an increase in disputes between shippers and NVOCCs over applicable rates and charges (*Id.* at 6). Levy also argues that exempting carriers from tariff compliance could be detrimental to commerce because there would be higher legal costs associated with settling disputes in court instead of at the FMC (*Id.*). Levy states that the issues of overly burdensome regulations, access to tariffs and their usefulness should not be ignored, and the FMC should consider reforming its tariff regulations so that it can perform its duty and maintain the regulatory framework envisioned by Congress, rather than exempting NVOCCs from the Act's requirements (*Id*). Levy strongly supports having the FMC initiate a proceeding to review and reform tariff regulations for both NVOCCs and VOCCs, to make tariff compliance less burdensome, tariffs more accessible and tariff information more useful (*Id.*).

III. Commission Action

After consideration of the Petition and all comments at a meeting on February 18, 2010, the Commission determined to initiate a rulemaking to relieve licensed NVOCCs from the costs and burdens of tariff rate publication.[2] The Commission specifically found that it was within its statutory authority and discretion under Section 16 of the Shipping Act to grant such an exemption with certain conditions, after having considered all the comments filed in support and in opposition to the Petition, as doing so would not result in substantial reduction in competition or be detrimental to commerce, consistent with the Act. *See* 46 U.S.C. 40103(a). Section 16 of the Act, as recodified, reads:

40103. Administrative exemptions:

(a) In General.—The Federal Maritime Commission, on application or on its own motion, may by order or regulation exempt for the future any * * * specified activity of [persons subject to this part] from any requirement of this part if the Commission finds that the exemption will not result in substantial reduction in competition or be detrimental to commerce. The Commission may attach conditions to an exemption and may, by order, revoke an exemption.

(b) Opportunity for Hearing.—An order or regulation of exemption may be issued only if the Commission has provided an opportunity for a hearing to interested persons and departments and agencies of the United States Government.

The Commission determined to issue this notice of proposed rulemaking, providing the licensed NVOCCs relief from tariff rate publication requirements and imposing several conditions, including the following: NVOCCs would continue to publish standard rules tariffs containing contractual terms and conditions governing shipments, and would be required to provide these rules free of charge; rates charged by NVOCCs must be agreed to and memorialized in writing by the date cargo is received for shipment by the common carrier; and NVOCCs must retain documentation of the agreed rate and terms for each shipment for a period of five years, and must make this documentation available promptly to the Commission on request pursuant to the Commission's regulations at 46 CFR 515.31(g).

IV. Discussion

As described above, the Commission voted at its meeting of February 18, 2010, exercising its discretion under Section 16 of the Act, codified at 46 U.S.C. 40103, to exempt licensed NVOCCs by regulation from these

[2] Commissioner Joseph E. Brennan dissented.

requirements of the Act: The requirement in Section 8(a), codified at 46 U.S.C. 40501(a)–(c) that each common carrier keep open to public inspection in an automated tariff system tariffs showing all its rates; Section 8(b), codified at 46 U.S.C. 40501(d) (time volume rates); Section 8(d), codified at 46 U.S.C. 40501(e) (tariff rate increase may not be effective on less than 30 days' notice but decrease effective immediately); Section 8(e), codified at 46 U.S.C. 40503 (carrier application to grant refunds); and Section 10(b)(2)(A)'s requirement of adhering to the published tariff rate, codified at 46 U.S.C. 41104(2)(A). The Commission also determined to seek public comment on whether the regulation should also extend the exemption to the prohibitions of Section 10(b)(4), codified at 46 U.S.C. 41104(4) (prohibiting common carriers from unfair or unjustly discriminatory practices in services pursuant to a tariff), and Section 10(b)(8), codified at 46 U.S.C. 41104(8) (prohibiting common carriers from undue or unreasonable preference or advantage or undue or unreasonable prejudice or disadvantage for tariff service). The Commission voted to make this exemption subject to several conditions, as described below. The Commission now publishes a proposed regulation and seeks comment from the public on the proposal.

The regulation, as proposed, would exempt licensed NVOCCs from certain provisions of the Act, specified as follows. The Petition also requests that the exemption be applicable for NVOCCs unlicensed but registered pursuant to 46 CFR 515.21(a)(3). The Commission will consider comments on whether the exemption should be extended to such NVOCCs. The proposed regulation would recognize NVOCC negotiated rate arrangements (NRAs) and proposes defining that instrument as "a written and binding arrangement between a shipper and an eligible NVOCC to provide specific transportation service for a stated cargo quantity, from origin to destination, on and after the receipt of the cargo by the carrier or its agent (or the originating carrier in the case of through transportation)."

For the exemption rule to apply to an NVOCC, the NVOCC must meet the following conditions:

- Notice that the NVOCC is invoking the exemption and opting out of rate publication must be published in a prominent place in a rules tariff;
- Public access to the rules tariff must be free of charge or the rules tariff must be provided with each of the NVOCC's proposed NRAs or rate quotes;
- NRAs must:
  - Be agreed to by both parties;
  - Be memorialized in writing;
  - Include the applicable rate for each shipment;
  - Be agreed and memorialized on or before the date on which the cargo is received by the common carrier or its agent (including originating carrier in the case of through transportation rates);
  - Include prominent notice of the existence and location of the NVOCC's rules tariff; and
- NRAs and associated records must be retained for five years and are subject to the records availability requirements of the Commission's regulations at 46 CFR 515.31(g).

When these conditions have been met, the regulation as proposed would exempt the NVOCC from the following requirements of the Act and the Commission's related regulations:

1. The requirement in Section 8(a)(1)(codified at 46 U.S.C. 40501(a)), (requirement that a tariff containing the applicable rate be published in an automated tariff system);

2. Section 8(b) (codified at 46 U.S.C. 40501(d)) (a rate under which a tariff may vary with the volume of cargo over a specified period of time);

3. Section 8(d), (codified at 46 U.S.C. 40501(e)) (tariff rate increase may not be effective on less than 30 days' notice but may decrease effective on publication);

4. Section 8(e), (codified at 46 U.S.C. 40503) (common carrier may apply for Commission authority to grant refunds); and from

5. Section 10(b)(2)(a)'s requirement to adhere to a published tariff rate (codified at 46 U.S.C. 41104(2)(A)).

Other than the specific provisions of the Act and the Commission's related regulations referenced above, eligible NVOCCs will be subject to the requirements of the Act and all applicable antitrust laws under the proposed regulation.

The Commission seeks comment on whether the regulation should additionally specifically exempt eligible NVOCCs from the prohibitions of Section 10(b)(4), codified at 46 U.S.C. 41104(4) (prohibiting common carriers from unfair or unjustly discriminatory practices in service pursuant to a tariff), and Section 10(b)(8), codified at 46 U.S.C. 41104(8) (prohibiting common carriers from undue or unreasonable preference or advantage or undue or unreasonable prejudice or disadvantage for tariff service).

The Commission also requests comment on additional terms to be required in the NRA documentation. In addition, the Commission requests comments on which elements should be required to qualify the NRA for a "safe harbor" status that affords a presumption that the corresponding shipment is not subject to the tariff rate publication requirement.

Finally, the Commission proposes to add 46 CFR 520.13(e) to its current tariff regulations indicating the interaction of NRAs and otherwise applicable tariff publication requirements of that section.

V. Section-by-Section Analysis

A. Section 532.1—Purpose

The NPRM proposes an exemption from certain provisions of the Act. Section 532.1 sets forth the purpose for the exemption and its conditions.

B. Section 532.2—Scope and Applicability

This provision describes the scope and applicability of the proposed exemption. Notably, the Commission has proposed that the exemption be limited to NVOCCs that are licensed pursuant to 46 CFR Part 515. Further, it states that any NVOCC who fails to maintain its bond or license or has had its tariff suspended or cancelled by the Commission is ineligible to avail itself of the exemption.

The Commission has proposed that, as the exemption as proposed will only apply to rates, but not the other terms of the agreement between shipper and carrier, standard terms ("tariff rules") will continue to be required to be made public in the NVOCC's tariff publication.

C. Section 532.3—Definitions

This provision defines the terms used in the exemption regulation. Specifically, the Commission introduces a new term, "NVOCC Negotiated Rate Arrangement" (NRA). The Commission notes that it does not propose to remove or revise the exemption regulations for NVOCC Service Arrangements (NSAs), 46 CFR Part 531.

The rule as proposed would define an NRA as, "a written and binding arrangement between a shipper and an eligible NVOCC to provide specific transportation service for a stated cargo quantity, from origin to destination, on and after the receipt of the cargo by the carrier or its agent (or the originating carrier in the case of through transportation)." This definition is based on that of "rate" as it appears in the Commission's rules at 46 CFR 520.2. The proposed exemption regulation would also define the term "rules tariff."

D. Section 532.4—Duties

This proposed provision imposes the duty to provide all terms of an NRA upon the offering NVOCC and is intended for the protection of the shipper. The proposed rule requires that an NVOCC invoking the exemption either (1) provide the public electronic access to its rules tariff free of charge or (2) provide a copy of its rules tariff with each of its proposed NRAs.

E. Section 532.5—Requirements for NVOCC Negotiated Rate Arrangements

This provision details the requirements for the timing, contents and documentation of NRAs. NRAs must be agreed to and memorialized in writing. Specifically, the Commission wishes commenters to take notice of the timing requirements of the exemption regulation. NRAs must be concluded and in place prior to the date the cargo is received by the common carrier or its agent (including originating carriers in the case of through transportation). These requirements are based on the applicable rate provision of the Commission's tariff regulations found at 46 CFR 520.7(c). The Commission wishes to note that the regulation as proposed does not allow for any modification to the NRA after the cargo is received by the carrier or its agent (or the originating carrier in the case of through transportation).

F. Section 532.6—Notices

This section provides details of the required notices that an NVOCC invoking the exemption must provide to the Commission and to potential customers. The proposed regulation requires NVOCCs invoking the exemption to continue to publish a rules tariff, which contains terms and conditions for shipments, but not the agreed rate for a particular shipment. The proposed rule requires that the published rules tariff include prominent notice that the NVOCC has chosen to operate under the exemption and opt out of publishing rates in its tariffs.

Alternatively, if an NVOCC seeks to invoke the exemption for all of its dealings with shippers, it may be simpler to provide an indication of this election to the Commission on the NVOCC's Form FMC–1 filing, which would then be reflected on the Commission's Web site along with the NVOCC's tariff location. The Commission seeks comment on whether the regulation should also specify that, when a tariff rate and a duly-executed NRA appear to address the same shipment, the lower rate shall prevail.

G. Section 532.7—Recordkeeping and Audit

This provision would require an NVOCC invoking the exemption to maintain original NRAs and associated records for 5 years in a format easily produced to Commission. An NVOCC would be required to make the NRAs and associated records available to the Commission promptly in response to a request pursuant to 46 CFR 515.31(g).

Failure to keep records would remove the operation of the exemption (even if it had been invoked by a notice as set forth in foregoing sections) and therefore would make the NVOCC subject to penalties for violations of the Act including, for example, 46 U.S.C. 41104(1) (prohibition against a common carrier allowing a person to obtain transportation at less than applicable tariff rates by an unjust or unfair means or device), and 41104(2)(A) (prohibition against a common carrier providing service not in accordance with a tariff).

VI. Statutory Reviews and Request for Comment

In accordance with the Regulatory Flexibility Act, 5 U.S.C. 601 *et seq.,* the Chairman of the Federal Maritime Commission certifies that the proposed rule, if promulgated, would not have a significant economic impact on a substantial number of small entities. The Commission recognizes that the majority of businesses affected by this rule qualify as small entities under the guidelines of the Small Business Administration. The rule, however, would establish an optional method for NVOCCs to carry cargo for their customers to be used at their discretion. The rule would pose no economic detriment to small business entities. Rather, it exempts NVOCCs from the otherwise applicable requirements of the Act when such entities comply with the rules set forth herein.

This regulatory action is not a "major rule" under 5 U.S.C. 804(2).

The collection of information requirements contained in this proposed 46 CFR Part 532 have been submitted to the Office of Management and Budget for review under section 3504(h) of the Paperwork Reduction Act of 1980, as amended. Send comments regarding the burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Ronald D. Murphy, Managing Director, Federal Maritime Commission, 800 North Capitol Street, NW., Washington, DC 20573, e-mail: *OMD@fmc.gov,* or fax: (202) 523–3646; and to the Office of Information and Regulatory Affairs, Office of Management and Budget, Attention: Desk Officer for Federal Maritime Commission, 17th Street and Pennsylvania Avenue, NW., Washington, DC 20503, e-mail: *OIRASubmission@OMB.EOP.GOV,* or fax: (202) 395–5806.

List of Subjects

46 CFR Part 520

Common carrier, Freight, Intermodal transportation, Maritime carrier, Reporting and recordkeeping requirements.

46 CFR Part 532

Exports, Non-vessel-operating common carriers, ocean transportation intermediaries.

Accordingly, the Federal Maritime Commission proposes to amend 46 CFR Part 520 and add 46 CFR Part 532 as follows:

PART 520—CARRIER AUTOMATED TARIFFS

1. The authority for Part 520 continues to read as follows:

Authority: 5 U.S.C. 553; 46 U.S.C. 305, 40101–40102, 40501–40503, 40701–40706, 41101–41109.

§ 520.13 [Amended]

2. In § 520.13, add a new paragraph (e) to read as follows:

§ 520.13 Exemptions and exceptions.

* * * * *

(e) NVOCC Negotiated Rate Arrangements. A licensed NVOCC that satisfies the requirements of part 532 of this chapter is exempt from the requirement in this part that it include rates in a tariff open to public inspection in an automated tariff system.

3. Add part 532 to read as follows:

PART 532—NVOCC NEGOTIATED RATE ARRANGEMENTS

Subpart A—General Provisions

Sec.
532.1 Purpose.
532.2 Scope and applicability.
532.3 Definitions.

Subpart B—Procedures Related to NVOCC Negotiated Rate Arrangements

532.4 Duties of the NVOCC.
532.5 Requirements for NVOCC Negotiated Rate Arrangements.
532.6 Notices.

Subpart C—Recordkeeping Requirements

532.7 Recordkeeping and audit.
532.91 OMB control number assigned pursuant to the Paperwork Reduction Act.

Authority: 46 U.S.C. 40103.

Subpart A—General Provisions

§ 532.1 Purpose.

The purpose of this Part, pursuant to the Commission's statutory authority, is to exempt licensed and bonded non-vessel-operating common carriers (NVOCCs) from the tariff rate publication and adherence requirements of the Shipping Act of 1984, as enumerated herein.

§ 532.2 Scope and applicability.

This Part exempts NVOCCs duly licensed pursuant to 46 CFR 515.3, holding adequate proof of financial responsibility pursuant to 46 CFR 515.21; and meeting the requirements of 46 CFR 532.4 through 532.7; from the following requirements and prohibitions of the Shipping Act and the Commission's regulations:

(a) The requirement in 46 U.S.C. 40501(a)–(c) that the NVOCC include its rates in a tariff open to public inspection in an automated tariff system;

(b) 46 U.S.C. 40501(d);

(c) 46 U.S.C. 40501(e);

(d) 46 U.S.C. 40503;

(e) The prohibition in 46 U.S.C. 41104(2)(A); and

(f) The Commission's corresponding regulation at 46 CFR 520.3(a) that the NVOCC include its rates in a tariff open for public inspection in an automated tariff system;

(g) The Commission's corresponding regulations at 46 CFR 520.4(a)(4), 520.4(f), 520.6(e), 520.7(c), (d), 520.8(a), 520.12, and 520.14. Any NVOCC failing to maintain its bond or license as set forth above, or who has had its tariff suspended by the Commission, shall not be eligible to invoke this exemption.

§ 532.3 Definitions.

When used in this part,

(a) "NVOCC Negotiated Rate Arrangement" means a written and binding arrangement between a shipper and an eligible NVOCC to provide specific transportation service for a stated cargo quantity, from origin to destination, on and after receipt of the cargo by the carrier or its agent (or the originating carrier in the case of through transportation).

(b) "Rate" means a price stated for providing a specified level of transportation service for a stated cargo quantity, from origin to destination, on and after a stated date or within a defined time frame.

(c) "Rules tariff" means the portion of a tariff, as defined by 46 CFR 520.2, containing the terms and conditions governing the charges, classifications, rules, regulations and practices of an NVOCC, but does not include a rate.

Subpart B—Procedures Related to NVOCC Negotiated Rate Arrangements

§ 532.4 Duties of the NVOCC.

Before entering into an NRA under this Part, the NVOCC must:

(a) For each NRA, provide the prospective shipper all the applicable terms as set forth in its rules tariff; or

(b) Provide electronic access to its rules tariffs to the public free of charge.

§ 532.5 Requirements for NVOCC Negotiated Rate Arrangements

In order to qualify for the exemptions to the general rate publication requirement as set forth in section 532.2, an NRA must:

(a) Be in writing;

(b) Be agreed to by both shipper and NVOCC prior to the date on which the cargo is received by the common carrier or its agent (including originating carriers in the case of through transportation);

(c) Clearly specify the rate and to which shipment or shipments such rate will apply; and

(d) may not be modified after the time the shipment is received by the carrier or its agent (including originating carriers in the case of through transportation).

§ 532.6 Notices.

(a) An NVOCC wishing to invoke an exemption pursuant to this part must indicate that intention to the Commission and to the public by one or more of the following:

(1) A prominent notice on its rules tariff; or

(2) By so indicating on its Form FMC–1 on file with the Commission.

(b) [Reserved]

Subpart C—Recordkeeping Requirements

§ 532.7 Recordkeeping and audit.

(a) An NVOCC invoking an exemption pursuant to this part must maintain original NRAs and all associated records including written communications for 5 years in a format easily produced to Commission.

(b) NRAs and all associated records and written communications are subject to inspection and reproduction requests under section 515.31(g) of this chapter. An NVOCC shall produce the requested NRAs and associated records, including written communications, promptly in response to a Commission request.

(c) Failure to keep or timely produce original NRAs and associated records and written communications will disqualify an NVOCC from the operation of the exemption provided pursuant to this part, regardless of whether it has been invoked by notice as set forth above, and may result in a Commission finding of a violation of 46 U.S.C. 41104(1), 41104(2)(A) or other acts prohibited by the Shipping Act.

§ 532.91 OMB control number issued pursuant to the Paperwork Reduction Act

The Commission has received OMB approval for this collection of information pursuant to the Paperwork Reduction Act of 1995, as amended. In accordance with that Act, agencies are required to display a currently valid control number. The valid control number for this collection of information is [3072–XXX].

By the Commission.

Karen V. Gregory,

Secretary.

BILLING CODE P

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 54

[WC Docket No. 05–337, CC Docket No. 96–45, WC Docket No. 03–109; FCC 10–57]

High-Cost Universal Service Support, Federal-State Joint Board on Universal Service, Lifeline and Link-Up

AGENCY: Federal Communications Commission.

ACTION: Notice of proposed rulemaking.

SUMMARY: In this document, the Commission proposes targeted rule changes to help eligible consumers in Puerto Rico take better advantage of existing universal service low-income support programs. Specifically, the Commission asks whether it should provide additional Link-Up support to help offset special construction charges incurred by consumers when facilities must be built to provide them with access to voice telephone service. By removing a remaining impediment to affordable voice telephone service, the Commission would hope to further close the gap in telephone subscribership between the Commonwealth and non-insular areas.

DATES: Comments on the proposed rules are due on or before June 7, 2010 and reply comments are due on or before June 21, 2010.

ADDRESSES: You may submit comments, identified by WC Docket No. 05–337, CC Docket No. 96–45, WC Docket No. 03–109, by any of the following methods:

• *Federal eRulemaking Portal: http://www.regulations.gov*. Follow the instructions for submitting comments.

• *Federal Communications Commission's Web Site: http://fjallfoss.fcc.gov/ecfs2/*. Follow the instructions for submitting comments.

• *People with Disabilities:* Contact the FCC to request reasonable accommodations (accessible format documents, sign language interpreters, CART, etc.) by e-mail: *FCC504@fcc.gov* or phone: (202) 418–0530 or TTY: (202) 418–0432.

For detailed instructions for submitting comments and additional information on the rulemaking process, *see* the **SUPPLEMENTARY INFORMATION** section of this document.

FOR FURTHER INFORMATION CONTACT: Ted Burmeister, Wireline Competition Bureau, Telecommunications Access Policy Division, (202) 418–7389 or TTY: (202) 418–0484.

SUPPLEMENTARY INFORMATION: This is a synopsis of the Commission's Notice of Proposed Rulemaking in WC Docket No. 05–337, CC Docket No. 96–45, WC Docket No. 03–109, FCC 10–57, adopted April 16, 2010, and released April 16, 2010. The complete text of this document is available for inspection and copying during normal business hours in the FCC Reference Information Center, Portals II, 445 12th Street, SW., Room CY–A257, Washington, DC 20554. The document may also be purchased from the Commission's duplicating contractor, Best Copy and Printing, Inc., 445 12th Street, SW., Room CY–B402, Washington, DC 20554, telephone (800) 378–3160 or (202) 863–2893, facsimile (202) 863–2898, or via the Internet at *http://www.bcpiweb.com*. It is also available on the Commission's Web site at *http://www.fcc.gov*.

Pursuant to §§ 1.415 and 1.419 of the Commission's rules, 47 CFR 1.415, 1.419, interested parties may file comments and reply comments on or before the dates indicated on the first page of this document. Comments may be filed using: (1) The Commission's Electronic Comment Filing System (ECFS), (2) the Federal Government's eRulemaking Portal, or (3) by filing paper copies. *See* Electronic Filing of Documents in Rulemaking Proceedings, 63 FR 24121, May 1, 1998.

• *Electronic Filers:* Comments may be filed electronically using the Internet by accessing the ECFS: *http://www.fcc.gov/cgb/ecfs/* or the Federal eRulemaking Portal: *http://www.regulations.gov*. Filers should follow the instructions provided on the Web site for submitting comments.

• *Paper Filers:* Parties who choose to file by paper must file an original and four copies of each filing. If more than one docket or rulemaking number appears in the caption of this proceeding, filers must submit two additional copies for each additional docket or rulemaking number.

Filings can be sent by hand or messenger delivery, by commercial overnight courier, or by first-class or overnight U.S. Postal Service mail (although we continue to experience delays in receiving U.S. Postal Service mail). All filings must be addressed to the Commission's Secretary, Office of the Secretary, Federal Communications Commission.

○ All hand-delivered or messenger-delivered paper filings for the Commission's Secretary must be delivered to FCC Headquarters at 445 12th St., SW., Room TW–A325, Washington, DC 20554. The filing hours are 8 a.m. to 7 p.m. All hand deliveries must be held together with rubber bands or fasteners. Any envelopes must be disposed of *before* entering the building.

○ Commercial overnight mail (other than U.S. Postal Service Express Mail and Priority Mail) must be sent to 9300 East Hampton Drive, Capitol Heights, MD 20743.

○ U.S. Postal Service first-class, Express, and Priority mail should be addressed to 445 12th Street, SW., Washington, DC 20554.

In addition, one copy of each pleading must be sent to each of the following:

• The Commission's duplicating contractor, Best Copy and Printing, Inc, 445 12th Street, SW., Room CY–B402, Washington, DC 20554; Web site: *http://www.bcpiweb.com;* phone: 1–800–378–3160; and

• Charles Tyler, Telecommunications Access Policy Division, Wireline Competition Bureau, 445 12th Street, SW., Room 5–A452, Washington, DC 20554; e-mail: *Charles.Tyler@fcc.gov*.

People with Disabilities: To request materials in accessible formats for people with disabilities (Braille, large print, electronic files, audio format), send an e-mail to *fcc504@fcc.gov* or call the Consumer & Governmental Affairs Bureau at (202) 418–0530 (voice) or (202) 418–0432 (TTY). Contact the FCC to request reasonable accommodations for filing comments (accessible format documents, sign language interpreters, CART, *etc.*) by e-mail: *fcc504@fcc.gov*; phone: (202) 418–0530 or (202) 418–0432 (TTY).

Filings and comments are also available for public inspection and copying during regular business hours at the FCC Reference Information Center, Portals II, 445 12th Street, SW., Room CY–A257, Washington, DC, 20554. Copies may also be purchased from the Commission's duplicating contractor, BCPI, 445 12th Street, SW., Room CY–B402, Washington, DC 20554. Customers may contact BCPI through its Web site: *http://www.bcpiweb.com,* by e-mail at *fcc@bcpiweb.com*, by telephone at (202) 488–5300 or (800) 378–3160 (voice), (202) 488–5562 (TTY), or by facsimile at (202) 488–5563.

I. Synopsis of the Notice of Proposed Rulemaking

1. Although the Commission declines to establish the universal service high-cost support mechanism proposed by Puerto Rico Telephone Company (PRTC), the Commission acknowledges that there may be a significant number of low-income consumers in Puerto Rico who remain unable to afford access to voice telephone service. Telephone subscribership in Puerto Rico has increased dramatically since the Commission released its notice of proposed rulemaking in 2005. Despite these gains, subscribership in Puerto Rico remains materially lower than in any other jurisdiction reported by the Census Bureau. In addition, a significantly higher percentage of Puerto Rican families are below the poverty threshold than the general U.S. population, with approximately 41 percent of Puerto Rican families reporting income below the poverty threshold between 2006 and 2008, as compared to approximately 10 percent of total U.S. families reporting income below the poverty threshold during the same time period. The State with the next highest percentage of families reporting income below the poverty threshold is Mississippi at 16.7 percent. Not only does Puerto Rico have the highest percentage of households with incomes below the poverty level of any jurisdiction reported by the Census Bureau, but it has the lowest median household income as well. Specifically, the median household income in Puerto Rico in 2007 was $17,741 compared with a national median household income of $50,740. The State with the next lowest median household income is West Virginia, with a median household income of $37,060—over twice the median household income in Puerto Rico. Evidence in the record suggests that infrastructure does not yet reach some subscribers, so some people may not be subscribing because they cannot afford to pay the special construction charges associated with building facilities to reach them. The confluence of these two factors—a subscribership rate lower than any other reported jurisdiction's and an exceptionally high rate of poverty—causes us to believe that additional low-

income support may be appropriate in this jurisdiction. To address this situation and to ensure that low-income consumers in Puerto Rico can take advantage of the assistance available to them through the existing universal service Lifeline and Link Up low-income support programs, we propose to amend our rules to allow eligible low-income consumers in Puerto Rico additional support through the Link Up Program to offset special construction charges incurred if additional facilities are required to provide them with access to voice telephone service.

2. The Commission in the *Twelfth Report and Order,* 65 FR 47941, August 4, 2000, took measures to address impediments to telephone subscribership and infrastructure investment on Tribal lands, including the adoption of enhanced Link Up support. The Commission identified a number of factors that are primary impediments to subscribership on Tribal lands, including the cost of basic voice service, the cost of intrastate toll service, inadequate telecommunications infrastructure and the cost of line extensions, and the lack of competitive service providers offering alternative technologies. At that time, however, the Commission chose not to extend the actions taken in the *Twelfth Report and Order* to all high-cost areas and all insular areas, including Puerto Rico. Although the record demonstrated that subscribership levels were below the national average in other low-income, rural areas and in certain insular areas, the Commission found that the factors causing low subscribership on Tribal lands were not the same factors causing low subscribership in those other jurisdictions. We recognize that is still the case today: while Puerto Rico faces a lower telephone subscriber rate and a higher poverty rate than other jurisdictions, the Commonwealth does not appear to suffer from other impediments to subscribership that affect Tribal lands, notably higher cost to provide voice telephone service and a lack of competitive service providers offering voice service via alternative technologies. Moreover, Puerto Rico has a much higher telephone subscribership rate (approximately 92 percent in 2008) than the subscribership rate we found on reservations when we adopted the *Twelfth Report and Order* (approximately 47 percent).

3. Importantly, however, the Commission's decision in 2000 to limit the measures adopted in the *Twelfth Report and Order* to Tribal lands was driven by its "concern[] that to devise a remedy addressing all low subscribership issues for all unserved or underserved populations simultaneously might unnecessarily delay action on behalf of those who are least served, *i.e.,* Tribal communities." In other words, the Commission placed higher priority on increasing telephone subscribership on Tribal lands—it did not determine that no further action was needed to assist other unserved or underserved populations. The Commission has long attributed Puerto Rico's historically lagging telephone subscribership penetration rate to low per-capita income. Thus, to the extent that parties have identified line extension and construction costs as obstacles to affordable telephone service in Puerto Rico, extending the enhanced Link Up support already available to Tribal lands could likewise "increase subscribership among qualifying low-income individuals [in Puerto Rico] by minimizing certain of these up-front costs." Indeed, by further reducing the initial connection charges and line extension charges for qualifying low-income customers in Puerto Rico, as we already have for consumers living on Tribal lands, we would hope to remove a remaining impediment to affordable voice telephone service and, thus, further close the gap in telephone subscribership between the Commonwealth and non-insular areas.

4. Specifically, for the benefit of consumers in Puerto Rico meeting the eligibility criteria for the Lifeline and Link Up Programs, we propose to amend our rules to increase the cap on Link Up support to cover special construction charges. The cap for these charges would be increased from the current $30 limit to $100. This additional $70 in Link Up support would cap Link Up discounts at the same level as the enhanced Link Up available to eligible residents of Tribal lands. Link Up support would be available to eligible low-income consumers in Puerto Rico for up to 100 percent of the special construction charges, subject to the $100 cap. Under our rules, Link Up support would continue to be available "for a single telecommunications connection at a consumer's principal place of residence." To ensure reasonable use of the support, this support would be available only when a low-income-eligible consumer in Puerto Rico has requested service under the Lifeline or Link Up Programs but such service could not be provided absent construction of additional facilities. Consistent with our rules, all ETCs in Puerto Rico would be required to offer and make available this additional Link Up support to eligible low-income consumers. All ETCs in Puerto Rico also would be required to advertise the availability of this additional Link Up support using media of general distribution in Puerto Rico. In addition, all ETCs receiving Link Up support in Puerto Rico would be required to report the number of consumers that request such additional Link Up support, the number of consumers that receive such support, the reasons why any requesting consumers did not qualify for or receive such support, the cost of constructing the additional facilities, and a description of the additional facilities constructed. This information would be included in the annual report required by section 54.209 of our rules. We seek comment on these proposed revisions to the low-income support rules for eligible low-income consumers in Puerto Rico.

II. Procedural Matters

A. Initial Paperwork Reduction Analysis

5. This notice of proposed rulemaking contains proposed information collections that would apply to fewer than ten respondents and, as a result, is not subject to the Paperwork Reduction Act of 1995. In addition, it does not contain any new, modified, or proposed "information collection burden for small business concerns with fewer than 25 employees" pursuant to the Small Business Paperwork Relief Act of 2002.

B. Initial Regulatory Flexibility Act Certification

6. The Regulatory Flexibility Act (RFA), *see* 5 U.S.C. 603, requires that an agency prepare a regulatory flexibility analysis for notice-and-comment rulemaking proceedings, unless the agency certifies that "the rule will not, if promulgated, have a significant economic impact on a substantial number of small entities." The RFA generally defines "small entity" as having the same meaning as the terms "small business," "small organization," and "small governmental jurisdiction." In addition, the term "small business" has the same meaning as the term "small business concern" under the Small Business Act. A "small business concern" is one which: (1) Is independently owned and operated; (2) is not dominant in its field of operation; and (3) satisfies any additional criteria established by the Small Business Administration (SBA).

7. In this notice of proposed rulemaking, we propose to revise the Commission's rules to permit eligible telecommunications carriers serving Puerto Rico to recover additional universal service support under

specified circumstances. Currently, there are 7 eligible telecommunications carriers serving Puerto Rico, none of which qualify as a small entity. Accordingly, the proposed rule will not have a significant economic impact on a substantial number of small entities.

8. The Commission therefore certifies, pursuant to the RFA, that the proposals in this notice of proposed rulemaking, if adopted, will not have a significant economic impact on a substantial number of small entities. If commenters believe that the proposals discussed in the notice of proposed rulemaking require additional RFA analysis, they should include a discussion of these issues in their comments and additionally label them as RFA comments. The Commission will send a copy of the notice of proposed rulemaking, including a copy of this initial certification, to the Chief Counsel for Advocacy of the SBA. In addition, a copy of the notice of proposed rulemaking and this initial certification will be published in the **Federal Register**.

C. Ex Parte Presentations

9. This proceeding shall be treated as a "permit-but-disclose" proceeding in accordance with the Commission's *ex parte* rules. Persons making oral *ex parte* presentations are reminded that memoranda summarizing the presentations must contain summaries of the substance of the presentations and not merely a listing of the subjects discussed. More than a one or two sentence description of the views and arguments presented is generally required. Other requirements pertaining to oral and written presentations are set forth in § 1.1206(b) of the Commission's rules.

List of Subjects in 47 CFR Part 54

Communications Common Carriers, Low income, Puerto Rico, Reporting and record keeping requirements, Schools, Telecommunications, Telephone.

Marlene H. Dortch,

Secretary, Federal Communications Commission.

Proposed Rules

For the reasons discussed in the preamble, the Federal Communications Commission proposes to amend 47 CFR part 54 as follows:

PART 54—UNIVERSAL SERVICE

1. The authority citation continues to read as follows:

Authority: 47 U.S.C. 151, 154(i), 201, 205, 214, and 254 unless otherwise noted.

2. Section 54.411 is amended by revising the first sentence of paragraphs (a)(3), the second sentence of paragraph (b), and by adding paragraph (e) to read as follows:

§ 54.411 Link Up program defined.

(a) * * *

(3) For an eligible resident of Tribal lands or Puerto Rico, a reduction of up to $70, in addition to the reduction in paragraph (a)(1) of this section, to cover 100 percent of the charges between $60 and $130 assessed for commencing telecommunications service at the principal place of residence of the eligible resident of Tribal lands or Puerto Rico. * * *

(b) * * * An eligible resident of Tribal lands or Puerto Rico may participate in paragraphs (a)(1), (a)(2), and (a)(3) of this section.

* * * * *

(e) In order to receive enhanced Link Up support for discounted connection charges provided to eligible residents of Puerto Rico pursuant to paragraph (a)(3) of this section, an eligible telecommunication carrier must comply with the following requirements:

(1) An eligible low-income consumer in Puerto Rico has requested service under the Lifeline or Link Up Programs but such service could not be provided absent construction of additional facilities.

(2) The eligible telecommunications carrier must report the number of consumers that request such additional Link Up support, the number of consumers that receive such support, the reasons why any requesting consumers did not qualify for or receive such support, the cost of constructing the additional facilities, and a description of the additional facilities constructed. This information must be included in the annual report required by section 54.209 of our rules.

BILLING CODE 6712–01–P

DEPARTMENT OF DEFENSE

Defense Acquisition Regulations System

48 CFR Part 207

RIN 0750–AG45

Defense Federal Acquisition Regulation Supplement; Preservation of Tooling for Major Defense Acquisition Programs (DFARS Case 2008–D042)

AGENCY: Defense Acquisition Regulations System, Department of Defense (DoD).

ACTION: Proposed rule with request for comments.

SUMMARY: DoD is proposing to amend the Defense Federal Acquisition Regulation Supplement (DFARS) to implement section 815 of the Duncan Hunter National Defense Authorization Act for Fiscal Year 2009. Section 815 requires acquisition plans for major weapons systems to include a plan for the preservation and storage of special tooling associated with the production of hardware for major defense acquisition programs through the end of the service life of the related weapons system.

DATES: Comments on the proposed rule should be submitted in writing to the address shown below on or before July 6, 2010, to be considered in the formation of the final rule.

ADDRESSES: You may submit comments, identified by DFARS Case 2008–D042, using any of the following methods:

- *Federal eRulemaking Portal: http://www.regulations.gov.*

Follow the instructions for submitting comments.

- *E-mail: dfars@osd.mil.* Include DFARS Case 2008–D042 in the subject line of the message.
- *Fax:* 703–602–0350.
- *Mail:* Defense Acquisition Regulations System, Attn: Ms. Mary Overstreet, OUSD(AT&L)DPAP(DARS), 3060 Defense Pentagon, Room 3B855, Washington, DC 20301–3060.

Comments received generally will be posted without change to *http://www.regulations.gov,* including any personal information provided.

FOR FURTHER INFORMATION CONTACT: Ms. Mary Overstreet, 703–602–0311.

SUPPLEMENTARY INFORMATION:

A. Background

This proposed rule affects all contracts for major weapons that will require special tooling associated with the production of hardware for major

defense acquisition programs. The DFARS language requires acquisition plans for major weapons systems to include a plan for the preservation and storage of special tooling associated with the production of hardware for major defense acquisition programs through the end of the service life of the related weapons system. The plan shall include the identification of any contract clauses, facilities, and funding required for the preservation and storage of such tooling unless the Under Secretary of Defense (Acquisition, Technology, and Logistics) waives this requirement in the best interest of DoD.

This rule was not subject to Office of Management and Budget review under Executive Order 12866, dated September 30, 1993.

B. Regulatory Flexibility Act

DoD does not expect this rule to have a significant economic impact on a substantial number of small entities within the meaning of the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.,* because this rule affects the internal operating procedures of the Government. Therefore, DoD has not performed an initial regulatory flexibility analysis. DoD invites comments from small business concerns and other interested parties on the expected impact of this rule on small entities.

DoD will also consider comments from small entities concerning the existing regulations in subparts affected by this rule in accordance with 5 U.S.C. 610. Interested parties must submit such comments separately and should cite 5 U.S.C. 610 (DFARS Case 2008–D042) in correspondence.

C. Paperwork Reduction Act

The Paperwork Reduction Act does not apply because the proposed rule does not contain new information collection requirements that require the approval of the Office of Management and Budget under 44 U.S.C. 3501, *et seq.*

List of Subjects in 48 CFR Part 207

Government procurement.

Ynette R. Shelkin,

Editor, Defense Acquisition Regulations System.

Therefore, DoD proposes to amend 48 CFR part 207 as follows:

1. The authority citation for 48 CFR part 207 continues to read as follows:

Authority: 41 U.S.C. 421 and 48 CFR chapter 1.

PART 207—ACQUISITION PLANNING

Subpart 207.1 Acquisition Plans

2. Add paragraph (S–73) to section 207.106 to read as follows:

207.106 Additional requirements for major systems.

* * * * *

(S–73) In accordance with section 815 of the Duncan Hunter National Defense Authorization Act for Fiscal Year 2009 (Pub. L. 110–417) and DoD policy requirements, acquisition plans for major weapons systems shall include a plan for the preservation and storage of special tooling associated with the production of hardware for major defense acquisition programs through the end of the service life of the related weapons system. The plan shall include the identification of any contract clauses, facilities, and funding required for the preservation and storage of such tooling. Section 815 also allows USD(AT&L) to waive this requirement if USD(AT&L) determines that it is in the best interest of DoD.

DEPARTMENT OF DEFENSE

Defense Acquisition Regulations System

48 CFR Parts 211 and 252

Defense Federal Acquisition Regulation Supplement; Marking of Government-Furnished Property (DFARS Case 2008–D050)

AGENCY: Defense Acquisition Regulations System, Department of Defense (DoD).

ACTION: Proposed rule with request for comments.

SUMMARY: DoD is issuing a proposed rule to require contractors to tag, label, or mark items of Government-furnished property identified in the contract when the Government-furnished material and Government-furnished property are subject to serialized item management.

DATES: Comments on the proposed rule should be submitted in writing to the address shown below on or before July 6, 2010, to be considered in the formation of the final rule.

ADDRESSES: You may submit comments, identified by DFARS Case 2008–D050, using any of the following methods:

Federal eRulemaking Portal: http://www.regulations.gov. Follow the instructions for submitting comments.

E-mail: dfars@osd.mil. Include DFARS Case 2008–D050 in the subject line of the message.

Fax: 703–602–0350.

Mail: Defense Acquisition Regulations System, Attn: Ms. Mary Overstreet, OUSD(AT&L)DPAP(DARS), 3060 Defense Pentagon, Room 3B855, Washington, DC 20301–3060.

Comments received generally will be posted without change to *http://www.regulations.gov,* including any personal information provided.

FOR FURTHER INFORMATION CONTACT: Ms. Mary Overstreet, 703–602–0311.

SUPPLEMENTARY INFORMATION:

A. Background

It is DoD policy to uniquely mark, identify, and track Government property through the use of unique identifiers. Unique identifiers allow DoD to track and trace property items throughout their lifecycle (in acquisition and logistics business processes and systems) in an integrated approach across the Department of Defense, Federal and state agencies, non-governmental organizations, and domestic and foreign persons and organizations to provide national level traceability.

B. Regulatory Flexibility Act

DoD has prepared an initial regulatory flexibility analysis consistent with 5 U.S.C. 603. A copy of the analysis may be obtained from the point of contact specified herein. The analysis is summarized as follows:

The objective of the rule is to improve the accountability and control of DoD assets. The proposed clause requires contractors who are provided Government-furnished property to tag, label, or mark the items of Government-furnished property identified in the contract when the requiring activity determines that such items are subject to serialized item management (serially-managed items). At this time, DoD is unable to estimate the number of small entities to which this rule will apply.

DoD invites comments from small business concerns and other interested parties on the expected impact of this rule on small entities.

DoD will also consider comments from small entities concerning the existing regulations in subparts affected by this rule in accordance with 5 U.S.C. 610. Interested parties must submit such comments separately and should cite 5 U.S.C. 610 (DFARS Case 2008–D050) in correspondence.

C. Paperwork Reduction Act

The Paperwork Reduction Act (Pub. L. 96–511) does not apply because the

rule does not impose additional information collection requirements that require the approval of the Office of Management and Budget under 44 U.S.C. 3501, *et seq.*

List of Subjects in 48 CFR Parts 211 and 252

Government procurement.

Ynette R. Shelkin,

Editor, Defense Acquisition Regulations System.

Therefore, DoD proposes to amend 48 CFR parts 211 and 252 as follows:

1. The authority citation for 48 CFR parts 211 and 252 continues to read as follows:

Authority: 41 U.S.C. 421 and 48 CFR Chapter 1.

PART 211—DESCRIBING AGENCY NEEDS

211.274–5 [Redesignated as 211.274–6]

2. Redesignate section 211.274–5 as 211.274–6.

3. Add section 211.274–5 to read as follows:

211.274–5 Policy for tagging, labeling, or marking of Government-furnished property.

(a) It is DoD policy that the appropriate tagging, labeling, or permanent marking of Government-furnished property, based on DoD marking standards (MIL Standard 130) or other standards, be required for Government-furnished property items where the requiring activity determines that such items are subject to serialized item management (serially-managed items).

(b) *Exceptions.* The contractor will not be required to tag, label, or mark Government-furnished property if such items were previously tagged, labeled, or marked.

3. In newly redesignated 211.274–6, add paragraph (c) to read as follows:

211.274–6 Contract clauses.

* * * * *

(c) Use the clause at 252.211–70YY, Tagging, Labeling, and Marking of Government-furnished Property, in solicitations and contracts that contain the clause at—

(1) FAR 52.245–1, Government Property; or

(2) FAR 52.245–2, Government Property Installation Operation Services.

PART 252—SOLICITATION PROVISIONS AND CONTRACT CLAUSES

4. Add section 252.211–70YY to read as follows:

252.211–70YY Tagging, Labeling, and Marking of Government-furnished Property.

As prescribed in 211.274–6(c), use the following clause:

TAGGING, LABELING, AND MARKING OF GOVERNMENT–FURNISHED PROPERTY (DATE)

(a) *Definitions.* As used in this clause—

Government-furnished property means property in the possession of, or directly acquired by, the Government and subsequently furnished to the contractor for performance of a contract, including performance by subcontractors and at Prime Contractor Alternate locations. Government-furnished property includes reparables, e.g., spares and property furnished for repair, maintenance, overhaul, or modification; and Government-furnished material that is requisitioned from Government supply sources without reimbursement by the contractor.

Serially-managed item means an item designated by DoD to be uniquely tracked, controlled, or managed in maintenance, repair, and/or supply systems by means of its serial number.

(b) The Contractor shall tag, label, or mark Government-furnished property items identified in the contract when the requiring activity determines that such items are subject to serialized item management (serially-managed items).

(c) *Exceptions.* Paragraph (b) of this clause does not apply to—

(1) Government-furnished property that was previously marked;

(2) Contractor-acquired property;

(3) Property under any statutory leasing authority;

(4) Property to which the Government has acquired a lien or title solely because of partial, advance, progress, or performance-based payments;

(5) Intellectual property or software; or

(6) Real property.

(End of clause)

RIN 0750–AF84

Defense Federal Acquisition Regulation Supplement; Presumption of Development at Private Expense

AGENCY: Defense Acquisition Regulations System, Department of Defense (DoD).

ACTION: Proposed rule with request for comments.

SUMMARY: DoD proposes to amend the Defense Federal Acquisition Regulation Supplement (DFARS) to implement section 802(b) of the National Defense Authorization Act (NDAA) for Fiscal Year (FY) 2007 and section 815(a)(2) of the NDAA for FY 2008. This proposed rule implements special requirements and procedures related to the validation of a contractor's or subcontractor's asserted restrictions on technical data and computer software.

DATES: Comments on the proposed rule should be submitted to the address shown below on or before July 6, 2010, to be considered in the formulation of the final rule.

ADDRESSES: You may submit comments, identified by DFARS Case 2007–D003, using any of the following methods:

- *Federal eRulemaking Portal: http://www.regulations.gov*. Follow the instructions for submitting comments.
- *E-mail: dfars@osd.mil*. Include DFARS Case 2007–D003 in the subject line of the message.
- *Fax:* 703–602–0350.
- *Mail:* Defense Acquisition Regulations System, Attn: Ms. Amy Williams, OUSD(AT&L)DPAP(DARS), 3060 Defense Pentagon, Room 3B855, Washington, DC 20301–3060.

All comments received will be posted generally without change to *http://www.regulations.gov*, including any personal information provided.

FOR FURTHER INFORMATION CONTACT: Ms. Amy Williams, 703–602–0328.

SUPPLEMENTARY INFORMATION:

A. Background

Section 802(b) of the National Defense Authorization Act (NDAA) for Fiscal Year (FY) 2007 (Pub. L. 109–364) modified 10 U.S.C. 2321(f) with regard to the presumption of development at private expense for major systems; and section 815(a)(2) of the NDAA for FY 2008 (Pub. L. 110–181) revised 10 U.S.C. 2321(f)(2) to exempt commercially available off-the-shelf items from the requirements that section 802(b) had established for major systems. This proposed rule implements special requirements and procedures related to the validation of a contractor's or subcontractor's asserted restrictions on technical data and computer software. More specifically, the proposed rule affects these validation procedures in the context of two special categories of items: Commercial items, (including commercially available off-the-shelf items); and major systems (including subsystems and components of major systems).

1. Procedures and Presumptions Regarding Development at Private Expense—Technical Data

The validation of asserted restrictions on technical data is based on statutory requirements, codified primarily at 10 U.S.C. section 2321. In 1994, the Federal Acquisition Streamlining Act (Pub. L. 103–355) revised these requirements to include specialized presumptions and procedures for technical data related to commercial items. For discussion purposes, these specialized requirements will be referred to as the "Commercial Rule" (*see* 10 U.S.C. 2320(b)(1) and 2321(f)).

Under the Commercial Rule, a contracting officer is required to presume that a commercial item has been developed entirely at private expense, unless shown otherwise in accordance with the procedures at 10 U.S.C. 2321(f). The detailed procedures at 10 U.S.C. 2321(f)(1) require the contracting officer to presume that the asserted restrictions have been justified (on the basis that the item was developed exclusively at private expense), whether or not the contractor or subcontractor submits a justification in response to the challenge notice issued by the contracting officer. The contracting officer's challenge may be sustained only if information provided by DoD demonstrates that the item was not developed exclusively at private expense.

Section 802(b) of the FY 2007 NDAA established another set of procedures for technical data related to major systems (including subsystems or components thereof). For discussion purposes, these specialized requirements will be referred to as the "Major Systems Rule." Under the Major Systems Rule, codified at 10 U.S.C. 2321(f)(2), a contracting officer's challenge to asserted restrictions on technical data relating to a major system shall be sustained unless the contractor or subcontractor submits information demonstrating that the item was developed exclusively at private expense. In the initial statutory implementation of section 802(b), the Major Systems Rule also covered all contracts for commercial items (*i.e.,* serving as a complete exception to the otherwise applicable Commercial Rule).

However, section 815(a)(2) of the FY 2008 NDAA altered the relationship between these two special rules in cases of overlap—revising the Major Systems Rule so that it does not apply to commercially available off-the-shelf (COTS) items (as defined at 41 U.S.C. 431(c)). Since COTS items are a subtype of commercial items, this change results in COTS items being governed by the Commercial Rule in all cases, regardless of whether the COTS items are included in a major system.

The proposed implementation in the DFARS of these special rules for technical data is modeled closely after this two-pronged statutory scheme. The detailed requirements for each special rule, and the relationship between the two rules, are consolidated in the regulatory coverage at 227.7103–13(c), and in the associated clause language at 252.227–7037(b). In each case, the implementing language combines the relevant preexisting DFARS coverage (*e.g.*, for the Commercial Rule, or for validation procedures generally) with the additional language necessary to implement the new Major Systems Rule and to clarify which rule governs in cases of overlap.

For example, preexisting DFARS coverage for the Commercial Rule at 227.7102 is relocated primarily to new 227.7103–13(c)(2), where it is combined with new language to address the Major Systems Rule (new paragraph (c)(2)(ii)). The language at proposed new 227.7103–13(c)(1) is a combination of preexisting language regarding initiation of challenges from preexisting 227.7102 and 227.7103–13(c) (the latter is redesignated as paragraph (d)).

Several other conforming or clarifying revisions are included. Preexisting language from 227.7102 is adapted to serve as proposed new subsection 227.7102–3, which highlights and cross-references the regulatory coverage for validation of asserted restrictions on technical data for commercial items, which is now consolidated at 227.7103–13. The prescriptive language at proposed 227.7102–4 and 227.7103–6(a) was revised for clarity and consistency. The language "other than a failure to respond under a contract for commercial items" was deleted from 252.227–7037(f) in order to eliminate confusion as to when a contracting officer is required to issue a final decision. The contracting officer must issue a final decision, even when the contractor or subcontractor fails to respond to a challenge notice under a contract for commercial items. Paragraph (f) of 252.227–7037 was amended to state positively that the contracting officer's final decision will adhere to the requirements set forth in paragraph (b) of the clause.

2. Flowdown of Requirements to Subcontracts for Commercial Items—Technical Data

The Federal Acquisition Streamlining Act (FASA) requires the FAR to identify statutes that are not to apply to contracts or subcontracts for commercial items (*see* FAR 12.503 and 12.504). The corresponding DFARS implementation of these requirements at 212.503 and 212.504 made 10 U.S.C. 2320 and 2321 inapplicable to subcontracts for commercial items, even though these requirements remained applicable to such acquisitions at the prime contract level. Accordingly, the associated technical data clauses used in prime contracts have not been flowed down to lower tier subcontracts for commercial items, pursuant to current 227.7102–3, 252.227–7013(k)(2), and 252.227–7037(l). DoD has reviewed the merits of this approach and has determined that these statutory requirements should remain applicable to acquisitions of technical data related to commercial items regardless of whether that data is provided by the prime contractor or by a lower tier subcontractor.

It is well established policy and practice in Federal and DoD acquisitions that the treatment of intellectual property rights creates a special, direct, relationship between the Government and subcontractors (at any tier). For example, the Government's license rights may be granted directly from the subcontractor to the Government, and the Government and subcontractor are allowed to transact business directly with one another on issues related to the subcontractor's intellectual property (such as delivery of technical data directly to the Government, and regarding the validation of asserted restrictions).

Detailed review of the statutory provisions also supports the conclusion that these requirements are intended to apply to all acquisitions of technical data, including both commercial and noncommercial, and at both the prime contract level and lower tier subcontract level. 10 U.S.C. 2320 and 2321 have always applied expressly to prime contractors and subcontractors. When FASA amended these sections to address special requirements for technical data related to commercial items (*e.g.*, the Commercial Rule discussed previously), the statutory amendments retained this approach, explicitly applying at the prime contract and subcontract levels (*see* 10 U.S.C. 2320(a) and (b)(1), and 2321(f)).

This congressional intent is reinforced by the recent amendments to these statutes. Section 802(b) of the FY07 NDAA, which created the new Major Systems Rule, expressly and explicitly cited application to prime contractors and subcontractors "whether or not under a contract for commercial items." Section 815(a)(2) retained all of the language that expressly applies to subcontracts, and revised the language

only to clarify that the Major Systems Rule is not intended to apply to COTS items, which, under the existing statutory language, would be covered under the Commercial Rule at both the prime contract and subcontract level.

Accordingly, this proposed rule revises section 212.504 to eliminate 10 U.S.C. 2320 and 2321 from the list of statutes that are inapplicable to subcontracts for commercial items, and makes corresponding changes to the flowdown requirements at 227.7102–4, and to the associated clauses at 252.227–7013(k)(2), –7015(e), and –7037(l).

3. Procedures and Presumptions Regarding Development at Private Expense—Computer Software

Although 10 U.S.C. 2320 and 2321 apply only to technical data and not to computer software (which is expressly excluded from the definition of technical data), it is longstanding Federal and DoD policy and practice to apply the same or analogous requirements to computer software, whenever appropriate. Many issues are common to both technical data and computer software, and in such cases, conformity of coverage between technical data and computer software is desirable.

For example, although the DFARS provides separate coverage for technical data and computer software—subparts 227.71 and 227.72, respectively—the policies and procedures are identical or analogous in most respects. Regarding the procedures for validation of asserted restrictions on computer software, the DFARS adapts the technical data procedures only for application to noncommercial computer software (*see* 227.7203–13 and 252.227–7019), but provides no similar or analogous coverage for commercial computer software (*see* 227.7202). This applicability model is used to guide the implementation of revisions analogous to those discussed previously for technical data (*i.e.*, analogous revisions are made to the validation procedures only for noncommercial technologies).

Accordingly, it is only the new Major Systems Rule that is applicable to, and implemented for, the validation procedures for noncommercial computer software. These new procedures are added at proposed 227.7203–13(d) and the associated clause at 252.227–7019(f). In each case, the paragraph numbers in the affected coverage are revised to incorporate the new paragraph. In addition, a conforming amendment is also made at 252.227–7019(g)(5) to state positively that the contracting officer's final decision will adhere to the new requirements.

This rule was subject to Office of Management and Budget review under Executive Order 12866, dated September 30, 1993.

B. Regulatory Flexibility Act

DoD does not expect this rule to have a significant economic impact on a substantial number of small entities within the meaning of the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.*, based on the historically low incidence of formal challenges to validate asserted restrictions by small businesses on major systems or subsystems or components thereof. Therefore, DoD has not performed an initial regulatory flexibility analysis. DoD invites comments from small business concerns and other interested parties on the expected impact of this rule on small entities.

DoD will also consider comments from small entities concerning the existing regulations in subparts affected by this rule in accordance with 5 U.S.C. 610. Interested parties must submit such comments separately and should cite 5 U.S.C. 610 (DFARS Case 2007–D003) in correspondence.

C. Paperwork Reduction Act

The Paperwork Reduction Act does not apply because the proposed changes to the DFARS do not create new information collection requirements, and do not affect the scope of existing information collection requirements in a manner that may require the approval of the Office of Management and Budget under 44 U.S.C. 3501, *et seq.*

List of Subjects in 48 CFR Parts 212, 227, and 252

Government procurement.

Ynette R. Shelkin,

Editor, Defense Acquisition Regulations System.

Therefore, DoD proposes to amend 48 CFR parts 212, 227, and 252 as follows:

1. The authority citation for 48 CFR parts 212, 227, and 252 continues to read as follows:

Authority: 41 U.S.C. 421 and 48 CFR chapter 1.

PART 212—ACQUISITION OF COMMERCIAL ITEMS

212.504 [Amended]

2. Amend section 212.504 by removing and reserving paragraphs (a)(v) and (a)(vi).

PART 227—PATENTS, DATA, AND COPYRIGHTS

227.7102 [Removed]

3. Remove section 227.7102.

227.7102–3 [Redesignated as 227.7102–4]

4. Redesignate section 227.7102–3 as section 227.7102–4.

5. Add new section 227.7102–3 to read as follows:

227.7102–3 Government right to review, verify, challenge and validate asserted restrictions.

Follow the procedures at 227.7103–13 and the clause at 252.227–7037, Validation of Restrictive Markings on Technical Data, regarding the validation of asserted restrictions on technical data related to commercial items.

6. Revise newly designated section 227.7102–4 to read as follows:

227.7102–4 Contract clause.

(a)(1) Except as provided in paragraph (b) of this subsection, use the clause at 252.227–7015, Technical Data–Commercial Items, in all solicitations and contracts when the Contractor will be required to deliver technical data pertaining to commercial items, components, or processes.

(2) Use the clause at 252.227–7015 with its Alternate I in contracts for the development or delivery of a vessel design or any useful article embodying a vessel design.

(b) In accordance with the clause prescription at 227.7103–6(a), use the clause at 252.227–7013, Rights in Technical Data—Noncommercial Items, in lieu of the clause at 252.227–7015 if the Government has paid or will pay any portion of the development costs of a commercial item.

(c) Use the clause at 252.227–7037, Validation of Restrictive Markings on Technical Data, in all solicitations and contracts for commercial items that include the clause at 252.227–7015 or the clause at 252.227–7013.

7. Amend section 227.7103–6 by revising paragraph (a) to read as follows:

227.7103–6 Contract clauses.

(a) Use the clause at 252.227–7013, Rights in Technical Data—Noncommercial Items, in solicitations and contracts when the successful offeror(s) will be required to deliver to the Government technical data pertaining to noncommercial items, or pertaining to commercial items for which the Government has paid or will pay any portion of the development costs. Do not use the clause when the only deliverable items are computer software or computer software documentation (*see* 227.72), commercial

items developed exclusively at private expense (*see* 227.7102–4), existing works (*see* 227.7105), special works (*see* 227.7106), or when contracting under the Small Business Innovation Research Program (*see* 227.7104). Except as provided in 227.7107–2, do not use the clause in architect-engineer and construction contracts.

* * * * *

8. Amend section 227.7103–13 as follows:

a. By redesignating paragraph (c) as paragraph (d);

b. By adding new paragraph (c);

c. By revising newly redesignated paragraph (d) introductory text;

d. By revising the first sentence of (d)(2)(i); and

e. By revising paragraph (d)(4).

The addition and revisions read as follows:

227.7103–13 Government right to review, verify, challenge and validate asserted restrictions.

* * * * *

(c) *Challenge considerations and presumption.* (1) *Requirements to initiate a challenge.* Contracting officers shall have reasonable grounds to challenge the validity of an asserted restriction. Before issuing a challenge to an asserted restriction, carefully consider all available information pertaining to the assertion. The contracting officer shall not challenge a contractor's assertion that a commercial item, component, or process was developed exclusively at private expense unless the Government can demonstrate that it contributed to development of the item, component or process.

(2) *Presumption regarding development exclusively at private expense.* 10 U.S.C. Sections 2320(b)(1) and 2321(f) establish a presumption and procedures regarding validation of asserted restrictions for technical data related to commercial items, and to major systems, on the basis of development exclusively at private expense.

(i) *Commercial items.* For commercially available off-the-shelf items (defined at 41 U.S.C. Section 431(c)) in all cases, and for all other commercial items except as provided in paragraph (c)(2)(ii) of this section, contracting officers shall presume that the items were developed exclusively at private expense whether or not a contractor submits a justification in response to a challenge notice. When a challenge is warranted, a contractor's or subcontractor's failure to respond to the challenge notice cannot be the sole basis for issuing a final decision denying the validity of an asserted restriction.

(ii) *Major systems.* The presumption of development exclusively at private expense does not apply to major systems or subsystems or components thereof, except for commercially available off-the-shelf items (which are governed by paragraph (c)(2)(i) of this section). When the contracting officer challenges an asserted restriction regarding technical data for a major system or a subsystem or component thereof on the basis that the technology was not developed exclusively at private expense, the contracting officer shall sustain the challenge unless information provided by the contractor or subcontractor demonstrates that the item was developed exclusively at private expense.

(d) *Challenge and validation.* All challenges shall be made in accordance with the provisions of the clause at 252.227–7037, Validation of Restrictive Markings on Technical Data.

* * * * *

(2) * * *

(i) After consideration of the situations described in paragraph (d)(3) of this subsection, contracting officers may request the person asserting a restriction to furnish a written explanation of the facts and supporting documentation for the assertion in sufficient detail to enable the contracting officer to ascertain the basis of the restrictive markings . * * *

* * * * *

(4) *Challenge notice.* The contracting officer will not issue a challenge notice unless there are reasonable grounds to question the validity of an assertion. The contracting officer may challenge an assertion whether or not supporting documentation was requested under paragraph (d)(2) of this section. Challenge notices shall be in writing and issued to the contractor or, after consideration of the situations described in paragraph (d)(3) of this section, the person asserting the restriction. The challenge notice shall include the information in paragraph (e) of the clause at 252.227–7037.

* * * * *

9. Revise section 227.7203–13 by redesignating paragraphs (d), (e), and (f) as (e), (f), and (g) respectively; and by adding new paragraph (d) to read as follows:

227.7203–13 Government right to review, verify, challenge and validate asserted restrictions.

* * * * *

(d) *Major systems.* When the contracting officer challenges an asserted restriction regarding noncommercial computer software for a major system or a subsystem or component thereof on the basis that the computer software was not developed exclusively at private expense, the contracting officer shall sustain the challenge unless information provided by the contractor or subcontractor demonstrates that the computer software was developed exclusively at private expense.

* * * * *

PART 252—SOLICITATION PROVISIONS AND CONTRACT CLAUSES

8. Amend section 252.227–7013 by revising the clause date and paragraph (k)(2) to read as follows:

252.227–7013 Rights in Technical Data—Noncommercial Items.

* * * * *

RIGHTS IN TECHNICAL DATA—NONCOMMERCIAL ITEMS (DATE)

* * * * *

(k) * * *

(2) Whenever any technical data is to be obtained from a subcontractor or supplier for delivery to the Government under this contract, the Contractor shall use this same clause in the subcontract or other contractual instrument, and require its subcontractors or suppliers to do so, without alteration, except to identify the parties. No other clause shall be used to enlarge or diminish the Government's, the Contractor's, or a higher-tier subcontractor's or supplier's rights in a subcontractor's or supplier's technical data.

* * * * *

9. Amend section 252.227–7015 by revising the clause date and the introductory text, and adding new paragraph 227.7015(e) to read as follows:

252.227–7015 Technical Data-Commercial Items.

As prescribed in 227.7102–4(a)(1), use the following clause:

TECHNICAL DATA—COMMERCIAL ITEMS (DATE)

* * * * *

(e) *Applicability to subcontractors or suppliers.*

(1) The Contractor shall recognize and protect the rights afforded its subcontractors and suppliers under 10 U.S.C. 2320 and 10 U.S.C. 2321.

(2) Whenever any technical data will be obtained from a subcontractor or supplier for delivery to the Government under this contract, the Contractor shall use this same clause in the subcontract or other contractual instrument, and require its subcontractors or suppliers to do so, without alteration, except to identify the parties.

(End of clause)

10. Amend section 252.227–7019 by revising the clause date; redesignating paragraphs (f) through (i) as (g) through (j) respectively; adding new paragraph (f); and revising newly redesignated paragraphs (g)(5), (h)(1), and (h)(3) to read as follows:

Validation of Asserted Restrictions—Computer Software

* * * * *

VALIDATION OF ASSERTED RESTRICTIONS—COMPUTER SOFTWARE (DATE)

* * * * *

(f) *Major systems.* When the Contracting Officer challenges an asserted restriction regarding noncommercial computer software for a major system or a subsystem or component thereof on the basis that the computer software was not developed exclusively at private expense, the Contracting Officer shall sustain the challenge unless information provided by the Contractor or subcontractor demonstrates that the computer software was developed exclusively at private expense.

(g) * * *

(5) If the Contractor fails to respond to the Contracting Officer's request for information or additional information under paragraph (g)(1) of this clause, the Contracting Officer shall issue a final decision, in accordance with paragraph (f) of this clause and the Disputes clause of this contract, pertaining to the validity of the asserted restriction.

* * * * *

(h) * * *

(1) The Government agrees that, notwithstanding a Contracting Officer's final decision denying the validity of an asserted restriction and except as provided in paragraph (h)(3) of this clause, it will honor the asserted restriction—

* * * * *

(3) The agency head, on a nondelegable basis, may determine that urgent or compelling circumstances do not permit awaiting the filing of suit in an appropriate court, or the rendering of a decision by a court of competent jurisdiction or Board of Contract Appeals. In that event, the agency head will notify the Contractor of the urgent or compelling circumstances. Notwithstanding paragraph (h)(1) of this clause, the Contractor agrees that the agency may use, modify, reproduce, release, perform, display, or disclose computer software marked with government purpose legends for any purpose, and authorize others to do so; or restricted or special license rights for government purposes only. The Government agrees not to release or disclose such software unless, prior to release or disclosure, the intended recipient is subject to the use and non-disclosure agreement at 227.7103–7 of the Defense Federal Acquisition Regulation Supplement (DFARS), or is a Government contractor receiving access to the software for performance of a Government contract that contains the clause at DFARS 252.227–7025, Limitations on the Use or Disclosure of Government-Furnished Information Marked with Restrictive Legends. The agency head's determination may be made at any time after the date of the Contracting Officer's final decision and shall not affect the Contractor's right to damages against the United States, or other relief provided by law, if its asserted restrictions are ultimately upheld.

* * * * *

11. Amend section 252.227–7037 by revising the clause date and revising paragraphs (b), (c), (f), and (l) to read as follows:

* * * * *

252.227–7037 Validation of Restrictive Markings on Technical Data.

* * * * *

VALIDATION OF RESTRICTIVE MARKINGS ON TECHNICAL DATA (DATE)

* * * * *

(b) *Presumption regarding development exclusively at private expense.*

(1) *Commercial items.* For commercially available off-the-shelf items (defined at 41 U.S.C. Section 431(c)) in all cases, and for all other commercial items except as provided in paragraph (b)(2) of this clause, the Contracting Officer shall presume that a Contractor's asserted use or release restrictions are justified on the basis that the item, component, or process was developed exclusively at private expense. The Contracting Officer shall not challenge such assertions unless information provided by the Contracting Officer demonstrates that the item, component, or process was not developed exclusively at private expense.

(2) *Major systems.* The presumption of development exclusively at private expense does not apply to major systems or subsystems or components thereof, except for commercially available off-the-shelf items (which are governed by paragraph (b)(1) of this clause). When the Contracting Officer challenges an asserted restriction regarding technical data for a major system or a subsystem or component thereof on the basis that the item, component, or process was not developed exclusively at private expense, the Contracting Officer shall sustain the challenge unless information provided by the Contractor or subcontractor demonstrates that the item, component, or process was developed exclusively at private expense.

(c) *Justification.* The Contractor or subcontractor at any tier is responsible for maintaining records sufficient to justify the validity of its markings that impose restrictions on the Government and others to use, duplicate, or disclose technical data delivered or required to be delivered under the contract or subcontract. Except as provided in paragraph (b) of this clause, the Contractor or subcontractor shall be prepared to furnish to the Contracting Officer a written justification for such restrictive markings in response to a challenge under paragraph (e) of this clause.

* * * * *

(f) *Final decision when Contractor or subcontractor fails to respond.* Upon a failure of a Contractor or subcontractor to submit any response to the challenge notice, the Contracting Officer shall issue a final decision to the Contractor or subcontractor in accordance with paragraph (b) of this clause and the Disputes clause of this contract pertaining to the validity of the asserted restriction. This final decision shall be issued as soon as possible after the expiration of the time period of paragraph (e)(1)(ii) or (e)(2) of this clause. Following issuance of the final decision, the Contracting Officer shall comply with the procedures in paragraphs (g)(2)(ii) through (iv) of this clause.

* * * * *

(l) *Flowdown.* The Contractor or subcontractor agrees to insert this clause in contractual instruments with its subcontractors or suppliers at any tier requiring the delivery of technical data.

(End of clause)

Defense Federal Acquisition Regulation Supplement; Cost and Software Data Reporting System

AGENCY: Defense Acquisition Regulations System, Department of Defense (DoD).

ACTION: Proposed rule with request for comments.

SUMMARY: DoD proposes to amend the Defense Federal Acquisition Regulation Supplement (DFARS) to set forth DoD Cost and Software Data Reporting system requirements for major defense acquisition programs and major automated information system programs.

DATES: Comments on the proposed rule should be submitted in writing to the address shown below on or before July 6, 2010, to be considered in the formation of the final rule.

ADDRESSES: You may submit comments, identified by DFARS Case 2008–D027, using any of the following methods:

- *Federal eRulemaking Portal: http://www.regulations.gov*. Follow the instructions for submitting comments.
- *E-mail: dfars@osd.mil*. Include DFARS Case 2008–D027 in the subject line of the message.
- *Fax:* 703–602–0350.
- *Mail:* Defense Acquisition Regulations System, Attn: Ms. Mary Overstreet, OUSD(AT&L)DPAP(DARS), Room 3B855, 3060 Defense Pentagon, Washington, DC 20301–3060.

Comments received generally will be posted without change to *http://*

www.regulations.gov, including any personal information provided.

FOR FURTHER INFORMATION CONTACT: Ms. Mary Overstreet, 703–602–0311.

SUPPLEMENTARY INFORMATION:

A. Background

This rule proposes to amend the DFARS to set forth the DoD requirement for offerors to:

- Describe the standard Cost and Software Data Reporting (CSDR) process offerors intend to use to satisfy the requirements of the CSDR Manual, DoD 5000.04–M–1, and the Government-approved contract CSDR plan, DD Form 2794, and the related Resource Distribution Table (RDT), in proposals in response to solicitations for Major Defense Acquisition Programs and Major Automated Information System programs;
- Provide comments on the adequacy of the CSDR contract plan, and the related Resource Distribution Table contained in the solicitation; and,
- Submit with their pricing proposal: the DD Form 1921, Cost Data Summary Report; DD Form 1921–1, Functional Cost-Hour Report; and, DD Form 1921–2, Progress Curve Report.

During contract performance, the contractor will be required to:

- Utilize a documented standard Cost and Software Data Reporting (CSDR) process that satisfies the guidelines contained in the CSDR Manual DoD 5000.04–M–1;
- Use management procedures that provide for generation of timely and reliable information for the Contractor Cost Data Reports, and Software Resources Data Reports;
- Use the Government-approved contract CSDR plan, DD Form 2794, Cost and Software Data Reporting Plan with the related Resource Distribution Table, and DD Form 1921–3, Contractor Business Data Report, as the basis for reporting; and
- Require subcontractors, or subcontracted effort if subcontractors have not been selected, to comply with the Cost and Software Data Reporting requirements.

This is not a significant regulatory action and therefore was not subject to review under section 6(b) of Executive Order 12866, Regulatory Planning and Review, dated September 30, 1993. This is not a major rule.

B. Regulatory Flexibility Act

DoD has prepared an initial regulatory flexibility analysis consistent with 5 U.S.C. 603. A copy of the analysis may be obtained from the point of contact specified herein. The analysis is summarized as follows:

The objective of the rule is to set forth Cost and Software Data Reporting System reporting requirements that are essential for the DoD to estimate the cost of current and future weapon systems. The reported data will also be very useful in performing contract price analysis, comparing prices of similar systems, and for capturing contractor-provided cost estimates in standard formats to facilitate comparison across several contractors. At this time, DoD is unable to estimate the number of small entities to which this rule will apply.

DoD invites comments from small businesses and other interested parties on the expected impact of this rule on small entities.

DoD will also consider comments from small entities concerning the existing regulations in subparts affected by this rule in accordance with 5 U.S.C. 610. Interested parties must submit such comments separately and should cite U.S.C. 601 (DFARS Case 2008–D027) in correspondence.

C. Paperwork Reduction Act

The information collection requirements under this proposed rule were previously approved by the Office of Management and Budget, under Clearance Number 0704–0188. The requirements of this proposed rule are not expected to significantly change the burden hours approved under Clearance Number 0704–0188.

List of Subjects in 48 CFR Parts 215, 234, 242, and 252

Government procurement.

Ynette R. Shelkin,

Editor, Defense Acquisition Regulations System.

Therefore, DoD proposes to amend 48 CFR parts 215, 234, 242, and 252 as follows:

1. The authority citation for 48 CFR parts 215, 234, 242, and 252 continues to read as follows:

Authority: 41 U.S.C. 421 and 48 CFR chapter 1.

PART 215—CONTRACTING BY NEGOTIATION

215.403–5 [Removed]

2. Remove section 215.403–5.

PART 234—MAJOR SYSTEM ACQUISITION

3. Add subpart 234.71 to read as follows:

Subpart 234.71—Cost and Software Data Reporting

Sec.

Subpart 234.71—Cost and Software Data Reporting

234.7100 Policy.

(a) The Cost and Software Data Reporting (CSDR) requirement is mandatory for major defense acquisition programs (as defined in 10 U.S.C. 2430), and major automated information system programs (as defined in 10 U.S.C. 2445a) as specified in DoDI 5000.02, Operation of the Defense Acquisition System and the DoD 5000.04–M–1, CSDR Manual. The CSDR system is applied in accordance with the reporting requirements established in DoDI 5000.02.

(b) Prior to contract award, Contracting Officers shall consult with the Defense Cost and Resource Center to determine that the offeror selected for award has proposed a standard Cost and Software Data Reporting (CSDR) system, as described in the offeror's proposal in response to the provision at 252.234–70XX, that is in compliance with DoDI 5000.02, Operation of the Defense Acquisition System, and the DoD 5000.04–M–1, CSDR Manual.

(c) The Defense Cost and Resource Center contact information is located at PGI 234.7100.

234.7101 Solicitation provision and contract clause.

(a) Use the provision at 252.234–70XX, Notice of Cost and Software Data Reporting System, in all solicitations for major defense acquisition programs and major automated information system programs that exceed $50 million. The clause may also be used on selected contracts below $50 million, but greater than $20 million as determined by the DoD program manager with the approval of the Defense Cost and Resource Center (*see* PGI 234.7100).

(b) Use the clause at 252.234–70YY, Cost and Software Data Reporting (CSDR), in all solicitations and contracts for major defense acquisition programs and major automated information system programs that exceed $20 million. The clause may also be used for the CSDR Software Resources Data Reporting requirement on selected contracts below $20 million as determined by the DoD program manager with the approval of the Defense Cost and Resource Center (*see* PGI 234.7100).

PART 242—CONTRACT ADMINISTRATION AND AUDIT SERVICES

4. Revise section 242.503–2 to read as follows:

242.503–2 Postaward conference procedure.

(a) DD Form 1484, Post-Award Conference Record, may be used in conducting the conference and in preparing the conference report.

(b) For contracts that include the clause at 252.234–70YY, postaward conferences shall include a discussion of the Contractor's standard Cost and Software Data Reporting (CSDR) process that satisfies the guidelines contained in the CSDR Manual DoD 5000.04–M–1 and the requirements in the Government approved contract CSDR plan, DD Form 2794, Cost and Software Data Reporting Plan and related Resource Distribution Table, and DD Form 1921–3, Contractor Business Data Report.

PART 252—SOLICITATION PROVISIONS AND CONTRACT CLAUSES

5. Add section 252.234–70XX to read as follows:

252.234 70XX Notice of Cost and Software Data Reporting System.

As prescribed in 234.7101(a), use the following provision:

NOTICE OF COST AND SOFTWARE DATA REPORTING SYSTEM (DATE)

(a) The offeror shall—

(1) Describe the standard Cost and Software Data Reporting (CSDR) process that it intends to use to satisfy the requirements of the CSDR Manual, DoD 5000.04–M–1, and the Government-approved contract CSDR plan, DD Form 2794 and related Resource Distribution Table contained in the solicitation. For Contractor Cost and Data Reporting (CCDR) application, the description will demonstrate how reports are based, to the maximum extent possible, upon actual cost transactions and not cost allocations. The description will also show how the data from the offeror's accounting system will be mapped into the standard reporting categories required in the Contractor CCDR data item descriptions. The document shall also describe how the offeror segregates recurring and nonrecurring costs;

(2) Provide comments on the adequacy of the CSDR contract plan and related Resource Distribution Table contained in the solicitation; and

(3) Submit the DD Form 1921, Cost Data Summary Report, DD Form 1921–1, Functional Cost-Hour Report, and DD Form 1921–2, Progress Curve Report, with its pricing proposal.

(b) The offeror shall identify the subcontractors or the subcontracted effort, if the subcontractors have not been selected, to whom the CSDR requirements will apply. This will be accomplished by providing comments on the Resource Distribution Table contained in the solicitation. The offeror shall be responsible for ensuring the selected subcontractors comply with the requirements of the CSDR System. The offeror shall also be responsible for notifying the Government prior to changes in subcontractor or planned subcontract circumstances affecting CSDR compliance.

(End of provision)

6. Add section 252.234–70YY to read as follows:

252.234 70YY Cost and Software Data Reporting System.

As prescribed in 234.7101(b), use the following clause:

COST AND SOFTWARE DATA REPORTING SYSTEM (DATE)

(a) In the performance of this contract, the Contractor shall use—

(1) A documented standard Cost and Software Data Reporting (CSDR) process that satisfies the guidelines contained in the CSDR Manual DoD 5000.04–M–1;

(2) Management procedures that provide for generation of timely and reliable information for the Contractor Cost Data Reports (CCDRs) and Software Resources Data Reports (SRDRs) required by the CCDR and SRDR data items of the contract. These procedures will also maximize use of actual cost transactions rather than cost allocations; and

(3) The Government-approved contract CSDR plan, DD Form 2794, Cost and Software Data Reporting Plan and related Resource Distribution Table, and DD Form 1921–3, Contractor Business Data Report, as the basis for reporting in accordance with the required CSDR data item descriptions (DIDs).

(b) The Contractor shall require the following subcontractors to comply with the CSDR requirements:

(Contracting Officer to insert names of subcontractors (or subcontracted effort if subcontractors have not been selected) designated for application of the CSDR requirement of the clause.)

Defense Acquisition Regulations System

[DFARS Case 2006–D029]

48 CFR Part 225

RIN 0750–AG57

Defense Federal Acquisition Regulation Supplement; Department of Defense (DoD); Restriction on Ball and Roller Bearings

ACTION: Proposed rule with request for comments.

SUMMARY: DoD is proposing to amend the Defense Federal Acquisition Regulation Supplement (DFARS) to revise the domestic source restriction on acquisition of ball and roller bearings. The current DFARS restriction on ball and roller bearings requires that the bearings and the main bearing components be manufactured in the U.S. or Canada. This requirement was based on the restriction at 10 U.S.C. 2534(a)(5), which expired on October 1, 2005. The proposed revision interprets the annual defense appropriations act domestic source restriction on acquisition of ball and roller bearings in a manner similar to the domestic source restriction of the Buy American Act.

DATES: Comments on the proposed rule should be submitted to the address shown below on or before July 6, 2010, to be considered in the formulation of the final rule.

ADDRESSES: You may submit comments, identified by DFARS Case 2006–D029, using any of the following methods:

- *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the instructions for submitting comments.
- *E-mail: dfars@osd.mil.* Include DFARS Case 2006–D029 in the subject line of the message.
- *Fax:* 703–602–0350.
- *Mail:* Defense Acquisition Regulations Council, Attn: Ms. Amy Williams, OUSD(AT&L)DPAP(DARS), Room 3B855, 3060 Defense Pentagon, Washington, DC 20301–3060.

All comments received will be posted to *http://emissary.acq.osd.mil/dar/dfars.nsf.*

FOR FURTHER INFORMATION CONTACT: Ms. Amy Williams, 703–602–0328.

SUPPLEMENTARY INFORMATION:

A. Background

The current DFARS restriction on ball and roller bearings (225.7009) implemented two statutory restrictions: 10 U.S.C. 2534(a)(5) and annual appropriations act restrictions. 10 U.S.C.

2534(a)(5) required that all ball and roller bearings and bearing components, either as end items or components of end items, be wholly manufactured in the United States or Canada. The annual defense appropriations act restrictions require that all ball and roller bearings be produced by a domestic source and be of domestic origin. This restriction does not apply to the acquisition of commercial items (either as components or end products), unless the commercial bearings themselves are purchased as the end products.

In the context of DFARS Part 225, the DAR Council always interprets the term "domestic" to include Canada, unless the statute specifically provides otherwise. Canada is part of the national technology and industrial base as defined at 10 U.S.C. 2500. Congress has never objected to this interpretation of the term "domestic."

Since the restriction at 10 U.S.C. 2534(a)(5) was considered to be more stringent than the annual defense appropriations act restriction, the DFARS requirements that the bearing and the main bearing components must be 100 percent manufactured in the U.S. or Canada was based on 10 U.S.C. 2534(a)(5). 10 U.S.C 2534(a)(5) expired on October 1, 2005.

It is more and more difficult to acquire commercial bearings in which all the main bearing components are 100 percent manufactured in the U.S. or Canada. U.S. and Canadian manufacturers of commercial bearings are increasingly going offshore for components, such as retainers, that do not represent the core competency of the bearing manufacturer. It is often not possible to obtain domestic commercial bearings that do not contain some nondomestic components. The Government does not constitute a large enough share of the market to influence significantly this decision by manufacturers of commercial bearings.

Therefore, this rule proposes to revise the restriction to implement the annual defense appropriations act restriction in a way that will allow more flexibility with regard to the source of bearing components.

The DAR Council interprets the phrase "produced by a domestic source and of domestic origin" to mean that a ball or roller bearing must be manufactured in the U.S. or Canada (domestic source) and the cost of its U.S. and Canadian components must exceed 50 percent of the cost of all its components (of domestic origin). This interpretation is comparable to implementation of the Buy American Act and to some of the other domestic source restrictions in the DFARS. For example, anchor and mooring chain is an appropriations act restriction that also requires the item to be manufactured in the U.S. with the cost of the components manufactured in the U.S. required to exceed 50 percent of the total cost of components. It is reasonable to apply the component test similarly to ball and roller bearings to establish that the bearing is of domestic origin.

This rule was subject to Office of Management and Budget review under Executive Order 12866, dated September 30, 1993.

B. Regulatory Flexibility Act

DOD does not expect this rule to have a significant economic impact on a substantial number of small entities within the meaning of the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.* However, because this rule has impact on the application of domestic source restrictions, DoD has performed an initial regulatory flexibility analysis, which is summarized as follows:

The objective of the rule is to allow more flexibility to domestic bearings manufacturers in the acquisition of nondomestic components. The legal basis for the rule is Section 8065 of the Fiscal Year 2002 DoD Appropriations Act (Pub. L. 107–117) and the same restriction in subsequent DoD appropriations acts.

The final rule affects manufacturers of bearings, bearing components, and noncommercial products that incorporate bearings.

• *Bearings.* This rule applies only to bearings purchased as end products or noncommercial bearings incorporated in noncommercial end products or noncommercial components of noncommercial end products (*see* TAB A). Because this rule allows some element of nondomestic content in ball and roller bearing components, as long as the U.S. or Canadian manufactured bearing contains less than 50 percent nondomestic bearing components, both large and small businesses may find greater numbers of sources from which to obtain ball and roller bearing components. Greater sourcing choices may enable small businesses to compete more successfully for DOD ball and roller bearing acquisitions.

• *Bearing components.* Manufacturers of domestic bearing components may face increased competition from manufacturers of nondomestic bearing components. However, many of the bearing components that are being outsourced are no longer readily available from domestic sources.

• *Manufacturers of noncommercial products incorporating bearings.* Manufacturers of noncommercial products incorporating bearings (both large and small businesses) will find it easier to acquire domestic bearings and will less frequently need to request nonavailability determinations (*see* TAB B).

The proposed rule imposes no reporting, recordkeeping, or other information collection requirements. The rule does not duplicate, overlap, or conflict with any other Federal rules. There are no known significant alternatives to the rule that would meet the requirements of the statute and minimize any significant economic impact of the rule on small entities. The impact of this rule on small business is expected to be predominantly positive.

DoD invites comments from small businesses and other interested parties. DoD also will consider comments from small entities concerning the affected DFARS subparts in accordance with 5 U.S.C. 610. Such comments should be submitted separately and should cite DFARS Case 2006–D029.

C. Paperwork Reduction Act

This proposed rule does not impose any new or modified information collection requirements that require the approval of the Office of Management and Budget under 44 U.S.C. 3501, *et seq.*

List of Subjects in 48 CFR Part 225

Government procurement.

Ynette R. Shelkin,

Editor, Defense Acquisition Regulations System.

Therefore, DoD proposes to amend 48 CFR part 225 as follows:

1. The authority citation for 48 CFR part 225 continues to read as follows:

Authority: 41 U.S.C. 421 and 48 CFR chapter 1.

PART 225—FOREIGN ACQUISITION

2. Revise section 225.7009–2 to read as follows:

225.7009–2 Restriction.

(a) Do not acquire ball and roller bearings unless—

(1) The bearings are manufactured in the United States or Canada; and

(2) For each ball or roller bearing, the cost of the bearing components mined, produced, or manufactured in the United States or Canada exceeds 50 percent of the total cost of the bearing components of that ball or roller bearing.

(b) The restriction at 225.7002–1(b) may also apply to bearings that are made from specialty metals, such as high carbon chrome steel (bearing steel).

3. Revise section 252.225–7016 to read as follows:

252.225–7016 Restriction on Acquisition of Ball and Roller Bearings.

As prescribed in 225.7009–5, use the following clause:

RESTRICTION ON ACQUISITION OF BALL AND ROLLER BEARINGS (DATE)

(a) *Definitions.* As used in this clause—

(1) *Bearing component* means the bearing element, retainer, inner race, or outer race.

(2) *Component,* other than a bearing component, means any item supplied to the Government as part of an end product or of another component.

(3) *End product* means supplies delivered under a line item of this contract.

(b) Except as provided in paragraph (c) of this clause—

(1) Each ball and roller bearing delivered under this contract shall be manufactured in the United States, its outlying areas, or Canada; and

(2) For each ball or roller bearing, the cost of the bearing components mined, produced, or manufactured in the United States or Canada shall exceed 50 percent of the total cost of the bearing components of that ball or roller bearing.

(c) The restriction in paragraph (b) of this clause does not apply to ball or roller bearings that are acquired as—

(1) Commercial components of a noncommercial end product; or

(2) Commercial or noncommercial components of a commercial component of a noncommercial end product.

(d) The restriction in paragraph (b) of this clause may be waived upon request from the Contractor in accordance with subsection 225.7009–4 of the Defense Federal Acquisition Regulation Supplement.

(e) If this contract includes DFARS clause 252.225–7009, Restriction on Acquisition of Certain Articles Containing Specialty Metals, all bearings that contain specialty metals, as defined in that clause, must meet the requirements of that clause.

(f) The Contractor shall insert the substance of this clause, including this paragraph (f), in all subcontracts, except those for—

(1) Commercial items; or

(2) Items that do not contain ball or roller bearings.

(End of clause)

National Highway Traffic Safety Administration

49 CFR Part 594

[Docket No. NHTSA 2010–0035; Notice 1]

RIN 2127–AK70

Schedule of Fees Authorized by 49 U.S.C. 30141

AGENCY: National Highway Traffic Safety Administration (NHTSA), DOT.

ACTION: Notice of proposed rulemaking.

SUMMARY: This document proposes fees for Fiscal Year 2011 and until further notice, as authorized by 49 U.S.C. 30141, relating to the registration of importers and the importation of motor vehicles not certified as conforming to the Federal motor vehicle safety standards (FMVSS). These fees are needed to maintain the registered importer (RI) program.

DATES: You should submit your comments early enough to ensure that Docket Management receives them no later than June 7, 2010.

ADDRESSES: Comments should refer to the docket and notice numbers above and be submitted by any of the following methods:

- *Federal eRulemaking Portal:* Go to *http://www.regulations.gov*. Follow the online instructions for submitting comments.
- *Mail:* Docket Management Facility: U.S. Department of Transportation, 1200 New Jersey Avenue, SE., West Building Ground Floor, Room W12–140, Washington, DC 20590–0001.
- *Hand Delivery or Courier:* West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., between 9 a.m. and 5 p.m. ET, Monday through Friday, except Federal holidays.
- *Fax:* 202–493–2251.

Instructions: For detailed instructions on submitting comments and additional information on the rulemaking process, see the Public Participation heading of the Supplementary Information section of this document. Note that all comments received will be posted without change to *http://www.regulations.gov*, including any personal information provided. Please see the Privacy Act heading below.

Privacy Act: Anyone is able to search the electronic form of all comments received into any of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, *etc.*). You may review DOT's complete Privacy Act Statement in the **Federal Register** published on April 11, 2000 (65 FR 19477–78) or you may visit *http://DocketInfo.dot.gov*.

Docket: For access to the docket to read background documents or comments received, go to *http://www.regulations.gov* or to the street address listed above. Follow the online instructions for accessing the dockets.

FOR FURTHER INFORMATION CONTACT: Clint Lindsay, Office of Vehicle Safety Compliance, NHTSA (202–366–5291). For legal issues, you may call Nicholas Englund, Office of Chief Counsel, NHTSA (202–366–5263). You may call Docket Management at 202–366–9324. You may visit the Docket in person from 9 a.m. to 5 p.m., Monday through Friday.

SUPPLEMENTARY INFORMATION:

Introduction

On June 24, 1996, at 61 FR 32411, we published a notice that discussed in full the rulemaking history of 49 CFR part 594 and the fees authorized by the Imported Vehicle Safety Compliance Act of 1988, Public Law 100–562, since recodified at 49 U.S.C. 30141–47. The reader is referred to that notice for background information relating to this rulemaking action. Certain fees were initially established to become effective January 31, 1990, and have been periodically adjusted since then.

We are required to review and make appropriate adjustments at least every two years in the fees established for the administration of the RI program. See 49 U.S.C. 30141(e). The fees applicable in any fiscal year (FY) are to be established before the beginning of such year. *Ibid.* We are proposing fees that would become effective on October 1, 2010, the beginning of FY 2011. The statute authorizes fees to cover the costs of the importer registration program, to cover the cost of making import eligibility decisions, and to cover the cost of processing the bonds furnished to the Department of Homeland Security (Customs). We last amended the fee schedule in 2008. See final rule published on September 24, 2008 at 73 FR 54981. Those fees apply to Fiscal Years 2009 and 2010.

The proposed fees are based on time and costs associated with the tasks for which the fees are assessed and reflect the increase in hourly costs in the past two fiscal years attributable to the approximately 4.78 and 2.42 percent raises (including the locality adjustment for Washington, DC) in salaries of employees on the General Schedule that became effective on January 1, 2009, and on January 1, 2010, respectively.

Requirements of the Fee Regulation

Section 594.6—Annual Fee for Administration of the Importer Registration Program

Section 30141(a)(3) of Title 49, U.S. Code provides that RIs must pay the annual fees established "* * * to pay for the costs of carrying out the registration program for importers * * *" This fee is payable both by new applicants and by existing RIs. To maintain its registration, each RI, at the time it submits its annual fee, must also file a statement affirming that the information it furnished in its registration application (or in later submissions amending that information) remains correct (49 CFR 592.5(f)).

In compliance with the statutory directive, we reviewed the existing fees and their bases in an attempt to establish fees that would be sufficient to recover the costs of carrying out the registration program for importers for at least the next two fiscal years. The initial component of the Registration Program Fee is the fee attributable to processing and acting upon registration applications. We have tentatively determined that this fee should be increased from $295 to $320 for new applications. We have also tentatively determined that the fee for the review of the annual statement should be increased from $186 to $195. The proposed adjustments reflect our time expenditures in reviewing both new applications and annual statements with accompanying documentation, as well as the inflation factor attributable to Federal salary increases and locality adjustments in the two years since the fees were last adjusted.

We must also recover costs attributable to maintenance of the registration program that arise from the need for us to review a registrant's annual statement and to verify the continuing validity of information already submitted. These costs also include anticipated costs attributable to the possible revocation or suspension of registrations and reflect the amount of time that we have devoted to those matters in the past two years.

Based upon our review of these costs, the portion of the fee attributable to the maintenance of the registration program is approximately $475 for each RI, an increase of $10. When this $475 is added to the $320 representing the registration application component, the cost to an applicant for RI status comes to $795, which is the fee we propose. This represents an increase of $35 over the existing fee. When the $475 is added to the $195 representing the annual statement component, the total cost to an RI for renewing its registration comes to $670, which represents an increase of $19.

Sec. 594.6(h) enumerates indirect costs associated with processing the annual renewal of RI registrations. The provision states that these costs represent a pro-rata allocation of the average salary and benefits of employees who process the annual statements and perform related functions, and "a pro-rata allocation of the costs attributable to maintaining the office space, and the computer or word processor." For the purpose of establishing the fees that are currently in existence, indirect costs are $20.31 per man-hour. We are proposing to increase this figure by $.36, to $20.67. This proposed increase is based on the difference between enacted budgetary costs within the Department of Transportation for the last two fiscal years, which were higher than the estimates used when the fee schedule was last amended, and takes account of further projected increases over the next two fiscal years.

Sections 594.7, 594.8—Fees To Cover Agency Costs in Making Importation Eligibility Decisions

Section 30141(a)(3) also requires registered importers to pay other fees the Secretary of Transportation establishes to cover the costs of "* * * (B) making the decisions under this subchapter." This includes decisions on whether the vehicle sought to be imported is substantially similar to a motor vehicle that was originally manufactured for importation into and sale in the United States and certified by its original manufacturer as complying with all applicable FMVSS, and whether the vehicle is capable of being readily altered to meet those standards. Alternatively, where there is no substantially similar U.S. certified motor vehicle, the decision is whether the safety features of the vehicle comply with, or are capable of being altered to comply with, the FMVSS based on destructive test information or such other evidence that NHTSA deems to be adequate. These decisions are made in response to petitions submitted by RIs or manufacturers, or on the Administrator's own initiative.

The fee for a vehicle imported under an eligibility decision made in response to a petition is payable in part by the petitioner and in part by other importers. The fee to be charged for each vehicle is the estimated pro-rata share of the costs in making all the eligibility decisions in a fiscal year. Inflation and General Schedule raises must also be taken into account in the computation of costs.

The agency believes that the volume of petition-based imports for the next two fiscal years should not be projected on the basis of any single year. The agency estimates the number of vehicles that will be imported under an import eligibility petition in each year for Fiscal Years 2011 and 2012 will equal the average number of such imports over that past five years. Further, the agency estimates the number of import eligibility petitions that will be filed in each year for Fiscal Years 2011 and 2012 will equal the average number of petitions filed each year since 2000. Based on these estimates, we project that 554 vehicles would be imported under petition-based eligibility decisions and that 25 petition-based import eligibility decisions would be made.

Based on these estimates, we project that for Fiscal Years 2011 and 2012, the agency's costs for processing these 25 petitions will be $95,479. The petitioners will pay $8,125 of that amount in the processing fees that accompanied the filing of their petitions, leaving the remaining $87,354 to be recovered from the importers of the 554 vehicles imported under petition-based import eligibility decisions. Dividing $87,354 by 554 yields a pro-rata fee of $158 for each vehicle imported under an eligibility decision that resulted from the granting of a petition. We are therefore proposing to decrease the pro-rata share of petition costs that are to be assessed against the importer of each vehicle from $198 to $158, which represents a decrease of $40. The same $158 fee would be paid regardless of whether the vehicle was petitioned under 49 CFR 593.6(a), based on the substantial similarity of the vehicle to a U.S. certified model, or was petitioned under 49 CFR 593.6(b), based on the safety features of the vehicle complying with, or being capable of being modified to comply with, all applicable FMVSS.

We are proposing no increase in the current fee of $175 that covers the initial processing of a "substantially similar" petition. Likewise, we are also proposing to maintain the existing fee of $800 to cover the initial costs for processing petitions for vehicles that have no substantially similar U.S.-certified counterpart.

In the event that a petitioner requests an inspection of a vehicle, the fee for such an inspection would remain $827 for vehicles that are the subject of either type of petition.

The importation fee varies depending upon the basis on which the vehicle is determined to be eligible. For vehicles covered by an eligibility decision on the

agency's own initiative (other than vehicles imported from Canada that are covered by import eligibility numbers VSA–80 through 83, for which no eligibility decision fee is assessed), we are proposing that the fee remain $125. NHTSA determined that the costs associated with previous eligibility determinations on the agency's own initiative would be fully recovered by October 1, 2010. We propose to apply the fee of $125 per vehicle only to vehicles covered by determinations made by the agency on its own initiative on or after October 1, 2010.

Section 594.9—Fee for Reimbursement of Bond Processing Costs and Costs for Processing Offers of Cash Deposits or Obligations of the United States in Lieu of Sureties on Bonds

Section 30141(a)(3) also requires a registered importer to pay any other fees the Secretary of Transportation establishes "* * * to pay for the costs of—(A) processing bonds provided to the Secretary of the Treasury * * *" upon the importation of a nonconforming vehicle to ensure that the vehicle would be brought into compliance within a reasonable time, or if it is not brought into compliance within such time, that it be exported, without cost to the United States, or abandoned to the United States.

The Department of Homeland Security (Customs) exercises the functions associated with the processing of these bonds. To carry out the statute, we make a reasonable determination of the costs that Department incurs in processing the bonds. In essence, the cost to Customs is based upon an estimate of the time that a GS–9, Step 5 employee spends on each entry, which Customs has judged to be 20 minutes.

Based on General Schedule salary raises that were effective in January 2009 and 2010 and the inclusion of costs for benefits, we are proposing that the processing fee be decreased by $.30, from $10.23 per bond to $9.93. This decrease reflects the fact that GS–9 salaries were increased by a smaller amount than we previously projected when we last amended the fee schedule in 2008. The $9.93 proposed fee would more closely reflect the direct and indirect costs that should be associated with processing the bonds.

In lieu of sureties on a DOT conformance bond, an importer may offer United States money, United States bonds (except for savings bonds), United States certificates of indebtedness, Treasury notes, or Treasury bills (collectively referred to as "cash deposits") in an amount equal to the amount of the bond. 49 CFR 591.10(a). The receipt, processing, handling, and disbursement of the cash deposits that have been tendered by RIs cause the agency to consume a considerable amount of staff time and material resources. NHTSA has concluded that the expense incurred by the agency to receive, process, handle, and disburse cash deposits may be treated as part of the bond processing cost, for which NHTSA is authorized to set a fee under 49 U.S.C. 30141(a)(3)(A). We first established a fee of $459 for each vehicle imported on and after October 1, 2008, for which cash deposits or obligations of the United States are furnished in lieu of a conformance bond. See final rule published on July 11, 2008 at 73 FR 39890.

The agency considered its direct and indirect costs in calculating the fee for the review, processing, handling, and disbursement of cash deposits submitted by importers and RIs in lieu of sureties on a DOT conformance bond. We are proposing to increase the fee from $459 to $514, which represents an increase of $55. The factors that the agency has taken into account in proposing the fee include time expended by agency personnel, the increase in General Schedule salary raises that were effective in January 2009 and 2010, and increased contractor and overhead costs.

Section 594.10—Fee for Review and Processing of Conformity Certificate

Each RI is currently required to pay $14 per vehicle to cover the costs the agency incurs in reviewing a certificate of conformity. We estimate that these costs would increase from $14 to an average of $17 per vehicle because of the increase in General Schedule salary raises that were effective in January 2009 and 2010, and increased contractor and overhead costs. Based on these estimates, we are proposing to increase the fee charged for vehicles for which a paper entry and fee payment is made, from $14 to $17, a difference of $3 per vehicle. However, if an RI enters a vehicle through the Automated Broker Interface (ABI) system, has an e-mail address to receive communications from NHTSA, and pays the fee by credit card, the cost savings that we realize allow us to significantly reduce the fee to $6. We propose to maintain the fee of $6 per vehicle if all the information in the ABI entry is correct.

Errors in ABI entries not only eliminate any time savings, but also require additional staff time to be expended in reconciling the erroneous ABI entry information to the conformity data that is ultimately submitted. Our experience with these errors has shown that staff members must examine records, make time-consuming long distance telephone calls, and often consult supervisory personnel to resolve the conflicts in the data. We have calculated this staff and supervisory time, as well the telephone charges, to amount to approximately $57 for each erroneous ABI entry. Adding this to the $6 fee for the review of conformity packages on automated entries yields a total of $63, representing a proposed $9 increase in the fee that is currently charged when there are one or more errors in the ABI entry or in the statement of conformity.

Effective Date

The proposed effective date of the final rule is October 1, 2010.

Rulemaking Analyses

A. Executive Order 12866 and DOT Regulatory Policies and Procedures

Executive Order 12866, "Regulatory Planning and Review" (58 FR 51735, October 4, 1993), provides for making determinations whether a regulatory action is "significant" and therefore subject to Office of Management and Budget (OMB) review and to the requirements of the Executive Order. The Order defines a "significant regulatory action" as one that is likely to result in a rule that may:

(1) Have an annual effect on the economy of $100 million or more or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or Tribal governments or communities;

(2) Create a serious inconsistency or otherwise interfere with an action taken or planned by another agency;

(3) Materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients thereof; or

(4) Raise novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in the Executive Order.

NHTSA has considered the impact of this rulemaking action under Executive Order 12866 and the Department of Transportation's regulatory policies and procedures. This rulemaking is not significant. Accordingly, the Office of Management and Budget has not reviewed this rulemaking document under Executive Order 12886. Further, NHTSA has determined that the rulemaking is not significant under Department of Transportation's regulatory policies and procedures.

Based on the level of the fees and the volume of affected vehicles, NHTSA currently anticipates that if made final the costs of the proposed rule would be so minimal as not to warrant preparation of a full regulatory evaluation. The action does not involve any substantial public interest or controversy. If made final there would be no substantial effect upon State and local governments. There would be no substantial impact upon a major transportation safety program. A regulatory evaluation analyzing the economic impact of the final rule establishing the registered importer program, adopted on September 29, 1989, was prepared, and is available for review in the docket.

B. Regulatory Flexibility Act

Pursuant to the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.,* as amended by the Small Business Regulatory Enforcement Fairness Act (SBFEFA) of 1996), whenever an agency is required to publish a notice of proposed rulemaking for any proposed or final rule, it must prepare and make available for public comment a regulatory flexibility analysis that describes the effect of the rule on small entities (*i.e.,* small businesses, small organizations, and small governmental jurisdictions). The Small Business Administration's regulations at 13 CFR part 121 define a small business, in part, as a business entity "which operates primarily within the United States." (13 CFR 121.105(a)). No regulatory flexibility analysis is required if the head of an agency certifies that the rule would not have a significant economic impact on a substantial number of small entities. The SBREFA amended the Regulatory Flexibility Act to require Federal agencies to provide a statement of the factual basis for certifying that a rule would not have a significant economic impact on a substantial number of small entities.

The agency has considered the effects of this proposed rulemaking under the Regulatory Flexibility Act, and certifies that if the proposed amendments are adopted they would not have a significant economic impact upon a substantial number of small entities.

The following is NHTSA's statement providing the factual basis for the certification (5 U.S.C. 605(b)). The proposed amendments would primarily affect entities that currently modify nonconforming vehicles and which are small businesses within the meaning of the Regulatory Flexibility Act; however, the agency has no reason to believe that these companies would be unable to pay the fees proposed by this action. In most instances, these fees would not be changed or be only modestly increased (and in some instances decreased) from the fees now being paid by these entities. Moreover, consistent with prevailing industry practices, these fees should be passed through to the ultimate purchasers of the vehicles that are altered and, in most instances, sold by the affected registered importers. The cost to owners or purchasers of nonconforming vehicles that are altered to conform to the FMVSS may be expected to increase (or decrease) to the extent necessary to reimburse the registered importer for the fees payable to the agency for the cost of carrying out the registration program and making eligibility decisions, and to compensate Customs for its bond processing costs.

Governmental jurisdictions would not be affected at all since they are generally neither importers nor purchasers of nonconforming motor vehicles.

C. Executive Order 13132 (Federalism)

Executive Order 13132 on "Federalism" requires NHTSA to develop an accountable process to ensure "meaningful and timely input by State and local officials in the development of regulatory policies that have Federalism implications." Executive Order 13132 defines the term "policies that have federalism implications" to include regulations that have "substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government." Under Executive Order 13132, NHTSA may not issue a regulation that has federalism implications, that imposes substantial direct compliance costs, and that is not required by statute, unless the Federal Government provides the funds necessary to pay the direct compliance costs incurred by State and local governments, or NHTSA consults with State and local officials early in the process of developing the proposed regulation.

The proposed rule would not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government as specified in Executive Order 13132. Moreover, NHTSA is required by statute to impose fees for the administration of the RI program and to review and make necessary adjustments in those fees at least every two years. Thus, the requirements of section 6 of the Executive Order do not apply to this rulemaking action.

D. National Environmental Policy Act

NHTSA has analyzed this action for purposes of the National Environmental Policy Act. The action would not have a significant effect upon the environment because it is anticipated that the annual volume of motor vehicles imported through registered importers would not vary significantly from that existing before promulgation of the rule.

E. Executive Order 12988 (Civil Justice Reform)

Pursuant to Executive Order 12988 "Civil Justice Reform," this agency has considered whether this proposed rule would have any retroactive effect. NHTSA concludes that this proposed rule would not have any retroactive effect. Judicial review of a rule based on this proposal may be obtained pursuant to 5 U.S.C. 702. That section does not require that a petition for reconsideration be filed prior to seeking judicial review.

F. Unfunded Mandates Reform Act of 1995

Section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA) requires agencies to prepare a written assessment of the costs, benefits, and other effects of proposed or final rules that include a Federal mandate likely to result in the expenditure by State, local, or tribal governments, in the aggregate, or by the private sector, of more than $100 million annually (adjusted for inflation with the base year of 1995). Before promulgating a rule for which a written assessment is needed, Section 205 of the UMRA generally requires NHTSA to identify and consider a reasonable number of regulatory alternatives and to adopt the least costly, most cost-effective, or least burdensome alternative that achieves the objectives of the rule. The provisions of Section 205 do not apply when they are inconsistent with applicable law. Moreover, Section 205 allows NHTSA to adopt an alternative other than the least costly, most cost-effective or least burdensome alternative if the agency publishes with the final rule an explanation why that alternative was not adopted. Because a final rule based on this proposal would not require the expenditure of resources beyond $100 million annually, this action is not subject to the requirements of Sections 202 and 205 of the UMRA.

G. Plain Language

Executive Order 12866 and the President's memorandum of June 1, 1998, require each agency to write all rules in plain language. Application of the principles of plain language includes consideration of the following questions:

—Have we organized the material to suit the public's needs?

—Are the requirements in the proposed rule clearly stated?

—Does the proposed rule contain technical language or jargon that is unclear?

—Would a different format (grouping and order of sections, use of heading, paragraphing) make the rule easier to understand?

—Would more (but shorter) sections be better?

—Could we improve clarity by adding tables, lists, or diagrams?

—What else could we do to make the rule easier to understand?

If you have any responses to these questions, please include them in your comments on this document.

H. Paperwork Reduction Act

Under the Paperwork Reduction Act of 1995, a person is not required to respond to a collection of information by a Federal agency unless the collection displays a valid OMB control number. Part 594 includes collections of information for which NHTSA has obtained OMB Clearance No. 2127–0002, a consolidated collection of information for "Importation of Vehicles and Equipment Subject to the Federal Motor Vehicle Safety, Bumper and Theft Prevention Standards," approved through 11/30/2010. This proposed rule, if made final, would not affect the burden hours associated with Clearance No. 2127–0002 because we are proposing only to adjust the fees associated with participating in the registered importer program. These proposed new fees will not impose new collection of information requirements or otherwise affect the scope of the program.

I. Executive Order 13045

Executive Order 13045 applies to any rule that (1) is determined to be "economically significant" as defined under E.O. 12866, and (2) concerns an environmental, health, or safety risk that NHTSA has reason to believe may have a disproportionate effect on children. If the regulatory action meets both criteria, we must evaluate the environmental health or safety effects of the planned rule on children, and explain why the planned rule is preferable to other potentially effective and reasonably feasible alternatives considered by us. This rulemaking is not economically significant and does not concern an environmental, health, or safety risk.

J. National Technology Transfer and Advancement Act

Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (NTTAA), Public Law 104–113, section 12(d) (15 U.S.C. 272) directs NHTSA to use voluntary consensus standards in its regulatory activities unless doing so would be inconsistent with applicable law or otherwise impractical. Voluntary consensus standards are technical standards (*e.g.,* materials specifications, test methods, sampling procedures, and business practices) that are developed or adopted by voluntary consensus standards bodies, such as the Society of Automotive Engineers (SAE). The NTTAA directs the agency to provide Congress, through the OMB, explanations when we decide not to use available and applicable voluntary consensus standards.

In this proposed rule, we propose to adjust the fees associated with the registered importer program. We propose no substantive changes to the program nor do we propose any technical standards. For these reasons, Section 12(d) of the NTTAA would not apply.

K. Comments

How do I prepare and submit comments?

Your comments must be written in English. To ensure that your comments are correctly filed in the Docket, please include the docket number of this document in your comments.

Your comments must not be more than 15 pages long (49 CFR 553.21). We established this limit to encourage you to write your primary comments in a concise fashion. However, you may attach necessary additional documents to your comments. There is no limit on the length of the attachments.

Please submit two copies of your comments, including the attachments, to Docket Management at the beginning of this document, under **ADDRESSES**.

How can I be sure that my comments were received?

If you wish Docket Management to notify you upon its receipt of your comments, enclose a self-addressed, stamped postcard in the envelope containing your comments. Upon receiving your comments, Docket Management will return the postcard by mail.

How do I submit confidential business information?

If you wish to submit any information under a claim of confidentiality, you should submit three copies of your complete submission, including the information you claim to be confidential business information, to the Chief Counsel, NHTSA, at the address given at the beginning of this document under **FOR FURTHER INFORMATION CONTACT**. In addition, you should submit two copies from which you have deleted the claimed confidential business information, to Docket Management at the address given at the beginning of this document under **ADDRESSES**. When you send a comment containing information claimed to be confidential business information, you should include a cover letter setting forth the information specified in our confidential business information regulation, 49 CFR part 512.

Will the agency consider late comments?

We will consider all comments that Docket Management receives before the close of business on the comment closing date indicated at the beginning of this notice under **DATES**. To the extent possible, we will also consider comments that Docket Management receives after that date. If Docket Management receives a comment too late for us to consider in developing a final rule, we will consider that comment as an informal suggestion for future rulemaking action.

How can I read the comments submitted by other people?

You may read the comments received by Docket Management at the address and times given near the beginning of this document under **ADDRESSES**.

You may also see the comments on the Internet. To read the comments on the Internet, take the following steps:

(1) Go to the Federal Docket Management System (FDMS) Web page *http://www.regulations.gov*.

(2) On that page, click on "search for dockets."

(3) On the next page (*http://www.regulations.gov/fdmspublic/component/main*), select NATIONAL HIGHWAY TRAFFIC SAFETY ADMINISTRATION from the drop-down menu in the Agency field, enter the Docket ID number and title shown at the heading of this document, and select "RULEMAKING" from the drop-down menu in the Type field.

(4) After entering that information, click on "submit."

(5) The next page contains docket summary information for the docket you

selected. Click on the comments you wish to see. You may download the comments. Although the comments are imaged documents, instead of the word processing documents, the "pdf" versions of the documents are word searchable. Please note that even after the comment closing date, we will continue to file relevant information in the Docket as it becomes available. Further, some people may submit late comments. Accordingly, we recommend that you periodically search the Docket for new material.

L. Regulation Identifier Number (RIN)

The Department of Transportation assigns a regulation identifier number (RIN) to each regulatory action listed in the Unified Agenda of Federal Regulations. The Regulatory Information Service Center publishes the Unified Agenda in April and October of each year. You may use the RIN that appears in the heading on the first page of this document to find this action in the Unified Agenda.

List of Subjects in 49 CFR Part 594

Imports, Motor vehicle safety, Motor vehicles.

In consideration of the foregoing, NHTSA proposes to amend 49 CFR part 594 as follows:

PART 594—SCHEDULE OF FEES AUTHORIZED BY 49 U.S.C. 30141

1. The authority citation for part 594 continues to read as follows:

Authority: 49 U.S.C. 30141, 31 U.S.C. 9701; delegation of authority at 49 CFR 1.50.

2. Amend § 594.6 by:

a. Revising the introductory text of paragraph (a);

b. Revising paragraph (b);

c. Revising the first sentence of paragraph (d);

d. Revising the second sentence of paragraph (h); and

e. Revising paragraph (i) to read as follows:

§ 594.6 Annual fee for administration of the registration program.

(a) Each person filing an application to be granted the status of a Registered Importer pursuant to part 592 of this chapter on or after October 1, 2010, must pay an annual fee of $795, as calculated below, based upon the direct and indirect costs attributable to:

* * * * *

(b) That portion of the initial annual fee attributable to the processing of the application for applications filed on and after October 1, 2010, is $320. The sum of $320, representing this portion, shall not be refundable if the application is denied or withdrawn.

* * * * *

(d) That portion of the initial annual fee attributable to the remaining activities of administering the registration program on and after October 1, 2010, is set forth in paragraph (i) of this section. * * *

* * * * *

(h) * * * This cost is $20.67 per man-hour for the period beginning October 1, 2010.

(i) Based upon the elements and indirect costs of paragraphs (f), (g), and (h) of this section, the component of the initial annual fee attributable to administration of the registration program, covering the period beginning October 1, 2010, is $475. When added to the costs of registration of $320, as set forth in paragraph (b) of this section, the costs per applicant to be recovered through the annual fee are $795. The annual renewal registration fee for the period beginning October 1, 2010, is $670.

3. Amend § 594.7 by revising the first sentence of paragraph (e) to read as follows:

§ 594.7 Fee for filing petitions for a determination whether a vehicle is eligible for importation.

* * * * *

(e) For petitions filed on and after October 1, 2010, the fee payable for seeking a determination under paragraph (a)(1) of this section is $175. * * *

* * * * *

4. Amend § 594.8 by revising the first sentence of paragraph (b) and the first sentence of paragraph (c) to read as follows:

§ 594.8 Fee for importing a vehicle pursuant to a determination by the Administrator.

* * * * *

(b) If a determination has been made pursuant to a petition, the fee for each vehicle is $158. * * *

(c) If a determination has been made on or after October 1, 2010, pursuant to the Administrator's initiative, the fee for each vehicle is $125. * * *

5. Amend § 594.9 by revising paragraphs (c) and (e) to read as follows:

§ 594.9 Fee for reimbursement of bond processing costs and costs for processing offers of cash deposits or obligations of the United States in lieu of sureties on bonds.

* * * * *

(c) The bond processing fee for each vehicle imported on and after October 1, 2010, for which a certificate of conformity is furnished, is $9.93.

* * * * *

(e) The fee for each vehicle imported on and after October 1, 2010, for which cash deposits or obligations of the United States are furnished in lieu of a conformance bond, is $514.00.

6. Amend § 594.10 by revising the first and third sentences of paragraph (d) to read as follows:

§ 594.10 Fee for review and processing of conformity certificate.

* * * * *

(d) The review and processing fee for each certificate of conformity submitted on and after October 1, 2010 is $17. * * * If NHTSA finds that the information in the entry or the certificate is incorrect, requiring further processing, the processing fee shall be $57.

Issued on: May 5, 2010.

Joseph Carra,

Acting Senior Associate Administrator for Vehicle Safety.

Docket No [0906221082–0122–02]

RIN 0648–XQ03

Endangered and Threatened Wildlife and Plants; Proposed Listing for the Largetooth Sawfish

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Proposed rule; 12–month petition finding; request for comments.

SUMMARY: We, NMFS, have determined that the largetooth sawfish (*Pristis perotteti*) qualifies as a "species" for listing as endangered or threatened under the Endangered Species Act (ESA), and propose listing the species as endangered. This proposed rule also constitutes the 12–month finding on the petition to list the largetooth sawfish throughout its range and designate critical habitat for the species. We are not proposing to designate critical habitat. This proposed rule to list the species as endangered is based on the status review of the species (NMFS, 2010), and the best available scientific and commercial data. We also solicit information that may be relevant to the status and conservation of the species.

DATES: Comments on this proposed rule must be received by July 6, 2010. Public hearing requests must be requested by June 21, 2010.

ADDRESSES: You may submit comments, identified by the RIN 0648–XQ03, by any of the following methods:

- Electronic Submissions: Submit all electronic public comments via the Federal eRulemaking Portal http// www.regulations.gov. Follow the instructions for submitting comments.
- Mail or hand-delivery: Assistant Regional Administrator for Protected Resources, NMFS, Southeast Regional Office, 263 13th Avenue South, St. Petersburg, FL 33701–5505.
- Facsimile (fax): 727 824 5309.

Instructions: No comments will be posted for public viewing until after the comment period. All comments received are considered part of the public record and will generally be posted to **HTTP://WWW.REGULATIONS.GOV**. All Personal Identifying Information (i.e., name, address, etc.) voluntarily submitted may be publicly accessible. Do not submit Confidential Business Information or otherwise sensitive or protected information. We will accept anonymous comments (enter "n/a" in the required fields if you wish to remain anonymous). Please provide electronic attachments using Microsoft Word, Excel, WordPerfect, or Adobe PDF file formats only. The proposed rule, the list of references, and the status review are also available electronically on the NMFS website at *http://sero.nmfs.noaa.gov/pr/Largetoothsawfish.htm*.

FOR FURTHER INFORMATION CONTACT: Shelley Norton, NMFS, Southeast Regional Office (727) 824–5312 or Dwayne Meadows, NMFS, Office of Protected Resources (301) 713–1401.

SUPPLEMENTARY INFORMATION:

Background

NMFS identified the largetooth sawfish (*Pristis perotteti*) as a candidate species in 1991 (56 FR 26797). It was removed from the list on July 14, 1997 (62 FR 37560), but was subsequently added to the revised list on June 23, 1999 (64 FR 33466).

On November 30, 1999, the Center for Marine Conservation (currently called Ocean Conservancy) petitioned us to list North American populations of largetooth and smalltooth sawfish as endangered under the ESA. The largetooth sawfish underwent a formal status review; however, we determined that the petitioner did not present substantial evidence that the petitioned action may be warranted for the largetooth sawfish (56 FR 12959; March 10, 2000). Specifically, there was no evidence that a North American population of largetooth sawfish existed. The largetooth sawfish was, however, maintained on the candidate species list and later transferred to the new Species of Concern list on April 15, 2004 (69 FR 19975).

On April 21, 2009, WildEarth Guardians petitioned the Secretary of Commerce to list the largetooth sawfish (*Pristis perotteti*) as endangered or threatened throughout its range and to designate critical habitat for this species. The petitioners also requested that we reconsider our previous March 10, 2000, negative finding on listing the North American population.

On July 29, 2009, we published a positive 90–day finding (74 FR 37671) announcing that the petition presented substantial scientific or commercial information indicating the petitioned action of listing the species may be warranted. We announced the initiation of a status review of the species and requested information to inform the agency's decision on whether to propose the species for ESA listing. Our Southeast Regional Office (SERO) issued two contracts in 2009 to the Florida Museum of Natural History to compile all confirmed records of largetooth sawfish in the U.S. and internationally. The status review (NMFS, 2010) was conducted by the Southeast Fisheries Science Center (SEFSC) and SERO staff. The status review is available electronically at *http://sero.nmfs.noaa.gov/pr/Largetoothsawfish.htm*.

Listing Determinations Under the Endangered Species Act

We are responsible for determining whether the largetooth sawfish (Pristis perotteti) is threatened or endangered under the ESA (16 U.S.C. 1531 *et seq*.). Section 4(b)(1)(A) of the ESA requires us to make listing determinations based solely on the best scientific and commercial data available after conducting a review of the status of the species and after taking into account efforts being made by any state or foreign nation to protect the species. We have followed a stepwise approach in making this listing determination for the largetooth sawfish (*Pristis perotteti*). As the first of five steps, we determined if the largetooth sawfish is a "species" under the ESA. To be considered for listing under the ESA, a group of organisms must constitute a "species," which is defined in section 3 of the ESA to include taxonomic species plus "any subspecies of fish or wildlife or plants, and any distinct population segment of any species of vertebrate fish or wildlife which interbreeds when mature."

Next we completed an extinction risk assessment to determine the status of the species, in particular whether it qualified for threatened or endangered status. Section 3 of the ESA defines an endangered species as "any species which is in danger of extinction throughout all or a significant portion of its range" and a threatened species as one "which is likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range." For our extinction risk analysis we follow the general procedure of Wainwright and Cope (1999).

In the third step, we assessed the threats affecting the species status. We did this by following the guidance in the ESA that requires us to determine whether any species is endangered or threatened due to any of the following five factors: (A) the present or threatened destruction, modification, or curtailment of its habitat or range; (B) overutilization for commercial, recreational, scientific, or educational purposes; (C) disease or predation; (D) the inadequacy of existing regulatory mechanisms; or (E) other natural or manmade factors affecting its continued existence (section 4(a)(1)(A) through (E)). After analyzing the threats affecting the species, we re-evaluated the extinction status for the species to see if the status changed after the assessment of the five factors.

The fourth step involves an assessment of the efforts being made to protect the species to determine if these efforts are adequate to mitigate existing threats. We evaluated all conservation efforts using the criteria outlined in the joint NMFS and U.S. Fish and Wildlife Service (USFWS) Policy for Evaluating Conservation Efforts When Making Listing Decisions (PECE policy; 68 FR 15100; March 28, 2003) to determine their certainties of implementation and effectiveness. In the final step, we reassessed the preliminary extinction risk assessment conclusion from above to determine if the status of the species had changed based on the PECE analysis.

To evaluate the petitioner's request that NMFS designate critical habitat for the species, we followed the provisions in the ESA and in our implementing regulations (50 CFR 424). Of particular relevance in this case are provisions that NMFS cannot designate critical habitat in "foreign countries" or areas outside of U.S. jurisdiction and that NMFS shall not designate as critical habitat areas outside of the geographical area presently occupied by a species, unless

"a designation limited to its present range would be inadequate to ensure the conservation of the species" (50 CFR 424.12).

Largetooth Sawfish Natural History

Taxonomy

All sawfishes belong to two Genera (*Pristis* and *Anoxypristis*) in the Family Pristidae of the Order Pristiformes, and are classified as rays (Superorder Batoidea). Sawfishes are distinguished from other rays by the long snout (rostrum) with teeth on either side. Using molecular phylogeny (mitochondrial and nuclear gene analysis) paired with morphological characters, Faria (2007) distinguished seven extant species in the Pristidae. Sawfishes are classified into three morphological groups based on rostrum characteristics: largetooth, smalltooth, and knifetooth (Garman, 1913). Three species are currently classified in the largetooth "group," namely *P. perotteti*, *P. microdon*, and *P. pristis*, though difficulties associated with taxonomic identification are known (Faria, 2007; Wiley *et al.*, 2008, Wueringer *et al.*, 2009).

Pristis perotteti has been referred to by other names throughout its range. For instance, it has been called *P. antiquorum* (as cited in Bigelow and Schroeder 1953), *P. zephyreus* (Beebe and Tee-Van, 1941), *P. pristis* (McEachran and Fechhelm, 1998), or *P. microdon* (Garman, 1913; Fowler, 1941; Chirichigno and Cornejo, 2001; Vakily *et al.*, 2002). Some authors consider the eastern Pacific populations to be part of the species *P. microdon* (Garman, 1913; Fowler, 1941; Chirichigno and Cornejo, 2001), while others consider the eastern Pacific populations to be *P. perotteti* (Jordan and Evermann, 1896; refs. in Beebe and Tee-Van, 1941; Compagno and Cook, 1995; Camhi *et al.*, 1998; Cook *et al.*, 2005). The species are generally classified based upon location (i.e., *P. perotteti* occurs in the Atlantic, while *P. microdon* is in the Indo-Pacific), and there is some evidence that tooth counts may differ (Wueringer *et al.*, 2009). The conserved morphology of sawfishes makes identification difficult in some cases; most species are distinguished by the number of teeth on, and size of, the rostrum, placement of the first dorsal fin in relation to the pectoral fins, and shape of the lower lobe of the caudal fin. However, Faria (2007), used both mitochondrial and nuclear genes to investigate the population structure for all Pristidae species. The results from his study indicate that the "largetooth" species *P. microdon* and *P. perotteti* are separate species, and that *P. microdon* occurs in the Pacific, based on their mitochondrial deoxyribonucleic acid sequencing data and differences in external morphology (e.g., rostrum length and horizontal length of the eye). Based on the available taxonomic information on *P. perotteti*, we have determined the species' range is the eastern and western Atlantic Ocean.

The rostral tooth count per side for *P. perotteti* ranges from 14 to 22, and the space between the two most posterior teeth is between 4.5 and 8.5 percent of rostrum standard length (Faria, 2007). The origin of the first dorsal fin is forward of the pelvic fin origin, and the lower lobe of the caudal fin is distinct at all maturity stages. The largest known specimen was a 275.6 in (700 cm) total length (TL) female captured in northern Brazilian waters (Almeida, 1999). The only other sawfish species that overlaps in range with *P. perotteti* is the smalltooth sawfish, *P. pectinata*. These species are differentiated by the number of teeth on the rostrum (24 to 32 for P. pectinata, 22 to 29 for P. perotteti (Wiley *et al.*, 2008)), and the rostrum length of *P. pectinata* is shorter in relation to its body length.

Habitat Use and Migration

Largetooth sawfish are generally restricted to shallow (< 33 ft (10 m)) coastal, estuarine, and fresh waters, although they have been found at depths of up to 400 ft (122 m) in Lake Nicaragua. Largetooth sawfish are often found in brackish water near river mouths and large bays, preferring partially enclosed waters, lying in deeper holes and on bottoms of mud or muddy sand (Bigelow and Schroeder, 1953). This species, like the smalltooth sawfish, is highly mangrove-associated (Burgess *et al.*, 2009). While it is thought that they spend most of their time on the bottom, they are commonly observed swimming near the surface in the wild and in aquaria (Cook *et al.*, 2005). Largetooth sawfish move across salinity gradients freely and appear to have more physiological tolerance of freshwater than smalltooth sawfish (Bigelow and Schroeder, 1953; Dahl, 1971; Thorson, 1974; 1976a; all as cited in Thorson, 1982a).

Though their habitats once overlapped in the northern Gulf of Mexico, the largetooth sawfish historically had a more southerly range than the smalltooth sawfish, with what appears to be a more narrow seasonal migration pattern. Mature largetooth sawfish seasonally ventured into waters as far north as U.S. waters of the Gulf of Mexico.

Age and Growth

There have been no formal studies examining the age and growth of the largetooth sawfish, though Thorson's (1982a) study of the Lake Nicaragua population estimated size at birth to be 30 in (75 cm) and an early juvenile growth rate of 13.8 to 15.7 in (35 to 40 cm)/year. Thorson (1982a) also estimated age of maturity to be 10 years and size at maturity 118 in (300 cm). Preliminary vertebral growth ring analysis has extrapolated largetooth sawfish (*P. microdon*) lifespan to an estimated maximum age of 51 years (Peverell, 2006), and we determined this to be our best available estimate of largetooth sawfish lifespan.

Reproductive Biology

The reproductive method of sawfishes is most likely lecithotrophic viviparity; ova are internally fertilized, developing embryos receive nourishment from an external yolk sac, and the pups are born live after the yolk sac is absorbed. The only known reproductive study of largetooth sawfish was from Lake Nicaragua in the 1970s (Thorson, 1976a). This study found that litter size ranged from one to 13 pups, with an average of 7.3 pups per cycle. The gestation period was approximately five months, with a biennial reproductive cycle. After a five-month gestation period, young are born between October and December (Oetinger, 1978). Thorson (1976a) also found that both ovaries appeared to be functional, though the left seemed to be larger and carry more ova. Parturition occurred in October and November and size at birth was between 28.7 and 31.5 in (73 and 80 cm) TL. Thorson (1976a) reported that the smallest gravid female was 120 in (305 cm) TL, and based on this and other observations, reported the size at maturity is estimated to be around 118 in (300 cm) TL. The life history of largetooth sawfish, like most elasmobranchs, is characterized by slow growth, late maturity, and low fecundity, which generally contributes to a low intrinsic rate of increase.

Simpfendorfer (2000) estimated that largetooth sawfish in Lake Nicaragua had an intrinsic rate of increase (r) of 0.05 to 0.07 per year, with a population doubling time (tx2) of 10.3 to 13.6 years. Intrinsic rates of increase below 0.1 are considered low, making species particularly vulnerable to population decline (Musick *et al.*, 2000). The results indicated that if effective conservation measures are put in place for the species and its habitats, recovery to levels with little risk of extinction will take a few decades. Since Thorson

(1973) hypothesized that many Lake Nicaraguan sawfish may live their whole lives in the lake and Faria (2007) reported that the Lake Nicaraguan sawfish may be a separate stock, the life history parameters estimated by Simpfendorfer (2000) may be unique to that subpopulation or stock.

Diet and Feeding

No published information is available that quantitatively describes the diet of largetooth sawfish. Bigelow and Schroeder (1953) reported that, in general, sawfish subsist on the most abundant small schooling fishes in the area, such as mullets and small clupeids. There is also some evidence of largetooth sawfish feeding on crustaceans and other small benthic organisms (Bigelow and Schroeder, 1953). In these cases, the rostrum may be used to stir up the bottom sediments to locate prey, and in the case of fish predation, the rostrum may be used to stun or wound the fish in a slashing movement (Bigelow and Schroeder, 1953).

Predation

While there is potential for competition between *P. perotteti* and *P. pectinata* due to their overlap in range and habitat types, there is no data to support this and differences in patterns of habitat use and salinity tolerance may adequately partition the niches of these species. Thorson (1970) speculated that the Lake Nicaragua population may have also competed with the bull shark, *Carcharhinus leucas*, as both were quite prevalent (Thorson, 1970); however, both species have since declined to the point of near extirpation. A *Pristis sp.* has been documented within the stomach of a bottlenose dolphin near Bermuda (Bigelow and Schroeder, 1953), in the stomach of a bull shark (*C. leucas*) in Australia (Thorburn *et al.*, 2004), and a juvenile smalltooth sawfish was captured with fresh bite marks from what appears to be a bull shark (Tonya Wiley, pers. comm., 2009). The International Union for Conservation of Nature (IUCN) Red List for the largetooth sawfish also states that crocodiles prey on the species (Charvet-Almeida *et al.*, 2007.

Distribution and Abundance

Historically, *P. perotteti* are thought to inhabit warm temperate to tropical marine waters in the eastern and western Atlantic and Caribbean. In the western Atlantic, P. perotteti occurred from the Caribbean and Gulf of Mexico south through Brazil, and in the United States, largetooth sawfish were reported in the Gulf of Mexico, mainly along the Texas coast and east into Florida waters (Burgess and Curtis, 2003; Burgess *et al.*, 2009). Burgess *et al.* (2009) also state that, based on the evidence, the species rarely occurred in Florida waters and that nearly all records of largetooth sawfish encountered in U.S. waters were limited to the Texas coast. In the eastern Atlantic, *P. perotteti* historically occurred from Spain through Angola.

Currently, *P. perotteti* are thought to primarily occur in freshwater habitats in Central (includes Mexico) and South America and West Africa. In Atlantic drainages, largetooth sawfish have been found in freshwater at least 833 miles (1,340 km) from the ocean in the Amazon River system (Manacapuru, Brazil), as well as in Lake Nicaragua and the San Juan River; the Rio Coco, on the border of Nicaragua and Honduras; Rio Patuca, Honduras; Lago de Izabal, Rio Motagua, and Rio Dulce, Guatemala; the Belize River, Belize; Mexican streams that flow into the Gulf of Mexico; Las Lagunas Del Tortuguero, Rio Parismina, Rio Pacuare, and Rio Matina, Costa Rica; Rio San Juan and the Magdalena River, Colombia; the Falm River in Mali and Senegal; the Saloum River, Senegal; coastal rivers in Gambia; and the Geba River, Guinea-Bissau (Thorson, 1974; 1982b; Castro-Aguirre, 1978 as cited in Thorson, 1982b; Compagno and Cook, 1995; C. Scharpf and M. McDavitt, pers. comm., as cited in Cook *et al.*, 2005).

The United States

Although the first confirmed record of a U.S. largetooth sawfish was from "the Gulf of Mexico" in 1878 (Burgess *et al.*, 2009), they were likely present prior to this time period. Sawfish encounters were reported in the entire Gulf of Mexico in the early popular literature of the late 1800s but the similarities between the smalltooth and largetooth sawfishes limited the ability of non-specialists to discriminate between the two species. Because of this, there are no conclusive data available for largetooth sawfish abundance before fishing and other anthropogenic pressures began to affect their distribution. Recreational fishers in Texas began targeting prize fishes, including large elasmobranchs such as sawfishes, in the 1930s. Photographs taken of these catches were favored in the print media, allowing Burgess *et al.* (2009) to identify 33 largetooth sawfish in Texas.

Though reported in the United States, it appears that *P. perotteti* was never abundant, with approximately 39 confirmed records (33 in Texas) from 1910 through 1961, and no confirmed sightings in the years since (Burgess *et al.*, 2009). A 1963 newspaper article reporting a shrimp trawler off the coast of Texas taking a "broadbill sawfish" may refer to a largetooth sawfish (Burgess *et al.*, 2009). One specimen was reported between 1916 and 1919 in Louisiana. The capture location and identification as a largetooth sawfish species "presumably from Alabama" was catalogued at the University of Alabama but could not be verified (Burgess *et al.*, 2009). Four individuals from Florida were noted between 1910 and 1960 (Burgess *et al.*, 2009). Two of the reports in Florida were identified by elasmobranch researcher Stewart Springer by rostral tooth counts: one from Key West (1941) and another from Port Salerno (Baughman, 1943; Bigelow and Schroeder, 1953). Port Salerno is on the east coast of Florida, making this capture the only reported largetooth sawfish outside of the Gulf of Mexico in the U.S. Another specimen from south Florida was collected by the American Museum of Natural History in 1910. The final record for *P. perotteti* in Florida was recorded in the Springer and Woodburn (1960) study of Tampa Bay fishes. The dried specimen was on display at the Sea-Orama in the city of Clearwater Beach, but the identification was not verified, and the size of the specimen (Burgess *et al.*, 2009) was much smaller than any other individual captured in U.S. waters. With this exception, all largetooth sawfish captured in the U.S. were 14 feet (4.3 m) in length or larger.

In Texas, largetooth sawfish were primarily found in three regions: Padre Island-Laguna Madre, Corpus Christi-Port Aransas, and Galveston-Freeport (Burgess *et al.*, 2009). Most were caught from 1929 through 1957, though some records may have been duplicated (Baughman, 1943). Ten largetooth sawfish were encountered in the Corpus Christi-Port Aransas region, from 1917 to 1961, though again duplication of records is possible. The highest number of records is from the northeast Texas coast (Galveston) and the lowest number from near the Texas-Mexico border (Padre Island), corresponding to the historical freshwater inflow patterns of the region (Longley, 1994). That is, sighting frequency is positively correlated with higher freshwater flow discharge. While it is likely that the freshwater affinity of this species, especially in comparison to the smalltooth sawfish, attracted the largetooth sawfish to these high outflow areas, these numbers may also be an artifact of higher fishing effort or likelihood of reporting in that area.

Burgess *et al.* (2009) report captures of largetooth sawfish in Texas were primarily in shallow inshore waters and

the majority (65 percent) of those captures noted were taken from fisheries using rod and reel gears. Additionally, shrimp nets (reported as shrimp seines, shrimp net, and shrimp trawls) are the gear type associated with approximately 25 percent of all captures. Where size data could be determined, all largetooth sawfish caught in Texas were greater than 16 ft (4.88 m) TL. Burgess *et al.* (2009) report all largetooth sawfish found in U.S. waters were large (>14 ft (4.3 m)) and were primarily encountered during periods of warm water (May through October), suggesting that adults of this species mainly utilized Texas waters in the summer (but data on month of capture only exist for 10 records).

The last confirmed record of *P. perotteti* in U.S. waters was from Port Aransas, Texas on June 24, 1961. The last records for other Gulf of Mexico states include Florida in 1941 and Louisiana in 1917. No records of largetooth sawfish were found from Mississippi, and, as stated previously, the one Alabama specimen could not be verified.

The Caribbean, Central America, and Northern South America

Only 33 confirmed records of P. perotteti exist for this region outside of Costa Rica and Nicaragua (Burgess *et al.*, 2009). The lack of data likely stems from several factors, including confusion or ambiguity of identification with smalltooth sawfish and the lack of scientific surveys and popular reports during the time of highest abundance. In total, 5 largetooth sawfish records were from Mexico, 5 from Guatemala, 1 from Honduras, 483 from Nicaragua, 37 from Costa Rica, 7 from Colombia, 6 from Venezuela, 1 from Guyana, 5 from Suriname, 1 from French Guiana, and 1 from Trinidad. Length data were not available for most of these specimens.

Of the known Mexican largetooth sawfish, four were from the southwestern Gulf of Mexico (Tamaulipas, Veracruz, Tabasco, and Campeche), while one was captured at the northeastern tip of the Yucatan Peninsula (Quintana Roo). The mature (17.7 ft (5.4 m in total length), 1764 lbs (800 kg)) Yucatan individual was captured in 1997, which is the northern-most record in recent history. It appears that the last records in the Mexican Gulf of Mexico were prior to 1978, and Caribbean records are very sparse.

No encounters could be substantiated in Belize (Burgess *et al.*, 2009). All five Guatemalan largetooth sawfish were from a survey of Lake Izabal between 1946 and 1947, and sawfishes were reported to be important inland fishes (Saunders *et al.*, 1950). Though reported by Thorson *et al.* (1966a; 1966b) to be common throughout the area, a claim which was mirrored by local fishers at the time, there are no recent reports of encounters with sawfishes in Guatemala. The lone largetooth sawfish reported from Honduras was acquired from that country, but the true origin of the rostrum and the date of capture could not be confirmed.

The vast majority of *P. perotteti* records from Costa Rica (34 of 37) and Nicaragua (397 of 483) stem from Thorson's (1982a; 1982b) years of work on the Lake Nicaragua-Rio San Juan system. The San Juan River originates at Lake Nicaragua and runs along the Nicaragua-Costa Rica border until it reaches the Caribbean slightly south of the Nicaraguan border; therefore, movement between the countries was likely. Sawfish were noted in Nicaragua as early as 1529 by a Spanish chronicler (Gill and Bransford, 1877). This species was also reported in Nicaragua by Meek (1907), Regan (1908), Marden (1944), Bigelow and Schroeder (1953), Hagberg (1968), and Baez (1980a; 1980b). A commercial fishery for the largetooth sawfish that began in earnest around 1970 quickly decimated the Lake Nicaragua population (Thorson, 1982a). Low-level sustenance fishing for this species was common before this time, but the Nicaraguan government helped to establish a processing plant in 1970, which processed and sold the meat, fins, and rostra in an efficient manner. In the 1970s, an American supermarket chain (A&P) produced advertisements in their Ohio, Pennsylvania, and Illinois chains which included "Fish Features" listing "Sierra Steaks" using the Spanish name for sawfish, *pez sierra*, as a fresh fish available in their stores (The Times Recorder, 1975). By 1981, Thorson (1982a) was unable to locate a single live specimen. Thorson (1982a) documented that within a decade the commercial largetooth sawfish fishery had removed the species from shallow water habitats within Lake Nicaragua. The species was relegated to deep water "pockets" remaining in Lake Nicaragua. Commercial fishing for largetooth sawfish in Lake Nicaragua was banned in 2006, but the species is still caught incidentally by fishers netting for other species (McDavitt, 2002). A Lake Nicaraguan fisherman reported that he encounters a few sawfish annually, nowadays (McDavitt, 2002). There are no known Nicaraguan records of the largetooth sawfish outside of the Lake Nicaragua-Rio San Juan-Rio Colorado system (Burgess *et al.*, 2009).

Bussing (2002) indicated that this species was known to inhabit the Rio Tempisque and tributaries of the San Juan basin in Costa Rica. Three occurrences in that river were found in internet searches, one being a 200 lb (90.7–kg) specimen caught recreationally (Burgess *et al.*, 2009). In Colombia, the Magdalena River estuary was the primary source for largetooth sawfish encounters from the 1940s (Miles, 1945), while other records originated from the Bahia de Cartagena and Isla de Salamanca (both marine), and Rio Sinu (freshwater) from the 1960s through the 1980s (Dahl, 1964; 1971; Frank and Rodriguez, 1976; Alvarez and Blanco, 1985). Scientists in the country reported that there have been no sightings of this species in Colombia for about 10 years (Burgess *et al.*, 2009).

Though thought to have once been abundant in some areas of Venezuela (Cervignon, 1966a; 1966b), the last of the four confirmed records of P. perotteti from that country was from 1962. The single records from Guyana, French Guiana, and Trinidad appear to be from the late 1800s and early 1900s. Of the five Suriname accounts, the latest was collected in 1962.

Brazil

The largetooth sawfish was assessed as critically endangered in Brazil by Charvet-Almeida and Faria (2008). A total of 139 reports are available for this species (Burgess *et al.*, 2009), some from as recently as 2009. Most of the records for which location is known originated in the state of Amazonas (12), which encompasses the middle section of the Amazon River basin along with the confluence of the Rio Negro and Rio Solimoes (in the state of Manaus). The other known locations are from the states of Rio Grande do Norte, Sergipe, Bahia, Espirito Santo, Rio de Janeiro, and Sao Paulo (1 record each), Para (7 records), and Maranhao (3 records). Para contains the estuary and lower reaches of the Amazon River, and Maranhao is just southeast of Para. Anectodal reports from fishers indicate that they are also caught in Amapa, which is the northernmost state in Brazil (Charvet-Almeida and Faria, 2008).

The Amazon River basin and adjacent waters are traditionally the most abundant known area for largetooth sawfish in Brazil (Bates, 1964; Marlier, 1967; Furneau, 1969); however, scientific collection and fisheries data for this region are very limited, both historically and recently. Sawfishes are captured as bycatch in artisanal and commercial fisheries in northern Brazil (Charvet-Almeida, 2002). Most historic records of largetooth sawfish in the Amazon River (Amazonia) predate 1974.

Known lengths ranged from 4.9 to 8.2 ft (1.5 to 2.5 m) in total length. Mathew McDavitt (pers. comm., 2010) notes there is anecdotal evidence that P. perotteti is currently being targeted in Brazil for the lucrative Chinese shark fin trade. A recent popular guide in China for dried seafood products provides descriptions of a dozen or so popular shark fin categories. Based on photographs and descriptions, the category *huang jiao* (literally: "yellow-glue") comes from *Pristis* sawfishes, the trade name deriving from its beige color and the especially copious gelatine it produces when cooked. This Chinese dried seafood book gives the current sources for *huang jiao* fin, noting that the supply from Brazil is favored nowadays due to its comparatively large size.

The Brazilian sawfish populations, which include both *P. perotteti* and *P. pectinata*, are found in this region but are almost exclusively of the largetooth species, are presumably large and abundant, compared to those captured in other localities, due to the fact that sawfishes have not yet been extirpated in Brazilian waters to the extent that they have been elsewhere. Presumably both species are caught and sold. No quantification of the exact species or number of captured or sold sawfishes is currently available, though Charvet-Almeida and Faria (2008) reported that as many as 1500 small and medium rostra and 180 large rostra were sold each year in Para alone.

The two most recent largetooth encounters in Brazil were from Maranhao, one caught by a fisher in 1998 and another in 2009. The latter was a gravid female estimated to be 7 m TL (Burgess *et al.*, 2009). Earlier reports of largetooth sawfish in Maranhao were mostly from the 1980s and 90s (Lessa, 1986; Martins-Juras *et al.*, 1987; Stride and Batista, 1992; Menni and Lessa, 1998; and Lessa *et al.*, 1999). Sawfish are likely caught incidentally by shark fishers in this state and landed for their saws (Almeida *et al.*, 2006).

Records of largetooth sawfish in each of the states south of Maranhao are limited to one each, and the dates of capture are largely unknown, though most appear to be from the nineteenth century. An archeological site in Sao Paulo yielded tooled *P. perotteti* rostral teeth, though whether they came from locally caught animals, or were traded from the north is unknown. Charvet-Almeida and Faria (2008) concluded that largetooth sawfish are most likely extirpated in most of the states south of Maranhao.

West Coast of Africa

Historical records indicate that largetooth sawfish were once relatively common in the coastal estuaries of West Africa. Verified records exist from Senegal (1841 to 1902), Gambia (1885 to 1909), Guinea-Bissau (1912), Republic of Guinea (1965), Sierra Leone (date unknown), Liberia (1927), Cote d'Ivoire (1881 to 1923), Congo (1951 to 1958), Democratic Republic of the Congo (1951 to 1959), and Angola (1951) (Burgess *et al.*, 2009). Most records, however, lacked species identification and locality data and may have been confused taxonomically with other sawfish species that also occur in the area. Unpublished notes from a 1950s survey detail 12 *P. perotteti* from Mauritania, Senegal, Guinea, Cote d'Ivoire, and Nigeria, ranging in size from 35 through 276 in (89 through 700 cm) in total length (Burgess *et al.*, 2009).

A more recent status review by Ballouard *et al.* (2006) reported that sawfishes, including the largetooth sawfish, were once common from Mauritania to the Republic of Guinea, but are now rarely captured or encountered. According to this report, the range of sawfishes has decreased to the Bissagos Archipelago (Guinea Bissau). The most recent sawfish encounters outside Guinea Bissau were in the 1990s in Mauritania, Senegal, Gambia, and the Republic of Guinea. The most recent documented *P. perotteti* capture was from 2005 in Nord de Caravela (Guinea Bissau), along with anecdotal accounts from fishers of captures off of two islands in the same area (Burgess *et al.*, 2009).

Summary and Abundance

As we document above, the range of the largetooth sawfish has contracted significantly on both sides of the Atlantic. Although no time-series abundance data exists to quantify the extent of the decline of the species throughout its range, we believe that with the substantial number of commercial and recreational fisheries fishing along our U.S. coast, the uniqueness of the species morphology, and because media and internet sites are easily accessible to the public, largetooth sawfish encounters would be noteworthy and reported. Additionally, outreach efforts along the Gulf of Mexico coast in the U.S. for the smalltooth sawfish, which includes printed brochures and signage in local bait shops, marinas, and boat ramps on where and how to report sawfish encounters, should have increased the likelihood of reporting a largetooth sawfish encounter. Access to media and internet sites for reporting largetooth encounters outside the U.S. is most likely less common in some of the remote areas along the coasts of Central America, the Amazonian region of Brazil, and West Africa. Nevertheless, the apparent decrease of sightings over time suggests that the species has undergone severe declines in abundance throughout its range. Moreover, the decline in museum records, negative scientific survey results in the U.S. and Lake Nicaragua, and anecdotal reports from fisher people suggest the trend for the species is declining (Burgess *et al.*, 2009).

Species Determination

We first considered whether or not *P. perotteti* met the definition of "species" pursuant to section 3 of the ESA as described above. As stated in the taxonomy section above, after reviewing the best available scientific and commercial taxonomic data on the species, we determined that *P. perotteti* is a "species" and its range is the eastern and western Atlantic Ocean. The best available scientific and commercial data available also suggest *P. perotteti* has a tropical distribution in the eastern and western Atlantic Ocean and has been rare at latitudes higher than 12° N and 12° S during historic times.

Extinction Risk

We next considered the risk of extinction for *P. perotteti* to determine whether the species is threatened or endangered as defined above. No quantitative estimate of abundance for the species is known, so methods such as population viability analysis cannot be used to determine the risk of extinction for the species. Therefore, we must use a method to determine the risk of extinction using qualitative information.

Wainwright and Kope (1999) developed methods to assess the risk of extinction for U.S. West Coast salmon. Using the definitions of endangered and threatened in the ESA, they considered a variety of information to assess extinction risks, including abundance, trends, productivity, variability, genetic integrity, and other risks. Wainwright and Kope (1999) further consider the risk to small populations based on potential genetic effects or random demographic effects. They also considered habitat capacity to answer questions about the carrying capacity and whether or not the carrying capacity can ensure the populations viability. In assessing the risk of extinction using trends, productivity, and variability, Wainwright and Kope (1999) indicate that short and long-term trends in

abundance are the primary indicators of risk. Wainwright and Kope (1999) also assessed the effects of genetic integrity (introduced genotypes, interactions with hatchery fish, or anthropogenic selection) as it relates to evaluating the risk of extinction. Loss of fitness and loss of diversity can occur from random genetic effects and increase the risk of extinction for a species. Wainwright and Kope (1999) also evaluated other risks that are considered for salmonids (disease, predation, and changes in life history). These "other risks" can affect the sustainability of a population. The last factor that Wainwright and Kope (1999) evaluated is the risks associated with recent events. Changes in harvest rates, anthropogenic changes in the environment (habitat degradation or enhancement), or natural events (floods, volcanic eruptions) can pose a risk for species but may not have been adequately considered by looking at the other effects above when there is a time-lag in seeing the effect of recent events.

In addition to analyzing factors that may affect the risk of extinction for salmon, Wainwright and Kope (1999) developed a general quantitative evaluation method to assess both qualitative and quantitative evidence for the various risk factors. In this method, four of the major categories of extinction risk are scored. These four categories are: (1) abundance, (2) trend, productivity, and variability (TPV), (3) genetic integrity, and (4) "other risks". The risk categories are scored on a scale from 1 to 5. A score of 1 represents a very low risk and factors (single or multiple factors) scored at this level are unlikely to contribute significantly to risk of extinction. A score of 2 represents a low risk and single factors are unlikely to contribute to extinction alone, but in combination with other factors may be a concern. Scores of 3 represent moderate risk. These factors contribute significantly to long-term risk of extinction, but do not alone constitute a danger of extinction in the near future. Score values of 4 represent increasing risk. This rating indicates the present risk is low or moderate, but is likely to increase to high risk in the future (reflects the ESA definition of threatened). Scores of 5 represent the high risk rating. This factor indicates danger of extinction in the near future.

Professional biologists at SERO used Wainwright and Kope's (1999) methods to assess extinction risk for *P. perotteti*. For the abundance category the following were important considerations. Small-population risks for the species were considered to assess the risk of extinction. As detailed above, museum records, negative scientific survey results in the U.S. and Lake Nicaragua, and anecdotal reports from fisher people suggest the trend for the species is declining and population size is small. This species is also a K-selected animal which indicates they are usually successful at maintaining relatively small, persistent population sizes in relatively constant environments. We expect changes from random demographic effects are likely to be significant for the species since they are not able to respond rapidly to stochastic events. Information on the distribution of the species was also used as an indicator of abundance. The current distribution for the species is significantly reduced from its historic range. Thus, the existing population of *P. perotteti* does not adequately represent historic patterns of geographic distribution and this is considered a risk factor for the species. We could not determine the habitat capacity for the species since most of the habitat within the species range is located in foreign countries and we have poor data from those areas. Based on small population risks that could occur from demographic effects and the severe range constriction that has occurred, we assigned a rating of 5 (high-risk) for the abundance factor.

For the TPV category we considered that the data for the species indicates a declining trend in abundance. A directed fishery existed for the species in Lake Nicaragua but no longer exists today. Reports of the species in Lake Nicaragua are rare. Lack of reports of the species occurrence throughout most of its range, including the U.S. and southern Brazil, also indicates the species abundance is declining. Productivity rates are not known for the species but are expected to be declining (Shaffer 1981). Variations in freshwater and marine environments within the species range are difficult to assess. Since reports of the species are rare throughout its range, we expect productivity is low.

Genetic integrity was not evaluated because we do not have information on the loss of fitness and loss of genetic diversity for the species.

Our evaluation of the "other risk" factor considered information about the species life history characteristics, in particular that the species has slow growth rates, late maturation, low fecundity, and population recovery potential is considered limited. Based on this information, we scored the other risk category as a 3.

Using Wainwright and Kope (1999) methods to determine the risk of extinction for *P. perotteti*, we believe that abundance and distribution of *P. perotteti* is likely to continue to decline in the near future. Therefore, we have determined the current threats affecting the species will continue into the future and the species is currently in danger of extinction throughout all of its range.

Summary of Factors Affecting the Largetooth Sawfish

In this section, we consider the five factors specified in section 4(a)(1) of the ESA that we outlined as step XX of our listing determination process above.

The Present or Threatened Destruction, Modification, or Curtailment of its Habitat or Range

Coastal habitat loss throughout the species' historical range is a contributing factor to the species decline. Coastal habitats in the southern U. S. Gulf of Mexico region have experienced and continue to experience losses due to urbanization. Wetland losses in the Gulf of Mexico region of the U.S. averages annual net losses of 60,000 acres (242.8 km2) of coastal and freshwater habitats from 1998 to 2004 (Stedman *et al.*, 2008). Although wetland restoration activities are ongoing in this region of the U.S., the losses significantly outweigh the gains (Stedman *et al.*, 2008). These losses have been attributed to commercial and residential development, port construction (dredging, blasting, and filling activities), construction of water control structures, modification to freshwater inflows (Rio Grande River in Texas), and gas and oil related activities. Riverine systems throughout the species' historical range have been altered or dammed. NOAA's Restoration Center is involved in ongoing coastal restoration activities throughout the Gulf of Mexico to restore coastal habitats. In spite of ongoing efforts to restore coastal habitats, coastal habitat losses will continue to occur.

The status of habitats within the current international range of the species is not well known, but with continued development and human population growth, negative effects on habitat are likely. Ruiz-Luna *et al.* (2008) acknowledge that deforestation of mangrove forests in Mexico has occurred from logging practices, construction of harbors, tourism, and aquaculture activities. In addition to deforestation, Ruiz-Luna *et al.* (2008) document that changes in the hydrological systems occurred with opening of the artificial canal in Cuautla, in the state of Nayarit. Valiela *et al.* (2001) report the total area of mangrove habitats in Brazil has decreased significantly (from 9,653 to 5,174 mi^2 (25,000 to 13,400 km^2)) from 1983 to 1997, with similar trends in

Guinnea-Bissau (1,838 to 959 mi^2 (4760 to 2484 km^2)) from 1953 to 1995. Habitat modification, including mangrove forest removal, is also likely in northern Brazil (Compagno *et al.*, 2006). The areas with the most rapid mangrove declines in the Americas included Venezuela, Mexico, Panama, the United States, and Brazil, while Senegal, Gambia, Sierra Leone, and Guinnea-Bissau showed the largest declines in western Africa (Ruiz-Luna *et al.* 2008). World-wide mangrove habitat loss was estimated to be 35 percent from 1980 to 2000 (Valiela *et al.*, 2001). There are unconfirmed reports of dam building activities on the Rio San Juan (Nicaragua) system, which could affect the movements of largetooth sawfish in that region. These threats cannot be directly related to the decline of the largetooth sawfish, but habitat loss is a known factor contributing to the decline of many freshwater and marine species, including the endangered U.S. distinct population segment (DPS) of smalltooth sawfish.

Overutilization for Commercial, Recreational, Scientific, or Educational Purposes

Commercial Fisheries

Sawfishes are very vulnerable to most fishing gears, and were historically caught by gillnets, trawls, seines, and lines (Compagno *et al.*, 2006). Most targeted catches of largetooth sawfish in Texas in the 1930s were from recreational hook and line, but they were also caught incidentally by shrimp trawls and seines (Burgess *et al.*, 2009). The Lake Nicaragua commercial fishery for largetooth sawfish consisted mostly of gillnet boats (Thorson, 1982a), and the commercial small coastal shark fishery in Brazil mainly utilizes gillnets and some handlines (Charvet-Almeida, 2002). Today the main threat to the largetooth sawfish is most likely from bycatch mortality, though sawfishes may be targeted opportunistically in some areas (Brazil) when the occasion arises. The current scarcity of sawfish may inhibit targeted fisheries that might occur in spite of international trade bans. However, if caught as bycatch they are most likely retained because of the value of their parts (e.g., the rostra, teeth, and fins). For example McDavitt's (2006) review of eBay sales of rostra is estimate a total of 200 rostra per year are sold, with a value of more than US $25,000.

Recreational Fisheries

Historically, recreational hook and line fishers targeted large elasmobranchs, including sawfishes, as trophies in Texas (Burgess *et al.*, 2009). Elsewhere in the U.S., abundance was likely never high enough for recreational fishers to encounter this species, much less target it. Because of its current distribution, which is mostly in developing nations, the largetooth sawfish is unlikely to be encountered by recreational fishers, with possible rare exceptions of tourists in these areas. There is no current information on the use of sawfish species for subsistence fishing, though it was noted in Brazil that the meat was often sold in local fish markets, while the other products (rostra, fins) were sold internationally (Charvet-Almeida, 2002).

Commercial Trade

There is very little information available about the trade of sawfish products in general, especially the largetooth sawfish. Largetooth sawfish were listed under Appendix I of the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES) in 2007, which prohibits the commercial trade of largetooth sawfish parts (see Regulatory Mechanisms section below). In 2006, eBay banned the sale of smalltooth sawfish on their online auction site; however, the ban was not established for all sawfish species. A survey by McDavitt and Charvet-Almeida (2004) of sawfish rostra on eBay (before the ban) found that large rostra command prices of over $1,000 (US). An informal web search in November 2009 turned up several sawfish rostra for sale online to international buyers, some listed as "largetooth", along with sites selling cockfighting spurs made from South American sawfish teeth. It is apparent that largetooth and smalltooth sawfishes are still landed and sold illegally in northern Brazil (Charvet-Almeida pers. comm., 2009). It was previously observed that sawfish rostra from small individuals were sold to tourists, while damaged or cut rostra were used for local folk medicine (McDavitt and Charvet-Almeida, 2004). The larger rostra were sold in international cockfighting markets, as the rostral teeth were used as spurs. The larger rostra were also purchased by Asian shark fin buyers, most likely for medicine or curios. The proportion of largetooth sawfish in these markets is unknown, though as many as 180 large Pristis spp. rostra were sold per year at a single market in northern Brazil in the early 2000s (McDavitt and Charvet-Almeida, 2004). With little enforcement of regional and international laws, the practice of landing sawfishes may continue in Brazil, though the extent of any international trade since the CITES listing is unknown. No confirmed reports of *P. perotteti* in aquaria exist currently. No seizures of largetooth sawfish in international trade have occurred since its CITES listing (Sharon Lynn (USFWS) pers. comm.).

Scientific Use

The only published studies on life history and movements of the largetooth sawfish were conducted by Thorson in the 1970s and 1980s in Costa Rica and Nicaragua (Thorson, 1970; 1973; 1974; 1976a; 1976b; 1978; 1982a; 1982b; 1987; Thorson *et al.*, 1966a; 1966b). While many live largetooth sawfish were tagged by Thorson in this time period, it seems that most of the biological data were obtained from dead specimens that were purchased from commercial fishers. Most areas where the largetooth sawfish now occurs suffer from lack of biological sampling due to logistical difficulties and most likely low funding of research. However, there is some scientific information being collected by researchers in Brazil, mostly from fish markets, where sawfishes are illegally landed and sold.

Disease and Predation

No commercial or scientific data exists on diseases that may affect the largetooth sawfish and all information related to predation is listed above in the Largetooth Sawfish Natural History section. There is no evidence that unusual levels of disease or predation are a threat to the species.

The Inadequacy of Existing Regulatory Mechanisms

Protective measures covering trade in the largetooth sawfish (*Pristis perotteti*) are implemented internationally under Appendix I of CITES, making non-domestic trade of parts illegal. Additional Federal, state, and national laws in the United States, Nicaragua, and Brazil are designed to limit the harvest and sale of largetooth sawfish locally and internationally. The Nicaraguan government officially banned commercial fishing for largetooth sawfish in Lake Nicaragua in 2006. The Brazilian Environment Ministry listed *P. perotteti* in Appendix I of the "Instrucao Normativa numero 05," meaning that the species is considered endangered and therefore cannot be landed or sold. Enforcement of these regulations in Brazil and Nicaragua is difficult due to the length of the coastline, extensive internal waterways, lack of enforcement personnel, and the need for more efficient tools. Sawfish abundance within other parts of their current range is depleted so targeted fisheries are

unlikely; however, those caught as bycatch are probably kept due to their value. Thus, illegal foreign trade of sawfish parts may be ongoing in Nicaragua and Brazil and elsewhere in spite of the CITES listing and national laws due to lack of enforcement and the high value of sawfish parts.

The status of largetooth sawfish protection in western Africa is mostly unknown, though Guinnea-Bissau has created six official Protected Areas, which were established in 2005 (UNEP, 2008). Among these areas are several island chains and deltas with intertidal muddy sand banks and mangroves, which are ideal sawfish habitat. Nevertheless, existing regulations in this part of the world may be inadequate to protect and restore populations of largetooth sawfish.

Though not currently found in U.S. waters, existing regulations and measures put in place to protect the smalltooth sawfish could also benefit the largetooth sawfish, should it return into the northern most extent of its historical range in North America. The U.S. DPS of smalltooth sawfish (*Pristis pectinata*) was listed as endangered on April 1, 2003. Both the smalltooth and largetooth sawfish are susceptible to similar threats (e.g., bycatch in various fisheries and habitat loss) so protections for the smalltooth sawfish will benefit the largetooth sawfish. In response to the listing of the U.S. DPS of smalltooth sawfish, Texas implemented a ban on harvest of largetooth sawfish because of the possibility of misidentification. The trading of any largetooth sawfish parts is banned by state laws in both Florida and Louisiana. Additionally, Florida and Texas do not allow gillnet fishing in state waters less than 9 miles (14.5 km) from shore, and Alabama restricts gillnet fishing within less than 3.5 miles (5.6 km) from shore.

In summary, the high value of sawfish parts, weak enforcement, and lack of adequate protections for largetooth sawfish habitat mean that existing regulations are inadequate to protect the species from further declines.

Other Natural or Manmade Factors Affecting its Continued Existence

Largetooth sawfish have slow growth rates, late maturity, a long life span, and low fecundity rates. The largetooth sawfish is a more k-selected type species, with an intrinsic rate of population increase below 1.0 (Simpfendorfer, 2000). K-selected animals are usually successful at maintaining relatively small, persistent population sizes in relatively constant environments. Conversely, they are not able to respond rapidly to additional sources of mortality, such as overexploitation and habitat degradation. Because of this, the risk of extinction remains high without effective conservation plans put into place.

Red tide may also be a human amplified factor that could affect the species. Red tide is caused by an increase of toxic, naturally occurring microscopic blooms of plankton and is a coastal phenomenon which is caused by environmental conditions. Factors that are especially favorable include warm surface temperatures, high nutrient content, low salinity, and calm seas. Rain followed by sunny weather in the summer months is often associated with red tide blooms. We do not have specific information on red tide effects to largetooth sawfish but we do have a report of a smalltooth sawfish that was found dead along the west coast of Florida during a red tide event (National Sawfish Encounter Database, 2009).

Summary of Findings

After considering the 5 factors above from Section 4(a)(1) of the ESA we determined that the species continues to be in danger of extinction throughout all of its range.

Protective Efforts

As a requirement of the ESA, current or future conservation efforts that have yet to be implemented or to show effectiveness to protect and recover largetooth sawfish must be evaluated under the PECE Policy (see above). This policy is designed to determine whether any conservation efforts that have been recently adopted or implemented or proposed, but not yet proven to be successful, will result in recovering the species to the point at which listing is not warranted or contribute to forming a basis for listing a species as threatened rather than endangered (68 FR 15101; March 28, 2003). The PECE policy established two basic criteria to be met before an action could be considered to help improve the conservation status of a species: (1) the certainty that the conservation efforts will be implemented, and (2) the certainty that the efforts will be effective.

Ongoing conservation efforts for the smalltooth sawfish may benefit the conservation of the largetooth sawfish if it returns to U.S. waters. The Smalltooth Sawfish Recovery Plan was finalized in 2009. The Smalltooth Sawfish Recovery Plan lays out specific guidelines for federal and state agencies to follow. Among the recovery plan's objectives are to minimize harm caused by human interactions and to protect and restore habitats. Since both species are susceptible to similar threats, implementation of the Smalltooth Sawfish Recovery Plan will provide conservation benefits for the largetooth sawfish if it returns to U.S. waters. Additionally, in 2010, NOAA will fund coastal restoration activities in Texas and Louisiana using appropriations from The American Recovery and Reinvestment Act of 2009, which restore habitats used by sawfish. Both of these projects meet the criteria of the PECE for certainty of implementation and effectiveness. However, we have determined that these conservation efforts will not alter the extinction risk of the species.

Proposed Determination

NMFS is responsible for determining whether the largetooth sawfish (Pristis perotteti) is threatened or endangered under the ESA (16 U.S.C. 1531 *et seq*.) Accordingly, we have followed a stepwise approach as outlined above in making this listing determination for the largetooth sawfish. We determined that *P. perotteti* is a valid species with a range in the eastern and western Atlantic Ocean. We then reviewed the status of the species and the threats to its status using the five-factor analysis described above. Next, we assessed efforts being made to protect the species, determining if these efforts are adequate to mitigate existing threats.

In summary, the largetooth sawfish (*P. perotteti*) faces ongoing threats from habitat alteration, bycatch, trade, and the inadequacy of existing regulatory mechanisms to address and reduce habitat alterations, bycatch, and trade. The species range has constricted so that it has not been seen in the U.S. since 1961. A similar range constriction is apparent at the southern extreme of the species' historical range. The species has not been reported from southern Brazil for almost at century. All of the threats attributed to the species decline are ongoing, except for the directed largetooth sawfish fishery in Lake Nicaragua. The Lake Nicaraguan fishery collapsed presumably when the sawfish population collapsed. These ongoing threats exist throughout the species current range (Central and South America and West Africa) and existing regulatory mechanisms in place are insufficient to protect the species from further decline. No current or proposed conservation activities will be enough to sufficiently improve the species status. Based on our review, therefore, we find that the species is in danger of extinction throughout all of its range and should be listed as endangered.

Effects of Listing

Conservation measures provided for species listed as endangered or threatened under the ESA include recovery actions (16 U.S.C. 1533(f)), Federal agency consultation requirements (16 U.S.C. 1536), and critical habitat designations, and prohibitions on taking (16 U.S.C. 1538). Recognition of the species' plight through listing promotes conservation actions by Federal and state agencies, foreign entities, private groups, and individuals. Should the proposed listing be made final, a recovery plan may be developed, unless such plan would not promote the conservation of the species.

Identifying Section 7 Consultation Requirements

Section 7(a)(2) of the ESA requires Federal agencies to consult with NMFS to ensure that activities authorized, funded, or carried out are not likely to jeopardize the continued existence of the species or destroy or adversely modify critical habitat. We anticipate few section 7 consultation requirements for Federal agencies given the species current distribution and abundance.

Critical Habitat

Critical habitat is defined in section 3 of the ESA (16 U.S.C. 1532(5)) as: (1) the specific areas within the geographical area occupied by a species, at the time it is listed in accordance with the ESA, on which are found those physical or biological features (a) essential to the conservation of the species and (b) that may require special management considerations or protection; and (2) specific areas outside the geographical area occupied by a species at the time it is listed upon a determination that such areas are essential for the conservation of the species. "Conservation" means the use of all methods and procedures needed to bring the species to the point at which listing under the ESA is no longer necessary. Regulations require that we shall designate critical habitat in areas outside the geographical area presently occupied by a species only when a designation limited to its present range would be inadequate to ensure the conservation of the species (50 CFR 424.12 (e)).

Section 4(a)(3)(A) of the ESA (16 U.S.C. 1533(a)(3)(A)) requires that, to the extent prudent and determinable, critical habitat be designated concurrently with the listing of a species. Critical habitat shall not be designated in foreign countries or other areas outside U.S. jurisdiction (50 CFR 424.12 (h)).

The best available scientific and commercial data as discussed above identify the geographical area occupied by P. perotteti as Central and South America and West Africa. Since these areas are entirely outside U.S. jurisdiction, NMFS cannot designate critical habitat in the geographical area occupied by the species. NMFS can designate critical habitat in unoccupied areas if the area(s) are determined by the Secretary to be essential for the conservation of the species. Regulations at 50 CFR 424.12 (e) specify that we shall designate as critical habitat areas outside the geographical range presently occupied by the species only when the designation limited to its present range would be inadequate to ensure the conservation of the species.

The best available scientific and commercial information on the species does not indicate that U.S. waters provided any specific essential biological function other than general foraging opportunities for the species. All records of P. perotteti were larger animals (adults). No records of juveniles are documented in U.S. waters, which suggest the species was not using the area as a nursery. The majority of the reports of the species in U.S. waters suggest they were in the U.S. during the summer months when water temperatures were warmer. No reports of the species in U.S. waters suggest breeding aggregations were present. Based on the best available information we have not identified unoccupied area(s) that are currently essential to the conservation of the species. Therefore, no critical habitat designation is currently being proposed.

Take Prohibitions

Because we are proposing to list this species as endangered all of the take prohibitions of Section 9(a)(10) of the ESA of the act will apply. These include prohibitions against the import, export, use in foreign commerce, or "take" of the species. Take is defined as "to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct." These prohibitions apply to all persons subject to the jurisdiction of the United States, including in the U.S. or on the high seas.

Service Policies on Endangered and Threatened Fish and Wildlife

On July 1, 1994, NMFS and USFWS published a series of policies regarding listings under the ESA, including a policy for peer review of scientific data (59 FR 34270; July 1, 1994), the Office of Management and Budget (2004) Bulletin on Peer Review, and a policy to identify, to the maximum extent possible, those activities that would or would not constitute a violation of section 9 of the ESA (59 FR 34272; July 1, 1994).

Role of Peer Review

The intent of the peer review policy is to ensure that listings are based on the best scientific and commercial data available. Prior to a final listing, NMFS formally solicits expert opinions and analyses on one or more specific questions or assumptions. This solicitation process may take place during a public comment period on any proposed rule or draft recovery plan, during the status review of a species under active consideration for listing, or at any other time deemed necessary to clarify a scientific question. The status review was peer reviewed by two elasmobranch experts in the field and an elasmobranch trade expert, with their substantive comments incorporated in the final status review.

Identification of Those Activities That Would Constitute a Violation of Section 9 of the ESA

The intent of this policy is to increase public awareness of the effect of this listing on proposed and ongoing activities within the species' range. NMFS will identify, to the extent known at the time of the final rule, specific activities that will not be considered likely to result in violation of section 9, as well as activities that will be considered likely to result in violation. Activities that NMFS believes could result in violation of section 9 prohibitions against ''take'' of the largetooth sawfish include, but are not limited to, the following: (1) importation, (2) exportation, (3) take, (4) sale, and (5) delivery that directly or indirectly affect endangered species, and (6) take any such species on the high seas. These prohibitions apply to all individuals, organizations, and agencies subject to U.S. jurisdiction.

References

A complete list of the references used in this proposed rule is available upon request (see **ADDRESSES**).

Classification

National Environmental Policy Act

The 1982 amendments to the ESA, in section 4(b)(1)(A), restrict the information that may be considered when assessing species for listing. Based on this limitation of criteria for a listing decision and the opinion in *Pacific Legal Foundation* v. *Andrus*, 675 F. 2d 825 (6th Cir. 1981), NMFS has

concluded that ESA listing actions are not subject to the environmental assessment requirements of the National Environmental Policy Act (NEPA) (See NOAA Administrative Order 216–6).

Executive Order 12866, Regulatory Flexibility Act and Paperwork Reduction Act

As noted in the Conference Report on the 1982 amendments to the ESA, economic impacts cannot be considered when assessing the status of a species. Therefore, the economic analysis requirements of the Regulatory Flexibility Act are not applicable to the listing process. In addition, this proposed rule is exempt from review under Executive Order 12866. This proposed rule does not contain a collection-of-information requirement for the purposes of the Paperwork Reduction Act.

Executive Order 13132, Federalism

In keeping with the intent of the Administration and Congress to provide continuing and meaningful dialogue on issues of mutual state and Federal interest, this proposed rule will be given to the relevant governmental agencies in each state in which the subject species historically occurred, and these agencies will be invited to comment.

International Relations

NMFS has conferred with the U.S. Department of State to ensure appropriate notice is given to foreign nations within the range of the species. As the process continues, NMFS intends to continue engaging in informal and formal contacts with the U.S. State Department, giving careful consideration to all written and oral comments received.

Public Comments Solicited

NMFS intends that any final action resulting from this proposal will be as accurate as possible and informed by the best available scientific and commercial information. Therefore, NMFS request comments or information from the public, other concerned governmental agencies, the scientific community, industry, or any other interested party concerning this proposed rule. NMFS particularly seek comments containing:

(1) Information concerning the location(s) of any sightings or captures of the species; and

(2) Information concerning the threats to the species; and

(3) Taxonomic information on the species; and

(4) Efforts being made to protect the species throughout its current range.

Public hearing requests must be requested by June 21, 2010.

List of Subjects in 50 CFR Part 224

Administrative practice and procedure, Endangered and threatened species, Exports, Imports, Reporting and record keeping requirements, Transportation.

Dated: April 30, 2010.

Samuel D. Rauch III,

Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service.

For the reasons set out in the preamble, 50 CFR part 224 is proposed to be amended as follows:

PART 224—ENDANGERED MARINE AND ANADROMOUS SPECIES

1. The authority citation for part 224 continues to read as follows:

Authority: 16 U.S.C. 1531–1543 and 16 U.S.C. 1361 *et seq.*

2. In § 224.101, the table in paragraph (a) is amended by adding an entry for "Largetooth Sawfish" at the end of the table to read as follows:

§ 224.101 Enumeration of endangered marine and threatened anadromous species.

DEPARTMENT OF AGRICULTURE

Rural Utilities Service

RIN 0572–ZA01

Broadband Initiatives Program

AGENCY: Rural Utilities Service, Department of Agriculture.

ACTION: Request for proposals.

SUMMARY: The Rural Utilities Service (RUS) announced its general policy and application procedures for the second round of funding under the broadband initiatives (the Second Round NOFA), established pursuant to the American Recovery and Reinvestment Act of 2009 (Recovery Act) for the Broadband Initiatives Program (BIP), on January 22, 2010 at 74 FR 3820. In that Second Round NOFA, RUS announced the opening of a future window for specific grants for Satellite, Rural Library Broadband, and Technical Assistance, and that any requirements would be outlined in the Request for Proposals (RFP). This RFP outlines those requirements.

DATES: Applications for Satellite, Rural Library Broadband, and Technical Assistance Projects will be accepted from May 7, 2010, until June 7, 2010.

Application Submission: The application packages for all programs are available at *http://www.broadbandusa.gov.* Applications for Satellite, Rural Libraries Broadband, and Technical Assistance projects must be submitted in paper format by June 7, 2010.

Paper Format: Paper applications must include proof of mailing consisting of one of the following: (i) A legibly dated U.S. Postal Service postmark. Please note that the U.S. Postal Service does not uniformly provide a dated postmark. Before relying on this method, Applicants should check with their local post office; (ii) A legible mail receipt with the date of mailing stamped by the U.S. Postal Service; or (iii) A dated shipping label, invoice, or receipt from a commercial carrier. Neither of the following will be accepted as proof of mailing: A private metered postmark, nor a mail receipt that is not dated by the U.S. Postal Service.

Mailing Address: One original and one copy of the completed application must be mailed, shipped, or sent overnight express to: Broadband Initiatives Program, Rural Utilities Service, U.S. Department of Agriculture, 1400 Independence Avenue, SW., Stop 1599, Room 2868, Washington, DC 20250 or hand-delivered to: Broadband Initiatives Program, Rural Utilities Service, U.S. Department of Agriculture, 1400 Independence Avenue, SW., Room 2868, Washington, DC 20250.

Contact Information: For general inquiries, contact David J. Villano, Assistant Administrator Telecommunications Program, Rural Utilities Service, U.S. Department of Agriculture (USDA), email: *BroadbandUSA@usda.gov,* telephone: (877) 508–8364. For inquiries regarding BIP compliance requirements, including applicable federal rules and regulations protecting against fraud, waste and abuse, contact *bipcompliance@wdc.usda.gov*. You may obtain additional information regarding applications for BIP via the Internet at *http://www.broadbandusa.gov*.

Authority: This notice is issued pursuant to the American Recovery and Reinvestment Act of 2009, Pub. L. 111–5, 123 Stat. 115 (2009) and the Rural Electrification Act of 1936, 7 U.S.C. 901 *et seq.*

SUPPLEMENTARY INFORMATION:

Catalog of Federal Domestic Assistance (CFDA) Number: Broadband Initiatives Program (BIP)—10.787.

Additional Items in Supplementary Information

I. Overview: Describes the purposes of the Recovery Act and the changes in BIP from the First Round NOFA.

II. Definitions: Sets forth the key statutory terms and other terms.

III. Funding Opportunity Description: Describes funding categories, requirements, and the amount of funds available for each category.

IV. Eligibility Information: Establishes eligibility criteria, eligibility factors, eligible and ineligible costs, and other eligibility requirements.

V. Application and Submission Information: Provides information regarding how to apply, application materials, and the application process.

VI. Application Evaluation Criteria: Establishes the evaluation criteria for application review.

VII. Award Administration Information: Provides award notice information, administrative and national policy requirements, terms and conditions, and other reporting requirements for award recipients.

VIII. Other Information: Sets forth guidance on funding, compliance with various laws, confidentiality, discretionary awards, and authorized signatures.

I. Overview

On January 22, 2010, the Rural Utilities Service (RUS) published its Second Round NOFA at 74 FR 3820, identifying new funding opportunities for Satellite, Rural Library Broadband, and Technical Assistance projects. In that Second Round NOFA, the Agency also noted that more specific requirements would be outlined in a future Request for Proposals (RFP). This RFP details those requirements with respect to application contents, as well as eligible expenses under each funding opportunity. Generally, the following changes have been made to each funding opportunity:

Satellite

For Satellite projects, there have been no major changes to the information required in the application except for the proposed amount per subscriber that is requested in federal assistance ("Proposed Subscriber Amount"). This amount represents the Applicant's bid to provide the required terms of service, in addition to any other proposed terms, to any unserved premises in the Satellite Region. The eligible costs provision has correspondingly been modified to reflect that such costs will be reimbursed on the proposed subscriber amount agreed to by the Agency. How a successful Applicant applies the grant funds per subscriber shall be at its discretion. In addition, the requirement that an Applicant offer a reduced service package of at least 25 percent of its December 2009 published rates has been eliminated. Upon reflection, the Agency has determined that such a requirement may not accomplish the desired effect, given that some providers may already offer better rates than other discounted rates, and that such an aggressive discount may not be feasible. Moreover, imposition of the requirement would be unfair to existing companies given that new

entrants or consortiums would not have existing rates. As such, the Agency is eliminating the 25 percent discount requirement, but now requires that the cost of its Basic Service Package, as defined in this RFP, not exceed $50 per month.

The Agency will accept National Applications which cover at least six of the eight Satellite Regions, in addition to Regional Applications that cover one or more Satellite Regions. However, if an applicant chooses to submit a National Application, it must submit one national proposed subscriber amount, whereas Regional Applications may contain distinct regional proposed subscriber amounts in their regional break out. An applicant may submit both a National Application and a Regional Application covering the same Satellite Regions for consideration.

In addition, the Agency has determined that reaching hard to serve unserved rural premises may best be served by awarding more than one Regional or National applicant for the same Satellite Region, depending on the proposals it receives.

Rural Library Broadband

For Rural Library Broadband projects, there also have been no changes to the requirements of the application, but the scope of eligible costs has been amplified to encompass associated costs with hardware and software to connect the Rural Libraries. Connecting the Rural Library to a broadband network without the necessary equipment to that connection would not serve the purposes of the program.

Technical Assistance

For Technical Assistance projects, the requirements of the application have been clarified with respect to the objective of the plan. Moreover, Indian tribes are not required to receive a BIP or BTOP award in order to be eligible to receive a grant for Technical Assistance.

Eligible costs also have been modified to include up to five percent of pre-application expenses so that Applicants may adequately lay out their proposal in sufficient detail.

Rural Library Broadband and Technical Assistance

For both Rural Library Broadband and Technical Assistance projects, eligible entities have been amended to clarify that in addition to the Awardees under the First Round NOFA and Second Round NOFA, only Applicants for the Second Round NOFA that ultimately receive an Award under that NOFA will be considered for these projects. Given the timing of this RFP, all Awardees under the Second Round NOFA have not been determined. As such, Round Two Applicants that have not yet been notified of the status of their application may submit an application for Rural Library Broadband and Technical Assistance projects at their own risk.

Satellite, Rural Library Broadband and Technical Assistance

Some definitions have been added to effectuate the requirements of Satellite, Rural Library Broadband, and Technical Assistance projects.

Based on the number of estimated applicants the Agency expects to receive for all three projects, it has determined that the cost of developing an online intake system would not be an effective use of Agency resources. Therefore, all applications under this RFP must be submitted in paper format.

II. Definitions

The terms and conditions provided in this Request For Proposals (RFP) are applicable to, and for the purposes of, this RFP only. Unless otherwise provided in the award documents, all financial terms not defined herein shall have the meaning as defined by Generally Accepted Accounting Principles.

Administrator means the RUS Administrator, or the Administrator's designee.

Applicant means an entity requesting an award under this RFP, and where applicable, the First Round NOFA or Second Round NOFA.

Award means a grant made under this RFP.

Awardee means a grantee under this RFP, unless otherwise specified.

Basic Service Package means Satellite Broadband Service offered at no greater than $50 per month to the end user.

BIP means the Broadband Initiatives Program, administered by the RUS, under the Recovery Act.

Broadband means providing two-way data transmission with advertised speeds of at least 768 kilobits per second (kbps) downstream and at least 200 kbps upstream to end users, or providing sufficient capacity in a middle mile project to support the provision of broadband service to end users.

BTOP NOFA means the Notice of Funds Availability issued under the Broadband Telecommunications Opportunity Program (BTOP) administered by the National Telecommunications and Information Administration of the Department of Commerce and published in the **Federal Register** on January 22, 2010 at 75 FR 3792.

CALEA means the Communications Assistance for Law Enforcement Act, 47 U.S.C. 1001 *et seq.*

Commercial Service Package means the provision of Satellite Broadband Service at speeds of at least 2 megabits per second (Mbps) downstream and greater than 200 kbps upstream to end users.

Critical community facilities means public facilities that provide community services essential for supporting the safety, health, and well-being of residents, including, but not limited to, emergency response and other public safety activities, hospitals and clinics, libraries and schools.

Current ratio means the current assets divided by the current liabilities.

Economic life means the estimated useful service life of an asset as determined by RUS.

End-user equipment means, excluding desktop or laptop computers, computer hardware and software (including anti-virus, anti-spyware, and other security software), audio or video equipment, computer network components, telecommunications terminal equipment, inside wiring, interactive video equipment, or other facilities required for the provision and use of broadband transmission services.

Expanded Service Package means the provision of Satellite Broadband Service at speeds of at least 1.5 Mbps downstream and greater than 200 kbps upstream to end users.

First Round NOFA means the NOFA published in the **Federal Register,** Vol. 74, No. 130, Thursday, July 9, 2009 at FR 33104.

GAAP means generally accepted accounting principles.

Grant agreement means the agreement between RUS and the Awardee for grants awarded under this RFP, including any amendments thereto, available for review at *http://www.broadbandusa.gov*.

Grant documents mean the grant agreement and security documents between the RUS and the Awardee and any associated documents pertaining to the grant.

Grant funds mean federal funds provided pursuant to a grant made under this RFP.

Indian tribe means, as provided in section 4 of the Indian Self-Determination and Education Assistance Act, 25 U.S.C. 450b, any Indian tribe, band, nation, or other organized group or community, including any Alaska Native village or regional or village corporation as defined in or established pursuant to the

Alaska Native Claims Settlement Act, 43 U.S.C.A. § 1601 *et seq.*, which is recognized as eligible for the special programs and services provided by the United States to Indians because of their status as Indians.

National Application shall mean a Satellite application covering at least six of the Satellite Regions, and shall be treated as a single application.

Proposed Subscriber Amount means, for a Satellite Project, the amount which the Applicant proposes to accept in federal assistance as payment in exchange for providing broadband service, on the terms as identified in its proposal and as required in this RFP, to each eligible unserved, rural premises.

RE Act means the "Rural Electrification Act of 1936," as amended (7 U.S.C. 901 *et seq.*).

Recovery Act means the American Recovery and Reinvestment Act of 2009, Public Law 111–5, 123 Stat. 115 (2009).

Region means either multi-jurisdictional areas, as proposed by an Applicant, within a state, territory, or Federally-designated tribal land or an area that crosses state, territory, or tribal boundaries.

Regional Application shall mean a Satellite application for one or more Satellite Regions, which shall be treated as a separate application for each of the Satellite Regions being applied for.

Rural area means any area, as confirmed by the latest decennial census of the Bureau of the Census, which is not located within: (1) A city, town, or incorporated area that has a population of greater than 20,000 inhabitants; or (2) an urbanized area contiguous and adjacent to a city or town that has a population of greater than 50,000 inhabitants. For purposes of the definition of rural area, an urbanized area means a densely populated territory as defined in the latest decennial census of the Bureau of the Census.

Rural Library means a library in a rural area.

RUS Accounting Requirements shall mean compliance with U.S. GAAP, acceptable to RUS, as well as compliance with the requirements of the applicable regulations: 7 CFR 3015, 3016, or 3019 or the system of accounts prescribed by RUS Bulletin 1770B–1.

Satellite Broadband Service means broadband that is delivered to the end user through a satellite based system and not an ancillary or terrestrial based system.

Satellite Project means any project to provide Satellite Broadband Service to unserved rural premises (including households, businesses, public safety entities, and critical community facilities).

Satellite Region means any of the eight regions available for a satellite project, identified in Section IV.C.1(a).

Second Round NOFA means the NOFA published in the **Federal Register,** Vol. 75, No. 14, Friday, January 22, 2010 at FR 3820.

Telecommunications terminal equipment means telecommunications equipment at the end of a circuit or path of a signal, including but not limited to facilities that receive or transmit over the air broadcast, satellite, and microwave, normally located on the premises of the end user, that interface with telecommunications transmission facilities, and that is used to modify, convert, encode, or otherwise prepare signals to be transmitted via such telecommunications facilities, or that is used to modify, reconvert, or carry signals received from such facilities, the purpose of which is to accomplish the goal for which the circuit or signal was established.

USDA Region means either multi-jurisdictional areas, as designated or defined by the Secretary of Agriculture, within a state, territory, or Federally-designated tribal land or an area that crosses state, territory, or tribal boundaries.

III. Funding Opportunity Description

A. Funding Categories

1. Satellite Projects

Applicants must propose to serve only unserved rural premises in any of the Satellite Regions listed in Section IV.C.1(a) of this RFP. Applicants may propose to serve more than one Satellite Region by submitting a Regional Application which is broken out for each Satellite Region it proposes to serve, and/or by submitting a National Application covering at least six of the Satellite Regions. National Applications, however, must contain only one national proposed subscriber amount, whereas Regional Applications broken out for each Satellite Region may contain distinct proposed subscriber amounts. One or two Applicants may be selected to serve each Satellite Region. Funds will be disbursed among the eight Satellite Regions listed in Section IV.C.1(a), as the Agency determines is necessary to promote geographic diversity of funding throughout each Satellite Region, and funds will be divided within the same Satellite Region, if two awardees are chosen, based on the strength of each proposal.

At a minimum, an application for Satellite projects must commit to providing no cost customer premise equipment CPE (including no installation, activation, or other fees) for all packages offered. In addition, the Basic Service Package must be offered at a rate no higher than $50 per month for at least one year with no length of service requirements, unless the Applicant offers the Basic Service Package at less than $40 per month. In such case, the Applicant may propose a one-year contract requirement, if an unconditional 30-day cancellation clause is provided. There are no length of service requirements or price requirements for Expanded Service Packages or Commercial Service Packages.

If no applications are received for a given Satellite Region, the Administrator may request applications for that Satellite Region from existing Applicants under this RFP. Moreover, if the Administrator determines that no applications are acceptable for a Satellite Region, the Agency may request Applicants that submitted applications for that Satellite Region to submit amended applications. If the Agency is still unable to receive an acceptable application from such Applicants, then the Administrator reserves the right to request applications from Applicants for other Satellite Regions, or not to award the Satellite Region.

2. Rural Library Broadband Grants

Awardees under the First Round NOFA or Second Round NOFA, or Applicants under the Second Round NOFA may submit a grant request for providing a broadband connection to any rural library in their proposed funded service area that was constructed or to be constructed with funding from USDA's Community Facilities program of the Rural Housing Service and that is without broadband service. The grant request must include the broadband connection to such rural library. Such costs need not have been addressed in the original application submitted under the First Round NOFA or Second Round NOFA. If the costs were addressed, however, in the original application, the Applicant may request that such costs be converted to grant funds. Rural libraries that already have a broadband connection are ineligible for this program.

In addition to the connection to these unserved rural libraries, Applicants may also request funds to accommodate up to 10 workstations, as well as critical End-user Equipment and Telecommunications Terminal Equipment, as defined herein, to ensure that broadband service is not only

available, but can be used by the residents of the community to be served.

If the Applicant will not be solely responsible for grant assets located in the rural library, then the rural library must be a co-applicant for the grant.

3. Technical Assistance Grants

Awardees under the First Round NOFA or Second Round NOFA, Applicants under the Second Round NOFA, or Indian Tribes may submit an additional grant request for funding regional broadband development planning activities associated with regions or USDA Regions in rural areas. In order to leverage these grants with the Rural Business Opportunity Grants (RBOG) of USDA's Rural Business—Cooperative Service (RBS), *see* 75 FR 15406 (Mar. 29, 2010), RUS is likewise encouraging applications that are designed to help rural areas in the region create wealth so that they are self-sustaining, repopulating, and thriving economically. Applicants must specifically address the following RBOG key strategy: *Use of broadband and other critical infrastructure as a strategy to facilitate local entrepreneurship and expansion of market opportunities for small businesses.* Similar to the RBOG program, RUS also seeks applications that attempt to promote broadband strategies through a regional approach. Regions can be either multi-jurisdictional areas within a state, territory, or Federally-designated tribal land or can cross state, territory, or tribal boundaries, either defined by the applicant or defined or designated by the Secretary.

Regional applications should focus on the broadband-related outcomes that promote economic integration and cohesion of their self-defined geographic area. This approach is intended to combine the resources of the Agency with those of State and local governments, educational institutions, and the private and nonprofit sectors to implement regional economic and community development strategies. In addition, in order to effectively leverage other resources, Applicants should identify other related programs such as those of the Department of Transportation, Health and Human Services, Education, Homeland Security, the Federal Communications Commission (FCC), Telemedicine Program of the Indian Health Service, and similar State and local programs. For example, a local community with limited broadband connectivity has proposed an industrial park to bring new jobs to the community. A regional proposal could include the proposal for a new industrial park identifying and leveraging State and Federal Department of Transportation resources for road construction, broadband infrastructure loans and grant from the RUS, and resources from Health and Human for a regional hospital and business models to attract new businesses to the area. The goal being to develop comprehensive plans that foster collaboration and leveraging of resources between local, state and federal agencies and focus on wealth and job creation through the use of broadband. Regional broadband development strategy proposals may be used by Awardees and regionally-based community leaders to support applications for other local, federal and state programs in order to meet the overall objectives of the plan.

By fostering the development of rigorous regional broadband strategies, RUS anticipates that Technical Assistance Awardees will also be able to submit more focused applications in the future to RUS' Infrastructure Telecommunications, Rural Broadband Access, Community-Oriented Connectivity Broadband, and Distance Learning and Telemedicine grant and loan programs. As such, Applicants are encouraged to consider the creation of a market study, an engineering plan for a broadband network, and a pro forma financial analysis of any potential loan.

Applicants are encouraged to consider all available resources in their geographic area that can contribute to supporting this broadband strategy. After selection, in addition to grant funding under this RFP, grantees may be provided with targeted technical assistance by USDA or other federal agencies as available and appropriate. To ensure that a broad range of communities have the opportunity to benefit from the program, individual grants will be limited to $200,000. The amount of the request should cover the costs of developing the plan. RUS, in its discretion, may decrease the requested award amount based on its evaluation of an application and based on the level of funding available for this program.

B. Available Funds

1. General

Subject to Section III.B.5 below, approximately $105,000,000 in funding has been set aside for funding opportunities under the Second Round NOFA for the following projects and this RFP.

2. Funding Targets

Award amounts under this RFP will be targeted as follows:

a. Satellite Projects

Up to $100,000,000 is available for grants for Satellite projects.

b. Rural Library Broadband Projects

Up to $2,000,000 is available for grants for Rural Library Broadband projects.

c. Technical Assistance Projects

Up to $3,000,000 is available for grants for Technical Assistance projects.

3. Award Period

All awards must be made and funding obligated by September 30, 2010.

4. Type of Funding Instrument

The funding instruments will be grants.

5. Additional Available Funding From the First and Second Round NOFAs

Funding that remains available from the First Round NOFA or the Second Round NOFA may be used to provide additional funding for the categories listed above in Section III.B.2.

IV. Eligibility Information

A. General

Applicants must satisfy the following eligibility requirements to qualify for funding.

B. Eligible Entities

1. Satellite Projects

a. A satellite Internet Service Provider (ISP);

b. A reseller of satellite ISP service;

c. A distributor or dealer of satellite ISP service; and

d. A consortium of a, b, or c above, except for a consortium of more than one satellite ISP.

2. Rural Library Broadband Projects

The following entities are eligible to apply for assistance:

a. Awardees under the First Round NOFA or Second Round NOFA; and

b. Applicants under the Second Round NOFA.[1]

3. Technical Assistance Projects

The following entities are eligible to apply for assistance:

a. Awardees under the First Round NOFA or Second Round NOFA;

[1] Applicants under the Second Round NOFA that have not yet been notified of the status of their application may apply for assistance; however, such submissions are at the applicant's own risk. Only those applicants that are ultimately selected as Awardees under the Second Round NOFA will be eligible to receive an award for Rural Library Broadband projects.

b. Applicants under the Second Round NOFA [2]; and

c. Indian Tribes

C. Eligible Grant Expenses

1. Satellite Award Expenses

a. Unserved Rural Premises

Grant funds may only be expended for eligible purposes, as provided in Section IV.C.1.b below, to unserved rural premises in the Satellite Region(s) for which the Applicant has applied. The eight Satellite Regions encompass the following states: Region 1 Washington, Oregon, California, Nevada, Idaho, Utah, Arizona; Region 2 Montana, Wyoming, North Dakota, South Dakota, Nebraska, Minnesota, Iowa, Wisconsin, and Illinois; Region 3 Colorado, New Mexico, Kansas, Oklahoma, Texas, Missouri, Arkansas, and Louisiana; Region 4 Michigan, Indiana, Ohio, Kentucky, West Virginia, Pennsylvania, and Virginia; Region 5 Tennessee, Mississippi, Alabama, Georgia, Florida, South Carolina, and North Carolina; Region 6 Maryland, Delaware, New Jersey, New York, Connecticut, Rhode Island, Massachusetts, New Hampshire, Vermont, and Maine; Region 7 Alaska; and Region 8 Hawaii.

Notwithstanding, unserved rural premises within the existing service area of current RUS borrowers currently in build-out, or the service areas of Last Mile Awardees under the First Round NOFA, Second Round NOFA or the BTOP NOFA shall be ineligible for grant funding, regardless of whether the premises are unserved, so as to not compete with RUS or Recovery Act projects being built. These areas can be found at *http://www.broadbandUSA.gov*.

b. To reimburse costs for the provision of broadband service to eligible, unserved rural premises defined in Section IV.C.1.a above, at the agreed upon proposed subscriber amount.

2. Eligible Rural Library Broadband Expenses

a. Award funds must be used by the Applicant to pay for the last mile connection to the rural library;

b. Award funds may be used by the Applicant to pay for the following:

1. The costs for up to 10 desktop or laptop computers and individual workstations located within the rural library;

2. End-user equipment needed to carry out the project;

3. The costs for the improvement of the rural library in order to accommodate, if necessary, the individual workstations; or

4. The cost of providing broadband service, free of charge, to the rural library for up to 2 years.

3. Eligible Technical Assistance Expenses

Award funds may be used by the Applicant:

a. To fund the proposed technical assistance for regional broadband development planning activities associated with a region or USDA region in rural areas. Such technical assistance must include planning, technical and economic expertise;

b. To reimburse up to 5 percent of the costs of the total proposed budget for pre-application expenses incurred no earlier than the date of the publication of the Second Round NOFA, January 22, 2010;

c. To fund the cost of a market study of the selected region;

d. To fund the cost of an engineering design for a broadband network to cover the selected region; and

e. To fund the cost of creating a pro forma financial analysis of a proposed future loan.

V. Application and Submission Information

A. Request for Application Package

Complete application packages, including required federal forms and instructions, will be available at *http://www.broadbandusa.gov.* Additional information can be found in the *Application Guidelines* at *http://www.broadbandusa.gov.* This Web site will be updated regularly.

B. Registration

1. DUNS Number

All Applicants must supply a Dun and Bradstreet Data Universal Numbering System (DUNS) number. Applicants can receive a DUNS number at no cost by calling the dedicated toll-free DUNS number request line at 1–866–705–5711 or via the Internet at *http://www.dunandbradstreet.com.*

2. Central Contractor Registration (CCR)

All Applicants must provide a CCR (CAGE) number evidencing current registration in the CCR database. If the Applicant does not have a current CCR (CAGE) number, the Applicant must register in the CCR system available at *http://www.ccr.gov/StartRegistration.aspx.* Applicants are encouraged to register early due to potential delays in registration.

C. Contents of the Application

1. Requirements for Applications for Satellite Projects

A complete application will include the following, broken out to the extent possible for each Satellite Region being applied for if not a National Application:

a. The identity of the Applicant or co-applicants and general Applicant and project information including:

i. A description of the project that will be made public consistent with the requirements of the Recovery Act;

ii. The Congressional District of the Applicant's headquarters;

b. An executive summary of the project, including the Satellite Region(s) for which the Applicant is applying, whether it is a National Application, and the number of unserved rural premises proposed to be served by the applicant within the Satellite Region(s);

c. A description of the Applicant's ability to cover the entire Satellite Region(s) being applied for;

d. A description of the proposed service offerings, including quality of service, transmission speed, associated pricing plans for a Basic Service Package, an Expanded Service Package, and a Commercial Service Package, how its rates will be affordable to low-income households, and how the service will be marketed throughout the entire Satellite Region(s) being applied for. The proposed service offerings of the proposal must include the provision of no cost CPE (including no installation, activation, or other fees) for all packages offered. In addition, the Basic Service Package must be offered at a rate no higher than $50 per month for at least one year with no length of service requirements, unless the Applicant offers the Basic Service Package at less than $40 per month. In such case, the Applicant may propose a one-year contract requirement, if an unconditional 30-day cancellation clause is provided. There are no length of service requirements or price requirements for Expanded Service Packages or Commercial Service Packages;

e. Résumés of key management personnel, a description of the organization's readiness to manage a broadband services network, and an organizational chart showing any parent organizations and/or subsidiaries and affiliates;

f. A legal opinion (as set forth in the application) that: (1) Addresses the

[2] Applicants under the Second Round NOFA that have not yet been notified of the status of their application may apply for assistance; however, such submissions are at the applicant's own risk. Only those applicants that are ultimately selected as Awardees under the Second Round NOFA will be eligible to receive an award for Technical Assistance projects.

Applicant's ability to enter into the award documents; (2) describes all material pending litigation matters; and (3) addresses the Applicant's ability to pledge security as required by the award documents;

g. The total amount of the proposal, the amount which the Applicant is requesting in assistance, and the proposed subscriber amount (note only regional applications may contain distinct proposed subscriber amounts);

h. Pro forma financial analysis related to the sustainability of the project, including subscriber estimates and proposed service offerings in addition to broadband Internet access; annual financial projections including balance sheets, income statements, and cash flow statements and supporting assumptions for a five-year forecast period as applicable; and evidence of committed sources of capital funding required to sustain the operation;

i. Historical financial statements, Certified Public Accountant (CPA) audits if applicable, for the previous two calendar years;

j. Certifications required in the application;

k. The pricing package being offered to critical community facilities, if any;

l. A list of all outstanding and contingent obligations, including copies of existing notes, loan and security agreements, and guarantees;

m. A detailed description of working capital requirements and the source of these funds;

n. A description of measurable service metrics and target service level objectives (SLOs) (*e.g.,* the speed with which new service will be established, service availability, and response time for reports of system failure at a residence) that will be provided to the customer, and a description of the approach and methodology for monitoring ongoing service delivery and service quality for the services being employed.

2. Requirements for Rural Library Broadband Projects

A complete application will include the following:

a. The identity of the Applicant, and co-Applicant, if any, and general Applicant and project information;

b. A description of the project that will be made public consistent with the requirements of the Recovery Act; and

c. The estimated dollar amount of the funding request, including an itemized budget for the associated costs for the last mile connection to the rural library, and any additional costs the Applicant seeks, such as required improvements to the rural library to accommodate individual workstations, up to 10 desktop or laptop computers and individual workstations to be located within the rural library, end-user equipment and telecommunications terminal equipment needed to carry out the project, and the cost of providing free broadband service to the rural library for up to 2 years;

d. An executive summary of the project as detailed in the application;

e. A certification that no broadband connection exists to the rural library, and that the rural library has or will receive a Community Facilities award;

f. A description of the quality of the service being provided;

g. A description of the benefits to the community or communities to be served by the rural library broadband connection; and

h. A completed Environmental Questionnaire, other documentation requests, and required environmental authorizations and permits, including those required by the National Environmental Policy Act of 1969, as amended (42 U.S.C. 4321 *et seq.*) (NEPA), the National Historic Preservation Act of 1966, as amended (16 U.S.C. 470 *et seq.*) (NHPA), and the Endangered Species Act of 1973, as amended (16 U.S.C. 1534 *et seq.*) (ESA) as applicable.

3. Requirements for Technical Assistance Projects

A complete application, which must not exceed twenty (20) consecutively numbered, 8.5 x 11-inch pages of single-spaced, standard 12-point type with 1-inch margins, must provide the following information:

a. An overview of the plan to address the following USDA key strategy: *Use of broadband and other critical infrastructure as a strategy to facilitate local entrepreneurship and expansion of market opportunities for small businesses;*

b. The description of the identified Region or USDA Region in need of assistance;

c. An explanation of the economic integration and cohesion that will be created in the Region or USDA Region with the Award. Proposals with detailed plans for a market study, engineered broadband network, or pro forma financial analysis will be favored. The qualifications of consultants to provide such work should also be addressed;

d. Evidence of resources which will be used to implement the regional economic and community development strategies, such as letters of endorsement from State and local governments, educational institutions, and the private and nonprofit sectors;

e. The identity of communities within the Region or USDA Region that would be eligible under RUS' Infrastructure Telecommunications, Rural Broadband Access, Community-Oriented Connectivity Broadband, and/or Distance Learning and Telemedicine grant and loan programs, and basic data regarding population, numbers of households, numbers and types of businesses, local revenue and employment should be provided;

f. The amount of the grant request, supported by a detailed budget estimate to create the plan;

g. A list of the objectives of the plan and why the objectives are important. This section should also include any background or introductory information that would help explain the objectives.

h. An outline of the research design, methods, analytical tools, and techniques that the applicant intends to use in meeting the objectives stated above. Methods must be clearly stated so that the agency can evaluate the appropriateness of the applicant's approach and tools to be used. A statement such as: "we will evaluate the data using the usual statistical methods" is not specific enough for evaluation.

i. Describe the expected results, benefits, and outcomes the applicant expects to achieve if awarded the grant and the potential benefits of the results to the communities and region served in the plan. A clear, concise description will help the agency understand the merits of the proposal; and

j. Discuss other information relevant to the potential success of the project. This should include facilities, personnel expertise/experience, project schedules, proposed management, interactions with other institutions, etc. Applications for multi-investor projects must identify project management and the functions of each investigator in each team and describe plans to communicate and share data.

D. Material Representations

The application, including certifications, and all forms submitted as part of the application will be treated as a material representation of fact upon which RUS will rely in awarding grants.

VI. Application Evaluation, Processing, and Implementation Procedures

A. Satellite Projects

The United States will be divided into eight service area regions eligible for Satellite applications (Satellite Regions). Applicants must propose serving only unserved rural premises in any of the eight Satellite Regions listed in Section IV.C.1(a) in this RFP; provided,

however, existing service areas where broadband capable service is in the process of being built-out by current RUS borrowers, or the service areas of Last Mile Awardees under the First Round NOFA, Second Round NOFA, or BTOP NOFA shall be ineligible for grant funding, regardless of whether the premises are unserved. Applicants may submit an application for more than one Satellite Region; however, each Satellite Region in the application must be broken out so that the Agency can analyze the proposal for each Satellite Region individually. Applicants may also submit a National Application covering at least six Satellite Regions, but such application will be limited to providing only one proposed subscriber amount for federal assistance.

Regional and National Applications will be evaluated on the strength of their proposals and the extent to which unserved rural premises will benefit under their proposals. The price of the service to the end-user, the proposed subscriber amount, the length of any proposed discounted service, the quality and transmission speed of the proposed services, especially the Basic Service Package, how potential requests for service will be handled, and the amount of outside investment in the project will all be considered as a whole.

Successful Applicants will be notified of the details of the award, and must accept the offer within the time specified in the grant offer. Applicants that are not able to do so will be rejected, and the next qualifying Applicant may be selected for the Satellite Region. RUS, at its discretion, reserves the right to decline funding in any Satellite Region for which no satisfactory application is received.

Awardees will be advanced funds no more than once per month for reimbursing the connection of new unserved, rural premises. The Awardee shall be entitled to the approved proposed subscriber amount of federal assistance for each new eligible subscriber.

If no applications are received for a given Satellite Region, the Administrator may request applications for that Satellite Region from existing Applicants under this RFP. Moreover, if the Administrator determines that no applications are acceptable for a Satellite Region, the Agency may request Applicants that submitted applications for that Satellite Region to submit amended applications. If the Agency is still unable to receive an acceptable application from such Applicants, then the Administrator reserves the right to request applications from Applicants for other Satellite Regions, or not to award the Satellite Region.

B. Rural Library Broadband Grants

Applications for Rural Library Broadband grants will be evaluated in terms of the benefit to the rural library benefitting from the grant, as well as the benefits to the community to be served. The quality of the broadband service being provided, the length of any proposed free service or additional discounted service, the conditions of the community to be served, such as unemployment rate or income levels, and the reasonableness of costs will all be considered as a whole. RUS, in its discretion, may increase or decrease the requested award amount based on its evaluation of the reasonableness of the costs and the level of funding available for this program.

C. Technical Assistance Grants

Applications for Technical Assistance grants will be evaluated on the strength and scope of the regional broadband development strategies and plan to address the logical components of a broadband plan. Moreover, the extent to which existing infrastructure will be integrated in the region, the number of unserved communities that will be connected, how regional economic development will be promoted, and the strength of the Applicant will all be considered in the evaluation. Applicants may request up to $200,000. RUS, in its discretion, may decrease the requested award amount based on its evaluation of the application and the level of funding available for this program. The Agency reserves the right to reject Applications that do not conform to the page, font, and spacing requirements of Section V.C.3.

VII. Award Administration Information

A. Award Notices

Successful Applicants will receive award documents from RUS following award notification. Applicants may view sample award documents at *http://www.broadbandusa.gov.*

B. Administrative Requirements

1. Pre-Award conditions

No funds will be disbursed under this program until all other sources of funding have been obtained and any other pre-award conditions have been met. Failure to obtain one or more sources of funding committed to in the Application or to fulfill any other pre-award condition within 30 days of award announcement will result in withdrawal of the award.

2. Failure To Comply With Award Requirements

If an Awardee fails to comply with the terms of the award as specified in the award documents, RUS may exercise rights and remedies.

3. Advance Procedures

RUS grant advances are made at the request of the Awardee according to the procedures stipulated in the grant documents.

4. Accounting, Monitoring, and Reporting Requirements

Awardees must follow RUS' accounting, monitoring, and reporting requirements. These requirements, which are specified in the award documents, include, but are not limited to, the following:

a. Awardees must adopt a GAAP system of accounts acceptable to RUS, and which complies with RUS Accounting Requirements, as defined herein;

b. Awardees must submit annual audited financial statements along with a report on compliance and on internal control over financial reporting, and a management letter in accordance with the requirements of 7 CFR part 1773. The CPA conducting the annual audit is selected by the Awardee and must be approved by RUS as set forth in 7 CFR 1773.4;

c. Awardees must submit to RUS the information as specified in Section VII.D.2 of this RFP;

d. Awardees must comply with all reasonable RUS requests to support ongoing monitoring efforts. The Awardee shall afford RUS, through its representatives and representatives of the USDA Office of Inspector General, reasonable opportunity at all times during business hours and upon prior notice, to have access to and the right to inspect the broadband system, and any other property encumbered by the mortgage or security agreement, and any or all books, records, accounts, invoices, contracts, leases, payrolls, timesheets, cancelled checks, statements, and other documents, electronic or paper of every kind belonging to or in the possession of the Awardee or in any way pertaining to its property or business, including its subsidiaries, if any, and to make copies or extracts therefrom.

5. Assistance Instruments

a. Terms and conditions of grants are set forth in the non-negotiable standard grant agreement found at *http://www.broadbandusa.gov.*

b. Grant documents appropriate to the project must be executed prior to any advance of funds.

C. Award Terms and Conditions

1. Scope

Awardees, including all contractors and subcontractors, are required to comply with the obligations set forth in the Recovery Act and the requirements established herein. Any obligation that applies to the Awardee shall extend for the life of the awarded-funded facilities.

2. Sale or Lease of Project Assets

The sale or lease of any portion of the award-funded broadband facilities shall be governed by the applicable Grant Agreement and the Department's grant regulations at 7 CFR parts 3015, 3016, and 3019. Terms under which grant assets can be sold are outlined in the Department's grant regulations cited above.

3. Certifications

a. The Applicant must certify that he or she is authorized to submit the application on behalf of the eligible entity(ies) listed on the application; that the Applicant has examined the application, that all of the information in the application, including certifications and forms submitted, all of which are part of the application, are material representations of fact and true and correct to the best of his or her knowledge; that the entity(ies) that is requesting funding pursuant to the application and any subawardees will comply with the terms, conditions, purposes, and federal requirements of the program; that no kickbacks were paid to anyone; and that a false, fictitious, or fraudulent statement or claim on this application is grounds for denial or termination of an award, and/or possible punishment by a fine or imprisonment as provided in 18 U.S.C. 1001 and civil violations of the False Claims Act (31 U.S.C. 3729 *et seq.*);

b. The Applicant certifies that the entity(ies) he or she represents have and will comply with all applicable Federal, state, and local laws, rules, regulations, ordinances, codes, orders, and programmatic rules and requirements relating to the project.[3] The Applicant acknowledges that failure to do so may result in rejection or deobligation of the award. The Applicant acknowledges that failure to comply with all Federal and program rules could result in civil or criminal prosecution by the appropriate law enforcement authorities;

[3] *See* Recovery Act section 6001(e)(4), 123 Stat. at 514.

D. Reporting Requirements

1. General Recovery Act Requirements

a. OMB Reporting Requirements Implementing the Recovery Act

Any grant awarded under the Second Round NOFA and this RFP shall be subject to the applicable statutes and regulations regarding reporting on Recovery Act funds.[4] If Recovery Act funds are combined with other funds to fund or complete projects and activities, Recovery Act funds must be accounted for separately from other funds and reported to RUS or any federal web site established for Recovery Act reporting purposes. Moreover, recipients of funds under this RFP must also comply with the accounting requirements as established or referred to in this RFP.

b. Required Data Elements

The Awardee and each contractor engaged by the Awardee must submit the following information to the relevant Agency:

i. The total amount of Recovery Act funds received;

ii. The amount of Recovery Act funds received that were expended or obligated to projects or activities;

iii. A detailed list of all projects or activities for which Recovery Act funds were expended or obligated, including (1) the name of the project or activity; (2) a description of the project or activity; (3) an evaluation of the completion status of the project or activity; (4) an estimate of the number of jobs created and the number of jobs retained by the project or activity; and (5) for infrastructure investments made by state and local governments, the purpose, total cost, and rationale of the Agency for funding the infrastructure investment with Recovery Act funds, and name of the person to contact at the Agency if there are concerns with the infrastructure investment; and

iv. Detailed information on any subcontracts or subgrants awarded by the Awardee to include the data elements required to comply with the Federal Funding Accountability and Transparency Act of 2006 (Pub. L. 109–282, 120 Stat. 1186 (to be codified at 31 U.S.C. 6101 note), allowing aggregate reporting on awards below $25,000 or to individuals.[5]

[4] *See, e.g.,* 2 CFR pt. 176; OMB, Interim Final Guidance for Federal Financial Assistance, 74 FR 18449 (Apr. 23, 2009); Implementing Guidance for Reports on Use of Funds Pursuant to the American Recovery and Reinvestment Act of 2009 (OMB M–09–21 June 22, 2009); and Updated Guidance on the American Recovery and Reinvestment Act of 2009 (OMB M–10–08 Dec. 18, 2009).

[5] Recovery Act section 1512(c), 123 Stat. at 287.

Awardees that must report information according to paragraph b(iv) of this section (re: Subcontracts or subgrants) must register with the CCR database (*http://www.ccr.gov/*) or complete other registration requirements as determined by the Director of OMB.

c. Reporting Deadlines

Recovery Act reports are due no later than 10 calendar days after each calendar quarter in which the Awardee receives the assistance award funded in whole or part with award funds. The final report should summarize the Awardee's quarterly filings and state whether the project's goals have been satisfied. Pursuant to OMB Guidelines, reports should be submitted electronically to *http://www.federalreporting.gov.* If the Awardee fails to submit an acceptable quarterly report or audited financial statement within the timeframe designated in the grant award, the agencies may suspend further payments until the Awardee complies with the reporting requirements. Additional information regarding reporting requirements will be specified at the time the award is issued.

2. BIP-Specific Reporting Requirements

In addition to the general Recovery Act reporting requirements, Satellite Awardees shall submit to RUS 30 calendar days after the end of each calendar year quarter, balance sheets, income statements, statements of cash flow, rate package summaries, and the number of unserved, rural premises taking broadband service utilizing RUS' Broadband Collection and Analysis System (BCAS). BCAS is an electronic reporting system that is accessed through the Internet.

VIII. Other Information

A. Funding Rounds

This is the final funding round for BIP.

B. Discretionary Awards

The government is not obligated to make any award as a result of this announcement, and will fund only projects that are deemed likely to achieve the program's goals and for which funds are available.

C. Limitation on Expenditures

The Recovery Act imposes an additional limitation on the use of funds expended or obligated from appropriations made pursuant to its provisions. Specifically, for purposes of this RFP, none of the funds appropriated or otherwise made

available under the Recovery Act may be used by any state or local government, or any private entity, for any casino or other gambling establishment, aquarium, zoo, golf course, or swimming pool.[6]

D. Recovery Act Logo

All projects that are funded by the Recovery Act shall display signage that features the Primary Emblem throughout the construction phase. The signage should be displayed in a prominent location on site. Some exclusions may apply. The Primary Emblem should not be displayed at a size less than six inches in diameter.

E. Environmental and National Historic Preservation Requirements

Awarding agencies are required to analyze the potential environmental impacts, as required by the NEPA and the NHPA for Applicant projects or proposals seeking Recovery Act funding. All Applicants are required to complete the Environmental Questionnaire under the description of program activities and to submit all other required environmental documentation with the application.

It is the Applicant's responsibility to obtain all necessary federal, state, and local governmental permits and approvals necessary for the proposed work to be conducted. Applicants are expected to design their projects so that they minimize the potential for adverse impacts to the environment. Applicants also will be required to cooperate with the granting agencies in identifying feasible measures to reduce or avoid any identified adverse environmental impacts of their proposed projects. The failure to do so may be grounds for not making an award.

Applications will be reviewed to ensure that they contain sufficient information to allow Agency staff to conduct a NEPA analysis so that appropriate NEPA documentation can be submitted to the agencies, along with the recommendation for funding of the selected applications. Applicants proposing activities that cannot be covered by existing environmental compliance procedures will be informed after the technical review stage whether NEPA compliance and other environmental requirements can otherwise be expeditiously met so that a project can proceed within the timeframes anticipated under the Recovery Act.

If additional information is required after an application is accepted for funding, funds can be withheld by the agencies under a special award condition requiring the Awardee to submit additional environmental compliance information sufficient for the Agency to make an assessment of any impacts that a project may have on the environment.

F. Davis-Bacon Wage Requirements

Pursuant to section 1606 of the Recovery Act, any project using Recovery Act funds requires the payment of not less than the prevailing wages for "all laborers and mechanics employed by contractors and subcontractors on projects funded directly by or assisted in whole or in part by and through the Federal Government."[7]

G. Financial and Audit Requirements

To maximize the transparency and accountability of funds authorized under the Recovery Act, all Applicants are required to comply with the applicable regulations set forth in OMB's Interim Final Guidance for Federal Financial Assistance.[8]

Recipients that expend $500,000 or more of federal funds during their fiscal year are required to submit an organization-wide financial and compliance audit report. The audit must be performed in accordance with the U.S. General Accountability Office, Government Auditing Standards, located at *http://www.gao.gov/govaud/ybk01.htm,* and OMB Circular A–133, Audits of States, Local Governments, and Non-Profit Organizations, located at *http://www.whitehouse.gov/omb/circulars/a133/a133.html.* Awardees are responsible for ensuring that sub-recipient audit reports are received and for resolving any audit findings.

H. Deobligation

The RUS reserves the right to deobligate awards to recipients under this RFP that demonstrate an insufficient level of performance, or wasteful or fraudulent spending, and award these funds competitively to new or existing Applicants prior to September 30, 2010.

I. Confidentiality of Applicant Information

Applicants are encouraged to identify and label any confidential and proprietary information contained in their applications. The Agency will protect confidential and proprietary information from public disclosure to the fullest extent authorized by applicable law, including the Freedom of Information Act, as amended (5 U.S.C. 552), the Trade Secrets Act, as amended (18 U.S.C. 1905), the Economic Espionage Act of 1996 (18 U.S.C. 1831 *et seq.*), and CALEA (47 U.S.C. 1001 *et seq.*). Applicants should be aware, however, that the Recovery Act requires substantial transparency. For example, RUS is required to make publicly available on the Internet a list of each entity that has applied for a grant, a description of each application, the status of each application, the name of each entity receiving funds, the purpose for which the entity is receiving the funds, each quarterly report, and other information.[9]

J. Disposition of Unsuccessful Applications

Applications accepted for review for Fiscal Year 2010 BIP will be retained for two years, after which they will be destroyed.

K. State Certifications

With respect to funds made available under Recovery Act to state or local governments for infrastructure investments, the governor, mayor, or other chief executive, as appropriate, must certify that the infrastructure investment has received the full review and vetting required by law and that the chief executive accepts responsibility that the infrastructure investment is an appropriate use of taxpayer dollars. This certification must include a description of the investment, the estimated total cost, and the amount of funds to be used, and must be posted on the recipient's website and linked to *http://www.recovery.gov.* A state or local Agency may not receive infrastructure investment funding from funds made available under the Recovery Act unless this certification is made and posted.[10]

L. Compliance With Applicable Laws

Any recipient of funds under this RFP shall be required to comply with all applicable federal and state laws, including but not limited to: i. The nondiscrimination and equal employment opportunity requirements of Title VI of the Civil Rights Act of 1964, as amended (42 U.S.C. 2000e *et seq.,* 7 CFR part 15); ii. section 504 of the Rehabilitation Act (29 U.S.C. 794 *et seq.;* 7 CFR part 15b); iii. The Age Discrimination Act of 1975, as amended (42 U.S.C. 6101 *et seq.;* 45 CFR part 90); iv. Executive Order 11375, amending Executive Order 11246, Relating to

[6] *Id.* Section 1604, 123 Stat. at 303.

[7] *Id.* Section 1606, 123 Stat. at 303.

[10] *See id.* sections 1511, 1526, 123 Stat. at 287, 293.

Equal Employment Opportunity (3 CFR part 102). *See* 7 CFR parts 15 and 15b and 45 CFR part 90, RUS Bulletin 1790–1 ("Nondiscrimination among Beneficiaries of RUS Programs"), and RUS Bulletin 20–15:320–15 ("Equal Employment Opportunity in Construction Financed with RUS Loans"). The RUS Bulletins are available at *http://www.broadbandusa.gov.;* v. The Architectural Barriers Act of 1968, as amended (42 U.S.C. 4151 *et seq.*); vi. The Uniform Federal Accessibility Standards (UFAS) (Appendix A to 41 CFR subpart 101–19.6); and vii. The Council on Environmental Quality Regulations for Implementing the Procedural Provisions of NEPA and certain related federal environmental laws, statutes, regulations, and Executive Orders found in 7 CFR part 1794. A more complete list of such requirements can be found in the applicable grant agreement.

M. Communications Laws

Awardees will be required to comply with all applicable federal and state communications laws and regulation as applicable, including, for example, the Communications Act of 1934, as amended, (47 U.S.C. 151 *et seq.*) the Telecommunications Act of 1996, as amended (Pub. L. 104–104, 110 Stat. 56) (1996), and CALEA. For further information, *see http://www.fcc.gov.*

N. Buy American Notice

1. General Prohibition and Waiver

None of the funds appropriated or otherwise made available by the Recovery Act may be used for the construction, alteration, maintenance, or repair of a public building or public work (as such terms are defined in 2 CFR 176.140) unless all of the iron, steel, and manufacturing goods used in the project are produced in the United States.[11] On July 1, 2009, the Department of Agriculture published a notice in the **Federal Register** at 74 FR 31402 stating that the Secretary of Agriculture has determined that applying the Buy American provision for the use of certain broadband equipment in public BIP projects would be inconsistent with the public interest.

As explained below, to the extent that an Applicant wishes to use broadband equipment or goods that are not covered by the Secretary's waiver, it may seek an additional waiver on a case-by-case basis as part of its application for Recovery Act funds.

2. OMB Buy American Notice Requirement

Pursuant to OMB guidance on the Recovery Act,[12] RUS is required to provide the following notice:

Section 176.170 Notice of Required Use of American Iron, Steel, and Manufactured Goods (Covered Under International Agreements)—Section 1605 of the American Recovery and Reinvestment Act of 2009

When requesting applications or proposals for Recovery Act programs or activities that may involve construction, alteration, maintenance, or repair of a public building or public work, and involve iron, steel, and/or manufactured goods covered under international agreements, the agency shall use the notice described in the following paragraphs in the solicitation:

(a) *Definitions. Designated country iron, steel, and/or manufactured goods, foreign iron, steel, and/or manufactured good, public building* and *public work,* and *steel,* as used in this provision, are defined in 2 CFR 176.160(a).

(b) *Requests for determinations of inapplicability.* A prospective applicant requesting a determination regarding the inapplicability of section 1605 of the American Recovery and Reinvestment Act of 2009 (Pub. L. 111–5) (Recovery Act) should submit the request to the award official in time to allow a determination before submission of applications or proposals. The prospective Applicant shall include the information and applicable supporting data required by 2 CFR 176.160(c) and (d) in the request. If an Applicant has not requested a determination regarding the inapplicability of section 1605 of the Recovery Act before submitting its application or proposal, or has not received a response to a previous request, the Applicant shall include the information and supporting data in the application or proposal.

(c) *Evaluation of project proposals.* If the Federal Government determines that an exception based on unreasonable cost of domestic iron, steel, and/or manufactured goods applies, the Federal Government will evaluate a project requesting exception to the requirements of section 1605 of the Recovery Act by adding to the estimated total cost of the project 25 percent of the project cost if foreign iron, steel, or manufactured goods are used based on unreasonable cost of comparable domestic iron, steel, or manufactured goods.

(d) *Alternate project proposals.*

(1) When a project proposal includes foreign iron, steel, and/or manufactured goods, other than designated country iron, steel, and/or manufactured goods, that are not listed by the Federal Government in this Buy American notice in the request for applications or proposals, the Applicant may submit an alternate proposal based on use of equivalent domestic or designated country iron, steel, and/or manufactured goods.

(2) If an alternate proposal is submitted, the Applicant shall submit a separate cost comparison table prepared in accordance with paragraphs 2 CFR 176.160(c) and (d) for the proposal that is based on the use of any foreign iron, steel, and/or manufactured goods for which the Federal Government has not yet determined if an exception applies.

(3) If the Federal Government determines that a particular exception requested in accordance with 2 CFR 176.160(b) does not apply, the Federal Government will evaluate only those proposals based on use of the equivalent domestic or designated country iron, steel, and/or manufactured goods, and the Applicant shall be required to furnish such domestic or designated country items.

O. Executive Order 12866

The Recovery Act appropriated $2.5 billion to RUS for broadband grants and loans. Of that, this RFP reserves $2 million for Rural Library Broadband projects and $3 million for Technical Assistance projects. The Agency has determined that these programs are not "economically significant." This RFP also reserves $100 million for Satellite projects, which may be supplemented by funds that remain available under the First Round NOFA and Second Round NOFA. The Agency has determined this program to be "economically significant" under Executive Order 12866, and has accordingly performed an economic analysis outlining the costs and benefits of implementing the Satellite program. The complete analysis is available from RUS upon request. Awards for all three programs must be made no later than September 30, 2010.

P. Executive Order 13132

It has been determined that this notice does not contain policies with federalism implications as that term is defined in Executive Order 13132.

Q. Administrative Procedure Act Statement

This RFP is being issued without advance rulemaking or public comment. The Administrative Procedure Act of 1946, as amended (5 U.S.C. 553) (APA), has several exemptions to rulemaking requirements. Among them is an exemption for "good cause" found at 5 U.S.C. 553(b)(B), which allows effective government action without rulemaking procedures where withholding the action would be "impracticable, unnecessary, or contrary to the public interest."

USDA has determined, consistent with the APA that making these funds available under this RFP for broadband development, as mandated by the Recovery Act, is in the public interest. Given the emergency nature of the Recovery Act and the extremely short time period within which all funds must be obligated, withholding this RFP

[11] *Id.* section 1605, 123 Stat. at 303.

[12] *See* 2 CFR part 176.

to provide for public notice and comment would unduly delay the provision of benefits associated with these broadband initiatives and be contrary to the public interest.

For the same reasons, the Agency finds good cause under 5 U.S.C. 553(d)(3) to waive the 30-day delay in effectiveness for this action. Because notice and opportunity for comment are not required pursuant to 5 U.S.C. 553(d)(3) or any other law, the analytical requirements of the Regulatory Flexibility Act of 1980, as amended (5 U.S.C. 601 *et seq.*) are inapplicable. Therefore, a regulatory flexibility analysis is not required and has not been prepared.

R. Paperwork Reduction Act

Copies of all forms, regulations, and instructions referenced in this RFP may be obtained from RUS by e-mailing *BroadbandUSA@usda.gov.* Data furnished by the Applicants will be used to determine eligibility for program benefits. Furnishing the data is voluntary; however, the failure to provide data could result in program benefits being withheld or denied.

The Information Collection and Recordkeeping requirements contained in the RFP have been approved by emergency clearance under OMB Control Number 0572–0145. In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. chapter 35), RUS invites comments on this information collection for which the Agency intends to request approval from the Office of Management and Budget (OMB).

Comments on this notice must be received by July 6, 2010. Comments are invited on (a) whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (b) the accuracy of the agency's estimate of burden including the validity of the methodology and assumption used; (c) ways to enhance the quality, utility and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Comments may be sent to Michele Brooks, Director, Program Development and Regulatory Analysis, Rural Utilities Service, U.S. Department of Agriculture, 1400 Independence Ave., SW., Stop 1522, Room 5162 South Building, Washington, DC 20250–1522.

Title: Broadband Initiatives Program—Rural Libraries, Technical Assistance, and Satellite Grants.

Type of Request: New collection.

Estimate of Burden: Public reporting burden for this collection of information is estimated to average 22 hours per response.

Respondents: Businesses and other for-profits.

Estimated Number of Respondents: 134.

Estimated Number of Responses per Respondent: 2.8.

Estimated Total Annual Burden on Respondents: 8,427 hours.

Copies of this information collection can be obtained from Michele Brooks, Program Development and Regulatory Analysis, at (202) 690–1078.

All responses to this information collection and recordkeeping notice will be summarized and included in the request for OMB approval. All comments will also become a matter of public record.

S. Recovery Act

Additional information about the Recovery Act is available at *http://www.Recovery.gov.*

T. Authorized Signatories

Only authorized grant officers can bind the Government to the expenditure of funds.

Dated: May 3, 2010.

Jonathan Adelstein,

Administrator, Rural Utilities Service.

[FR Doc. 2010–10765 Filed 5–6–10; 8:45 am]

BILLING CODE P

DEPARTMENT OF AGRICULTURE

Forest Service

Kake to Petersburg Transmission Line Intertie Project

AGENCY: Forest Service, USDA.

ACTION: Notice of intent to prepare an Environmental Impact Statement.

SUMMARY: The Department of Agriculture, Forest Service, will prepare an Environmental Impact Statement (EIS) on a proposal to construct and operate a new electric transmission line intertie that would extend west across the Tongass National Forest from the Petersburg area to the community of Kake. The proposed action is to build a new transmission line that would transmit power at either 69 or 138 kilovolt (kV) and consist of single wood pole structures with horizontal post insulators, with average span lengths between pole structures of 350 to 400 feet. Two primary alternative routes are currently under consideration. These routes generally follow two routes previously identified as Transportation and Utility System (TUS) corridors in the Tongass National Forest Land and Resource Management Plan (Forest Plan). Both alternative routes follow existing logging roads for the majority of their lengths. In addition, one of the routes follows the proposed route identified by the Alaska Department of Transportation & Public Facilities (DOTPF) for the permanent road between Kake and Petersburg. Both routes would use existing roads for construction and long-term maintenance access where possible. New road segments would be built in locations where access is not currently available.

DATES: Comments concerning the scope of the analysis must be received by June 7, 2010. Public information and scoping meetings will be held in Petersburg on May 12, 2010 and in Kake on May 13, 2010. The Draft EIS is projected to be filed with the Environmental Protection Agency (EPA) in December 2010 and will begin a 45-day public comment period. The Final EIS and Record of Decision are scheduled to be published in Summer/Fall 2011.

ADDRESSES: You may comment on the project in the following ways: Send written comments to the Petersburg Ranger District, Tongass National Forest, Attn: Kake-Petersburg Intertie Project, P.O. Box 1328, Petersburg, AK 99833, or hand deliver them to the Petersburg Ranger District, 12 N Nordic Drive, Petersburg, Alaska. The FAX number is (907) 772–5995. Send e-mail comments to: *comments-alaska-tongass-petersburg@fs.fed.us* with "Kake-Petersburg Intertie Project" in the subject line. Include your name, address and organization name if you are commenting as a representative.

FOR FURTHER INFORMATION CONTACT: Questions about the proposal and EIS should be directed to Chris Savage, District Ranger, Petersburg Ranger District, Tongass National Forest, P.O. Box 1328, Petersburg, AK 99833, telephone (907) 772–3871.

SUPPLEMENTARY INFORMATION:

Background: An Intertie transmission line from Kake to Petersburg has been discussed for many years and has been the subject of a number of studies dating back to the 1970s, with more than 10 alternative routes discussed over the years. Recent studies include the Southeast Alaska Intertie Study prepared in 2003 and a follow-on study of the Kake-Petersburg Intertie completed in 2005 and updated in 2009. These recent studies identified two

primary route alternatives, a southern route that crosses the Wrangell Narrows near the Tonka log transfer facility and proceeds west across Duncan Canal (the "Center-South" route), and a northern route generally located on the north end of Kupreanof Island (the "Northern" route). These alternatives generally correspond with two TUS corridors identified in the 2008 Forest Plan.

Purpose and Need for Action: The community of Kake on Kupreanof Island is presently served by an isolated electric system operated by the Inside Passage Electric Cooperative (IPEC). This system currently depends upon high-cost diesel generation, and the resulting high cost of electricity in Kake is a major burden on the economic and social well-being of the community and a significant disincentive to economic development. The proposed Kake-Petersburg Intertie would connect this isolated electric system to the interconnected electric systems of Petersburg, Wrangell and Ketchikan. Petersburg, Wrangell, and Ketchikan are currently interconnected to and obtain most of their power supplies from the Tyee Lake and Swan Lake hydroelectric projects owned by the Southeast Alaska Power Agency (SEAPA) (formerly the Four Dam Pool Power Agency). The Kake-Petersburg Intertie would be used to transmit surplus hydroelectric power from SEAPA to the IPEC electric system in Kake, thereby offsetting the existing diesel generation while lowering and stabilizing the cost of electricity in Kake.

Proposed Action: The proposed transmission line would extend west from the Petersburg area to the community of Kake and be approximately 46.8 miles or 56.5 miles in length. The line would be built to transmit power at either 69 or 138 kV and consist of single wood pole structures with horizontal post insulators, with average span lengths between pole structures of 350 to 400 feet. This design would be able to take advantage of existing roads for construction and maintenance and has been used successfully for other transmission applications elsewhere in Alaska.

The two primary routes identified in the 2005 feasibility study and evaluated further in the 2009 update—the Center-South and Northern routes—are currently under consideration. Both proposed routes follow existing logging roads for the majority of their lengths. In addition, the Northern route follows the proposed route identified by the Alaska DOTPF for the permanent road between Kake and Petersburg. Both routes would use existing roads for construction and long-term maintenance access where possible. New road segments would be built in locations where access is not currently available. The two alternative routes may be summarized as follows:

Center-South Route—(46.8 miles total length, two marine crossings). This route would connect to the existing Tyee transmission line approximately 8 miles south of Petersburg and require a tap or a small switch yard. From this connection, the route crosses Wrangell Narrows, proceeds west across the Lindenberg Peninsula (10.6 miles), crosses Duncan Canal, and continues northwest to Kake (33.7 miles), where it would terminate at a new substation located approximately 4.8 miles south of the existing Kake substation. A new distribution line (12.45 kV) would extend from the new substation to Kake. The majority of this route (43.6 miles) would cross National Forest System (NFS) lands. The route would also cross lands owned and managed by the town of Petersburg, Sealaska, Kake Tribal Corporation, and the city of Kake.

Northern Route—(56.5 miles total length, one marine crossing). This route would originate at the existing SEAPA substation near Petersburg, cross Wrangell Narrows from Mitkof Island to Kupreanof Island, and follow the proposed route of the Alaska DOTPF road north along Frederick Sound (18.5 miles), and then west (37.9 miles) to Kake, where, like the Center-South route, it would terminate at a new substation with a new distribution line extending to Kake. The majority of this route (47.1 miles) would cross NFS lands. The route would also cross lands owned and managed by Alaska Department of Natural Resources, Sealaska, Kake Tribal Corporation, and the cities of Kake, Kupreanof, and Petersburg.

Two alternative route options from the SEAPA substation to the proposed Alaska DOTPF road corridor are currently being considered:

Option 1: Under this option the line would start at the SEAPA substation, and staying south of Petersburg, follow an existing gravel road for 3.5 miles east-northeast to Frederick Sound. At Frederick Sound, a submarine cable termination facility would connect the overhead line to a 3.1 mile long underwater cable, which would come ashore near Prolewy Point on Kupreanof Island, where it would connect to an overhead line that would then follow the proposed road corridor.

Option 2: Under this option the line would proceed from the SEAPA substation north along Mitkof Highway to near the narrowest point of the Wrangell Narrows. At that point, the line would turn west and cross Wrangell Narrows via a horizontal directional bore or buried cable that would extend approximately 1,400 feet. West of the Narrows the line would return to overhead construction, turn and go north approximately 1.7 miles where it would cross Petersburg Creek (a distance of approximately 800 feet) either via directional bore or overhead construction. The route would then continue overhead approximately 2.5 miles northeast to the proposed DOTPF road corridor.

Subsistence hearings, as provided for in Title VIII, Section 810 of the Alaska National Interest Lands Conservation Act (ANILCA), will be conducted, if necessary, during the comment period on the Draft EIS.

Public Participation: This notice of intent initiates the scoping process which guides the development of the EIS. Public participation will be especially important at several points during the analysis. The Forest Service will be seeking information, comments, and assistance from Tribal Governments and corporations, Federal, State, and local agencies, individuals and organizations that may be interested in, or affected by, the proposed activities.

The public scoping period for this project extends from May 7, 2010 to June 7, 2010. Interested parties are encouraged to provide written input on the proposed project and submit their comments via email, regular mail, or fax to the addresses identified above under Addresses.

Public scoping meetings will be held from 5 to 7 pm in Petersburg on May 12, 2010 and in Kake on May 13, 2010. Both meetings will follow an open house format. Interested parties may drop in until 7 p.m. to obtain information about the project, speak with project team members, and provide scoping comments to the team.

Tentative Issues: Tentative issues identified for analysis in the EIS to date include the proposed crossings of Wrangell Narrows and Duncan Canal, as well as anadromous and resident fish-bearing streams, potential impacts to wildlife species listed under the Endangered Species Act, and potential impacts to Inventoried Roadless Areas.

Early Notice of Importance of Public Participation in Subsequent Environmental Review: A Draft EIS will be prepared for comment. The comment period on the Draft EIS will be 45 days from the date the EPA publishes the notice of availability in the **Federal Register.** It is important that reviewers provide their comments at such times and in such a way that they are useful

to the Agency's preparation of the EIS. Therefore, comments should be provided prior to the close of the comment period and should clearly articulate the reviewer's concerns and contentions. The submission of timely and specific comments can affect a reviewer's ability to participate in subsequent administrative review or judicial review.

Comments received in response to this solicitation, including names and addresses of those who comment, will be part of the public record for this proposed action and will be available for public inspection. (Authority: 40 CFR 1501.7 and 1508.22; Forest Service Handbook 1909.15, Section 21). Comments submitted anonymously will be accepted and considered; however, those who submit anonymous comments will not have standing to appeal the subsequent decision under 36 CFR parts 215 or 217. Additionally, pursuant to 7 CFR 1.27(d), any person may request that the agency withhold a submission from the public record by showing how the Freedom of Information Act (FOIA) permits such confidentiality. Requesters should be aware that, under FOIA, confidentiality may be granted in only very limited circumstances, such as to protect trade secrets. The Forest Service will inform the requester of the agency's decision regarding the request for confidentiality, and where the request is denied, the agency will return the submission and notify the requester that the comments may be resubmitted with or without name and address within 7 days.

To assist the Forest Service in identifying and considering issues and concerns of the proposed action, comments during scoping and comments on the Draft EIS should be as specific as possible. It is also helpful if comments refer to specific pages or chapters of the Draft EIS. Comments may also address the adequacy of the Draft EIS or the merits of the alternatives formulated and discussed in the document. Reviewers may wish to refer to the Council on Environmental Quality Regulations for implementing the procedural provisions of the National Environmental Policy Act at 40 CFR 1503.3 in addressing these points.

Responsible Official: Forrest Cole, Forest Supervisor, Tongass National Forest, Federal Building, Ketchikan, Alaska 99901.

Nature of Decision To Be Made: The Forest Supervisor is the Responsible Official for this action and will decide whether or not to permit the construction of the proposed electric transmission line across NFS lands, along with the alternative route that will be followed, as well as mitigation measures and/or monitoring, as appropriate. The decision will be based on the information that is disclosed in the EIS. The responsible official will consider comments, responses, the disclosure of environmental consequences, and applicable laws, regulations, and policies in making the decision and will state that rationale in the Record of Decision.

(Authority: 40 CFR 1501.7 and 1508.22; Forest Service Handbook 1909.15, Section 21)

Dated: April 29, 2010.

Forrest Cole,

Forest Supervisor.

[FR Doc. 2010–10702 Filed 5–6–10; 8:45 am]

BILLING CODE 3410–11–P

DEPARTMENT OF AGRICULTURE

Forest Service

Shasta Trinity National Forest, South Fork Management Unit, California Salt Timber Harvest and Fuels Hazard Reduction Project

AGENCY: USDA Forest Service.

ACTION: Notice of intent to prepare a supplemental environmental impact statement.

SUMMARY: This notice revises the previous notice of intent, published on March 26, 2008, Vol. 73, No. 59, pages 15966 through 15968, to prepare an environmental impact statement for the Salt Timber Harvest and Fuels Reduction Project (Salt Project). A supplemental environmental impact statement will be prepared for the Salt Project to supplement wildlife management indicator assemblage analysis. This notice and supplement pertains only to the wildlife management indicator assemblage analysis for the Salt Project.

DATES: The draft supplemental environmental impact statement is expected July 2010, there will be a public comment period on the draft and then the final supplemental environmental impact statement is expected May 2011.

FOR FURTHER INFORMATION CONTACT: Bobbie DiMonte Miller, Shasta-Trinity National Forest, 3644 Avtech Parkway, Redding, CA 96002; telephone (530) 226–2425, e-mail *bdimontemiller@fs.fed.us.* Individuals who use telecommunication devices for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1–800–877–8339 between 8 a.m. and 8 p.m., Eastern Time, Monday through Friday.

SUPPLEMENTARY INFORMATION: The Forest Service is proposing to prepare a supplement to the final environmental impact statement for the Salt Project in accordance with FSH 1909.15, Chapter 10, Section 18.1 and Section 18.2.

J. Sharon Heywood, Shasta-Trinity National Forest Supervisor, signed a Record of Decision on October 20, 2009, based on the Salt Project Final Environmental Impact Statement (FEIS). On December 21, 2009, Denise Boggs filed a notice of appeal on behalf of Conservation Congress, Citizens for Better Forestry, Environmental Protection Information Center and Kiamath Forest Alliance. On February 5, 2010, Appeal Reviewing Officer (ARO) Tern Marceron, Forest Supervisor at Lake Tahoe Basin Management Unit, recommended that the Forest Supervisor's decision be affirmed on all issues with the exception of wildlife management indicator assemblage analysis. The ARO determined that the Salt Project FEIS did not document the effects of project alternatives on key habitat components consistent with the Shasta-Trinity National Forest Land and Resource Management Plan. The Appeal Deciding Officer agreed with the ARO's analysis. This notice pertains only to the supplement of management indicator assemblage effects information and analyses.

Purpose and Need for Action

Because the supplement will only address the additional wildlife management indicator assemblage information and analyses, the purpose and need for action remains the same as described in the October 2009 Salt Project FEIS, Chapter 1, pages 3 through 16.

Proposed Action

The proposed action is the same as described in Chapter 1 of the October 2009 Salt Project FEIS (Chapter 1, pages 16 & 17). That document is available on the Shasta-Trinity National Forest Web site at *www.fs.usda.gov/stnf.* Under Highlights click on Ongoing NEPA projects.

Responsible Official

J. Sharon Heywood, Shasta-Trinity National Forest Supervisor, 3644 Avtech Parkway, Redding, CA 96002.

Nature of Decision To Be Made

The Responsible Official will review the supplemental information and determine what, if any, modifications should be made to the October 20, 2009, decision. A new decision will be issued.

Scoping Process

Scoping is not required for supplements to environmental impact statements (40 CFR 1502.9(c)(4). A history of scoping and public involvement to date, starting in 2006, is detailed in Chapter 1 of the October 2009 Salt Project FEIS (Chapter 1, pages 17–18).

Dated: April 28, 2010.

Scott G. Armentrout,

Deputy Forest Supervisor, Shasta-Trinity National Forest.

[FR Doc. 2010–10471 Filed 5–6–10; 8:45 am]

BILLING CODE 3410–11–M

DEPARTMENT OF AGRICULTURE

Forest Service

Intermountain Region, Boise National Forest, Emmett Ranger District; Idaho Scriver Creek Integrated Restoration Project

AGENCY: Forest Service, USDA.

ACTION: Notice of intent to prepare an environmental impact statement.

SUMMARY: The Emmett Ranger District of the Boise National Forest will prepare an environmental impact statement (EIS) for the integrated restoration project in the Scriver Creek subwatershed. The 11,500-acre project is located approximately 6 miles north of Crouch, Idaho. The Scriver Creek Integrated Restoration Project proposes to undertake vegetation condition restoration, improve watershed conditions, and utilize wood products resulting from restoration activities to support local and regional communities through a variety of activities including commercial and noncommercial vegetation management and road system modifications and maintenance.

DATES: Comments concerning the scope of the analysis must be received by June 7, 2010. The draft environmental impact statement is expected February 2011 and the final environmental impact statement is expected June 2011.

ADDRESSES: Send written comments to 1805 Highway 16, Room 5, Emmett, ID 83617. Comments may also be sent via e-mail to *comments-intermtn-boise-emmett@fs.fed.us,* or via facsimile to 208–365–7307.

It is important that reviewers provide their comments at such times and in such a way that they are useful to the Agency's preparation of the EIS. Therefore, comments should be provided prior to the close of the comment period and should clearly articulate the reviewer's concerns and contentions.

Comments received in response to this solicitation, including names and addresses of those who comment, will be part of the public record for this proposed action. Comments submitted anonymously will be accepted and considered, however.

FOR FURTHER INFORMATION CONTACT: Ann Roseberry, Project Team Leader, 208–365–7000. Individuals who use telecommunication devices for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1–800–877–8339 between 8 a.m. and 8 p.m., Eastern Time, Monday through Friday.

SUPPLEMENTARY INFORMATION:

Purpose and Need for Action

Three purposes have been identified for the project: (1) Move toward restoration of Forest Plan desired vegetation conditions by manipulating the forest structure, density, and species composition in order to accelerate development of larger tree size class stands and old forest habitat; (2) improve watershed conditions and reduce road-related impacts to wildlife, fish, soil, and water resources; and (3) utilize wood products resulting from restoration treatments to support local and regional economies.

Proposed Action

The Proposed Action would undertake commercial timber harvest on about 3,265 acres utilizing tractor/off-road jammer (1,124 acres), skyline (926 acres), and helicopter (1,215 acres) logging systems. In addition, all acres treated by commercial timber activities (about 3,265 acres) would be followed by thinning of submerchantable trees. About 839 acres of existing plantations would be thinned from below of small diameter (typically less than 8 inches diameter at breast height (d.b.h.). Of these acres, approximately 163 acres of these thinning activities would occur within riparian conservation areas (RCAs). About 18 helicopter landing would be used or developed to facility commercial timber harvest activities. Approximately 21.5 million board feet (MMBF) would be provided as sawlogs to local and/or regional processing facilities.

The Proposed Action would construct about 2.4 miles of new specified National Forest System (NFS) roads and 1.0 mile of temporary road. About 4.3 miles of road realignment on NFS road 696 would occur to provide long-term accress and eliminate segements of the road within RCA corridors. Approximately 18.5 miles of NFS roads would be decommissioned. Roadway improvements, such as spot surface aggregate placement and drainage improvements, would be undertaken on NFS roads (in particular RCA roads) where needed. Aquatic organism passage (AOP), *i.e.,* fish passage, would be restored by replacing the existing culverts on NFS roads 693, 693A and 695 with AOP passable structures. Application of up to 300 feet of surface gravel applied to both sides of road/stream crossings when located on perennial streams, for all NFS roads to be used for timber harvest activities (except for NFS roads proposed to be decommissioned).

Possible Alternatives

The only other alternative identified at this time is the "No Action" alternative.

Responsible Official

Boise National Forest Supervisor, Cecilia R. Seesholtz.

Nature of Decision To Be Made

The Boise National Forest Supervisor will decide the following: (1) Should vegetation restoration activities be carried out within the project area at this time, and if so, which stands should be treated and what silvicultural systems be applied?; (2) what, if any, changes to the NFS road system should be made?; and (3) what design features, mitigation measures, and/or monitoring should be applied to the project? This decision will be made within the scope of the 2003 Boise National Forest Land and Resource Management Plan (Forest Plan), as anticipated to be amended later in 2010.

Addresses

Project information is available on the Boise National Forest Web site, *http://fs.usda.gov/boise* (click on Scriver Integrated Restoration Project).

Scoping Process

This notice of intent initiates the scoping process, which guides the development of the environmental impact statement.

It is important that reviewers provide their comments at such times and in such manner that they are useful to the agency's preparation of the environmental impact statement. Therefore, comments should be provided prior to the close of the comment period and should clearly articulate the reviewer's concerns and contentions.

Dated: April 30, 2010.

Cecilia R. Seesholtz,

Forest Supervisor, Boise National Forest.

DEPARTMENT OF AGRICULTURE

Forest Service

Deschutes and Ochoco National Forests Resource Advisory Committee

AGENCY: Forest Service, USDA.

ACTION: Notice of meeting.

SUMMARY: The Deschutes and Ochoco National Forests Resource Advisory Committee will meet in Redmond, Oregon. The purpose of the meeting is to review proposed projects and make recommendations under Title II (division C of Pub. L. 10–343 reauthorized and amended the Secure rural Schools and community Self-Determination Act of 2000 (SRS Act) as originally enacted in Public Law 106–393.

DATES: The meeting will be held May 12, 2010 from 8 a.m. to 5 p.m.

ADDRESSES: The meeting will be held at the office of the Central Oregon Intergovernmental Council, 2363 SW. Glacier Place, Redmond, Oregon 97756. Send written comments to Jeff Walter as Designated Federal Official, for the Deschutes and Ochoco National Forests Resource Advisory Committee, c/o Forest Service, USDA, Ochoco National Forest, 3160 NE. 3rd St., Prineville, OR 97754 or electronically to *jwalter@fs.fed.us.*

FOR FURTHER INFORMATION CONTACT: Jeff Walter, Designated Federal Official, Ochoco National Forest, 541–416–6625.

SUPPLEMENTARY INFORMATION: The meeting is open to the public. Committee discussion is limited to Forest Service staff and Committee members. However, persons who wish to bring Title II matters to the attention of the Committee may file written statements with the Committee staff before the meeting. A public input session will be provided and individuals who made written requests by May 10, 2010 will have the opportunity to address the Committee at the session.

Dated: April 28, 2010.

Jeff Walter,

Designated Federal Official.

Forest Service

Medbow-Routt Resource Advisory Committee

AGENCY: Forest Service, USDA.

ACTION: Notice of meeting.

SUMMARY: The MedBow-Routt Resource Advisory Committee will meet in Laramie, Wyoming. The committee is meeting as authorized under the Secure Rural Schools and Community Self-Determination Act (Pub. L. 110–343) and in compliance with the Federal Advisory Committee Act. The purpose of the meeting is orientation and RAC overview for members to the newly established RAC, and selection of chairperson.

DATES: The meeting will be held May 26, 9:30 a.m.–3:30 p.m.

ADDRESSES: The meeting will be held at Forest Supervisor's Office, 2468 Jackson Street, Laramie, Wyoming. Written comments should be sent to Phil Cruz, RAC DFO, 2468 Jackson Street, Laramie, Wyoming 82070. Comments may also be sent via e-mail to *pcruz@fs.fed.us,* or via facsimile to 307–745–2467.

All comments, including names and addresses when provided, are placed in the record and are available for public inspection and copying. The public may inspect comments received at the Forest Supervisor's Office, 2468 Jackson Street, Laramie, Wyoming.

FOR FURTHER INFORMATION CONTACT: Diann Ritschard, RAC Coordinator, 925 Weiss Drive, Steamboat Springs, CO 80487, 970–870–2187, *dritschard@fs.fed.us.*

Individuals who use telecommunication devices for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1–800–877–8339 between 8 a.m. and 8 p.m., Eastern Standard Time, Monday through Friday.

SUPPLEMENTARY INFORMATION: The meeting is open to the public. The following business will be conducted: Secure Rural School & Federal Advisory Committee Overview; Roles and Responsibilities of RAC; Rules/Operational Guides and Bylaws; Flow of Work and Setting Future Agendas; Project Process, Submission Form and Deadline; election of RAC Chairperson; Public Forum Discussion. Persons who wish to bring related matters to the attention of the Committee may file written statements with the Committee staff before or after the meeting. Public input sessions will be provided and individuals who make written requests by May 23, 2010 will have the opportunity to address the Comittee at those sessions.

Dated: April 27, 2010.

Phil Cruz,

Deputy Forest Supervisor.

BILLING CODE 3410–11–M

DEPARTMENT OF AGRICULTURE

National Institute of Food and Agriculture

Solicitation of Input From Stakeholders Regarding the Agriculture and Food Research Initiative (AFRI)

AGENCY: National Institute of Food and Agriculture, USDA.

ACTION: Notice of public meeting and request for stakeholder input.

SUMMARY: In Fiscal Year 2009, the National Institute of Food and Agriculture (NIFA), formerly known as the Cooperative State Research, Education, and Extension Service (CSREES), created a new research, education, and extension program called the Agriculture and Food Research Initiative (AFRI). The AFRI process has been iterative. Pursuant to the requirements of section 7406 of the Food, Conservation, and Energy Act of 2008, beginning in September of 2008 CSREES solicited public comment from persons who use or conduct research, extension, or education regarding the implementing regulation to be developed for this new program. In an effort to improve the quality of the AFRI program, NIFA is again holding a public meeting and soliciting public comments for consideration in the development of the Fiscal Year 2011 AFRI program solicitations. All comments must be received by close of business June 7, 2010, to be considered.

DATES: The meeting will be held on Wednesday, June 2, 2010, from 8:30 a.m. to 4:30 p.m.

ADDRESSES: The meeting will be held at the One Washington Circle Hotel, 1 Washington Circle, NW., Washington, DC 20037. You may submit comments, identified by Docket Number NIFA–2010–0001 by any of the following methods to the NIFA Docket Clerk:

Federal eRulemaking Portal: http://www.regulations.gov. Follow the instructions for submitting comments.

E-mail: afri@nifa.usda.gov. Include Docket Number NIFA–2010–0001 in the subject line of the message.

Fax: 202–401–1782.

Mail: Paper, disk or CD–ROM submissions should be submitted to AFRI; Competitive Programs (CP) Unit; National Institute of Food and Agriculture; U.S. Department of Agriculture; STOP 2240; 1400 Independence Avenue, SW.; Washington, DC 20250–2240.

Hand Delivery/Courier: AFRI; Competitive Programs (CP) Unit; National Institute of Food and Agriculture; U.S. Department of

Agriculture; Room 2457, Waterfront Centre; 800 9th Street, SW.; Washington, DC 20024.

Instructions:

All submissions received must include the agency name and the Docket Number NIFA–2010–0001. All comments received will be posted to *http://www.regulations.gov,* including any personal information provided.

FOR FURTHER INFORMATION CONTACT: Ms. Terri Joya, (202) 401–1761 (phone), (202) 401–1782 (fax), or *tjoya@nifa.usda.gov.*

SUPPLEMENTARY INFORMATION:

Additional Meeting and Comment Procedures

Persons wishing to present oral comments at the Wednesday, June 2, 2010 meeting are requested to pre-register by contacting Ms. Terri Joya at (202) 401–1761, by fax at (202) 401–1782 or by e-mail to tjoya@nifa.usda.gov. Participants may reserve one 5-minute comment period. More time may be available, depending on the number of people wishing to make a presentation and the time needed for questions following presentations. Reservations will be confirmed on a first-come, first-served basis. All other attendees may register at the meeting. Written comments may also be submitted for the record at the meeting. All comments must be received by close of business June 7, 2010 to be considered. All comments and the official transcript of the meeting, when they become available, may be reviewed on the NIFA Web page for six months. Participants who require a sign language interpreter or other special accommodations should contact Ms. Joya as directed above.

Background and Purpose

Section 7406 of the Food, Conservation, and Energy Act of 2008 (Pub. L. 110–246) amended subsection 2(b) of the Competitive, Special, and Facilities Research Grant Act (7 U.S.C. 450i(b)) authorizing the Secretary of Agriculture to establish a new competitive grant program to provide funding for fundamental and applied research, extension, and education to address food and agricultural sciences. Subject to the availability of appropriations to carry out this program, the Secretary may award grants to State agricultural experiment stations; colleges and universities; university research foundations; other research institutions and organizations; Federal agencies; national laboratories; private organizations or corporations; individuals; or any group consisting of two or more of the aforementioned entities. Grants shall be awarded to address priorities in United States agriculture in the following areas: (A) Plant health and production and plant products; (B) Animal health and production and animal products; (C) Food safety, nutrition, and health; (D) Renewable energy, natural resources, and environment; (E) Agriculture systems and technology; and (F) Agriculture economics and rural communities. To the maximum extent practicable, NIFA, in coordination with the Under Secretary for Research, Education, and Economics (REE), will make awards for high priority research, education, and extension, taking into consideration, when available, the determinations made by the National Agricultural Research, Extension, Education, and Economics Advisory Board. The authority to carry out this program has been delegated to NIFA through the Undersecretary for REE.

NIFA is holding a public meeting to obtain comments to consider in developing the Fiscal Year 2011 solicitations for the AFRI competitive grants program. The meeting is open to the public. Written comments and suggestions on issues that may be considered in the meeting may be submitted to the NIFA Docket Clerk at the address above.

Summary of Agriculture and Food Research Initiative

The program authorizes $700 million in grants for FY 2008–12, of which the Secretary may retain no more than 4% for administrative costs. Funds will be available for obligation for a two-year period beginning in the fiscal year for which funds are first made available. Grants will be awarded on the basis of merit, quality, and relevance and may have terms of up to 10 years.

Of the AFRI funds allocated to research activities, section 7406 directs 60 percent toward grants for fundamental (or basic) research, and 40 percent toward applied research. Of the AFRI funds allocated to fundamental research, not less than 30 percent of AFRI grants will be directed toward research by multidisciplinary teams. In addition, the law specifies that of the total amount appropriated for AFRI, not less than 30 percent is to be used for integrated programs.

Implementation Plans

NIFA plans to consider stakeholder input received from this public meeting as well as other written comments in developing the Fiscal Year 2011 solicitations for this program.

Done at Washington, DC, this 3rd day of May 2010.

Meryl Broussard,

Interim Deputy Director, National Institute of Food and Agriculture.

[FR Doc. 2010–10690 Filed 5–6–10; 8:45 am]

BILLING CODE 3410–22–P

DEPARTMENT OF AGRICULTURE

Foreign Agricultural Service

WTO Agricultural Safeguard Trigger Levels

AGENCY: Foreign Agricultural Service, USDA.

ACTION: Notice of product coverage and trigger levels for safeguard measures provided for in the World Trade Organization (WTO) Agreement on Agriculture.

SUMMARY: This notice lists the updated quantity trigger levels for products which may be subject to additional import duties under the safeguard provisions of the WTO Agreement on Agriculture. This notice also includes the relevant period applicable for the trigger levels on each of the listed products.

DATES: *Effective Date:* May 7, 2010.

FOR FURTHER INFORMATION CONTACT: Safeguard Staff, Import Policies and Export Reporting Division, Office of Trade Programs, Foreign Agricultural Service, U.S. Department of Agriculture, Stop 1021, 1400 Independence Avenue, SW., Washington, DC 20250–1021; or by telephone at (202) 720–0638, or by e-mail at *itspd@fas.usda.gov.*

SUPPLEMENTARY INFORMATION: Article 5 of the WTO Agreement on Agriculture provides that additional import duties may be imposed on imports of products subject to tariffication as a result of the Uruguay Round, if certain conditions are met. The agreement permits additional duties to be charged if the price of an individual shipment of imported products falls below the average price for similar goods imported during the years 1986–88 by a specified percentage. It also permits additional duties to be imposed if the volume of imports of an article exceeds the average of the most recent 3 years for which data are available by 5, 10, or 25 percent, depending on the article. These additional duties may not be imposed on quantities for which minimum or current access commitments were made during the Uruguay Round negotiations, and only one type of safeguard, price or quantity, may be applied at any given time to an article.

Section 405 of the Uruguay Round Agreements Act requires that the President cause to be published in the **Federal Register** information regarding the price and quantity safeguards, including the quantity trigger levels, which must be updated annually based upon import levels during the most recent 3 years. The President delegated this duty to the Secretary of Agriculture in Presidential Proclamation No. 6763, dated December 23, 1994, 60 FR 1005 (Jan. 4, 1995). The Secretary of Agriculture further delegated the duty to the Administrator of the Foreign Agricultural Service (7 CFR 2.43(a)(2)(2007)). The Annex to this notice contains the updated quantity trigger levels.

Additional information on the products subject to safeguards and the additional duties which may apply can be found in subchapter IV of Chapter 99 of the Harmonized Tariff Schedule of the United States (2010) and in the Secretary of Agriculture's Notice of Uruguay Round Agricultural Safeguard Trigger Levels, published in the **Federal Register** at 60 FR 427 (Jan. 4, 1995).

Notice: As provided in section 405 of the Uruguay Round Agreements Act, consistent with Article 5 of the Agreement on Agriculture, the safeguard quantity trigger levels previously notified are superceded by the levels indicated in the Annex to this notice. The definitions of these products were provided in the Notice of Uruguay Round Agricultural Safeguard Action published in the **Federal Register,** at 60 FR 427 (Jan. 4, 1995).

Issued at Washington, DC, April 29, 2010.

John D. Brewer,

Administrator, Foreign Agricultural Service.

ANNEX—QUANTITY-BASED SAFEGUARD TRIGGER

Product	Trigger level	Period
Beef	270,519 mt	January 1, 2010 to December 31, 2010.
Mutton	4,503 mt	January 1, 2010 to December 31, 2010.
Cream	1,165,099 liters	January 1, 2010 to December 31, 2010.
Evaporated or Condensed Milk	3,536,146 kilograms	January 1, 2010 to December 31, 2010.
Nonfat Dry Milk	393,499 kilograms	January 1, 2010 to December 31, 2010.
Dried Whole Milk	2,397,493 kilograms	January 1, 2010 to December 31, 2010.
Dried Cream	27,330 kilograms	January 1, 2010 to December 31, 2010.
Dried Whey/Buttermilk	30,238 kilograms	January 1, 2010 to December 31, 2010.
Butter	7,311,166 kilograms	January 1, 2010 to December 31, 2010.
Butter Oil and Butter Substitutes	6,985,605 kilograms	January 1, 2010 to December 31, 2010.
Dairy Mixtures	43,535,705 kilograms	January 1, 2010 to December 31, 2010.
Blue Cheese	4,846,863 kilograms	January 1, 2010 to December 31, 2010.
Cheddar Cheese	12,272,710 kilograms	January 1, 2010 to December 31, 2010.
American-Type Cheese	7,093,001 kilograms	January 1, 2010 to December 31, 2010.
Edam/Gouda Cheese	7,019,833 kilograms	January 1, 2010 to December 31, 2010.
Italian-Type Cheese	22,355,614 kilograms	January 1, 2010 to December 31, 2010.
Swiss Cheese with Eye Formation	28,867,494 kilograms	January 1, 2010 to December 31, 2010.
Gruyere Process Cheese	4,398,721 kilograms	January 1, 2010 to December 31, 2010.
Lowfat Cheese	848,545 kilograms	January 1, 2010 to December 31, 2010.
NSPF Cheese	46,400,350 kilograms	January 1, 2010 to December 31, 2010.
Peanuts	15,172 mt	April 1, 2009 to March 31, 2010.
	18,176 mt	April 1, 2010 to March 31, 2011.
Peanut Butter/Paste	4,280 mt	January 1, 2010 to December 31, 2010.
Raw Cane Sugar	1,407,556 mt	October 1, 2009 to September 30, 2010.
	1,142,815 mt	October 1, 2010 to September 30, 2011.
Refined Sugar and Syrups	191,180 mt	October 1, 2009 to September 30, 2010.
	176,800 mt	October 1, 2010 to September 30, 2011.
Blended Syrups	107 mt	October 1, 2009 to September 30, 2010.
	134 mt	October 1, 2010 to September 30, 2011.
Articles Over 65% Sugar	578 mt	October 1, 2009 to September 30, 2010.
	277 mt	October 1, 2010 to September 30, 2011.
Articles Over 10% Sugar	15,617 mt	October 1, 2009 to September 30, 2010.
	15,083 mt	October 1, 2010 to September 30, 2011.
Sweetened Cocoa Powder	1,249 mt	October 1, 2009 to September 30, 2010.
	1,054 mt	October 1, 2010 to September 30, 2011.
Chocolate Crumb	10,081,708 kilograms	January 1, 2010 to December 31, 2010.
Lowfat Chocolate Crumb	226,647 kilograms	January 1, 2010 to December 31, 2010.
Infant Formula Containing Oligosaccharides	10,530 kilograms	January 1, 2010 to December 31, 2010.
Mixes and Doughs	315 mt	October 1, 2009 to September 30, 2010.
	383 mt	October 1, 2010 to September 30, 2011.
Mixed Condiments and Seasonings	176 mt	October 1, 2009 to September 30, 2010.
	280 mt	October 1, 2010 to September 30, 2011.
Ice Cream	2,869,565 liters	January 1, 2010 to December 31, 2010.
Animal Feed Containing Milk	32,419 kilograms	January 1, 2010 to December 31, 2010.
Short Staple Cotton	699,482 kilograms	September 20, 2009 to September 19, 2010.
	591,350 kilograms	September 20, 2010 to September 19, 2011.
Harsh or Rough Cotton	0 kilograms	August 1, 2009 to July 31, 2010.
	0 kilograms	August 1, 2010 to July 31, 2011.
Medium Staple Cotton	688,341 kilograms	August 1, 2009 to July 31, 2010.
	149,148 kilograms	August 1, 2010 to July 31, 2011.
Extra Long Staple Cotton	3,656,233 kilograms	August 1, 2009 to July 31, 2010.
	2,017,042 kilograms	August 1, 2010 to July 31, 2011.
Cotton Waste	395,745 kilograms	September 20, 2009 to September 19, 2010.
	432,133 kilograms	September 20, 2010 to September 19, 2011.

BILLING CODE 3410–10–P

DEPARTMENT OF COMMERCE

Bureau of Industry and Security

Action Affecting Export Privileges; Orion Air, S.L. and Syrian Pearl Airlines; Order Renewing Order Temporarily Denying Export Privileges

Orion Air, S.L., Canada Real de Merinas, 7 Edificio 5, 3'A, Eissenhower business center, 28042 Madrid, Spain
Ad. de las Cortes Valencianas no 37, Esc.A Puerta 45 46015 Valencia, Spain
Syrian Pearl Airlines, Damascus International Airport, Damascus, Syria, Respondents

Pursuant to Section 766.24 of the Export Administration Regulations, 15 CFR parts 730–774 (2009) ("EAR" or the "Regulations"), I hereby grant the request of the Bureau of Industry and Security ("BIS") to renew for 180 days the Order Temporarily Denying the Export Privileges of Respondents Orion Air, S.L. ("Orion Air") and Syrian Pearl Airlines (collectively, "Respondents"), as I find that renewal of the temporary denial order ("TDO" or the "Order") is necessary in the public interest to prevent an imminent violation of the EAR.

I. Procedural History

On May 7, 2009, then-Acting Assistant Secretary of Commerce for Export Enforcement Kevin Delli-Colli signed an Order Temporarily Denying the Export Privileges of the Respondents for 180 days on the grounds that its issuance was necessary in the public interest to prevent an imminent violation of the Regulations. Pursuant to Section 766.24(a), the TDO was issued *ex parte* and was effective upon issuance. Copies of the TDO were sent to each Respondent in accordance with section 766.5 of the Regulations and the Order was published in the **Federal Register** on May 26, 2009.[1] Thereafter, on November 2, 2009, Acting Assistant Secretary Delli-Colli issued an Order renewing the TDO for an additional 180 days.[2] The current Order would expire on May 1, 2010, unless renewed in accordance with section 766.24 of the Regulations.

On April 9, 2010, BIS, through its Office of Export Enforcement ("OEE"), filed a written request for renewal of the TDO against the Respondents for an additional 180 days and served a copy of its request on the Respondents in accordance with section 766.5 of the Regulations. No opposition to renewal of the TDO has been received from either Orion Air or Syrian Pearl Airlines.

II. Discussion

A. Legal Standard

Pursuant to section 766.24(d)(3) of the EAR, the sole issue to be considered in determining whether to continue a TDO is whether the TDO should be renewed to prevent an imminent violation of the EAR, as "imminent" violation is defined in section 766.24. "A violation may be 'imminent' either in time or in degree of likelihood." 15 CFR 766.24(b)(3). BIS may show "either that a violation is about to occur, or that the general circumstances of the matter under investigation or case under criminal or administrative charges demonstrate a likelihood of future violations." *Id.* As to the likelihood of future violations, BIS may show that "the violation under investigation or charges is significant, deliberate, covert and/or likely to occur again, rather than technical and negligent[.]" *Id.* A "lack of information establishing the precise time a violation may occur does not preclude a finding that a violation is imminent, so long as there is sufficient reason to believe the likelihood of a violation." *Id.*

B. Findings

As part of its initial TDO request, BIS presented evidence that on or about May 1, 2009, Orion Air re-exported a BAE 146–300 aircraft (tail number EC–JVO) to Syria, and specifically to Syrian Pearl Airlines, without the U.S. Government authorization required by General Order No. 2 of Supplement 1 to Part 736 of the EAR. The aircraft is subject to the Regulations because it contains greater than a 10-percent de minimis amount of U.S.-origin content. Orion Air engaged in this re-export transaction despite having been directly informed of the export licensing requirements by the U.S. Government. Moreover, Orion Air not only engaged in this conduct after having received actual as well as constructive notice of the applicable license requirements, but then sought to evade the Regulations and U.S. export controls by giving the U.S. Government false assurances that it would put the transaction on hold due to the U.S. Government's concerns.

BIS also produced evidence that the re-exported aircraft bore the livery, colors and logos of Syrian Pearl Airlines, a national of Syria, a Country Group E:1 destination; was flight capable; and under the terms of the lease agreement was to be based in and operated out of Syria during the lease term. The record also shows that the re-exported aircraft currently remains in Syria under the control of Syrian Pearl Airlines.

In addition to the unauthorized re-export described above, Acting Assistant Secretary Delli-Colli also concluded that additional violations were imminent based on statements by Orion Air to the U.S. Government in May 2009 that Orion Air planned to re-export an additional BAE 146–300 aircraft (tail number EC–JVJ) to Syria, and specifically to Syrian Pearl Airlines. This second aircraft was at the time undergoing maintenance in the United Kingdom, and remains located there. Moreover, the agreement between Orion Air and Syrian Pearl Airlines involved both aircraft. Based on my review of the record, I find that the facts and circumstances that led to the issuance of the initial TDO and the November 2009 renewal Order continue to show that renewal of the TDO for an additional 180 days is necessary and in the public interest to prevent an imminent violation of the EAR. Absent renewal of the TDO, there remains a substantial continued risk that the second aircraft will be re-exported contrary to the Regulations, given that, *inter alia,* Orion Air acted with actual knowledge and took deceptive and evasive action. This finding alone would justify renewal. There also would be a substantial risk that, absent renewal of the TDO, the first aircraft, which remains in Syria, would

[1] 74 FR 24,786.

[2] The November 2, 2009 renewal Order was effective immediately and was published in the **Federal Register** on November 9, 2009 (74 FR 57626).

be operated or disposed of in violation of the Regulations. Furthermore, renewal of the TDO is needed to give notice to persons and companies in the United States and abroad that they should cease dealing with the Respondents in export transactions involving items subject to the EAR.

It is therefore ordered:

First, that, Orion Air, S.L., Canada Real de Merinas, 7 Edificio 5, 3'A, Eissenhower business center, 28042 Madrid, Spain, and Ad. de las Cortes Valencianas no 37, Esc.A Puerta 4546015 Valencia, Spain; and Syrian Pearl Airlines, Damascus International Airport, Damascus, Syria (each a "Denied Person" and collectively the "Denied Persons") may not, directly or indirectly, participate in any way in any transaction involving any commodity, software or technology (hereinafter collectively referred to as "item") exported or to be exported from the United States that is subject to the Export Administration Regulations ("EAR"), or in any other activity subject to the EAR including, but not limited to:

A. Applying for, obtaining, or using any license, license exception, or export control document;

B. Carrying on negotiations concerning, or ordering, buying, receiving, using, selling, delivering, storing, disposing of, forwarding, transporting, financing, or otherwise servicing in any way, any transaction involving any item exported or to be exported from the United States that is subject to the EAR, or in any other activity subject to the EAR; or

C. Benefiting in any way from any transaction involving any item exported or to be exported from the United States that is subject to the EAR, or in any other activity subject to the EAR.

Second, that no person may, directly or indirectly, do any of the following:

A. Export or reexport to or on behalf of any Denied Person any item subject to the EAR;

B. Take any action that facilitates the acquisition or attempted acquisition by any Denied Person of the ownership, possession, or control of any item subject to the EAR that has been or will be exported from the United States, including financing or other support activities related to a transaction whereby any Denied Person acquires or attempts to acquire such ownership, possession or control;

C. Take any action to acquire from or to facilitate the acquisition or attempted acquisition from any Denied Person of any item subject to the EAR that has been exported from the United States;

D. Obtain from any Denied Person in the United States any item subject to the EAR with knowledge or reason to know that the item will be, or is intended to be, exported from the United States; or

E. Engage in any transaction to service any item subject to the EAR that has been or will be exported from the United States and which is owned, possessed or controlled by any Denied Person, or service any item, of whatever origin, that is owned, possessed or controlled by any Denied Person if such service involves the use of any item subject to the EAR that has been or will be exported from the United States. For purposes of this paragraph, servicing means installation, maintenance, repair, modification or testing.

Third, that after notice and opportunity for comment as provided in section 766.23 of the EAR, any other person, firm, corporation, or business organization related to any of the Respondents by affiliation, ownership, control, or position of responsibility in the conduct of trade or related services may also be made subject to the provisions of this Order.

Fourth, that this Order does not prohibit any export, reexport, or other transaction subject to the EAR where the only items involved that are subject to the EAR are the foreign-produced direct product of U.S.-origin technology.

In accordance with the provisions of section 766.24(e) of the EAR, the Respondents may, at any time, appeal this Order by filing a full written statement in support of the appeal with the Office of the Administrative Law Judge, U.S. Coast Guard ALJ Docketing Center, 40 South Gay Street, Baltimore, Maryland 21202–4022.

In accordance with the provisions of section 766.24(d) of the EAR, BIS may seek renewal of this Order by filing a written request not later than 20 days before the expiration date. The Respondents may oppose a request to renew this Order by filing a written submission with the Assistant Secretary for Export Enforcement, which must be received not later than seven days before the expiration date of the Order.

A copy of this Order shall be served on the Respondents and shall be published in the **Federal Register**.

This Order is effective upon issuance and shall remain in effect for 180 days.

Issued this 29th day of April 2010.

David W. Mills,

Assistant Secretary of Commerce for Export Enforcement.

BILLING CODE 3510–DT–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Proposed Information Collection; Comment Request; Regional Economic Data Collection Program for Southeast Alaska

AGENCY: National Oceanic and Atmospheric Administration (NOAA).

ACTION: Notice.

SUMMARY: The Department of Commerce, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995.

DATES: Written comments must be submitted on or before July 6, 2010.

ADDRESSES: Direct all written comments to Diana Hynek, Departmental Paperwork Clearance Officer, Department of Commerce, Room 6625, 14th and Constitution Avenue, NW., Washington, DC 20230 (or via the Internet at *dHynek@doc.gov*).

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the information collection instrument and instructions should be directed to Chang Seung, (206) 526–4250 or *Chang.Seung@noaa.gov.*

SUPPLEMENTARY INFORMATION:

I. Abstract

The regional or community economic analysis of proposed fishery management policies is required by the Magnuson-Stevens Fishery Conservation and Management Act, National Environmental Policy Act, and Executive Order 12866, among others. To satisfy these mandates and inform policymakers and the public of the likely regional economic impacts associated with fishery management policies, appropriate economic models and the data to implement them are needed.

Much of the data required for regional economic analysis associated with Southeast Alaska fisheries are either unavailable or unreliable. Accurate fishery-level data on employment, labor income, and expenditures in the Southeast Alaska fishery and related industries are not currently available but are needed to estimate the effects of fisheries on the economy of Southeast Alaska. In this planned survey effort, data on these important regional economic variables will be collected and used to develop models that will

provide more reliable estimates and significantly improve policymakers' ability to assess policy effects on fishery-dependent communities in Southeast Alaska. The survey will be conducted one-time only. The survey (mailed) will request data on employment, labor payments, and other expenditures from owners of 1,700 vessels that delivered fish to Southeast Alaska processors in 2009.

II. Method of Collection

Mail surveys will be used.

III. Data

OMB Control Number: None.

Form Number: None.

Type of Review: Regular submission.

Affected Public: Business or other for-profit organizations.

Estimated Number of Respondents: 425.

Estimated Time per Response: 20 minutes.

Estimated Total Annual Burden Hours: 142.

Estimated Total Annual Cost to Public: $0 in recordkeeping/reporting costs.

IV. Request for Comments

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden (including hours and cost) of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection; they also will become a matter of public record.

Dated: May 4, 2010.

Gwellnar Banks,

Management Analyst, Office of the Chief Information Officer.

BILLING CODE 3510–22–P

U.S. DEPARTMENT OF COMMERCE

Foreign–Trade Zones Board

[Docket 29–2010]

Foreign–Trade Zone 125 - South Bend, Indiana

Application for Reorganization under Alternative Site Framework

An application has been submitted to the Foreign–Trade Zones (FTZ) Board (the Board) by the St. Joseph County Airport Authority, grantee of Foreign–Trade Zone 125, requesting authority to reorganize the zone under the alternative site framework (ASF) adopted by the Board (74 FR 1170, 1/12/09; correction 74 FR 3987, 1/22/09). The ASF is an option for grantees for the establishment or reorganization of general–purpose zones and can permit significantly greater flexibility in the designation of new "usage–driven" FTZ sites for operators/users located within a grantee's "service area" in the context of the Board's standard 2,000–acre activation limit for a general–purpose zone project. The application was submitted pursuant to the Foreign–Trade Zones Act, as amended (19 U.S.C. 81a–81u) and the regulations of the Board (15 CFR part 400). It was formally filed on April 29, 2010.

FTZ 125 was approved by the Board on March 11, 1986 (Board Order 326, 51 F.R. 10564; 3/27/86). After approval of a minor boundary modification (A(27f)-33–95), the general–purpose zone currently consists of the following two sites: *Site 1*: (7 acres) - located at 2809 North Foundation Drive within the Airport Industrial Park, South Bend (St. Joseph County); and *Site 2*: (21 acres) - located at 1507 South Olive Street, South Bend (St. Joseph County), Indiana.

The grantee's proposed service area under the ASF would be St. Joseph, Elkhart, Kosciusko, Marshall, LaPorte and Starke Counties, Indiana, as described in the application. If approved, the grantee would be able to serve sites throughout the service area based on companies' needs for FTZ designation. The proposed service area is within and adjacent to the Chicago Customs and Border Protection port of entry.

The applicant is requesting authority to reorganize its existing zone project to include both of the existing sites as "magnet" sites. The ASF allows for the possible exemption of one magnet site from the "sunset" time limits that generally apply to sites under the ASF, and the applicant proposes that Site 2 be so exempted. No usage–driven sites are being requested at this time. Because the ASF only pertains to establishing or reorganizing a general–purpose zone, the application would have no impact on FTZ 125's authorized subzones.

In accordance with the Board's regulations, Claudia Hausler of the FTZ Staff is designated examiner to evaluate and analyze the facts and information presented in the application and case record and to report findings and recommendations to the Board.

Public comment is invited from interested parties. Submissions (original and 3 copies) shall be addressed to the Board's Executive Secretary at the address below. The closing period for their receipt is July 6, 2010. Rebuttal comments in response to material submitted during the foregoing period may be submitted during the subsequent 15-day period to July 21, 2010.

A copy of the application will be available for public inspection at the Office of the Executive Secretary, Foreign–Trade Zones Board, Room 2111, U.S. Department of Commerce, 1401 Constitution Avenue, NW, Washington, DC 20230–0002, and in the "Reading Room" section of the Board's website, which is accessible via www.trade.gov/ftz. For further information, contact Claudia Hausler at Claudia.Hausler@trade.gov or (202)482–1379.

Dated: April 29, 2010.

Andrew McGilvray,

Executive Secretary.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

RIN 0648–XV18

Endangered and Threatened Species; Recovery Plans

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Extension of public comment period.

SUMMARY: On March 18, 2010, we, NMFS, announced the release of the Draft Recovery Plan for Central California Coast coho salmon (Draft Plan) for public review and comment. The Draft Plan addresses the Central California Coast coho salmon (*Oncorhynchus kisutch*) Evolutionarily Significant Unit (ESU). NMFS is soliciting review and comment from the

public and all interested parties on the Draft Plan. As part of that proposal, we provided a 60–day comment period, ending on May 17, 2010. We have received requests for an extension of the public comment period. In response to these requests, we are extending the comment period for the proposed action an additional 60 days.

DATES: Information and comments on the subject action must be received by July 6, 2010.

ADDRESSES:

Please send written comments to Charlotte Ambrose, National Marine Fisheries Service, 777 Sonoma Avenue, Room 325, Santa Rosa, CA 95404. Comments may also be submitted by e-mail to: *CohoRecovery.SWR@noaa.gov*. Include in the subject line of the e-mail comment the following identifier: Comments on Central Valley Salmon and Steelhead Draft Plan. Comments may be submitted via facsimile (fax) to (707) 578–3435.

Persons wishing to review the Draft Plan can obtain an electronic copy (i.e., CD-ROM) from Andrea Berry by calling (866) 300–2948 or by e-mailing a request to *Andrea.Berry@noaa.gov* with the subject line "CD-ROM Request for CCC coho salmon Recovery Draft Plan." Electronic copies of the Draft Plan are also available on-line on the NMFS website *http://swr.nmfs.noaa.gov/recovery/Coho__Recovery__Plan__031810.htm*.

FOR FURTHER INFORMATION CONTACT: Charlotte Ambrose, NCCC Domain Recovery Coordinator at (707) 575–6068, or Maura Eagan Moody at (707) 575–6092.

SUPPLEMENTARY INFORMATION:

Background

On March 18, 2010, we published a Notice of Availability of the Draft Central California Coast coho salmon Recovery Plan (Draft Plan) for public review and comment (FR 13081). The Draft Plan addresses the Central California Coast coho salmon (*Oncorhynchus kisutch*) Evolutionarily Significant Unit (ESU). NMFS is soliciting review and comment from the public and all interested parties on the Draft Plan. As part of that proposal, we provided a 60–day comment period, ending on May 17, 2010. Public meetings were held in Fort Bragg, CA, on March 31, 2010, in Santa Cruz, CA, on April 8, and in Santa Rosa, CA on April 9, 2010. We have received requests for an extension of the public comment period. In response to these requests, we are extending the comment period for the proposed action an additional 60 days.

Information and comments must be received by July 6, 2010.

Authority: 16 U.S.C. 1531 *et seq.*

Dated: May 4, 2010.

Therese Conant,

Acting Chief, Endangered Species Division, Office of Protected Resources, National Marine Fisheries Service.

BILLING CODE 3510–22–S

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

RIN 0648–XW33

Endangered and Threatened Species; Take of Anadromous Fish

AGENCY: NOAA's National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), U. S. Department of Commerce.

ACTION: Notice of receipt of a permit application; request for comments.

SUMMARY: Notice is hereby given that NMFS has received an application for a permit to conduct research for scientific purposes from the Resource Conservation District of the Santa Monica Mountains (RCD), in southern California. The requested permit would affect the endangered Southern California (SC) Distinct Population Segment (DPS) of steelhead (*Oncorhynchus mykiss*). The public is hereby notified of the availability of the permit application for review and comment before NMFS either approves or disapproves the application.

DATES: Written comments on the permit application must be received at the appropriate address or fax number (see **ADDRESSES**) on or before June 7, 2010.

ADDRESSES: Written comments on the permit application should be sent to Matt McGoogan, Protected Resources Division, NMFS, 501 W. Ocean Blvd., Suite 4200, Long Beach, California 90802. Comments may also be sent using email (*FRNpermits.1b@noaa.gov*) or fax (562.980.4027). The permit application is available for review, by appointment, at the foregoing address and is also available for review online at the Authorizations and Permits for Protected Species website at *https://apps.nmfs.noaa.gov*.

FOR FURTHER INFORMATION CONTACT: Matt McGoogan at phone number (562.980.4026) or e-mail: *matthew.mcgoogan@noaa.gov*

SUPPLEMENTARY INFORMATION:

Authority

Issuance of permits, as required by the Endangered Species Act of 1973 (16 U.S.C. 1531B1543) (ESA), is based on a finding that such permits: (1) are applied for in good faith; (2) would not operate to the disadvantage of the listed species which are the subject of the permits; and (3) are consistent with the purposes and policies set forth in section 2 of the ESA. Authority to take listed species is subject to conditions set forth in the permits. Permits are issued in accordance with and are subject to the ESA and NMFS regulations governing listed fish and wildlife permits (50 CFR parts 222B226).

Those individuals requesting a hearing on an application listed in this notice should provide the specific reasons why a hearing on that application would be appropriate (see ADDRESSES). The holding of such a hearing is at the discretion of the Assistant Administrator for Fisheries, NOAA. All statements and opinions contained in the permit action summaries are those of the applicant and do not necessarily reflect the views of NMFS.

Permit Application Received

The RCD has applied for a permit (permit 15390) to study the endangered SC DPS of steelhead (*Oncorhynchus mykiss*) in streams emptying to the Santa Monica Bay of southern California, with specific focus on Topanga Creek, Arroyo Sequit, and Malibu Creek. The purpose of this study is to use monitoring methods to gather information that will contribute to the understanding of migration patterns, diet, and the abundance and distribution of steelhead in the subject streams. Monitoring methods include using direct underwater observation techniques for estimating abundance and distribution of steelhead, migratory trapping, and Passive Integrated Transponder (PIT) tagging. Sampling methods to obtain steelhead for abundance counts and PIT tagging may include hand nets, seine nets, angling, fyke traps, and electrofishing. Field activities will occur between June 2010 and December 2020. The RCD has requested an annual non-lethal take of 1150 juvenile steelhead, 100 smolts, and 10 adult steelhead as well as an annual collection and possession of up to 950 steelhead tissue samples and 10 steelhead carcasses. The 100 smolts and up to 850 juvenile steelhead (depending on size) could be processed for PIT tags. Adult steelhead may be captured in fyke traps, but will be released without being PIT tagged. Gastric lavage would be

performed on up to 30 juvenile steelhead to gather information on feeding habits and diet. The unintentional lethal take that may occur as a result of research activities on Topanga and Malibu creeks is up to 36 juvenile steelhead annually. No lethal take of adult steelhead is expected or authorized with this research permit.

Dated: May 4, 2010.

Therese Conant,

Acting Chief, Endangered Species Division, Office of Protected Resources, National Marine Fisheries Service.

BILLING CODE 3510–22–S

DEPARTMENT OF COMMERCE

International Trade Administration

[Application No. 10–00003]

Export Trade Certificate of Review

ACTION: Notice of Application (#10–00003) for an Export Trade Certificate of Review from Saintilien Enterprise Inc., doing business as Saintilien Global Services ("SGS").

SUMMARY: Export Trading Company Affairs ("ETCA"), International Trade Administration, Department of Commerce, has received an application for an Export Trade Certificate of Review ("Certificate"). This notice summarizes the conduct for which certification is sought and requests comments relevant to whether the Certificate should be issued.

FOR FURTHER INFORMATION CONTACT: Joseph E. Flynn, Director, Office of Competition and Economic Analysis, International Trade Administration, by telephone at (202) 482–5131 (this is not a toll-free number) or e-mail at *oetca@ita.doc.gov.*

SUPPLEMENTARY INFORMATION: Title III of the Export Trading Company Act of 1982 (15 U.S.C. 4001–21) authorizes the Secretary of Commerce to issue Export Trade Certificates of Review. An Export Trade Certificate of Review protects the holder and the members identified in the Certificate from state and federal government antitrust actions and from private treble damage antitrust actions for the export conduct specified in the Certificate and carried out in compliance with its terms and conditions. Section 302(b)(1) of the Export Trading Company Act of 1982 and 15 CFR 325.6(a) require the Secretary to publish a notice in the **Federal Register** identifying the applicant and summarizing its proposed export conduct.

Request for Public Comments

Interested parties may submit written comments relevant to the determination whether a Certificate should be issued. If the comments include any privileged or confidential business information, it must be clearly marked and a nonconfidential version of the comments (identified as such) should be included. Any comments not marked privileged or confidential business information will be deemed to be nonconfidential. An original and five (5) copies, plus two (2) copies of the nonconfidential version, should be submitted no later than 20 days after the date of this notice to: Export Trading Company Affairs, International Trade Administration, U.S. Department of Commerce, Room 7021–X H, Washington, DC 20230, or transmit by e-mail at *oetca@ita.doc.gov.* Information submitted by any person is exempt from disclosure under the Freedom of Information Act (5 U.S.C. 552). However, nonconfidential versions of the comments will be made available to the applicant if necessary for determining whether or not to issue the Certificate. Comments should refer to this application as "Export Trade Certificate of Review, application number 10–00003." A summary of the application follows.

Summary of the Application

Applicant: Saintilien Enterprise Inc., doing business as Saintilien Global Services ("SGS"), 85 NW. 116 Street, Miami, FL 33168.

Contact: Mr. James Saintilien,

Telephone: (786) 274–2927.

Application No.: 10–00003.

Date Deemed Submitted: April 22, 2010.

Members: None.

The applicant (SEI) will serve as an International Department and manage complications of export. SEI will assist with entry into foreign markets, which can be time consuming, expensive, and simply unimaginable for small to medium size businesses. SEI will serve as the intermediary of transactions. SEI will provide market research, strategic planning, and initiatives for exporting goods and services for domestic companies. Customer Contact, Market Entry, Logistics, and Marketing will be SEI's role in helping domestic businesses.

I. Export Trade

1. *Products:* All Products.

2. *Services:* All Services.

3. *Technology Rights:* Technology rights, including, but not limited to, patents, trademarks, copyrights, and trade secrets, that relate to Product and Services.

4. *Export Trade Facilitation Services* (as they relate to the Export of Products, Services, and Technology Rights): Export Trade Facilitation Services include professional services in the areas of government relations and assistance with state and federal programs; foreign trade and business protocol; consulting; market research and analysis; collection of information on trade opportunities; marketing; negotiations; joint ventures; shipping; export management; export licensing; advertising; documentation and services related to compliance with customs requirements; insurance and financing; trade show exhibitions; organizational development; management and labor strategies; transfer of technology; transportation; and facilitating the formation of shippers' associations.

II. Export Markets

The Export Markets include all parts of the world except the United States (the fifty states of the United States, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, American Samoa, Guam, the Commonwealth of the Northern Mariana Islands, and the Trust Territory of the Pacific Islands).

III. Export Trade Activities and Methods of Operation

1. *With respect to the sale of Products and Services, licensing of Technology Rights and provision of Export Trade Facilitation Services, SGS, subject to the terms and conditions listed below, may:*

a. Provide and/or arrange for the provisions of Export Trade Facilitation Services;

b. Engage in promotional and marketing activities and collect information on trade opportunities in the Export Markets and distribute such information to clients;

c. Enter into exclusive and/or non-exclusive licensing and/or sales agreements with Suppliers for the export of Products, Services, and/or Technology Rights to Export Markets;

d. Enter into exclusive and/or non-exclusive agreements with distributors and/or sales representatives in Export Markets;

e. Allocate export sales or divide Export Markets among Suppliers for the sale and/or licensing of Products, Services, and/or Technology Rights;

f. Allocate export orders among Suppliers;

g. Establish the price of Products, Services, and/or Technology Rights for sales and/or licensing in Export Markets;

h. Negotiate, enter into, and/or manage licensing agreements for the export of Technology Rights; and

i. Enter into contracts for shipping.

2. SGS and individual Suppliers may regularly exchange information on a one-on-one basis regarding that Supplier's inventories and near-term production schedules in order that the availability of Products for export can be determined and effectively coordinated by SGS with its distributers in Export Markets.

Definition

"*Supplier*" means a person who produces, provides, or sells Products, Services, and/or Technology Rights.

Dated: May 3, 2010.

Joseph E. Flynn,

Director, Office of Competition and Economic Analysis.

International Trade Administration

[Application No. 88–12A16]

Export Trade Certificate of Review

ACTION: Notice of Application (#88–12A16) to Amend the Export Trade Certificate of Review Issued to Wood Machinery Manufacturers of America, Application no. 88–00016.

SUMMARY: Export Trading Company Affairs ("ETCA") of the International Trade Administration, Department of Commerce, has received an application to amend an Export Trade Certificate of Review ("Certificate"). This notice summarizes the proposed amendment and requests comments relevant to whether the amended Certificate should be issued.

FOR FURTHER INFORMATION CONTACT: Jeffrey Anspacher, Acting Director, Office of Competition and Economic Analysis, International Trade Administration, (202) 482–5131 (this is not a toll-free number) or E-mail at *oetca@ita.doc.gov.*

SUPPLEMENTARY INFORMATION: Title III of the Export Trading Company Act of 1982 (15 U.S.C. 4001–21) authorizes the Secretary of Commerce to issue Export Trade Certificates of Review. An Export Trade Certificate of Review protects the holder and the members identified in the Certificate from State and Federal government antitrust actions and from private treble damage antitrust actions for the export conduct specified in the Certificate and carried out in compliance with its terms and conditions. Section 302(b)(1) of the Export Trading Company Act of 1982 and 15 CFR 325.6(a) require the Secretary to publish a notice in the **Federal Register** identifying the applicant and summarizing its proposed export conduct.

Request for Public Comments

Interested parties may submit written comments relevant to the determination whether an amended Certificate should be issued. If the comments include any privileged or confidential business information, it must be clearly marked and a nonconfidential version of the comments (identified as such) should be included. Any comments not marked as privileged or confidential business information will be deemed to be nonconfidential. An original and five (5) copies, plus two (2) copies of the nonconfidential version, should be submitted no later than 20 days after the date of this notice to: Export Trading Company Affairs, International Trade Administration, U.S. Department of Commerce, Room 7021–X, Washington, DC 20230. Information submitted by any person is exempt from disclosure under the Freedom of Information Act (5 U.S.C. 552). However, nonconfidential versions of the comments will be made available to the applicant if necessary for determining whether or not to issue the Certificate. Comments should refer to this application as "Export Trade Certificate of Review, application number 88–12A16."

The Wood Machinery Manufacturers of America's ("WMMA") original Certificate was issued on February 3, 1989 (54 FR 6312, February 9, 1989), and last amended on December 24, 2009 (75 FR 1335, January 11, 2010). A summary of the current application for an amendment follows.

Summary of the Application

Applicant: Wood Machinery Manufacturers of America ("WMMA"), 100 North 20th Street, 4th Floor, Philadelphia, PA 19103–1443.

Contact: Harold Zassenhaus, Export Consultant, Telephone: (301) 652–0693.

Application No.: 88–12A16.

Date Deemed Submitted: April 26, 2010.

Proposed Amendment: WMMA seeks to amend its Certificate to:

1. Add the following companies as a new "Member" of the Certificate within the meaning of section 325.2(l) of the Regulations (15 CFR 325.2(l)): Precision Drive Systems LLC, Bessemer City, NC; Vortex Tool Company, Inc., Schofield, WI; and Williams & Hussey Machine Co., Inc., Milford, NH, and

2. Delete the following company as a Member of WMMA's Certificate: CTD Machines, Inc., Los Angeles.

Dated: May 3, 2010.

A–557–813

Polyethylene Retail Carrier Bags From Malaysia: Extension of Time Limit for Preliminary Results of Antidumping Duty Administrative Review

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

EFFECTIVE DATE: May 7, 2010.

FOR FURTHER INFORMATION CONTACT: Jerrold Freeman or Richard Rimlinger, AD/CVD Operations, Office 5, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue, NW, Washington, DC, 20230; telephone: (202) 482–0180 or (202) 482–4477, respectively.

SUPPLEMENTARY INFORMATION:

Background

At the request of interested parties, the Department of Commerce (the Department) initiated an administrative review of the antidumping duty order on polyethylene retail carrier bags from Malaysia for the period August 1, 2008, through July 31, 2009. *See Initiation of Antidumping and Countervailing Duty Administrative Reviews and Request for Revocation in Part*, 74 FR 48224 (September 22, 2009).

As explained in the memorandum from the Deputy Assistant Secretary for Import Administration, we have exercised our discretion to toll deadlines for the duration of the closure of the Federal Government from February 5 through February 12, 2010. Thus, all deadlines in this review have been extended by seven days. The revised deadline for the final results of this administrative review is currently May 10, 2010. See Memorandum to the Record from Ronald Lorentzen, DAS for Import Administration, regarding "Tolling of Administrative Deadlines As a Result of the Government Closure During the Recent Snowstorm," dated February 12, 2010.

Extension of Time Limit for Preliminary Results

Section 751(a)(3)(A) of the Tariff Act of 1930, as amended (the Act), requires the Department to make a preliminary determination within 245 days after the last day of the anniversary month of an order for which a review is requested and a final determination within 120 days after the date on which the preliminary determination is published. If it is not practicable to complete the review within these time periods, section 751(a)(3)(A) of the Act allows the Department to extend the time limit for the preliminary determination to a maximum of 365 days after the last day of the anniversary month. *See also* 19 CFR 351.213(h)(2).

We determine that it is not practicable to complete the preliminary results of this administrative review by the current deadline of May 10, 2010, because we are continuing to examine the operating status of the sole respondent, Europlastics Malaysia Sdn. Bhd. Therefore, in accordance with section 751(a)(3)(A) of the Act and 19 CFR 351.213(h)(2), we are partially extending the time period for issuing the preliminary results of this review by 30 days until June 9, 2010.

This notice is published in accordance with sections 751(a)(3)(A) and 777(i)(1) of the Act and 19 CFR 351.213(h)(2).

Dated: May 3, 2010.

John M. Andersen,

Acting Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations.

BILLING CODE 3510–DS–S

DEPARTMENT OF COMMERCE

National Institute of Standards and Technology

Announcement of Body Armor Research Needs Meeting

AGENCY: National Institute of Standards and Technology, Department of Commerce.

ACTION: Notice of meeting.

SUMMARY: The National Institute of Standards and Technology (NIST) invites interested parties to attend a one-day High Strength Fiber and Body Armor Research Needs Meeting. The Meeting will provide a forum to discuss test methods, technologies, and R&D that can significantly improve ballistic protection through the examination of such issues as material longevity, new materials, and improved testing methodologies for body armor (*e.g.,* improved blunt trauma measurement and correlation to injury).

DATES: The Body Armor Research Needs Meeting will be held June 15, 2010. The workshop will be held from 9 a.m. to 5 p.m. Members of the public wishing to attend the meeting must notify Cindy Stanley by C.O.B June 4, 2010, per instructions under the **SUPPLEMENTARY INFORMATION** section of this notice.

ADDRESSES: The workshop will be held at the National Institute of Standards and Technology (NIST), 100 Bureau Drive, Building 101, Lecture Room B, Gaithersburg, MD 20899.

FOR FURTHER INFORMATION CONTACT: Cindy Stanley, 100 Bureau Dr. M/S 8102, Gaithersburg, MD 20899–8102, 301–975–2756, *stanleyc@nist.gov.*

SUPPLEMENTARY INFORMATION: The Meeting program will include experts from the standards, research, and testing communities. Presentations on today's challenges in body armor and material longevity research will be given. Among the topics to be discussed are the need for the formation of research collaborations between the manufacturing community (including fiber producers, fabric producers, and armor manufacturers) and government and academic researchers.

The goal of the meeting is to identify potential areas for research collaboration between body armor industry representatives and the Federal Government. In this regard, the Meeting will explore:

- Life Cycle Testing for Body Armor
- Improved Test Methods for Body Armor
- The Role of Federal Agencies and Standards Committees
- Opportunities for Collaboration

We expect this workshop to provide a strong foundation for follow-on efforts among government agencies, industry, and academia to

- Identify/define research needs for body armor
- Develop performance standards
- Demonstrate performance metrics

All visitors to the National Institute of Standards and Technology site will have to pre-register to be admitted. Anyone wishing to attend this meeting must register by C.O.B June 4, 2010 in order to attend. Please submit your name, e-mail address, and phone number to Cindy Stanley, and you will be provided instructions for admittance. Non-U.S. citizens must also submit their country of citizenship, passport issuing country, passport number, city of birth, country of birth, date of birth, gender, title, phone number, current mailing address, employer/sponsor, phone and address. Cindy Stanley's e-mail address *stanleyc@nist.gov* and her phone number is (301) 975–2756.

Dated: May 3, 2010.

Katharine B. Gebbie,

Director, Physics Laboratory.

Fisheries of the South Atlantic and Gulf of Mexico; Southeast Data, Assessment, and Review (SEDAR); Public Meetings

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of SEDAR 24 South Atlantic red snapper assessment webinars 1 and 2.

SUMMARY: The SEDAR 24 assessment of the South Atlantic stock of red snapper will consist of a series of workshops and webinars: a Data Workshop, a series of Assessment webinars, and a Review Workshop. See **SUPPLEMENTARY INFORMATION**.

DATES: SEDAR 24 Assessment Process webinar 1 will be held on Friday, June 18, from 10 a.m. to 1 p.m. (EDT). SEDAR 24 Assessment Process webinar 2 will be held on Wednesday, July 14, from 12 p.m. to 4 p.m. (EDT).

ADDRESSES: The meeting will be held via webinar. The webinar is open to members of the public. Those interested in participating should contact Dale Theiling at SEDAR (See **FOR FURTHER INFORMATION CONTACT**) to request an invitation providing webinar access information.

FOR FURTHER INFORMATION CONTACT: Dale Theiling, SEDAR Coordinator, 4055 Faber Place, Suite 201, North Charleston, SC 29405; telephone: (843) 571–4366; e-mail: *Dale.Theiling@safmc.net*

SUPPLEMENTARY INFORMATION: The Gulf of Mexico, South Atlantic, and Caribbean Fishery Management Councils, in conjunction with NOAA Fisheries and the Atlantic and Gulf States Marine Fisheries Commissions have implemented the Southeast Data, Assessment and Review (SEDAR) process, a multi-step method for determining the status of fish stocks in the Southeast Region. SEDAR is a three-step process including: (1) Data Workshop, (2) Assessment Process utilizing webinars and (3) Review Workshop. The product of the Data Workshop is a data report which compiles and evaluates potential datasets and recommends which datasets are appropriate for assessment analyses. The product of the Assessment Process is a stock assessment report which describes the fisheries, evaluates the status of the stock, estimates biological benchmarks, projects future population conditions, and recommends research and monitoring needs. The assessment is independently peer reviewed at the Review Workshop. The product of the Review Workshop is a Summary documenting Panel opinions regarding the strengths and weaknesses of the stock assessment and input data. Participants for SEDAR Workshops are appointed by the Gulf of Mexico, South Atlantic, and Caribbean Fishery Management Councils and NOAA Fisheries Southeast Regional Office and Southeast Fisheries Science Center. Participants include data collectors and database managers; stock assessment scientists, biologists, and researchers; constituency representatives including fishermen, environmentalists, and NGO's; International experts; and staff of Councils, Commissions, and state and federal agencies.

SEDAR 24 Assessment webinar 1:

Participants will discuss data issues, availability, and appropriate modeling approaches. Guidance will be provided to the analytical team to enable development of preliminary runs of candidate models. Tasks, workload, and scheduling issues will be discussed.

Meeting Schedule:

Friday, June 18, 2010, from 10 a.m. to 1 p.m. (EDT)

SEDAR 24 Assessment webinar 2:

Emerging data issues will be discussed and preliminary model runs reviewed. Participants will provide further model configuration guidance and select a preferred technique.

Meeting Schedule:

Wednesday July 14, 2010, from 12 p.m. to 4 p.m. (EDT)

Although non-emergency issues not contained in this agenda may come before this group for discussion, those issues may not be the subject of formal action during this meeting. Action will be restricted to those issues specifically listed in this notice and any issues arising after publication of this notice that require emergency action under section 305(c) of the Magnuson-Stevens Fishery Conservation and Management Act, provided the public has been notified of the Council's intent to take final action to address the emergency.

Special Accommodations

These meetings are physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to the Council office (see **ADDRESSES**) at least 10 business days prior to the meeting.

Dated: May 3, 2010.

Tracey L. Thompson,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

Carbazole Violet Pigment 23 from India: Rescission of Administrative Review

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

SUMMARY: On January 29, 2010, in response to a request from an interested party, the Department of Commerce (the Department) published a notice of initiation of the administrative review of the antidumping duty order on carbazole violet pigment 23 (CVP 23) from India for the period of December 1, 2008, through November 30, 2009. Because the party withdrew its request for an administrative review in a timely manner the Department is rescinding this review.

EFFECTIVE DATE: May 7, 2010.

FOR FURTHER INFORMATION CONTACT: Jerrold Freeman or Richard Rimlinger, AD/CVD Operations, Office 5, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue, NW, Washington, DC 20230; telephone: (202) 482–0180 and (202) 482–4477, respectively.

SUPPLEMENTARY INFORMATION:

Background

On January 29, 2010, in accordance with section 751(a) of the Tariff Act of 1930, as amended (Act), and 19 CFR 351.221(c)(1)(i), we published a notice of initiation of administrative review of the order. *See Initiation of Antidumping and Countervailing Duty Administrative Reviews, Request for Revocation in Part, and Deferral of Initiation of Administrative Review*, 75 FR 4770 (January 29, 2010) (*Initiation Notice*). We initiated the review with respect to Meghmani Pigments (Meghmani) based on its request for a review of its sales during the period December 1, 2008, through November 30, 2009.

On March 9, 2010, in accordance with section 751(b) of the Act and 19 CFR 351.216 and 351.221(c)(3), we published in the **Federal Register** a notice of initiation of an antidumping duty changed–circumstances review. *See Carbazole Violet Pigment 23 from India: Initiation of Antidumping Duty Changed–Circumstances Review*, 75 FR 10759 (March 9, 2010). In this notice we indicated that we would be conducting the changed–circumstances review in the context of the administrative review.

On April 5, 2010, Meghmani withdrew its request for review of its

sales of merchandise subject to the order for the period December 1, 2008, through November 30, 2009.

Rescission of Review

In accordance with 19 CFR 351.213(d)(1), the Department will rescind an administrative review "if a party that requested the review withdraws the request within 90 days of the date of publication of notice of initiation of the requested review." We received a letter from Meghmani withdrawing its request for review within the 90-day time limit. We received no other requests for review of this company. In accordance with 19 CFR 351.213(d)(1), we are rescinding the review with respect to CVP 23 from India produced and/or exported by Meghmani.

Continuation of the Changed–Circumstances Review

Although we are rescinding the administrative review, we will continue to conduct the changed–circumstances review. Therefore, in accordance with 19 CFR 351.216(e), we intend to "issue final results of the changed–circumstances review within 270 days after the date on which we initiated the changed–circumstances review."

Notification to Importer

This notice serves as a final reminder to importers of their responsibility under 19 CFR 351.402(f) to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during the review period. Failure to comply with this requirement could result in the Department's presumption that reimbursement of antidumping duties occurred and the subsequent assessment of doubled antidumping duties.

Notification to Interested Parties

This notice serves as a reminder to parties subject to the administrative protective order (APO) of their responsibility concerning the disposition of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3). Timely written notification of the destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and terms of an APO is a sanctionable violation.

We are issuing and publishing this notice in accordance with section 777(i)(1) of the Act and 19 CFR 351.213(d)(4).

Dated: May 3, 2010.

John M. Andersen,

Acting Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations.

BILLING CODE 6330–01–M

COMMITTEE FOR PURCHASE FROM PEOPLE WHO ARE BLIND OR SEVERELY DISABLED

Procurement List Proposed Additions and Deletions

AGENCY: Committee for Purchase From People Who Are Blind or Severely Disabled.

ACTION: Proposed additions to and deletions from the Procurement List.

SUMMARY: The Committee is Proposing to add to the Procurement List products and a service to be furnished by nonprofit agencies employing persons who are blind or have other severe disabilities, and to delete services previously provided by such agencies.

Comments Must be Received on or Before: 6/7/2010.

ADDRESSES: Committee for Purchase From People Who Are Blind or Severely Disabled, Jefferson Plaza 2, Suite 10800, 1421 Jefferson Davis Highway, Arlington, Virginia 22202–3259.

For Further Information or to Submit Comments Contact: Barry S. Lineback, Telephone: (703) 603–7740, Fax: (703) 603–0655, or e-mail *CMTEFedReg@AbilityOne.gov*.

SUPPLEMENTARY INFORMATION: This notice is published pursuant to 41 U.S.C. 47(a)(2) and 41 CFR 51–2.3. Its purpose is to provide interested persons an opportunity to submit comments on the proposed actions.

Additions

If the Committee approves the proposed additions, the entities of the Federal Government identified in this notice will be required to procure the products and service listed below from nonprofit agencies employing persons who are blind or have other severe disabilities.

Regulatory Flexibility Act Certification

I certify that the following action will not have a significant impact on a substantial number of small entities. The major factors considered for this certification were:

1. If approved, the action will not result in any additional reporting, recordkeeping or other compliance requirements for small entities other than the small organizations that will furnish the products and service to the Government.

2. If approved, the action will result in authorizing small entities to furnish the products and service to the Government.

3. There are no known regulatory alternatives which would accomplish the objectives of the Javits-Wagner-O'Day Act (41 U.S.C. 46–48c) in connection with the products and service proposed for addition to the Procurement List.

Comments on this certification are invited. Commenters should identify the statement(s) underlying the certification on which they are providing additional information.

End of Certification

The following products and service are proposed for addition to Procurement List for production by the nonprofit agencies listed:

NPA: ARC–Imperial Valley, El Centro, CA
Contracting Activity: Department of Homeland Security, Bureau of Customs and Border Protection, Office of Procurement, Washington, DC

Deletions

Regulatory Flexibility Act Certification

I certify that the following action will not have a significant impact on a substantial number of small entities. The major factors considered for this certification were:

1. If approved, the action will not result in additional reporting, recordkeeping or other compliance requirements for small entities.

2. If approved, the action may result in authorizing small entities to provide the services to the Government.

3. There are no known regulatory alternatives which would accomplish the objectives of the Javits-Wagner-O'Day Act (41 U.S.C. 46–48c) in connection with the services proposed for deletion from the Procurement List.

End of Certification

The following services are proposed for deletion from the Procurement List:

Services

Service Type/Location: Medical Transcription, Veterans Affairs Medical Center, 7305 N. Military Trail, West Palm Beach, FL
NPA: Gulfstream Goodwill Industries, Inc., West Palm Beach, FL
Contracting Activity: Department of Veterans Affairs, NAC, Hines, IL
Service Type/Location: Janitorial/Custodial, Fort McPherson: U.S. Army Health Clinic, Buildings 100, 101, 105, 162, 163, 165, 170, 170A and 170B, Fort McPherson, GA
NPA: WORKTEC, Jonesboro, GA
Contracting Activity: Dept of the Army, XR W40M Natl Region Contract OFC, Washington, DC

BILLING CODE 6353–01–P

DEPARTMENT OF DEFENSE

Office of the Secretary

Meeting of the Defense Department Advisory Committee on Women in the Services (DACOWITS)

AGENCY: Department of Defense (DoD).

ACTION: Notice.

SUMMARY: Pursuant to section 10(a), Public Law 92–463, as amended, notice is hereby given of a forthcoming meeting of the Defense Department Advisory Committee on Women in the Services (DACOWITS). The purpose of the meeting is for the Committee to discuss their vision and priorities for the upcoming year and receive briefing from Sexual Assault and Prevention and Response Office. The meeting is open to the public, subject to the availability of space.

DATES: The meeting will be held on June 3, 2010, from 8:30 a.m. to 3 p.m.

ADDRESSES: The meeting will be held at the Doubletree Hotel, 300 Army Navy Dr., Arlington, VA 22202.

FOR FURTHER INFORMATION CONTACT: MSgt Robert Bowling, USAF, DACOWITS, 4000 Defense Pentagon, Room 2C548A, Washington, DC 20301–4000. *Robert.bowling@osd.mil* Telephone (703) 697–2122. Fax (703) 614–6233.

SUPPLEMENTARY INFORMATION:

Meeting Agenda

June 3, 2010, From 8:30 a.m.–3 p.m.

—Welcome, introductions, and announcements
—Discussion on Committee's vision, philosophy, and topics to pursue
—Briefings from Sexual Assault Prevention and Response Office
—Public Forum

Written Statements

Individuals submitting a written statement may submit their statement to the Point of Contact listed under **FOR FURTHER INFORMATION CONTACT** at any time. However, written statements must be received by 5 p.m. on Tuesday, June 1, 2010, to be provided to and considered by the Committee for the meeting that is the subject of this notice. Statements received after 5 p.m. on June 1, 2010, may not be provided to or considered by the Committee until its next open meeting. The Designated Federal Officer will review all timely submissions with the Defense Department Advisory Committee on Women in the Services Chairperson and ensure they are provided to the members of the Defense Department Advisory Committee on Women in the Services. If members of the public are interested in making an oral statement, a written statement must be submitted as above. After reviewing the written comments, the Chairperson and the Designated Federal Officer will determine who of the requesting persons will be able to make an oral presentation of their issue during an open portion of this meeting or at a future meeting. Determination of who will be making an oral presentation will depend on time available and if the topics are relevant to the Committee's activities. Two minutes will be allotted to persons desiring to make an oral presentation. Oral presentations by members of the public will be permitted only on Thursday, June 3, 2010, from 2 p.m. to 2:30 p.m. before the full Committee. Number of oral presentations to be made will depend on the number of requests received from members of the public.

Dated: May 4, 2010.

Mitchell S. Bryman,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

BILLING CODE 5001–06–P

DEPARTMENT OF DEFENSE

Office of the Secretary

Federal Advisory Committee; Advisory Panel on Department of Defense Capabilities for Support of Civil Authorities After Certain Incidents

AGENCY: Office of the Assistant Secretary of Defense (Homeland Defense and Americas' Security Affairs), DoD.

ACTION: Notice of meeting.

SUMMARY: Under the provisions of the Federal Advisory Committee Act of 1972 (5 U.S.C., Appendix, as amended), the Government in the Sunshine Act of 1976 (5 U.S.C. 552b, as amended), and 41 CFR 102–3.150, the Department of Defense announces that the Advisory Panel on Department of Defense Capabilities for Support of Civil Authorities after Certain Incidents (hereinafter referred to as the Advisory Panel) will meet on June 2 and 3, 2010. Subject to the availability of space, this meeting is open to the public.

DATES: The meeting will be held on Wednesday, June 2, 2010, from 8:30 a.m. to 5 p.m. and on Thursday, June 3, 2010, from 8:30 a.m. to 5 p.m. Eastern Daylight Time (hereinafter referred to as EDT).

ADDRESSES: The meeting will be held at the RAND Corporation, 1200 South Hayes Street, Arlington, Virginia 22202, 4th floor conference facilities (*see* below under Public Accessibility to the Meeting for additional information).

FOR FURTHER INFORMATION CONTACT: *Advisory Panel's Points of Contact at the Federally Funded Research and Development Center (FFRDC):* Andrew Morral, Principal Investigator, telephone 703–413–1100, x5119, e-mail: *morral@rand.org;* The RAND Corporation, 1200 South Hayes Street, Arlington, Virginia, 22202.

Advisory Panel's Designated Federal Officer: Catherine Polmateer, telephone: 703–697–6370, OASD(HD&ASA), Resources Integration, 2600 Defense Pentagon, Washington, DC 20301–2600, e-mail: *Catherine.Polmateer@osd.mil.*

SUPPLEMENTARY INFORMATION:

Purpose of the Meeting

The panel will discuss the key issues in its congressional mandate with senior members of U.S. Government agencies and State and local officials. It will discuss preliminary findings, conclusions, and recommendations, based on its activities to date. It will decide on topics for research and other activities for future meetings, based on its congressionally-mandated tasks.

Agenda

- Opening Remarks by the Chairman.
- Discussions with senior officials of the U.S. Departments of Justice, Health and Human Services, Energy, and Homeland Security.
- Discussions with State Governors and other State and local officials.
- Discussion of preliminary findings, conclusions, and recommendations.
- Discussion of future meetings.
- Administration.

Public Accessibility to the Meeting

Pursuant to 5 U.S.C. 552b and 41 CFR 102–3.140 through 102–3.165, and the availability of space, this meeting is open to the public. Seating is on a first-come basis.

Note: Members of the public who choose to attend the meeting should allow approximately 15 minutes to clear building security on the ground floor (Hayes Street entrance) and RAND security (4th floor reception area).

Written Statements

Pursuant to 41 CFR 102–3.105(j) and 102–3.140, and section 10(a)(3) of the Federal Advisory Committee Act of 1972 (FACA), the public or interested organizations may submit written statements to the Advisory Panel about its mission and functions. Written statements may be submitted at any time or in response to the stated agenda of a planned meeting of the Advisory Panel.

All written statements shall be submitted to the Designated Federal Officer for the Advisory Panel, and this individual will ensure that the written statements are provided to the membership for their consideration. Contact information for the Designated Federal Officer is provided in this notice or can be obtained from the GSA's FACA Database: *https://www.fido.gov/facadatabase/public.asp.*

Written statements submitted in response to the agenda mentioned in this notice must be received by the Designated Federal Officer (*see* **FOR FURTHER INFORMATION CONTACT**) no later than 11 a.m., EDT, Wednesday, May 26, 2010. Written statements received after this date may not be provided to or considered by the Advisory Panel until its next meeting.

The Designated Federal Officer will review all timely submissions with the Advisory Panel Chairperson and ensure they are provided to all members of the Advisory Panel before the meeting that is the subject of this notice.

All written statements received by the Designated Federal Officer will be retained as part of the committee's official records. In addition, statements timely submitted in response to a stated agenda of a planned meeting and provided to committee members in preparation for a meeting, will be made available to the public during the meeting and posted to the GSA's FACA Database.

Oral Statements

In addition to written statements, and time permitting, the Chairperson of the Advisory Panel may allow Oral Statements by the public to the Members of the Advisory Panel. Any person seeking to address orally the Advisory Panel must submit a request to the Designated Federal Officer no later than 11 a.m., EDT, Wednesday, May 26, 2010. Oral statements will be limited to five minutes (or less depending on time available). The Designated Federal Officer will provide timekeeping for oral statements and will notify the Chairperson when a presenter has reached allotted time.

Dated: May 4, 2010.

Mitchell S. Bryman,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

[FR Doc. 2010–10845 Filed 5–6–10; 8:45 am]

BILLING CODE 5001–06–P

DEPARTMENT OF DEFENSE

Office of the Secretary

Federal Advisory Committee; Defense Audit Advisory Committee (DAAC)

AGENCY: Under Secretary of Defense (Comptroller), DoD.

ACTION: Notification of meeting.

SUMMARY: Under the provisions of the Federal Advisory Committee Act of 1972 (5 U.S.C., Appendix, as amended), the Government in the Sunshine Act of 1976 (5 U.S.C. 552b, as amended), and 41 CFR 102–3.150, the Department of Defense announces that the Defense Audit Advisory Committee will meet on May 17, 2010. Subject to the availability of space, the meeting is open to the public.

DATES: The meeting will be held on Monday, May 17, 2010, from 3 p.m. to 5 p.m.

ADDRESSES: The meeting will be held at the Pentagon, Room 3E754, Washington, DC (escort required, *see* below).

FOR FURTHER INFORMATION CONTACT: The Committee's Designated Federal Officer (DFO) is Sandra Gregory, Office of the Under Secretary of Defense (Comptroller) (OUSD(C)), 1100 Defense Pentagon, Room 3C689, Washington, DC 20301–1100, *sandra.gregory@osd.mil*, (703) 614–3310.

For meeting information please contact Arianna Smith, OUSD(C), 1100 Defense Pentagon, Room 3C689, Washington, DC 20301–1100, *arianna.smith.ctr@osd.mil*, (703) 614–4819.

SUPPLEMENTARY INFORMATION:

Purpose

The mission of the DAAC is to provide the Secretary of Defense, through the Under Secretary of Defense (Comptroller)/Chief Financial Officer, independent advice and recommendations on DoD financial management to include financial reporting processes, systems of internal controls, audit processes, and processes for monitoring compliance with relevant laws and regulations.

Agenda

Below is the agenda for the May 17, 2010 meeting:

3 p.m. Welcome and update
3:20 Review of last meeting minutes and Opening Remarks
3:45 Open Discussion on Themes and Messages of the May 2010 FIAR Plan Status Report
4:10 Alternative approaches for Balance sheet property valuation
4:35 Internal Audit Role
4:55 Closing Remarks

Accessibility to the Meeting

Pursuant to 5 U.S.C. 552b and 41 CFR 102–3.140 through 102–3.165, and the availability of space, this meeting is open to the public. Seating is on a first-come basis. Members of the public who wish to attend the meeting must contact Ms. Smith at the number listed in this notice no later than noon on Tuesday, May 11, 2010, to arrange a Pentagon escort. Public attendees are required to arrive at the Pentagon Metro Entrance by 2 p.m. and complete security screening by 2:15 p.m. Security screening requires two forms of identification: (1) A government-issued photo I.D., and (2) any type of secondary I.D. which verifies the individual's name (*i.e.* debit card, credit card, work badge, Social Security card).

Special Accommodations

Individuals requiring special accommodation to access the public meeting should contact Ms. Smith at least five business days prior to the meeting to ensure appropriate arrangements can be made.

Procedures for Providing Written Comments

Pursuant to 41 CFR 102–3.105(j) and 102–3.140, and section 10(a)(3) of the Federal Advisory Committee Act of 1972, the public or interested organizations may submit written comments to the Committee about its mission and topics pertaining to this public session.

Written comments are accepted until the date of the meeting; however, written comments should be received by the Designated Federal Officer at least five business days prior to the meeting date so that the comments may be made available to the Committee members for their consideration prior to the meeting. Written comments should be submitted to the Designated Federal Officer (*see* **FOR FURTHER INFORMATION CONTACT**). E-mail submissions should be in one of the following formats (Adobe Acrobat, WordPerfect, or Word format).

Please note: Since the committee operates under the provisions of the Federal Advisory Committee Act, as amended, all written comments will be treated as public documents and will be made available for public inspection, up to and including being posted on the OUSD(C) Web site.

Request for Waiver

Due to unforeseen difficulties the Designated Federal Officer was unable to process the **Federal Register** notice for the May 17, 2010, meeting of the Defense Audit Advisory Committee (DAAC), as required by 41 CFR 102–3.150(a). Accordingly, the Committee Management Officer for the Department of Defense, pursuant to 41 CFR 102–3.150(b), waives the 15-calendar day notification requirement.

Dated: May 4, 2010.

Mitchell S. Bryman,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

BILLING CODE 5001–06–P

DEPARTMENT OF DEFENSE

Office of the Secretary

[Docket ID: DOD–2010–OS–0060]

Privacy Act of 1974; Systems of Records

AGENCY: Defense Logistics Agency, DoD.

ACTION: Notice to amend a system of records.

SUMMARY: The Defense Logistics Agency proposes to amend a system of records notice in its existing inventory of records systems subject to the Privacy Act of 1974, (5 U.S.C. 552a), as amended.

DATES: This proposed action will be effective without further notice on June 7, 2010, unless comments are received which result in a contrary determination.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

- *Federal Rulemaking Portal: http://www.regulations.gov*. Follow the instructions for submitting comments.
- *Mail:* Federal Docket Management System Office, 1160 Defense Pentagon, Washington, DC 20301–1160.

Instructions: All submissions received must include the agency name and docket number for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the Internet at *http://www.regulations.gov* as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: Jody Sinkler at (703) 767–5045.

SUPPLEMENTARY INFORMATION: The Defense Logistics Agency systems of records notices subject to the Privacy Act of 1974, (5 U.S.C. 552a), as amended, have been published in the **Federal Register** and are available from the Chief Privacy and FOIA Officer, Headquarters Defense Logistics Agency, ATTN: DGA, 8725 John J. Kingman Road, Suite 1644, Fort Belvoir, VA 22060–6221.

The specific changes to the record system being amended are set forth below followed by the notice, as amended, published in its entirety. The proposed amendment is not within the purview of subsection (r) of the Privacy Act of 1974 (5 U.S.C. 552a), as amended, which requires the submission of new or altered systems reports.

Dated: May 4, 2010.

Mitchell S. Bryman,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

Requests should contain the individual's full name, Social Security Number (SSN), employee number, and/or station number.

RECORD ACCESS PROCEDURES:

Individuals seeking access to information about themselves contained in this system of records should address written inquiries to the Privacy Act Office, Headquarters, Defense Logistics Agency, ATTN: DGA, 8725 John J. Kingman Road, Suite 1644, Fort Belvoir, VA 22060–6221.

Individual should provide their full name, Social Security Number (SSN), employee number, and/or station number.

CONTESTING RECORD PROCEDURES:

The DLA rules for accessing records, for contesting contents, and appealing initial agency determinations are contained in 32 CFR part 323, or may be obtained from the Privacy Act Office, Headquarters, Defense Logistics Agency, ATTN: DGA, 875 John J. Kingman Road, Suite 1644, Fort Belvoir, VA 22060–6221.

RECORD SOURCE CATEGORIES:

Information is provided by the individual, and training and educational institutions.

EXEMPTIONS CLAIMED FOR THE SYSTEM:

None.

BILLING CODE 5001–06–P

DEPARTMENT OF DEFENSE

Office of the Secretary

[Docket ID: DoD–2010–OS–0061]

Privacy Act of 1974; Systems of Records

AGENCY: National Security Agency/Central Security Service, DoD.

ACTION: Notice to amend a system of records.

SUMMARY: The National Security Agency (NSA) is proposing to amend a systems of records notices in its inventory of record systems subject to the Privacy Act of 1974, (5 U.S.C. 552a), as amended.

DATES: This proposed action will be effective without further notice on June 7, 2010 unless comments are received which result in a contrary determination.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

* *Federal Rulemaking Portal: http://www.regulations.gov.* Follow the instructions for submitting comments.

* *Mail:* Federal Docket Management System Office, 1160 Defense Pentagon, Washington, DC 20301–1160.

Instructions: All submissions received must include the agency name and docket number for this **Federal Register**

document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the Internet at *http://www.regulations.gov* as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: Ms. Anne Hill at (301) 688–6527.

SUPPLEMENTARY INFORMATION: The National Security Agency's systems of notices subject to the Privacy Act of 1974 (5 U.S.C. 552a), as amended, have been published in the **Federal Register** and are available from the National Security Agency/Central Security Service, Freedom of Information Act and Privacy Act Office, 9800 Savage Road, Suite 6248, Ft. George G. Meade, MD 20755–6248.

The specific changes to the records system being amended are set forth below followed by the notice, as amended, published in its entirety. The proposed amendments are not within the purview of subsection (r) of the Privacy Act of 1974, (5 U.S.C. 552a), as amended, which requires the submission of a new or altered system report.

Dated: May 4, 2010.

Mitchell S. Bryman,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

GNSA 21

SYSTEM NAME:

NSA/CSS Morale, Welfare, and Recreation (MWR) and Non-appropriated Fund Instrumentality (NAFI) Files.

SYSTEM LOCATION:

National Security Agency/Central Security Service, Ft. George G. Meade, MD 20755–6000.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

Civilian DoD employees, non-appropriated fund instrumentality employees, employees of other Federal agencies or military departments, contractor employees, and dependents of these individuals, and personnel authorized to use DoD-sponsored MWR services and participate in NAFI sponsored activities.

CATEGORIES OF RECORDS IN THE SYSTEM:

Records include information on members, participants, patrons, and other authorized users to include name, address, phone number, Social Security Number (SSN), organization, correspondence; membership applications; special activity applications; accounts receivable records; loan information; dishonored check listings; and investigatory reports involving abuse of facilities.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

National Security Agency Act of 1959, Public Law 86–36 (50 U.S.C. 402 note), as amended; DoD Instruction 1015.08, DoD Civilian employee Morale, Welfare, and Recreation (MWR) Activities and Supporting Nonappropriated Fund Instrumentalities; DoD Instruction 1015.10, Military Morale, Welfare, and Recreation (MWR) Programs; NSA/CSS Policy 4–2, NSA/CSS Civilian Morale, Welfare, and Recreation Program; and E.O. 9397, as amended (SSN).

PURPOSE(S):

To develop MWR programs and NAFI to promote and provide a centrally managed, well-rounded MWR program to help ensure the mental and physical well being of its civilian and military personnel and to provide programs and resources through financial support from both appropriated and non-appropriated funds. Information will be used to maintain records necessary for the administration of MWR programs and NAFI.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

In addition to those disclosures generally permitted under 5 U.S.C. 552a(b) of the Privacy Act of 1974, these records contained therein may specifically be disclosed outside the DoD as a routine use pursuant to 5 U.S.C. 552a(b)(3) as follows:

The DoD 'Blanket Routine Uses' set forth at the beginning of the NSA/CSS' compilation of systems of records notices apply to this system.

POLICIES AND PRACTICES FOR STORING, RETRIEVING, ACCESSING, RETAINING, AND DISPOSING OF RECORDS IN THE SYSTEM:

STORAGE:

Paper records and on electronic storage media.

RETRIEVABILITY:

By name, organization (or affiliation), Social Security Number (SSN), home address and phone number, and subject matter.

SAFEGUARDS:

The NSA/CSS Fort Meade facility is secured by a series of guarded pedestrian gates and checkpoints. Access to the facility is limited to security cleared personnel and escorted visitors only. Within the facility itself,

access to paper and computer printouts is controlled by limited-access facilities and lockable containers. Access to electronic mediums is controlled by computer password protection.

Access to information is limited to those individuals specifically authorized and granted access by NSA/CSS regulations. For records on the computer system, access is controlled by passwords and limited to authorized personnel only.

RETENTION AND DISPOSAL:

Records are maintained for 6 years and 3 months, and then destroyed by pulping, burning, shredding, or erasure of magnetic media.

SYSTEM MANAGER(S) AND ADDRESS:

Associate Director for Installations and Logistics, National Security Agency/Central Security Service, 9800 Savage Road, Ft. George G. Meade, MD 20755–6000.

NOTIFICATION PROCEDURE:

Individuals seeking to determine whether information about themselves is contained in this system should address written inquiries to the National Security Agency/Central Security Service, Freedom of Information Act/Privacy Act Office, 9800 Savage Road, Ft. George G. Meade, MD 20755–6000.

Written inquiries should contain the individual's full name, Social Security Number (SSN) and mailing address.

RECORD ACCESS PROCEDURES:

Individuals seeking access to information about themselves contained in this system should address written inquiries to the National Security Agency/Central Security Service, Freedom of Information Act/Privacy Act Office, 9800 Savage Road, Ft. George G. Meade, MD 20755–6000.

Written inquiries should contain the individual's full name, Social Security Number (SSN) and mailing address.

CONTESTING RECORD PROCEDURES:

The NSA/CSS rules for contesting contents and appealing initial determinations are published at 32 CFR part 322 or may be obtained from the system manager.

RECORD SOURCE CATEGORIES:

Individual patrons/users of a service, and activity record.

EXEMPTIONS CLAIMED FOR THE SYSTEM:

None.

[FR Doc. 2010–10843 Filed 5–6–10; 8:45 am]

BILLING CODE 5001–06–P

DEPARTMENT OF DEFENSE

Department of the Army; Corps of Engineers

Intent To Prepare an Environmental Impact Statement for Northwest Aggregates' Previously Authorized Replacement of an Existing Barge Loading Facility in East Passage of Puget Sound on the Southeast Shoreline of Maury Island, King County, WA

AGENCY: Department of the Army, U.S. Army Corps of Engineers, DoD.

ACTION: Notice of intent.

SUMMARY: The U.S. Army Corps of Engineers (Corps) Seattle District is preparing an Environmental Impact Statement (EIS) to analyze the environmental effects of replacing an existing dock and resuming sand and gravel mining operations. The Corps issued a permit to Northwest Aggregates for the dock replacement project on June 2, 2008, under Section 10 of the Rivers and Harbors Act and Section 404 of the Clean Water Act. Construction of the new dock began in December 2008 and approximately 49% of the construction was completed as of January 2009. The Corps has been directed by the U.S. District Court to complete an EIS on the project. The EIS will include additional analysis of potential impacts of the project on the marine environment, including Chinook salmon, Southern Resident Killer whales, and forage fish, additional analysis and evaluation of the no action and off-site alternatives, and additional analysis of cumulative impacts associated with the permit project.

DATES: Scoping meetings for this project will be held on (*see* **SUPPLEMENTARY INFORMATION** section).

ADDRESSES: The scoping meeting locations are (*see* **SUPPLEMENTARY INFORMATION** section).

FOR FURTHER INFORMATION CONTACT: Written comments on the scope of the EIS or requests for information should be addressed to Mrs. Olivia Romano, Project Manager, U.S. Army Corps of Engineers, Seattle Regulatory Branch, 4735 E. Marginal Way South, Seattle, Washington 98134; (206) 764–6960 or via e-mail to *olivia.h.romano@usace.army.mil*.

SUPPLEMENTARY INFORMATION: The EIS process begins with the publication of this Notice of Intent. The scoping period will continue for 30 days after publication of this Notice of Intent and will close on June 7, 2010. During the scoping period the Corps invites Federal agencies, State and local governments, Native American Tribes, and the public to participate in the scoping process either by providing written comments or by attending the public scoping meetings scheduled for at the time and location indicated.

1. May 17 from 6 p.m. to 8:30 p.m., Seattle, Washington. An open house will be held as part of the meeting from 6 p.m. to 7 p.m. Following a presentation on the project the open house will continue from 7:30 p.m. to 8:30 p.m. Located at Federal Center South, 4735 East Marginal Way South, Seattle, WA.

2. May 18 from 6 p.m. to 8:30 p.m. Vashon Island, Washington. An open house will be held as part of the meeting from 6 p.m. to 7 p.m. Following a presentation on the project the open house will continue from 7:30 p.m. to 8:30 p.m. Located at Vashon High School Commons, 20120 Vashon Highway, SW, Vashon Island, WA.

Written comments will be considered in the preparation of the Draft EIS. Comments postmarked or received by e-mail after the specified date will be considered to the extent feasible.

The purpose of the scoping meeting is to assist the Corps in defining issues, public concerns, alternatives, and the depth to which they will be evaluated in the EIS. The Corps has prepared a scoping announcement to familiarize agencies, the public and interested organizations with the Northwest Aggregates dock replacement project and potential environmental issues including completed construction work, the remaining construct work, and the operation of the dock. Copies of the scoping announcement will be available at the public meeting or can be requested by contacting the Corps Seattle District as described above. Corps' representatives will answer scope-related questions and accept comments.

The EIS will be prepared according to the Corps' procedures for implementing the National Environmental Policy Act (NEPA) of 1969, as amended, 42 U.S.C. 4232(2)(c), and consistent with the Corps' policy to facilitate public understanding and review of agency proposals. As part of the EIS process a full range of reasonable alternatives will be evaluated. Development of the Draft EIS will begin after the close of the public scoping period. The Draft EIS is expected to be available for public review in the Fall 2010.

Michelle Walker,

Chief, Regulatory Branch, Seattle District.

BILLING CODE 3720–58–P

DEPARTMENT OF DEFENSE

Department of the Army, Corps of Engineers

Notice of Intent To Prepare a Draft Environmental Impact Statement for a Permit Application for the Proposed Gregory Canyon Landfill Project, in San Diego County, CA

AGENCY: U.S. Army Corps of Engineers, Los Angeles District, DoD.

ACTION: Notice of Intent (NOI).

SUMMARY: The U.S. Army Corps of Engineers, Los Angeles District (Corps) is examining the environmental consequences associated with the proposed construction, operation, and closure of a new Class III landfill in northern San Diego County, in connection with Gregory Canyon, Ltd.'s application for a Department of the Army permit under Section 404 of the Clean Water Act to construct the proposed Gregory Canyon Landfill and associated facilities, which would discharge fill materials into approximately 2 acres of waters of the U.S. (less than 1 acre would be affected by permanent discharges of fill) in the San Luis Rey River to construct a bridge and in Gregory Canyon to construct the landfill liner, stability berm, and ancillary facilities.

The primary federal environmental concerns are the proposed discharges of fill material into waters of the U.S. and the potential for significant adverse environmental effects resulting from such in-water activities. Therefore, to address these concerns in accordance with the National Environmental Policy Act (NEPA), the Corps is requiring preparation of an Environmental Impact Statement (EIS) prior to consideration of any permit action. The action must comply with the Section 404(b)(1) Guidelines (40 CFR part 230) and not be contrary to the public interest to be granted a Corps permit. The Corps may ultimately make a determination to permit or deny the above project, or permit or deny modified versions of the above project.

FOR FURTHER INFORMATION CONTACT: Questions about the proposed action or the scoping of the Draft EIS can be answered by Dr. Spencer MacNeil, Corps Senior Project Manager, at (805) 585–2152. Comments regarding scoping of the Draft EIS shall be addressed to: U.S. Army Corps of Engineers, Los Angeles District, Regulatory Division, Ventura Field Office, ATTN: CESPL–RG–N–2010–00354–SDM, 2151 Alessandro Drive, Suite 110, Ventura, California 93001, or *spencer.d.macneil@usace.army.mil.* Comment letters sent via electronic mail shall include the commenter's physical mailing address and the project title "Gregory Canyon Landfill Project" shall be included in the electronic mail's subject line.

SUPPLEMENTARY INFORMATION:

1. *Project Site and Background Information:* The proposed project is located in northern San Diego County on State Route 76 (SR 76), about three miles east of Interstate 15. The project site encompasses approximately 1,770 acres. There are three large, regional easements that cross the property: SR 76, a San Diego Gas & Electric (SDG&E) transmission corridor, and San Diego Pipelines Nos. 1 and 2 (First San Diego Aqueduct). In addition, the San Luis Rey River traverses the site in an east-west direction. A portion of Gregory Mountain is located on the project site; this mountain is considered culturally sacred by some Native Americans. The Gregory Canyon Landfill Project (proposed project) consists of the construction, operation, and closure of the proposed Gregory Canyon Landfill. The proposed landfill and its associated facilities would be located on the south side of SR 76 and would occupy approximately 308 acres of the site. The majority of the remaining property (a minimum of 1,313 acres) would be dedicated as permanent open space for long-term preservation of sensitive habitat and species.

The property is located adjacent to residential, agricultural, and Native American properties. A portion of the site was previously occupied by two dairies, which have ceased operation.

An Environmental Impact Report (EIR) was prepared for the project and was certified in 2003 and 2007 by the Director of the San Diego County Department of Environmental Health (DEH). Subsequently, in response to a court order for additional information regarding the identified water supply, an Addendum to the certified 2007 EIR was prepared. The 2008 Addendum was adopted by the Director of San Diego County DEH. The Court ruled that the Addendum was the appropriate document and that the issue was adequately addressed. A second Addendum was prepared to analyze a change in the provision of water for the project. This Addendum was adopted by the Director of the San Diego County DEH in January 2010.

2. *Proposed Action:* Gregory Canyon, Ltd., as project applicant, proposes to construct, operate, and close a Class III landfill on the project site. The construction activities would discharge fill materials into approximately 2 acres of waters of the U.S. (less than 1 acre would be affected by permanent discharges of fill) associated with constructing a bridge over the San Luis Rey River and with constructing the landfill liner, stability berm, and ancillary facilities in Gregory Canyon. The proposed landfill project would have a maximum daily intake of 5,000 tons and an annual intake of one million tons. The landfill would accept solid waste disposal for approximately 30 years. The landfill components would occupy approximately 308 acres of an approximately 1,770-acre site. All of the construction associated with the landfill would be located to the south of SR 76.

The landfill footprint, which would be constructed and filled in phases, would be approximately 197 acres (including relocated SDG&E transmission towers, see below) and would be located within Gregory Canyon. The landfill prism would consist of a double composite liner as well as a leachate collection and removal system with a protective cover. At times, periodic construction to open the next landfill cell would occur simultaneously with acceptance of solid waste.

Two borrow/stockpile areas, which would be used to store or excavate material for daily operation of the landfill, would be provided to the west of the landfill footprint. Borrow/Stockpile Area A, which would be about 22 acres in size, would be located adjacent to the western property boundary. A haul road would connect Borrow/Stockpile Area A with the landfill footprint. The haul road would be 20 feet wide and would run along the base of the adjacent hillside with turn-out locations for heavy equipment. Borrow/Stockpile Area B, which would be about 65 acres in size, would be located immediately to the west of the southern portion of the landfill footprint.

The proposed project includes the construction of an access road and bridge that would cross the San Luis Rey River, which runs through the property. The approximately 35.5 foot wide bridge would be approximately 640 feet in length, with five sets of piles. The proposed project includes modifications to SR 76 at the entrance. The modifications would widen the roadway to 52 to 64 feet to provide for an eastbound deceleration lane and a westbound left turn lane and would realign approximately 1,700 linear feet of roadway to the south of the existing alignment. The modifications are expected to improve sight distance and

facilitate truck movements at the access road on SR76.

The access road would lead to the ancillary facilities area just north of the landfill footprint. The ancillary facilities area would include booth and fee scale, an administration building, maintenance building, and a recyclable drop-off area. Two 10,000-gallon leachate- holding tanks, a 20,000-gallon water storage tank, a 20,000-gallon recycled water tank, and a 50 gallon per minute reverse osmosis system would be located in the ancillary facilities area.

In addition, the proposed project would include the relocation of SDG&E transmission towers located on the slope of Gregory Mountain and an option to relocate approximately 3,200 linear feet of San Diego County Water Authority Pipelines 1 and 2, which traverse the property. The proposed project would include the dedication of a minimum of 1,313 acres of the site as permanent open space for long-term preservation of sensitive habitat and species.

Through the EIS process, feasible environmental mitigation measures will be developed to reduce potential environmental impacts. Measures to reduce construction impacts would be implemented through construction contract specifications and permit requirements.

3. *Issues:* There are several potential environmental issues that will be addressed in the Draft EIS. Additional issues may be identified during the scoping process. Issues initially identified for evaluation in the Draft EIS as potentially significant include:

1. Visual impacts from the landform alterations;

2. air quality impacts from construction, operation, increased vehicle emissions;

3. biological impacts to habitat and wildlife;

4. cultural resources (ethnographic resources);

5. hydrogeology, surface hydrology and water quality from disturbance of sediment, operations, and runoff from development;

6. noise from increased traffic associated with operations;

7. traffic and transportation; and

8. cumulative impacts from past, present, and reasonably foreseeable future projects.

4. *Alternatives:* Several alternatives are being considered for the proposed action. The Draft EIS will include a co-equal analysis of the No Action and project alternatives considered. Alternatives were considered through the state environmental review process and an associated EIR that included a no project alternative; two on-site landfill scenarios; an on-site prescriptive design alternative with a single liner; two off-site North San Diego County locations; and alternatives to reduce the need for a landfill. The EIS will likely consider some of these alternatives. The EIS will include and evaluate a No Action Alternative that would not implement any of the proposed project elements and would not involve any discharge of dredged or fill material into waters of the U.S., and therefore, would not require a Corps permit. These alternatives will be further formulated and developed during the scoping process. Additional alternatives that may be developed during scoping will also be considered in the Draft EIS.

5. *Scoping Process:* The Corps will conduct a public scoping meeting for the proposed Gregory Canyon Landfill Project Draft EIS to receive public comment and to assess public concerns regarding the appropriate scope and preparation of the Draft EIS. Participation in the public meeting by federal, state, and local agencies and other interested organizations and persons is encouraged. The meeting will be held on June 3, 2010 beginning at 6:00 PM (PST) at the City of San Marcos Senior Center (Horizon Room), 111 Richmar Avenue, San Marcos, CA 92069. Comments on the proposed action, alternatives, or any additional concerns should be submitted in writing. Written comment letters will be accepted until June 18, 2010.

The Corps also anticipates formally consulting with the U.S. Fish and Wildlife Service under Section 7 of the Endangered Species Act and with the State Historic Preservation Officer under Section 106 of the National Historic Preservation Act.

6. *Availability of the Draft EIS:* The Draft EIS is expected to be published and circulated by mid-2011, and a public meeting will be held after its publication.

Dated: April 29, 2010.

Mark D. Cohen,

Deputy Chief, Regulatory Division, Corps of Engineers.

BILLING CODE 3720–58–P

DEPARTMENT OF DEFENSE

Department of the Air Force

[Docket ID: USAF–2010–0015]

Privacy Act of 1974; System of Records

AGENCY: Department of the Air Force, DoD.

ACTION: Notice to add a system of records.

SUMMARY: The Department of the Air Force proposes to add a system of records to its inventory of record systems subject to the Privacy Act of 1974 (5 U.S.C. 552a), as amended.

DATES: The proposed action will be effective on June 7, 2010 unless comments are received that would result in a contrary determination.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

- *Federal Rulemaking Portal: http://www.regulations.gov*. Follow the instructions for submitting comments.
- *Mail:* Federal Docket Management System Office, 1160 Defense Pentagon, Washington, DC 20301–1160.

Instructions: All submissions received must include the agency name and docket number for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the Internet at *http://www.regulations.gov* as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: Mr. Charles J. Shedrick, 703–696–6488.

SUPPLEMENTARY INFORMATION: The Department of the Air Force's notices for systems of records subject to the Privacy Act of 1974 (5 U.S.C. 552a), as amended, have been published in the **Federal Register** and are available from the Department of the Air Force Privacy Office, Air Force Privacy Act Office, Office of Warfighting Integration and Chief Information officer, ATTN: SAF/XCPPI, 1800 Air Force Pentagon, Washington DC 20330–1800.

The proposed systems report, as required by 5 U.S.C. 552a(r) of the Privacy Act, was submitted on April 27, 2010, to the House Committee on Oversight and Government Reform, the Senate Committee on Homeland Security and Governmental Affairs, and the Office of Management and Budget (OMB) pursuant to paragraph 4c of Appendix I to OMB Circular No. A–130, "Federal Agency Responsibilities for Maintaining Records About Individuals," dated February 8, 1996 (February 20, 1996; 61 FR 6427).

Dated: May 4, 2010.

Mitchell S. Bryman,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

F031 AFMC C

SYSTEM NAME:

Automated Installation Entry Control System/Visitor Center Enrollment System.

SYSTEM LOCATION:

Barnes Air National Guard Base, 104th Security Forces Squadron Attn: AIECS POC, 175 Falcon Drive, Building 31, MA 01085–1482.

MacDill Air Force Base, 6th Security Forces Squadron, Attn: AIECS POC, 2505 SOCOM Memorial Hwy., Building 203, FL 33621–1011.

Test Site C–3, Eglin Air Force Base, 46th Range Support Squadron (RANSS), Attn: AIECS POC, 308 West D Avenue, Suite 203, FL 32542–5418.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

Active Duty, National Guard, and Reserve Personnel; government employees, contractors, retirees, dependents, visitors, and foreign personnel assigned to military installations.

CATEGORIES OF RECORDS IN THE SYSTEM:

Badge and vehicle control records that at a minimum include: Name, Social Security Number (SSN), Electronic Data Interchange Personal Identifier (EDIPI), home address, telephone number, citizenship, grade or rank, date of birth, place of birth, gender, employment information, military address, license plate number, driver's license number, vehicle make, model, year, color, driver's identification credential barcode data, and suspension, revocation, and debarment status.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

10 U.S.C. 8013, Secretary of the Air Force, Powers and Duties; Department of Defense 5200.08–R Physical Security Program; Department of Defense Air Force Instruction (AFI) 31–203, Security Forces Management Information System (SFMIS); and Directive Type Memorandum 09–012, Interim Policy Guidance for DoD Physical Access Control; and E.O. 9397 (SSN), as amended.

PURPOSE(S):

The Automated Installation Entry Control System (AIECS) is a law enforcement tool designed to be installed at military installation vehicle entry gates. The system scans information off of DoD issued credentials and system-produced visitor passes presented to a lane-side barcode scanner in order to enhance security and vehicle throughput.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USE:

In addition to those disclosures generally permitted under 5 U.S.C. 552A(b) of the Privacy Act of 1974, these records contained therein may be specifically disclosed outside the Department of Defense as a routine use pursuant to 5 U.S.C. 552a(b)(3) as follows:

The DoD 'Blanket Routine Uses' published at the beginning of the Air Force's compilation of systems of records notices apply to this system.

POLICIES AND PRACTICES FOR STORING, RETRIEVING, ACCESSING, RETAINING, AND DISPOSING OF RECORDS IN THE SYSTEM:

STORAGE:

Electronic storage media.

RETRIEVABILITY:

Data is retrieved by querying a driver's name, Social Security Number (SSN), Electronic Data Interchange Personal Identifier (EDIPI), or driver's identification credential barcode.

SAFEGUARDS:

Records are accessed by persons responsible for servicing the system in performance of their official duties. Individuals are properly screened and cleared for need-to-know. Records are stored in locked cabinets, locked rooms, or buildings with controlled entry. Computer records are controlled by computer system software.

RETENTION AND DISPOSAL:

Computer records are destroyed by erasing, deleting, or overwriting. Personnel records are retained indefinitely in line with law enforcement purposes. Audit records are retained for a period of three years, after which they are deleted from the system.

SYSTEM MANAGER(S) AND ADDRESS:

AIECS Program Manager, 642d ELSS, 642d Electronic Systems Squadron, 45 Arnold St., Bldg. 1600, Hanscom AFB, MA 01731–1600.

Barnes ANGB, 104th Security Forces Squadron, Attn: AIECS POC, 104th SFS, 175 Falcon Drive, Building 31, Barnes ANGB, Westfield, MA 01085–1482.

MacDill AFB, 6th SFS, Attn: AIECS POC, 6th SFS2505 SOCOM Memorial Hwy., Building 203, MacDill AFB, FL 33621–1011.

Test Site C–3 Eglin AFB, 46th RANSS, Attn: AIECS POC, Test Site C–3 308 West D Avenue, Suite 203, Eglin AFB, FL 32542–5418.

NOTIFICATION PROCEDURES:

Individuals seeking to determine whether information about themselves is contained in this system of records should address inquiries to their local Base Security Forces office.

Requests must contain full name, Social Security Number (SSN), and current mailing address.

Barnes ANGB, 104th SFS, Attn: AIECS POC, 104th SFS/SFM175 Falcon Drive, Building 31, Barnes ANGB, Westfield, MA 01085–1482.

MacDill AFB, 6th SFS, Attn: AIECS POC, 6th SFS/SFO 2505 SOCOM Memorial Hwy., Building 203, MacDill AFB, FL 33621–1011.

Test Site C–3 Eglin AFB, 46th RANSS, Attn: AIECS POC, Test Site C–3308 West D Avenue, Suite 203, Eglin AFB, FL 32542–5418.

RECORD ACCESS PROCEDURES:

Individuals seeking to access information about themselves contained in this system of records should address written inquiries to their local Base Security Forces office.

Requests must contain full name, Social Security Number (SSN), and current mailing address.

Barnes ANGB, 104th SFS, Attn: AIECS POC, 104th SFS/SFM175 Falcon Drive, Building 31, Barnes ANGB, Westfield, MA 01085–1482.

MacDill AFB, 6th SFS, Attn: AIECS POC, 6th SFS/SFO 2505 SOCOM Memorial Hwy., Building 203, MacDill AFB, FL 33621–1011.

Test Site C–3 Eglin AFB, 46th RANSS, Attn: AIECS POC, Test Site C–3308 West D Avenue, Suite 203, Eglin AFB, FL 32542–5418.

CONTESTING RECORD PROCEDURES:

The Air Force rules for accessing records, and for contesting contents and appealing initial agency determinations are published in Air Force Instruction 33–332; 32 CFR part 806b; or may be obtained from the system manager.

RECORD SOURCE CATEGORIES:

Information obtained from individuals and from Defense Enrollment Eligibility Reporting System (DEERS) and Security Forces Management Information System (SFMIS).

EXEMPTIONS CLAIMED FOR THE SYSTEM:

None.

BILLING CODE 5001–06–P

DEPARTMENT OF EDUCATION

Notice Extending the Deadline Date for Transmittal of Applications and the Deadline Date for Intergovernmental Review for the Migrant Education Program (MEP) Consortium Incentive Grants Program for Fiscal Year (FY) 2010

AGENCY: Office of Elementary and Secondary Education, Department of Education.

ACTION: Notice Extending the Deadline Date for Transmittal of Applications and the Deadline Date for Intergovernmental Review for the Migrant Education Program (MEP) Consortium Incentive Grants Program for Fiscal Year (FY) 2010.

Catalog of Federal Domestic Assistance (CFDA) Number: 84.144F.

SUMMARY: On April 1, 2010, we published in the **Federal Register** (75 FR 16446) a notice inviting applications for new awards for FY 2010 for the MEP Consortium Incentive Grants program. That notice specified a deadline date of May 7, 2010, for the submission of applications. Since publication, however, we have learned that certain State educational agencies need additional time to receive approval from their State legislatures to apply for the grant. Therefore, in order to give applicants adequate time to receive that approval to apply and to submit their application packages, we are changing the deadline for the submission of applications to June 4, 2010. As a result of this extension of the deadline for submissions of applications, we are also extending the deadline for intergovernmental review to August 4, 2010. Applicants must refer to the April 1, 2010 Application Notice for all other requirements concerning this program.

DATES: *Deadline for Transmittal of MEP consortium Incentive Grants Program Applications:* June 4, 2010.

Deadline for Intergovernmental Review: August 4, 2010.

FOR FURTHER INFORMATION CONTACT: Michelle Moreno, U.S. Department of Education, Office of Migrant Education, 400 Maryland Avenue, SW., room 3E257, Washington, DC 20202–6135. Telephone: (202) 401–2928, or by e-mail: *michelle.moreno@ed.gov*.

If you use a telecommunications device for the deaf (TDD), call the Federal Relay Service (FRS), toll free, at 1–800–877–8339.

SUPPLEMENTARY INFORMATION: *Accessible Format:* Individuals with disabilities can obtain this document in an accessible format (e.g., braille, large print, audiotape, or computer diskette) on request to the program contact person listed under **FOR FURTHER INFORMATION CONTACT** in this notice.

Electronic Access to This Document: You can view this document, as well as all other documents of this Department published in the **Federal Register,** in text or Adobe Portable Document Format (PDF) on the Internet at the following site: *http://www.ed.gov/news/fedregister.* To use PDF you must have Adobe Acrobat Reader, which is available free at this site.

You may also view this document in text at the following site: *http://www.ed.gov/about/offices/list/oese/ome/index.html.*

Note: The official version of this document is the document published in the **Federal Register.** Free Internet access to the official edition of the **Federal Register** and the Code of Federal Regulations is available on GPO Access at: *http://www.gpoaccess.gov/nara/index.html.*

Program Authority: 20 U.S.C. 6398(d).

Dated: May 4, 2010.

Thelma Meléndez de Santa Ana,

Assistant Secretary for Elementary and Secondary Education.

[FR Doc. 2010–10870 Filed 5–6–10; 8:45 am]

BILLING CODE 4000–01–P

DEPARTMENT OF ENERGY

Energy Information Administration

Agency Information Collection Activities: Proposed Collection; Comment Request

AGENCY: Energy Information Administration (EIA), Department of Energy (DOE).

ACTION: Agency Information Collection Activities: Proposed Collection; Comment Request.

SUMMARY: The EIA is soliciting comments on the proposed revisions and three-year extension to the following Petroleum Supply Forms: EIA–800, "Weekly Refinery and Fractionator Report," EIA–802, "Weekly Product Pipeline Report," EIA–803, "Weekly Crude Oil Stocks Report," EIA–804, "Weekly Imports Report," EIA–805, "Weekly Terminal Blenders Report," EIA–809, "Weekly Oxygenate Report," EIA–810, "Monthly Refinery Report," EIA–812, "Monthly Product Pipeline Report," EIA–813, "Monthly Crude Oil Report," EIA–814, "Monthly Imports Report," EIA–815, "Monthly Terminal and Blender Report," EIA–816, "Monthly Natural Gas Liquids Report," EIA–817, "Monthly Tanker and Barge Movement Report," EIA–819, "Monthly Oxygenate Report," and EIA–820, "Annual Refinery Report."

DATES: Comments must be filed by July 6, 2010. If you anticipate difficulty in submitting comments within that period, contact the person listed below as soon as possible.

ADDRESSES: Send comments to Sylvia Norris. To ensure receipt of the comments by the due date, submission by FAX (202–586–1076) or e-mail (*sylvia.norris@eia.doe.gov*) is recommended. The mailing address is Petroleum Division, EI–42, Forrestal Building, U.S. Department of Energy, 1000 Independence Ave., SW., Washington, DC 20585. Alternatively, Sylvia Norris may be contacted by telephone at 202–586–6106.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of any forms and instructions should be directed to Sylvia Norris at the address listed above. The proposed forms and changes in definitions and instructions are also available on the Internet at: *http://www.eia.doe.gov/oil_gas/petroleum/survey_forms/pet_survey_forms.html.*

SUPPLEMENTARY INFORMATION:

I. Background

The Federal Energy Administration Act of 1974 (15 U.S.C. 761 *et seq.*) and the DOE Organization Act (42 U.S.C. 7101 *et seq.*) require the EIA to carry out a centralized, comprehensive, and unified energy information program. This program collects, evaluates, assembles, analyzes, and disseminates information on energy resource reserves, production, demand, technology, and related economic and statistical information. This information is used to assess the adequacy of energy resources to meet near and longer term domestic demands and to promote sound policymaking, efficient markets, and public understanding of energy and its interaction with the economy and the environment.

The EIA, as part of its effort to comply with the Paperwork Reduction Act of 1995 (44 U.S.C. 3501, *et seq.*), provides the general public and other Federal agencies with opportunities to comment on collections of energy information conducted by or in conjunction with the EIA. Also, the EIA will later seek approval for this collection by the Office of Management and Budget (OMB) under Section 3507(a) of the Paperwork Reduction Act of 1995.

The weekly petroleum supply surveys (Forms EIA–800, EIA–802, EIA–803, EIA–804, EIA–805 and EIA–809) are designed to highlight information on petroleum refinery operations, inventory levels, and imports of selected petroleum products in a timely manner. The information appears in the publications listed below and is also available electronically through the Internet at *http://www.eia.doe.gov/*.

Publications: Internet only publications are the *Weekly Petroleum Status Report, Short-Term Energy Outlook,* and *This Week in Petroleum.*

The monthly petroleum supply surveys (Forms EIA–810, EIA–812, EIA–813, EIA–814, EIA–815, EIA–816, EIA–817, and EIA–819) are designed to provide statistically reliable and comprehensive information not available from other sources to EIA, other Federal agencies, and the private sector for use in forecasting, policy making, planning, and analysis activities. The information appears in the publications listed below and is also available electronically through the Internet at *http://www.eia.doe.gov/*.

Publications: Internet only publications are the *Petroleum Supply Monthly, Petroleum Supply Annual,* and *Short-Term Energy Outlook.* Hardcopy and Internet publications are the *Monthly Energy Review* (DOE/EIA–0035), the *Annual Energy Review* (DOE/EIA–0384), and the *Annual Energy Outlook* (DOE/EIA–0383).

The annual petroleum supply survey (Form EIA–820) provides data on capacities, fuels consumed, natural gas consumed as hydrogen feedstock, crude oil receipts by method of transportation, and storage capacity of operating and idle petroleum refineries (including new refineries under construction), refineries shutdown with useable storage capacity, and refineries shutdown during the previous year. The information appears in the *Refinery Capacity Report* available electronically through the Internet at *http://www.eia.doe.gov/*.

Please refer to the proposed forms and instructions for more information about the purpose, who must report, when to report, where to submit, the elements to be reported, detailed instructions, provisions for confidentiality, and uses (including possible nonstatistical uses) of the information. For instructions on obtaining materials, *see* the **FOR FURTHER INFORMATION CONTACT** section.

II. Current Actions

The EIA proposes the following changes: For the Form EIA–801 (Weekly Bulk Terminal Report)—Discontinue collection of this report. All bulk terminal and blender reporting will be reported by site on Form EIA–805 (Weekly Bulk Terminal and Blender Report).

For the Form EIA–805 (Weekly Bulk Terminal and Blender Report)—Collect inventories for natural gas plant liquids and liquefied refinery gases, propane (including propylene), propylene (nonfuel use), fuel ethanol, finished motor gasoline (reformulated blended with fuel ethanol, reformulated other, conventional blended with fuel ethanol (Ed55 and lower, greater than Ed55), and conventional other), motor gasoline blending components (RBOB, CBOB, GTAB and all other), kerosene-type jet fuel, kerosene, distillate fuel oil (15 ppm sulfur and under, greater than 15 ppm to 500 ppm sulfur (incl), greater than 500 ppm sulfur), residual fuel oil and asphalt and road oil. Collect inputs and production for fuel ethanol, jet fuel, distillate fuel oil (15 ppm sulfur and under, greater than 15 ppm to 500 ppm sulfur (incl), greater than 500 ppm sulfur), and residual fuel oil.

For the form EIA–820 (Annual Refinery Report)—Discontinue collection of storage capacity on an annual basis. This information is now being collected semi-annually (March and September) on Form EIA–810, "Monthly Refinery Report."

III. Request for Comments

Prospective respondents and other interested parties should comment on the actions discussed in item II. The following guidelines are provided to assist in the preparation of comments. Please indicate to which form(s) your comments apply.

As a Potential Respondent to the Request for Information

A. Is the proposed collection of information necessary for the proper performance of the functions of the agency and does the information have practical utility?

B. What actions could be taken to help ensure and maximize the quality, objectivity, utility, and integrity of the information to be collected?

C. Are the instructions and definitions clear and sufficient? If not, which instructions need clarification?

D. Can the information be submitted by the respondent by the due date?

E. Public reporting burden for this collection is estimated to average:

Estimated hours per response: EIA–800, "Weekly Refinery and Fractionator Report,"—1.58 hours; EIA–802, "Weekly Product Pipeline Report,"—0.95 hours; EIA–803, "Weekly Crude Oil Stocks Report,"—0.50 hours; EIA–804, "Weekly Imports Report,"—1.75 hours; EIA–805, "Weekly Terminal Blenders Report,"—2.30 hours; EIA–809, "Weekly Oxygenate Report,"—1.00 hours; EIA–810, "Monthly Refinery Report,"—6.00 hours; EIA–812, "Monthly Product Pipeline Report,"—4.30 hours; EIA–813, "Monthly Crude Oil Report,"—2.50 hours; EIA–814, "Monthly Imports Report,"—2.55 hours; EIA–815, "Monthly Terminal Blenders Report,"—5.00 hours; EIA–816, "Monthly Natural Gas Liquids Report,"—0.95 hours; EIA–817, "Monthly Tanker and Barge Movement Report,"—2.25 hours; EIA–819, "Monthly Oxygenate Report,"—1.75 hours; and EIA–820, "Annual Refinery Report"—2.00 hours. The estimated burden includes the total time necessary to provide the requested information. In your opinion, how accurate is this estimate?

F. The agency estimates that the only cost to a respondent is for the time it will take to complete the collection. Will a respondent incur any start-up costs for reporting, or any recurring annual costs for operation, maintenance, and purchase of services associated with the information collection?

G. What additional actions could be taken to minimize the burden of this collection of information? Such actions may involve the use of automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

H. Does any other Federal, State, or local agency collect similar information? If so, specify the agency, the data element(s), and the methods of collection.

As a Potential User of the Information To Be Collected

A. Is the proposed collection of information necessary for the proper performance of the functions of the agency and does the information have practical utility?

B. What actions could be taken to help ensure and maximize the quality, objectivity, utility, and integrity of the information disseminated?

C. Is the information useful at the levels of detail to be collected?

D. For what purpose(s) would the information be used? Be specific.

E. Are there alternate sources for the information and are they useful? If so, what are their weaknesses and/or strengths?

Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of the forms. They also will become a matter of public record.

Statutory Authority: Section 13(b) of the Federal Energy Administration Act of 1974, Pub. L. 93–275, codified at 15 U.S.C. 772(b).

Issued in Washington, DC, on April 15, 2010.

Stephanie Brown,

Director, Statistics and Methods Group, Energy Information Administration.

BILLING CODE 6450–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

Combined Notice of Filings #1

April 29, 2010.

Take notice that the Commission received the following electric corporate filings:

Docket Numbers: EC10–61–000.

Applicants: AER NY-Gen, LLC, AG-Energy, LP, Eagle Creek Hydro Power, LLC, Eagle Creek Water Resources, LLC, Eagle Creek Land Resources, LLC, Eagle Creek Ogdensburg (LP), LLC, Eagle Creek Ogdensburg (GP), LLC, Hudson M3, LLC.

Description: Application for Authorization for Disposition of Jurisdictional Facilities, Request for Confidential Treatment, and Request for Expedited Consideration of AG-Energy, L.P., *et. al.*

Filed Date: 04/28/2010.

Accession Number: 20100428–5189.

Comment Date: 5 p.m. Eastern Time on Wednesday, May 19, 2010.

Docket Numbers: EC10–62–000.

Applicants: Meadow Lake Wind Farm II LLC.

Description: Application for authorization for disposition of jurisdictional facilities and request for expedited action of Meadow Lake Wind Farm II LLC.

Filed Date: 04/28/2010.

Accession Number: 20100428–5218.

Comment Date: 5 p.m. Eastern Time on Wednesday, May 19, 2010.

Take notice that the Commission received the following electric rate filings:

Docket Numbers: ER01–1099–014; ER02–1406–015; ER99–2928–011.

Applicants: Cleco Power LLC; Acadia Power Partners, LLC; Cleco Evangeline LLC.

Description: Cleco Power LLC *et. al.* submits amendment to their notice of non-material change in status and include the information requested by Commission Staff as Exhibit I.

Filed Date: 04/28/2010.

Accession Number: 20100429–0039.

Comment Date: 5 p.m. Eastern Time on Wednesday, May 19, 2010.

Docket Numbers: ER08–1113–007.

Applicants: California Independent System Operator Corporation.

Description: California Independent System Operator Corporation submits 4/1/2010 Order on Compliance filing on the proceeding.

Filed Date: 04/28/2010.

Accession Number: 20100428–0217.

Comment Date: 5 p.m. Eastern Time on Wednesday, May 19, 2010.

Docket Numbers: ER10–842–001.

Applicants: Energy Plus Holdings LLC.

Description: Energy Plus Holdings LLC submits substitute FERC Electric Tariff Volume 1, which adds information to the footer of the tariff.

Filed Date: 04/28/2010.

Accession Number: 20100428–0213.

Comment Date: 5 p.m. Eastern Time on Wednesday, May 12, 2010.

Docket Numbers: ER10–1114–000.

Applicants: Illinois Power Company.

Description: Illinois Power Company submits tariff filing per 35.12: Illinois Power General Tariff, to be effective 4/29/2010.

Filed Date: 04/29/2010.

Accession Number: 20100429–5000.

Comment Date: 5 p.m. Eastern Time on Thursday, May 20, 2010.

Docket Numbers: ER10–1115–000.

Applicants: PECO Energy Company.

Description: PECO Energy Co submits the Transmission Interconnection Agreement with Public Service Electric and Gas Co.

Filed Date: 04/28/2010.

Accession Number: 20100429–0204.

Comment Date: 5 p.m. Eastern Time on Wednesday, May 19, 2010.

Docket Numbers: ER10–1116–000.

Applicants: PECO Energy Company.

Description: Public Service Electric and Gas Company submits Notices of Cancellation of two agreements on file with FERC *etc.*

Filed Date: 04/28/2010.

Accession Number: 20100429–0203.

Comment Date: 5 p.m. Eastern Time on Wednesday, May 19, 2010.

Docket Numbers: ER10–1117–000.

Applicants: Evergreen Wind Power V, LLC.

Description: Evergreeen Wind Power V, LLC *et al.* submits a Shared Facilities and Sublease Agreement, as amended between Evergreen Wind Power V and Stetson Wind II.

Filed Date: 04/28/2010.

Accession Number: 20100429–0202.

Comment Date: 5 p.m. Eastern Time on Wednesday, May 19, 2010.

Docket Numbers: ER10–1118–000.

Applicants: Southwest Power Pool, Inc.

Description: Southwest Power Pool, Inc. submits an executed Meter Agent Services Agreement with the Municipal Energy Agency of Nebraska.

Filed Date: 04/28/2010.

Accession Number: 20100429–0201.

Comment Date: 5 p.m. Eastern Time on Wednesday, May 19, 2010.

Docket Numbers: ER10–1119–000.

Applicants: Central Illinois Public Service Company.

Description: Central Illinois Public Service Company submits tariff filing per 35.12: Central Illinois Public Service Company General Tariff to be effective 4/30/2010.

Filed Date: 04/29/2010.

Accession Number: 20100429–5041.

Comment Date: 5 p.m. Eastern Time on Thursday, May 20, 2010.

Docket Numbers: ER10–1120–000.

Applicants: Competitive Energy.

Description: Competitive Energy submits tariff filing per 35.12: MBR Filing to be effective 8/1/2001.

Filed Date: 04/29/2010.

Accession Number: 20100429–5049.

Comment Date: 5 p.m. Eastern Time on Thursday, May 20, 2010.

Docket Numbers: ER10–1121–000.

Applicants: Beaver Ridge Wind, LLC.

Description: Beaver Ridge Wind, LLC submits tariff filing per 35.12: Market Based Rate Authorization to be effective 7/1/2008.

Filed Date: 04/29/2010.

Accession Number: 20100429–5050.

Comment Date: 5 p.m. Eastern Time on Thursday, May 20, 2010.

Docket Numbers: ER10–1122–000.

Applicants: Hannaford Energy LLC.

Description: Hannaford Energy LLC submits tariff filing per 35.12: Market Rate Baseline to be effective 3/8/2010.

Filed Date: 04/29/2010.

Accession Number: 20100429–5053.

Comment Date: 5 p.m. Eastern Time on Thursday, May 20, 2010.

Docket Numbers: ER10–1123–000.

Applicants: Union Electric Company.

Description: Union Electric Company submits tariff filing per 35.12: Union Electric General Tariff to be effective 4/30/2010.

Filed Date: 04/29/2010.

Accession Number: 20100429–5091.

Comment Date: 5 p.m. Eastern Time on Thursday, May 20, 2010.

Docket Numbers: ER10–1124–000.

Applicants: Central Illinois Light Company.

Description: Central Illinois Light Company submits tariff filing per 35.12: Central Illinois Light Company General Tariff to be effective 4/30/2010.

Filed Date: 04/29/2010.

Accession Number: 20100429–5123.

Comment Date: 5 p.m. Eastern Time on Thursday, May 20, 2010.

Docket Numbers: ER10–1128–000.

Applicants: Commonwealth Edison Company.

Description: Commonwealth Edison Company submits tariff filing per 35.12: PSRT Baseline Filing to be effective 4/29/2010.

Filed Date: 04/29/2010.

Accession Number: 20100429–5134.

Comment Date: 5 p.m. Eastern Time on Thursday, May 20, 2010.

Take notice that the Commission received the following electric securities filings:

Docket Numbers: ES10–37–000.

Applicants: Old Dominion Electric Cooperative, Inc.

Description: Application of Old Dominion Electric Cooperative for Authorization to Issue Long-Term Debt and Request for Exemption from Competitive Bidding Requirements.

Filed Date: 04/29/2010.

Accession Number: 20100429–5024.

Comment Date: 5 p.m. Eastern Time on Thursday, May 20, 2010.

Docket Numbers: ES10–38–000.

Applicants: KCP&L Greater Missouri Operations Company.

Description: Application KCP&L Greater Missouri Operations Company for Authorization of Issuance of Long-Term Debt Securities Under Section 204 of the Federal Power Act.

Filed Date: 04/29/2010.

Accession Number: 20100429–5136.

Comment Date: 5 p.m. Eastern Time on Thursday, May 20, 2010.

Any person desiring to intervene or to protest in any of the above proceedings must file in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214) on or before 5 p.m. Eastern time on the specified comment date. It is not necessary to separately intervene again in a subdocket related to a compliance filing if you have previously intervened in the same docket. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Anyone filing a motion to intervene or protest must serve a copy of that document on the Applicant. In reference to filings initiating a new proceeding, interventions or protests submitted on or before the comment deadline need not be served on persons other than the Applicant.

The Commission encourages electronic submission of protests and interventions in lieu of paper, using the FERC Online links at *http://www.ferc.gov.* To facilitate electronic service, persons with Internet access who will eFile a document and/or be listed as a contact for an intervenor must create and validate an eRegistration account using the eRegistration link. Select the eFiling link to log on and submit the intervention or protests.

Persons unable to file electronically should submit an original and 14 copies of the intervention or protest to the Federal Energy Regulatory Commission, 888 First St.,NE., Washington, DC 20426.

The filings in the above proceedings are accessible in the Commission's eLibrary system by clicking on the appropriate link in the above list. They are also available for review in the Commission's Public Reference Room in Washington, DC. There is an eSubscription link on the Web site that enables subscribers to receive e-mail notification when a document is added to a subscribed dockets(s). For assistance with any FERC Online service, please e-mail *FERCOnlineSupport@ferc.gov.* or call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

Nathaniel J. Davis, Sr.,

Deputy Secretary.

[FR Doc. 2010–10804 Filed 5–6–10; 8:45 am]

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Office of Energy Efficiency and Renewable Energy

[Case No. CAC–025]

Energy Conservation Program for Commercial Equipment: Decision and Order Granting a Waiver to Daikin AC (Americas), Inc. (Daikin) From the Department of Energy Commercial Package Air Conditioner and Heat Pump Test Procedures

AGENCY: Office of Energy Efficiency and Renewable Energy, Department of Energy.

ACTION: Decision and order.

SUMMARY: This notice publishes the U.S. Department of Energy's (DOE) decision and order in Case No. CAC–025, which grants a waiver to Daikin from the existing DOE test procedure applicable to commercial package central air conditioners and heat pumps. The waiver is specific to the Daikin variable speed and variable refrigerant volume VRV–III–C (commercial) multi-split heat pumps and heat recovery systems. As a condition of this waiver, Daikin must use the alternate test procedure set forth in this notice to test and rate its VRV–III–C multi-split products.

DATES: This Decision and Order is effective May 7, 2010.

FOR FURTHER INFORMATION CONTACT: Dr. Michael G. Raymond, U.S. Department of Energy, Building Technologies Program, Mail Stop EE–2J, 1000 Independence Avenue, SW., Washington, DC 20585–0121. *Telephone:* (202) 586–9611. *E-mail: Michael.Raymond@ee.doe.gov*.

Elizabeth Kohl, U.S. Department of Energy, Office of the General Counsel, Mail Stop GC–71, 1000 Independence Avenue, SW., Washington, DC 20585–0103. *Telephone:* (202) 586–7796. *E-mail: Elizabeth.Kohl@hq.doe.gov*.

SUPPLEMENTARY INFORMATION: In accordance with 10 CFR 431.401(f)(4), DOE gives notice that it issues the decision and order set forth below. In this decision and order, DOE grants Daikin a waiver from the existing DOE commercial package air conditioner and heat pump test procedures for its VRV–III–C multi-split products. This waiver requires Daikin use the alternate test procedure provided in this notice to test and rate the specified models from its VRV–III–C multi-split product line. The current test procedure is the Air-Conditioning and Refrigeration Institute (ARI) Standard 340/360–2004, "Performance Rating of Commercial and Industrial Unitary Air-Conditioning and Heat Pump Equipment" (incorporated by reference at 10 CFR 431.95(b)(2)).

Today's decision prohibits Daikin from making representations concerning the energy efficiency of these products unless the product has been tested consistent with the provisions and restrictions in the alternate test procedure set forth in the decision and order below, and the representations fairly disclose the test results. (42 U.S.C. 6314(d)). Distributors, retailers, and private labelers are held to the same standard when making representations regarding the energy efficiency of these products. (42 U.S.C. 6293(c)).

Issued in Washington, DC, on April 30, 2010.

Cathy Zoi,

Assistant Secretary, Energy Efficiency and Renewable Energy.

Decision and Order

In the Matter of: Daikin AC (Americas), Inc. (Daikin) (Case No. CAC–025).

Background

Title III of the Energy Policy and Conservation Act (EPCA) sets forth a variety of provisions concerning energy efficiency, including Part A of Title III, which establishes the "Energy Conservation Program for Consumer Products Other Than Automobiles." (42 U.S.C. 6291–6309) Part A–1 of Title III

provides for a similar energy efficiency program titled "Certain Industrial Equipment," which includes large and small commercial air-conditioning equipment, package boilers, storage water heaters, and other types of commercial equipment. (42 U.S.C. 6311–6317) EPCA specifically includes definitions, test procedures, labeling provisions, and energy conservation standards for covered equipment. It also provides DOE the authority to require information and reports from manufacturers. (42 U.S.C. 6311–6317) With respect to test procedures, the statute generally authorizes DOE to prescribe test procedures that are reasonably designed to produce test results that reflect energy efficiency, energy use, and estimated annual operating costs, and that are not unduly burdensome to conduct. (42 U.S.C. 6314(a)(2))

Today's notice involves commercial package air-conditioning and heating equipment under Part A–1. EPCA provides that for such equipment, "the test procedures shall be those generally accepted industry testing procedures or rating procedures developed or recognized by the Air-Conditioning and Refrigeration Institute or by the American Society of Heating, Refrigerating and Air-Conditioning Engineers, as referenced in ASHRAE/IES Standard 90.1 and in effect on June 30, 1992." (42 U.S.C. 6314(a)(4)(A)) Under 42 U.S.C. 6314(a)(4)(B), the Secretary of Energy (the Secretary) must amend the test procedure for a covered commercial product if the applicable industry test procedure is amended, unless the Secretary determines, by rule and based on clear and convincing evidence, that such a modified test procedure does not meet the statutory criteria set forth in 42 U.S.C. 6314(a)(2) and (3).

On December 8, 2006, DOE published a final rule adopting test procedures for commercial package air-conditioning and heating equipment, effective January 8, 2007. 71 FR 71340. DOE adopted Air-Conditioning and Refrigeration Institute (ARI) Standard 210/240–2003 for small commercial package air-cooled air-conditioning and heating equipment with capacities <65,000 British thermal units per hour (Btu/h), and ARI Standard 340/360–2004 for large and very large commercial package air-cooled air-conditioning and heating equipment with capacities ≥ 65,000 Btu/h and <760,000 Btu/h, respectively. *Id.* at 71371. Pursuant to the final rule, DOE's regulations at 10 CFR 431.95(b)(1)–(2) incorporate by reference these two ARI standards, and 10 CFR 431.96 directs manufacturers of commercial package air-conditioning and heating equipment to use the appropriate procedure when measuring the energy efficiency of those products. The cooling capacities of Daikin's VRV–III–C commercial multi-split products, which have capacities between 72,000 Btu/hr and 192,000 Btu/hr, fall in the range covered by ARI Standard 340/360–2004.

In addition, DOE's regulations for covered equipment permit a person to seek a waiver for a particular basic model from the test procedure requirements for covered commercial equipment if (1) that basic model contains one or more design characteristics which prevent testing according to the prescribed test procedures, or (2) the prescribed test procedures may evaluate the basic model in a manner so unrepresentative of its true energy consumption characteristics as to provide materially inaccurate comparative data. 10 CFR 431.401(a)(1). Petitioner must include in its waiver petition any alternate test procedures known to the petitioner to evaluate characteristics of the basic model in a manner representative of its energy consumption. 10 CFR 431.401(b)(1)(iii). The Assistant Secretary for Energy Efficiency and Renewable Energy (the Assistant Secretary) may grant a waiver subject to conditions, including adherence to alternate test procedures. 10 CFR 431.401(f)(4). Waivers remain in effect pursuant to the provisions of 10 CFR 431.401(g).

The waiver process also allows any interested person who has submitted a petition for waiver to file an application for interim waiver from the applicable test procedure requirements. 10 CFR 431.401(a)(2). An interim waiver may be granted if the Assistant Secretary determines that the applicant will experience economic hardship if the application for interim waiver is denied; if it appears likely that the petition for waiver will be granted; and/or if the Assistant Secretary determines that it would be desirable for public policy reasons to grant immediate relief pending a determination on the petition for waiver. 10 CFR 431.401(e)(3). An interim waiver remains in effect for 180 days or until DOE issues its determination on the petition for waiver, whichever occurs first. It may be extended by DOE for an additional 180 days. 10 CFR 431.401(e)(4).

On September 9, 2009, Daikin filed a petition for waiver and an application for interim waiver from the test procedures applicable to small and large commercial package air-cooled air-conditioning and heating equipment. The applicable test procedure is ARI 340/360–2004, specified in Tables 1 and 2 of 10 CFR 431.96. Daikin asserted that the two primary factors that prevent testing of multi-split variable speed products, regardless of manufacturer, are the same factors stated in the waivers that DOE granted to Mitsubishi Electric & Electronics USA, Inc. (Mitsubishi) for a similar line of commercial multi-split air-conditioning systems:

- Testing laboratories cannot test products with so many indoor units; and
- There are too many possible combinations of indoor and outdoor units to test. Mitsubishi (72 FR 17528, April 9, 2007); Samsung (72 FR 71387, Dec. 17, 2007); Fujitsu (72 FR 71383, Dec. 17, 2007); Daikin (73 FR 39680, July 10, 2008); Daikin (74 FR 15955, April 8, 2009); Sanyo (74 FR 16193, April 9, 2009); Daikin (74 FR 16373, April 10, 2009); and LG (74 FR 66330, December 15, 2009).

On December 15, 2009, DOE published Daikin's petition for waiver in the **Federal Register,** seeking public comment pursuant to 431.3401(b)(1)(iv), and granted the application for an interim waiver. 74 FR 66324. DOE received one comment on the Daikin petition; discussion of and DOE's response to this comment are set forth below.

In a similar case, DOE published a petition for waiver from Mitsubishi Electric and Electronics USA, Inc. (MEUS), for products very similar to Daikin's multi-split products. 71 FR 14858 (March 24, 2006). In the March 24, 2006 **Federal Register** notice, DOE also published and requested comment on an alternate test procedure for the MEUS products at issue. DOE stated that if it specified an alternate test procedure for MEUS in the subsequent decision and order, DOE would consider applying the same procedure to similar waivers for residential and commercial central air conditioners and heat pumps, including such products for which waivers had previously been granted. *Id.* at 14861. Comments were published along with the MEUS decision and order in the **Federal Register** on April 9, 2007. 72 FR 17528 (April 9, 2007). Most of the comments were favorable. Though one commenter indicated that a waiver was unnecessary, the commenter did not present a satisfactory way to test the products. *Id.* at 17529. Generally, commenters agreed that an alternate test procedure is necessary while a final test procedure for these types of products is being developed. *Id.* The MEUS decision and order included the

alternate test procedure adopted by DOE. *Id.*

Assertions and Determinations

Daikin's Petition for Waiver

Daikin seeks a waiver from the DOE test procedures for this product class on the grounds that its VRV–III–C multi-split heat pump and heat recovery systems contain design characteristics that prevent them from being tested using the current DOE test procedures. As stated above, Daikin asserts that there are two primary factors that prevent testing of multi-split variable speed products, regardless of manufacturer: Testing laboratories cannot test products with so many indoor units; there are too many possible combinations of indoor and outdoor units to test.

The VRV–III–C systems have operational characteristics similar to other commercial multi-split products manufactured by Mitsubishi, Samsung, Sanyo, Fujitsu and LG, all of which have been granted waivers. The Daikin VRV–III–C system can be connected to the complete range of Daikin ceiling mounted, concealed, ducted, corner, cassette, wall-mounted and floor-mounted, and other indoor fan coil units. Each of these units has nine different standard indoor static pressure ratings. Additional pressure ratings are available. There are over 1,000,000 possible combinations of the VRV–III–C products. Consequently, Daikin requests that DOE grant a waiver from the applicable test procedures for its VRV–III–C product designs until a suitable test method can be prescribed. DOE believes that the Daikin VRV–III–C equipment and equipment for which waivers have previously been granted are alike with respect to the factors that make them eligible for test procedure waivers. DOE therefore grants Daikin a VRV–III–C multi-split product waiver similar to the multi-split product waivers already issued to other manufacturers.

Previously, in addressing MEUS's R410A CITY MULTI VRFZ products, which are similar to the Daikin products at issue here, DOE stated:

> To provide a test procedure from which manufacturers can make valid representations, the Department is considering setting an alternate test procedure for MEUS in the subsequent decision and order. Furthermore, if DOE specifies an alternate test procedure for MEUS, DOE is considering applying the alternate test procedure to similar waivers for residential and commercial central air conditioners and heat pumps. Such cases include Samsung's petition for its DVM products (70 FR 9629, February 28, 2005), Fujitsu's petition for its Airstage variable refrigerant flow (VRF) products (70 FR 5980, February 4, 2005), and MEUS's petition for its R22 CITY MULTI VRFZ products. (69 FR 52660, August 27, 2004).

71 FR 14861 (March 24, 2006).

In granting the petitions for waiver from MEUS, DOE specified an alternate test procedure that MEUS could use to test, and make valid energy efficiency representations for, its R410A CITY MULTI products and its R22 multi-split products. This alternate test procedure was published in the **Federal Register** on April 9, 2007 and on December 15, 2009. 72 FR 17528; 74 FR 66311. While Daikin did not include an alternate test procedure in its petition for waiver, DOE believes that the same alternate test procedure specified in the MEUS decision could be used to test the Daikin products at issue here.

DOE understands that existing testing facilities have a limited ability to test multiple indoor units at one time. It also understands it is impractical to test some variable refrigerant flow zoned systems because of the number of possible combinations of indoor and outdoor units. DOE further notes that after the waiver granted MEUS's R22 multi-split products, AHRI formed a committee to develop a testing protocol for variable refrigerant flow systems. The committee developed AHRI Standard 1230–2009: "Performance Rating of Variable Refrigerant Flow (VRF) Multi-Split Air-Conditioning and Heat Pump Equipment." AHRI has adopted the standard.

Carrier Corporation (Carrier) commented that DOE should deny Daikin's petition for waiver and repeal all the other commercial multi-split waivers because of the availability of AHRI 1230–2009. However, AHRI 1230–2009, which is substantially the same as DOE's alternate test procedure with respect to the testing of these Daikin products, is not a part of DOE's test procedure. In addition, AHRI 1230–2009 has not yet been adopted by ASHRAE 90.1.

DOE issues today's decision and order granting Daikin a test procedure waiver for its commercial VRV–III–C multi-split heat pumps. As a condition of this waiver, Daikin must use the alternate test procedure described below. This alternate test procedure is the same in all relevant particulars as the procedure specified in DOE's decision and orders granting the MEUS waivers.

Alternate Test Procedure

The alternate test procedure permits Daikin to designate a tested combination for each model of outdoor unit. The indoor units designated as part of the tested combination must meet specific requirements. For example, the tested combination must have between two to eight indoor units so it can be tested in available test facilities. The tested combination was originally defined in the MEUS waivers to consist of one outdoor unit matched with between two and five indoor units. The maximum number of indoor units in a tested combination is increased in this Daikin waiver from five to eight because these larger-capacity products can accommodate more indoor units. The tested combination must be tested according to the applicable DOE test procedure, as modified by the provisions of the alternate test procedure as set forth below.

The alternate DOE test procedure also allows Daikin to represent the product's energy efficiency. These representations must fairly disclose the test results. The DOE test procedure, as modified by the alternate test procedure set forth in this decision and order, provides for efficiency rating of a non-tested combination in one of two ways: (1) At an energy efficiency level determined using a DOE-approved alternative rating method; or (2) at the efficiency level of the tested combination utilizing the same outdoor unit.

As in the MEUS waivers, DOE believes that allowing Daikin to make energy efficiency representations for non-tested combinations by adopting the alternative test procedure is reasonable because the outdoor unit is the principal efficiency driver. The current DOE test procedure for commercial products tends to rate these products conservatively because it does not account for their multi-zoning feature. The multi-zoning feature enables these products to cool only those portions of the building that require cooling. Products with a multi-zoning feature would be expected to use less energy than units controlled by a single thermostat, which cool the entire home or commercial building regardless of whether only portions need cooling. The multi-zoning feature would not be properly evaluated by the current test procedure, which requires full-load testing. Full load testing requires the entire building to be cooled. Products using a multi-zoning feature and subjected to full load testing would be at a disadvantage because they are optimized for highest efficiency when operating with less than full loads. The alternate test procedure will provide an appropriate basis for assessing the energy efficiency of such products.

With regard to the laboratory testing of commercial products, some of the difficulties associated with the existing

test procedure are avoided by the alternate test procedure's requirements for choosing the indoor units to be used in the manufacturer-specified tested combination. For example, in addition to limiting the number of indoor units, another requirement is that all the indoor units must be subjected to the same minimum external static pressure. This requirement enables the test lab to manifold the outlets from each indoor unit into a common plenum that supplies air to a single airflow measuring apparatus. This eliminates situations in which some of the indoor units are ducted and some are non-ducted. Without this requirement, the laboratory must evaluate the capacity of a subgroup of indoor coils separately and then sum the separate capacities to obtain the overall system capacity. Measuring capacity in this way would require that the test laboratory be equipped with multiple airflow measuring apparatuses. It is unlikely that any test laboratory would be equipped with the necessary number of such apparatuses. Alternatively, the test laboratory could connect its one airflow measuring apparatus to one or more common indoor units until the contribution of each indoor unit had been measured, which would be so time-consuming as to be impractical.

For the reasons discussed above, DOE believes Daikin's VRV–III–C multi-split products cannot be tested using the procedure prescribed in 10 CFR 431.96 (ARI Standard 340/360–2004) and incorporated by reference in DOE's regulations at 10 CFR 431.95(b)(2). After careful consideration, DOE has decided to prescribe the alternate test procedure first developed for the MEUS waiver for Daikin's commercial multi-split products. The alternate test procedure for the Daikin products must include the modifications described above.

Consultations With Other Agencies

DOE consulted with the Federal Trade Commission (FTC) staff concerning the Daikin petition for waiver. The FTC staff did not have any objections to issuing a waiver to Daikin.

Conclusion

After careful consideration of all the materials submitted by Daikin, the absence of any comments, and consultation with the FTC staff, it is ordered that:

(1) The petition for waiver filed by Daikin Electronics, Inc., (Daikin) (Case No. CAC–025) is hereby granted as set forth in the paragraphs below.

(2) Daikin shall not be required to test or rate its VRV–III–C multi-split air conditioner and heat pump models listed below on the basis of the test procedure cited in 10 CFR 431.96, specifically, ARI Standard 340/360–2004 (incorporated by reference in 10 CFR 431.95(b)(2)), but shall be required to test and rate such products according to the alternate test procedure as set forth in paragraph (3).

Type	Size	Model number	Combination	
			8–Ton	16–Ton
Condensing Unit	6–Ton	RTSQ72PTJU	.....	1
	8–Ton	RTSQ96PTJU	1	.....
	10–Ton	RTSQ120PTJU	.....	1
2nd Stage Function Unit	Up to 16–Ton	BTSQ192PTJU	1	1
Outdoor Piping Kit	.....	BHFP30A56	.....	1

(3) *Alternate test procedure.*

(A) Daikin is required to test the products listed in paragraph (2) above according to the test procedure for central air conditioners and heat pumps prescribed by DOE at 10 CFR Part 431 (ARI 340/360–2004, (incorporated by reference in 10 CFR 431.95(b)(2)), except that Daikin shall test a tested combination selected in accordance with the provisions of subparagraph (B) of this paragraph. For every other system combination using the same outdoor unit as the tested combination, Daikin shall make representations concerning the VRV–III–C products covered in this waiver according to the provisions of subparagraph (C) below.

(B) *Tested combination.* The term tested combination means a sample basic model comprised of units that are production units, or are representative of production units, of the basic model being tested. For the purposes of this waiver, the tested combination shall have the following features:

(i) The basic model of a variable refrigerant flow system used as a tested combination shall consist of an outdoor unit that is matched with between two and eight indoor units. For multi-split systems, each of these indoor units shall be designed for individual operation.

(ii) The indoor units shall:

(a) Represent the highest sales model family, or another indoor model family if the highest sales model family does not provide sufficient capacity (see b);

(b) Together, have a nominal cooling capacity that is between 95 percent and 105 percent of the nominal cooling capacity of the outdoor unit;

(c) Not, individually, have a nominal cooling capacity greater than 50 percent of the nominal cooling capacity of the outdoor unit;

(d) Operate at fan speeds that are consistent with the manufacturer's specifications; and

(e) Be subject to the same minimum external static pressure requirement.

(C) *Representations.* In making representations about the energy efficiency of its VRV–III–C multi-split products for compliance, marketing, or other purposes, Daikin must fairly disclose the results of testing under the DOE test procedure in a manner consistent with the provisions outlined below:

(i) For VRV–III–C multi-split combinations tested in accordance with this alternate test procedure, Daikin may make representations based on these test results.

(ii) For VRV–III–C multi-split combinations that are not tested, Daikin may make representations based on the testing results for the tested combination and that are consistent with either of the two following methods:

(a) Representation of non-tested combinations according to an alternative rating method (ARM) approved by DOE; or

(b) Representation of non-tested combinations at the same energy efficiency level as the tested combination with the same outdoor unit.

(4) This waiver shall remain in effect from the date this order is issued, consistent with the provisions of 10 CFR 431.401(g).

(5) This waiver is issued on the condition that the statements, representations, and documentary materials provided by the petitioner are valid. DOE may be revoke or modify the waiver at any time if it determines the factual basis underlying the petition for waiver is incorrect, or the results from the alternate test procedure are

unrepresentative of the basic models' true energy consumption characteristics.

Issued in Washington, DC, on April 30, 2010.

Cathy Zoi,
Assistant Secretary, Energy Efficiency and Renewable Energy.

BILLING CODE 6450–01–P

DEPARTMENT OF ENERGY

Office of Energy Efficiency and Renewable Energy

[Docket Number: EERE–BT–2006–WAV–0140]

Energy Conservation Program for Consumer Products: Decision and Order Denying a Waiver to PB Heat, LLC From the Department of Energy Residential Furnace and Boiler Test Procedures

AGENCY: Office of Energy Efficiency and Renewable Energy, Department of Energy (DOE).

ACTION: Decision and Order.

SUMMARY: This notice publishes DOE's Decision and Order in Case No. WAV–0140, which denies a waiver to PB Heat, LLC (PB) from the existing DOE residential furnace and boiler test procedure. This Decision and Order pertains to PB's PO–50, PO–60, PO–63, and PO–73 models of oil-fired boilers. DOE previously published the PB Petition for Waiver and solicited comments, data, and information regarding the petition, which requested permission to publish a Low Water Temperature Seasonal Efficiency (LWTSE) value, conducted under an alternative industry test procedure, in addition to the mandatory Annual Fuel Utilization Efficiency (AFUE) value required under DOE's energy conservation standards. PB's petition suggested that testing and reporting of the AFUE value alone is not representative of its basic models' true energy consumption characteristics. DOE denies PB's Petition for Waiver for the reasons set forth below. Because a waiver is not appropriate, DOE cannot prescribe an alternative test procedure. However, the Decision and Order clarifies that it is permissible for a manufacturer to conduct LWTSE testing and to present such results in product literature. It is noted that the Energy Guide label used for certification and consumer information purposes can only present information generated under the DOE test procedure, as required under applicable Federal Trade Commission (FTC) regulations. When making such supplemental statements in the product literature, manufacturers must continue to conduct, report, and fairly disclose the AFUE test results generated under the DOE test procedures, and to use those AFUE results when making representations as to the basic model's energy efficiency. Supplemental statements regarding LWTSE must fairly disclose the results of such testing and may not mislead the consumer about the relevance of the required AFUE value. For example, DOE suggests any manufacturer that wishes to show the LWTSE values in addition to the AFUE value should make clear the differences between the two tests, including the different operating characteristics and conditions, for consumers.

DATES: This Decision and Order is effective May 7, 2010.

FOR FURTHER INFORMATION CONTACT: Mr. Mohammed Khan, U.S. Department of Energy, Building Technologies Program, EE–2J, 1000 Independence Avenue, SW., Washington, DC 20585–0121. Telephone: (202) 586–7892. E-mail: *Mohammed.Khan@ee.doe.gov.*

Ms. Francine Pinto or Mr. Eric Stas, U.S. Department of Energy, Office of the General Counsel, GC–71, 1000 Independence Avenue, SW., Washington, DC 20585–0121. Telephone: (202) 586–9507. E-mail: *Francine.Pinto@hq.doe.gov* or *Eric.Stas@hq.doe.gov.*

For access to the docket to read this notice, the Petition for Waiver, background documents, or comments received, please call Ms. Brenda Edwards at (202) 586–2945 for information regarding visiting the Resource Room of the Building Technologies Program. The Resource Room is accessible at the U.S. Department of Energy, 950 L'Enfant Plaza, SW., Suite 600, Washington, DC, between 9 a.m. and 4 p.m., Monday through Friday, except Federal holidays.

SUPPLEMENTARY INFORMATION: In accordance with 10 CFR 430.27(l), DOE gives notice of the issuance of its Decision and Order as set forth below. In this Decision and Order, DOE denies PB's request for a waiver from the existing DOE residential furnace and boiler test procedure for its PO–50, PO–60, PO–63, and PO–73 models of oil-fired boilers. DOE denies the waiver because: (1) The PB units can and do operate at the higher water temperatures specified in the DOE test procedure; (2) there is no indication that the existing test procedure generates inaccurate results at the specified temperatures; and (3) the PB units meet the AFUE level required under the energy conservation standard. Accordingly, DOE has determined that the applicable test procedure is representative of the energy consumption characteristics of the PB basic models at the specified conditions (*i.e.,* water temperatures) and that the DOE test procedures for these residential products will allow PB to test and rate its above-referenced line of oil-fired boilers.

DOE clarifies that it is permissible for a manufacturer to conduct LWTSE testing and present the results in product literature (other than supplementation of the certification label, which can only present information generated under the DOE test procedure, as required under applicable FTC regulations). When making such supplemental statements in product literature, manufacturers must continue to conduct, report, and fairly disclose the AFUE test results generated under the DOE test procedures (10 CFR 430.62(a)(4)(viii)), and to use AFUE results when making representations as to the basic model's energy efficiency (42 U.S.C. 6293(c)(1)). Supplemental statements regarding LWTSE must fairly disclose the results of such testing and may not mislead the consumer about the relevance of the required AFUE value. For example, DOE suggests any manufacturer that wishes to show the LWTSE values in addition to the AFUE value should make clear the differences between the two tests, including the different operating characteristics and conditions, for consumers.

Issued in Washington, DC, April 30, 2010.

Cathy Zoi,

Assistant Secretary, Energy Efficiency and Renewable Energy.

Decision and Order

In the Matter of: PB Heat, LLC (PB) (Case No. WAV–0140).

Authority

Title III of the Energy Policy and Conservation Act of 1975 (EPCA), as amended, sets forth a variety of provisions concerning energy efficiency, including Part A [1] of Title III, which establishes the "Energy Conservation Program for Consumer Products Other Than Automobiles." (42 U.S.C. 6291–6309) Similarly, Part A–1 [2] of Title III of EPCA, 42 U.S.C. 6311–6317, provides for an energy efficiency program titled,

[1] This part was originally titled Part B. It was redesignated Part A in the United States Code for editorial reasons.

[2] This part was originally titled Part C. It was redesignated Part A–1 in the United States Code for editorial reasons.

"Energy Efficiency Program for Certain Commercial and Industrial Equipment." (42 U.S.C. 6311–6317)

In general, Part A of Title III also provides for test procedures, labeling, and energy conservation standards for a variety of covered consumer products, including residential furnaces and boilers, and it authorizes DOE to require information and reports from manufacturers. With respect to test procedures, the statute generally authorizes the Secretary of Energy (the Secretary) to prescribe test procedures that are reasonably designed to produce results which reflect energy efficiency, energy use, and estimated annual operating costs, and that are not unduly burdensome to conduct. (42 U.S.C. 6293(b)(3)) The statute further provides that no manufacturer, distributor, retailer, or private labeler may make any representation in writing (including on a label) or in any broadcast advertisement with respect to the energy use or efficiency (or water use) of a covered product to which a DOE test procedure is applicable, unless such product has been tested in accordance with such test procedure and such representation fairly discloses the results of such testing. (42 U.S.C. 6293(c)(1))

In relevant part, EPCA requires that DOE prescribe standardized test procedures to measure the energy consumption of residential furnaces and boilers in terms of the AFUE metric. (42 U.S.C. 6291(22)(A)) DOE adopted test procedures for residential furnaces and boilers which are codified at 10 CFR 430.23(n) and at 10 CFR 430, subpart B, appendix N ("Uniform Test Method For Measuring the Energy Consumption of Furnaces and Boilers"). The DOE test procedure incorporates by reference provisions of the American National Standards Institute (ANSI)/American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc. (ASHRAE) Standard 103–1993, "Method of Testing for Annual Fuel Utilization Efficiency of Residential Central Furnaces and Boilers." The test procedure prescribes a standardized method for measuring the energy consumption of various types of furnaces and boilers. Further, the test procedure measurements can be used in determining model-specific energy consumption information to assist consumers in making purchasing decisions.

DOE's regulations set forth under 10 CFR 430.27 contain provisions that enable a person to seek a waiver from the test procedure requirements for a covered consumer product under the following circumstances. Any interested person may submit a petition for waiver upon the grounds that the basic model contains a design characteristic which either prevents testing of the basic model according to the prescribed test procedures, or the prescribed test procedures may evaluate the basic model in a manner so unrepresentative of its true energy consumption characteristics as to provide materially inaccurate comparative data. 10 CFR 430.27(a)(1).

Furthermore, the regulations authorize the Assistant Secretary for Energy Efficiency and Renewable Energy (Assistant Secretary) to grant an Interim Waiver from test procedure requirements applicable to a particular basic model of consumer product, if it is determined that the applicant will experience economic hardship if the Application for Interim Waiver is denied, if it appears likely that the Petition for Waiver will be granted, and/or the Assistant Secretary determines that it would be desirable for public policy reasons to grant immediate relief pending a determination on the Petition for Waiver. 10 CFR 430.27(g). An Interim Waiver will remain in effect for 180 days or until DOE issues its determination on the Petition for Waiver, whichever occurs first. Further, an Interim Waiver may be extended for an additional 180 days. 10 CFR 430.27(h).

Assertions and Determinations

PB submitted a Petition for Waiver from the temperature requirements listed in ASHRAE Standard 103–1993, with errata of October 24, 1996, which are incorporated into appendix N to subpart B of 10 CFR Part 430. The Petition for Waiver is based on the grounds that "'the prescribed test procedures may evaluate the basic model in a manner so unrepresentative of its true energy consumption characteristics'" [as to provide materially inaccurate comparative data]. 71 FR 46460, 46463 (August 14, 2006). In its petition, PB requested that in addition to the mandatory reporting of AFUE, it be allowed to also provide an LWTSE efficiency measure for its oil-fired boilers based upon testing under the procedures in Appendix F of ASHRAE Standard 103–2003 (Public Review Draft).[3] *Id.* at 46463–64.

1. PB Petition for Waiver

On March 27, 2006, PB filed a petition requesting that it be permitted to publish an LWTSE value in conjunction with the AFUE value that is the result of testing under 10 CFR part 430, subpart B, appendix N (*i.e.,* the test procedures for residential furnaces and boilers). At specific issue in the PB Petition are its PO–50, PO–60, PO–63 and PO–73 models of oil-fired boilers. PB stated that the AFUE value from the prescribed test procedure may result in an evaluation of the basic model that is unrepresentative of its true energy consumption characteristics. PB did not request to rely on the LWTSE metric in lieu of the AFUE metric, but instead requested permission to publish both values for its residential boilers. DOE's current test procedure does not provide for LWTSE testing, which represents a variant of AFUE under different operating conditions (*i.e.,* lower return water temperatures).

DOE understands that residential boilers are typically used either with baseboard convector or radiant floor heating systems that circulate water in a closed-loop fashion. Originating at the boiler, heated water is pumped to the convectors or radiant floor coils. As the water passes through the convectors or floor coils, heat is extracted, and the water is cooled. The heated water exiting the boiler is termed "supply water," and the cooled water entering the boiler is termed, "return water." For any given system, the return water temperature is directly related to the supply water temperature, which can be set at the boiler. Also, the return water temperature is a function of a house's heating load and the effectiveness of either the convector or radiant floor coil system. Different heating systems and heating control systems may provide different water temperatures. For example, supply and return water temperatures are typically lower for a radiant floor coil system than a convector system. Nevertheless, to uniformly test and compare the AFUE of different residential boiler heating systems, the procedure in 10 CFR part 430, subpart B, appendix N specifies the use of standardized supply and return water temperatures for measuring the AFUE. As part of the petition, PB asserted that the specified temperatures do not suitably match the expected performance characteristics of the

[3] The Review Draft is currently part of ASHRAE Standard 103–2007 as an informative appendix. ASHRAE Standard 103–2007 states, "This appendix is not part of the standard. It is merely informative and does not contain requirements necessary for conformance to the standard. It has not been processed according to the ANSI requirements for a standard and may contain material that has not been subject to public review or a consensus process. Unresolved objectors on informative material are not offered the right to appeal to ASHRAE or ANSI." However, for ease of discussion, this document will continue to refer to ASHRAE Standard 103–2003, as specified in PB's original petition.

subject boiler units, and consequently, the prescribed test procedures under 10 CFR 430.23(n)(2) and in 10 CFR part 430, subpart B, appendix N, evaluate the subject boiler models in a manner that is unrepresentative of their true energy consumption characteristics in the field.

PB stated that if a boiler is used with radiant floor heating systems, the return and supply water temperatures are far lower than those seen with baseboard convector systems. Similarly, PB stated that if a boiler is used with baseboard convector heating systems, in combination with outdoor reset controls, the supply water temperatures can be lower than that specified in the DOE test procedure for some fraction of the heating season. In its petition, PB also asserted that because the boilers in question are supplied with an outdoor reset control from the manufacturer, the boilers installed with either radiant floor heating systems or baseboard convector heating systems are capable of achieving condensing conditions, and increased efficiency and reduced energy use, during warmer periods of the heating season.

In particular, PB asserted that its oil-fired boiler models PO–50, PO–60, PO–63, and PO–73 achieve fully-condensing conditions at return water temperatures that are below the 120 degrees Fahrenheit (EF) return water temperature required under the test procedure at 10 CFR 430.23(n)(2) and 10 CFR 430, subpart B, appendix N. According to PB, these oil-fired boilers are designed to operate in low-temperature applications, and are supplied with an outdoor reset control that can allow the boiler to operate with lower return water temperatures for much of the heating season.

In contrast, the DOE test procedure prescribed for boilers, under 10 CFR 430.23(n) and 10 CFR part 430, subpart B, appendix N, requires a return water temperature of 120 °F. PB asserted that the DOE test procedure will not reflect the efficiency that its boilers are capable of achieving due to the variations in the return water temperature. Instead, PB argued that the procedure described in ASHRAE Standard 103–2003, which uses a nominal return water temperature of 90 °F and a nominal supply water temperature of 110 °F, would better represent the seasonal efficiency of its boilers. PB believes that a waiver permitting publication of LWTSE would allow customers making purchasing decisions to "receive the greatest seasonal efficiency, save money on fuel costs and apply for the Energy Tax Credit that is part of the Federal Energy Bill of 2005." 71 FR 46460, 46464 (August 14, 2006).

2. Factors To Consider in Granting or Evaluating a Petition

DOE understands that PB is seeking a waiver of the test procedure requirements for return water temperature under 10 CFR 430.23(n)(2), because the petitioner asserts that the test procedure may evaluate its boiler models PO–50, PO–60, PO–63, and PO–73 in a manner so unrepresentative of their true energy consumption characteristics as to provide materially inaccurate comparative data. Also, DOE understands that PB seeks to use an alternative test procedure (*i.e.,* draft ASHRAE Standard 103–2003), which specifies lower supply and return water temperatures than required in DOE's test procedure and a different seasonal efficiency metric. In addition, PB requested permission to publish an LWTSE in addition to AFUE for its residential boilers.

In light of the above, DOE considered the potential impacts of testing condensing boilers under lower water temperatures, as suggested by PB. In its notice publishing PB's Petition for Waiver, DOE expressed concern that the reliability of the approach suggested by PB in fact depends upon different seasonal and heating conditions that can vary from house to house, such as heating load profile that is a function of geographic location, temperature of the return water necessary for condensation, and the performance of a particular house's baseboard convectors or radiant floor heating system. DOE also tentatively concluded that appendix F of the draft ASHRAE Standard 103–2003 (which specifically states it is intended for radiant floor heating systems) does not take into account how often a boiler will operate in the condensing mode with a baseboard convector system, even with an outdoor reset control. Thus, it may not accurately reflect "annualized" efficiency, which could cause confusion to consumers making a purchasing decision. Further, DOE understands from the PB petition that outdoor reset controls are "supplied" with its boilers. However, it is unclear whether such controls are an integral part of the boiler itself or a separate mechanism for installation in the field. If these control mechanisms are field-installed, DOE cannot be certain that a boiler would be equipped with the intended outdoor controls, which ultimately impact the annual energy use of the unit. It is DOE's understanding that the outdoor temperature reset does not replace the safety mechanisms in place for residential boilers, which prevent them from operating at temperatures well above the DOE test procedure conditions. Finally, DOE questioned whether granting a waiver to PB could result in LTWSE ratings for its oil-fired boiler models PO–50, PO–60, PO–63, and PO–73 that do not enable uniform comparison with the ratings of other oil-fired boilers. 71 FR 46460, 46461 (August 14, 2006).

Discussion of Comments

DOE announced in the **Federal Register** the PB Petition for Waiver, the potential use of draft ASHRAE Standard 103–2003, appendix F as an alternative test procedure for residential oil-fired furnaces and boilers, a calculation methodology for LWTSE, and a request for public comments. 71 FR 46460 (August 14, 2006).

In particular, DOE requested comments on the following questions:

- Does the DOE test procedure provide results that are unrepresentative of the PB PO–50, PO–60, PO–63, and PO–73 models of oil-fired boilers' energy consumption so as to provide materially inaccurate comparative data in all installations?
- Were PB to be granted a waiver, would it lead to a proliferation of petitions for waiver for other oil-fired boilers?
- Is the DOE test procedure appropriate for boilers used with baseboard convector heating systems?
- Are there other metrics that can be used to assess the performance of low-water-temperature boilers used with baseboard heating systems?
- Is it appropriate for PB to use the proposed alternate test procedures for ratings and representations, and compliance with energy efficiency standards, building codes, and regulatory requirements?
- Should the Department prescribe for manufacturers the LWTSE for low-water-temperature boilers?

Id. at 46462.

In response, DOE received comments from seven interested parties. The comments appear in Docket No. EERE–BT–2006–WAV–0140. (See the **FOR FURTHER INFORMATION CONTACT** section in this notice for further information about access to the docket.) The following discussion identifies each interested party and summarizes its relevant comments.

(1) Bradford White Corporation

Bradford White Corporation (BWC) generally opposed the Petition for Waiver and commented that lowering the supply water temperature (140 °F) and the return water temperature (120 °F) specified in ASHRAE Standard 103–1993 to 110 °F and 90 °F, respectively,

as PB requests, could increase the rated AFUE for all other boilers, especially condensing types. Further, BWC stated that the condensing products on today's market, including those with outdoor temperature reset controls, are currently rated according to the existing test procedures. In response to the above questions, BWC opined that the current test procedure (10 CFR 430.23(n)(2)) "does not provide materially inaccurate comparative data." (BWC, 9 at p.1) Instead, BWC suggested that it is designed to select a single set of operating conditions that a boiler may see in service and measure efficiency at that point. This single operating test point allows consumers to compare data across available models and manufacturers. BWC asserted that the current test procedure is appropriate for boilers used with baseboard convector systems, and that creating other ratings would confuse the market and consumers by creating a matrix of boiler types, system types, operating temperatures, and so forth. (BWC, 9 at p.2)

(2) National Oilheat Research Alliance

National Oilheat Research Alliance (NORA) generally favored the PB Petition for Waiver and provided several assertions to substantiate its position. First, the oil heating industry has objected to the AFUE rating procedure because it fails to recognize the benefits that controls and electronics may have on overall system efficiency. Second, NORA stated that the current test procedure for AFUE does not serve the interests of consumers because it does not allow the measurement of an oilheating boiler when it is fully condensing. Third, NORA argued that the operating system controls, including use of an outside reset feature, can adjust boiler water temperatures to meet particular heating loads, thereby improving efficiency over a range of weather conditions. (NORA, 8 at p.1,2)

(3) ECR International, Inc.

ECR International, Inc. (ECRI) strongly urged DOE to deny the PB Petition for Waiver. In general, ECRI did not object to the supplemental use of LWTSE for marketing and informational purposes. However, ECRI asserted that the AFUE test results under DOE's test conditions must be clearly distinguished from the optional LWTSE metrics to prevent consumer confusion. Notwithstanding the above, ECRI objected to the PB Petition for Waiver for the following reasons. According to ECRI, AFUE provides a common standard by which a consumer can make a logical comparison between boiler models and manufacturers. However, AFUE can only be used for relative comparisons between boilers and not absolute expectations of fuel consumption, because the actual efficiency of a boiler depends on many factors that vary from house to house and the current test procedure requires a steady state condition for return water temperature. As an example, ECRI states that the performance of a unit configured with an outdoor reset feature and indirect domestic hot water heating will be different from a system without such features and that return water temperatures vary in any one demand cycle. (ECR, 6 at p.1)

In response to the above questions raised by DOE, ECRI offered the following comments. First, ECRI generally stated that AFUE and LWTSE metrics are not comparable. ECRI opined that the LWTSE metric would provide a higher efficiency value using the same test method due to differences in operating temperatures. Second, if DOE grants PB a waiver, ECRI will apply for and expect to receive a waiver for its products (both gas and oil types), and the result would be an increase of one to three percentage points of efficiency. Third, the current test procedure is appropriate for boilers used in baseboard applications, because AFUE enables comparisons between various boiler types. Fourth, the current use of AFUE allows for comparisons of low-water-temperature boilers. Fifth, it is not appropriate to use the LWTSE rating for compliance with energy efficiency standards, because reducing the water temperature would reduce the validity of the testing protocol. Overall, ECRI asserted that DOE should not substitute AFUE with LWTSE, and instead, ECRI recommended using LWTSE as a supplement to an AFUE rating to provide consumers with additional information on condition that the information is not confusing to consumers. (ECRI, 6 at p.2,3)

(4) Burnham Hydronics

In general, Burnham Hydronics (BH) agreed with PB that the current test procedure underestimates boiler efficiency in low-temperature applications, but it stated that all condensing boilers are disadvantaged in this way, so there should be no waiver. Further, BH opined that if a waiver were granted, there would not be a proliferation of waivers from the two manufacturers of oil-fired boilers, but there would be a proliferation of waivers from the more than twenty manufacturers of gas-fired boilers. BH stated its belief that the current test procedure overestimates the efficiency of boilers that are used in baseboard heating systems, and underestimates the efficiency of boilers used in condensing systems. BH asserted that there are no other metrics that can be used to measure the performance of low-water-temperature boilers used with baseboard heating systems, and that it is not appropriate to use a test procedure for LWTSE to meet established energy efficiency standards. As a minimum, BH reasoned that the current test procedure puts all condensing boiler manufacturers on a level playing field. Lastly, BH commented that DOE could prescribe LWTSE for low-water-temperature boilers, but only through the rulemaking process. (BH, 3 at p.1,2)

(5) Brookhaven National Laboratory

Brookhaven National Laboratory (BNL) commented that the current AFUE test procedure for boilers specifies supply and return water temperatures at 140 °F and 120 °F, respectively. This return water temperature is specified both for condensing and non-condensing boilers. At this return water temperature, BNL stated that a gas-fired boiler can condense, but an oil-fired boiler will not. Furthermore, due to the lower water vapor content and lower latent heat loss, an oil-fired boiler will achieve higher efficiency than a gas-fired boiler under non-condensing conditions with the same excess air and flue gas temperature. (BNL, 10 at p. 1)

BNL stated its understanding that actual boiler temperatures can vary considerably in the field, and that the temperature in a particular system can be affected by controls, including outdoor reset controls. According to BNL, studies have shown that outdoor reset controls can enable condensing oil-fired boilers to operate in a condensing mode for most of the heating season, even when used with baseboard radiators. (BNL, 10 at p. 1)

In response to DOE's request for comments on other metrics that can be considered for low-water-temperature boilers used with baseboard heating systems, BNL addressed controls that provide variable water temperature. BNL stated that the ASHRAE Special Products Committee 155 is developing a test method for commercial boilers that includes the effects of controls and variable water temperatures, which would result in an "Application Seasonal Efficiency" where controls, oversize features, and multiple boiler options can be selected to evaluate performance in a particular building. In addition, BNL commented that the method for "Determination of Boiler Performance for Low Water

Temperature Applications," defined an appendix to the public review draft ASHRAE Standard 103, "Method of Testing Annual Fuel Utilization Efficiency of Residential Central Furnaces and Boilers," was developed only for information and in particular for low temperature applications, such as radiant floor heating. BNL stated that this optional methodology uses supply and return water temperatures that are low enough to allow for condensing both in oil- and gas-fired boilers, but because this methodology uses a fixed-temperature water supply, it does not apply to a system with a variable temperature water supply. (BNL, 10 at p. 1, 2)

(6) Quincy Hydronic Technology, Inc.

Quincy Hydronic Technology, Inc. (QHT) strongly opposed granting a waiver to PB, arguing that it would be unfair to manufacturers that produce high-efficiency boilers which meet the required AFUE levels. Moreover, QHT objected to the AFUE rating system generally and asserted that it is not only flawed, but penalizes high-efficiency products. QHT cited examples of its B–10 boilers, wall-mounting gas boilers, and flexible cast iron boilers that essentially reduce fuel consumption and are more efficient because of innovative designs, but such benefits cannot be demonstrated through the AFUE test procedure. QHT indicated that, based on homeowner feedback, AFUE ratings fail consumers when making purchasing decisions. QHT opined that if PB were to receive a waiver, then DOE should expect requests for waivers from many manufacturers. QHT argued that DOE should revise the current test procedure so that it better reflects the performance boilers can achieve in actual field use and to make AFUE more meaningful. (QHT, 5 at p. 1, 2)

(7) LAARS Heating Systems Company

LAARS Heating Systems Company (LHSC) opposed granting a waiver to PB for its line of PO models of oil-fired boilers. According to LHSC, the change that PB requests for inlet and outlet temperatures from the levels currently specified in ASHRAE Standard 103–1993 (*i.e.,* from 120 °F/140 °F to 90 °F/110 °F) would increase the rated AFUE for these products, as it would for most other gas-fired and oil-fired boilers, and in particular condensing boilers. Further, if a new test procedure methodology is provided by waiver for only the PB products, then consumers would not be able to make reliable comparisons of AFUE ratings with the product lines of other manufacturers. Accordingly, LHSC argued that any change in the current test procedure should be industry-wide. (LHSC, 11 at p. 1)

In response to DOE's questions, LHSC commented that the current test procedure is not materially inaccurate, but it is designed for a single set of operating conditions and measures efficiency at that point, to enable consumers to compare data across available products. Also, LHSC reasoned that the test procedure is appropriate for boilers used with baseboard convector systems that are typically designed for 180 °F supply/160 °F return temperatures, which would result in slightly different installed operating efficiencies than rated AFUE. LHSC observed that existing standards, codes, and other regulatory requirements rely on the current test procedures for AFUE, so providing a unique set of testing requirements through waiver would give PB an unfair competitive advantage in meeting such requirements. In addition, AFUE is the only metric for measuring boiler performance, regardless of boiler or type of heating system that uses gas-fired or oil-fired boilers, and introducing other ratings would cause confusion in the marketplace. LHSC opined that using the alternative test procedure for ratings and representations, as proposed by PB, would artificially raise the ratings for products made by PB over the boiler products of other manufacturers that test for AFUE under the current test procedures. Nevertheless, LHSC asserted that DOE should review and seek comments on potential changes to ASHRAE Standard 103 and consider adoption of appropriate amendments to the test procedure suitable for implementation on an industry-wide basis. (LHSC, 11 at p. 2)

Response to Comments and DOE Determination

Regarding the responses received to the above questions raised by DOE and other issues presented by commenters, DOE offers the following discussion.

First, DOE asked whether the currently-prescribed test procedures may evaluate the PO-series basic model of oil-fired boiler manufactured by PB in a manner so unrepresentative of its true energy consumption characteristics as to provide materially inaccurate data. Interested parties commented that although the current test procedure measures efficiency at a single operating point under steady-state conditions, it nevertheless underestimates boiler efficiency in low-temperature applications, and in some cases penalizes high-efficiency designs. Two interested parties objected to the current test procedure because it does not consider the benefits that electronic controls (such as an outdoor temperature reset feature that can adjust boiler output temperature to meet a particular heating need) may have on overall system efficiency, nor does the current test procedure allow for measuring boiler efficiency when it is fully condensing.

DOE generally divides products for standard-setting purposes into product classes by type of energy used, capacity, or other performance-related feature affecting energy efficiency. (42 U.S.C. 6295(q)(1)) In the case of residential boilers, DOE has established product classes based on fuel type, including gas-fired and oil-fired units. 10 CFR 430.32(e)(2).

DOE understands that the current test procedure, at 10 CFR 430.23(n)(2) and 10 CFR part 430, subpart B, appendix N, measures AFUE at steady-state operating conditions under certain supply and return water temperatures. The test procedure for all oil-fired boilers, regardless of manufacturer and across the entire range of efficiencies, was developed to provide a reasonable interpretation to the consumer of the annual fuel utilization efficiency. In order to do this, DOE requires testing at specific incoming and exiting water temperatures to provide a fair comparison for boilers offered for sale and to minimize testing burden on manufacturers. This enables consumers to make comparisons among various gas-fired or oil-fired boilers all operating under the same operating test condition.

While DOE acknowledges that there are certain design features that could enhance efficiency which may not be captured by the current test procedure and statutory metric, one option would be for DOE to consider test procedure revisions in the future, which consider variations to the water temperatures experienced by different systems. PB did not provide any data supplementing their claims to show how the AFUE is impacted by varying water temperatures. In addition, PB also did not provide any data which would give DOE an indication of the proportion of time that the boiler spends operating at various water temperatures throughout the year. (Note: DOE realizes such data would be location and installation dependent.) Given that the statutory metric is AFUE, the current test procedure adequately measures that metric.

When asked if there would be a proliferation of petitions for waiver if PB were granted a waiver, interested parties that commented on this issue

predicted that there would be some petitions for waiver from manufacturers of oil-fired boilers, and more so from manufacturers of gas-fired boilers. In light of the above comments, DOE understands that there would likely be many petitions for waiver from the prescribed test procedures under 10 CFR 430.23(n)(2). However, such considerations do not affect whether PB's Petition for Waiver should be granted on its merits.

DOE believes that an alternative test procedure that is based on the informative appendix F of draft ASHRAE Standard 103–2003 could provide consumers with additional information about system efficiency under various operating conditions in the field, such as those used in radiant heating applications. However, as mentioned in comments by BNL, the procedure provided in appendix F does not address fully the more complicated issue of variable temperature controls.

DOE asked about the appropriateness of its test procedure as it relates to boilers used with baseboard systems. Interested parties generally commented that the current test procedure is appropriate for boilers used with baseboard convector heating systems. It does not provide materially inaccurate comparative data, but is designed around a single set of operating conditions, thereby enabling consumers to compare data and make valid comparisons between products. DOE asked whether there are other metrics that can be used to assess the performance of low-water-temperature boilers used with baseboard heating systems. Interested parties generally commented that the current test procedure is appropriate, because it allows relative comparisons between low-temperature boilers, and that creating other ratings could cause confusion in the marketplace. DOE agrees that the current test procedure allows for an effective means for relative comparisons because the test establishes a single-point operating condition for all boilers regardless of how the boilers are used in actual field installations. For the same reason however, DOE is sensitive to the fact that the test procedure cannot capture the variance in performance of boilers which might be capable of different ratings when tested at other operating conditions (or tested with certain controls). By requiring testing under a specific set of operating conditions, DOE's test procedure allows for reasonable representations to be made of the efficiency, irrespective of efficiency at other conditions or manufacturer.

In response to DOE's request for comments on whether it would be appropriate for PB to use an alternative test procedure for its ratings, representations, and compliance with energy efficiency standards, building codes, and other regulatory requirements, interested parties generally opined that it would not be appropriate to use a test procedure that measures LWTSE to meet established energy efficiency standards or regulations that are based on AFUE. Further, because such regulations rely on the current test procedures for AFUE, commenters argued that providing a unique set of testing requirements would give one manufacturer an unfair competitive advantage in meeting such requirements. Further, DOE understands that the variance in operating conditions, which impact the efficiency of the boiler, are not manufacturer-specific or model-specific. If DOE were to consider any changes, it would do so in a separate proceeding. DOE agrees that using LWTSE would be inappropriate because AFUE is the established metric, and, in addition, not deviating from the current AFUE metric and test procedure would maintain a method for consistent and equivalent comparisons of all boilers.

As to whether DOE should prescribe a test procedure and establish levels for LWTSE, DOE did not receive specific comments on the technical merits of PB's requested alternative test procedure as a proposed amendment to 10 CFR part 430, subpart B, appendix N—Uniform Test Method for Measuring the Energy Consumption of Furnaces and Boilers. 71 FR 46460, 46461 (August 14, 2006). Instead, interested parties commented that if DOE prescribes a test procedure and standard for LWTSE, it should be through the rulemaking process, include the opportunity for public comments, and be applied on an industry-wide basis. Two interested parties generally addressed the test method defined in appendix F of the public review draft ASHRAE Standard 103, and one interested party said that the method of test was developed for low-water-temperature applications, such as radiant floor heating systems, but for information purposes only. (BNL, 10 at p.2) The other interested party asserted that DOE should seek comments on changes to ASHRAE Standard 103, and make appropriate changes to the DOE test procedures. (LHSC, 11 at p.2) DOE believes the most appropriate approach presently is to not propose an amendment prescribing the alternative test procedure and establishing standard levels based on LWTSE. However, DOE is sensitive to the potential issue of its current test procedure possibly underrating the efficiency of some boilers used in condensing modes/systems. Accordingly, DOE is receptive to any comments and suggestions for workable solutions during any future DOE activity aimed at revising the test procedure. DOE believes that a full understanding of the issue and identification of the appropriate approaches to remedying issues can only be accomplished through a rulemaking process.

DOE appreciates all of the comments it received, which have helped DOE reach a more fully informed decision regarding the PB Petition. DOE recognizes the concern raised by some commenters that the current DOE test procedure may not equally estimate the performance of condensing boilers and non-condensing boilers, and some commenters believe that the LWTSE test procedure would better characterize the efficiency of condensing boilers. DOE believes, however, that the LWTSE test procedure, which specifies lower fixed test temperatures only, may not be comprehensive enough to either capture or sufficiently represent the performance of condensing systems equipped with certain controls (*i.e.,* temperature reset controls) that vary system operating temperatures. A revised test procedure that both accommodates lower water temperatures and captures the potential benefits of control strategies may be required to wholly and accurately characterize the spectrum of available boiler products and operating conditions. Even though DOE understands that there could be a variety of operating conditions experienced in the field, PB has not shown that the current AFUE test cannot be applied to these models. In addition, the test procedures are to provide reasonable efficiency ratings across the range of covered oil-fired boilers, and DOE was not provided details as to why DOE's test procedure does not accurately capture the energy efficiency of the range of products currently sold.

In light of the above, DOE has determined the following in response to the PB Petition for Waiver. Pursuant to 42 U.S.C. 6291(22)(A), the "efficiency descriptor" for furnaces (of which boilers are one type) is annual fuel utilization efficiency. Because the efficiency metric for those products are set by statute, DOE does not have authority to substitute other metrics to rate the efficiency of residential furnaces and boilers. The DOE test

procedure prescribed at 10 CFR 430.23(n) and contained in 10 CFR part 430, subpart B, appendix N require AFUE testing of boilers with an inlet water temperature of 140 °F and an outlet water temperature of 120 °F. DOE could, however, consider modifications to the test conditions in the AFUE test as part of a separate rulemaking proceeding if DOE had data showing different test conditions were more appropriate.

Even though PB's Petition for Waiver requested permission to report information supplemental to AFUE rather than to only report different data expected to be more representative than AFUE, PB asserted that the DOE test procedure generates results that are so unrepresentative of the true energy consumption characteristics of its basic models as to provide materially inaccurate comparative data.

After subsequent inquiry concerning PB's assertion and in light of the above, DOE has determined that the PB boilers in question can and do operate at the higher water temperatures specified in the DOE test procedure. PB did not state that its units are incapable of operating at higher water temperatures; DOE understands the units are neither shipped with an add-on component nor equipped with an integral part that precludes operation at higher water temperatures. As stated earlier in this Decision and Order, system water temperatures are a function of many factors unrelated to the unit itself and can range significantly. In the absence of outdoor temperature reset, the incoming water temperatures can vary greatly depending on heating load, installation, and other factors. Thus, because the PB boilers can operate at the temperatures specified in the existing DOE test procedures, it is appropriate to test at those temperatures when rating the unit's AFUE. Testing in this manner provides a steady-state test condition that generates results that can be compared across a range of products and manufacturers. PB has provided no evidence to suggest that the existing test procedure generates results that are either inaccurate or are not representative when testing is conducted at the higher temperatures specified in the test procedure. Therefore, a waiver is not appropriate, which in turn provides no basis for granting an alternative test procedure.

The PB Petition for Waiver has raised a legitimate issue of whether the DOE test procedure would benefit from amendments to test and rate the performance of boilers at lower water input and output temperatures, as well as the efficiency effects of various controls for those products. PB has suggested that results generated at lower water temperature conditions would be more typical of the specified models' performance, although it did not state that its products would be unable to be tested using DOE's test procedure or to meet the energy conservation standard when testing is conducted at the higher water temperatures specified in the existing DOE test procedure for residential boilers. However, given their potential complexity, DOE believes that such issues should be addressed in the context of a rulemaking with the opportunity for public notice and comment. The results of such rulemaking would apply on an industry-wide basis, thereby resulting in no advantage or disadvantage to any particular manufacturer. DOE may consider potential amendments to the test procedure regarding testing the energy efficiency of condensing boilers at lower water temperatures as part of a future rulemaking.

In the meantime, DOE points out that PB and similarly situated manufacturers may make supplemental statements regarding the energy efficiency of their boilers (*e.g.,* on marketing materials, Web sites), provided that they continue to disclose the AFUE result generated using the DOE test procedure. Such supplemental results must not mislead the consumer and must be clearly distinguished from the AFUE results. With that said, DOE notes that it has examined ASHRAE Standard 103–2003 (Public Review Draft) and believes it to be generally adequate for the supplemental testing purposes envisioned by PB, provided that the significance of LWTSE results are explained and clearly differentiated from AFUE results, so as to prevent consumer confusion in the marketplace. Since LWTSE test conditions promote condensing operation, DOE would caution, in the interest of consumer safety, that units tested accordingly, and advertised with a LWTSE, be appropriately designed or equipped to contend with potential corrosion issues which are typically associated with condensates produced from low-temperature flue gases. Accordingly, nothing currently prevents PB (or any other manufacturer) from reporting low-water-temperature test results for the boilers in question, along with the required AFUE results in marketing or other informative materials for consumers. DOE suggests any manufacturer that wishes to show the LWTSE values in addition to the AFUE values clearly distinguish the differences between the two tests, including the different operating characteristics, for consumers. DOE notes, however, that such supplemental information could not be placed on the product's Energy Guide label, because the FTC's regulations limit such information to results generated under the DOE test procedure.

Consultations With Other Agencies

DOE consulted with the FTC staff concerning the PB Petition for Waiver. The FTC staff did not have any objections to the decision to deny a waiver to PB.

Conclusion

After careful consideration of all the materials submitted by PB and consultation with the FTC staff, for the reasons above, it is ordered that:

(1) The "Petition for Waiver" filed by PB Heat, LLC (PB) (Case No. WAV–0140) is hereby denied for the reasons discussed above; and

(2) PB shall be required to test or rate the AFUE of its residential PO–50, PO–60, PO–63, and PO–73 oil-fired boilers on the basis of the current test procedure contained in 10 CFR 430.23(n) and 10 CFR part 430, subpart B, appendix N.

PB may conduct LWTSE testing and report the results in product literature (other than supplementation of the certification label), provided that the AFUE test results generated under the DOE test procedure continue to be disclosed and that the LWTSE results provide reasonable, clear, and distinguishable representations of those results to the consumer.

Issued in Washington, DC, on April 30, 2010.

Cathy Zoi,
Assistant Secretary,
Energy Efficiency and Renewable Energy.

[FR Doc. 2010–10815 Filed 5–6–10; 8:45 am]

BILLING CODE 6450–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. ER10–1089–000]

EquiPower Resources Management, LLC; Supplemental Notice That Initial Market-Based Rate Filing Includes Request for Blanket Section 204 Authorization

April 29, 2010.

This is a supplemental notice in the above-referenced proceeding of EquiPower Resources Management, LLC's application for market-based rate authority, with an accompanying rate

tariff, noting that such application includes a request for blanket authorization, under 18 CFR part 34, of future issuances of securities and assumptions of liability.

Any person desiring to intervene or to protest should file with the Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). Anyone filing a motion to intervene or protest must serve a copy of that document on the Applicant.

Notice is hereby given that the deadline for filing protests with regard to the applicant's request for blanket authorization, under 18 CFR part 34, of future issuances of securities and assumptions of liability, is May 19, 2010.

The Commission encourages electronic submission of protests and interventions in lieu of paper, using the FERC Online links at *http://www.ferc.gov.* To facilitate electronic service, persons with Internet access who will eFile a document and/or be listed as a contact for an intervenor must create and validate an eRegistration account using the eRegistration link. Select the eFiling link to log on and submit the intervention or protests.

Persons unable to file electronically should submit an original and 14 copies of the intervention or protest to the Federal Energy Regulatory Commission, 888 First St., NE., Washington, DC 20426.

The filings in the above-referenced proceeding are accessible in the Commission's eLibrary system by clicking on the appropriate link in the above list. They are also available for review in the Commission's Public Reference Room in Washington, DC. There is an eSubscription link on the Web site that enables subscribers to receive e-mail notification when a document is added to a subscribed docket(s). For assistance with any FERC Online service, please e-mail *FERCOnlineSupport@ferc.gov.* or call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

Nathaniel J. Davis, Sr.,

Deputy Secretary.

BILLING CODE 6717–01–P

FEDERAL ENERGY REGULATORY COMMISSION

[Docket No. ER10–1110–000]

Mint Energy LLC; Supplemental Notice That Initial Market-Based Rate Filing Includes Request for Blanket Section 204 Authorization

April 29, 2010.

This is a supplemental notice in the above-referenced proceeding of Mint Energy LLC's application for market-based rate authority, with an accompanying rate tariff, noting that such application includes a request for blanket authorization, under 18 CFR Part 34, of future issuances of securities and assumptions of liability.

Any person desiring to intervene or to protest should file with the Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). Anyone filing a motion to intervene or protest must serve a copy of that document on the Applicant.

Notice is hereby given that the deadline for filing protests with regard to the applicant's request for blanket authorization, under 18 CFR Part 34, of future issuances of securities and assumptions of liability, is May 19, 2010.

The Commission encourages electronic submission of protests and interventions in lieu of paper, using the FERC Online links at *http://www.ferc.gov.* To facilitate electronic service, persons with Internet access who will eFile a document and/or be listed as a contact for an intervenor must create and validate an eRegistration account using the eRegistration link. Select the eFiling link to log on and submit the intervention or protests.

Persons unable to file electronically should submit an original and 14 copies of the intervention or protest to the Federal Energy Regulatory Commission, 888 First St., NE., Washington, DC 20426.

The filings in the above-referenced proceeding are accessible in the Commission's eLibrary system by clicking on the appropriate link in the above list. They are also available for review in the Commission's Public Reference Room in Washington, DC. There is an eSubscription link on the Web site that enables subscribers to receive e-mail notification when a document is added to a subscribed docket(s). For assistance with any FERC Online service, please e-mail *FERCOnlineSupport@ferc.gov.* or call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

BILLING CODE 6717–01–P

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OECA–2005–0062; ER–FRL–8990–3]

Agency Information Collection Activities; Proposed Collection; Comment Request; Procedures for Implementing the National Environmental Policy Act and Assessing the Environmental Effects Abroad of EPA Actions (Renewal); EPA ICR No. 2243.06, OMB Control No. 2020–0033

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act (PRA) (44 U.S.C. 3501 *et seq.*), this document announces that EPA is planning to submit a request to renew an existing approved Information Collection Request (ICR) to the Office of Management and Budget (OMB). This ICR is scheduled to expire on August 31, 2010. Before submitting the ICR to OMB for review and approval, EPA is soliciting comments on specific aspects of the proposed information collection as described below.

DATES: Comments must be submitted on or before Tuesday, July 6, 2010.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–HQ–OECA–2005–0062, by one of the following methods:

- *http://www.regulations.gov:* Follow the on-line instructions for submitting comments.
- *E-mail: trice.jessica@epa.gov.*
- *Fax:* 202–564–0072.
- *Mail:* Enforcement and Compliance Docket, Environmental Protection Agency, Mailcode: 28221T, 1200 Pennsylvania Ave., NW., Washington, DC 20460.
- *Hand Delivery:* EPA Headquarters West Building, Room 3334, located at 1301 Constitution Ave., NW., Washington, DC 20460. Such deliveries are only accepted during the Docket's normal hours of operation, and special arrangements should be made for deliveries of boxed information.

Instructions: Direct your comments to Docket ID No. EPA–HQ–OECA–2005–0062. EPA's policy is that all comments received will be included in the public docket without change and may be made available online at *http://www.regulations.gov,* including any personal information provided, unless the comment includes information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Do not submit information that you consider to be CBI or otherwise protected through *http://www.regulations.gov* or e-mail. The *http://www.regulations.gov* Web site is an "anonymous access" system, which means EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an e-mail comment directly to EPA without going through *http://www.regulations.gov* your e-mail address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the Internet. If you submit an electronic comment, EPA recommends that you include your name and other contact information in the body of your comment and with any disk or CD–ROM you submit. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comment. Electronic files should avoid the use of special characters, any form of encryption, and be free of any defects or viruses. For additional information about EPA's public docket visit the EPA Docket Center homepage at *http://www.epa.gov/epahome/dockets.htm.*

FOR FURTHER INFORMATION CONTACT: Jessica Trice, Office of Federal Activities, Mail Code 2252A, Environmental Protection Agency, 1200 Pennsylvania Ave., NW., Washington, DC 20460; telephone number: (202) 564–6646; fax number: (202) 564–0072; e-mail address: *trice.jessica@epa.gov.*

SUPPLEMENTARY INFORMATION:

How can I access the docket and/or submit comments?

EPA has established a public docket for this ICR under Docket ID No. EPA–HQ–OECA–2005–0062, which is available for online viewing at *http://www.regulations.gov,* or in person viewing at the Enforcement and Compliance Docket in the EPA Docket Center (EPA/DC), EPA West, Room 3334, 1301 Constitution Ave., NW., Washington, DC. The EPA/DC Public Reading Room is open from 8 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Reading Room is 202–566–1744, and the telephone number for the Enforcement and Compliance Docket is 202–566–1752.

Use *http://www.regulations.gov* to obtain a copy of the draft collection of information, submit or view public comments, access the index listing of the contents of the docket, and to access those documents in the public docket that are available electronically. Once in the system, select "search," then key in the docket ID number identified in this document.

What information is EPA particularly interested in?

Pursuant to section 3506(c)(2)(A) of the PRA, EPA specifically solicits comments and information to enable it to:

(i) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the Agency, including whether the information will have practical utility;

(ii) evaluate the accuracy of the Agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

(iii) enhance the quality, utility, and clarity of the information to be collected; and

(iv) minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses. In particular, EPA is requesting comments from very small businesses (those that employ less than 25) on examples of specific additional efforts that EPA could make to reduce the paperwork burden for very small businesses affected by this collection.

What should I consider when I prepare my comments for EPA?

You may find the following suggestions helpful for preparing your comments:

1. Explain your views as clearly as possible and provide specific examples.
2. Describe any assumptions that you used.
3. Provide copies of any technical information and/or data you used that support your views.
4. If you estimate potential burden or costs, explain how you arrived at the estimate that you provide.
5. Offer alternative ways to improve the collection activity.
6. Make sure to submit your comments by the deadline identified under **DATES.**
7. To ensure proper receipt by EPA, be sure to identify the docket ID number assigned to this action in the subject line on the first page of your response. You may also provide the name, date, and Federal Register citation.

What information collection activity or ICR does this apply to?

Affected entities: Entities potentially affected by this action are certain grant or permit applicants who must submit environmental information documentation to EPA for their projects to comply with NEPA or Executive Order 12114. The applicant burden for any EPA action subject to NEPA and/or Executive Order 12114 that is based on an applicant proposal, including Wastewater Treatment Construction Grants Program facilities, STAG actions subject to NEPA and new source NPDES permits issued by EPA, is addressed in this ICR. EPA's Executive Order 12114 implementing procedures further the purpose of NEPA and provide that EPA may be guided by the CEQ Regulations to the extent they are applicable. Therefore, when EPA conducts an environmental assessment pursuant to its Executive Order 12114 procedures, the Agency generally follows the CEQ Regulations and the procedures in EPA's NEPA implementing regulations.

Title: Agency Information Collection Activities; Proposed Collection; Comment Request; Procedures for Implementing the National Environmental Policy Act and Assessing the Environmental Effects Abroad of EPA Actions (Renewal).

ICR numbers: EPA ICR No. 2243.06, OMB Control No. 2020–0033.

ICR status: This ICR is currently scheduled to expire on August 31, 2010. An Agency may not conduct or sponsor, and a person is not required to respond to, a collection of information, unless it displays a currently valid OMB control number. The OMB control numbers for EPA's regulations in title 40 of the CFR, after appearing in the **Federal Register** when approved, are listed in 40 CFR part 9, are displayed either by publication in the **Federal Register** or by other appropriate means, such as on the related collection instrument or form, if applicable. The display of OMB control numbers in certain EPA regulations is consolidated in 40 CFR part 9.

Abstract: The National Environmental Policy Act of 1969 (NEPA), 42 U.S.C. 4321–4347 establishes the Federal government's national policy for protection of the environment. The Council on Environmental Quality Regulations (CEQ Regulations) at 40 CFR parts 1500 through 1508 establish procedures implementing the national policy. The CEQ Regulations (40 CFR 1505.1) require Federal agencies to adopt and, as needed, revise their own implementing procedures to supplement the CEQ Regulations and to ensure their decision-making processes are consistent with NEPA.

Those subject to the final NEPA rule include EPA officials who must comply with NEPA, and certain grant or permit applicants who must submit environmental information documentation to EPA for their proposed projects. The final NEPA regulations consolidate and standardize the environmental review process applicable to all EPA actions subject to NEPA, including those actions now specifically addressed in the regulations and other actions subject to NEPA but not specifically addressed in the regulations (*e.g.,* certain grants awarded for special projects authorized by Congress through the Agency's annual Appropriations Act).

Compliance with the final NEPA regulations is the responsibility of EPA's Responsible Officials. For applicant-proposed actions, certain procedures apply to applicants (that is grantees and permit applicants) who must submit environmental information to EPA as part of the environmental review process. The EPA Responsible Official is responsible for the environmental review process, including any categorical exclusion determination or the scope, accuracy, and contents of a final environmental assessment (EA) or environmental impact statement (EIS) and any supporting documents.

The applicant contributes by submitting environmental information to EPA as part of the environmental review process. For actions subject to NEPA, the Responsible Official may determine that the proposed action does not individually or cumulatively have a significant effect on the human environment and may, therefore, be categorically excluded from further NEPA review. If the proposed action is not categorically excluded, the Responsible Official may prepare an EA in order to determine whether to prepare an EIS or a finding of no significant impact (FONSI). If necessary, the Responsible Official must prepare an EIS if the proposed action will have a significant effect on the human environment. For applicant-proposed actions, the applicant may submit information to the Responsible Official regarding the applicability of a categorical exclusion and request a determination by the Responsible Official. Unless the applicant-proposed action is categorically excluded, the Responsible Official may gather the information and prepare the NEPA documents without assistance from the applicant, or have the applicant prepare an environmental information document (EID) or a draft EA and supporting documents or implement a third-party contract agreement with the applicant.

EPA is collecting information from certain applicants as part of the process of complying with either NEPA or Executive Order 12114. EPA's NEPA regulations apply to the actions of EPA that are subject to NEPA in order to ensure that environmental information is available to the Agency's decision-makers and the public before decisions are made and before actions are taken. The Part 6 regulations also include EPA's procedures implementing Executive Order 12114. These procedures ensure that environmental information is available to the Agency's decision-makers and other appropriate Federal agencies and officials for actions subject to Executive Order 12114.

Whether the NEPA documents are based on environmental information developed by the Responsible Official or submitted by the applicant, the NEPA review and resulting documents generally rely on the use of existing data and information, including data and information from other federal agencies, state or local governments, or federally-recognized Indian tribes with jurisdiction by law or special expertise. Whether the NEPA documents are prepared by the Responsible Official or based on environmental information submitted by the applicant, the quality of the information provided by an applicant must be sufficient to enable the Responsible Official to make a decision. This is accomplished under EPA's NEPA implementing procedures through: (1) Early coordination and

cooperation with Federal agencies, State and local governments, and federally-recognized Indian tribes with jurisdiction by law or special expertise (see final rule § 6.202); and (2) the public participation process associated with actions other than those categorically excluded (see final rule § 6.203). When the environmental information is provided by the applicant, the Responsible Official is responsible for the statements, analyses, and conclusions of the EA or EIS and any supporting documents. The information compiled is a one-time submission in narrative text format (see final rule §§ 6.205 and 6.207) rather than computerized compilations of data and information. There are no forms, checklists, or ongoing reporting, recordkeeping or file-maintenance requirements for applicants. EPA maintains file records for each action.

The information submitted by applicants would be consistent with the guidelines of the Office of Management and Budget (OMB) in 5 CFR 1320.6. There are no schedule requirements or requirements on the number of copies of the documentation to be submitted or requirements for ongoing reporting or recordkeeping or to conduct statistical surveys.

Burden Statement: The annual public reporting and recordkeeping burden for this collection of information is estimated to average 123 hours per response. Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a Federal agency. This includes the time needed to review instructions; develop, acquire, install, and utilize technology and systems for the purposes of collecting, validating, and verifying information, processing and maintaining information, and disclosing and providing information; adjust the existing ways to comply with any previously applicable instructions and requirements which have subsequently changed; train personnel to be able to respond to a collection of information; search data sources; complete and review the collection of information; and transmit or otherwise disclose the information.

For purposes of this ICR, the total annual public reporting and recordkeeping burden for this collection of information is estimated at 38,472 hours and $3,503,245 for contractor hours and costs, direct labor hours and costs, and O&M costs. This burden reflects the annual submission of documentation for an anticipated 312 applicant-proposed project that may be documented with a CE, or an EA/FONSI, or an EIS/ROD. For any specific project, only one of these levels of documentation is generally prepared.

The ICR provides a detailed explanation of the Agency's estimate, which is only briefly summarized here:

Estimated total number of potential respondents: 312.

Frequency of response: On occasion.

Estimated total average number of responses for each respondent: 1.

Estimated total annual burden hours: 38,472 hours.

Estimated total annual costs: $3,503,245.

Are there changes in the estimates from the last approval?

There is a decrease of 9,675 hours in the total estimated respondent burden compared with that identified in the ICR currently approved by OMB. This decrease reflects the increasing number of projects that are documented with a categorical exclusion (CE) rather than an environmental assessment (EA). Under the current ICR, approximately 60% of the annual 300 grant projects were documented with a CE, and 40% with an EA. However, we estimate that out of the 300 annual grant projects, 75% will be documented with a CE and 25% will be documented with an EA. Annually, then, the burden would shift to 10,125 hours and $3,825 for CE documentation, and 19,500 hours and $3,000 for EA documentation. With the current ICR, the total annual burden is 48,147 hours and $8,673.34. Under the renewal ICR, the total annual burden is 38,472 hours and $7,638.34. The renewal ICR reduces the total annual burden by 9,675 hours and $1,035. This reflects EPA's respondents anticipated during the 3-year ICR renewal period and the level of environmental documentation EPA anticipates the respondents will submit.

What is the next step in the process for this ICR?

EPA will consider the comments received and amend the ICR as appropriate. The final ICR package will then be submitted to OMB for review and approval pursuant to 5 CFR 1320.12. At that time, EPA will issue another **Federal Register** notice pursuant to 5 CFR 1320.5(a)(1)(iv) to announce the submission of the ICR to OMB and the opportunity to submit additional comments to OMB. If you have any questions about this ICR or the approval process, please contact the technical person listed under **FOR FURTHER INFORMATION CONTACT.**

Dated: April 30, 2010.

Susan E. Bromm,

Director, Office of Federal Activities.

ENVIRONMENTAL PROTECTION AGENCY

[ER–FRL–8990–2]

Environmental Impacts Statements; Notice of Availability

Responsible Agency: Office of Federal Activities, General Information (202) 564–1399 or *http://www.epa.gov/compliance/nepa/.*

Weekly receipt of Environmental Impact Statements

Filed 04/26/2010 through 04/30/2010

Pursuant to 40 CFR 1506.9.

Notice

In accordance with Section 309(a) of the Clean Air Act, EPA is required to make its comments on EISs issued by other Federal agencies public. Historically, EPA has met this mandate by publishing weekly notices of availability of EPA comments, which includes a brief summary of EPA's comment letters, in the **Federal Register.** Since February 2008, EPA has been including its comment letters on EISs on its Web site at: *http://www.epa.gov/compliance/nepa/eisdata.html.* Including the entire EIS comment letters on the Web site satisfies the Section 309(a) requirement to make EPA's comments on EISs available to the public. Accordingly, after March 31, 2010, EPA will discontinue the publication of this notice of availability of EPA comments in the **Federal Register.**

EIS No. 20100157, Draft EIS, USFS, NV, Mountain City, Ruby Mountains, and Jarbidge Ranger Districts, Combined Travel Management Project, Implementation, Humboldt-Toiyabe National Forest, Elko and White Pine Counties, NV, Comment Period Ends: 06/21/2010, Contact: James Winfrey, 775–355–5308.

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

[FRL–9148–6; Docket ID No. EPA–HQ–ORD–2007–0664]

Integrated Risk Information System (IRIS); Announcement of Availability of Literature Searches for IRIS Assessments

AGENCY: Environmental Protection Agency.

ACTION: Notice; Announcement of availability of literature searches for IRIS assessments; request for information.

SUMMARY: The U.S. Environmental Protection Agency (EPA) is announcing the availability of literature searches for four IRIS assessments and requesting scientific information on health effects that may result from exposure to these chemical substances. EPA's IRIS is a human health assessment program that evaluates quantitative and qualitative risk information on effects that may result from exposure to specific chemical substances found in the environment.

DATES: EPA will accept information related to the specific substances included herein as well as any other compounds being assessed by the IRIS Program. Please submit any information in accordance with the instructions provided below.

ADDRESSES: Please submit relevant scientific information identified by docket ID number EPA–HQ–ORD–2007–0664, online at *www.regulations.gov* (EPA's preferred method); by e-mail to *ord.docket@epa.gov;* mailed to Office of Environmental Information (OEI) Docket (Mail Code: 2822T), U.S. Environmental Protection Agency, 1200 Pennsylvania Ave., NW., Washington, DC 20460–0001; or by hand delivery or courier to EPA Docket Center, EPA West, Room 3334, 1301 Constitution Ave., NW., Washington, DC, between 8:30 a.m. and 4:30 p.m. Monday through Friday, excluding legal holidays. Information on a disk or CD–ROM should be formatted in Word or as an ASCII file, avoiding the use of special characters and any form of encryption, and may be mailed to the mailing address above.

FOR FURTHER INFORMATION CONTACT: For information on the IRIS program, contact Dr. Abdel-Razak Kadry, IRIS Program Director, National Center for Environmental Assessment, (mail code: 8601D), Office of Research and Development, U.S. Environmental Protection Agency, Washington, DC 20460; telephone: (703) 347–8545, facsimile: (703) 347–8689; or e-mail: *kadry.abdel@epa.gov.*

For general questions about access to IRIS, or the content of IRIS, please call the IRIS Hotline at (202) 566–1676 or send electronic mail inquiries to *hotline.iris@epa.gov.*

SUPPLEMENTARY INFORMATION:

Background

EPA's IRIS is a human health assessment program that evaluates quantitative and qualitative risk information on effects that may result from exposure to specific chemical substances found in the environment. Through the IRIS Program, EPA provides the highest quality science-based human health assessments to support the Agency's regulatory activities. The IRIS database contains information for more than 540 chemical substances that can be used to support the first two steps (hazard identification and dose-response evaluation) of the risk assessment process. When supported by available data, IRIS provides oral reference doses (RfDs) and inhalation reference concentrations (RfCs) for chronic noncancer health effects and cancer assessments. Combined with specific exposure information, government and private entities use IRIS to help characterize public health risks of chemical substances in a site-specific situation and thereby support risk management decisions designed to protect public health.

This data call-in is a new step in the IRIS process. As literature searches are completed, the results will be posted on the IRIS Web site (*http://www.epa.gov/iris*). The public is invited to review the literature search results and submit additional information to EPA.

Request for Public Involvement in IRIS Assessments

EPA is soliciting public involvement in assessments on the IRIS agenda, including new assessments starting in 2010. While EPA conducts a thorough literature search for each chemical

substance, there may be unpublished studies or other primary technical sources that are not available through the open literature. EPA would appreciate receiving scientific information from the public during the information gathering stage for the assessments listed in this notice or any other assessments on the IRIS agenda. Interested persons may provide scientific analyses, studies, and other pertinent scientific information. While EPA is primarily soliciting information on new assessments, the public may submit information on any chemical substance at any time.

This notice provides (1) a list of new IRIS assessments for which literature searches have recently become available; and (2) instructions to the public for submitting scientific information to EPA pertinent to the development of assessments.

EPA is announcing the availability of additional literature searches on the IRIS web site (*http://www.epa.gov/iris*). The public is invited to review the literature search results and submit additional information to EPA. Literature searches are now available for diisobutyl phthalate (DIBP) (84–69–5), diisononyl phthalate (DINP) (28553–12–0, 68515–48–0, 71549–78–5 and 14103–61–8), dipentyl phthalate (DPP) (131–18–0), and polychlorinated biphenyls (noncancer) (various) at *http://www.epa.gov/iris* under "IRIS Agenda and Literature Searches." Additional literature searches will be posted as they are completed. Availability will be announced in the **Federal Register**. Instructions on how to submit information are provided below under General Information.

General Information

Submit your comments, identified by Docket ID No. EPA–HQ–ORD–2007–0664 by one of the following methods:

- *http://www.regulations.gov:* Follow the on-line instructions for submitting comments.
- *E-mail: ORD.Docket@epa.gov.*
- *Fax:* 202–566–1753.
- *Mail:* Office of Environmental Information (OEI) Docket, (Mail Code: 2822T), U.S. Environmental Protection Agency, 1200 Pennsylvania Ave., NW., Washington, DC 20460. The phone number is 202–566–1752.
- *Hand Delivery:* The OEI Docket is located in the EPA Headquarters Docket Center, EPA West Building, Room 3334, 1301 Constitution Ave., NW., Washington, DC. The EPA Docket Center's Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is 202–566–1744. Such deliveries are only accepted during the docket's normal hours of operation, and special arrangements should be made for deliveries of boxed information. If you provide information by mail or hand delivery, please submit one unbound original with pages numbered consecutively, and three copies of the comments. For attachments, provide an index, number pages consecutively with the main text, and submit an unbound original and three copies.

Instructions: Direct your comments to Docket ID No. EPA–HQ–ORD–2007–0664. It is EPA's policy to include all comments it receives in the public docket without change and to make the comments available online at *http://www.regulations.gov*, including any personal information provided, unless a comment includes information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Do not submit information that you consider to be CBI or otherwise protected through *http://www.regulations.gov* or e-mail. The *http://www.regulations.gov* Web site is an "anonymous access" system, which means EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an e-mail comment directly to EPA without going through *http://www.regulations.gov*, your e-mail address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the Internet. If you submit an electronic comment, EPA recommends that you include your name and other contact information in the body of your comment and with any disk or CD–ROM you submit. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comment. Electronic files should avoid the use of special characters, any form of encryption, and be free of any defects or viruses. For additional information about EPA's public docket visit the EPA Docket Center homepage at *http://www.epa.gov/epahome/dockets.htm.*

Docket: All documents in the docket are listed in the *http://www.regulations.gov* index. Although listed in the index, some information is not publicly available, e.g., CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, will be publicly available only in hard copy. Publicly available docket materials are available either electronically in *http://www.regulations.gov* or in hard copy at the OEI Docket in the EPA Headquarters Docket Center.

Dated: April 30, 2010.

ENVIRONMENTAL PROTECTION AGENCY

National Advisory Council for Environmental Policy and Technology

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of meeting.

SUMMARY: Under the Federal Advisory Committee Act, Public Law 92463, EPA gives notice of a meeting of the National Advisory Council for Environmental Policy and Technology (NACEPT). NACEPT provides advice to the EPA Administrator on a broad range of environmental policy, technology, and management issues. NACEPT is a committee of individuals who represent diverse interests from academia, industry, non-governmental organizations, and local, state, and tribal governments. The purpose of this meeting is to discuss the Council's FY 20l0–FY 2012 agenda, which includes vulnerable populations and workforce issues. A copy of the agenda for the meeting will be posted at *http://www.epa.gov//ocem/nacept/cal-nacept.htm.*

DATES: NACEPT will hold a two-day meeting on Tuesday, May 25, 2010, from 8:30 a.m. to 6 p.m. and Wednesday, May 26, 2010, from 8:30 a.m. to 2 p.m.

ADDRESSES: The meeting will be held at the Sheraton Crystal City Hotel, 1800 Jefferson Davis Highway, Arlington, VA 22202. The meeting is open to the public, with limited seating on a first-come, first-served basis.

FOR FURTHER INFORMATION CONTACT: Sonia Altieri, designated Federal officer, *altieri.sonia@epa.gov,* (202) 564–0243, U.S. EPA, Office of Cooperative Environmental Management (1601M), 1200 Pennsylvania Avenue, NW., Washington, DC 20460.

SUPPLEMENTARY INFORMATION: Requests to make oral comments or to provide written comments to the Council should be sent to Sonia Altieri, designated Federal officer, at the contact information above. All requests must be submitted no later than May 17, 2010.

Meeting Access: For information on access or services for individuals with disabilities, please contact Sonia Altieri at 202–564–0243 or *altieri.sonia@epa.gov.* To request accommodation of a disability, please contact Sonia Altieri, preferably at least 10 days prior to the meeting, to give EPA as much time as possible to process your request.

Dated: April 29, 2010.

Sonia Altieri,

Designated Federal Officer.

ENVIRONMENTAL PROTECTION AGENCY

[FRL–9145–7]

Notice of a Project Waiver of Section 1605 (Buy American Requirement) of the American Recovery and Reinvestment Act of 2009 (ARRA) to the City of Coldwater, MI (Coldwater)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The EPA is hereby granting a project waiver of the Buy American requirements of ARRA section 1605 under the authority of section 1605(b)(2) [manufactured goods are not produced in the United States of a satisfactory quality] to Coldwater, Michigan for the purchase of high-speed, high-efficiency magnetic bearing turbo-compressors that will be used in the city's sludge treatment process. This is a project-specific waiver and it only applies to the use of the specified product for the ARRA funded project being proposed. Any other ARRA project that may wish to use the same product must apply for a separate waiver based on project-specific circumstances. These turbo-compressors, which are supplied by ABS USA of Meriden, Connecticut, are manufactured in Sweden, and meet Coldwater's performance specifications and requirements. The Acting Regional Administrator is making this determination based on the review and recommendations of EPA Region 5's Water Division. Coldwater has provided sufficient documentation to support its request. The Assistant Administrator of the Office of Administration and Resources Management has concurred on this decision to make an exception to Section 1605 of ARRA. This action permits the purchase of high-speed, high-efficiency magnetic bearing turbo-compressors for Coldwater's activated sludge project that may otherwise be prohibited under Section 1605(a) of the ARRA.

DATES: *Effective Date:* March 26, 2010.

FOR FURTHER INFORMATION CONTACT: Andrew Lausted, SRF Program Manager (312) 886–0189, or Puja Lakhani, Office of Regional Counsel, (312) 353–3190, U.S. EPA Region 5, 77 W. Jackson Blvd., Chicago, IL 60604.

SUPPLEMENTARY INFORMATION: In accordance with ARRA Section 1605(c) and pursuant to Section 1605(b)(2) of Public Law 111–5, Buy American requirements, EPA hereby provides notice that it is granting a project waiver to Coldwater, Michigan for the acquisition of high-speed, high-efficiency magnetic bearing turbo-compressors that are manufactured in Sweden.

Section 1605 of the ARRA requires that none of the appropriated funds may be used for the construction, alteration, maintenance, or repair of a public building or public work unless all of the iron, steel, and manufactured goods used in the project are produced in the United States, or unless a waiver is provided to the recipient by the head of the appropriate agency, here EPA. A waiver may be provided if EPA determines that (1) Applying these requirements would be inconsistent with the public interest; (2) iron, steel, and the relevant manufactured goods are not produced in the United States in sufficient and reasonably available quantities and of a satisfactory quality; or (3) inclusion of iron, steel, and the relevant manufactured goods produced in the United States will increase the cost of the overall project by more than 25 percent.

The ARRA-funded project will provide improved aeration for Coldwater's activated sludge treatment process, allowing the Wastewater Treatment Plant (WWTP) to meet the stringent ammonia-nitrogen effluent discharge limits required for this facility placed into effect in May 2007. Following a study of the cause for these ammonia-nitrogen effluent discharge excursions, it was determined the WWTP's current organic treatment process was not capable of handling the maximum day and peak ammonia-nitrogen loading occurrences experienced by the facility. The existing multistage centrifugal aeration blowers cannot be turned down sufficiently to adequately meet the low and average aeration requirements on the WWTP. These blowers also have insufficient capacity to meet the peak aeration requirements alone, and need supplemental aeration blowers to meet these demands. Relative to conventional technologies and equipment, the high-speed, high-efficiency turbocompressors offer more turndown potential and the ability for the WWTP to meet the low, average, and peak aeration requirements in combination with the existing aeration blowers. The selected equipment can operate at 38% of its rated capacity, providing exceptional turndown. Coldwater selected the magnetic bearing technology because of its ability to avoid overheating and its track record of providing long-standing reliable service—key advantages over the competing airfoil bearing technology. Further, as Coldwater initiated its evaluation of the equipment for selection and design phases well before the enactment of ARRA, the decision to do was clearly not an attempt to avoid application of the Buy American provisions of ARRA. Coldwater's submissions clearly articulated functional reasons that justified their technical specifications and requirements.

The April 28, 2009 EPA HQ Memorandum, "Implementation of Buy American provisions of Public Law 111–5, the 'American Recovery and Reinvestment Act of 2009'," defines *reasonably available quantity* as "the quantity of iron, steel, or relevant manufactured good is available or will be available at the time needed and place needed, and in the proper form or specification as specified in the project plans and design."

The applicant met the requirements specified for the availability inquiry as appropriate to the circumstances by conducting an extensive investigation into all possible sources for high-speed, high-efficiency turbo-compressors. Based on the investigation, five companies manufacture these machines, but only two (ABS and one other company) used magnetic bearings. Moreover, both of the companies that use magnetic bearings manufacture their machines overseas. Therefore, Coldwater believed that there was no domestic product of satisfactory quality available.

EPA's national contractor prepared a technical assessment report dated December 24, 2009, based on the submitted waiver request. The report determined that the waiver request submittal was complete, that adequate technical information was provided, and that there were no significant weaknesses in the justification provided. Therefore, based on the information provided to EPA and to the best of our knowledge at this time, the high-speed, high-efficiency magnetic bearing turbo-compressors necessary for this project are not manufactured in the

United States, and no other U.S. manufactured product can meet Coldwater's project performance specifications and requirements.

The purpose of the ARRA is to stimulate economic recovery in part by funding current infrastructure construction, not to delay projects that are "shovel ready" by requiring communities such as Coldwater to revise their standards and specifications and to start the bidding process again. The imposition of ARRA Buy American requirements on such projects otherwise eligible for ARRA State Revolving Fund assistance would result in unreasonable delay and thus displace the "shovel ready" status for this project. To further delay project implementation is in direct conflict with a fundamental economic purpose of the ARRA, which is to create or retain jobs.

The State and Tribal Programs Branch has reviewed this waiver request and has determined that the supporting documentation provided by Coldwater is sufficient to meet the criteria listed under Section 1605(b) of the ARRA and in the April 28, 2009, "Implementation of Buy American provisions of Public Law 111–5, the 'American Recovery and Reinvestment Act of 2009' Memorandum": Iron, steel, and the manufactured goods are not produced in the United States in sufficient and reasonably available quantities and of a satisfactory quality. The basis for this project waiver is the authorization provided in section 1605(b)(2) of the ARRA. Due to the lack of production of this item in the United States in sufficient and reasonably available quantities and of a satisfactory quality in order to meet Coldwater's project performance specifications and requirements, a waiver from the Buy American requirement is justified.

The March 31, 2009, Delegation of Authority Memorandum provided Regional Administrators with the authority to issue exceptions to Section 1605 of the ARRA within the geographic boundaries of their respective regions and with respect to requests by individual grant recipients. Having established both a proper basis to specify the particular good required for this project, and that this manufactured good was not available from a producer in the United States, Coldwater is hereby granted a waiver from the Buy American requirements of Section 1605(a) of Public Law 111–5 for the purchase of high-speed, high efficiency magnetic bearing turbo-compressors using ARRA funds as specified in the community's request of December 21, 2009. This supplementary information constitutes the detailed written justification required by Section 1605(c) for waivers "based on a finding under subsection (b)."

Authority: Pub. L. 111–5, section 1605.

Dated: March 26, 2010.

Walter W. Kovalick,

Acting Regional Administrator, Region 5.

Notice of a Project Waiver of Section 1605 (Buy American Requirement) of the American Recovery and Reinvestment Act of 2009 (ARRA) to the City of Faribault, MN (Faribault)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The EPA is hereby granting a project waiver of the Buy American requirements of ARRA Section 1605 under the authority of Section 1605(b)(2) [manufactured goods are not produced in the United States of a satisfactory quality] to Faribault for the purchase of high-speed, high-efficiency magnetic bearing turbo-compressors to be used in the city's sludge treatment process. This is a project-specific waiver and only applies to the use of the specified product for the ARRA funded project being proposed. Any other ARRA project that may wish to use the same product must apply for a separate waiver based on project-specific circumstances. These turbo-compressors, which are supplied by ABS USA of Meriden, Connecticut, are manufactured in Finland, and meet Faribault's performance specifications and requirements. The Acting Regional Administrator is making this determination based on the review and recommendations of EPA Region 5's Water Division. Faribault has provided sufficient documentation to support its request. The Assistant Administrator of the Office of Administration and Resources Management has concurred on this decision to make an exception to Section 1605 of ARRA. This action permits the purchase of high-speed, high-efficiency magnetic bearing turbo-compressors for Faribault's activated sludge project that may otherwise be prohibited under Section 1605(a) of the ARRA.

DATES: *Effective Date:* January 13, 2010.

FOR FURTHER INFORMATION CONTACT: Andrew Lausted, SRF Program Manager (312) 886–0189, or Puja Lakhani, Regional Counsel, (312) 353–3190, U.S. EPA Region 5, 77 W. Jackson Blvd., Chicago, IL 60604.

SUPPLEMENTARY INFORMATION: In accordance with ARRA Section 1605(c) and pursuant to Section 1605(b)(2) of Public Law 111–5, Buy American requirements, EPA hereby provides notice that it is granting a project waiver to Faribault for the acquisition of high-speed, high-efficiency magnetic bearing turbo-compressors that are manufactured in Finland.

Section 1605 of the ARRA requires that none of the appropriated funds may be used for the construction, alteration, maintenance, or repair of a public building or public work unless all of the iron, steel, and manufactured goods used in the project are produced in the United States, or unless a waiver is provided to the recipient by the head of the appropriate agency, here EPA. A waiver may be provided if EPA determines that (1) applying these requirements would be inconsistent with the public interest; (2) iron, steel, and the relevant manufactured goods are not produced in the United States in sufficient and reasonably available quantities and of a satisfactory quality; or (3) inclusion of iron, steel, and the relevant manufactured goods produced in the United States will increase the cost of the overall project by more than 25 percent.

These manufactured goods will provide aeration for Faribault's activated sludge treatment process. The city selected the magnetic bearing technology because of its ability to avoid overheating and its track record of providing long-standing reliable service—key advantages over the competing airfoil bearing technology. Also, the project specifications required a 322 horsepower capacity turbo-compressor. Faribault's submissions clearly articulated functional reasons that justified their technical specifications and requirements.

The April 28, 2009 EPA HQ Memorandum, "Implementation of Buy American Provisions of Public Law 111–5, the 'American Recovery and Reinvestment Act of 2009,'" defines *reasonably available quantity* as "the quantity of iron, steel, or relevant manufactured good is available or will be available at the time needed and place needed, and in the proper form or specification as specified in the project plans and design."

The applicant met the procedures specified for the availability inquiry as appropriate to the circumstances by conducting an extensive investigation into all possible sources for high-speed,

high-efficiency turbo-compressors. Five companies were found to manufacture these machines, but only two (ABS and one other company) used magnetic bearings. This other company was presented in Faribault's submission as a U.S. firm that had bid on the project, but had never manufactured a turbo-compressor the size of the 322-hp models required for the project. Because of this, Faribault believed that there was no domestic product of satisfactory quality available.

EPA's national contractor prepared a technical assessment report dated August 14, 2009, based on the submitted waiver request. The report determined that the waiver request submittal was complete, that adequate technical information was provided, and that there were no significant weaknesses in the justification provided. In the report's examination of this submittal, it originally appeared that the U.S. firm might be able to meet the bid specifications for the turbocompressor, *i.e.,* could potentially be "available." This report did indicate some uncertainty as to the characteristics and quality of the turbocompressor that could be made available by the U.S. firm. After substantial further inquiry, EPA determined that while a turbo-compressor of characteristics and quality responsive to Faribault's specifications might be available from this U.S. firm, such a turbo-compressor was not in fact made in the U.S. by this firm, but was manufactured abroad. This conclusion confirmed the waiver applicant's claim that there are no comparable domestic products that can meet the specific power and performance needs of the project Therefore, based on the information provided to EPA and to the best of our knowledge at this time, the high-speed, high-efficiency magnetic bearing turbo-compressors necessary for this project are not manufactured in the United States, and no other U.S. manufactured product can meet Faribault's project performance specifications and requirements.

The purpose of the ARRA is to stimulate economic recovery in part by funding current infrastructure construction, not to delay projects that are "shovel ready" by requiring communities such as Faribault to revise their standards and specifications and to start the bidding process again. The imposition of ARRA Buy American requirements on such projects otherwise eligible for ARRA State Revolving Fund assistance would result in unreasonable delay and thus displace the "shovel ready" status for this project. To further delay project implementation is in direct conflict with a fundamental economic purpose of the ARRA, which is to create or retain jobs.

The State and Tribal Programs Branch has reviewed this waiver request and has determined that the supporting documentation provided by Faribault is sufficient to meet the criteria listed under Section 1605(b) of the ARRA and in the April 28, 2009, "Implementation of Buy American provisions of Public Law 111–5, the 'American Recovery and Reinvestment Act of 2009' Memorandum": Iron, steel, and the manufactured goods are not produced in the United States in sufficient and reasonably available quantities and of a satisfactory quality. The basis for this project waiver is the authorization provided in Section 1605(b)(2) of the ARRA. Due to the lack of production of this product in the United States in sufficient and reasonably available quantities and of a satisfactory quality in order to meet Faribault's project performance specifications and requirements, a waiver from the Buy American requirement is justified.

The March 31, 2009, Delegation of Authority Memorandum provided Regional Administrators with the authority to issue exceptions to Section 1605 of the ARRA within the geographic boundaries of their respective regions and with respect to requests by individual grant recipients. Having established both a proper basis to specify the particular good required for this project, and that this manufactured good was not available from a producer in the United States, Faribault is hereby granted a waiver from the Buy American requirements of Section 1605(a) of Public Law 111–5 for the purchase of high-speed, high efficiency magnetic bearing turbo-compressors using ARRA funds as specified in the community's request of August 3, 2009. This supplementary information constitutes the detailed written justification required by Section 1605(c) for waivers "based on a finding under subsection (b)."

Authority: Pub. L. 111–5, section 1605.

Dated: January 13, 2010.

Walter W. Kovalick,

Acting Regional Administrator, Region 3.

Notice of a Project Waiver of Section 1605 (Buy American Requirement) of the American Recovery and Reinvestment Act of 2009 (ARRA) to the City of Auburn, IN (Auburn)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The EPA is hereby granting a project waiver of the Buy American requirements of ARRA Section 1605 under the authority of Section 1605(b)(2) [manufactured goods are not produced in the United States of a satisfactory quality] to Auburn, Indiana, for the purchase of three high-speed, high-efficiency magnetic bearing turbo-compressors that will be used in the city's sludge treatment process. This is a project-specific waiver and it only applies to the use of the specified product for the ARRA funded project being proposed. Any other ARRA project that may wish to use the same product must apply for a separate waiver based on project-specific circumstances. These turbo-compressors, which are supplied by ABS USA of Meriden, Connecticut, are manufactured in Sweden, and meet Auburn's performance specifications and requirements. The Acting Regional Administrator is making this determination based on the review and recommendations of EPA Region 5's Water Division. Auburn has provided sufficient documentation to support its request. The Assistant Administrator of the Office of Administration and Resources Management has concurred on this decision to make an exception to Section 1605 of ARRA. This action permits the purchase of high-speed, high-efficiency magnetic bearing turbo-compressors for Auburn's activated sludge project that may otherwise be prohibited under Section 1605(a) of the ARRA.

DATES: *Effective Date:* March 25, 2010.

FOR FURTHER INFORMATION CONTACT: Andrew Lausted, SRF Program Manager (312) 886–0189, or Puja Lakhani, Office of Regional Counsel, (312) 353–3190, U.S. EPA Region 5, 77 W. Jackson Blvd., Chicago, IL 60604.

SUPPLEMENTARY INFORMATION: In accordance with ARRA Section 1605(c) and pursuant to Section 1605(b)(2) of Public Law 111–5, Buy American requirements, EPA hereby provides notice that it is granting a project waiver to Auburn, Indiana, for the acquisition

of high-speed, high-efficiency magnetic bearing turbo-compressors that are manufactured in Sweden.

Section 1605 of the ARRA requires that none of the appropriated funds may be used for the construction, alteration, maintenance, or repair of a public building or public work unless all of the iron, steel, and manufactured goods used in the project are produced in the United States, or unless a waiver is provided to the recipient by the head of the appropriate agency, here EPA. A waiver may be provided if EPA determines that (1) applying these requirements would be inconsistent with the public interest; (2) iron, steel, and the relevant manufactured goods are not produced in the United States in sufficient and reasonably available quantities and of a satisfactory quality; or (3) inclusion of iron, steel, and the relevant manufactured goods produced in the United States will increase the cost of the overall project by more than 25 percent.

These manufactured goods will provide aeration for Auburn's activated sludge treatment process. The city selected the magnetic bearing technology because of its ability to avoid overheating and its track record of providing long-standing reliable service—key advantages over the competing airfoil bearing technology. Auburn's submissions clearly articulated functional reasons that justified their technical specifications and requirements.

The April 28, 2009 EPA HQ Memorandum, "Implementation of Buy American provisions of Public Law 111–5, the 'American Recovery and Reinvestment Act of 2009'," defines *reasonably available quantity* as "the quantity of iron, steel, or relevant manufactured good is available or will be available at the time needed and place needed, and in the proper form or specification as specified in the project plans and design."

The applicant met the requirements specified for the availability inquiry as appropriate to the circumstances by conducting an extensive investigation into all possible sources for high-speed, high-efficiency turbo-compressors. Based on the investigation, five companies were found to manufacture these machines, but only two (ABS and one other company) used magnetic bearings. Moreover, both of the companies that use magnetic bearings manufacture their machines overseas. Auburn believes that since ABS has multiple municipal wastewater treatment plant installations in the Midwest and that its competitor has none, that the ABS turbo-compressor technology has been proven and would perform reliably in this specific application. Therefore, Auburn contends that there is no domestic product of satisfactory quality available.

EPA's national contractor prepared a technical assessment report dated January 27, 2010, based on the submitted waiver request. The report determined that the waiver request submittal was complete, that adequate technical information was provided, and that there were no significant weaknesses in the justification provided. Therefore, based on the information provided to EPA and to the best of our knowledge at this time, the high-speed, high-efficiency magnetic bearing turbo-compressors necessary for this project are not manufactured in the United States, and no other U.S. manufactured product can meet Auburn's project performance specifications and requirements.

The purpose of the ARRA is to stimulate economic recovery in part by funding current infrastructure construction, not to delay projects that are "shovel ready" by requiring communities such as Auburn to revise their standards and specifications and to start the bidding process again. The imposition of ARRA Buy American requirements on such projects otherwise eligible for ARRA State Revolving Fund assistance would result in unreasonable delay and thus displace the "shovel ready" status for this project. To further delay project implementation is in direct conflict with a fundamental economic purpose of the ARRA, which is to create or retain jobs.

The State and Tribal Programs Branch has reviewed this waiver request and has determined that the supporting documentation provided by Auburn is sufficient to meet the criteria listed under Section 1605(b) of the ARRA and in the April 28, 2009, "Implementation of Buy American provisions of Public Law 111–5, the 'American Recovery and Reinvestment Act of 2009' Memorandum": Iron, steel, and the manufactured goods are not produced in the United States in sufficient and reasonably available quantities and of a satisfactory quality. The basis for this project waiver is the authorization provided in Section 1605(b)(2) of the ARRA. Due to the lack of production of this item in the United States in sufficient and reasonably available quantities and of a satisfactory quality in order to meet Auburn's project performance specifications and requirements, a waiver from the Buy American requirement is justified.

The March 31, 2009, Delegation of Authority Memorandum provided Regional Administrators with the authority to issue exceptions to Section 1605 of the ARRA within the geographic boundaries of their respective regions and with respect to requests by individual grant recipients. Having established both a proper basis to specify the particular good required for this project, and that this manufactured good was not available from a producer in the United States, Auburn is hereby granted a waiver from the Buy American requirements of Section 1605(a) of Public Law 111–5 for the purchase of high-speed, high efficiency magnetic bearing turbo-compressors using ARRA funds as specified in the community's request of December 21, 2009. This supplementary information constitutes the detailed written justification required by Section 1605(c) for waivers "based on a finding under subsection (b)."

Authority: Pub. L. 111–5, section 1605.

Dated: March 25, 2010.

Notice of a Project Waiver of Section 1605 (Buy American Requirement) of the American Recovery and Reinvestment Act of 2009 (ARRA) to Warren County, OH (Warren County)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The EPA is hereby granting a project waiver of the Buy American requirements of ARRA Section 1605 under the authority of Section 1605(b)(2) [manufactured goods are not produced in the United States of a satisfactory quality] to Warren County for the purchase of a Trojan UV 4000 Plus medium-pressure, high-intensity ultraviolet disinfection system to treat effluent from the Lower Little Miami River Wastewater Treatment Plant. This is a project-specific waiver and only applies to the use of the specified product for the ARRA funded project being proposed. Any other ARRA project that may wish to use the same product must apply for a separate waiver based on project-specific circumstances. This disinfection system, which is supplied by Trojan Technologies of London, Ontario, is manufactured in Canada and meets

Warren County's performance specifications and requirements. The Acting Regional Administrator is making this determination based on the review and recommendations of EPA Region 5's Water Division. Warren County has provided sufficient documentation to support its request. The Assistant Administrator of the Office of Administration and Resources Management has concurred on this decision to make an exception to Section 1605 of ARRA. This action permits the purchase of a Trojan UV 4000 Plus medium-pressure, high-intensity ultraviolet disinfection system for the Lower Little Miami River Wastewater Treatment Plant that may otherwise be prohibited under Section 1605(a) of the ARRA.

DATES: *Effective Date:* January 26, 2010.

FOR FURTHER INFORMATION CONTACT: Andrew Lausted, SRF Program Manager (312) 886–0189, or Puja Lakhani, Office of Regional Counsel, (312) 353–3190, U.S. EPA Region 5, 77 W. Jackson Blvd., Chicago, IL 60604.

SUPPLEMENTARY INFORMATION: In accordance with ARRA section 1605(c) and pursuant to section 1605(b)(2) of Public Law 111–5, the Buy American requirements, EPA hereby provides notice that it is granting a project waiver to Warren County for the acquisition of a Trojan 4000 Plus medium-pressure, high-intensity ultraviolet disinfection system that is manufactured in Canada.

Section 1605 of the ARRA requires that none of the appropriated funds may be used for the construction, alteration, maintenance, or repair of a public building or public work unless all of the iron, steel, and manufactured goods used in the project are produced in the United States, or unless a waiver is provided to the recipient by the head of the appropriate agency, here EPA. A waiver may be provided if EPA determines that (1) Applying these requirements would be inconsistent with the public interest; (2) iron, steel, and the relevant manufactured goods are not produced in the United States in sufficient and reasonably available quantities and of a satisfactory quality; or (3) inclusion of iron, steel, and the relevant manufactured goods produced in the United States will increase the cost of the overall project by more than 25 percent.

These manufactured goods will provide wastewater effluent disinfection for Warren County's Lower Little Miami River Wastewater Treatment Plant. Early in the design process, the County decided to use a UV system that utilizes a medium pressure UV lamp. Warren County's plant is relatively large and a medium pressure UV system uses many fewer UV lamps than a low pressure system, and consequently has reduced operation and maintenance costs and requires a much smaller building to house the UV system.

While there are two companies that manufacture medium pressure UV systems that are marketed in the United States for use in wastewater disinfection, each manufacturer implements the technology differently which generally requires a completely different facility layout. Based on cost and technical concerns, the County decided in 2008—prior to the enactment of ARRA—to finalize plant design using the Trojan 4000 Plus medium-pressure, high intensity ultraviolet disinfection system with an open-channel configuration that will meet the capacity requirements of the project.

The April 28, 2009 EPA HQ Memorandum, "Implementation of Buy American provisions of Public Law 111–5, the 'American Recovery and Reinvestment Act of 2009'," defines *reasonably available quantity* as "the quantity of iron, steel, or relevant manufactured good is available or will be available at the time needed and place needed, and in the proper form or specification as specified in the project plans and design."

Here, the applicant met the requirements specified for the availability inquiry by conducting an extensive investigation into all possible sources for medium-pressure, high intensity ultraviolet disinfection systems that can meet the capacity requirements of the project. The one potential alternative to the Trojan 4000 Plus system, an American-manufactured, medium-pressure ultraviolet disinfection system for wastewater, was a closed-vessel, in-pipe system rather than an open-channel system. Use of this alternative would require a substantial and costly redesign of the disinfection facility from the project specifications as finalized in 2008. Based on the information provided to EPA and to the best of our knowledge at this time, because the Trojan 4000 Plus is the only system that can meet the design specification for an open-channel medium-pressure high-intensity UV disinfection system, EPA believes that there is no domestic product of satisfactory quality available to meet this justified specification.

The purpose of the ARRA is to stimulate economic recovery in part by funding current infrastructure construction, and not to delay projects that are "shovel ready" by requiring communities such as Warren County to revise substantially their project design and specifications, start the bidding process again, and potentially choose a more costly, less efficient project. In this situation, the imposition of ARRA Buy American requirements on a project otherwise eligible for ARRA State Revolving Fund assistance would result in unreasonable delay and thus displace the "shovel ready" status for this project. To further delay project implementation is in direct conflict with a fundamental economic purpose of the ARRA, which is to create or retain jobs.

Based on the submitted waiver request, EPA's national contractor prepared a technical assessment report dated November 3, 2009. The report determined that the waiver request submittal was complete, that adequate technical information was provided, and that there were no significant weaknesses in the justification that was provided. The report confirmed the waiver applicant's claim that there are no comparable domestic products that can meet the design specifications for the project. Therefore, based on the information provided to EPA and to the best of our knowledge at this time, the medium-pressure, high-intensity open-channel configuration ultraviolet disinfection system necessary for this project is not manufactured in the United States, and no other U.S. manufactured product can meet Warren County's project performance specifications and requirements.

The State and Tribal Programs Branch has reviewed this waiver request and has determined that the supporting documentation provided by Warren County is sufficient to meet the criteria listed under Section 1605(b) of the ARRA and in the April 28, 2009, "Implementation of Buy American provisions of Public Law 111–5, the 'American Recovery and Reinvestment Act of 2009' Memorandum": Iron, steel, and the manufactured goods are not produced in the United States in sufficient and reasonably available quantities and of a satisfactory quality. The basis for this project waiver is the authorization provided in Section 1605(b)(2) of the ARRA. Due to the lack of production of this item in the United States in sufficient and reasonably available quantities and of a satisfactory quality to meet Warren County's project performance specifications and requirements, a waiver from the Buy American requirement is justified.

The March 31, 2009, Delegation of Authority Memorandum provided Regional Administrators with the authority to issue exceptions to Section 1605 of the ARRA within the geographic boundaries of their respective regions and with respect to requests by

individual grant recipients. Having established both a proper basis to specify the particular good required for this project, and that this manufactured good was not available from a producer in the United States, Warren County is hereby granted a waiver from the Buy American requirements of Section 1605(a) of Public Law 111–5 for the purchase of a Trojan 4000 Plus medium-pressure, high-intensity ultraviolet disinfection system using ARRA funds as specified in the community's request of October 29, 2009. This **SUPPLEMENTARY INFORMATION** constitutes the detailed written justification required by Section 1605(c) for waivers "based on a finding under subsection (b)."

Authority: Pub. L. 111–5, section 1605.

Dated: January 26, 2010.

Walter W. Kovalick,

Acting Regional Administrator, Region 5.

ENVIRONMENTAL PROTECTION AGENCY

[FRL–9146–9]

Notice of a Project Waiver of Section 1605 (Buy American Requirement) of the American Recovery and Reinvestment Act of 2009 (ARRA) to the Albuquerque Bernalillo County Water Utility Authority, New Mexico

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The Regional Administrator of EPA Region 6 is hereby granting a project waiver of the Buy American requirements of ARRA Section 1605 under the authority of Section 1605(b)(2) [manufactured goods are not produced in the United States in sufficient and reasonably available quantities and of a satisfactory quality] to the Albuquerque Bernalillo County Water Utility Authority ("ABCWUA") for the purchase of three hundred acoustic leak detection sensors/loggers ("loggers") and one fully programmable radio transceiver. The loggers and radio transceiver under consideration are manufactured by Gutermann, Inc., and no United States manufacturer produces an alternative that meets the ABCWUA's technical specifications. This is a project specific waiver and only applies to the use of the specified product for the ARRA funded project being proposed. Any other ARRA project that may wish to use the same product must apply for a separate waiver based on the specific project circumstances. The Regional Administrator is making this determination based on the review and recommendations of the EPA Region 6, Water Quality Protection Division. The ABCWUA has provided sufficient documentation to support its request.

The Assistant Administrator of the EPA's Office of Administration and Resources Management has concurred on this decision to make an exception to Section 1605 of ARRA. This action permits the purchase of three hundred loggers and one radio transceiver containing goods not manufactured in America, for the proposed project being implemented by the ABCWUA.

DATES: *Effective Date:* April 28, 2010.

FOR FURTHER INFORMATION CONTACT: Nasim Jahan, Buy American Coordinator, (214) 665–7522, SRF & Projects Section, Water Quality Protection Division, U.S. EPA Region 6, 1445 Ross Avenue, Dallas, Texas 75202–2733.

SUPPLEMENTARY INFORMATION: In accordance with ARRA Section 1605(c) and 1605(b)(2), EPA hereby provides notice that it is granting a project waiver of the requirements of Section 1605(a) of Public Law 111–5, Buy American requirements to the ABCWUA for the acquisition of three hundred loggers and one radio transceiver (Model: Gutermann Zonescan 820). The ABCWUA has been unable to find an American made logger manufacturer to meet its specific requirements of cross correlation functionality for pinpointing leaks throughout its water distribution system.

Section 1605 of the ARRA requires that none of the appropriated funds may be used for the construction, alteration, maintenance, or repair of a public building or public work unless all of the iron, steel, and manufactured goods used in the project are produced in the United States unless a waiver is provided to the recipient by EPA. A waiver may be provided if EPA determines that (1) applying these requirements would be inconsistent with public interest; (2) iron, steel, and the relevant manufactured goods are not produced in the United States in sufficient and reasonably available quantities and of a satisfactory quality; or (3) inclusion of iron, steel, and the relevant manufactured goods produced in the United States will increase the cost of the overall project by more than 25 percent.

The ABCWUA is implementing a comprehensive asset management program, and leak detection is critical to better management of its water system assets. The ABCWUA desires to quickly and efficiently locate leaks in its wastewater distribution system and seeks ARRA funding to purchase loggers that can easily be deployed on the water distribution system, that are non-invasive, and are designed to detect noise generated from vibrations of water escaping from pipes. Efficient leak detection provides timely data on the types of leak and potential cause. It helps the utility authority in identifying high priority assets needing rehabilitation/replacement, which can effectively reduce the chances of catastrophic failure.

Accordingly, the ABCWUA on January 22, 2010 concluded an ARRA assistance agreement with the State of New Mexico to a fund a project to procure and deploy leak detection equipment for its distribution system. The bid documents for the project include the specifications for loggers and one radio transceiver having cross correlation functionality for exactly pinpointing leaks throughout the water distribution system. The ABCWUA had received four bids for this project on January 20, 2010, and upon identifying Gutermann as the only bidder to provide a data logger that included this cross-correlation functionality, submitted a timely waiver request to EPA on February 5, 2010.

The ABCWUA is requesting a waiver for the use of three hundred loggers and one programmable radio transceiver (Model: Gutermann Zonescan 820) on the basis that there are no domestic manufacturers of the loggers that will meet the ABCWUA product specifications.

The ABCWUA authority received four bids for the acoustic leak detection equipment project. Among the four bidders, the bid submitted by Gutermann was the only leak detection logger that met ABCWUA's specifications. Specifically, the logger was required to have the feature of cross correlation functionality for pinpointing leaks. Gutermann's Zonescan 820 loggers automatically perform leak noise correlation for pinpointing the leak location. In addition, automatic multi-correlation provides precise positions between all loggers in the same project area. As this feature maximizes the efficiency and effectiveness of the crucial functions of enabling the ABCWUA to conserve and prevent contamination of scarce water supplies that have already been treated to comply with National Primary Drinking Water Regulations, EPA finds that the ABCWUA's specification of this feature is justified.

Although there are loggers that are manufactured in the United States, the

research conducted by Cadmus, the EPA Office of Water's national contractor, was unable to identify any domestically available loggers which meet the specifications and quality described in the project plans and designs. The contractor contacted four companies that manufacture loggers in the U.S. but none of these companies could provide loggers that offer integrated cross correlation functionality between loggers.

Additional research conducted by EPA Region 6 appeared to confirm that there are no domestic logger manufacturers that would meet the ABCWUA's technical specifications.

EPA's national contractor prepared a technical assessment report dated February 10, 2010 based on the waiver request submittal. The report determined that the waiver request submittal was complete, that adequate technical information was provided, and that there were no significant weaknesses in the justification provided. The report confirmed the waiver applicant's claim that there are no American-made loggers available for use in the water distribution system. Therefore, EPA Region 6 concludes that the loggers meet the "specifications in project plans and design."

The April 28, 2009 EPA HQ Memorandum, Implementation of Buy American provisions of P.L. 111–5, the "American Recovery and Reinvestment Act of 2009", defines reasonably available quantity as "the quantity of iron, steel, or relevant manufactured good is available or will be available at the time needed and place needed, and in the proper form or specification as specified in the project plans and design." The ABCWUA has incorporated specific technical design requirements for installation of loggers in its water distribution system. Therefore, it meets the requirements of the "satisfactory quality" criterion for requesting a waiver from the Buy American provisions of Public Law 111–5.

The purpose of the ARRA is to stimulate economic recovery in part by funding current infrastructure construction, not to delay projects that are "shovel ready" by requiring utilities, such as the ABCWUA, to revise their standards and specifications, institute a new bidding process, and potentially choose a more costly, less efficient project. The imposition of ARRA Buy American requirements on such projects otherwise eligible for State Revolving Fund assistance would result in unreasonable delay and thus displace the "shovel ready" status for this project. To further delay construction is in direct conflict with a fundamental economic purpose of the ARRA, which is to create or retain jobs.

The Region 6 Water Quality Protection Division has reviewed this waiver request, and to the best of my knowledge at the time of review, has determined that the supporting documentation provided by the ABCWUA is sufficient to meet the criteria listed under ARRA, Section 1605(b), Office of Management and Budget (OMB) regulations at 2 CFR 176.60–176.170, and in the April 28, 2009, "Implementation of Buy American provisions of Public Law 111–5, the "American Recovery and Reinvestment Act of 2009" Memorandum:" Iron, steel, and the manufactured goods are not produced in the United States in sufficient and reasonably available quantities and of a satisfactory quality. The basis for this project waiver is the authorization provided in ARRA, Section 1605(b)(2). Due to the lack of production of this product in the United States in sufficient and reasonably available quantities and of a satisfactory quality in order to meet the ABCWUA's technical specifications, a waiver from the Buy American requirement is justified.

EPA headquarters' March 31, 2009 Delegation of Authority Memorandum provided Regional Administrators with the authority to issue exceptions to Section 1605 of ARRA within the geographic boundaries of their respective regions and with respect to requests by individual grant recipients. Having established both a proper basis to specify the particular good required for this project, and that this manufactured good was not available from a producer in the United States, the ABCWUA is hereby granted a waiver from the Buy American requirements of ARRA, Section 1605(a) of Public Law 111–5 for the purchase of three hundred loggers and one radio transceiver, using ARRA funds, as specified in the ABCWUA's request of February 5, 2010. This supplementary information constitutes the detailed written justification required by ARRA, Section 1605(c), for waivers "based on a finding under subsection (b)."

Authority: Public Law 111–5, section 1605.

Dated: April 28, 2010.

Al Armendariz,

Regional Administrator, Region 6.

ENVIRONMENTAL PROTECTION AGENCY

[EPA-New England Region I—EPA–R01–OW–2010–0316; FRL–9147–1]

Massachusetts Marine Sanitation Device Standard—Receipt of Petition

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice—Receipt of Petition.

SUMMARY: Notice is hereby given that a petition has been received from the Commonwealth of Massachusetts requesting a determination by the Regional Administrator, U.S. Environmental Protection Agency, that adequate facilities for the safe and sanitary removal and treatment of sewage from all vessels are reasonably available for the waters of Pleasant Bay/Chatham Harbor, MA.

DATES: Comments must be submitted by June 7, 2010.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R01–OW–2010–0316, by one of the following methods: *http://www.regulations.gov,* Follow the on-line instructions for submitting comments.

- *E-mail: rodney.ann@epa.gov.*
- *Fax:* (617) 918–0538.

Mail and hand delivery: U.S. Environmental Protection Agency—New England Region, Five Post Office Square, Suite 100, OEP06–1, Boston, MA 02109–3912. Deliveries are only accepted during the Regional Office's normal hours of operation (8 a.m.–5 p.m., Monday through Friday, excluding legal holidays), and special arrangements should be made for deliveries of boxed information.

Instructions: Direct your comments to Docket ID No. EPA–R01–OW–2010–0316. EPA's policy is that all comments received will be included in the public docket without change and may be made available online at *http://www.regulations.gov,* including any personal information provided, unless the comment includes information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Do not submit information that you consider to be CBI or otherwise protected through *http://www.regulations.gov,* or e-mail. The *http://www.regulations.gov* Web site is an "anonymous access" system, which means EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an e-mail comment directly to EPA without going through *http://www.regulations.gov* your e-mail

address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the Internet. If you submit an electronic comment, EPA recommends that you include your name and other contact information in the body of your comment and with any disk or CD–ROM you submit. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comment. Electronic files should avoid the use of special characters, any form of encryption, and be free of any defects or viruses.

Docket: All documents in the docket are listed in the *http://www.regulations.gov* index. Although listed in the index, some information is not publicly available, *e.g.,* CBI or other information whose disclosure is restricted by statute. Certain other material, such as copy-righted material, will be publicly available only in hard copy. Publicly available docket materials are available either electronically in *http://www.regulations.gov* or in hard copy at the U.S. Environmental Protection Agency—New England Region, Five Post Office Square, Suite 100, OEP06–01, Boston, MA 02109–3912. Such deliveries are only accepted during the Regional Office's normal hours of operation, and special arrangements should be made for deliveries of boxed information. The Regional Office is open from 8 a.m.–5 p.m., Monday through Friday, excluding legal holidays. The telephone number is (617) 918–1538.

FOR FURTHER INFORMATION CONTACT: Ann Rodney, U.S. Environmental Protection Agency—New England Region, Five Post Office Square, Suite 100, OEP06–01, Boston, MA 02109–3912. Telephone: (617) 918–1538, Fax number: (617) 918–0538; e-mail address: *rodney.ann@epa.gov.*

SUPPLEMENTARY INFORMATION: Notice is hereby given that a petition has been received from the Commonwealth of Massachusetts requesting a determination by the Regional Administrator, U.S. Environmental Protection Agency, pursuant to Section 312(f)(3) of Public Law 92–500 as amended by Public Law 95–217 and Public Law 100–4, that adequate facilities for the safe and sanitary removal and treatment of sewage from all vessels are reasonably available for Pleasant Bay/Chatham Harbor, MA.

The proposed boundary of the Pleasant Bay/Chatham Harbor NDA includes all of the 17 sub-embayments within the area with the following water boundaries:

Waterbody/general area	From latitude	From longitude	To latitude	To longitude
Bounded on the west by mainland Chatham, Harwich, Brewster and Orleans; bounded on the east by Nauset Beach (North Beach) and North Beach Island. A line drawn cross the mouth of the North inlet across from Minister's Point:	41°42′19.43″ N	69°55′44.76″ W	41°42′13.31″ N	69°55′45.11″ W
From West of a line across the mouth of the South Inlet:	41°40′41.51″ N	69°56′3.47″ W	41°39′56.52″ N	69°56′30.48″ W

The boundaries were chosen based on easy line-of-sight locations and generally represent all navigational waters. The area includes the municipal waters of Chatham, Harwich, Brewster and Orleans.

Boating is one of the most popular recreational uses of Pleasant Bay/Chatham Harbor. There are three private marinas, four boating clubs and approximately 30 public landings/access points in the proposed area. Massachusetts has certified that there are three pumpout facilities within the proposed area available to the boating public. A list of the facilities, locations, contact information, hours of operation, and water depth is provided at the end of this petition.

Massachusetts has provided documentation indicating that the total vessel population is estimated to be 2,160 in the proposed area. It is estimated that 124 of the total vessel population may have a Marine Sanitation Device (MSD) of some type. Over 90 percent of the boats in the proposed area are 25 feet and under.

The proposed area is roughly 9,000 acres and is a state designated Area of Critical Environment Concern (ACEC). The islands of Pochet, Sampson, Hog, and Little Sipson are held in trust and subject to conservation restrictions and Strong Island is owned by the town of Chatham and the Chatham Conservation Foundation. Tern Island is owned by the Massachusetts Audubon Society. The Nauset Barrier Beach is within the boundaries of the Cape Cod National Seashore. There are 36 finfish species and an abundance of quahogs, softshell clams, razor clams and scallops. This area is a popular destination for boaters due to its natural environmental diversity and would benefit from a No Discharge Area.

PUMPOUT FACILITIES WITHIN PROPOSED NO DISCHARGE AREA

PLEASANT BAY/CHATHAM HARBOR

FEDERAL COMMUNICATIONS COMMISSION

Notice of Public Information Collection(s) Being Submitted for Review and Approval to the Office of Management and Budget (OMB), Comments Requested

May 4, 2010.

SUMMARY: The Federal Communications Commission, as part of its continuing effort to reduce paperwork burden invites the general public and other Federal agencies to take this opportunity to comment on the following information collection(s), as required by the Paperwork Reduction Act (PRA) of 1995, 44 U.S.C. 3501 – 3520. Comments are requested concerning: (a) whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; (b) the accuracy of the Commission's burden estimate; (c) ways to enhance the quality, utility, and clarity of the information collected; (d) ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology; and (e) ways to further reduce the information collection burden for small business concerns with fewer than 25 employees.

The FCC may not conduct or sponsor a collection of information unless it displays a currently valid control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the Paperwork Reduction Act (PRA) that does not display a currently valid OMB control number.

DATES: Written Paperwork Reduction Act (PRA) comments should be submitted on or before June 7, 2010. If you anticipate that you will be submitting PRA comments, but find it difficult to do so within the period of time allowed by this notice, you should advise the FCC contact listed below as soon as possible.

ADDRESSES: Direct all PRA comments to Nicholas A. Fraser, Office of Management and Budget, via fax at 202–395–5167 or via the Internet at Nicholas_A._Fraser@omb.eop.gov and to the Federal Communications Commission via email to PRA@fcc.gov. To view a copy of this information collection request (ICR) submitted to OMB: (1) Go to the web page http://reginfo.gov/public/do/PRAMain, (2) look for the section of the web page called "Currently Under Review", (3) click on the downward–pointing arrow in the "Select Agency" box below the "Currently Under Review" heading, (4) select "Federal Communications Commission" from the list of agencies presented in the "Select Agency" box, (5) click the "Submit" button to the right of the "Select Agency" box, and (6) when the list of FCC ICRs currently under review appears, look for the title of this ICR (or its OMB Control Number, if there is one) and then click on the ICR Reference Number to view detailed information about this ICR.

FOR FURTHER INFORMATION CONTACT: Judith B. Herman, Office of Managing Director, (202) 418–0214. For additional information or copies of the information collection(s), contact Judith B. Herman, OMD, 202–418–0214, email Judith–b.herman@fcc.gov.

SUPPLEMENTARY INFORMATION:

OMB Control Number: 3060–1030.

Title: Service Rules for Advanced Wireless Services (AWS) in the 1.7 GHz and 2.1 GHz Bands.

Form Number: N/A.

Type of Review: Extension of a currently approved collection.

Respondents: Business or other for–profit, not–for–profit institutions and state, local or tribal government.

Number of Respondents and Responses: 979 respondents, 1,630 responses.

Estimated Time per Response: .25 – 5 hours.

Frequency of Response: Semi–annual and on occasion reporting requirements, recordkeeping requirement and third party disclosure requirement.

Obligation to Respond: Required to obtain or retain benefits. Statutory authority for this information collection is contained in 47 U.S.C. sections 151, 154(i), 301, 302, 303(f), 303(g), 303(r), 307, 308, 309, 310, 316, and the Commercial Spectrum Enhancement Act (CSEA) of 2004, Pub. L. No. 108–494.

Total Annual Burden: 33,480 hours.

Total Annual Cost: $581,800.

Privacy Act Impact Assessment: N/A.

Nature and Extent of Confidentiality: There is no need for confidentiality except as follows: The clearinghouses have committed, pursuant to the FCC's directive, to implement safeguards to maintain the confidentiality of information where necessary to protect respondents' legitimate commercial interests. Additionally, the Ninth Report and Order, 71 FR 29818 (May 24, 2006), protects the specific location of the Broadband Radio Service (BRS) licensees' end–user/subscriber equipment, customer names, addresses and contact for purpose of relocation, which could raise competitive concerns. The Commission's rules permit filing information with the Commission to request confidential treatment of their information under 47 CFR 0.459 of the Commission's rules.

Needs and Uses: The Commission will submit this expiring information collection to the Office of Management and Budget (OMB) during this comment period in order to obtain the full three year clearance from them and to keep the OMB approval from lapsing. The Commission has not changed the reporting, recordkeeping and/or third party disclosure requirements. The Commission is reporting a 4,333 hour adjustment increase in burden hours and a $2,139,400 decrease in annual costs. The change in burden hours and costs are due to a complete review of the Commission's initial burden estimates.

The public burden requirements will be used by incumbent licensees and new entrants to negotiate relocation agreements and to coordinate operations to avoid interference. The information will also be used by the clearinghouses to maintain a national database, determine reimbursement obligations of entrants pursuant to the Commission's rules and notify such entrants of their reimbursement obligations. Also, the information will be used to facilitate dispute resolution and for FCC oversight of the clearinghouses and the cost–sharing plan. Additionally, the requirements regarding foreign ownership, substantial service compliance, and interference coordination has been used in the past and will continue to be used to minimize interference, verify that the applicants are legally and technically qualified to hold licenses, and to determine compliance with Commission rules.

Federal Communications Commission.

Marlene H. Dortch,

Secretary,

Office of the Secretary,

Office of Managing Director.

FEDERAL COMMUNICATIONS COMMISSION

Notice of Public Information Collections Being Submitted for Review and Approval to the Office of Management and Budget (OMB), Comments Requested

April 30, 2010.

SUMMARY: The Federal Communications Commission, as part of its continuing effort to reduce paperwork burden invites the general public and other Federal agencies to take this opportunity to comment on the following information collections, as required by the Paperwork Reduction Act (PRA) of 1995, 44 U.S.C. 3501 – 3520. Comments are requested concerning: (a) whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; (b) the accuracy of the Commission's burden estimate; (c) ways to enhance the quality, utility, and clarity of the information collected; (d) ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology; and (e) ways to further reduce the information collection burden for small business concerns with fewer than 25 employees.

The FCC may not conduct or sponsor a collection of information unless it displays a currently valid control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the Paperwork Reduction Act (PRA) that does not display a currently valid OMB control number.

DATES: Written Paperwork Reduction Act (PRA) comments should be submitted on or before June 7, 2010. If you anticipate that you will be submitting PRA comments, but find it difficult to do so within the period of time allowed by this notice, you should advise the FCC contact listed below as soon as possible.

ADDRESSES: Direct all PRA comments to Nicholas A. Fraser, Office of Management and Budget, via fax at 202–395–5167 or via the Internet at Nicholas_A._Fraser@omb.eop.gov and to the Federal Communications Commission via email to PRA@fcc.gov and Cathy.Williams@fcc.gov. To view a copy of this information collection request (ICR) submitted to OMB: (1) Go to the web page http://reginfo.gov/public/do/PRAMain, (2) look for the section of the web page called "Currently Under Review", (3) click on the downward–pointing arrow in the "Select Agency" box below the "Currently Under Review" heading, (4) select "Federal Communications Commission" from the list of agencies presented in the "Select Agency" box, (5) click the "Submit" button to the right of the "Select Agency" box, and (6) when the list of FCC ICRs currently under review appears, look for the title of this ICR (or its OMB Control Number, if there is one) and then click on the ICR Reference Number to view detailed information about this ICR.

FOR FURTHER INFORMATION CONTACT: For additional information or copies of the information collections, contact Cathy Williams on (202) 418–2918.

SUPPLEMENTARY INFORMATION:

OMB Control Number: 3060–0888.

Title: Section 76.7, Petition Procedures; Section 76.9, Confidentiality of Proprietary Information; Section 76.61, Dispute Concerning Carriage; Section 76.914, Revocation of Certification; Section 76.1001, Unfair Practices; Section 76.1003, Program Access Proceedings; Section 76.1302, Carriage Agreement Proceedings; Section 76.1513, Open Video Dispute Resolution.

Form Number: Not applicable.

Type of Review: Revision of a currently approved collection.

Respondents: Businesses or other for–profit.

Number of Respondents and Responses: 640 respondents; 640 responses.

Estimated Time per Response: 4.1 to 61.4 hours.

Frequency of Response: On occasion reporting requirement; Third party disclosure requirement.

Obligation to Respond: Required to obtain or retain benefits. The statutory authority for this information is contained in Sections 4(i), 303(r) and 628 of the Communications Act of 1934, as amended.

Total Annual Burden: 20,960 hours

Total Annual Cost: $681,600.

Privacy Act Impact Assessment: No impact(s).

Nature and Extent of Confidentiality: A party that wishes to have confidentiality for proprietary information with respect to a submission it is making to the Commission must file a petition pursuant to the pleading requirements in Section 76.7 and use the method described in Sections 0.459 and 76.9 to demonstrate that confidentiality is warranted.

On January 20, 2010, the Commission adopted a First Report and Order In the Matter of Review of the Commission's Program Access Rules and Examination of Programming Tying Arrangements, MB Docket No. 07–198, FCC 10–17. In the First Report and Order, the Commission establishes rules, policies, and procedures for the consideration of complaints alleging unfair acts involving terrestrially delivered, cable–affiliated programming in violation of Section 628(b) of the Communications Act. The Commission also establishes procedures for the consideration of requests for a temporary standstill of the price, terms, and other conditions of an existing programming contract by a program access complainant seeking renewal of such a contract.

The following rule sections contain revised information collection requirements that the Commission is seeking approval for from the Office of Management and Budget (OMB):

47 CFR Section 76.1001(b)(2) permits any multichannel video programming distributor to commence an adjudicatory proceeding by filing a complaint with the Commission alleging that a cable operator, a satellite cable programming vendor in which a cable operator has an attributable interest, or a satellite broadcast programming vendor, has engaged in an unfair act involving terrestrially delivered, cable–affiliated programming (which, as defined in this R&O, includes exclusive contracts, discrimination, and undue or improper influence), which must be filed and responded to in accordance with the procedures specified in Section 76.7, except to the extent such procedures are modified by Sections 76.1001(b)(2) and 76.1003. In program access cases involving terrestrially delivered, cable–affiliated programming, the defendant has 45 days from the date of service of the complaint to file an answer, unless otherwise directed by the Commission. A complainant shall have the burden of proof that the defendant's alleged conduct has the purpose or effect of hindering significantly or preventing the complainant from providing satellite cable programming or satellite broadcast programming to subscribers or consumers; an answer to such a complaint shall set forth the defendant's reasons to support a finding that the complainant has not carried this burden. In addition, a complainant alleging that a terrestrial cable programming vendor has engaged in discrimination shall have the burden of proof that the terrestrial cable programming vendor is wholly owned by, controlled by, or under common control with a cable operator or cable operators, satellite cable programming

vendor or vendors in which a cable operator has an attributable interest, or satellite broadcast programming vendor or vendors; an answer to such a complaint shall set forth the defendant's reasons to support a finding that the complainant has not carried this burden. In addition, the R&O provides that a complainant that wants a currently pending complaint involving terrestrially delivered, cable–affiliated programming considered under the rules adopted in the R&O must submit a supplemental filing alleging that the defendant has engaged in an unfair act after the effective date of the rules. In such case, the complaint and supplement will be considered pursuant to the rules adopted in the R&O and the defendant will have an opportunity to answer the supplemental filing, as set forth in the rules.

47 CFR Section 76.1003(c)(3) requires a program access complaint to contain evidence that the complainant competes with the defendant cable operator, or with a multichannel video programming distributor that is a customer of the defendant satellite cable programming or satellite broadcast programming vendor or a terrestrial cable programming vendor alleged to have engaged in conduct described in Section 76.1001(b)(1).

47 CFR Section 76.1003(l) permits a program access complainant seeking renewal of an existing programming contract to file a petition along with its complaint requesting a temporary standstill of the price, terms, and other conditions of the existing programming contract pending resolution of the complaint, to which the defendant will have the opportunity to respond within 10 days of service of the petition, unless otherwise directed by the Commission.

The following rule sections are also covered in this information collection but do not require additional OMB approval since the requirements have not changed since last approved by OMB:

47 CFR Section 76.7. Pleadings seeking to initiate FCC action must adhere to the requirements of Section 76.6 (general pleading requirements) and Section 76.7 (initiating pleading requirements). Section 76.7 is used for numerous types of petitions and special relief petitions, including general petitions seeking special relief, waivers, enforcement, show cause, forfeiture and declaratory ruling procedures.

47 CFR Section 76.9. A party that wishes to have confidentiality for proprietary information with respect to a submission it is making to the FCC must file a petition pursuant to the pleading requirements in Section 76.7 and use the method described in Sections 0.459 to demonstrate that confidentiality is warranted. The petitions filed pursuant to this provision are contained in the existing information collection requirement and are not changed by the rule changes.

47 CFR Section 76.61(a) permits a local commercial television station or qualified low power television station that is denied carriage or channel positioning or repositioning in accordance with the must–carry rules by a cable operator to file a complaint with the FCC in accordance with the procedures set forth in Section 76.7. Section 76.61(b) permits a qualified local noncommercial educational television station that believes a cable operator has failed to comply with the FCC's signal carriage or channel positioning requirements (Sections 76.56 through 76.57) to file a complaint with the FCC in accordance with the procedures set forth in Section 76.7.

47 CFR Section 76.61(a)(1) states that whenever a local commercial television station or a qualified low power television station believes that a cable operator has failed to meet its carriage or channel positioning obligations, pursuant to Section 76.56, such station shall notify the operator, in writing, of the alleged failure and identify its reasons for believing that the cable operator is obligated to carry the signal of such station or position such signal on a particular channel.

47 CFR Section 76.61(a)(2) states that the cable operator shall, within 30 days of receipt of such written notification, respond in writing to such notification and either commence to carry the signal of such station in accordance with the terms requested or state its reasons for believing that it is not obligated to carry such signal or is in compliance with the channel positioning and repositioning and other requirements of the must–carry rules. If a refusal for carriage is based on the station's distance from the cable system's principal headend, the operator's response shall include the location of such headend. If a cable operator denies carriage on the basis of the failure of the station to deliver a good quality signal at the cable system's principal headend, the cable operator must provide a list of equipment used to make the measurements, the point of measurement and a list and detailed description of the reception and over–the–air signal processing equipment used, including sketches such as block diagrams and a description of the methodology used for processing the signal at issue, in its response.

47 CFR Section 76.914(c) permits a cable operator seeking revocation of a franchising authority's certification to file a petition with the FCC in accordance with the procedures set forth in Section 76.7.

47 CFR Section 76.1003(a) permits any multichannel video programming distributor (MVPD) aggrieved by conduct that it believes constitute a violation of the FCC's competitive access to cable programming rules to commence an adjudicatory proceeding at the FCC to obtain enforcement of the rules through the filing of a complaint, which must be filed and responded to in accordance with the procedures specified in Section 76.7, except to the extent such procedures are modified by Section 76.1003.

47 CFR Section 76.1003(b) requires any aggrieved MVPD intending to file a complaint under this section to first notify the potential defendant cable operator, and/or the potential defendant satellite cable programming vendor or satellite broadcast programming vendor, that it intends to file a complaint with the Commission based on actions alleged to violate one or more of the provisions contained in Sections 76.1001 or 76.1002 of this part. The notice must be sufficiently detailed so that its recipient(s) can determine the nature of the potential complaint. The potential complainant must allow a minimum of ten (10) days for the potential defendant(s) to respond before filing a complaint with the Commission.

47 CFR Section 76.1003(c) describes the required contents of a program access complaint, in addition to the requirements of Section 76.7 of this part.

47 CFR Section 76.1003(d) states that, in a case where recovery of damages is sought, the complaint shall contain a clear and unequivocal request for damages and appropriate allegations in support of such claim.

47 CFR Section 76.1003(e)(1) requires cable operators, satellite cable programming vendors, or satellite broadcast programming vendors whom expressly reference and rely upon a document in asserting a defense to a program access complaint filed or in responding to a material allegation in a program access complaint filed pursuant to Section 76.1003, to include such document or documents, such as contracts for carriage of programming referenced and relied on, as part of the answer. Except as otherwise provided or directed by the Commission, any cable operator, satellite cable programming vendor or satellite broadcast programming vendor upon which a program access complaint is served under this section shall answer within

twenty (20) days of service of the complaint.

47 CFR Section 76.1003(e)(2) requires an answer to an exclusivity complaint to provide the defendant's reasons for refusing to sell the subject programming to the complainant. In addition, the defendant may submit its programming contracts covering the area specified in the complaint with its answer to refute allegations concerning the existence of an impermissible exclusive contract. If there are no contracts governing the specified area, the defendant shall so certify in its answer. Any contracts submitted pursuant to this provision may be protected as proprietary pursuant to Section 76.9 of this part.

47 CFR Section 76.1003(e)(3) requires an answer to a discrimination complaint to state the reasons for any differential in prices, terms or conditions between the complainant and its competitor, and to specify the particular justification set forth in Section 76.1002(b) of this part relied upon in support of the differential.

47 CFR Section 76.1003(e)(4) requires an answer to a complaint alleging an unreasonable refusal to sell programming to state the defendant's reasons for refusing to sell to the complainant, or for refusing to sell to the complainant on the same terms and conditions as complainant's competitor, and to specify why the defendant's actions are not discriminatory.

47 CFR Section 76.1003(f) provides that, within fifteen (15) days after service of an answer, unless otherwise directed by the Commission, the complainant may file and serve a reply which shall be responsive to matters contained in the answer and shall not contain new matters.

47 CFR Section 76.1003(g) states that any complaint filed pursuant to this subsection must be filed within one year of the date on which one of three specified events occurs.

47 CFR Section 76.1003(h) sets forth the remedies that are available for violations of the program access rules, which include the imposition of damages, and/or the establishment of prices, terms, and conditions for the sale of programming to the aggrieved multichannel video programming distributor, as well as sanctions available under title V or any other provision of the Communications Act.

47 CFR Section 76.1003(j) states in addition to the general pleading and discovery rules contained in Section 76.7 of this part, parties to a program access complaint may serve requests for discovery directly on opposing parties, and file a copy of the request with the Commission. The respondent shall have the opportunity to object to any request for documents that are not in its control or relevant to the dispute. Such request shall be heard, and determination made, by the Commission. Until the objection is ruled upon, the obligation to produce the disputed material is suspended. Any party who fails to timely provide discovery requested by the opposing party to which it has not raised an objection as described above, or who fails to respond to a Commission order for discovery material, may be deemed in default and an order may be entered in accordance with the allegations contained in the complaint, or the complaint may be dismissed with prejudice.

47 CFR Section 76.1302(a) states that any video programming vendor or multichannel video programming distributor aggrieved by conduct that it believes constitute a violation of the regulations set forth in this subpart may commence an adjudicatory proceeding at the Commission to obtain enforcement of the rules through the filing of a complaint.

47 CFR Section 76.1302(b) states that any aggrieved video programming vendor or multichannel video programming distributor intending to file a complaint under this section must first notify the potential defendant multichannel video programming distributor that it intends to file a complaint with the Commission based on actions alleged to violate one or more of the provisions contained in Section 76.1301 of this part. The notice must be sufficiently detailed so that its recipient(s) can determine the specific nature of the potential complaint. The potential complainant must allow a minimum of ten (10) days for the potential defendant(s) to respond before filing a complaint with the Commission.

47 CFR Section 76.1302(c) specifies the content of carriage agreement complaints.

47 CFR Section 76.1302(d) states that any multichannel video programming distributor upon which a carriage agreement complaint is served under this section shall answer within thirty (30) days of service of the complaint, unless otherwise directed by the Commission. The answer shall address the relief requested in the complaint, including legal and documentary support, for such response, and may include an alternative relief proposal without any prejudice to any denials or defenses raised.

47 CFR Section 76.1302(e) states that within twenty (20) days after service of an answer, unless otherwise directed by the Commission, the complainant may file and serve a reply which shall be responsive to matters contained in the answer and shall not contain new matters.

47 CFR Section 76.1302(f) states that any complaint filed pursuant to this subsection must be filed within one year of the date on which one of three events occurs.

47 CFR Section 76.1302(g)(1) states that upon completion of such adjudicatory proceeding, the Commission shall order appropriate remedies, including, if necessary, mandatory carriage of a video programming vendor's programming on defendant's video distribution system, or the establishment of prices, terms, and conditions for the carriage of a video programming vendor's programming.

47 CFR Section 76.1513(a) permits any party aggrieved by conduct that it believes constitute a violation of the FCC's regulations or in section 653 of the Communications Act (47 U.S.C. 573) to commence an adjudicatory proceeding at the Commission to obtain enforcement of the rules through the filing of a complaint, which must be filed and responded to in accordance with the procedures specified in Section 76.7, except to the extent such procedures are modified by Section 76.1513.

47 CFR Section 76.1513(b) provides that an open video system operator may not provide in its carriage contracts with programming providers that any dispute must be submitted to arbitration, mediation, or any other alternative method for dispute resolution prior to submission of a complaint to the Commission.

47 CFR Section 76.1513(c) requires that any aggrieved party intending to file a complaint under this section must first notify the potential defendant open video system operator that it intends to file a complaint with the Commission based on actions alleged to violate one or more of the provisions contained in this part or in Section 653 of the Communications Act. The notice must be in writing and must be sufficiently detailed so that its recipient(s) can determine the specific nature of the potential complaint. The potential complainant must allow a minimum of ten (10) days for the potential defendant(s) to respond before filing a complaint with the Commission.

47 CFR Section 76.1513(d) describes the contents of an open video system complaint.

47 CFR Section 76.1513(e) addresses answers to open video system complaints.

47 CFR Section 76.1513(f) states within twenty (20) days after service of

an answer, the complainant may file and serve a reply which shall be responsive to matters contained in the answer and shall not contain new matters.

47 CFR Section 76.1513(g) requires that any complaint filed pursuant to this subsection must be filed within one year of the date on which one of three events occurs.

47 CFR Section 76.1513(h) states that upon completion of the adjudicatory proceeding, the Commission shall order appropriate remedies, including, if necessary, the requiring carriage, awarding damages to any person denied carriage, or any combination of such sanctions. Such order shall set forth a timetable for compliance, and shall become effective upon release.

OMB Control Number: 3060–1034.

Title: Digital Audio Broadcasting Systems and their Impact on the Terrestrial Radio Broadcast Service; Digital Notification Form, FCC Form 335.

Form Number: FCC Form 335.

Type of Review: Revision of a currently approved collection.

Respondents: Business or other for–profit entities.

Number of Respondents and Responses: 1,310 respondents; 1,310 responses.

Estimated Time per Response: 1– 8 hours.

Frequency of Response: On occasion reporting requirement.

Obligation to Respond: Required to obtain or retain benefits. The statutory authority for this information collection is contained in Sections 154(i), 303, 310 and 533 of the Communications Act of 1934, as amended.

Total Annual Burden: 1,780 hours.

Total Annual Cost: $606,500.

Privacy Impact Assessment: No impact(s).

Nature and Extent of Confidentiality: There is no need for confidentiality with this collection of information.

Needs and Uses: On January 29, 2010, the Commission released the Order, Digital Audio Broadcasting Systems and Their Impact on the Terrestrial Radio Broadcast Service (“Order”), DA 10–208, MM Docket 99–325. The Order will allow:

(1) Eligible authorized FM stations to commence operation of FM digital facilities with operating power up to –14 dB upon notice to the Commission on either Form 335 (the licensee of a super–powered FM station must file an informal request for any increase in the station’s FM Digital ERP).

(2) Licensees to submit an application to the Media Bureau, in the form of an informal request, for any increase in FM Digital ERP beyond 6 dB.

(3) Licensees submitting such a request must use a simplified method set forth in the Order to determine the proponent station’s maximum permissible FM Digital ERP.

(4) In situations where the simplified method is not applicable due to unusual terrain or other environmental or technical considerations or when it produces anomalous FM Digital ERP results, the Bureau will accept applications for FM Digital ERP in excess of –14 dB on a case–by–case basis when accompanied by a detailed showing containing a complete explanation of the prediction methodology used as well as data, maps and sample calculations.

(5) Finally, the Order implements interference mitigation and remediation procedures to resolve promptly allegations of digital interference to an authorized FM analog facility resulting from an FM Digital ERP power increase undertaken pursuant to the procedures adopted in the Order. Pursuant to these procedures, the affected analog FM station may file an interference complaint with the Bureau. In order to be considered by the Bureau, the complaint must contain at least six reports of ongoing (rather than transitory) objectionable interference. For each report of interference, the affected FM licensee must submit a map showing the location of the reported interference and a detailed description of the nature and extent of the interference being experienced at that location. Interference reports at locations outside a station’s protected analog contour will not be considered. The complaint must also contain a complete description of the tests and equipment used to identity the alleged interference and the scope of the unsuccessful efforts to resolve the interference.

The following rule sections contain information collection requirements that have been approved by OMB and do not require any additional OMB approval because they did not change since last approved by OMB:

47 CFR 73.404(b) states in situations where interference to other stations is anticipated or actually occurs, AM licensees may, upon notification to the Commission, reduce the power of the primary Digital Audio Broadcasting (DAB) sidebands by up to 6 dB. Any greater reduction of sideband power requires prior authority from the Commission via the filing of a request for special temporary authority or an informal letter request for modification of license.

47 CFR 73.404(e) states licensees (commercial and noncommercial AM and FM radio stations) must provide notification to the Commission in Washington, DC, within 10 days of commencing in–band, on channel (IBOC) digital operation. The notification must include the following information:

(1) Call sign and facility identification number of the station;

(2) Date on which IBOC operation commenced;

(3) Certification that the IBOC DAB facilities conform to permissible hybrid specifications;

(4) Name and telephone number of a technical representative the Commission can call in the event of interference;

(5) FM digital effective radiated power used and certification that the FM analog effective radiated power remains as authorized;

(6) Transmitter power output; if separate analog and digital transmitters are used, the power output for each transmitter;

(7) If applicable, any reduction in an AM station’s primary digital carriers;

(8) If applicable, the geographic coordinates, elevation data, and license file number of the auxiliary antenna employed by an FM station as a separate digital antenna;

(9) If applicable, for FM systems employing interleaved antenna bays, a certification that adequate filtering and/or isolation equipment has been installed to prevent spurious emissions in excess of the limits specified in Section 73.317;

(10) A certification that the operation will not cause human exposure to levels of radio frequency radiation in excess of the limits specified in Section 1.1310 of the Commission’s rules and is therefore categorically excluded from environmental processing pursuant to Section 1306(b). Any station that cannot certify compliance must submit an environmental assessment (“EA”) pursuant to Section 1.1311 and may not commence IBOC operation until such EA is ruled upon by the Commission.

FEDERAL COMMUNICATIONS COMMISSION

Notice of Public Information Collection(s) Being Reviewed by the Federal Communications Commission, Comments Requested

May 3, 2010.

SUMMARY: The Federal Communications Commission, as part of its continuing effort to reduce paperwork burden invites the general public and other Federal agencies to take this opportunity to comment on the following information collection(s), as required by the Paperwork Reduction Act (PRA) of 1995, 44 U.S.C. 3501–3520. Comments are requested concerning: (a) whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; (b) the accuracy of the Commission's burden estimate; (c) ways to enhance the quality, utility, and clarity of the information collected; (d) ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology, and (e) ways to further reduce the information collection burden on small business concerns with fewer than 25 employees.

The FCC may not conduct or sponsor a collection of information unless it displays a currently valid control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the Paperwork Reduction Act (PRA) that does not display a currently valid OMB control number.

DATES: Written Paperwork Reduction Act (PRA) comments should be submitted on or before July 6, 2010. If you anticipate that you will be submitting PRA comments, but find it difficult to do so within the period of time allowed by this notice, you should advise the FCC contact listed below as soon as possible.

ADDRESSES: Direct all PRA comments to Nicholas A. Fraser, Office of Management and Budget, via fax at 202–395–5167 or via the Internet at Nicholas_A._Fraser@omb.eop.gov and to the Federal Communications Commission via email to PRA@fcc.gov.

FOR FURTHER INFORMATION CONTACT: Judith B. Herman, Office of Managing Director, (202) 418–0214. For additional information, contact Judith B. Herman, OMD, 202–418–0214 or email Judith–b.herman@fcc.gov.

SUPPLEMENTARY INFORMATION:

OMB Control Number: 3060–1135.

Title: Revisions to Rules Authorizing the operation of Low Power Auxiliary Stations (Including Wireless Microphones).

Form No.: N/A.

Type of Review: Revision of a currently approved collection.

Respondents: Business or other for–profit, not–for–profit institutions, and state local or tribal government.

Number of Respondents and Responses: 5,100 respondents; 127,500 responses.

Estimated Time Per Response: .25 hours (15 minutes).

Frequency of Response: Third party disclosure requirements (disclosure and labeling).

Obligation to Respond: Mandatory. Statutory authority for this information collection is contained in 47 U.S.C. sections 151, 152, 154(i), 154(j), 301, 302(a), 303, 304 307, 308, 309, 316, 332, 336 and 337.

Total Annual Burden: 31,875 hours.

Total Annual Cost: $1,625,000.

Privacy Act Impact Assessment: N/A.

Nature and Extent of Confidentiality: There is no need for confidentiality since this a third party disclosure and labeling requirement.

Needs and Uses: The Commission will submit this revision to the Office of Management and Budget (OMB) after this comment period in order to obtain the full three year clearance from them. The Commission is requesting a revision of this collection which eliminates the early clearing requirement burden as it will be unnecessary after June 12, 2010 while keeping the disclosure and labeling requirements that would allow the Commission to clear the 700 MHz band of wireless microphones and provide them a home in the core TV spectrum, where many wireless microphones are already operating. Therefore, the Commission is reducing the total annual burden for this collection by 1,049 hours (program change).

The point–of–sale disclosure requirement is necessary for a successful transition of wireless microphones out of the 700 MHz band. The Commission anticipates that many wireless microphone users currently operating in the 700 MHz band will have to purchase or lease new equipment capable of operating in the core TV spectrum. The point–of–sale disclosure requirement will help these consumers make an educated decision as they obtain new microphones, and it will help them operate in the core TV spectrum without causing interference to other services in the spectrum. Further, a label on 700 MHz band wireless microphones bound for export will help to ensure that these wireless microphones do not continue to be made available for use in the United States, in contravention of our efforts to remove them from the 700 MHz band.

FEDERAL COMMUNICATIONS COMMISSION

Notice of Public Information Collection Being Reviewed by the Federal Communications Commission for Extension Under Delegated Authority, Comments Requested

April 30, 2010.

SUMMARY: The Federal Communications Commission, as part of its continuing effort to reduce paperwork burden invites the general public and other Federal agencies to take this opportunity to comment on the following information collection, as required by the Paperwork Reduction Act (PRA) of 1995, 44 U.S.C. 3501 – 3520. Comments are requested concerning: (a) whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; (b) the accuracy of the Commission's burden estimate; (c) ways to enhance the quality, utility, and clarity of the information collected; (d) ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology, and (e) ways to further reduce the information collection burden for small business concerns with fewer than 25 employees.

The FCC may not conduct or sponsor a collection of information unless it displays a currently valid control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the Paperwork Reduction Act (PRA) that does not display a currently valid OMB control number.

DATES: Written Paperwork Reduction Act (PRA) comments should be submitted on or before [July 6, 2010]. If you anticipate that you will be submitting PRA comments, but find it difficult to do so within the period of

time allowed by this notice, you should advise the FCC contact listed below as soon as possible.

ADDRESSES: Direct all PRA comments to Nicholas A. Fraser, Office of Management and Budget, via fax at 202–395–5167 or via email to Nicholas_A._Fraser@omb.eop.gov and to the Federal Communications Commission via email to PRA@fcc.gov and Cathy.Williams@fcc.gov.

SUPPLEMENTARY INFORMATION:

OMB Control Number: 3060–0633.

Title – Sections 73.1230, 74.165, 74.432, 74.564, 74.664, 74.765, 74.832, 74.1265, Posting or Filing of Station Licenses.

Form Number: N/A.

Type of Review: Extension of a currently approved collection.

Respondents: Businesses or other for–profit entities, Not–for–profit institutions.

Number of Respondents and Responses: 2,584 respondents; 2,584 responses.

Estimated Hours per Response: 0.083 hours.

Frequency of Response: Recordkeeping requirement; On occasion reporting requirement; Third party disclosure requirement.

Obligation to Responds: Required to obtain or retain benefits. The statutory authority for this information collection is contained in Section 154(i) of the Communications Act of 1934, as amended.

Total Annual Burden: 214 hours.

Total Annual Cost: $24,860.

Nature and Extent of Confidentiality: No need for confidentiality required with this collection of information.

Privacy Impact Assessment: No impact(s).

Needs and Uses: 47 CFR 73.1230 requires that the station license and any other instrument of station authorization for an AM, FM or TV station be posted in a conspicuous place at the place the licensee considers to be the principal control point of the transmitter.

47 CFR 74.165 requires that the instrument of authorization for an experimental broadcast station be available at the transmitter site.

47 CFR 74.432(j) (remote pickup broadcast station) and 74.832(j) (low power auxiliary station) requires that the license of a remote pickup broadcast/low power auxiliary station shall be retained in the licensee's files, posted at the transmitter, or posted at the control point of the station. These sections also require the licensee to forward the station license to the FCC in the case of permanent discontinuance of the station.

47 CFR 74.564 (aural broadcast auxiliary stations) requires that the station license and any other instrument of authorization be posted in the room where the transmitter is located, or if operated by remote control, at the operating position.

47 CFR 74.664 (television broadcast auxiliary stations) requires that the station license and any other instrument of authorization be posted in the room where the transmitter is located.

Sections 74.765 (low power TV, TV translator and TV booster) and 74.1265 (FM translator stations and FM booster stations), require that the station license and any other instrument of authorization be retained in the station's files. In addition, the call sign of the station, together with the name, address and telephone number of the licensee or the local representative of the licensee, and the name and address of the person and place where the station records are maintained, shall be displayed at the transmitter site on the structure supporting the transmitting antenna.

BILLING CODE 6712–01–S

FEDERAL COMMUNICATIONS COMMISSION

[CG Docket No. 10–51; DA 10–314]

Structure and Practices of the Video Relay Service Program

AGENCY: Federal Communications Commission.

ACTION: Notice.

SUMMARY: In this document, the Commission, via the Consumer and Governmental Affairs Bureau (Bureau), addresses the compensability from the Interstate TRS Fund (Fund) of certain types of calls made through Video Relay Service (VRS), a form of Telecommunications Relay Service (TRS). First, the Bureau emphasizes that VRS calls made by or to a VRS provider's employee, or the employee of a provider's subcontractor, are not eligible for compensation from the TRS Fund on a per-minute basis from the Fund, but rather as business expenses. Second, the Bureau emphasizes that VRS calls placed for the purpose of generating compensable minutes are not, and never have been, compensable from the Fund. Finally, the Bureau emphasizes that two categories of calls do not meet the definition of TRS or otherwise are not compensable from the Fund under plain statutory language: (1) VRS Voice Carry Over (VCO) used to connect two hearing users and (2) VRS calls used to connect two users who are both outside the United States. This action is necessary to explain that certain types of TRS minutes are not compensable from the Fund. The intended impact of this action is to enhance the integrity of the TRS program.

DATES: Effective February 25, 2010.

FOR FURTHER INFORMATION CONTACT: Gregory Hlibok, Consumer and Governmental Affairs Bureau at (202) 559–5158 (VP), or e-mail: *Gregory.Hlibok@fcc.gov.*

SUPPLEMENTARY INFORMATION: This is a synopsis of the Commission's document DA 10–314, adopted and released on February 25, 2010. The full text of this document and copies of any subsequently filed documents in this matter will be available for public inspection and copying during regular business hours at the FCC Reference Information Center, Portals II, 445 12th Street, SW., Room CY–A257, Washington, DC 20554. This document and copies of subsequently filed documents in this matter may also be purchased from the Commission's duplicating contractor at Portals II, 445 12th Street, SW., Room CY–B402, Washington, DC 20554. Customers may contact the Commission's duplicating contractor at their Web site: *http://www.bcpiweb.com* or call 1–800–378–3160. To request materials in accessible formats for people with disabilities (Braille, large print, electronic files, audio format), send an e-mail to *fcc504@fcc.gov* or call the Consumer and Governmental Affairs Bureau at (202) 418–0530 (voice), (202) 418–0432 (TTY). Document DA 10–314 can also be downloaded in Word or Portable Document Format (PDF) at: *http://www.fcc.gov/cgb/dro.*

Synopsis

VRS Calls Already Compensated Through the Rate Base

1. In document DA 10–314, the Bureau emphasizes that VRS calls made by or to a VRS provider's employee, or the employee of a provider's subcontractor, are not eligible for compensation from the TRS Fund on a per-minute basis as part of the provider's calls submitted monthly to

the Fund administrator for payment. Instead, the costs of such calls are business expenses that can and should be included in the providers' cost data submitted to the Fund administrator for purposes of setting VRS compensation rates. The Relay Services Data Request form, which is submitted to the Fund Administrator annually by each provider for purposes of determining the compensation rate, expressly identifies such expenses (*e.g.,* for telecommunications expenses, operations support, human resources, and marketing and advertising) as business expenses. In this manner, the cost associated with providing telephone service for use by employees is properly reflected in the VRS compensation rate. Providers have had ample notice that such costs should be treated as business expenses. Because providers already are able to include the costs of providing telephone and telecommunications services for use by employees in their annual submissions to the Fund Administrator, to permit providers also to be compensated from the Fund for such calls on a per-minute basis would result in double recovery from the Fund.

VRS Calls Placed for the Purpose of Generating Compensable Minutes

2. The Bureau also emphasizes that individuals who place or arrange for VRS calls for the purpose of generating compensable minutes of use are not using the service as intended; that is, Congress intended TRS to provide the ability for individuals with hearing or speech disabilities to communicate over the telephone system with hearing individuals in a functionally equivalent manner. Using VRS as a means to generate compensation from the TRS Fund is antithetical to that statutory purpose. This includes, but is not limited to, calls to podcasts or other pre-recorded material and calls ostensibly for marketing or outreach purposes, when initiated by or on behalf of VRS providers. This also includes paying independent marketing firms to have deaf employees place marketing calls through the providers' VRS. Likewise, for example, when a provider directly or indirectly sponsors events (*e.g.,* lectures, courses, story times) that deaf callers can listen to by placing VRS calls to a bridge number, that is encouraging users to place VRS calls that they would not ordinarily make. In these instances, but for the provider establishing the event for the deaf caller to call via VRS, no such call would occur.

VRS Voice Carry Over (VCO) Calls

3. Some providers offer VCO service to deaf or hard of hearing consumers who use VRS. VRS VCO permits the deaf or hard of hearing user to speak to the other party to the call rather than communicate via ASL; in return, the CA signs in ASL to the consumer what the other party to the call (the voice telephone user) has said. Such calls are generally set up by having the VRS CA, after the VRS user has initiated the video call to the CA, call back the VRS user on a voice telephone line. As a result, the VRS user has both the video link to the CA (to see, in ASL, what the called party has said) and a voice telephone link to the called party so that the VRS user can speak directly to that party.

4. To the extent that some users have abused VRS by using VRS VCO to make voice-to-voice calls for the purpose of making a free long distance call, the Bureau takes this opportunity to remind VRS providers of Congress's explicit limitation that VRS calls "provide the ability for an individual who has a hearing impairment or speech impairment to engage in communication * * * with a hearing individual." 47 U.S.C. 225(a)(3). Therefore, VRS VCO may be used only when a person who is deaf or hard of hearing wants to use his or her own voice to speak to the hearing party during the VRS call. If it becomes clear that what was initially set up as a VRS VCO call is in fact a call between two voice telephone users, the call is no longer a TRS call compensable from the Fund.

VRS Calls That Originate and Terminate Outside of the United States

5. The Bureau also reminds providers that VRS calls that both originate and terminate outside of the United States are not compensable from the Fund under section 225 of the Act. Section 225 of the Act provides that "the Commission shall ensure that interstate and intrastate telecommunications relay services are available, to the extent possible and in the most efficient manner, to hearing-impaired and speech-impaired individuals in the United States." 47 U.S.C. 225(b)(1). Because section 225 of the Act expressly states that TRS is for individuals "in the United States," the statute does not authorize compensation from the Fund for VRS or other TRS calls that do not either originate or terminate in the United States. Similarly, as part of the registration and verification requirements applicable to the provision of ten-digit, North American Numbering Plan (NANP), telephone numbers to Internet-based TRS users, providers must verify that only persons with hearing or speech disabilities residing in the United States may obtain from them, and be registered with, a ten-digit NANP number.

Congressional Review Act

The Commission will not send a copy of this [Report & Order, *etc.*] pursuant to the Congressional Review Act, *see* 5 U.S.C. 801(a)(1)(A), because the adopted rules are: Rules of particular applicability;

Ordering Clauses

Pursuant Sections 1, 2, 4(i), and 225 of the Communications Act of 1934, as amended, 47 U.S.C. 151, 152, 154(i), and 225, and §§ 0.141, 0.361 and 1.2 of the Commission's rules, 47 CFR 0.141, 0.361 and 1.2, document DA 10–314 IS adopted.

Mark Stone,

Deputy Bureau Chief, Consumer and Governmental Affairs Bureau, Federal Communications Commission.

BILLING CODE 6712–01–P

FEDERAL DEPOSIT INSURANCE CORPORATION

Sunshine Act Meeting

Pursuant to the provisions of the "Government in the Sunshine Act" (5 U.S.C. 552b), notice is hereby given that the Federal Deposit Insurance Corporation's Board of Directors will meet in open session at 10 a.m. on Tuesday, May 11, 2010, to consider the following matters:

Summary Agenda: No substantive discussion of the following items is anticipated. These matters will be resolved with a single vote unless a member of the Board of Directors requests that an item be moved to the discussion agenda.

Disposition of minutes of previous Board of Directors' Meetings.

Summary reports, status reports, reports of the Office of Inspector General, and reports of actions taken pursuant to authority delegated by the Board of Directors.

Memorandum and resolutions re: Honoring Employees with 35-Years of Federal Service.

Memorandum and resolution re: Retiring Executive Manager.

Discussion Agenda:

Memorandum and resolution re: Rulemaking on Treatment by the FDIC as Conservator or Receiver of Financial Assets Transferred by an Insured

Depository Institution in Connection with a Securitization or Participation.

Memorandum and resolution re: Notice of Proposed Rulemaking—Large Insured Depository Institutions Reporting and Planning.

The meeting will be held in the Board Room on the sixth floor of the FDIC Building located at 550 17th Street, NW., Washington, DC.

This Board meeting will be Webcast live via the Internet and subsequently made available on-demand approximately one week after the event. Visit *http://www.vodium.com/goto/fdic/boardmeetings.asp* to view the event. If you need any technical assistance, please visit our Video Help page at: *http://www.fdic.gov/video.html.*

The FDIC will provide attendees with auxiliary aids (*e.g.,* sign language interpretation) required for this meeting. Those attendees needing such assistance should call (703) 562–6067 (Voice or TTY), to make necessary arrangements.

Requests for further information concerning the meeting may be directed to Mr. Robert E. Feldman, Executive Secretary of the Corporation, at (202) 898–7043.

Dated: May 4, 2010.

Federal Deposit Insurance Corporation.

Robert E. Feldman,

Executive Secretary.

FEDERAL RESERVE SYSTEM

Notice of Proposals to Engage in Permissible Nonbanking Activities or to Acquire Companies that are Engaged in Permissible Nonbanking Activities

The companies listed in this notice have given notice under section 4 of the Bank Holding Company Act (12 U.S.C. 1843) (BHC Act) and Regulation Y (12 CFR Part 225) to engage *de novo*, or to acquire or control voting securities or assets of a company, including the companies listed below, that engages either directly or through a subsidiary or other company, in a nonbanking activity that is listed in § 225.28 of Regulation Y (12 CFR 225.28) or that the Board has determined by Order to be closely related to banking and permissible for bank holding companies. Unless otherwise noted, these activities will be conducted throughout the United States.

Each notice is available for inspection at the Federal Reserve Bank indicated. The notice also will be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing on the question whether the proposal complies with the standards of section 4 of the BHC Act. Additional information on all bank holding companies may be obtained from the National Information Center website at *www.ffiec.gov/nic/*.

Unless otherwise noted, comments regarding the applications must be received at the Reserve Bank indicated or the offices of the Board of Governors not later than May 28, 2010.

A. Federal Reserve Bank of Philadelphia (Michael E. Collins, Senior Vice President) 100 North 6th Street, Philadelphia, Pennsylvania 19105–1521:

1. The Bancorp, Inc., Wilmington, Delaware; to engage *de novo* through its subsidiary, Bancorp Federal Savings Bank, Mount Laurel, New Jersey, in operating a savings association, pursuant to section 225.28(b)(4)(ii) of Regulation Y.

Board of Governors of the Federal Reserve System, April 29, 2010.

Robert deV. Frierson,

Deputy Secretary of the Board.

GOVERNMENT ACCOUNTABILITY OFFICE

Board of Governors of the Patient-Centered Outcomes Research Institute (PCOR)

AGENCY: Government Accountability Office (GAO).

ACTION: Notice on letters of nomination.

SUMMARY: The Patient Protection and Affordable Care Act gave the Comptroller General of the United States responsibility for appointing 19 members to the Board of Governors of the Patient-Centered Outcomes Research Institute. In addition, the Directors of the Agency for Healthcare Research and Quality and the National Institutes of Health, or their designees, are members of the Board. The Comptroller General is required to make appointments not later than 6 months after the date of enactment of the Act. Board members must meet the qualifications listed in Section 6301 of the Act. For these appointments, I am announcing the following: Letters of nomination and resumes should be submitted by June 30, 2010 to ensure adequate opportunity for review and consideration of nominees prior to appointment. Letters of nomination and resumes can be sent to either the e-mail or mailing address listed below.

ADDRESSES: Nominations can be submitted by either of the following:

E-mail: HCWorkforce@gao.gov.

Mail: GAO Health Care, Attention: National Health Care Workforce Commission Nominations, 441 G Street, NW., Washington, DC 20548.

FOR FURTHER INFORMATION CONTACT: GAO: Office of Public Affairs, (202) 512–4800.

[Sec. 5101, Pub. L. 111–148]

BILLING CODE 1610–02–M

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Meeting of the National Vaccine Advisory Committee

AGENCY: Department of Health and Human Services, Office of the Secretary, Office of Public Health and Science.

ACTION: Notice.

SUMMARY: As stipulated by the Federal Advisory Committee Act, the Department of Health and Human Services (HHS) is hereby giving notice that the National Vaccine Advisory Committee (NVAC) will hold a meeting. The meeting is open to the public. Pre-registration is required for both public attendance and comment. Individuals who wish to attend the meeting and/or participate in the public comment session should either e-mail *nvpo@hhs.gov* or call 202–690–5566 to register.

DATES: The meeting will be held on June 2, 2010, from 9 a.m. to 5:30 p.m., and June 3, 2010, from 8:30 a.m. to 5:30 p.m.

ADDRESSES: Department of Health and Human Services; Hubert H. Humphrey Building, Room 800; 200 Independence Avenue, SW., Washington, DC 20201.

FOR FURTHER INFORMATION CONTACT: National Vaccine Program Office, Department of Health and Human Services, Room 715–H, Hubert H. Humphrey Building, 200 Independence Avenue, SW., Washington, DC 20201. Phone: (202) 690–5566; Fax: (202) 260–1165; e-mail: *nvpo@hhs.gov.*

SUPPLEMENTARY INFORMATION: Pursuant to Section 2101 of the Public Health Service Act (42 U.S.C. 300aa–1), the Secretary of Health and Human Services was mandated to establish the National Vaccine Program to achieve optimal prevention of human infectious diseases through immunization and to achieve optimal prevention against adverse reactions to vaccines. The National Vaccine Advisory Committee was established to provide advice and make recommendations to the Director of the National Vaccine Program, on matters related to the Program's responsibilities. The Assistant Secretary for Health serves as Director of the National Vaccine Program.

Topics to be discussed at the meeting include the draft National Vaccine Plan, adult immunization recommendations, vaccine financing, 2009 H1N1 influenza outbreak, vaccine safety, and other related issues. The meeting agenda will be posted on the Web site: *http://www.hhs.gov/nvpo/nvac* at least one week prior to the meeting. Public attendance at the meeting is limited to space available. Individuals who plan to attend and need special assistance, such as sign language interpretation or other reasonable accommodations, should notify the office at the address/phone listed above at least one week prior to the meeting. Members of the public will have the opportunity to provide comments at the meeting. Public

comment will be limited to five minutes per speaker. Individuals who would like to submit written statements should e-mail or fax their comments to the National Vaccine Program Office at least five business days prior to the meeting. Those wishing to register to attend the meeting may do so by sending an e-mail to *nvpo@hhs.gov* or by calling 202–690–5566 and providing name, e-mail address and organization.

Dated: April 30, 2010.

Bruce Gellin,

Deputy Assistant Secretary for Health, Director, National Vaccine Program Office.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Children and Families

Proposed Information Collection Activity; Comment Request

Proposed Projects

Title: Division of Unaccompanied Children's Services (DUCS) Request for Specific Consent.

OMB No.: New Collection.

Description: The William Wilberforce Trafficking Victims Protection Reauthorization Act of 2008 (TVPRA of 2008), Public Law 110–457 was enacted into law December 23, 2008. Section 235(d) directs the Secretary of HHS to grant or deny requests for specific consent for unaccompanied alien children in HHS custody who seek to invoke the jurisdiction of a State court for a dependency order and who also seek to invoke the jurisdiction of a State court to determine or alter his or her custody status or release from ORR. These requests can be extremely time sensitive since a child must ask a State court for dependency before turning 18 years old.

In developing procedures for collecting the necessary information from unaccompanied alien children, their attorneys, or other representatives to allow HHS to approve or deny consent requests, ORR/DUCS devised a form. Specifically, the form asks the requestor for his/her identifying information, basic identifying information on the unaccompanied alien child, the name of the HHS-funded facility where the child is in HHS custody and care, the name of the court and its location, and the kind of request (*e.g.,* for a change in custody, *etc.*). The form also asks that the unaccompanied alien child's attorney or authorized representative attach a Notice of Representation, which is an approved Federal government agency form used for immigration procedures that authorizes the attorney to act on behalf of the child (*i.e.,* G–28, EOIR–28, EOIR–29), or any other form of authorization to act on behalf of the unaccompanied alien child.

Respondents: Attorneys, accredited legal representatives, or others authorized to act on behalf of an unaccompanied alien child.

ANNUAL BURDEN ESTIMATES

Instrument	Number of respondents	Number of responses per respondent	Average burden hours per response	Total burden hours
ORR–0132	72	1	0.33	23.76

Estimated Total Annual Burden Hours: 23.76.

In compliance with the requirements of Section 506(c)(2)(A) of the Paperwork Reduction Act of 1995, the Administration for Children and Families is soliciting public comment on the specific aspects of the information collection described above. Copies of the proposed collection of information can be obtained and comments may be forwarded by writing to the Administration for Children and Families, Office of Administration, Office of Information Services, 370 L'Enfant Promenade, SW., Washington, DC 20447, Attn: ACF Reports Clearance Officer. E-mail address: *infocollection@acf.hhs.gov.* All requests should be identified by the title of the information collection.

The Department specifically requests comments on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Consideration will be given to comments and suggestions submitted within 60 days of this publication.

Dated: May 4, 2010.

Robert Sargis,

Reports Clearance Officer.

Proposed Projects

Title: Request for State Data Needed to Determine Amount of a Tribal Family Assistance Grant.

OMB No.: 0970–0173.

Description: 42 U.S.C. 612 (Section 412 of the Social Security Act) gives federally recognized Indian Tribes the opportunity to apply to operate a Tribal Temporary Assistance for Needy Families (TANF) program. The Act specifies that the Secretary shall use State-submitted data to determine the amount of the grant to the Tribe. This form (letter) is used to request those data from the States. ACF is proposing to extend this information collection without change.

Respondents: States that have Indian Tribes applying to operate a TANF program.

ANNUAL BURDEN ESTIMATES

Instrument	Number of respondents	Number of responses per respondent	Average burden hours per response	Total burden hours
Request for State Data Needed to Determine the Amount of Tribal Family Assistance Grant	15	1	42	630

Estimated Total Annual Burden Hours: 630.

In compliance with the requirements of Section 506(c)(2)(A) of the Paperwork Reduction Act of 1995, the Administration for Children and Families is soliciting public comment on the specific aspects of the information collection described above. Copies of the proposed collection of information can be obtained and comments may be forwarded by writing to the Administration for Children and Families, Office of Administration, Office of Information Services, 370 L'Enfant Promenade, SW., Washington, DC 20447, *Attn:* ACF Reports Clearance Officer. *E-mail address: infocollection@acf.hhs.gov.* All requests should be identified by the title of the information collection.

The Department specifically requests comments on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Consideration will be given to comments and suggestions submitted within 60 days of this publication.

Proposed Projects

Title: Guidance for Tribal TANF.

OMB No.: 0970–0157.

Description: 42 U.S.C. 612 (Section 412 of the Social Security Act) requires each Indian Tribe that elects to administer and operate a TANF program to submit a TANF Tribal Plan. The TANF Tribal Plan is a mandatory statement submitted to the Secretary by the Indian Tribe, which consists of an outline of how the Indian Tribes TANF program will be administered and operated. It is used by the Secretary to determine whether the plan is approvable and to determine that the Indian Tribe is eligible to receive a TANF assistance grant. It is also made available to the public.

Respondents: Indian Tribes applying to operate a TANF program.

ANNUAL BURDEN ESTIMATES

Instrument	Number of respondents	Number of responses per respondent	Average burden hours per response	Total burden hours
Request for State Data Needed to Determine the Amount of a Tribal Family Assistance Grant	20	1	68	1,360

Estimated Total Annual Burden Hours: 1,360.

In compliance with the requirements of Section 506(c)(2)(A) of the Paperwork Reduction Act of 1995, the Administration for Children and Families is soliciting public comment on the specific aspects of the information collection described above. Copies of the proposed collection of information can be obtained and comments may be forwarded by writing to the Administration for Children and Families, Office of Administration, Office of Information Services, 370 L'Enfant Promenade, SW., Washington, DC 20447, Attn: ACF Reports Clearance Officer. DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration on Aging

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Extension of Current Program Announcement and Grant Application Template for Older Americans Act Title IV Discretionary Grants Program

AGENCY: Administration on Aging, HHS.

ACTION: Notice.

SUMMARY: The Administration on Aging (AoA) is announcing that the proposed collection of information listed below has been submitted to the Office of Management and Budget (OMB) for review and clearance under the Paperwork Reduction Act of 1995.

DATES: Submit written comments on the collection of information by June 7, 2010.

ADDRESSES: Submit written comments on the collection of information by fax 202.395.6974 to the OMB Desk Officer for AoA, Office of Information and Regulatory Affairs, OMB.

FOR FURTHER INFORMATION CONTACT: Lori Stalbaum, (202)357–3452 or *lori.stalbam@aoa.hhs.gov*.

SUPPLEMENTARY INFORMATION: In compliance with 44 U.S.C. 3507, AoA has submitted the following proposed collection of information to OMB for review and clearance.

AoA is requesting an extension of the currently approved Program Announcement and Application Instructions Template for the Older Americans Act Title IV Discretionary Grants Program. This template provides the requirements and instructions for the submission of an application for discretionary grants funding opportunities. The template may be found on the AoA Web site at *http://www.aoa.gov/AoARoot/Grants/Funding/overview.aspx*.

AoA estimates the burden of this collection of information as follows:

Frequency: 10–15 Title IV Program Announcements published annually.

Respondents: State agencies, public agencies, private non-profit agencies, institutions of higher education, and organizations including tribal organizations.

Estimated Number of Responses: 300 annually.

Total Estimated Burden Hours: 14,400.

Dated: May 4, 2010.

Kathy Greenlee,

Assistant Secretary for Aging.

[FR Doc. 2010–10910 Filed 5–6–10; 8:45 am]

BILLING CODE 4154–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Substance Abuse and Mental Health Services Administration

Agency Information Collection Activities: Submission for OMB Review; Comment Request

Periodically, the Substance Abuse and Mental Health Services Administration (SAMHSA) will publish a summary of information collection requests under OMB review, in compliance with the Paperwork Reduction Act (44 U.S.C. Chapter 35). To request a copy of these documents, call the SAMHSA Reports Clearance Officer on (240) 276–1243.

Project: Cross-site Evaluation of the Garrett Lee Smith Memorial Suicide Prevention and Early Intervention Programs (OMB No. 0930–0286)—Revision

The Substance Abuse and Mental Health Services Administration's (SAMHSA) Center for Mental Health Services (CMHS) will continue to conduct the cross-site evaluation of the Garrett Lee Smith Memorial Youth Suicide Prevention and Early Intervention State/Tribal Programs and the Garrett Lee Smith Memorial Youth Suicide Prevention Campus Programs. The data collected through the cross-site evaluation addresses four stages of program activity: (1) The context stage includes a review of program plans, such as grantee's target population, target region, service delivery mechanisms, service delivery setting, types of program activities to be funded and evaluation activities; (2) the product stage describes the prevention strategies that are developed and utilized by grantees; (3) the process stage assesses progress on key activities and milestones related to implementation of program plans; and (4) the impact stage assesses the impact of the program on early identification, referral for services and service follow up of youth at risk.

Additionally, to obtain a comprehensive understanding of the integration of community-based behavioral health services with services provided by college or university campuses, SAMHSA will conduct case studies of four exemplary Campus suicide prevention programs. Currently, case studies of two campus grantees are underway. The goal of the Campus Case Studies is to understand how a public health approach is successfully applied as a model for campus suicide prevention efforts, and will explore, in a systematic manner: The suicide prevention related infrastructures and supports (*e.g.,* clinical and non-clinical) that exist on selected GLS-funded campuses; the various student-level factors that are related to suicide prevention efforts (*e.g.,* protective factors, coping strategies, social norms, and facilitators and barriers to student access and receipt of behavioral healthcare); campus interdepartmental collaboration and the relationship between various efforts to promote student mental health and wellness; and the extent to which the campus infrastructures and supports promote and address these factors.

To date, 86 State/Tribal grants and 93 Campus grants have participated in the cross-site evaluation, since FY2007. Currently, 48 State/Tribal grants and 38 Campus grants are participating in the cross-site evaluation. Data will continue to be collected from suicide prevention program staff (*e.g.* project directors, evaluators), key program stakeholders (*e.g.* State/local officials, child-serving agency directors, gatekeepers, mental health providers, and campus administrators), training participants, college students, and campus faculty/staff through FY2012.

Since the State/Tribal grantees differ from the campus grantees in programmatic approaches, specific data collection activities also vary by type of program. The following describes the specific data collection activities and data collection instruments to be used across State/Tribal and Campus grantees for the cross-site evaluation and the specific data collection instruments to be used by selected Campus grantees for the Campus Case Studies. While most of the data collection instruments described below are revised versions of instruments that have previously received OMB approval (OMB No. 0930–0286 with Expiration Date: May 2010) and are currently in use, the Training Utilization and Preservation—Survey (TUP–S) for State/Tribal grantees and the Training Exit Survey for Campus grantees (TES–C) are proposed as new instruments. The addition of these two new data collection activities, the inclusion of the Campus Case studies, and an overall growth in number of grants for both the State/Tribal and Campus programs has increased the burden associated with the cross-site evaluation. A summary table of number of respondents and

respondent burden has also been included.

Data Collection Activities for State/Tribal Grantees

For State/Tribal grantees, the Prevention Strategies Inventory State/Tribal (PSI ST), Training Exit Survey State/Tribal (TES ST), Referral Network Survey (RNS) and Training Utilization and Preservation—Interview (TUP–I) described below are revised versions of instruments that previously received OMB approval (OMB No. 0930–0286 with Expiration Date: May 2010) and are currently in use. The Training Utilization and Preservation—Survey (TUP–S) is proposed as a new data collection instrument.

• *Prevention Strategies Inventory-State/Tribal (PSI ST)—Revised.* The Prevention Strategies Inventory will collect information on the suicide prevention strategies that grantees have developed and utilized. Prevention strategies include outreach and awareness, gatekeeper training, assessment and referral training for mental health professionals and hotline staff, lifeskills development programs, screening programs, hotlines and helplines, means restriction, policies and protocols for intervention and postvention, coalitions and partnerships, and direct services and traditional healing practices. Baseline data will be collected from the State/Tribal grantees at the beginning of their grant cycle. Thereafter, they will complete the PSI ST on a quarterly basis over the duration of their grant period. Baseline data will be collected on information on the types of prevention strategies grantees have developed and utilized, and the follow-up data collection asks the grantees to update the information they have provided on a quarterly basis over the period of the grant. On average, 48 State/Tribal grantees will fill out the PSI ST per year. One respondent from each site will be responsible for completing the survey. The survey will take approximately 45 minutes; however, the number of products, services and activities implemented under each strategy will determine the number of items each respondent will complete. The PSI ST primarily has multiple choice questions with several open-ended questions.

• *Training Exit Survey State-Tribal Version (TES ST)—Revised.* The TES ST will be administered to all participants in suicide prevention training activities immediately following their training experience in order to assess the content of the training, the participants' intended use of the skills and knowledge learned and satisfaction with the training experience. The survey will also contain modules with questions tailored to specific types of training. It is estimated that approximately 94,848 trainees per year will respond to the TES ST. The questions on the TES ST are multiple-choice, Likert-scale, and open-ended. The survey includes about 33 items and will take approximately 10 minutes to complete.

• *Training Exit Survey Cover Page State/Tribal Version (TES CP)—Revision.* State and Tribal grantees are required to report aggregate training participant information for all training conducted as part of their suicide prevention programs. These data are aggregated from existing data sources, some of which are attendance sheets, management information systems, etc. Grantees are responsible for aggregating these data and submitting to the cross-site evaluation team using the TES CP.

• *Training Utilization and Preservation Survey (TUP–S)—New.* The Training Utilization and Preservation Survey (TUP–S) is a quantitative, computer-assisted telephone interview that will be administered to a random sample of trainees two months following the training. The TUP–S will assess trainee knowledge retention and gatekeeper behavior, particularly behavior related to identifying youth at risk. The TUP–S will ask trainees to provide demographic information about individuals they have identified at risk, information about the subsequent referrals or supports provided by the trainee, and any available information about services accessed by the at-risk individual. An average of 2000 participants per year will be sampled. The TUP–S includes 26 items and will take approximately 10 minutes to complete.

• *Training Utilization and Preservation Key Informant Interview (TUP–1)—Revision.* The TUP–I is a qualitative follow-up interview that is targeted towards locally developed and understudied standardized training curricula as well as towards particular understudied gatekeeper trainee populations. The TUP–I will be administered to respondents two months following the training experience to assess whether the suicide prevention knowledge, skills or techniques learned through training were utilized and had an impact on youth. On average, the TUP–I will be administered to 100 respondents per year. The interviews are semistructured and open ended. The TUP includes 22 items and will take approximately 40 minutes to complete.

• *Referral Network Survey (RNS)—Revision.* The Referral Network Survey (RNS) will be administered to representatives of youth-serving organizations or agencies that form referral networks supporting youth identified at risk. The RNS examines how collaboration and integration are used for sharing and transferring knowledge, resources, and technology among State/Tribal Program agencies and organizational stakeholders, how these networks influence referral mechanisms and service availability, policies and protocols regarding follow-up for youths who have attempted suicide and who are at risk for suicide, and access to electronic databases. Most State/Tribal grantees will select a single referral network for this survey, the average size of the network is 11 agencies/organizations and there will be 2 respondents per agency. The RNS will be administered to referral networks on an annual basis over the period of the grant. On average, 1056 respondents per year will complete the RNS. Questions on the RNS are multiple-choice, Likert-scale, and open-ended. The RNS includes 28 items and will take approximately 30 minutes to complete.

• *Early Identification, Referral and Follow up Aggregate Screening Form—* State/Tribal grantees are also required to report aggregate screening information for all youth screened as part of their suicide prevention programs. These data are aggregated from existing data sources. Grantees are responsible for aggregating these data and submitting to the cross-site evaluation team using the Early Identification, Referral and Follow up Aggregate Screening Form.

• *Early Identification, Referral and Follow Up Analyses*—State/Tribal grantees are required to share existing data with the cross-site evaluation team on the number of youth identified at risk as a result of early identification activities, referred for services, and who present for services.

Data Collection Activities for Campuses

For Campus grantees, the Prevention Strategies Inventory-Campus Baseline and Follow Up (PSI C), Suicide Prevention Exposure, Awareness and Knowledge Survey—Student Version (SPEAKS–S), Suicide Prevention Exposure, Awareness and Knowledge Survey—Faculty/Staff Version (SPEAKS–FS) and Campus Infrastructure Interviews (CIFI) are revised versions of instruments that previously received OMB approval (OMB No. 0930–0286 with Expiration Date: May 2010) and are currently in use, and the Training Exit Survey—Campus (TES C) is proposed as a new data collection instrument.

• *Prevention Strategies Inventory-Campus (PSI C)—Revision.* The Prevention Strategies Inventory will collect information on the suicide prevention strategies that grantees have developed and utilized. Prevention strategies include outreach and awareness, gatekeeper training, assessment and referral training for mental health professionals and hotline staff, lifeskills development activities, screening programs, hotlines and helplines, means restriction, policies and protocols for intervention and postvention, and coalitions and partnerships. The Campus grantees will first complete collecting baseline data. Thereafter, they will collect follow-up data on a quarterly basis over the duration of their grant period. Baseline data will be collected on information on the types of prevention strategies grantees have developed and utilized, and the follow-up data collection asks the grantees to update the information they have provided on a quarterly basis over the period of the grant. On average, 38 Campus grantees will fill out the PSI C per year. One respondent from each site will be responsible for completing the survey. The survey will take approximately 45 minutes. However, the number of products, services and activities implemented under each strategy will determine the number of items to complete. The survey primarily has multiple choice questions with several open-ended questions.

• *Training Exit Survey Campus Version (TES C)—New.* The TES C will be administered to all participants in suicide prevention training activities immediately following their training experience in order to assess the content of the training, the participants' intended use of the skills and knowledge learned, and satisfaction with the training experience. The survey will also contain modules with questions tailored to specific types of training. It is estimated that approximately 23,712 trainees per year will respond to the Training Exit Survey. The questions on the TES C are multiple-choice, Likert-scale, and open-ended. The survey includes about 33 items and will take approximately 10 minutes to complete.

• *Training Exit Survey Cover Page Campus Version (TES CP)—Revision.* State and Tribal grantees are required to report aggregate training participant information for all training conducted as part of their suicide prevention programs. These data are aggregated from existing data sources, some of which are attendance sheets, management information systems, etc. Grantees are responsible for aggregating these data and submitting to the cross-site evaluation team using the TES CP.

• *Suicide Prevention Exposure, Awareness and Knowledge Survey—Student Version (SPEAKS–S)—Revision.* This survey will examine: The exposure of campus populations to suicide prevention initiatives; awareness of appropriate crisis interventions, supports, services, and resources for mental health seeking; knowledge of myths and facts related to suicide and suicide prevention; perceived and personal stigma related to depression and mental health seeking; and behaviors related to seeking help and referring for mental health services. This survey will be administered annually over the grant period. It is estimated that 7,600 students per year will respond to the SPEAKS S. The SPEAKS–S is Web-based and includes multiple-choice, Likert-scale and true/false questions. The SPEAKS–Student Version includes 85 items and will take approximately 25 minutes to complete.

• *Suicide Prevention Exposure, Awareness and Knowledge Survey—(SPEAKS FS)—Revision.* The SPEAKS–FS assesses the exposure, awareness and knowledge of suicide prevention activities among faculty/staff on campus as a result of the suicide prevention program. Questions include whether faculty/staff have been exposed to suicide prevention materials, their agreement with myths and facts about suicide, and the availability of resources to provide assistance to those at risk for suicide. This survey will be administered annually over the grant period. It is estimated that 1,900 faculty/staff per year will respond to the SPEAKS FS. The SPEAKS–FS is Web-based and includes multiple-choice, Likert-scale and true/false questions. The survey includes 54 items and will take approximately 15 minutes to complete.

• *Campus Infrastructure Interviews (CIFI)—Revision.* CIFI is designed to gather information around campus infrastructure, program, policy, and planning related to suicide prevention; it involves key informant interviews conducted by the cross-site evaluation team via teleconference for each campus twice during the life of the grant. These semistructured interviews are conducted with up to five site representatives to gather information from multiple and varied perspectives on campus-based infrastructure development around suicide prevention activities. These representatives include: (1) Administrator, (2) Student Leader, (3) Counseling Center Staff, (4) Faculty/Staff-human services department, and (5) Faculty/Staff-non-human service department. Questions on the Campus Infrastructure Interview include whether respondents are aware of suicide prevention activities, what the campus culture is related to suicide prevention, and what specific efforts are in place to prevent suicide among the campus population. Questions will include close-ended background questions, with the remaining questions being open-ended and semi-structured. It is estimated that on average 64 respondents per year will respond to CIFI. The Campus Infrastructure Interviews include 29 items and will take approximately 60 minutes to complete.

Data Collection Activities for Campus Case Studies

For Campus Case Studies, the instruments described below are currently used by 2 Campus grantees. These instruments are proposed for 4 additional Campus grantees. The Campus Case Studies will take place over the period of the grant.

• *Student Focus Group Moderator's Guide.* This component will assess student risk and protective factors related to mental health, help-seeking behaviors, and knowledge of prevention activities on campus and their perceived effectiveness. This will help researchers more fully understand student-level factors in relation to population-level factors addressed by the SPEAKS–S. Questions address stressors that different groups of students face while in college, barriers to seeking help, attitudes and stigma related to seeking help, and the accessibility of the campus counseling center. Six focus groups will be conducted on each campus twice over the data collection period. The following groups of students will potentially be represented in the focus groups, as decided by the campus: (1) First-year students, (2) athletes, (3) international students, (4) Lesbian, Gay, Bisexual, and Transgender (LGBT) students, (5) Greek life students, (6) graduate students, and (7) residential advisors/peer educators. Recruitment will be conducted by campus project staff. Focus groups will include a maximum of 9 students. It is estimated that on average 432 students will participate in focus groups. Groups will last approximately 90 minutes.

• *Faculty/Staff Focus Group Moderator's Guide.* The faculty and staff focus groups will assess the campus' approach to prevention, attitudes and stigma around student mental health and wellness on campus, campus infrastructure supports for students who need mental health help, and the general campus climate around mental

health and wellness. Faculty and staff will also describe their knowledge of prevention activities on campus and their perceived effectiveness of these efforts. Local campus staff will recruit appropriate respondents for the faculty and staff focus groups to include a maximum of 9 respondents per group. Two faculty focus groups and one staff focus group will be conducted on each campus twice over the period of data collection. It is estimated that 216 faculty/staff will participate in focus groups. The groups will last approximately 90 minutes.

• *Case Study Key Informant Interviews (7 versions).* The Case Study Key Informant Interviews (CSIs) include 7 qualitative interview versions: (1) Administrator, (2) Counseling Staff, (3) Coalition Member—Faculty, (4) Prevention Staff, (5) Case Finder, (6) Campus Police, and (7) Student Leader. Local project staff will be responsible for identifying appropriate respondents for each CSI version and scheduling the interview to occur during site visits by the case study team. Fourteen individuals from each of the campus sites will be selected as key informants to participate in the CSIs in each of the two stages of the GLS Campus Case Studies. Questions on the CSIs include whether respondents are aware of suicide prevention activities, what the campus culture is related to suicide prevention, and what specific efforts are in place to prevent suicide among the campus population. Items are formatted as open-ended and semi-structured questions. The CSIs include 16 to 21 items and will take approximately 60 minutes to complete. On the second site visit, the case study team will incorporate preliminary findings from the case studies in the interviews, which may be modified to some extent to collect more comprehensive information and gather feedback from local key informants surrounding the context of the preliminary findings. It is estimated that the CSI will be administered to 112 respondents. The CSIs for the second site visit will last 60 minutes.

In addition to the above described data collection activities, data from existing sources (*i.e.,* management information systems (MIS), administrative records, case files, etc.) will continue to be analyzed across grantee sites to support the impact stage of the cross-site evaluation. For the cross-site evaluation of the Campus programs, existing program data related to the number of students who are at risk for suicide, the number who seek services, and the type of services received are analyzed to determine the impact of Campus program activities on the student and campus populations. Because this information is obtained through existing sources, data collection instruments were not developed as part of the cross-site evaluation and no identifiable respondents exist; therefore no respondent burden has been estimated.

Internet-based technology will continue to be used for collecting data via Web-based surveys, and for data entry and management. The average annual respondent burden is estimated below. The estimate reflects the average annual number of respondents, the average annual number of responses, the time it will take for each response, and the average annual burden. While the different cohorts of grantees finish their grants at different times, we have assumed that new cohorts will replace previous cohorts. Therefore, the number of grantees in each year is assumed to be constant.

TABLE—ESTIMATES OF ANNUALIZED HOUR BURDEN

Measure name	Number of respondents	Number of responses/respondent	Hours/response	Response burden (in hours)
Prevention Strategies Inventory—State Tribal (PSI–ST)	48	4	0.75	144
Training Exit Survey State/Tribal (TES–ST)	94,848	1	0.17	16,125
Training Utilization and Penetration Survey (TUP–S)	2,000	1	0.25	500

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

[Document Identifier CMS–901A and 901D]

Agency Information Collection Activities: Proposed Collection; Comment Request

AGENCY: Centers for Medicare & Medicaid Services, HHS.

In compliance with the requirement of section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, the Centers for Medicare & Medicaid Services (CMS) is publishing the following summary of proposed collections for public comment. Interested persons are invited to send comments regarding this burden estimate or any other aspect of this collection of information, including any of the following subjects: (1) The necessity and utility of the proposed information collection for the proper performance of the agency's functions; (2) the accuracy of the estimated burden; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

1. *Type of Information Collection Request:* Extension of a currently approved collection; *Title of Information Collection:* Federal Qualification Application (42 CFR 417.140) and Medicare Health Care Prepayment Plan Application (42 CFR 417.800); *Use:* The application is the collection form used to obtain information to determine if an applicant meets the regulatory requirements to enter into a contract with CMS as a Federal Qualified health maintenance organization (HMO) or to provide health benefits to Medicare beneficiaries as a Medicare Health Care Prepayment Plan contractor. *Form Number:* CMS–901A & 901D (OMB#: 0938–0470); *Frequency:* Once; *Affected Public:* Business or other for-profits and Not-for-profit institutions; *Number of Respondents:* 20; *Total Annual Responses:* 20; *Total Annual Hours:* 800 (For policy questions regarding this collection contact Heidi Arndt at 410–786–1607. For all other issues call 410–786–1326.)

To obtain copies of the supporting statement and any related forms for the proposed paperwork collections referenced above, access CMS' Web site at *http://www.cms.hhs.gov/PaperworkReductionActof1995,* or E-mail your request, including your address, phone number, OMB number, and CMS document identifier, to *Paperwork@cms.hhs.gov,* or call the Reports Clearance Office on (410) 786–1326.

In commenting on the proposed information collections please reference the document identifier or OMB control number. To be assured consideration, comments and recommendations must be submitted in one of the following ways by *July 6, 2010:*

1. *Electronically.* You may submit your comments electronically to *http://www.regulations.gov*. Follow the instructions for "Comment or Submission" or "More Search Options" to find the information collection document(s) accepting comments.

2. *By regular mail.* You may mail written comments to the following address: CMS, Office of Strategic Operations and Regulatory Affairs, Division of Regulations Development, Attention: Document Identifier/OMB Control Number, Room C4–26–05, 7500 Security Boulevard, Baltimore, Maryland 21244–1850.

Michelle Shortt,

Director, Regulations Development Group, Office of Strategic Operations and Regulatory Affairs.

BILLING CODE 4120–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

[Document Identifier: CMS–10293]

Centers for Medicare & Medicaid Services; Agency Information Collection Activities: Submission for OMB Review; Comment Request

AGENCY: Centers for Medicare & Medicaid Services.

In compliance with the requirement of section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, the Centers for Medicare & Medicaid Services (CMS), Department of Health and Human Services, is publishing the following summary of proposed collections for public comment. Interested persons are invited to send comments regarding this burden estimate or any other aspect of this collection of information, including any of the following subjects: (1) The necessity and utility of the proposed information collection for the proper performance of the Agency's function; (2) the accuracy of the estimated burden; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

1. *Type of Information Collection Request:* New Collection; *Title of Information Collection:* Tribal Consultation State Plan Amendment Template; *Use:* Effective July 1, 2009, section 5006 of the American Recovery and Reinvestment Act of 2009 (Recovery Act) amended section 1902(a)(73) of the Act to require that certain States utilize a process for the State to seek advice on a regular, ongoing basis from designees of the Indian Health Service (IHS) and Urban Indian Organizations concerning Medicaid and Children's Health Insurance Program (CHIP) matters having a direct effect on them. The consultation process is required for the 37 States in which 1 or more Indian Health Programs or Urban Indian Organizations furnish health care services. The State Medicaid agency for each of these States will complete the template page and submit it for approval as part of a State plan amendment, to document how it meets the requirements for tribal consultation. *Form Number:* CMS–10293 (OMB#: 0938–NEW); *Frequency:* Reporting—Once and occasionally; *Affected Public:* State, Local, or Tribal Governments; *Number of Respondents:* 37; *Total Annual Responses:* 37; *Total Annual Hours:* 37. (For policy questions regarding this collection contact Lane Terwilliger at 410–786–2059. For all other issues call 410–786–1326.)

To obtain copies of the supporting statement and any related forms for the proposed paperwork collections referenced above, access CMS Web Site address at *http://www.cms.hhs.gov/PaperworkReductionActof1995,* or E-mail your request, including your address, phone number, OMB number, and CMS document identifier, to

Paperwork@cms.hhs.gov, or call the Reports Clearance Office on (410) 786–1326.

To be assured consideration, comments and recommendations for the proposed information collections must be received by the OMB desk officer at the address below, no later than 5 p.m. on *June 7, 2010*.

OMB, Office of Information and Regulatory Affairs, Attention: CMS Desk Officer, Fax Number: (202) 395–6974, E-mail: *OIRA_submission@omb.eop.gov*.

Michelle Shortt,

Director, Regulations Development Group, Office of Strategic Operations and Regulatory Affairs.

Food and Drug Administration

[Docket No. FDA–2010–N–0074]

Agency Information Collection Activities; Submission for Office of Management and Budget Review; Comment Request; Registration and Product Listing for Owners and Operators of Domestic Tobacco Product Establishments and Listing of Ingredients in Tobacco Products

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing that a proposed collection of information has been submitted to the Office of Management and Budget (OMB) for review and clearance under the Paperwork Reduction Act of 1995 (the PRA).

DATES: Fax written comments on the collection of information by June 7, 2010.

ADDRESSES: To ensure that comments on the information collection are received, OMB recommends that written comments be faxed to the Office of Information and Regulatory Affairs, OMB, Attn: FDA Desk Officer, FAX: 202–395–7285, or e-mailed to *oira_submission@omb.eop.gov*. All comments should be identified with the OMB control number 0910–0650. Also include the FDA docket number found in brackets in the heading of this document.

FOR FURTHER INFORMATION CONTACT: Jonna Capezzuto, Office of Information Management, Food and Drug Administration, 1350 Piccard Dr., PI50–400B, Rockville, MD 20850, 301–796–3794, *Jonnalynn.Capezzuto@fda.hhs.gov*.

SUPPLEMENTARY INFORMATION: In compliance with 44 U.S.C. 3507, FDA has submitted the following proposed collection of information to OMB for review and clearance.

Registration and Product Listing for Owners and Operators of Domestic Tobacco Product Establishments and Listing of Ingredients in Tobacco Products—(OMB Control Number 0910–0650)—Extension

On June 22, 2009, the President signed The Family Smoking Prevention and Tobacco Control Act (the Tobacco Control Act) (Public Law 111–31) into law. The Tobacco Control Act amended the Federal Food, Drug, and Cosmetic Act (the act) (21 U.S.C. 301 *et seq.*) by, among other things, adding a new chapter granting FDA important new authority to regulate the manufacture, marketing, and distribution of tobacco products to protect the public health generally and to reduce tobacco use by minors. Section 905(b) of the act (21 U.S.C. 395(b)), as amended by the Tobacco Control Act, requires that "every person who owns or operates any establishment in any State engaged in the manufacture, preparation, compounding, or processing of a tobacco product or tobacco products * * *" register with FDA the name, places of business, and all establishments owned or operated by that person. Every person must register by December 31 of each year. Section 905(i)(1) of the act, as amended by the Tobacco Control Act, requires that all registrants "shall, at the time of registration under any such subsection, file with [FDA] a list of all tobacco products which are being manufactured, prepared, compounded, or processed by that person for commercial distribution," along with certain accompanying consumer information, such as all labeling and a representative sampling of advertisements. Section 904(a)(1) of the act, as amended by the Tobacco Control Act, requires each tobacco product manufacturer or importer, or agent thereof, to submit "a listing of all ingredients, including tobacco, substances, compounds, and additives that are * * * added by the manufacturer to the tobacco, paper, filter, or other part of each tobacco product by brand and by quantity in each brand and subbrand." Since the Tobacco Control Act was enacted on June 22, 2009, the information required under section 904(a)(1) of the act must be submitted to FDA by December 22, 2009, and include the ingredients added as of the date of submission. Section 904(c) of the act also requires submission of information whenever additives, or the quantities of additives, are changed.

FDA issued guidance documents on both (1) Registration and Product Listing for Owners and Operators of Domestic Tobacco Product Establishments (November 12, 2009, 74 FR 58298) and (2) Listing of Ingredients in Tobacco Products (December 1, 2009, 74 FR 62795) to assist persons making such submissions to FDA under the Tobacco Control Act. While electronic submission of registration and product listing information and ingredient listing information are not required, FDA is strongly encouraging electronic submission to facilitate efficiency and timeliness of data management and collection. To that end, FDA designed the eSubmitter application to streamline the data entry process for registration and product listing and for ingredient listing. This tool allows for importation of large quantities of structured data, attachments of files (e.g., in portable document format (PDFs) and certain media files), and automatic acknowledgement of FDA's receipt of submissions. FDA also developed paper forms (FDA Form 3742—Registration and Listing for Owners and Operators of Domestic Tobacco Product Establishments and FDA Form 3743—Listing of Ingredients in Tobacco Products) as an alternative submission tool. Both the eSubmitter application and the paper forms can be accessed at *http://www.fda.gov/tobacco*.

In the **Federal Register** of September 1, 2009 (74 FR 45219), FDA published a notice announcing that a proposed collection of information had been submitted to OMB for emergency processing under the PRA. In the **Federal Register** of September 15, 2009 (74 FR 47257), FDA published a notice correcting the length of the comment period, keeping it open until October 1, 2009. In the **Federal Register** of October 13, 2009 (74 FR 52495), FDA published a notice reopening the comment period until October 26, 2009. Based on comments indicating that the burden estimates were too low, FDA has adjusted its original burden estimates. FDA has adjusted its burden estimate for registration and product listing for owners and operators of domestic establishments under section 905 of the act from 0.75 hours per response to 3.75 hours per response. FDA has adjusted its burden estimate for listing of ingredients under section 904 of the act from 0.75 hours per response to 3.0 hours per response. FDA also decreased

the number of respondents for listing of ingredients under section 904 of the act from 100,000 to 11,000 in response to comments that this estimate was too high. FDA also added the activity of applying for a Dun and Bradstreet D-U-N-S number to the burden of this information collection for those who chose to use eSubmitter.

In the **Federal Register** of February 18, 2010 (75 FR 7269), FDA published a 60-day notice requesting public comment on the proposed collection of information. One comment was received but was outside the scope of the PRA requirements.

FDA estimates the burden of this collection of information as follows:

TABLE 1.—ESTIMATED ANNUAL REPORTING BURDEN

Activity	Number of Respondents	Annual Frequency per Response	Total Annual Respondents	Hours per Response	Total Hours
Registration and Product Listing for Owners and Operators of Domestic Establishments	100,000	1	100,000	3.75	375,000
Listing of Ingredients	11,000	1	11,000	3.0	33,000
Obtaining a Dun and Bradstreet D-U-N-S Number	1,550	1	1,550	0.5	775
Total	112,550		112,550		408,775

Dated: May 4, 2010.

Leslie Kux,

Acting Assistant Commissioner for Policy.

[Docket No. FDA–2009–N–0487]

Agency Information Collection Activities; Announcement of Office of Management and Budget Approval; Guidance on Informed Consent for In Vitro Diagnostic Device Studies Using Leftover Human Specimens That Are Not Individually Identifiable

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing that a collection of information entitled "Guidance on Informed Consent For In Vitro Diagnostic Device Studies Using Leftover Human Specimens That Are Not Individually Identifiable" has been approved by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995.

FOR FURTHER INFORMATION CONTACT: Daniel Gittleson, Office of Information Management, Food and Drug Administration, 1350 Piccard Dr., PI50–400B, Rockville, MD 20850, 301–796–5156, email: *Daniel.Gittleson@fda.hhs.gov*.

SUPPLEMENTARY INFORMATION: In the **Federal Register** of January 19, 2010 (75 FR 2868), the agency announced that the proposed information collection had been submitted to OMB for review and clearance under 44 U.S.C. 3507. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. OMB has now approved the information collection and has assigned OMB control number 0910–0582. The approval expires on February 28, 2013. A copy of the supporting statement for this information collection is available on the Internet at *http://www.reginfo.gov/public/do/PRAMain*.

Dated: May 4, 2010.

BILLING CODE 4160–01–S

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Submission for OMB Review; Comment Request; REDS–II—Does Pre-Donation Behavioral Deferral Increase the Safety of the Blood Supply?

SUMMARY: Under the provisions of Section 3507(a)(1)(D) of the Paperwork Reduction Act of 1995, the National Heart, Lung and Blood Institute (NHLBI), the National Institutes of Health has submitted to the Office of Management and Budget (OMB) a request for review and approval of the information collection listed below. This proposed information collection was previously published in the **Federal Register** on February 24, 2010 in Volume 75, No. 36, pages 8367–8368 and allowed 60-days for public comment. (No public comments were received.) The purpose of this notice is to allow an additional 30 days for public comment. The National Institutes of Health may not conduct or sponsor, and the respondent is not required to respond to, an information collection that has been extended, revised, or implemented on or after October 1, 1995, unless it displays a currently valid OMB control number.

Proposed Collection: Title: REDS–II Does Pre-Donation Behavioral Deferral Increase the Safety of the Blood Supply?

Type of Information Collection Request: New. *Need and Use of Information Collection:* While it is well-accepted that deferrals, as part of the "layers of safety" concept, increase the safety of the blood supply, studies with sufficiently large sample size to quantify HIV infection and other infectious marker rates in deferred donors are lacking. Evidence in support of increased safety is frequently inferred from studies conducted in other health care settings. For example, a small hospital-based case control study conducted in Brazil examined the association between infectious markers and body tattoos. Even though tattoos are not used as a criteria to determine blood donor eligibility in Brazil, having a tattoo was associated with HCV and also with having at least one positive infectious marker.(1) Significant associations were not independently observed for HIV, HBV, syphilis or Chagas. The authors reported an overall sensitivity of 11% and specificity of

97% for the presence of a tattoo as indicator of having HIV, HCV, HBV, or syphilis infection. The researchers then estimated the impact on blood donor selection and disease marker testing using the results from their hospital-based case control study. However, the assumptions such as disease marker prevalence of as much as 15% in donors who are deferred for tattoos and a prevalence of 4% of the potential donor base having a tattoo (2) do not represent current temporary deferrals in Brazil and do not address the most common behavior-related deferrals. A more detailed and targeted assessment of the value of relevant deferrals could be used to help inform blood donation policies in Brazil.

In Brazilian blood collection centers, donor deferral is initiated either by the blood center staff, based on information disclosed by prospective donors, or by the donor through self-deferral. Either type of deferral occurs because of the belief that a donor's behavior, exposures, or history represents an increased risk to the safety of the blood supply.

Although the general eligibility criteria are mandated by the Brazilian Ministry of Health, the specific criteria for screening potential donors and the procedures for implementing them may vary across the regional blood collection centers. This study will focus on sexual behavior deferrals and their impact on blood safety. The two main study aims are: (1) To assess infectious disease marker prevalence in donors who are deferred for higher risk sexual and non-injection drug use behavior; and (2) To determine if the different deferral classification procedures used by different blood centers in Brazil lead to a measurable difference in disease marker prevalence in deferred donors. To do this, deferred donors who agree to participate in this study will be asked to complete an audio computer assisted self interview (ACASI) questionnaire that measures two content areas (1) motivations for attempting to donate, (2) additional information on the deferral and other potentially undisclosed deferrable behaviors. A blood sample will be collected from the deferred donors and tested for the panel of infections currently screened for in Brazil (HIV, Hepatitis C, Hepatitis B, Human T-lymphotropic virus, syphilis, and Trypanosoma cruzi) using the same high-throughput laboratory reagents and procedures that are used to screen donations. These deferred donor marker rates will be compared to the marker rates among accepted donors with the same demographic characteristics. Marker rates in deferred donors will also be compared between the blood centers.

Frequency of Response: Once. *Affected Public:* Individuals. *Type of Respondents:* Adult Blood Donors. The annual reporting burden is as follows: *Estimated Number of Respondents:* 4,860; *Estimated Number of Responses per Respondent:* 1; *Average Burden of Hours per Response:* 0.33 (including administration of the informed consent form and questionnaire completion instructions); and *Estimated Total Annual Burden Hours Requested:* 1,604. The annualized cost to respondents is estimated at: $10,426 (based on $6.50 per hour). There are no Capital Costs to report. There are no Operating or Maintenance Costs to report.

Estimated number of respondents	Estimated number of responses per respondent	Average burden hours per response	Estimated total annual burden hours requested
4,860	1	0.33	1,604

Request for Comments: Written comments and/or suggestions from the public and affected agencies are invited on one or more of the following points: (1) Whether the proposed collection of information is necessary for the proper performance of the function of the agency, including whether the information will have practical utility; (2) The accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) Ways to enhance the quality, utility, and clarity of the information to be collected; and (4) Ways to minimize the burden of the collection of information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Direct Comments to OMB: Written comments and/or suggestions regarding the item(s) contained in this notice, especially regarding the estimated public burden and associated response time, should be directed to the: Office of Management and Budget, Office of Regulatory Affairs, *OIRA_submission@omb.eop.gov* or by fax to 202–395–6974, Attention: Desk Officer for NIH. To request more information on the proposed project or to obtain a copy of the data collection plans and instruments, contact: Dr. George Nemo, Project Officer, NHLBI, Two Rockledge Center, Suite 10042, 6701 Rockledge Drive, Bethesda, MD 20892–7950, or call 301–435–0075, or E-mail your request to *nemog@nih.gov*.

Comments Due Date: Comments regarding this information collection are best assured of having their full effect if received within 30-days of the date of this publication.

Dated: April 29, 2010.

George Nemo,

Project Officer, NHLBI, National Institutes of Health.

BILLING CODE 4140–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Proposed Collection; Comment Request; A Generic Submission for Formative Research, Pretesting, and Stakeholder Measures at NCI

SUMMARY: Under the provisions of Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, for opportunity for public comment on proposed data collection projects, the National Cancer Institute (NCI), the National Institutes of Health (NIH) will publish periodic summaries of proposed projects to be submitted to the Office of Management and Budget (OMB) for review and approval.

Proposed Collection: Title: A Generic Submission for Formative Research, Pretesting, and Stakeholder Measures at NCI. *Type of Information Collection Request:* New. *Need and Use of Information Collection:* In order to carry out NCI's legislative mandate, the Office of Advocacy Relations (OAR) disseminates cancer-related information to a variety of stakeholders, seeks their

input and feedback, and facilitates collaboration between the Institute and these external partners to advance NCI's authorized programs. It is beneficial for NCI, through the OAR, to pretest strategies, concepts, activities and materials while they are under development. This pre-testing, or formative evaluation, helps ensure that the products and services developed by NCI have the greatest capacity of being received, understood, and accepted by their target audiences.

Additionally, since OAR is responsible for matching advocates to NCI programs and initiatives across the cancer continuum, it is necessary to measure the satisfaction of both internal and external stakeholders with this collaboration. This customer satisfaction research helps ensure the relevance, utility, and appropriateness of the many initiatives and products that OAR and NCI produce. The OAR will use a variety of qualitative (focus groups, interviews) and quantitative (paper, phone, in-person, and Web surveys) methodologies to conduct this research, allowing NCI to: (1) Understand characteristics (attitudes, beliefs, and behaviors) of the intended target audience and use this information in the development of effective strategies, concepts and activities; (2) use a feedback loop to help refine, revise, and enhance OAR's efforts—ensuring that they have the greatest relevance, utility, appropriateness, and impact for/to target audiences; and (3) expend limited program resource dollars wisely and effectively. *Frequency of Response:* On occasion. *Affected Public:* Individuals or households; Businesses or other for profit; Not-for-profit institutions and organizations; Federal Government; State, Local, or Tribal Government. *Type of Respondents:* Adult cancer research advocates; members of the public; health care professionals; organizational representatives. The table below outlines the estimated burden hours required for a three-year approval of this generic submission. There are no Capital Costs, Operating Costs, and/or Maintenance Costs to report.

A.12–1—ESTIMATE OF ANNUAL BURDEN HOURS

Survey/instrument	Number of respondents	Frequency of response	Average hours per response	Annual burden hours
Self-Administered Post-Activity Questionnaires	1,200	1	20/60 (.33)	400
Other Self-Administered Questionnaires	600	1	20/60 (.33)	200
Individual In-Depth Interviews	75	1	1.0	75
Focus Group Interviews	100	1	1.5	150
Totals	1,975			825

Request for Comments: Written comments and/or suggestions from the public and affected agencies are invited on one or more of the following points: (1) Whether the proposed collection of information is necessary for the proper performance of the function of the agency, including whether the information will have practical utility; (2) The accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) Ways to enhance the quality, utility, and clarity of the information to be collected; and (4) Ways to minimize the burden of the collection of information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

FOR FURTHER INFORMATION CONTACT: To request more information on the proposed project or to obtain a copy of the data collection plans, contact Elizabeth Neilson, Advocacy Relations Manager, Office of Advocacy Relations (OAR), NCI, NIH, 31 Center Drive, Bldg. 31, Room 10A28, MSC 2580, Bethesda, MD 20892, call non-toll-free number 301–451–3321 or e-mail your request, including your address to: *neilsone@mail.nih.gov.*

Comments Due Date: Comments regarding this information collection are best assured of having their full effect if received within 60 days of the date of this publication.

Dated: April 29, 2010.

Vivian Horovitch-Kelley,

NCI Project Clearance Liaison, National Institutes of Health.

BILLING CODE 4140–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Office of Refugee Resettlement

Administration for Children and Families; Single-Source Program Expansion Supplement Grant

AGENCY: Office of Refugee Resettlement, ACF, HHS.

ACTION: Notice to award a single-source program expansion supplement grant.

CFDA Number: 93.576.

Legislative Authority: This program is authorized by section 412 (c)(1)(A) of the Immigration and Nationality Act (INA) [8 U.S.C. 1522 (c)(1)(A)], as amended, which authorizes the Director "to make grants to, and enter into contracts with, public or private nonprofit agencies for projects specifically designed—(i) To assist refugees in obtaining the skills which are necessary for economic self-sufficiency, including projects for job training, employment services, day care, professional refresher training, and other recertification services; (ii) to provide training in English where necessary (regardless of whether the refugees are employed or receiving cash or other assistance); and (iii) to provide where specific needs have been shown and recognized by the Director, health (including mental health) services, social services, educational and other services."

Amount of Award: $150,000.

Project Period: December 1, 2009–September 29, 2010.

SUMMARY: The Office of Refugee Resettlement (ORR) announces the award of a $150,000 single-source program expansion supplement to expand the provision of technical assistance to the Ethiopian Community Development Council, Inc. (ECDC), located in Arlington, VA.

Current economic conditions have confronted community-based organizations (CBO) with a dire need for assistance yet limited resources to respond effectively. This supplemental award will support greater outreach and enhanced collaboration to meet these challenges.

Provision of technical assistance is essential to support the long-term

sustainability of programs and services that help newly-arrived refugees secure employment, overcome language and cultural barriers, become economically self-sufficient, and integrate into their new communities.

Through this provision of technical assistance, ECDC will ensure a more effective service component by focusing on reducing social service gaps, increasing refugee access to mainstream resources and services, and helping CBOs build capacity and sustainability.

Contact for Further Information: Kenneth Tota, Deputy Director, Office of Refugee Resettlement, 901 D Street, SW., Washington, DC 20047. Telephone: 202–401–4858; e-mail: *ktota@acf.hhs.gov.*

Dated: April 28, 2010.

Eskinder Negash,

Director, Office of Refugee Resettlement.

BILLING CODE P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Children and Families

Office of Refugee Resettlement; Urgent Single Source Grant to Survivors of Torture International (SOTI)

AGENCY: Office of Refugee Resettlement, ACF, HHS.

ACTION: Notice to Award an Urgent Single Source Grant to Survivors of Torture International (SOTI).

CFDA Number: 93.604.

Legislative Authority: "Torture Victims Relief Act (TVRA) of 1998," Public Law 105–320 (22 U.S.C. 2152 note), reauthorized by Public Law 109–165 in January 2006. Section 5(a) provides for "Assistance for Treatment of Torture Victims.—The Secretary of Health and Human Services may provide grants to programs in the United States to cover the cost of the following services: (1) Services for the rehabilitation of victims of torture, including treatment of the physical and psychological effects of torture. (2) Social and legal services for victims of torture. (3) Research and training for health care providers outside of treatment centers, or programs for the purpose of enabling such providers to provide the services described in paragraph (1)."

Amount of Award: $271,000.

Project Period: March 1, 2010 through February 28, 2011.

Summary: Notice is hereby given that an urgent single-source award will be made to Survivors of Torture International (SOTI), San Diego, CA, to provide comprehensive rehabilitative services to incoming Iraqi and other survivors of torture, who are in need of specialized services, to regain their health and independence and rebuild productive lives. In addition to providing direct services, SOTI will train area providers to effectively serve this population and leverage resources within the community. SOTI will also focus on building and sustaining collaboration among other providers to serve this population.

In Fiscal Year (FY) 2010, due to an increase in the funding appropriation under the TVRA, an additional amount of $271,000 is available for direct services through the Office of Refugee Resettlement (ORR) Services for Survivors of Torture Program. In FY 2009, a total of 3,667 Iraqi refugees and holders of Special Immigrant Visas were resettled in the San Diego metropolitan area. Some of these individuals have suffered torture prior to arrival in the United States and are in need of specialized services. San Diego, CA, is the area of the country most heavily impacted in terms of Iraqi refugee arrivals. SOTI has a long history of serving torture survivors in San Diego county, has developed a large network of pro bono providers, is well known in the community, and possesses the clinical and programmatic expertise to serve the survivors.

FOR FURTHER INFORMATION CONTACT: Ronald Munia, Director, Division of Community Resettlement, Office of Refugee Resettlement, 901 D Street, SW., Washington, DC 20047. Telephone: 202–401–4559. E-mail: *Ronald.Munia@acf.hhs.gov.*

Dated: April 28, 2010.

Eskinder Negash,

Director, Office of Refugee Resettlement.

Food and Drug Administration

[Docket No. FDA–2010–D–0189]

Guidance for Industry and Food and Drug Administration Staff; Enforcement Policy Concerning Certain Regulations Restricting the Sale and Distribution of Cigarettes and Smokeless Tobacco; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing the availability of the guidance entitled "Enforcement Policy Concerning Certain Regulations Restricting the Sale and Distribution of Cigarettes and Smokeless Tobacco." This guidance document discusses FDA's intended enforcement policies with respect to two provisions of the final regulations restricting the sale and distribution of cigarettes and smokeless tobacco to protect children and adolescents. One provision restricts the use of a trade or brand name of a nontobacco product as the trade or brand name for a cigarette or smokeless tobacco product. The second provision requires that labeling or print advertisements appear in a black-and-white text only format, except in certain "adult only" locations or in publications that do not have significant readership by children and adolescents under the age of 18. This guidance document will be implemented immediately, but it remains subject to comment in accordance with the agency's good guidance practices (GGPs).

DATES: Submit electronic or written comments on this guidance at any time. General comments on agency guidance documents are welcome at any time.

ADDRESSES: Submit written requests for single copies of the guidance document entitled "Enforcement Policy Concerning Certain Regulations Restricting the Sale and Distribution of Cigarettes and Smokeless Tobacco" to the Center for Tobacco Products, Food and Drug Administration, 9200 Corporate Blvd., Rockville, MD 20850–3229. Send one self-addressed adhesive label to assist that office in processing your request or include a fax number to which the guidance document may be sent. See the **SUPPLEMENTARY INFORMATION** section for information on electronic access to the guidance.

Submit electronic comments to *http://www.regulations.gov.* Submit written comments concerning this guidance to the Division of Dockets Management (HFA–305), Food and Drug Administration, 5630 Fishers Lane, rm. 1061, Rockville, MD 20852. Identify comments with the docket number found in brackets in the heading of this document.

FOR FURTHER INFORMATION CONTACT: Annette Marthaler, Center for Tobacco Products, Food and Drug Administration, 9200 Corporate Blvd., Rockville, MD 20850, 1–877–287–1373, *annette.marthaler@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

In the **Federal Register** of March 19, 2010 (75 FR 13225), FDA published final regulations restricting the sale and distribution of cigarettes and smokeless tobacco to protect children and adolescents. This guidance document discusses FDA's intended enforcement policies with respect to two provisions of the final regulations restricting the sale and distribution of cigarettes and smokeless tobacco to protect children and adolescents.

One provision, § 1140.16(a) (21 CFR 1140.16(a)), specifies that manufacturers may not use a trade or brand name of a nontobacco product as the trade or brand name for a cigarette or smokeless tobacco product unless the trade or brand name was on both the tobacco product and a nontobacco product sold in the United States on January 1, 1995. FDA is aware of concerns regarding this provision and is considering what changes, if any, would be appropriate to address those concerns.[1] While FDA has this issue under consideration, it intends to exercise its enforcement discretion concerning § 1140.16(a) (21 CFR 1140.16(a)) not to commence enforcement actions under this provision for the duration of its consideration where:

(1) The trade or brand name of the cigarettes or smokeless tobacco product was registered, or the product was marketed, in the United States on or before June 22, 2009; or

(2) The first marketing or registration in the United States of the tobacco product occurs before the first marketing or registration in the United States of the nontobacco product bearing the same name; provided, however, that the tobacco and nontobacco product are not owned, manufactured, or distributed by the same, related, or affiliated entities (including as a licensee).

The second provision is § 1140.32(a) (21 CFR 1140.32(a)). Under this section of the final rule, manufacturers, distributors, and retailers must use only black text on a white background for labeling or advertising (with certain exceptions). The United States District Court for the Western District of Kentucky recently issued an order permanently enjoining FDA from enforcing § 1140.32(a) (formerly 21 CFR 897.32(a) of the 1996 final rule that published in the **Federal Register** of August 28, 1996 (61 FR 44396)) (*Commonwealth Brands, Inc.* v. *United States*, No. 1:09-CV-117-M (W.D. Ky. Jan. 4, 2010)). As required by section 102 of the Family Smoking Prevention and Tobacco Control Act (Tobacco Control Act), the effective date for § 1140.32(a) is June 22, 2010. At this time, however, in light of the court's order in *Commonwealth Brands*, FDA intends to exercise its enforcement discretion concerning § 1140.32(a) not to commence enforcement actions under this provision during the pendency of the litigation irrespective of whether the entity is a party to the pending lawsuit or located in the Western District of Kentucky.

FDA intends that the exercise of enforcement discretion expressed in this guidance document for §§ 1140.16(a) and 1140.32(a) begin upon the effective date of the final rule (June 22, 2010). In accordance with FDA's GGP regulation (§ 10.115 (21 CFR 10.115)), you may comment on this guidance at any time. The agency will consider your comments and determine whether to revise the guidance at a later date.

[1] Under section 102(a)(3)-(4) of the Family Smoking Prevention and Tobacco Control Act (21 U.S.C. 387a-1(a)(3)-(4)), FDA may amend the final rule after issuing a proposed rule for notice and comment.

II. Significance of Guidance

FDA is issuing this guidance document as a level 1 guidance consistent with FDA's GGP regulation (§ 10.115). This guidance document is being implemented immediately without prior public comment under § 10.115(g)(2) because the agency has determined that prior public participation is not feasible or appropriate. This document provides guidance on regulations that are required by statute (section 102 of the Tobacco Control Act); moreover, the statute directs that the regulations take effect on June 22, 2010 (section 102(a)(2)(F) of the Tobacco Control Act). It is important that FDA explain its enforcement policy for these two provisions before that date.

III. Comments

Interested persons may submit to the Division of Dockets Management (see **ADDRESSES**) electronic or written comments regarding this document. Submit a single copy of electronic comments or two paper copies of any mailed comments, except that individuals may submit one paper copy. Comments are to be identified with the docket number found in brackets in the heading of this document. Received comments may be seen in the Division of Dockets Management between 9 a.m. and 4 p.m., Monday through Friday.

IV. Electronic Access

An electronic version of the guidance document is available on the Internet at *http://www.regulations.gov* and *http://www.fda.gov/TobaccoProducts/GuidanceComplianceRegulatoryInformation/default.htm*.

Dated: May 4, 2010.

Leslie Kux,

Acting Assistant Commissioner for Policy.

Substance Abuse and Mental Health Services Administration

Advisory Committee for Women's Services; Notice of Meeting

Pursuant to Public Law 92–463, notice is hereby given of a meeting of the Substance Abuse and Mental Health Services Administration's (SAMHSA) Advisory Committee for Women's Services (ACWS) on May 26–27 at SAMHSA.

The meeting is open to the public. It will include reports from the SAMHSA Administrator and the ACWS Chair, Updates from ACWS members, and a discussion of SAMHSA's strategic initiatives.

Attendance by the public will be limited to space available. Public comments are welcome. The meeting can also be accessed via Webstream. To obtain the access information, to register, to submit written or brief oral comments, or to request special accommodations for persons with disabilities, please register at the SAMHSA Committee's Web site at *https://nac.samhsa.gov/Registration/meetingsRegistration.aspx* or communicate with the Designated Federal Officer for the ACWS, Ms. Nevine Gahed (*see* contact information below). Substantive meeting information and a roster of Committee members may be obtained either by accessing the SAMHSA Committee's Web site at *https://nac.samhsa.gov/WomenServices/index.aspx*, or by contacting Ms. Gahed. The transcript for the meeting will be available on the SAMHSA Committee's Web site within three weeks after the meeting.

Committee Name: SAMHSA's Advisory Committee for Women's Services.

Date/Time/Type: Wednesday, May 26, 2010 from 9 a.m. to 5 p.m. EST: OPEN. Thursday, May 27, 2010 from 9 a.m. to 12 noon EST: OPEN.

Place: 1 Choke Cherry Road, Seneca Conference Room, Rockville, Maryland 20857.

Contact: Nevine Gahed, Designated Federal Officer, SAMHSA Advisory Committee for Women's Services, 1 Choke Cherry Road,

Room 8–1112, Rockville, Maryland 20857, *Telephone:* (240) 276–2331; *Fax:* (240) 276–2220 and *E-mail: nevine.gahed@samhsa.hhs.gov*.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Center for Scientific Review; Notice of Closed Meetings

Pursuant to section 10(d) of the Federal Advisory Committee Act, as amended (5 U.S.C. App.), notice is hereby given of the following meetings.

The meetings will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: Center for Scientific Review Special Emphasis Panel; PAR–10–082: Shared Instrumentation: Miscellaneous.

Date: May 26, 2010.

Time: 11 a.m. to 5 p.m.

Agenda: To review and evaluate grant applications

Place: Tata Communications Us, Inc., 2355 Dulles Corner Boulevard, Suite 700, Herndon, VA 20171.

Contact Person: Sergei Ruvinov, PhD, Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 4158, MSC 7806, Bethesda, MD 20892, 301–435–1180, *ruvinser@csr.nih.gov.*

Name of Committee: Molecular, Cellular and Developmental Neuroscience Integrated Review Group; Cellular and Molecular Biology of Neurodegeneration Study Section.

Date: May 27–28, 2010.

Time: 8:30 a.m. to 5 p.m.

Agenda: To review and evaluate grant applications

Place: Amalfi Hotel, 20 West Kinzie Street, Chicago, IL 60654.

Contact Person: Laurent Taupenot, PhD, Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 4183, MSC 7850, Bethesda, MD 20892, 301–435–1203, *taupenol@csr.nih.gov.*

Name of Committee: Center for Scientific Review Special Emphasis Panel; Member Conflicts: Kidney and Urological Sciences.

Date: June 1, 2010.

Time: 7 a.m. to 7 p.m.

Agenda: To review and evaluate grant applications.

Place: National Institutes of Health, 6701 Rockledge Drive, Bethesda, MD 20892 (Virtual Meeting).

Contact Person: Najma Begum, PhD, Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 2186, MSC 7818, Bethesda, MD 20892, 301–435–1243, *begumn@csr.nih.gov.*

Name of Committee: Cardiovascular and Respiratory Sciences Integrated Review Group; Lung Injury, Repair, and Remodeling Study Section.

Date: June 1–2, 2010.

Time: 8 a.m. to 5 p.m.

Agenda: To review and evaluate grant applications.

Place: InterContinental Los Angeles Century City, 2151 Avenue of the Stars, Los Angeles, CA 90067.

Contact Person: Ghenima Dirami, PhD, Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 4122, MSC 7814, Bethesda, MD 20892, 301–594–1321, *diramig@csr.nih.gov.*

Name of Committee: Center for Scientific Review Special Emphasis Panel; Member Conflict: Integrative and Functional Neuroscience.

Date: June 1–2, 2010.

Time: 8 a.m. to 5 p.m.

Agenda: To review and evaluate grant applications.

Place: National Institutes of Health, 6701 Rockledge Drive, Bethesda, MD 20892 (Virtual Meeting).

Contact Person: Brian Hoshaw, PhD, Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 5181, MSC 7844, Bethesda, MD 20892, 301–435–1033, *hoshawb@csr.nih.gov*

Name of Committee: Genes, Genomes, and Genetics Integrated Review Group; Molecular Genetics B Study Section.

Date: June 1–2, 2010.

Time: 8 a.m. to 5 p.m.

Agenda: To review and evaluate grant applications.

Place: Catamaran Resort, 3999 Mission Boulevard, San Diego, CA 92109.

Contact Person: Richard A. Currie, PhD, Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 5128, MSC 7840, Bethesda, MD 20892, (301) 435–1219, *currieri@csr.nih.gov.*

Name of Committee: Musculoskeletal, Oral and Skin Sciences Integrated Review Group; Arthritis, Connective Tissue and Skin Study Section.

Date: June 1–2, 2010.

Time: 8:30 a.m. to 5:30 p.m.

Agenda: To review and evaluate grant applications.

Place: Courtyard Chicago Downtown/Magnificent Mile, 165 East Ontario Street, Chicago, IL 60611.

Contact Person: Aftab A. Ansari, PhD, Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 4108, MSC 7814, Bethesda, MD 20892, (301) 594–6376, *ansaria@csr.nih.gov.*

Name of Committee: Center for Scientific Review Special Emphasis Panel; RFA Panel: Investigations on Primary Immunodeficiency Diseases.

Date: June 1, 2010.

Time: 3 p.m. to 6 p.m.

Agenda: To review and evaluate grant applications.

Place: National Institutes of Health, 6701 Rockledge Drive, Bethesda, MD 20892 (Virtual Meeting).

Contact Person: Jin Huang, PhD, Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 4095G, MSC 7812, Bethesda, MD 20892, 301–435–1230, *jh377p@nih.gov.*

Name of Committee: Center for Scientific Review Special Emphasis Panel; RFA RM09–022: Transformative R01 Roadmap Review.

Date: June 2, 2010.

Time: 8 a.m. to 6 p.m.

Agenda: To review and evaluate grant applications.

Place: Hotel Nikko, 222 Mason Street, San Francisco, CA 94102.

Contact Person: John L. Bowers, PhD, Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 4170, MSC 7806, Bethesda, MD 20892, (301) 435–1725, *bowersj@csr.nih.gov.*

Name of Committee: Cardiovascular and Respiratory Sciences Integrated Review Group; Cardiac Contractility, Hypertrophy, and Failure Study Section.

Date: June 2–3, 2010.

Time: 8 a.m. to 5 p.m.

Agenda: To review and evaluate grant applications.

Place: Grand Hyatt Seattle, 721 Pine Street, Seattle, WA 98101.

Contact Person: Olga A Tjurmina, PhD, Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 4030B, MSC 7814, Bethesda, MD 20892, (301) 451–1375, *ot3d@nih.gov.*

Name of Committee: Risk, Prevention and Health Behavior Integrated Review Group; Behavioral Medicine, Interventions and Outcomes Study Section.

Date: June 2–3, 2010.

Time: 8 a.m. to 5 p.m.

Agenda: To review and evaluate grant applications.

Place: W Chicago—Lakeshore, 644 North Lake Shore Drive, Chicago, IL 60611.

Contact Person: Lee S. Mann, JD, PhD, Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 3186, MSC 7848, Bethesda, MD 20892, 301–435–0677, *mannl@csr.nih.gov.*

Name of Committee: Cardiovascular and Respiratory Sciences Integrated Review Group; Lung Cellular, Molecular, and Immunobiology Study Section.

Date: June 2–3, 2010.

Time: 8 a.m. to 6 p.m.

Agenda: To review and evaluate grant applications.

Place: Pier 5 Hotel, 711 Eastern Avenue, Baltimore, MD 21202.

Contact Person: George M. Barnas, PhD, Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 2180, MSC 7818, Bethesda, MD 20892, 301–435–0696, *barnasg@csr.nih.gov.*

Name of Committee: Population Sciences and Epidemiology Integrated Review Group; Epidemiology of Cancer Study Section.

Date: June 2–3, 2010.

Time: 8 a.m. to 1 p.m.

Agenda: To review and evaluate grant applications.

Place: Hilton Alexandria Old Town, 1767 King Street, Alexandria, VA 22314.

Contact Person: Denise Wiesch, PhD, Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 3150, MSC 7770, Bethesda, MD 20892, (301) 435–0684, *wieschd@csr.nih.gov.*

Name of Committee: Center for Scientific Review Special Emphasis Panel; Nursing and Related Clinical Sciences.

Date: June 2–3, 2010.

Time: 8 a.m. to 5 p.m.

Agenda: To review and evaluate grant applications.

Place: W Chicago—Lakeshore, 644 North Lake Shore Drive, Chicago, IL 60611.

Contact Person: Karin F. Helmers, PhD, Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 3166, MSC 7770, Bethesda, MD 20892, 301–254–9975, *helmersk@csr.nih.gov.*

Name of Committee: Center for Scientific Review Special Emphasis Panel; RFA RM09–022: Transformative R01 Roadmap Review.

Date: June 2, 2010.

Time: 8 a.m. to 6 p.m.

Agenda: To review and evaluate grant applications.

Place: Hotel Nikko, 222 Mason Street, San Francisco, CA 94102.

Contact Person: John L. Bowers, PhD, Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 4170, MSC 7806, Bethesda, MD 20892, (301) 435–1725, *bowersj@csr.nih.gov.*

Name of Committee: Cell Biology Integrated Review Group; Membrane Biology and Protein Processing Study Section.

Date: June 2–3, 2010.

Time: 8 a.m. to 5 p.m.

Agenda: To review and evaluate grant applications.

Place: InterContinental Chicago Hotel, 505 North Michigan Avenue, Chicago, IL 60611.

Contact Person: Janet M Larkin, PhD, Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 5142, MSC 7840, Bethesda, MD 20892, 301–806–2765, *larkinja@csr.nih.gov.*

Name of Committee: Endocrinology, Metabolism, Nutrition and Reproductive Sciences Integrated Review Group; Cellular, Molecular and Integrative Reproduction Study Section.

Date: June 2, 2010.

Time: 8 a.m. to 6 p.m.

Agenda: To review and evaluate grant applications.

Place: Hyatt Regency Bethesda, One Bethesda Metro Center, 7400 Wisconsin Avenue, Bethesda, MD 20814.

Contact Person: Gary Hunnicutt, PhD, Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 6164, MSC 7892, Bethesda, MD 20892, 301–435–0229, *gary.hunnicutt@nih.gov.*

Name of Committee: Integrative, Functional and Cognitive Neuroscience Integrated Review Group; Biological Rhythms and Sleep Study Section.

Date: June 2, 2010.

Time: 8 a.m. to 5 p.m.

Agenda: To review and evaluate grant applications.

Place: Pier 5 Hotel, 711 Eastern Avenue, Baltimore, MD 21202.

Contact Person: Michael Selmanoff, PhD, Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 1208, MSC 7844, Bethesda, MD 20892, 301–435–1119, *mselmanoff@csr.nih.gov.*

Name of Committee: Cardiovascular and Respiratory Sciences Integrated Review Group; Respiratory Integrative Biology and Translational Research Study Section.

Date: June 2–3, 2010.

Time: 8:30 a.m. to 12 p.m.

Agenda: To review and evaluate grant applications.

Place: The Allerton Hotel, 701 North Michigan Avenue, Chicago, IL 60611.

Contact Person: Everett E. Sinnett, PhD, Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 2178, MSC 7818, Bethesda, MD 20892, (301) 435–1016, *sinnett@nih.gov.*

Name of Committee: Genes, Genomes, and Genetics Integrated Review Group; Genomics, Computational Biology and Technology Study Section.

Date: June 2–3, 2010.

Time: 8:30 a.m. to 5:30 p.m.

Agenda: To review and evaluate grant applications.

Place: InterContinental Chicago Hotel, 505 North Michigan Avenue, Chicago, IL 60611.

Contact Person: Barbara J. Thomas, PhD, Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 2218, MSC 7890, Bethesda, MD 20892, 301–435–0603, *bthomas@csr.nih.gov.*

Name of Committee: Biological Chemistry and Macromolecular Biophysics Integrated Review Group; Synthetic and Biological Chemistry B Study Section.

Date: June 2–3, 2010.

Time: 8:30 a.m. to 5 p.m.
Agenda: To review and evaluate grant applications.
Place: InterContinental Chicago Hotel, 505 North Michigan Avenue, Chicago, IL 60611.
Contact Person: Kathryn M. Koeller, PhD, Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 4166, MSC 7806, Bethesda, MD 20892, 301–435–2681, *koellerk@csr.nih.gov.*

Name of Committee: Healthcare Delivery and Methodologies; Community Influences on Health Behavior.
Date: June 2–3, 2010.
Time: 8:30 a.m. to 2 p.m.
Agenda: To review and evaluate grant applications.
Place: W Chicago—Lakeshore, 644 North Lake Shore Drive, Chicago, IL 60611.
Contact Person: Ellen K. Schwartz, EDD, Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 3168, MSC 7770, Bethesda, MD 20892, 301–435–0681, *schwarte@csr.nih.gov.*

Name of Committee: Integrative, Functional and Cognitive Neuroscience Integrated Review Group; Neurobiology of Motivated Behavior Study Section.
Date: June 2–3, 2010.
Time: 8:30 a.m. to 5 p.m.
Agenda: To review and evaluate grant applications.
Place: Ritz Carlton Hotel, 1150 22nd Street, NW., Washington, DC 20037.
Contact Person: Edwin C. Clayton, PhD, Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 5180, MSC 7844, Bethesda, MD 20892, 301–408–9041, *claytone@csr.nih.gov.*

Name of Committee: Genes, Genomes, and Genetics Integrated Review Group; Genetics of Health and Disease Study Section.
Date: June 2–3, 2010.
Time: 8:30 a.m. to 1:30 p.m.
Agenda: To review and evaluate grant applications.
Place: Embassy Suites at the Chevy Chase Pavilion, 4300 Military Road, NW., Washington, DC 20015.

National Institute of Diabetes and Digestive and Kidney Diseases; Notice of Closed Meetings

Pursuant to section 10(d) of the Federal Advisory Committee Act, as amended (5 U.S.C. App.), notice is hereby given of the following meetings.

The meetings will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: National Institute of Diabetes and Digestive and Kidney Diseases Special Emphasis Panel, Collaborative Interdisciplinary Team Ancillary Study.

Date: June 10, 2010.

Time: 2 p.m. to 4 p.m.

Agenda: To review and evaluate grant applications.

Place: National Institutes of Health, Two Democracy Plaza, 6707 Democracy Boulevard, Bethesda, MD 20892 (Telephone Conference Call).

Contact Person: D.G. Patel, PhD, Scientific Review Officer, Review Branch, DEA, NIDDK, National Institutes of Health, Room 756, 6707 Democracy Boulevard, Bethesda, MD 20892–5452. (301) 594–7682. *pateldg@niddk.nih.gov.*

Name of Committee: National Institute of Diabetes and Digestive and Kidney Diseases Special Emphasis Panel, NIDDK DEM Fellowships.

Date: June 14–15, 2010.

Time: 1 p.m. to 5 p.m.

Agenda: To review and evaluate grant applications.

Place: Residence Inn Bethesda, 7335 Wisconsin Avenue, Bethesda, MD 20814.

Contact Person: Robert Wellner, PhD, Scientific Review Officer, Review Branch, DEA, NIDDK, National Institutes of Health, Room 757, 6707 Democracy Boulevard, Bethesda, MD 20892–5452. (301) 594–4721. *rw175w@nih.gov.*

Name of Committee: National Institute of Diabetes and Digestive and Kidney Diseases Special Emphasis Panel, R13 Conference Review.

Date: June 17, 2010.

Time: 2 p.m. to 4 p.m.

Agenda: To review and evaluate grant applications.

Place: National Institutes of Health, Two Democracy Plaza, 6707 Democracy Boulevard, Bethesda, MD 20892.

Contact Person: D.G. Patel, PhD, Scientific Review Officer, Review Branch, DEA, NIDDK, National Institutes of Health, Room 756, 6707 Democracy Boulevard, Bethesda, MD 20892–5452. (301) 594–7682. *pateldg@niddk.nih.gov.*

Name of Committee: National Institute of Diabetes and Digestive and Kidney Diseases Special Emphasis Panel, Bio Samples from Diabetes Clinical Studies.

Date: July 13, 2010.

Time: 8 a.m. to 5 p.m.

Agenda: To review and evaluate grant applications.

Place: Bethesda Marriott Suites, 6711 Democracy Boulevard, Bethesda, MD 20817.

Contact Person: D.G. Patel, PhD, Scientific Review Officer, Review Branch, DEA, NIDDK, National Institutes of Health, Room 756, 6707 Democracy Boulevard, Bethesda, MD 20892–5452. (301) 594–7682. *pateldg@niddk.nih.gov.*

Food and Drug Administration

[Docket No. FDA–2010–N–0217]

Device Improvements to Reduce the Number of Under-Doses, Over-Doses, and Misaligned Exposures From Therapeutic Radiation; Public Meeting; Request for Comments

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of public meeting; requests for comments.

The Food and Drug Administration (FDA) is announcing a public meeting entitled "Device Improvements to Reduce the Number of Under-doses, Over-doses, and Misaligned Exposures from Therapeutic Radiation." The purpose of this meeting is to discuss steps that could be taken by manufacturers of linear accelerators, radiation therapy treatment planning systems, and radiation therapy simulators to help reduce misadministration and misaligned exposures. FDA is seeking input on this topic and requests comments on a number of related questions.

Date and Time: The public meeting will be held on June 9 and 10, 2010, from 8 a.m. to 5 p.m.

Location: The public meeting will be held at the Hilton Hotel Washington DC North/Gaithersburg, 620 Perry Pkwy., Gaithersburg, MD 20877.

Contact Person: Simon Choi, Center for Devices and Radiological Health, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 66, rm. 5400, Silver Spring, MD 20993, 301–796–5426; e-mail: *simon.choi@fda.hhs.gov*.

Registration and Requests for Oral Presentations: Persons interested in attending the public meeting must register by May 15, 2010. If you wish to attend the public meeting, you must register by e-mail at *CDRHRadiationTherapy@fda.hhs.gov* or by contacting Simon Choi (see *Contact Person*). Provide complete contact information for each attendee, including name, title, company or organization,

address, telephone number, and e-mail (if appropriate).

Registration is free and will be on a first-come, first-served basis. Early registration is recommended because seating is limited. FDA may limit the number of participants from each organization based on space limitations. Registrants will receive confirmation once they have been accepted. Onsite registration on the day of the public meeting will be provided on a space-available basis beginning at 7 a.m.

If you wish to make an oral presentation during any of the sessions at the meeting (see section I of this document, **Public Meeting**), you must indicate this at the time of registration. FDA has included specific questions for comment in section II of this document, **Questions for Comment**. You should also identify the session(s) during which you would like to present, as well as the question(s) you would like to address in each session. In order to keep each session focused on the topic at hand, presentations given during each session should address only the topic specified for that session. FDA will do its best to accommodate requests to speak. Individuals and organizations with common interests are urged to consolidate or coordinate their presentations, and to request time for a joint presentation. FDA will determine the amount of time allotted to each presenter and the approximate time that each oral presentation is scheduled to begin.

If you would like to participate in any of the four planned round-table discussions (see section I of this document, **Public Meeting**), you must indicate this interest at the time of registration, and also submit a brief statement that describes your experience with radiation therapy devices. FDA is seeking participants interested in engaging in one of four round-table discussions related to the presentations given during each of the earlier sessions of the meeting. Each round-table discussion will include no more than 10 non-FDA participants. Only one participant from an organization or company will be assigned to each discussion group. FDA will attempt to have a range of constituencies represented in each discussion group. Others in attendance at the public meeting will have an opportunity to listen to each round-table discussion.

If you need special accommodations due to a disability, please contact Simon Choi (see *Contact Person*) at least 7 days in advance of the meeting.

Comments: FDA is holding this public meeting to obtain information on a number of questions regarding steps manufacturers of radiation therapy devices could take to help reduce over-doses, under-doses, or misaligned exposures from therapeutic radiation. The deadline for submitting comments related to this public meeting is May 15, 2010, by 5 p.m. EST.

Regardless of attendance at the public meeting, interested persons may submit written or electronic comments. Submit written comments to the Division of Dockets Management (HFA–305), Food and Drug Administration, 5630 Fishers Lane, rm. 1061, Rockville, MD 20852. Submit electronic comments to *http://www.regulations.gov*. Submit a single copy of electronic comments or two paper copies of any mailed comments, except that individuals may submit one paper copy. Comments are to be identified with the docket number found in brackets in the heading of this document. In addition, when responding to specific questions as outlined in section II of this document, please identify the question you are addressing. Received comments may be seen in the Division of Dockets Management between 9 a.m. and 4 p.m., Monday through Friday.

SUPPLEMENTARY INFORMATION:

I. Public Meeting

The objective of this public meeting is to discuss steps that could be taken by manufacturers of linear accelerators, radiation therapy treatment planning systems, and radiation therapy simulators to help reduce misadministration and misaligned exposures. FDA is seeking input on this topic and requests comments on a number of related questions.

The public meeting will be held over the course of 2 days. Each day will be divided into two sessions. Day 1 will focus on equipment features that manufacturers should incorporate into radiation therapy devices (morning session) and software (afternoon session). Day 2 will focus on steps manufacturers should take to improve training of individuals who use these devices (morning session) and steps to improve quality assurance (QA) at medical facilities (afternoon session). During each session, members of the public may present oral comments related to the topic of that session. Specific questions for comment are listed in section II of this document, **Questions for Comment**. Individuals who are interested in giving an oral presentation during any of the sessions must indicate this interest at the time of registration and must also identify the session(s) at which they would like to present (see *Registration and Requests for Oral Presentations*). In order to keep each session focused on the topic at hand, each oral presentation should address only the topic specified for that session. Commentators are free to submit written comments on any topic(s) to the open docket (see *Comments*). FDA will schedule speakers for each session as time permits.

To close each of the four sessions, FDA will hold a round-table discussion between FDA staff and selected participants representing a range of constituencies (for more information about participating in the round-table discussion, see *Registration and Requests for Oral Presentations*). The participants in each round-table discussion will remark on the presentations given during the session, engage in a dialogue with each other and FDA staff, and provide closing thoughts on the session. Round-table participants will not be asked to develop consensus opinions during the discussion, but rather to provide their individual perspectives. Others in attendance at the meeting will have an opportunity to listen to each round-table discussion.

In advance of the public meeting, additional information, including a meeting agenda with a speakers' schedule for each session, will be made available on the Internet. This information will be placed on file in the public docket (docket number found in brackets in the heading of this document), which is available at *http://www.regulations.gov*. This information will also be available at *http://www.fda.gov/MedicalDevices/NewsEvents/WorkshopsConferences/default.htm* (select the appropriate meeting from the list).

II. Questions for Comment

A. Device Improvements and Reporting

1. Describe issues with misadministrations and your suggestions to address the safety issues.

2. Are there any hardware and software features that manufacturers can build into radiation therapy devices to reduce underexposures, overexposures, or misaligned exposures to ionizing radiation during radiation therapy?

3. What techniques do you recommend for improving therapists attention (e.g. a dead-man switch to assure operator attention). Should efforts to improve device safety features include: incorporation of access controls and audit capabilities into equipment to identify the specific user(s) of the device during any particular treatment? If so, why, and what access controls and audit

capabilities should be incorporated? If not, why not?

4. If certain changes are desirable as additional safeguards for the devices, how feasible is it to retrofit existing units in the field?

5. Should manufacturers standardize their display format to ensure that treatment settings, protocols, and collimator positions are displayed taking human factors into consideration and are recorded for physician review?

6. Should manufacturers submit more data to FDA as part of their premarket submissions for approval or clearance of devices, related to the safety of these devices? If so, why, and what data should be submitted? If not, why not?

7. Should there be a mandatory "time-out" built into the equipment, similar to what already has been implemented for surgical procedures, to confirm that all settings for the equipment are correct and allow adequate time for QA? If not, why not?

8. Should manufacturers provide better instructions and specifics (i.e. QA methodology) for acceptance testing and/or commissioning due to new and/or unique features/capabilities? If so, why and what should be included?

9. Other than requiring a facility to report to FDA, how can FDA ensure that facilities report to FDA significant under-doses and over-doses? Should there be a quantitative metric used to define a medical event similar to that used by the Nuclear Regulatory Commission (e.g. +/- 20% variation from intended dose)?

10. What prevents users from participating in voluntary reporting?

11. How can FDA encourage reporting and prevent workarounds even when no clinically significant adverse event occurs?

B. User Training

1. Should manufacturers provide training to ensure equipment users have adequate understanding of equipment capabilities, operating principles for the technology, general information about patient dose, and specific dose-related equipment features? If so, why, and what training should be provided? If not, why not?

2. If manufacturers provide such training, which personnel should receive it? In your response, please consider dosimetrists, physicists, radiation therapists or technologists in other specialties and departmental administrators as well as physicians in all medical specialties who may operate radiation therapeutic equipment.

3. If manufacturers provide such training, what is the most effective timing for a new installation and how frequently should it be repeated for optimum implementation? Should manufacturers recommend an internal training program for use by the facility to insure continued staff competence?

4. For software patches and upgrades, how is the software tested for hazard analysis, verification and validation? Should manufacturers perform additional testing to adequately test software patches?

5. Would standardizing terminology and standardizing design of control panels facilitate safe use of the equipment?

6. Should custom-tailored educational material, such as pamphlets, pocket cards, videos etc. that highlight unique features of the equipment, be provided with new equipment?

C. Quality Assurance Measures

1. Is there a model QA program that exists which is widely accepted? If so, please describe.

2. What types of QA should be the responsibility of the facility, the physicist, the operator, others?

3. Should manufacturers provide QA procedures to medical facilities and users of radiation therapy devices? If so, why, and what instructions should be provided? If not, why not? How extensive should they be?

4. Should manufacturers provide training on QA practices? If so, why, what type of training should be provided, and to which personnel? If not, why not and who should?

III. Transcripts

Please be advised that as soon as a transcript is available, it will be accessible at *http://www.regulations.gov*. It may be viewed at the Division of Dockets Management (HFA–305), Food and Drug Administration, 5630 Fishers Lane, rm. 1061, Rockville, MD. A transcript will also be available in either hardcopy or on CD–ROM, after submission of a Freedom of Information request. Written requests are to be sent to Division of Freedom of Information (HFI–35), Office of Management Programs, Food and Drug Administration, 5600 Fishers Lane, rm. 6–30, Rockville, MD 20857.

Dated: May 3, 2010.

Leslie Kux,

Acting Assistant Commissioner for Policy.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2010–N–0001]

Food Protection Workshop; Public Workshop

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of public workshop.

SUMMARY: The Food and Drug Administration (FDA), Office of Regulatory Affairs (ORA), Southwest Regional Office (SWRO), in co-sponsorship with the University of Arkansas (UA) Institute of Food Science and Engineering, is announcing a public workshop entitled "Food Protection Workshop." This public workshop is intended to provide information about food safety, food defense, the regulations authorized by the Public Health Security and Bioterrorism Preparedness and Response Act of 2002 (the Bioterrorism Act), and other related subjects to the Food Protection Plan as it relates to food establishments such as farms, manufacturers, processors, distributors, retailers, and restaurants.

Date and Time: This public workshop will be held on June 9 and 10, 2010, from 8 a.m. to 5 p.m.

Location: The public workshop will be held at the Continuing Education Center, Two East Center St., Fayetteville, AR (located downtown).

Contact: David Arvelo, Food and Drug Administration, Southwest Regional Office, 4040 North Central Expressway, suite 900, Dallas, TX 75204, 214–253–4952, FAX: 214–253–4970, or e-mail: *david.arvelo@fda.hhs.gov*.

For information on accommodation options, visit *http://www.uark.edu/ua/foodpro/Workshops/Food_Safety_Defense_Workshop.html* or contact Steven C. Seideman, 2650 North Young Ave., Institute of Food Science & Engineering, University of Arkansas, Fayetteville, AR 72704, 479–575–4221, FAX: 479–575–2165, or e-mail: *seideman@uark.edu*.

Registration: You are encouraged to register by May 26, 2010. The University of Arkansas has a $250 registration fee to cover the cost of facilities, materials, speakers, and breaks. There is no fee for FDA employees. Seats are limited; please submit your registration as soon as possible. Course space will be filled in order of receipt of registration. Those accepted into the course will receive confirmation. Registration will close after the course is filled. Registration at the site is not guaranteed but may be possible on a space available basis on the day of the public workshop beginning at 8 a.m. The cost of registration at the site is $350 payable to: "The University of Arkansas." If you need special accommodations due to a disability, please contact Steven C. Seideman (see *Contact*) at least 14 days in advance.

To register, please visit *http://www.uark.edu/ua/foodpro/Workshops/Food_Safety_Defense_Workshop.html* to register online or submit a check or money order for $250 payable to the "The University of Arkansas." Mail to: Institute of Food Science & Engineering, University of Arkansas, 2650 North Young Ave., Fayetteville, AR 72704 along with the following information: Your name, affiliation, mailing address, phone number, fax, e-mail, and whether special accommodations are required.

Transcripts: Transcripts of the public workshop will not be available due to the format of this workshop. Workshop handouts may be requested at cost through the Freedom of Information Office (HFI–35), Food and Drug Administration, 5600 Fishers Lane, rm. 12A–16, Rockville, MD 20857, approximately 15 working days after the public workshop at a cost of 10 cents per page.

SUPPLEMENTARY INFORMATION: This public workshop is being held in response to the large volume of food protection concerns from food establishments (such as farms, manufacturers, processors, distributors, retailers, and restaurants) originating from the area covered by the FDA Dallas District Office. The SWRO presents this workshop to help achieve objectives set forth in section 406 of the Food and Drug Administration Modernization Act of 1997 (21 U.S.C. 393), which include working closely with stakeholders and maximizing the availability and clarity of information to stakeholders and the public. This is consistent with the purposes of the Small Business Representative Program, which are in part to respond to industry inquiries, develop educational materials, sponsor workshops and conferences to provide firms, particularly small businesses, with firsthand working knowledge of FDA's guidance, requirements, and compliance policies. This workshop is also consistent with the Small Business Regulatory Enforcement Fairness Act of 1996 (Public Law 104–121), as outreach activities by Government agencies to small businesses.

The goal of this public workshop is to present information that will enable food establishments (such as farms, manufacturers, processors, distributors, retailers, and restaurants) to better comply with any regulations authorized by the Public Health Security and Bioterrorism Preparedness and Response Act of 2002 (the Bioterrorism Act) relevant to such establishments, and to be aware of recommendations in food protection guidance, especially in light of growing concerns about food safety and defense. Information presented will be based on regulations, guidances, and information previously made available to the public. Topics to be discussed at the workshop include: (1) Food defense programs, (2) good manufacturing practices, (3) reportable food registry, (4) Hazard Analysis Critical Control Point (HACCP), (5) good agricultural practices, (6) food recalls, (7) pathogens of public health concern, and (8) risk management and vulnerability assessments and other related topics. For more information, please visit *http://www.uark.edu/ua/foodpro/Workshops/Food_Safety_Defense_Workshop.html*. FDA expects that participation in this public workshop will provide regulated industry with greater understanding of the regulatory and guidance perspectives on food protection and increase voluntary compliance and food defense awareness.

Dated: May 3, 2010.

Leslie Kux,

Acting Assistant Commissioner for Policy.

National Institutes of Health

Office of the Director, Office of Biotechnology Activities; Notice of a Safety Symposium

There will be a safety symposium entitled "Gene-Modified T Cells: Challenges in Clinical Trial Design with Novel Receptors." The meeting will be open to the public, with attendance limited to space available. Individuals who plan to attend and need special assistance, such as sign language interpretation or other reasonable accommodations, should notify the Contact Person listed below in advance of the meeting. For further information concerning this meeting contact Ms. Chezelle George, Administrative Assistant, Office of Biotechnology Activities, Office of the Director, National Institutes of Health, 6705 Rockledge Drive, Room 750, Bethesda, MD 20892–7985, 301–496–9838, *georgec@mail.nih.gov*.

Name of Committee: Recombinant DNA Advisory Committee.

Date: June 15, 2010.

Time: 8 a.m. to 5:30 p.m.

Agenda: The Office of Biotechnology Activities (OBA) and NIH Recombinant DNA Advisory Committee will host a symposium entitled "Gene Modified T Cells: Challenges in Clinical Trial Design with Novel Receptors" on June 15, 2010 at the Rockville Hotel and Executive Center. Experts will discuss data from trials conducted to date, the selection of novel antigen targets, the

potential risks of off-target effects and clinical trial design strategies that can maximize both anti-tumor effect and safety. An agenda will be posted to OBA's Web site closer to the meeting date. Please check the meeting agenda at *http://oba.od.nih.gov/rdna/rdna.html* for more information.

Place: Rockville Hotel and Executive Center, 1750 Rockville Pike, Rockville, MD 20892.

Contact Person: Chezelle George, Administrative Assistant, Office of Science Policy, Office of Biotechnology Activities, National Institutes of Health, 6705 Rockledge Drive, Suite 750–A1, Bethesda, MD 20892, 301–496–9838, *georgec@mail.nih.gov*.

Any interested person may file written comments with the panel by forwarding the statement to the Contact Person listed on this notice. The statement should include the name, address, telephone number and when applicable, the business or professional affiliation of the interested person. Background information may be obtained by contacting NIH OBA by e-mail *oba@od.nih.gov*

Dated: April 29, 2010.

DEPARTMENT OF HOMELAND SECURITY

Federal Emergency Management Agency

[Internal Agency Docket No. FEMA–1906–DR; Docket ID FEMA–2010–0002]

Mississippi; Major Disaster and Related Determinations

AGENCY: Federal Emergency Management Agency, DHS.

ACTION: Notice.

SUMMARY: This is a notice of the Presidential declaration of a major disaster for the State of Mississippi (FEMA–1906–DR), dated April 29, 2010, and related determinations.

DATES: *Effective Date:* April 29, 2010.

FOR FURTHER INFORMATION CONTACT: Peggy Miller, Recovery Directorate, Federal Emergency Management Agency, 500 C Street, SW., Washington, DC 20472, (202) 646–3886.

SUPPLEMENTARY INFORMATION: Notice is hereby given that, in a letter dated April 29, 2010, the President issued a major disaster declaration under the authority of the Robert T. Stafford Disaster Relief and Emergency Assistance Act, 42 U.S.C. 5121 *et seq.* (the "Stafford Act"), as follows:

I have determined that the damage in certain areas of the State of Mississippi resulting from severe storms, tornadoes, and flooding during the period of April 23–24, 2010, is of sufficient severity and magnitude to warrant a major disaster declaration under the Robert T. Stafford Disaster Relief and Emergency Assistance Act, 42 U.S.C. 5121 *et seq.* (the "Stafford Act"). Therefore, I declare that such a major disaster exists in the State of Mississippi.

In order to provide Federal assistance, you are hereby authorized to allocate from funds available for these purposes such amounts as you find necessary for Federal disaster assistance and administrative expenses.

You are authorized to provide assistance for debris removal (Category A) for 72 hours of the State's choosing and emergency protective measures (Category B), limited to direct Federal assistance, under the Public Assistance program and Individual Assistance in the designated areas, and Hazard Mitigation throughout the State. Consistent with the requirement that Federal assistance is supplemental, any Federal funds provided under the Stafford Act for Public Assistance, Hazard Mitigation, and Other Needs Assistance will be limited to 75 percent of the total eligible costs.

Further, you are authorized to make changes to this declaration for the approved assistance to the extent allowable under the Stafford Act.

The time period prescribed for the implementation of section 310(a), Priority to Certain Applications for Public Facility and Public Housing Assistance, 42 U.S.C. 5153, shall be for a period not to exceed six months after the date of this declaration.

The Federal Emergency Management Agency (FEMA) hereby gives notice that pursuant to the authority vested in the Administrator, under Executive Order 12148, as amended, Michael Bolch, of FEMA is appointed to act as the Federal Coordinating Officer for this major disaster.

The following areas of the State of Mississippi have been designated as adversely affected by this major disaster:

Choctaw and Yazoo Counties for Individual Assistance.

Choctaw and Yazoo Counties for debris removal (Category A), for 72 hours of the State's choosing and emergency protective measures (Category B), limited to direct Federal assistance, under the Public Assistance program.

All counties in the State of Mississippi are eligible to apply for assistance under the Hazard Mitigation Grant Program.

The following Catalog of Federal Domestic Assistance Numbers (CFDA) are to be used for reporting and drawing funds: 97.030, Community Disaster Loans; 97.031, Cora Brown Fund; 97.032, Crisis Counseling; 97.033, Disaster Legal Services; 97.034, Disaster Unemployment Assistance (DUA); 97.046, Fire Management Assistance Grant; 97.048, Disaster Housing Assistance to Individuals and Households In Presidentially Declared Disaster Areas; 97.049, Presidentially Declared Disaster Assistance—Disaster Housing Operations for Individuals and Households; 97.050, Presidentially Declared Disaster Assistance to Individuals and Households—Other Needs; 97.036, Disaster Grants—Public Assistance (Presidentially Declared Disasters); 97.039, Hazard Mitigation Grant.

W. Craig Fugate,

Administrator, Federal Emergency Management Agency.

BILLING CODE 9111–23–P

DEPARTMENT OF HOMELAND SECURITY

Federal Emergency Management Agency

[Internal Agency Docket No. FEMA–1906–DR; Docket ID FEMA–2010–0002]

Mississippi; Amendment No. 2 to Notice of a Major Disaster Declaration

AGENCY: Federal Emergency Management Agency, DHS.

ACTION: Notice.

SUMMARY: This notice amends the notice of a major disaster declaration for the State of Mississippi (FEMA–1906–DR), dated April 29, 2010, and related determinations.

DATES: *Effective Date:* May 1, 2010.

FOR FURTHER INFORMATION CONTACT: Peggy Miller, Recovery Directorate, Federal Emergency Management Agency, 500 C Street, SW., Washington, DC 20472, (202) 646–3886.

SUPPLEMENTARY INFORMATION: The notice of a major disaster declaration for the State of Mississippi is hereby amended to include the following areas among those areas determined to have been adversely affected by the event declared a major disaster by the President in his declaration of April 29, 2010.

Monroe and Union Counties for Individual Assistance

Choctaw and Yazoo Counties for Public Assistance, including direct Federal assistance (already designated for Individual Assistance and debris removal [Category A], for 72 hours of the State's choosing and emergency protective measures [Category B], limited to direct Federal assistance, under the Public Assistance program).

Attala and Holmes Counties for Public Assistance, including direct Federal assistance, (already designated for Individual Assistance).

The following Catalog of Federal Domestic Assistance Numbers (CFDA) are to be used for reporting and drawing funds: 97.030, Community Disaster Loans; 97.031, Cora Brown Fund; 97.032, Crisis Counseling; 97.033, Disaster Legal Services; 97.034, Disaster Unemployment Assistance (DUA); 97.046, Fire Management Assistance Grant;

97.048, Disaster Housing Assistance to Individuals and Households In Presidentially Declared Disaster Areas; 97.049, Presidentially Declared Disaster Assistance—Disaster Housing Operations for Individuals and Households; 97.050, Presidentially Declared Disaster Assistance to Individuals and Households—Other Needs; 97.036, Disaster Grants—Public Assistance (Presidentially Declared Disasters); 97.039, Hazard Mitigation Grant.

W. Craig Fugate,

Administrator, Federal Emergency Management Agency.

[FR Doc. 2010–10791 Filed 5–6–10; 8:45 am]

BILLING CODE 9111–23–P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–5376–N–32]

Tracking the Use of CDBG Homeowners and Small Landlords Disaster Assistance Grants

AGENCY: Office of the Chief Information Officer, HUD.

ACTION: Notice.

SUMMARY: The proposed information collection requirement described below has been submitted to the Office of Management and Budget (OMB) for review, as required by the Paperwork Reduction Act. The Department is soliciting public comments on the subject proposal.

This study will evaluate the role of supplemental CDBG disaster recovery funding in housing recovery in the three states most affected by hurricanes Katrina and Rita (Louisiana, Mississippi, and Texas) and identify the most important factors affecting property owners' willingness to rebuild or repair their storm-damaged properties.

DATES: *Comments Due Date:* June 7, 2010.

ADDRESSES: Interested persons are invited to submit comments regarding this proposal. Comments should refer to the proposal by name and/or OMB approval Number (2525–Pending) and should be sent to: HUD Desk Officer, Office of Information and Regulatory Affairs (OIRA), Office of Management and Budget (OMB), New Executive Office Building, Washington, DC 20503; e-mail: *OIRA_Submission@omb.eop.gov;* fax: (202) 395–5806.

FOR FURTHER INFORMATION CONTACT: Cheryl A. Levine, PhD, Department of Housing and Urban Development, e-mail: *cheryl.a.levine@hud.gov,* phone (202) 402–3928; or Carol Star, Director, Program Evaluation Division; e-mail: Carol Star at *carol.s.star@hud.gov.* Copies of available documents submitted to OMB may be obtained from Dr. Levine.

SUPPLEMENTARY INFORMATION: This notice informs the public that the Department of Housing and Urban Development has submitted to OMB a request for approval of the Information collection described below. This notice is soliciting comments from members of the public and affecting agencies concerning the proposed collection of information to: (1) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (2) Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information; (3) Enhance the quality, utility, and clarity of the information to be collected; and (4) Minimize the burden of the collection of information on those who are to respond; including through the use of appropriate automated collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

This notice also lists the following information:

Title of Proposal: Tracking the use of CDBG Homeowners and Small Landlords Disaster Assistance Grants.

OMB Approval Number: 2528–Pending.

Form Numbers: None.

Description of the Need for the Information and Its Proposed Use: This study will evaluate the role of supplemental CDBG disaster recovery funding in housing recovery in the three states most affected by hurricanes Katrina and Rita (Louisiana, Mississippi, and Texas) and identify the most important factors affecting property owners' willingness to rebuild or repair their storm-damaged properties.

Frequency of Submission: On Occasion.

REPORTING BURDEN

Number of respondents	Annual responses	×	Hours per response	=	Burden hours
984	1		0.75		738

Total Estimated Burden Hours: 738.

Status: New Collection.

Authority: Section 3507 of the Paperwork Reduction Act of 1995, 44 U.S.C. 35, as amended.

Dated: April 30, 2010.

Leroy McKinney, Jr.,

Departmental Reports Management Officer, Office of the Chief Information Officer.

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–5375–N–17]

Federal Property Suitable as Facilities To Assist the Homeless

AGENCY: Office of the Assistant Secretary for Community Planning and Development, HUD.

ACTION: Notice.

SUMMARY: This Notice identifies unutilized, underutilized, excess, and surplus Federal property reviewed by HUD for suitability for possible use to assist the homeless.

DATES: *Effective Date: May 7, 2010.*

FOR FURTHER INFORMATION CONTACT: Kathy Ezzell, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7262, Washington, DC 20410; telephone (202) 708–1234; TTY number for the hearing- and speech-impaired (202) 708–2565, (these telephone numbers are not toll-free), or call the toll-free Title V information line at 800–927–7588.

SUPPLEMENTARY INFORMATION: In accordance with the December 12, 1988 court order in *National Coalition for the Homeless* v. *Veterans Administration,* No. 88–2503–OG (D.D.C.), HUD publishes a Notice, on a weekly basis, identifying unutilized, underutilized, excess and surplus Federal buildings and real property that HUD has reviewed for suitability for use to assist the homeless. Today's Notice is for the purpose of announcing that no additional properties have been determined suitable or unsuitable this week.

Dated: April 29, 2010.

Mark R. Johnston,

Deputy Assistant Secretary for Special Needs.

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

[FWS–R5–R–2010–N020; BAC–4311–K9 S3]

John Heinz National Wildlife Refuge at Tinicum, Philadelphia and Delaware Counties, PA

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of intent to prepare a comprehensive conservation plan and environmental assessment; request for comments.

SUMMARY: We, the U.S. Fish and Wildlife Service (Service), intend to prepare a comprehensive conservation plan (CCP) and environmental assessment (EA) for John Heinz National Wildlife Refuge (NWR) at Tinicum in Philadelphia, Pennsylvania. We provide this notice in compliance with our CCP policy to advise other Federal and State agencies, Tribal Governments, and the public of our intentions, and to obtain suggestions and information on the scope of issues to consider in the planning process. We are also announcing public meetings and requesting public comments.

DATES: To ensure consideration, please send your written comments by June 11, 2010. We will announce opportunities for public input in local news media throughout the CCP process.

ADDRESSES: Send your comments or requests for more information by any of the following methods:

Electronic Mail: northeastplanning@fws.gov. Include "John Heinz NWR CCP" in the subject line of the message.

Facsimile: Attention: Nancy McGarigal, 413–253–8468.

U.S. Mail: U.S. Fish and Wildlife Service, 300 Westgate Center Drive, Hadley, MA 01035.

In-Person Drop-off. You may drop off comments during regular business hours at John Heinz NWR at Tinicum, 8601 Lindbergh Blvd., Philadelphia, PA 19153.

FOR FURTHER INFORMATION CONTACT: Gary Stolz, Refuge Manager, John Heinz NWR at Tinicum, 8601 Lindbergh Blvd., Philadelphia, PA 19153; phone: (215) 365–3118; electronic mail: *gary_stolz©fws.gov.*

SUPPLEMENTARY INFORMATION:

Introduction

With this notice, we initiate our process for developing a CCP for John Heinz NWR at Tinicum, in Philadelphia and Delaware Counties, Pennsylvania. This notice complies with our CCP policy to (1) advise other Federal and State agencies, Tribal Governments, and the public of our intention to conduct detailed planning on this refuge, and (2) obtain suggestions and information on the scope of issues to consider in the environmental document and during development of the CCP.

Background

The CCP Process

The National Wildlife Refuge System Administration Act of 1966 (16 U.S.C. 668dd–668ee) (Administration Act), as amended by the National Wildlife Refuge System Improvement Act of 1997, requires us to develop a CCP for each national wildlife refuge. The purpose for developing a CCP is to provide refuge managers with a 15-year plan for achieving refuge purposes and contributing to the mission of the National Wildlife Refuge System (NWRS), consistent with sound principles of fish and wildlife management, conservation, legal mandates, and our policies. In addition to outlining broad management direction on conserving wildlife and their habitats, CCPs identify wildlife-dependent recreational opportunities available to the public, including opportunities for hunting, fishing, wildlife observation and photography, and environmental education and interpretation. We will review and update the CCP at least every 15 years in accordance with the Administration Act.

Each unit of the NWRS was established for specific purposes. We use these purposes as the foundation for developing and prioritizing the management goals and objectives for each refuge within the NWRS, and to determine how the public can use each

refuge. The planning process is a way for us and the public to evaluate management goals and objectives that will ensure the best possible approach to wildlife, plant, and habitat conservation, while providing for wildlife-dependent recreation opportunities that are compatible with each refuge's establishing purposes and the mission of the NWRS.

Our CCP process provides participation opportunities for Tribal, State, and local governments, conservation organizations, and the public. At this time, we encourage input in the form of issues, concerns, ideas, and suggestions for the future management of John Heinz NWR.

We will conduct the environmental review of this project and develop an EA in accordance with the requirements of the National Environmental Policy Act of 1969, as amended (NEPA) (42 U.S.C. 4321 *et seq.*); NEPA regulations (40 CFR parts 1500–1508); other appropriate Federal laws and regulations; and our policies and procedures for compliance with those laws and regulations.

John Heinz NWR

Under legislation passed by Congress in 1972, authorization was given to the Secretary of the Interior to acquire 1,200 acres to preserve Tinicum Marsh and establish a "Tinicum National Environmental Center." The Congressional mandate set forth for the refuge was to preserve, restore, and enhance habitat; provide opportunities for the public to study wildlife in its natural habitat; and to promote environmental education. In November 1991, in a bill sponsored by Congressman Curt Weldon (R–PA), the name of the refuge was changed to John Heinz National Wildlife Refuge at Tinicum to honor the late Senator who helped preserve Tinicum Marsh.

The refuge protects five varied habitats: Freshwater tidal marsh, impounded water, woods, meadow, and field. The 200 acres of freshwater tidal marsh represents approximately 80 percent of Pennsylvania's remaining coastal wetlands. The refuge is an important stopover for migratory birds along the Atlantic Flyway, and provides breeding habitat for several State-listed threatened and endangered species. It has over 10 miles of trails, and visitors can actually pass through, or by, most of the habitats using these trails.

John Heinz NWR is the most urban refuge managed by the Service. Over 100,000 visitors come to the refuge each year, and the refuge's urban setting provides unique opportunities for public education and involvement. To better address these opportunities and promote environmental education, the refuge completed construction on the Cusano Environmental Education Center in 2001.

The mission of the Cusano Environmental Education Center is to demonstrate, within an urban setting, the importance of the natural world to the quality of human life and to inspire visitors to become responsible stewards of the environment.

Scoping: Preliminary Issues, Concerns, and Opportunities. The planning team has identified some preliminary issues, concerns, and opportunities to address in the CCP. We list below the categories for issues we have identified. During public scoping, we expect additional issues may be raised.

(1) Ecoregional or ecosystemwide issues, such as climate change, regional land conservation, and protection of water quality throughout the Delaware River estuary;

(2) Biological program issues, such as habitat and species management needs, protection, restoration, monitoring, inventories, and research;

(3) Public use program issues, such as the breadth and quality of programs, public access, user conflicts, and use impacts on natural resources;

(4) Infrastructure and staffing issues, such as appropriateness of facilities, safety, accessibility, and additional staffing needs;

(5) Community relations and outreach issues and opportunities, such as tourism, and local economic impacts; and

(6) Coordination and communication issues and opportunities with other environmental educators, and Federal, State, and Tribal Governments, and with non-governmental conservation partners.

Public Meetings

We will give the public an opportunity to provide input at a public meeting. You can obtain the schedule from the refuge manager (*see* **FOR FURTHER INFORMATION CONTACT**). You may also send comments anytime during the planning process by mail, electronic mail, or facsimile (see **ADDRESSES**). There will be additional opportunities to provide public input once we have prepared a draft CCP.

Public Availability of Comments

Before including your address, phone number, electronic mail address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Dated: March 29, 2010.

Richard O. Bennett,

Acting Regional Director, Northeast Region, U.S. Fish and Wildlife Service, Hadley, MA 01035.

In-Person Drop-off: You may drop off comments during regular business hours at Montezuma NWR, 3395 U.S. Route 20 East, Seneca Falls, NY 13148–9423.

FOR FURTHER INFORMATION CONTACT: Tom Jasikoff, Refuge Manager, Montezuma NWR, 3395 U.S. 20 East, Seneca Falls, NY 13148–9423; phone: (315) 568–5987; electronic mail: *tom_jasikoff@fws.gov.*

SUPPLEMENTARY INFORMATION:

Introduction

With this notice, we initiate our process for developing a CCP for Montezuma NWR in Seneca, Wayne, and Cayuga Counties, New York. This notice complies with our CCP policy to (1) advise other Federal and State agencies, Tribal Governments, and the public of our intention to conduct detailed planning on this refuge, and (2) obtain suggestions and information on the scope of issues to consider in the environmental document and during development of the CCP.

Background

The CCP Process

The National Wildlife Refuge System Administration Act of 1966 (16 U.S.C. 668dd–668ee) (Administration Act), as amended by the National Wildlife Refuge System Improvement Act of 1997, requires us to develop a CCP for each national wildlife refuge. The purpose for developing a CCP is to provide refuge managers with a 15-year plan for achieving refuge purposes and contributing toward the mission of the National Wildlife Refuge System (NWRS), consistent with sound principles of fish and wildlife management, conservation, legal mandates, and our policies. In addition to outlining broad management direction on conserving wildlife and their habitats, CCPs identify wildlife-dependent recreational opportunities available to the public, including opportunities for hunting, fishing, wildlife observation and photography, and environmental education and interpretation. We will review and update the CCP at least every 15 years in accordance with the Administration Act.

Each unit of the NWRS was established for specific purposes. We use these purposes as the foundation for developing and prioritizing the management goals and objectives for each refuge within the NWRS mission, and to determine how the public can use each refuge. The planning process is a way for us and the public to evaluate management goals and objectives that will ensure the best possible approach to wildlife, plant, and habitat conservation, while providing for wildlife-dependent recreation opportunities that are compatible with each refuge's establishing purposes and the mission of the NWRS.

Our CCP process provides participation opportunities for Tribal, State, and local governments, conservation organizations, and the public. At this time, we encourage input in the form of issues, concerns, ideas, and suggestions for the future management of Montezuma NWR.

We will conduct the environmental review of this project and develop an EA in accordance with the requirements of the National Environmental Policy Act of 1969, as amended (NEPA) (42 U.S.C. 4321 *et seq.*); NEPA regulations (40 CFR parts 1500–1508); other appropriate Federal laws and regulations; and our policies and procedures for compliance with those laws and regulations.

Montezuma NWR

Montezuma NWR was established as a refuge in 1938 primarily in recognition of its importance as a stopover area for migratory birds and other wildlife. The refuge provides resting, feeding, and nesting habitat for waterfowl and other migratory birds and is located in the middle of one of the most active migratory bird pathways in the Atlantic Flyway. Over 1,000,000 migrating geese and ducks, and one of the largest concentrations of migrating shorebirds in New York, are observed each year. Located at the north end of Cayuga Lake in the Finger Lakes Region of New York, Montezuma NWR consists of 9,073 acres.

Refuge habitats are very diverse. They consist of approximately 4,700 acres of freshwater wetlands in 16 impoundments; 1,646 acres in floodplain forest; 360 acres in cropland; 700 acres in early or mid-successional forest; 584 acres in grassland, 157 acres in canals, river, or dikes, and the remainder in roads, trails and other infrastructure.

Montezuma NWR hosts over 150,000 visitors annually. Popular activities include driving on the 3-mile auto tour, observing and photographing nature on the 5.5 miles of walking trails, and hunting, fishing, or participating in the many educational and interpretive programs. The refuge visitor center, open from April 1 to November 30 each year, is a popular destination for visitors to the area.

Scoping: Preliminary Issues, Concerns, and Opportunities

The planning team is in the process of identifying preliminary issues, concerns, and opportunities to address in the CCP. We list below the categories for issues we have identified. During public scoping, we expect additional issues may be raised.

(1) Ecoregional or ecosystemwide issues, such as climate change, regional land conservation, and the protection of water quality throughout the West Oswego River watershed;

(2) Biological program issues, such as habitat and species management needs, protection, restoration, monitoring, inventories, and research;

(3) Public-use program issues, such as the breadth and quality of programs, public access, user conflicts, and use impacts on natural resources;

(4) Infrastructure and staffing issues, such as appropriateness of facilities, safety, accessibility, and additional staffing needs;

(5) Community relations and outreach issues and opportunities, such as tourism and local economic impacts; and

(6) Coordination and communication issues and opportunities with Federal, State, and Tribal Governments, and with non-governmental conservation partners.

Public Meetings

We will give the public an opportunity to provide input at a public meeting. You can obtain the schedule from the planning team leader or refuge manager (*see* **FOR FURTHER INFORMATION CONTACT**). You may also send comments anytime during the planning process by mail, electronic mail, or facsimile (*see* **ADDRESSES**). There will be additional opportunities to provide public input once we have prepared a draft CCP.

Public Availability of Comments

Before including your address, phone number, electronic mail address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Dated: March 26, 2010.

James G. Geiger,

Acting Regional Director, Northeast Region, U.S. Fish and Wildlife Service.

BILLING CODE 4310–55–M

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[CACA 49834; L51010000.ER0000 LLCAD09000 LVRWB09B3160]

Notice of Availability of the Draft Environmental Impact Report and Draft Environmental Impact Statement for the Southern California Edison Eldorado-Ivanpah Transmission Project, California and Nevada

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of availability.

SUMMARY: In accordance with the National Environmental Policy Act of 1969, as amended, and the California Environmental Quality Act of 1970, the Department of the Interior, Bureau of Land Management (BLM), together with the California Public Utilities Commission, has prepared a Draft Environmental Impact Report (EIR)/Environmental Impact Statement (EIS) for the proposed Eldorado-Ivanpah Transmission Project (EITP), and by this notice is announcing the opening of the comment period.

DATES: To ensure that comments will be considered, the BLM must receive written comments on the EITP Draft EIR/EIS within 45 days following the date the Environmental Protection Agency publishes its Notice of Availability in the **Federal Register.** The BLM will announce future meetings or hearings and any other public involvement activities at least 15 days in advance through public notices, media releases, or mailings.

ADDRESSES: You may submit comments related to the proposed EITP Draft EIR/EIS by any of the following methods:

- *Web site: http://www.blm.gov/ca/st/en/fo/needles.html;*
- *E-mail: caeitp@blm.gov,* subject line EITP;
- *Fax:* (760) 326–7099; or
- *Mail or other delivery service:* George R. Meckfessel, Needles Field Office, 1303 South U.S. Highway 95, Needles, California 92363–4228.

Copies of the EITP Draft EIR/EIS are available in the Needles Field Office at the above address, or at the following Web site: *http://www.blm.gov/ca/st/en/fo/needles.html,* and at the BLM California State Office, 2800 Cottage Way, Sacramento, California 95825. Electronic (CD–ROM) or paper copies may also be obtained by contacting George Meckfessel at (760) 326–7000 or by e-mailing your request to *caeitp@blm.gov* and including your name and mailing address.

FOR FURTHER INFORMATION CONTACT: For further information and/or to have your name added to our mailing list, contact Tom Hurshman, Project Manager, telephone (970) 240–5345; fax (970) 240–5368; address 2465 South Townsend Avenue, Montrose, Colorado 81401; e-mail *Tom_Hurshman@blm.gov.*

SUPPLEMENTARY INFORMATION: The BLM's purpose and need for the EITP project is to respond to Southern California Edison's (SCE) application for a right-of-way (ROW) grant to construct and operate a double circuit 230-kilovolt (kV) transmission line to replace an existing 115-kV transmission line on public lands in compliance with Title V of the Federal Lands Management and Policy Act (FLPMA) (43 U.S.C. 1761–1771), the BLM ROW regulations, and other applicable Federal laws.

The upgraded transmission line would extend approximately 35 miles from southern Clark County, Nevada (28 miles), into northeastern San Bernardino County, California (7 miles). The project would also include a new Ivanpah substation in California near Primm, Nevada, which would serve as a connector hub for solar energy that may be produced by future solar generation projects in the Ivanpah Valley area. The existing Eldorado Substation would be modified to accommodate the new Eldorado-Ivanpah transmission line. The segment of transmission line to be replaced is approximately 36 miles long and originates at the existing Eldorado Substation in T. 25 S., R. 62 E., Sec. 1, Mount Diablo Meridian, and terminates at the proposed Ivanpah Substation in T. 16 N., R. 14 E., Sec. 4, San Bernardino Meridian.

The BLM will decide whether to approve, approve with modification, or deny issuance of a ROW authorization to SCE for the proposed EITP project. The EITP would carry electricity from several renewable energy projects proposed in and around the Ivanpah Valley, including the Ivanpah Solar Energy Generation System planned by BrightSource, LLC. The proposed transmission line and new substation would be constructed within an existing designated utility corridor. Telecommunications lines are also proposed. The public lands in the project area are managed by the BLM in accordance with the California Desert Conservation Area (CDCA) Plan and the Las Vegas Field Office Resource Management Plan.

As proposed by SCE, the transmission line would be sited within an existing ROW corridor designated in the CDCA plan and Las Vegas RMP. In addition to the proposed action and the no action alternatives, the EIR/EIS analyzes seven additional action alternatives that address alternative routes for the transmission and telecommunications lines.

A Notice of Intent to prepare an EIR/EIS for the EITP project was published in the **Federal Register** on July 27, 2009, and was followed by a 30-day public scoping period. The BLM held an interagency meeting on July 1, 2009, to inform other agencies about the project and held formal scoping meetings for the public on July 28 and 29, 2009. Four primary areas of concern were identified during the public scoping process: (1) Impacts of the project on several biological resources, especially desert tortoise; (2) compatibility of the project with regional land uses such as the planned Southern Nevada Supplemental Airport; (3) compatibility of the project with other existing ROW designations; and (4) cumulative impacts. Before including your address, phone number, e-mail address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Authority: 40 CFR 1506.6, 1506.10, and 43 CFR 1610.2

Thomas Pogacnik,

Deputy State Director.

BILLING CODE 4310–40–P

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[ID–320–1610 DQ–050D]

Notice of Availability of the Proposed Resource Management Plan and Final Environmental Impact Statement for the Pocatello Field Office, Idaho

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of availability.

SUMMARY: In accordance with the National Environmental Policy Act of 1969, as amended, and the Federal Land Policy and Management Act of 1976, as amended, the Bureau of Land Management (BLM) has prepared a Proposed Resource Management Plan/Final Environmental Impact Statement

(PRMP/FEIS) for the Pocatello Field Office and by this notice is announcing its availability.

DATES: BLM planning regulations at 43 CFR 1610.5–2 state that any person who meets the conditions described may protest the BLM's PRMP/FEIS. A person who meets the conditions and files a protest must file the protest within 30 days of the date that the Environmental Protection Agency publishes its Notice of Availability in the **Federal Register.**

ADDRESSES: Copies of the Pocatello Field Office PRMP/FEIS have been sent to tribal governments, Federal, state, and local government agencies and to other stakeholders. Copies of the PRMP/FEIS are available for public inspection at the Pocatello Field Office, Bureau of Land Management, 4350 Cliffs Drive, Pocatello, Idaho 83204. Interested persons may also review the PRMP/FEIS on the Internet at *http://www.blm.gov/id/st/en/prog/planning.1.html.* All protests must be in writing and mailed to one of the following addresses:

Regular Mail: BLM Director (210), *Attention:* Brenda Williams, P.O. Box 66538, Washington, DC 20035.

Overnight Mail: BLM Director (210), *Attention:* Brenda Williams, 1620 L Street, NW., Suite 1075, Washington, DC 20036.

FOR FURTHER INFORMATION CONTACT: For further information contact Terry Lee Smith, RMP Project Manager, telephone (208) 478–6340; 4350 Cliffs Drive, Pocatello, Idaho 83204; e-mail *Terry_Lee_Smith@blm.gov.*

SUPPLEMENTARY INFORMATION: The planning area covers approximately 613,800 acres of public lands within nine counties in southeastern Idaho. The Pocatello RMP, when completed, will provide management direction for resources and resource uses. Planning issues addressed in the PRMP/FEIS include: Off-highway vehicle management, recreation management, sagebrush ecosystems, public access, and phosphate mining.

The PRMP is essentially the same as the BLM's preferred alternative of the Draft RMP/Draft EIS and provides the most reasonable and practical approach to public lands management in the planning area. The PRMP allows flexibility in adjusting to changing conditions over time while emphasizing a level of protection, restoration, and enhancement to meet the overall needs of the resources, use allocations, and public services into the future.

In addition, the PRMP/FEIS would designate the 400-acre Petticoat Peak Area of Critical Environmental Concern (ACEC) to provide protection to unique native plants. Several decisions associated with the Petticoat Peak ACEC designation include: Designating the area "closed" to off-highway vehicles, excluding rights-of-way and leasing fluid minerals with a "No Surface Occupancy" stipulation. The FEIS also analyzes the direct and indirect effects of fluid minerals leasing with standard terms and conditions and applicable special stipulations.

The Pocatello Draft RMP/Draft EIS was published for public comment on January 5, 2007. During the 90-day public comment period following its release, the BLM received 52 comment letters, e-mails, and faxes. These submissions included about 1,400 individual comments, which the BLM has responded to in the PRMP/FEIS. Comments on the Draft RMP/Draft EIS received from the public and internal BLM review were considered and incorporated as appropriate into the proposed plan. Public comments resulted in minor changes intended to clarify proposed management direction and update the analysis of potential environmental impacts, but did not significantly change proposed land use decisions.

Instructions for filing a protest with the Director of the BLM regarding the PRMP/FEIS may be found in the "Dear Reader Letter" of the Pocatello Field Office PRMP/FEIS and at 43 CFR 1610.5–2. E-mail and faxed protests will not be accepted unless the protesting party also provides the original letter by either regular or overnight mail postmarked by the close of the protest period. Under these conditions, the BLM will consider the e-mail or faxed protest as an advance copy and it will receive full consideration. If you wish to provide the BLM with such advance notification, please direct faxed protests to the attention of the BLM protest coordinator at 202–912–7212, and e-mails to *Brenda_Hudgens-Williams@blm.gov.*

All protests, including the follow-up letter to e-mails or faxes, must be in writing and mailed to the appropriate address, as set forth in the **ADDRESSES** section above.

Before including your phone number, e-mail address, or other personal identifying information in your protest, you should be aware that your entire protest—including your personal identifying information—may be made publicly available at any time. While you can ask us in your protest to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Authority: 40 CFR 1506.6, 1506.10, 43 CFR 1610.2, and 1610.

Peter J. Ditton,

Bureau of Land Management, Acting Idaho State Director.

BILLING CODE 4310–GG–P

DEPARTMENT OF THE INTERIOR

National Park Service

Notice of Intent To Repatriate Cultural Items: Rochester Museum & Science Center, Rochester, NY

AGENCY: National Park Service, Interior.

ACTION: Notice.

Notice is here given in accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), 25 U.S.C. 3005, of the intent to repatriate 13 cultural items in the possession of the Rochester Museum & Science Center, Rochester, NY, that meet the definitions of "sacred object" and object of "cultural patrimony" under 25 U.S.C. 3001.

This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA, 25 U.S.C. 3003(d)(3). The determinations in this notice are the sole responsibility of the museum, institution, or Federal agency that has control of the cultural items. The National Park Service is not responsible for the determinations in this notice.

On January 1, 1928, the museum acquired two large wooden medicine faces from Alvin Dewey, Rochester, NY (AE 2870/D 8363/29.259.17 and AE 2872/D 8364/29.259.19). The Dewey catalog card states: "Onondaga Indians. From the John Kilham collection, May 23, 1919."

On August 15, 1966, two large wooden medicine faces were donated to the museum by Mr. & Mrs. Warner Palmer, Albion, NY (AE 10315/66.222.1 and AE 10316/66.222.2). Both faces were made circa 1960, and collected by Charles Palmer.

In 1971, nine miniature wooden medicine faces were donated by the Rochester Museum Association to the museum (E 13.1.345/numbers 71.17.1–9). They are of Onondaga origin and were made circa 1970.

Onondaga Nation traditional religious leaders have identified these medicine faces as being needed for the practice of traditional Native American religions by present-day adherents. In the course of consultations with members of the Onondaga Nation, it was shown that any individual who carved a medicine face

and alienated it to a third party that in turn donated or sold it to the Rochester Museum & Science Center did not have the authority to do so. Museum documentation, supported by oral evidence presented during consultation by the Onondaga Nation NAGPRA representatives and other Haudenosaunee and non-Haudenosaunee parties, indicates that these medicine faces are culturally affiliated with the Onondaga Nation, and are both sacred objects and objects of cultural patrimony.

Officials of the Rochester Museum & Science Center have determined that, pursuant to 25 U.S.C. 3001(3)(C), the 13 cultural items described above are specific ceremonial objects needed by traditional Native American religious leaders for the practice of traditional Native American religions by their present-day adherents. Officials of the Rochester Museum & Science Center have also determined that, pursuant to 25 U.S.C. 3001(3)(D), the 13 cultural items described above have an ongoing historical, traditional, or cultural importance central to the Native American group or culture itself, rather than property owned by an individual. Lastly, officials of the Rochester Museum & Science Center have determined that, pursuant to 25 U.S.C. 3001(2), there is a relationship of shared group identity that can be reasonably traced between the sacred objects/objects of cultural patrimony and the Onondaga Nation of New York.

Representatives of any other Indian Nation or tribe that believes itself to be culturally affiliated with the sacred objects/objects of cultural patrimony should contact Adele DeRosa, Rochester Museum & Science Center, Rochester, NY 14607, telephone (585) 271–4552, ext 302, before June 7, 2010. Repatriation of the sacred objects/objects of cultural patrimony to the Onondaga Nation of New York may proceed after that date if no additional claimants come forward.

The Rochester Museum & Science Center is responsible for notifying the Onondaga Nation of New York that this notice has been published.

Dated: April 27, 2010.

David Tarler,

Acting Manager, National NAGPRA Program.

BILLING CODE 4312–50–P

DEPARTMENT OF THE INTERIOR

National Park Service

Notice of Intent To Repatriate Cultural Items: Rochester Museum & Science Center, Rochester, NY

AGENCY: National Park Service, Interior.

ACTION: Notice.

Notice is here given in accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), 25 U.S.C. 3005, of the intent to repatriate cultural items in the possession of the Rochester Museum & Science Center, Rochester, NY, that meet the definitions of "sacred objects" and "objects of cultural patrimony" under 25 U.S.C. 3001.

This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA, 25 U.S.C. 3003(d)(3). The determinations in this notice are the sole responsibility of the museum, institution, or Federal agency that has control of the cultural items. The National Park Service is not responsible for the determinations in this notice.

Between 1923 and 1966, the Rochester Museum & Science Center acquired from various sources 10 medicine faces made by members of the Tonawanda Seneca Nation.

In 1923, a large wooden medicine face was collected by Edward D. Putnam, Curator, Rochester Museum, Rochester, NY, on the Tonawanda Reservation. It was accessioned into the museum's collection on August 25, 1923 (AE 383/23.32.61). According to museum documentation, "This is a shaman's mask used by the Seneca False Face Company in curing diseases by invoking the spirit of the myth creature represented by the face."

In 1929, the museum accessioned two large wooden medicine faces that were collected by James Skye from the Tonawanda Reservation (AE 1673/29.270.1, made circa 1900; and AE 1689/29.270.2, made circa 1920).

In 1929, the museum purchased a large wooden medicine face with a medicine bag attached to it from Alvin Dewey, Rochester, NY (AE 2871/D 4974/29.259.18). According to the catalog card by Dewey, it was "Last used by Chauncey Abrams of Tonawanda Reservation."

In 1929, a large wooden medicine face was purchased from Alvin Dewey, Rochester, NY (AE 2873/29.259.20). In June 1916, Mr. Dewey had purchased the medicine face from William S. Wakeman, Batavia, NY. Before selling it to the museum, it was lent to Arthur C. Parker, State Archeologist, on December 23, 1923. At that time, it was reported to have been 75 years old.

In March 1966, the museum purchased five large medicine faces from Kidd Smith that were made on the Tonawanda Seneca Reservation, circa 1960. Four are identified as being simply wooden medicine faces (AE 10256/66.356.1, AE 10271/66.356.3, AE 10272/66.356.4 and AE 10273/66.356.5) with the fifth medicine face being made of basswood (AE 10257/66.356.2).

Museum documentation, supported by oral evidence presented during consultation by Tonawanda Seneca Nation NAGPRA representatives, indicates that these medicine faces are culturally affiliated with the Tonawanda Seneca Nation. Tonawanda Seneca Nation traditional religious leaders have identified these medicine faces as being needed for the practice of traditional Native American religions by present-day adherents. During consultation, it was shown that individuals who carved a face did not have the authority to alienate it to a third party or sell it indirectly to the Rochester Museum & Science Center. Therefore, based on consultation with NAGPRA representatives from the Tonawanda Seneca Nation and other Haudenosaunee and non-Haudenosaunee consultants, the museum has determined that the medicine faces are both sacred objects and objects of cultural patrimony.

Officials of the Rochester Museum & Science Center have determined that, pursuant to 25 U.S.C. 3001(3)(C), the 10 cultural items described above are specific ceremonial objects needed by traditional Native American religious leaders for the practice of traditional Native American religions by their present-day adherents. Officials of the Rochester Museum & Science Center have also determined that, pursuant to 25 U.S.C. 3001(3)(D), the 10 cultural items described above have an ongoing historical, traditional, or cultural importance central to the Native American group or culture itself, rather than property owned by an individual. Lastly, officials of the Rochester Museum & Science Center have determined that, pursuant to 25 U.S.C. 3001(2), there is a relationship of shared group identity that can be reasonably traced between the sacred objects/objects of cultural patrimony and the Tonawanda Band of Seneca Indians of New York.

Representatives of any other Indian Nation or tribe that believes itself to be culturally affiliated with the sacred objects/objects of cultural patrimony should contact Adele DeRosa, NAGPRA

Coordinator/Collections Manager, Rochester Museum & Science Center, 657 East Ave., Rochester, NY 14607, telephone (585) 271–4552, ext 302, before June 7, 2010. Repatriation of the sacred objects/objects of cultural patrimony to the Tonawanda Band of Seneca Indians of New York may proceed after that date if no additional claimants come forward.

The Rochester Museum & Science Center is responsible for notifying the Tonawanda Band of Seneca Indians of New York that this notice has been published.

Dated: April 27, 2010.

BILLING CODE 4312–51–P

DEPARTMENT OF THE INTERIOR

Minerals Management Service

Outer Continental Shelf (OCS) Mid-Atlantic Proposed Oil and Gas Lease Sale 220

AGENCY: Minerals Management Service (MMS), Interior.

ACTION: Notice of indefinite postponement of comment period on and cancellation of public meetings to scope for an Environmental Impact Statement (EIS) for Proposed Mid-Atlantic Oil and Gas Lease Sale 220.

SUMMARY: This Notice serves to cancel scoping meetings and to postpone the comment period on scoping for Sale 220 until further notice. Three public scoping meetings that had been scheduled on May 12, 25, and 27, in the **Federal Register** (Vol. 75, No. 82, page 22623) to solicit information to assist MMS in preparing an EIS to evaluate potential environmental effects of proposed Lease Sale 220 are hereby cancelled. Also, the public scoping meeting scheduled for May 12, 2010, in Norfolk, Virginia, to solicit public input on both Sale 220 and the Geological & Geophysical Programmatic EIS on the Mid- and South Atlantic OCS (G&G PEIS) is hereby cancelled. This Notice does not affect the public scoping period for the G&G PEIS. The scoping period for that PEIS ends on May 17, 2010 (see 75 FR 16830).

Pursuant to the regulations implementing the procedural provisions of the National Environmental Policy Act of 1969, as amended (42 U.S.C. 4321 *et seq*) (NEPA), MMS had reopened the scoping comment period on the EIS for proposed Lease Sale 220 for a period of 45 days from the date of the **Federal Register** notice on April 29, 2010. The closing date for scoping under that notice was to be June 14, 2010. The scoping period for Lease Sale 220 is now postponed until or unless we provide further notification.

DATES: On April 29, 2010, MMS published a notice in the **Federal Register** (Vol. 75, No. 82, page 22623) announcing the continuation of scoping for a 45-day period and that three public meetings were scheduled on:

- May 12 at Hilton Norfolk Airport in Norfolk, Virginia;
- May 25 at Princess Royale Oceanfront Hotel and Conference Center, Ocean City, Maryland; and
- May 27 at Elizabeth City State University Fine Arts Complex in Elizabeth City, North Carolina.

These meetings are cancelled.

Comments: Comments that are provided in the period between

publication of the notification reopening scoping on April 29, 2010, and this notification of postponed scoping will be held together with comments received during the initial scoping period of November 13, 2008 through January 13, 2009. No further comments are being solicited for scoping of the Lease Sale 220 EIS pending decision by the Secretary of the Interior.

FOR FURTHER INFORMATION CONTACT: For information on the status for the Sale 220 EIS scoping, please contact Mr. Gary D. Goeke, Chief, Environmental Assessment Section, Leasing and Environment (MS 5410), Minerals Management Service, Gulf of Mexico OCS Region, 1201 Elmwood Park Boulevard, New Orleans, LA 70123–2394, telephone (504) 736–3233.

SUPPLEMENTARY INFORMATION: With respect to proposed Lease Sale 220, MMS issued a Notice of Intent to prepare an EIS published in the **Federal Register** on November 13, 2008 (Vol. 73, No. 220, page 67201), and included a 45-day scoping period. No scoping meetings were announced at that time. The MMS decided to extend the comment period and made announcements in a press release and other media. On January 7, 2009, MMS published a notice in the **Federal Register** (Vol. 74, No. 4, page 727) extending the scoping comment period to 60 days. That comment period expired on January 13, 2009. Scoping had been reopened in the **Federal Register** notice published on April 29, 2010 (Vol. 75, No. 82, page 22623). Today's notice postpones indefinitely scoping for the Sale 220 EIS until or unless MMS provides further notification.

Dated: May 4, 2010.

S. Elizabeth Birnbaum,

Director, Minerals Management Service.

BILLING CODE 4310–MR–P

INTERNATIONAL TRADE COMMISSION

[Investigation No. 337–TA–689]

In the Matter of Certain Dual Access Locks and Products Containing Same; Notice of Commission Determination Not To Review an Initial Determination Granting Motions for Summary Determination of Non-Infringement and Finding No Violation of Section 337; Termination of the Investigation

AGENCY: U.S. International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that the U.S. International Trade Commission has determined not to review an initial determination ("ID") granting two motions for summary determination of non-infringement and no violation of section 337 issued by the presiding administrative law judge ("ALJ") on March 18, 2010, in the above-captioned investigation.

FOR FURTHER INFORMATION CONTACT: Michael K. Haldenstein, Office of the General Counsel, U.S. International Trade Commission, 500 E Street, SW., Washington, DC 20436, telephone (202) 205–3041. Copies of non-confidential documents filed in connection with this investigation are or will be available for inspection during official business hours (8:45 a.m. to 5:15 p.m.) in the Office of the Secretary, U.S. International Trade Commission, 500 E Street, SW., Washington, DC 20436, telephone (202) 205–2000. General information concerning the Commission may also be obtained by accessing its Internet server at *http://www.usitc.gov.* The public record for this investigation may be viewed on the Commission's electronic docket (EDIS) at *http://edis.usitc.gov.* Hearing-impaired persons are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on (202) 205–1810.

SUPPLEMENTARY INFORMATION: The Commission instituted this investigation on October 21, 2009, under section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. 1337, based on an amended complaint filed on October 5, 2009, by Safe Skies, LLC and David Tropp of Brooklyn, New York. 74 FR 54065 (October 21, 2009). The Commission named the following companies as respondents: C&C Luggage Manufacturing Co., Ltd. of China; Formosa Tai Rank Industrial Corp. of Taiwan; Hangzhou Gema Suitcases & Bags Co., Ltd. of China; La Pearl Luggage and Leather Goods Co., Ltd. of China; Hinomoto Jomae, Ltd. of Japan; Sinox Company, Ltd. of Taiwan; Yi Feng Manufacturing, Co., Ltd. of China; Jin Tay Industries Co., Ltd. of Taiwan; FULLYEAR-Brother Enterprise, Co., Ltd. of Taiwan; Zhuhai SkyGood Tech. Industrial Corp., Ltd. of China; Ningbo Xianfeng Art & Craft Co., Ltd. of China; Paloma Enterprises Co., Ltd. of Taiwan; Tekraft Industrial Co., Ltd. of Taiwan; Hangzhou Travelsky Co., Ltd. of China; The Sun Lock Company Ltd. of Hong Kong; Alloy Metal Manufactory, Ltd. of Hong Kong; Cometform, Ltd. of England; Design Go Ltd. of England; Franzen International of Germany; M–Power Lock Manufactory of Hong Kong.

The complaint alleged violations of section 337 based upon the importation into the United States, the sale for importation, and the sale within the United States after importation of certain dual access locks and products containing same that infringe claims 1–21 of U.S. Patent No. 7,021,537 and claims 1–20 of U.S. Patent No. 7,036,728. The complaint further alleged that an industry in the United States exists as required by subsection (a)(2) of section 337. The complainants requested that the Commission issue a general exclusion order and cease and desist orders.

On March 18, 2010, the ALJ issued an ID (Order No. 6) granting a motion of the Commission investigative attorney ("IA") and a joint motion on behalf of 19 of the above-named respondents for summary determination of non-infringement of all asserted claims. Only respondent Formosa Tai Ran Industrial Corp. did not join in the joint motion for summary determination. On April 1, 2010, complainants filed a petition for review of the ID. On April 8, 2010, the IA filed an opposition to the petition for review. On April 9, 2010, the 19 respondents filed a joint opposition to the petition for review and a motion for leave to file their response out of time, which the Commission has granted.

Having examined the record in this investigation, including the ALJ's ID, the petition for review and the responses thereto, the Commission has determined not to review the ID and terminate the investigation with a finding of no violation of section 337.

The authority for the Commission's determination is contained in section 337 of the Tariff Act of 1930, as amended (19 U.S.C. 1337), and in sections 210.42–.46 of the Commission's Rules of Practice and Procedure (19 CFR 210.42–.46).

By order of the Commission.

Issued: May 3, 2010.

Marilyn R. Abbott,

Secretary to the Commission.

[FR Doc. 2010–10758 Filed 5–6–10; 8:45 am]

BILLING CODE 7020–02–P

DEPARTMENT OF JUSTICE

Office of Justice Programs

[OMB Number 1121–0166]

Agency Information Collection Activities: Extension of a Currently Approved Collection: Comments Requested

ACTION: 30-Day Notice of information collection under review: Extension of a

currently approved collection. *Bureau of Justice Assistance Application Form: Public Safety Officers' Disability Benefits.*

The Department of Justice, Office of Justice Programs, will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995. The proposed information collection is published to obtain comments from the public and affected agencies. This proposed information collection was previously published in the **Federal Register** [Volume 75, Number 42, page 9928–9929 on March 4, 2010], allowing for a 60-day comment period.

The purpose of this notice is to allow for an additional 30 days for public comment until June 7, 2010. This process is conducted in accordance with 5 CFR 1320.10.

Written comments and/or suggestions regarding the items contained in this notice, especially the estimated public burden and associated response time, should be directed to OMB, Office of Information and Regulatory Affairs, Attention: Department of Justice Desk Officer, Washington, DC 20503. In addition, comments may be submitted to OMB via facsimile to (202) 395–5806. Comments may also be submitted to M. Berry by phone at 202–616–6500/1–866–268–0079; by mail at Bureau of Justice Assistance, Office of Justice Programs, U.S. Department of Justice, 810 7th Street, NW., Washington, DC 20531; via facsimile at 202–305–1367; or by e-mail at *M.A.Berry@ojp.usdoj.gov*.

Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should do one or more of the following:

—Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

—Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

—Enhance the quality, utility, and clarity of the information to be collected; and

—Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Overview of This Information Collection

(1) *Type of Information Collection:* Extension of a currently approved collection.

(2) *Title of the Form/Collection: Public Safety Officers' Disability Benefits.*

(3) *Agency form number, if any, and the applicable component of the Department of Justice sponsoring the collection: OJP FORM 3650/7 Public Safety Officers' Disability Benefits.*

(4) *Affected public who will be asked or required to respond, as well as a brief abstract:*

Primary: Dependents of public safety officers who were killed or permanently and totally disabled in the line of duty.

Abstract: The Public Safety Officers' Benefits Act of 1976, 42 U.S.C. 3796, authorizes the Public Safety Officers' Benefits Office, Bureau of Justice Assistance, Office of Justice Programs, U.S. Department of Justice to pay a benefit to claimant public safety officers found to have been permanently and totally disabled as the direct result of a catastrophic line-of-duty injury sustained on or after November 29, 1990.

Others: None.

(5) *An estimate of the total number of respondents and the amount of time needed for an average respondent to respond is as follows:* It is estimated that no more than 100 respondents will apply a year. Each application takes approximately 120 minutes to complete.

(6) *An estimate of the total public burden (in hours) associated with the collection: Total Annual Reporting Burden:* 100 × 120 minutes per application = 12,000 minutes/60 minutes per hour = 200 hours.

If additional information is required, please contact Lynn Bryant, Department Clearance Officer, United States Department of Justice, Justice Management Division, Policy and Planning Staff, Patrick Henry Building, Suite 1600, 601 D Street, NW., Washington, DC 20530.

Dated: May 4, 2010.

Lynn Bryant,

Department Clearance Officer, PRA, United States Department of Justice.

Antitrust Division

Notice Pursuant to the National Cooperative Research and Production Act of 1993—Rare Earth Industry and Technology Association

Notice is hereby given that, on March 22, 2010, pursuant to Section 6(a) of the National Cooperative Research and Production Act of 1993, 15 U.S.C. 4301 *et seq.* ("the Act"), the Rare Earth Technology Consortium ("RETC") has filed written notifications simultaneously with the Attorney General and the Federal Trade Commission disclosing (1) the identities of the parties to the venture and (2) the nature and objectives of the venture. The notifications were filed for the purpose of invoking the Act's provisions limiting the recovery of antitrust plaintiffs to actual damages under specified circumstances.

Pursuant to Section 6(b) of the Act, the identities of the parties to the venture are: Rare Earth Industry and Tecimology Association, Greenwood Village, CO; Global Tungsten & Powders Corp., Towanda, PA; General Electric Company, Niskayuna, NY; Arnold Magnetic Technologies Corp., Rochester, NY; Electron Energy Corp., Landisville, PA; Colorado School of Mines, Golden, CO; Worcester Polytechnic Institute, Worcester, MA; Iowa State University, Ames, IA; University of Delaware, Newark, DE; Rare Element Resources, Vancouver, British Columbia, CANADA; and Molycorp Minerals LLC, Greenwood Village, CO. The general areas of RETC's planned activities are to (a) improve the business conditions of entities engaged in all points of the production chain for rare earths magnets and other materials and products beginning with extraction of rare earths and ending with marketing and sale of such materials and products ("Rare Earth Companies"), while providing guidance for such companies to act as responsible stewards of rare earth resources; (b) promote the common business interests of Rare Earth Companies by establishing a consortium compromised of commercial, charitable, academic and state and local government organizations that work together to identify, develop, manage and implement rare earth projects that benefit for profit, nonprofit, government and charitable entities, including, without limitation, military and commercial entities, and in doing so to commercialize rare earth research, technology and use for dual-purpose

military/civilian use; (c) create an effective teaming environment among its members for purposes of identifying rare earth related opportunities that can be developed into applications that serve military and commercial markets through shared public and private investment; and (d) enter into, or coordinate with Rare Earth Industry and Technology Association (REITA) and/or the individual members of the Consortium as they enter into, agreements with the U.S. Army (REITA and the U.S. Army shall designate the parties to each such agreement) known as a "Section 845 Other Transactions Agreement" or "OTA" for the purpose of funding certain work to be conducted in partnership with the U.S. government and the Consortium or any one or more of its members acting through the Consortium for the benefit of the U.S. Army Armament Research, Development and Engineering Center ("ARDEC") to utilize rare earth products and technology to enhance the U.S. military's war fighting capabilities for the national defense.

Patricia A. Brink,

Deputy Director of Operations, Antitrust Division.

Notice Pursuant to the National Cooperative Research and Production Act of 1993—High Definition Metrology and Process-2 Micron Manufacturing Under ATP Award No. 70NANB77041

Notice is hereby given that, on March 10, 2010, pursuant to Section 6(a) of the National Cooperative Research and Production Act of 1993, 15 U.S.C. 4301 *et seq.* ("the Act"), High Definition Metrology and Process-2 Micron Manufacturing under ATP Award No. 70NANB7H7041 has filed written notifications simultaneously with the Attorney General and the Federal Trade Commission disclosing changes in its membership. The notifications were filed for the purpose of extending the Act's provisions limiting the recovery of antitrust plaintiffs to actual damages under specified circumstances. Specifically, MAG, Port Huron, MI, has been added as a party to this venture. Also, Superior Controls, Plymouth, MI, has withdrawn as a party to this venture.

No other changes have been made in either the membership or planned activity of the group research project. Membership in this research project remains open, and High Definition Metrology intends to file additional written notifications disclosing all changes in membership.

On December 13, 2007, High Definition Metrology filed its original notification pursuant to Section 6(a) of the Act. The Department of Justice published a notice in the **Federal Register** pursuant to Section 6(b) of the Act on March 10, 2008 (73 FR 12762).

The last notification was filed with the Department on September 17, 2008. A notice was published in the **Federal Register** pursuant to Section 6(b) of the Act on October 21, 2008 (73 FR 62542).

Patricia A. Brink,

Deputy Director of Operations, Antitrust Division.

Notice Pursuant to the National Cooperative Research and Production Act of 1993—DVD Copy Control Association

Notice is hereby given that, on March 10, 2010, pursuant to Section 6(a) of the National Cooperative Research and Production Act of 1993, 15 U.S.C. 4301 *et seq.* ("the Act"), DVD Copy Control Association ("DVD CCA") has filed written notifications simultaneously with the Attorney General and the Federal Trade Commission disclosing changes in its membership. The notifications were filed for the purpose of extending the Act's provisions limiting the recovery of antitrust plaintiffs to actual damages under specified circumstances. Specifically, Chongqing Xugang Electronic Co., Ltd., Jiangbei, Chongqing, PEOPLE'S REPUBLIC OF CHINA; Huizhou Aihua Multimedia Co., Ltd., Huizhou, Guangdong, PEOPLE'S REPUBLIC OF CHINA; digiCon AG, Kornwestheim, GERMANY; Mimeos V0F, Baarlo Noord Limburg, THE NETHERLANDS; MIT Technology Co., Ltd., Dongguan, Guangdong, PEOPLE'S REPUBLIC OF CHINA; ShenZhen Sea Star Technology Co., Ltd., Longhua Town, Baoan, Shenzhen, PEOPLE'S REPUBLIC OF CHINA; and Yuban & Co., Nan-Kang, Taipei, TAIWAN, have been added as parties to this venture.

Also, ATI Technologies, Inc., Unionville, Ontario, CANADA; Axiom Technologies Mfg Pte Ltd., Singapore, SINGAPORE; DOCdata media b.v., Tilburg, THE NETHERLANDS; Mattel Inc., El Segundo, CA; nVidia Corporation, Santa Clara, CA; OPT Corporation, Tokyo, JAPAN; Seagate Technology LLC, Longmont, CO; Tonic Electronics Limited, Kowloon, HONG KONG-CHINA; and Toppan Printing Co., Ltd., Tokyo, JAPAN, have withdrawn as parties to this venture. In addition, Mediachain Co., Ltd. has changed its name to SD RAY Co., Ltd., Hwasung-Si, Kyounggi-do, REPUBLIC OF KOREA.

No other changes have been made in either the membership or planned activity of the group research project. Membership in this group research project remains open, and DVD CCA intends to file additional written notifications disclosing all changes in membership.

On April 11, 2001, DVD CCA filed its original notification pursuant to Section 6(a) of the Act. The Department of Justice published a notice in the **Federal Register** pursuant to Section 6(b) of the Act on August 3, 2001 (66 FR 40727).

The last notification was filed with the Department on December 3, 2009. A notice was published in the **Federal Register** pursuant to Section 6(b) of the Act on January 19, 2010 (75 FR 2890).

Notice Pursuant to the National Cooperative Research and Production Act of 1993—Joint Venture To Perform Project Entitled Versatile Onboard Traffic Embedded Roaming Sensors

Notice is hereby given that, on April 5, 2010, pursuant to Section 6(a) of the National Cooperative Research and Production Act of 1993, 15 U.S.C. 4301 *et seq.* ("the Act"), Joint Venture to Perform Project Entitled Versatile Onboard Traffic Embedded Roaming Sensors ("VOTERS") has filed written notifications simultaneously with the Attorney General and the Federal Trade Commission disclosing changes in its membership. The notifications were filed for the purpose of extending the Act's provisions limiting the recovery of antitrust plaintiffs to actual damages under specified circumstances. Specifically, Trilion Quality Systems, Plymouth Meeting, PA, has been added as a party to this venture. Also, Witten Technologies, Inc., Somerville, MA, has withdrawn as a party to this venture.

No other changes have been made in either the membership or planned activity of the group research project. Membership in this group research project remains open, and VOTERS intends to file additional written notifications disclosing all changes in membership.

On February 10, 2009, VOTERS filed its original notification pursuant to Section 6(a) of the Act. The Department of Justice published a notice in the **Federal Register** pursuant to Section 6(b) of the Act on March 13, 2009 (74 FR 10967).

BILLING CODE 4410–11–M

DEPARTMENT OF LABOR

Workforce Investment Act of 1998 (WIA); Notice of Incentive Funding Availability Based on Program Year (PY) 2008 Performance

AGENCY: Employment and Training Administration.

ACTION: Notice.

SUMMARY: The Department of Labor, in collaboration with the Department of Education, announces that ten states are eligible to apply for Workforce Investment Act (WIA) (Pub. L. 105–220, 29 U.S.C. 2801 *et seq.*) incentive grant awards authorized by section 503 of the WIA.

DATES: The ten eligible states must submit their applications for incentive funding to the Department of Labor by June 21, 2010.

ADDRESSES: Submit applications to the Employment and Training Administration, Office of Policy Development and Research, Division of System Accomplishments, 200 Constitution Avenue NW., Room S–5206, Washington, DC 20210, *Attention:* Karen Staha and Gail Sather, *Telephone number:* 202–693–3995 (this is not a toll-free number). *Fax:* 202–693–3490. *E-mail: staha.karen@dol.gov* and *sather.gail@dol.gov.* Information may also be found at the ETA Performance *Web site: http://www.doleta.gov/performance.*

SUPPLEMENTARY INFORMATION: Ten states (*see* Appendix) qualify to receive a share of the $9.7 million available for incentive grant awards under WIA section 503. These funds, which were contributed by the Department of Education from appropriations for the Adult Education and Family Literacy Act, are available for the eligible states to use through June 30, 2012, to support innovative workforce development and education activities that are authorized under title IB (Workforce Investment Systems) or title II (the Adult Education and Family Literacy Act (AEFLA)) of WIA, or under the Carl D. Perkins Career and Technical Education Act of 2006 (Perkins IV), 20 U.S.C. 2301 *et seq.,* as amended by Public Law 109–270. In order to qualify for a grant award, a state must have exceeded its performance levels for WIA title IB and adult education (AEFLA). (Due to the lack of availability of PY 2008 performance data under the Carl D. Perkins Vocational and Technical Education Act of 1998 (Perkins III), the Department of Labor and the Department of Education did not consider states' performance levels under the Perkins Act in determining incentive grants eligibility.) The goals included employment after training and related services, retention in employment, and improvements in literacy levels, among other measures. After review of the performance data submitted by states to the Department of Labor and to the Department of Education, each Department determined for its program(s) which states exceeded their performance levels (the Appendix at the bottom of this notice lists the eligibility of each state by program). These lists were compared, and states that exceeded their performance levels for both programs are eligible to apply for and receive an incentive grant award. The amount that each state is eligible to receive was determined by the Department of Labor and the Department of Education, based on the provisions in WIA section 503(c) (20 U.S.C. 9273(c)), and is proportional to the total funding received by these states for WIA title IB and AEFLA programs.

The states eligible to apply for incentive grant awards and the amounts they are eligible to receive are listed in the following chart:

State	Amount of award
1. Colorado	$870,920
2. Connecticut	844,169
3. Illinois	1,238,005
4. Iowa	806,297
5. Kentucky	964,785
6. Minnesota	881,593
7. Missouri	988,456
8. Nebraska	784,251
9. New York	1,405,909
10. Tennessee	976,065

Dated: May 4, 2010.

Jane Oates,

Assistant Secretary for Employment and Training.

BILLING CODE 4510–FN–P

DEPARTMENT OF LABOR

Employment and Training Administration

Workforce Investment Act; Lower Living Standard Income Level

AGENCY: Employment and Training Administration, Labor.

ACTION: Notice of Determination of Lower Living Standard Income Level.

SUMMARY: Under Title I of the Workforce Investment Act (WIA) of 1998 (Pub. L. 105–220), the Secretary of Labor annually determines the Lower Living Standard Income Level (LLSIL) for uses described in the law. WIA defines the term "Low Income Individual" as one who qualifies under various criteria, including an individual who received income for a six-month period that does not exceed the higher level of the poverty line or 70 percent of the LLSIL. This issuance provides the Secretary's annual LLSIL for 2010 and references the current 2009 Health and Human Services "Poverty Guidelines." Congress has taken action to keep the 2009 HHS poverty guidelines in effect until at least May 31, 2010.

DATES: *Effective Date:* This notice is effective on the date of publication in the **Federal Register**.

ADDRESSES: Send questions about the Lower Living Standard Income Level calculations: Mr. Samuel Wright, Department of Labor, Employment and Training Administration, 200 Constitution Avenue, NW., Room S–4231, Washington, DC 20210.

Send written youth program comments to: Mr. Evan Rosenberg, Department of Labor, Employment and Training Administration, 200 Constitution Avenue, NW., Room N–4464, Washington, DC 20210.

For Further Information on LLSIL: Please contact Mr. Samuel Wright, Telephone 202–693–2870; Fax 202–693–3015 (these are not toll free numbers); e-mail address *wright.samuel.e@dol.gov*.

For Further Information on Federal Youth Programs: Evan Rosenberg, Telephone 202–693–3593; Fax 202–693–3532 (these are not toll free numbers).

SUPPLEMENTARY INFORMATION: It is the purpose of the Workforce Investment Act of 1998 "to provide workforce investment activities, through statewide and local workforce investment systems, that increase the employment, retention, and earnings of participants, and increase occupational skill attainment by participants, and as a result, improve the quality of the workforce, reduce welfare dependency, and enhance the productivity and competitiveness of the Nation."

The LLSIL is used for several purposes under WIA. Specifically, WIA Section 101(25) defines the term "low income individual" for eligibility purposes, and Sections 127(b)(2)(C) and 132(b)(1)(B)(v)(IV) define the terms "disadvantaged youth" and "disadvantaged adult" in terms of the

poverty line or LLSIL for state formula allotments. The Governor and state/local workforce investment boards (WIBs) use the LLSIL for determining eligibility for youth, eligibility for employed adult workers for certain services and for the Work Opportunity Tax Credit (WOTC). We encourage the Governors and state/local WIBs to consult WIA regulations and the preamble to the WIA Final Rule (published at 65 FR 49294 August 11, 2000) for more specific guidance in applying the LLSIL to program requirements. The Department of Health and Human Services (HHS) published the most current poverty-level guidelines in the **Federal Register** at 74 FR 4199–4201 on Jan. 23, 2009. The HHS 2009 Poverty guidelines may also be found on the Internet at: *http://aspe.hhs.gov/poverty/09fedreg.pdf*. ETA plans to have the 2010 LLSIL available on its Web site at [*http://www.doleta.gov/llsil/2010/*].

WIA Section 101(24) defines the LLSIL as "that income level (adjusted for regional, metropolitan, urban and rural differences and family size) determined annually by the Secretary [of Labor] based on the most recent lower living family budget issued by the Secretary." The most recent lower living family budget was issued by the Secretary in the fall of 1981. The four-person urban family budget estimates, previously published by the Bureau of Labor Statistics (BLS), provided the basis for the Secretary to determine the LLSIL. BLS terminated the four-person family budget series in 1982, after publication of the fall 1981 estimates. Currently, BLS provides data to ETA through which ETA develops the LLSIL tables, as provided in the Appendices.

ETA published the 2009 updates to the LLSIL in the **Federal Register** of March 26, 2009, at 74 FR 13262. This notice again updates the LLSIL to reflect cost of living increases for 2009, by applying the percentage change in the most recent 2009 Consumer Price Index for All Urban Consumers (CPI–U) for an area, compared with the 2008 CPI–U to each of the March 26, 2009 LLSIL figures. Those updated figures for a family-of-four are listed in Appendix A, Table 1, by region for both metropolitan and non-metropolitan areas. Figures in all of the accompanying tables, in the Appendices, are rounded up to the nearest dollar. Since low income individuals, "disadvantaged adult" and "disadvantaged youth" may be determined by family income at 70 percent of the LLSIL, pursuant to WIA Sections 101(25), 127(b)(2)(C), and 132(b)(1)(B)(v)(IV), respectively, those figures are listed as well.

Jurisdictions included in the various regions, based generally on Census Divisions of the U.S. Department of Commerce, are as follows:

Northeast

Connecticut
Maine
Massachusetts
New Hampshire
New Jersey
New York
Pennsylvania
Rhode Island
Vermont
Virgin Islands

Midwest

Illinois
Indiana
Iowa
Kansas
Michigan
Minnesota
Missouri
Nebraska
North Dakota
Ohio
South Dakota
Wisconsin

South

Alabama
American Samoa
Arkansas
Delaware
District of Columbia
Florida
Georgia
Northern Marianas
Oklahoma
Palau
Puerto Rico
South Carolina
Kentucky
Louisiana
Marshall Islands
Maryland
Micronesia
Mississippi
North Carolina
Tennessee
Texas
Virginia
West Virginia

West

Arizona
California
Colorado
Idaho
Montana
Nevada
New Mexico
Oregon
Utah
Washington
Wyoming

Additionally, separate figures have been provided for Alaska, Hawaii, and Guam as indicated in Appendix B, Table 2.

For Alaska, Hawaii, and Guam, the year 2009 figures were updated from the April, 2009 "State Index" based on the ratio of the urban change in the state (using Anchorage for Alaska and Honolulu for Hawaii and Guam) compared to the West regional metropolitan change, and then applying that index to the West regional metropolitan change.

Data on 23 selected MSAs are also available. These are based on semiannual CPI–U changes for a 12-month period ending in June 2009. The updated LLSIL figures for these MSAs and 70 percent of the LLSIL are reported in Appendix C, Table 3.

Appendix D, Table 4 lists each of the various figures at 70 percent of the updated 2009 LLSIL for family sizes of one to six persons. Because tables 1–3 only list the LLSIL for a family of four, table 4 can be used to determine the LLSIL for families of one to six persons. For families larger than six persons, an amount equal to the difference between the six-person and the five-person family income levels should be added to the six-person family income level for each additional person in the family. Where the poverty level for a particular family size is greater than the corresponding LLSIL figure, the figure is indicated in parentheses. A modified Excel version of Appendix D, Table 4, with the area names, will be available on the Department of Labor, Employment and Training Administration LLSIL Webpage at [*http://www.doleta.gov/llsil/2010/*]. Appendix E, Table 5, indicates 100 percent of LLSIL for family sizes of one to six and is used to determine self-sufficiency as noted at 20 CFR 663.230 of the WIA regulations and WIA Section 134(d)(3)(A)(ii).

Use of These Data

Governors should designate the appropriate LLSILs for use within the state from Appendices A, B, and C, containing Tables 1 through 3. Appendices D and E, which contain Tables 4 and 5, which adjusts a family of four figure for larger and smaller families, may be used with any LLSIL designated. The Governor's designation may be provided by disseminating information on MSAs and metropolitan and non-metropolitan areas within the state or it may involve further calculations. For example, the State of New Jersey may have four or more LLSIL figures for Northeast metropolitan, Northeast non-metropolitan, portions of the State in the New York City MSA, and those in

the Philadelphia MSA. If a workforce investment area includes areas that would be covered by more than one figure, the Governor may determine which is to be used.

Under 20 CFR 661.110, a state's policies and measures for the workforce investment system shall be accepted by the Secretary to the extent that they are consistent with the WIA and the WIA regulations.

Disclaimer on Statistical Uses

It should be noted, the publication of these figures is only for the purpose of meeting the requirements specified by WIA as defined in the law and regulations. BLS has not revised the lower living family budget since 1981, and has no plans to do so. The four-person urban family budget estimates series has been terminated. The CPI–U adjustments used to update the LLSIL for this publication are not precisely comparable, most notably because certain tax items were included in the 1981 LLSIL, but are not in the CPI–U. Thus, these figures should not be used for any statistical purposes, and are valid only for those purposes under WIA as defined in the law and regulations.

Lower Living Standard Income Level for 2010

Under Title I of the Workforce Investment Act of 1998 (Pub. L. 105–220), the Secretary of Labor annually determines the Lower Living Standard Income Level (LLSIL). This Notice announces the LLSIL Tables for 2010. WIA requires the Department of Labor to update and publish the LLSIL tables annually. The LLSIL tables are used for several purposes under WIA, including determining eligibility for youth and for the Work Opportunity Tax Credit.

Signed at Washington, DC, this 30th day of April 2010.

Jane Oates,

Assistant Secretary, Employment and Training Administration.

Appendix A

TABLE 1—LOWER LIVING STANDARD INCOME LEVEL (FOR A FAMILY OF FOUR PERSONS) BY REGION [1]

Region [2]	2010 adjusted LLSIL	70 percent LLSIL
Northeast:		
Metro	$38,759	$27,131
Non-Metro [3]	37,060	25,942
Midwest:		
Metro	34,161	23,913
Non-Metro	33,026	23,118
South:		
Metro	33,043	23,130
Non-Metro	32,318	22,623
West:		
Metro	37,471	26,230
Non-Metro [4]	35,758	25,031

[1] For ease of use, these figures are rounded to the next highest dollar.

[2] Metropolitan area measures were calculated from the weighted average CPI–Us for city size classes A and B/C. Non-metropolitan area measures were calculated from the CPI–Us for city size class D.

[3] Non-metropolitan area percent changes for the Northeast region are no longer available. The Non-metropolitan percent change was calculated using the U.S. average CPI–U for city size class D.

[4] Non-metropolitan area percent changes for the West region are unpublished data.

Appendix B

TABLE 2—LOWER LIVING STANDARD INCOME LEVEL (FOR A FAMILY OF FOUR PERSONS)—ALASKA, HAWAII AND GUAM [1]

Region	2010 adjusted LLSIL	70 percent LLSIL
Alaska:		
Metro	$45,047	$31,533
Non-Metro [2]	44,866	31,406
Hawaii, Guam:		
Metro	48,432	33,902
Non-Metro [2]	47,898	33,529

[1] For ease of use, these figures are rounded to the next highest dollar.

[2] Non-Metropolitan percent changes for Alaska, Hawaii and Guam were calculated from the CPI–Us for city size class D in the Western Region.

Appendix C

TABLE 3—LOWER LIVING STANDARD INCOME LEVEL (FOR A FAMILY OF FOUR PERSONS) 23 MSAS [1]

San Francisco—Oakland—San Jose, CA	39,916	27,941
Seattle—Tacoma—Bremerton, WA	40,784	28,549
Washington—Baltimore, DC/MD/VA/WV [2]	41,669	29,168

[1] For ease of use, these figures are rounded to the next highest dollar.

[2] Baltimore and Washington are now calculated as a single metropolitan statistical area.

Appendix D

Table 4—Seventy Percent of Updated 2010 Lower Living Standard Income Level (LLSIL), by Family Size

To use the seventy percent LLSIL value, where it is stipulated for WIA programs, begin by locating the region or metropolitan area where they reside. These are listed in Tables 1, 2 and 3. After locating the appropriate region or metropolitan statistical area, find the seventy percent LLSIL amount for that location. The seventy percent LLSIL figures are listed in the last column to the right on each of the three tables. These figures apply to a family of four. Larger and smaller family eligibility is based on a percentage of the family of four. To determine eligibility for other size families consult Table 4 and the instructions below.

To use Table 4, locate the seventy percent LLSIL value that applies to the individual's region or metropolitan area from Tables 1, 2 or 3. Find the same number in the "family of four" column of Table 4. Move left or right across that row to the size that corresponds to the individual's family unit. That figure is the maximum household income the individual is permitted in order to qualify as economically disadvantaged under WIA.

Where the HHS poverty level for a particular family size is greater than the corresponding LLSIL figure, the LLSIL figure appears in a shaded block. Individuals from these size families may consult the 2009 HHS poverty guidelines found in the **Federal Register**, Vol. 74, No. 14, January 23, 2009, pp. 4199–4201 (on the Internet at *http://aspe.hhs.gov/poverty/09fedreg.htm*) to find the higher eligibility standard. Individuals from Alaska and Hawaii should consult the HHS guidelines for the generally higher poverty levels that apply in their states.

Family of one	Family of two	Family of three	Family of four	Family of five	Family of six

Appendix E

Table 5—Updated 2010 LLSIL (100%), By Family Size

To use the LLSIL to determine the minimum level for establishing self-sufficiency criteria at the state or local level, begin by locating the metropolitan area or region from Table 1, 2 or 3. Then locate the appropriate region or metropolitan statistical area and then find the 2010 Adjusted LLSIL amount for that location. These figures apply to a family of four. Locate the corresponding number in the family of four in the column below. Move left or right across that row to the size that corresponds to the individual's family unit. That figure is the minimum figure States must set for determining whether employment leads to self-sufficiency under WIA programs.

Family of one	Family of two	Family of three	Family of four	Family of five	Family of six
$11,011	$18,040	$24,760	$30,562	$36,069	$42,182
11,289	18,501	25,406	31,353	37,002	43,270
11,400	18,681	25,641	31,646	37,352	43,678

NATIONAL LABOR RELATIONS BOARD

Sunshine Act Meetings

TIME AND DATES:

All meetings are held at 2:30 p.m.

Tuesday, May 4, Wednesday, May 5, Thursday, May 6, 2010;

Tuesday, May 11, Wednesday, May 12, Thursday, May 13, 2010;

Tuesday, May 18, Wednesday, May 19, Thursday, May 20, 2010;

Tuesday, May 25, Wednesday, May 26, Thursday, May 27, 2010.

PLACE: Board Agenda Room, No. 11820, 1099 14th St., NW., Washington DC 20570.

STATUS: Closed.

MATTERS TO BE CONSIDERED: Pursuant to § 102.139(a) of the Board's Rules and Regulations, the Board or a panel thereof will consider "the issuance of a subpoena, the Board's participation in a civil action or proceeding or an arbitration, or the initiation, conduct, or disposition … of particular representation or unfair labor practice proceedings under section 8, 9, or 10 of the [National Labor Relations] Act, or any court proceedings collateral or ancillary thereto." *See also* 5 U.S.C. 552b(c)(10).

CONTACT PERSON FOR MORE INFORMATION: Lester A. Heltzer, Executive Secretary, (202) 273–1067.

Lester A. Heltzer,

Executive Secretary.

BILLING CODE 7545–01–P

NATIONAL SCIENCE FOUNDATION

Notice of Permit Applications Received Under the Antarctic Conservation Act of 1978 (Pub. L. 95–541)

AGENCY: National Science Foundation.

ACTION: Notice of Permit Applications Received under the Antarctic Conservation Act of 1978, Public Law 95–541.

SUMMARY: The National Science Foundation (NSF) is required to publish notice of permit applications received to conduct activities regulated under the Antarctic Conservation Act of 1978. NSF has published regulations under the Antarctic Conservation Act at Title 45 Part 670 of the Code of Federal Regulations. This is the required notice of permit applications received.

DATES: Interested parties are invited to submit written data, comments, or views with respect to this permit application by June 7, 2010. This application may be inspected by interested parties at the Permit Office, address below.

ADDRESSES: Comments should be addressed to Permit Office, Room 755, Office of Polar Programs, National Science Foundation, 4201 Wilson Boulevard, Arlington, Virginia 22230.

FOR FURTHER INFORMATION CONTACT: Nadene G. Kennedy at the above address or (703) 292–7405.

SUPPLEMENTARY INFORMATION: The National Science Foundation, as directed by the Antarctic Conservation Act of 1978 (Pub. L. 95–541), as amended by the Antarctic Science, Tourism and Conservation Act of 1996, has developed regulations for the establishment of a permit system for various activities in Antarctica and designation of certain animals and certain geographic areas requiring special protection. The regulations establish such a permit system to designate Antarctic Specially Protected Areas.

The applications received are as follows:

1. *Applicant:* Permit Application No. 2011–004. Sam Feola, Director, Raytheon Polar Services Company, 7400 S. Tucson Way, Centennial, CO 80112.

Activity for Which Permit is Requested

Introduce into Antarctica. The applicant plans to import commercially available bacterial host cell, Escherichia coli, for experimental use at the science laboratories at McMurdo and Palmer Stations. The experimental purpose is to generate clones of genes and gene fragments. In both cases the

recombinant DNA is introduced into E. coli which can be cultured to produce large quantities of the recombinant DNA for analysis and sequencing. E. coli engineered for routine cloning purposes belongs to the K–12 strain, which generally cannot survive outside the Lab. All cells will be autoclaved within the Lab to destroy all active cells.

Location: Palmer and McMurdo Station laboratories.

Dates: August 13, 2010 to March 1, 2011.

Nadene G. Kennedy,

Permit Officer, Office of Polar Programs.

BILLING CODE 7555–01–P

NUCLEAR REGULATORY COMMISSION

[DOCKET NO. 70–143; NRC–2010–0175]

Nuclear Fuel Services, Inc.; Environmental Assessment and Finding of No Significant Impact for Proposed Extension of Deadline for Inventory of Special Nuclear Material

AGENCY: Nuclear Regulatory Commission.

ACTION: Environmental Assessment and Finding of No Significant Impact.

FOR FURTHER INFORMATION CONTACT: Kevin M. Ramsey, Project Manager, Fuel Cycle Facilities Branch, Division of Fuel Cycle Safety and Safeguards, Office of Nuclear Material Safety and Safeguards, U.S. Nuclear Regulatory Commission, Mail Stop EBB–2C40M, Rockville, MD 20555–0001, Telephone (301) 492–3123; Fax (301) 492–3359; e-mail *kevin.ramsey@nrc.gov.*

SUPPLEMENTARY INFORMATION:

I. Introduction

The U.S. Nuclear Regulatory Commission (NRC) staff is considering the issuance of a license amendment to Materials License SNM–124 to Nuclear Fuel Services, Inc. (NFS) (the licensee) to grant a one-time exemption from an inventory requirement for strategic special nuclear material. NRC regulations at Title 10 of the *Code of Federal Regulations* (10 CFR) 74.59(f)(1) state that a physical inventory of strategic special nuclear material must occur every six months. By letter dated March 10, 2010, NFS requested a temporary exemption from this requirement.

The NRC has prepared an Environmental Assessment (EA) in support of this amendment and exemption request in accordance with the requirements of 10 CFR Part 51. Based on the EA, the NRC has concluded that a Finding of No Significant Impact (FONSI) is appropriate; therefore, an Environmental Impact Statement (EIS) will not be prepared.

II. Environmental Assessment

Background

The NFS facility in Erwin, Tennessee is authorized, under License SNM–124 to manufacture high-enriched nuclear reactor fuel. In addition, NFS is authorized to blend highly enriched uranium with natural uranium and manufacture low-enriched nuclear reactor fuel. Currently, several processing lines are in a safe-shutdown mode, in accordance with Confirmatory Action Letter No. 02–2010–001 dated January 7, 2010. Operations were shut down without the usual material processing/clean-out that is required to be undertaken as part of a measured physical inventory. NFS is currently in the process of implementing program improvements and conducting operational readiness reviews which must be reviewed and approved by NRC before each process line is restarted. After operations are authorized, each process line must be operated to process the material to a suitable form that will enable a measurable physical inventory to occur. NFS requests that the inventory reporting date be extended until 90 days after all processing lines are authorized to restart operations, a date which is currently unknown.

Review Scope

The purpose of this EA is to assess the environmental impacts of the requested license amendment and exemption. It does not approve the request. This EA is limited to the proposed exemption and any cumulative impacts on existing plant operations. The existing conditions and operations for the Erwin facility were evaluated by NRC for environmental impacts in a 1999 EA related to the renewal of the NFS license (Ref. 1) and a 2002 EA related to the first amendment for the Blended Low-Enriched Uranium (BLEU) Project (Ref. 2). The 2002 EA assessed the impact of the entire BLEU Project using information available at that time. A 2003 EA (Ref. 3) and a 2004 EA (Ref. 4), related to additional BLEU Project amendments, confirmed the FONSI issued in 2002.

Proposed Action

The proposed action is to amend NRC Materials License SNM–124 to grant a one-time exemption from the requirement to take a physical inventory of strategic special nuclear material every six months. The exemption would authorize NFS to submit the physical inventory results after NRC has authorized the restart of all operations currently shutdown, and after NFS has had an opportunity to then process the material and complete the inventory. The proposed action is limited to the reporting deadline only. No change to processing, packaging, or storage operations is requested, and no construction of new facilities is requested.

Need for Proposed Action

The proposed action is being requested because NFS had to secure operations in several processing lines to implement program improvements. NFS has committed to maintain the processing lines in a safe-shutdown mode until NRC authorizes restart of operations. Regulations in 10 CFR 74.59(f)(1) require a physical inventory of strategic special nuclear material every six months. To comply with this regulation, the material must be processed into a form that can be inventoried. Material in the processing lines is not in a form that can be inventoried, and it cannot be processed into the proper form until the restart of operations is authorized.

Alternatives

The alternatives available to NRC are:

1. Approve the requested action as described, or

2. No action (*i.e.,* deny the request).

Affected Environment

The affected environment for the proposed action and the no action alternative is the NFS site. The NFS facility is located in Unicoi County, Tennessee, about 32 km (20 mi) southwest of Johnson City, Tennessee. The facility is within the Erwin city limits. The affected environment is identical to the affected environment assessed in the 2002 EA related to the first amendment for the BLEU Project (Ref. 2). A full description of the site and its characteristics are given in the 2002 EA. Additional information can be found in the 1999 EA related to the renewal of the NFS license (Ref. 1). The site occupies about 28 hectares (70 acres). The site is bounded to the northwest by the CSX Corporation (CSX) railroad property and the Nolichucky River; and by Martin Creek to the northeast. The plant elevation is about 9 m (30 ft) above the nearest point on the Nolichucky River.

The area adjacent to the site consists primarily of residential, industrial, and

commercial areas, with a limited amount of farming to the northwest. Privately owned residences are located to the east and south of the facility. Tract size is relatively large, leading to a low housing density in the areas adjacent to the facility. The CSX railroad right-of-way is parallel to the western boundary of the site. Industrial development is located adjacent to the railroad on the opposite side of the right-of-way. The site is bounded by Martin Creek to the north with privately owned, vacant property and low-density residences.

Environmental Impacts of Proposed Action and Alternatives

1. Occupational and Public Health

Proposed Action

The occupational and public health impacts from the proposed action are essentially the same as those considered in the previous environmental assessments. If the exemption is granted, inactive processing lines will remain in a safe-shutdown mode, which will reduce the emissions from normal operations and reduce the risk of accidents. However, the reductions would be so small that the differences would be negligible.

No Action

Denying this amendment request would not result in any significant difference in the occupational and public health impacts when compared to the proposed action. If this amendment and exemption request is denied, the licensee may be cited for failing to submit a required report. However, the material cannot be inventoried until it is processed into an appropriate form. The facility will continue to implement NRC-approved radiation safety procedures for storing and handling radioactive materials. Thus, the impacts under the "no action" alternative will remain within acceptable regulatory limits.

2. Effluent Releases, Environmental Monitoring, Water Resources, Geology, Soils, Air Quality, Demography, Biota, Cultural and Historic Resources

Proposed Action

The NRC staff has determined that the approval of the proposed action will not impact effluent releases, environmental monitoring, water resources, geology, soils, air quality, demography, biota, or cultural or historic resources at or near the NFS site.

No Action

The NRC staff has determined that denial of the proposed action will not impact effluent releases, environmental monitoring, water resources, geology, soils, air quality, demography, biota, or cultural or historic resources at or near the NFS site.

Conclusion

Based on its review, the NRC has concluded that the environmental impacts associated with the proposed action are not significant and, therefore, do not warrant the preparation of an EIS. The NRC has determined that the proposed action, approval of the license amendment and exemption as described, is the appropriate alternative for selection. Based on an evaluation of the environmental impacts of the proposed action, the NRC has determined that the proper action is to issue a FONSI.

Agencies and Persons Contacted

On April 26, 2010, the NRC staff contacted the Division of Radiological Health in the Tennessee Department of Environment and Conservation (TDEC) concerning this EA. On April 30, 2010, TDEC responded that it had reviewed the draft EA and had no comments (Ref. 6).

The NRC staff has determined that the proposed action will not affect listed species or critical habitat. Therefore, no consultation is required under Section 7 of the Endangered Species Act. Likewise, the NRC staff has determined that the proposed action is not the type of activity that has the potential to cause effects on historic properties. Therefore, no consultation is required under Section 106 of the National Historic Preservation Act.

III. Finding of No Significant Impact

Pursuant to 10 CFR part 51, the NRC staff has considered the environmental consequences of amending NRC Materials License SNM–124 to grant a one-time exemption from the physical inventory deadline for strategic special nuclear material. On the basis of this EA, the NRC has concluded that there are no significant environmental impacts associated with the proposed amendment and has determined not to prepare an EIS for the proposed amendment.

IV. Further Information

The documents referenced in this Notice may be made available to interested parties pursuant to a protective order and subject to applicable security requirements upon a showing that the party has an interest that may be affected by the proposed action.

Dated at Rockville, Maryland, this 30th day of April 2010.

For the Nuclear Regulatory Commission.

Peter J. Habighorst,

Chief, Fuel Cycle Facilities Branch, Division of Fuel Cycle Safety and Safeguards, Office of Nuclear Material Safety and Safeguards.

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

Advisory Committee on Reactor Safeguards (ACRS) Meeting of the ACRS Subcommittee on ESBWR

The ACRS Subcommittee on ESBWR will hold a meeting on May 18–19, 2010, Room T–2B1, 11545 Rockville Pike, Rockville, Maryland.

The entire meeting will be open to public attendance, with the exception of a portion that may be closed to protect information that is proprietary to General Electric-Hitachi Nuclear Americas, LLC (GEH) and its contractors pursuant to 5 U.S.C. 552b(c)(4).

The agenda for the subject meeting shall be as follows:

Tuesday, May 18, 2010—8:30 a.m. until 5 p.m.; Wednesday, May 19, 2010—8:30 a.m.–12 p.m.

The Subcommittee will discuss Chapters 4, 8, 6, and 9 of the Safety Evaluation Report associated with the

ESBWR design certification; Topical Reports related to fuel design; and the resolution of control room habitability issues. The Subcommittee will hear presentations by and hold discussions with representatives of the NRC staff, GE Hitachi Nuclear Energy, and other interested persons regarding this matter. The Subcommittee will gather information, analyze relevant issues and facts, and formulate proposed positions and actions, as appropriate, for deliberation by the Full Committee.

Members of the public desiring to provide oral statements and/or written comments should notify the Designated Federal Official (DFO), Mr. Christopher Brown (Telephone 301–415–7111 or E-mail *Christopher.Brown@nrc.gov*) five days prior to the meeting, if possible, so that appropriate arrangements can be made. Thirty-five hard copies of each presentation or handout should be provided to the DFO thirty minutes before the meeting. In addition, one electronic copy of each presentation should be e-mailed to the DFO one day before the meeting. If an electronic copy cannot be provided within this timeframe, presenters should provide the DFO with a CD containing each presentation at least thirty minutes before the meeting. Electronic recordings will be permitted only during those portions of the meeting that are open to the public. Detailed procedures for the conduct of and participation in ACRS meetings were published in the **Federal Register** on October 14, 2010, (74 FR 58268–58269).

Detailed meeting agendas and meeting transcripts are available on the NRC Web site at *http://www.nrc.gov/reading-rm/doc-collections/acrs.* Information regarding topics to be discussed, changes to the agenda, whether the meeting has been canceled or rescheduled, and the time allotted to present oral statements can be obtained from the website cited above or by contacting the identified DFO. Moreover, in view of the possibility that the schedule for ACRS meetings may be adjusted by the Chairman as necessary to facilitate the conduct of the meeting, persons planning to attend should check with these references if such rescheduling would result in a major inconvenience.

Dated: April 28, 2010.

Cayetano Santos,

Chief, Reactor Safety Branch A, Advisory Committee on Reactor Safeguards.

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

Advisory Committee on Reactor Safeguards (ACRS) Meeting of the ACRS Subcommittee on Regulatory Policies and Practices

The ACRS Subcommittee on Regulatory Policies and Practices will hold a meeting on May 19, 2010, Room T–2B1, 11545 Rockville Pike, Rockville, Maryland.

The entire meeting will be open to public attendance.

The agenda for the subject meeting shall be as follows:

Wednesday, May 19, 2010—1 p.m. until 5 p.m.

The Subcommittee will review Draft Final Regulatory Guide 1.216 (previously DG–1203) "Containment Structural Integrity Evaluation for Internal Pressure Loadings Above Design-Basis Pressure". The DG was issued for public comment and subsequently revised in order to incorporate some of the public comments and/or to improve on the newly proposed guidelines. The Subcommittee will hear presentations by and hold discussions with representatives of the NRC staff, and other interested persons regarding this matter. The Subcommittee will gather information, analyze relevant issues and facts, and formulate proposed positions and actions, as appropriate, for deliberation by the Full Committee.

Members of the public desiring to provide oral statements and/or written comments should notify the Designated Federal Official (DFO), Mrs. Zena Abdullahi (Telephone 301–415–8716 or E-mail *Zena.Abdullahi@nrc.gov*) five days prior to the meeting, if possible, so that appropriate arrangements can be made. Thirty-five hard copies of each presentation or handout should be provided to the DFO thirty minutes before the meeting. In addition, one electronic copy of each presentation should be emailed to the DFO one day before the meeting. If an electronic copy cannot be provided within this timeframe, presenters should provide the DFO with a CD containing each presentation at least thirty minutes before the meeting. Electronic recordings will be permitted only during those portions of the meeting that are open to the public. Detailed procedures for the conduct of and participation in ACRS meetings were published in the **Federal Register** on October 14, 2010, (74 FR 58268–58269).

Detailed meeting agendas and meeting transcripts are available on the NRC Web site at *http://www.nrc.gov/reading-rm/doc-collections/acrs.* Information regarding topics to be discussed, changes to the agenda, whether the meeting has been canceled or rescheduled, and the time allotted to present oral statements can be obtained from the website cited above or by contacting the identified DFO. Moreover, in view of the possibility that the schedule for ACRS meetings may be adjusted by the Chairman as necessary to facilitate the conduct of the meeting, persons planning to attend should check with these references if such rescheduling would result in a major inconvenience.

Dated: April 28, 2010.

Antonio Dias,

Chief, Reactor Safety Branch B, Advisory Committee on Reactor Safeguards.

POSTAL REGULATORY COMMISSION

[Docket Nos. CP2010–40, CP2010–41, CP2010–42, CP2010–43, CP2010–44, CP2010–45 and CP2010–46; Order No. 451]

New Postal Products

AGENCY: Postal Regulatory Commission.

ACTION: Notice.

SUMMARY: The Commission is noticing a recently-filed Postal Service filing to add new Global Expedited Packages Services 2 products to the Competitive Product List. This notice addresses procedural steps associated with the filing.

DATES: Comments are due: May 10, 2010.

ADDRESSES: Submit comments electronically via the Commission's Filing Online system at *http://www.prc.gov.* Commenters who cannot submit their views electronically should contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section by telephone for advice on alternatives to electronic filing.

FOR FURTHER INFORMATION CONTACT: Stephen L. Sharfman, General Counsel, 202–789–6820 and *stephen.sharfman@prc.gov.*

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Introduction

On April 29, 2010, the Postal Service filed a notice announcing that it has entered into seven additional Global

Expedited Package Services 2 (GEPS 2) contracts.[1] The Postal Service believes the instant contracts are functionally equivalent to previously submitted GEPS 2 contracts, and are supported by Governors' Decision No. 08–7, attached to the Notice and originally filed in Docket No. CP2008–4. *Id.* at 1, Attachment 3. The Notice also explains that Order No. 86, which established GEPS 1 as a product, also authorized functionally equivalent agreements to be included within the product, provided that they meet the requirements of 39 U.S.C. 3633. *Id.* at 1. In Order No. 290, the Commission approved the GEPS 2 product.[2]

The instant contracts. The Postal Service filed the instant contracts pursuant to 39 CFR 3015.5. In addition, the Postal Service contends that each contract is in accordance with Order No. 86. The term of each contract is 1 year from the date the Postal Service notifies the customer that all necessary regulatory approvals have been received. Notice at 2–3.

In support of its Notice, the Postal Service filed four attachments as follows:

- Attachments 1A, 1B, 1C, 1D, 1E, 1F and 1G—redacted copies of the seven contracts and applicable annexes;
- Attachments 2A, 2B, 2C, 2D, 2E, 2F and 2G—a certified statement required by 39 CFR 3015.5(c)(2) for each of the seven contracts;
- Attachment 3—a redacted copy of Governors' Decision No. 08–7 which establishes prices and classifications for GEPS contracts, a description of applicable GEPS contracts, formulas for prices, an analysis and certification of the formulas and certification of the Governors' vote; and
- Attachment 4—an application for non-public treatment of materials to maintain redacted portions of the contracts and supporting documents under seal.

The Notice advances reasons why the instant GEPS 2 contracts fit within the Mail Classification Schedule language for GEPS 2. The Postal Service identifies customer-specific information, general contract terms and other differences that distinguish the instant contracts from the baseline GEPS 2 agreement, all of which are highlighted in the Notice. *Id.* at 3–6. These modifications as described in the Postal Service's Notice apply to each of the instant contracts.

The Postal Service contends that the instant contracts are functionally equivalent to the GEPS 2 contracts filed previously notwithstanding these differences. *Id.* at 6–7.

The Postal Service asserts that several factors demonstrate the contracts' functional equivalence with previous GEPS 2 contracts, including the product being offered, the market in which it is offered, and its cost characteristics. *Id.* at 3. The Postal Service concludes that because the GEPS agreements "incorporate the same cost attributes and methodology, the relevant cost and market characteristics are similar, if not the same..." despite any incidental differences. *Id.* at 6.

The Postal Service contends that its filings demonstrate that each of the new GEPS 2 contracts complies with the requirements of 39 U.S.C. 3633 and is functionally equivalent to previous GEPS 2 contracts. It also requests that the contracts be included within the GEPS 2 product. *Id.* at 7.

II. Notice of Filing

The Commission establishes Docket Nos. CP2010–40, CP2010–41, CP2010–42, CP2010–43, CP2010–44, CP2010–45 and CP2010–46 for consideration of matters related to the contracts identified in the Postal Service's Notice.

These dockets are addressed on a consolidated basis for purposes of this order. Filings with respect to a particular contract should be filed in that docket.

Interested persons may submit comments on whether the Postal Service's contracts are consistent with the policies of 39 U.S.C. 3632, 3633 or 3642. Comments are due no later than May 10, 2010. The public portions of these filings can be accessed via the Commission's Web site *(http://www.prc.gov)*.

The Commission appoints Paul L. Harrington to serve as Public Representative in the captioned proceedings.

III. Ordering Paragraphs

It is ordered:

1. The Commission establishes Docket Nos. CP2010–40, CP2010–41, CP2010–42, CP2010–43, CP2010–44, CP2010–45 and CP2010–46 for consideration of matters raised by the Postal Service's Notice.

2. Comments by interested persons in these proceedings are due no later than May 10, 2010.

3. Pursuant to 39 U.S.C. 505, Paul L. Harrington is appointed to serve as the officer of the Commission (Public Representative) to represent the interests of the general public in these proceedings.

4. The Secretary shall arrange for publication of this order in the **Federal Register**.

By the Commission.

Shoshana M. Grove,

Secretary.

SMALL BUSINESS ADMINISTRATION

[Disaster Declaration #12147 and #12148]

Mississippi Disaster #MS–00035

AGENCY: Small Business Administration.

ACTION: Notice.

SUMMARY: This is a Notice of the Presidential declaration of a major disaster for the State of Mississippi (FEMA–1906–DR), dated 04/29/2010.

Incident: Severe Storms, Tornadoes, and Flooding.

Incident Period: 04/23/2010 through 04/24/2010.

Effective Date: 04/29/2010.

Physical Loan Application Deadline Date: 06/28/2010.

Economic Injury (EIDL) Loan Application Deadline Date: 01/29/2011.

ADDRESSES: Submit completed loan applications to: Small Business Administration, Processing and Disbursement Center, 14925 Kingsport Road, Fort Worth, TX 76155.

FOR FURTHER INFORMATION CONTACT: A. Escobar, Office of Disaster Assistance, U.S. Small Business Administration, 409 3rd Street, SW., Suite 6050, Washington, DC 20416.

SUPPLEMENTARY INFORMATION: Notice is hereby given that as a result of the President's major disaster declaration on 04/29/2010, applications for disaster loans may be filed at the address listed above or other locally announced locations.

The following areas have been determined to be adversely affected by the disaster:

Primary Counties (Physical Damage and Economic Injury Loans): Attala, Choctaw, Holmes, Warren, Yazoo.

Contiguous Counties and Parishes (Economic Injury Loans Only):

Mississippi: Carroll, Claiborne, Hinds, Humphreys, Issaquena, Leake, Leflore, Madison, Montgomery, Neshoba, Oktibbeha, Sharkey, Webster, Winston.

Louisiana: East Carroll, Madison, Tensas.

The Interest Rates are:

	Percent
For Physical Damage:	
Homeowners With Credit Available Elsewhere	5.500
Homeowners Without Credit Available Elsewhere	2.750
Businesses With Credit Available Elsewhere	6.000
Businesses Without Credit Available Elsewhere	4.000
Non-Profit Organizations With Credit Available Elsewhere	3.625
Non-Profit Organizations Without Credit Available Elsewhere	3.000
For Economic Injury:	
Businesses & Small Agricultural Cooperatives Without Credit Available Elsewhere	4.000
Non-Profit Organizations Without Credit Available Elsewhere	3.000

The number assigned to this disaster for physical damage is 12147C and for economic injury is 121480.

BILLING CODE 8025–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–62012; File No. SR–ISE–2010–36]

Self-Regulatory Organizations; International Securities Exchange, LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change Relating to the Options Regulatory Fee

April 30, 2010.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the "Act"),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on April 26, 2010, the International Securities Exchange, LLC (the "Exchange" or the "ISE") filed with the Securities and Exchange Commission the proposed rule change as described in Items I, II, and III, below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The ISE is proposing to amend the Options Regulatory Fee. The text of the proposed rule change is available on the Exchange's Web site (*http://www.ise.com*), at the principal office of the Exchange, at the Commission's Public Reference Room, and on the Commission's Web site at *http://www.sec.gov*.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The self-regulatory organization has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The purpose of the proposed rule change is to amend the Options Regulatory Fee ("ORF"). The Exchange notes that the total monthly charges to be assessed in a given month will be rounded to the nearest $0.01. The Exchange currently charges an ORF of $0.0035 per contract to each member for all options transactions executed or cleared by the member that are cleared by The Options Clearing Corporation ("OCC") in the customer range, *i.e.*, transactions that clear in the customer account of the member's clearing firm at OCC. The ORF is collected indirectly from members through their clearing firms by OCC on behalf of the Exchange. There is a minimum one-cent charge per trade.[3] The Exchange does not calculate the ORF on a trade-by-trade basis. ISE calculates the ORF based on the aggregate number of contracts executed by each clearing firm every month. Accordingly, the Exchange proposes to remove the minimum one-cent charge per trade. The Exchange believes eliminating the one-cent charge per trade should reduce the fee related to the ORF for members.

This proposed fee change will be operative on May 1, 2010.

2. Statutory Basis

The basis under the Securities Exchange Act of 1934 (the "Exchange Act") for this proposed rule change is the requirement under Section 6(b)(4) that an exchange have an equitable allocation of reasonable dues, fees and other charges among its members and other persons using its facilities. The Exchange believes this proposed rule change is equitable because it eliminates the minimum one-cent charge per trade thereby reducing the monthly ORF charge to all members.

B. Self-Regulatory Organization's Statement on Burden on Competition

The proposed rule change does not impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange has not solicited, and does not intend to solicit, comments on this proposed rule change. The Exchange has not received any unsolicited written comments from members or other interested parties.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act[4] and paragraph (f)(2) of Rule 19b–4[5] thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission may summarily abrogate such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an e-mail to *rule-comments@sec.gov*. Please include File Number SR–ISE–2010–36 on the subject line.

Paper Comments

- Send paper comments in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street, NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–ISE–2010–36. This file number should be included on the subject line if e-mail is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] *See* Securities Exchange Act Release No. 61154 (December 11, 2009), 74 FR 67278 (December 18, 2009) (SR–ISE–2009–105).

[4] 15 U.S.C. 78s(b)(3)(A)(ii).

[5] 17 CFR 240.19b–4(f)(2).

Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street, NE., Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–ISE–2010–36 and should be submitted on or before May 28, 2010.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[6]

Florence E. Harmon,

Deputy Secretary.

BILLING CODE 8010–01–P

DEPARTMENT OF STATE

[Public Notice: 6990]

30-Day Notice of Proposed Information Collection: DS–4100, Iran Program Grants Vetting, Information Collection 1405–0176

ACTION: Notice of request for public comments and submission to OMB of proposed collection of information.

SUMMARY: The Department of State has submitted the following information collection request to the Office of Management and Budget (OMB) for approval in accordance with the Paperwork Reduction Act of 1995.

Title of Information Collection: Iran Program Grants.

- *OMB Control Number:* 1405–0176.
- *Type of Request:* Extension of a Currently Approved Collection.
- *Originating Office:* Office of Iranian Affairs, Bureau of Near Eastern Affairs (NEA/IR).
- *Form Number:* DS–4100.
- *Respondents:* Potential grantees and participants for Iran programs.
- *Estimated Number of Respondents:* 200.
- *Estimated Number of Responses:* 200.
- *Average Hours per Response:* 1.
- *Total Estimated Burden:* 200.
- *Frequency:* On occasion.
- *Obligation to Respond:* Required to obtain benefits.

DATES: The Department will accept comments from the public up to 30 days from May 7, 2010.

ADDRESSES: Direct comments to the Department of State Desk Officer in the Office of Information and Regulatory Affairs at the Office of Management and Budget (OMB). You may submit comments by the following methods:

- *E-mail: oira_submission@omb.eop.gov.* You must include the DS form number, information collection title, and OMB control number in the subject line of your message.
- *Fax:* 202–395–5806. Attention: Desk Officer for Department of State.

FOR FURTHER INFORMATION CONTACT: Direct requests for additional information regarding the collection listed in this notice, including requests for copies of the proposed information collection and supporting documents, to Danika Walters, Bureau of Near Eastern Affairs, U.S. Department of State, Washington, DC 20520, who may be reached on 202–647–1347, or via e-mail at *WaltersDL@state.gov.*

SUPPLEMENTARY INFORMATION:

We are soliciting public comments to permit the Department to:

- Evaluate whether the proposed information collection is necessary for the proper performance of our functions.
- Evaluate the accuracy of our estimate of the burden of the proposed collection, including the validity of the methodology and assumptions used.
- Enhance the quality, utility, and clarity of the information to be collected.
- Minimize the reporting burden on those who are to respond, including the use of automated collection techniques or other forms of technology.

Abstract of Proposed Collection

The State Department has made the awarding of grants a key component of its Iran policy. As a condition of licensing these activities, the Office of Foreign Assets Control (OFAC) mandate that the Department conduct a vetting of potential Iran programs grantees and sub-grantees for counter-terrorism purposes. To conduct this vetting the Department envisions collecting information from grantees and sub-grantees regarding the identity and background of their key employees, board of directors, and program participants.

Methodology

We will collect this information either through fax or electronic submission.

Dated: May 3, 2010.

Jillian Burns,

Office Director, Office of Iranian Affairs, Bureau of Near Eastern Affairs, Department of State.

[FR Doc. 2010–10838 Filed 5–6–10; 8:45 am]

BILLING CODE 4710–31–P

DEPARTMENT OF STATE

[Public Notice 6984]

Request for Nominations of Experts for Consideration as Authors and/or Editors for the Fifth Global Environment Outlook (GEO–5)

ACTION: This is an announcement of an opportunity to recommend experts to the U.S. Government for nomination as Coordinating Lead Authors, Lead Authors, Contributing Authors and Review Editors for the Fifth Global Environment Outlook (GEO–5).

SUMMARY: Governments, along with other stakeholder groups, relevant institutions, and United Nations agencies, have been invited to nominate experts to participate in the GEO–5 assessment. The Department of State is coordinating the recommendation of experts to the United Nations Environment Programme (UNEP) for GEO–5. The purpose of GEO–5 is to provide a comprehensive, integrated, and scientifically credible global environmental assessment to support decision-making processes at appropriate levels. Individuals may seek to nominate others (or themselves) directly on *http://www.unep.org/geo/nominations/*, or through the U.S. government. For those who wish to submit their nominations through the U.S. government, your nomination must be submitted to UNEP at the Web site above, and the nomination must also be received at the U.S. Department of State, Office of Environmental Policy, which is coordinating the U.S. Government nomination process, no later than May 12, 2010. The remainder of this announcement provides background information and describes how to submit recommendations.

The Global Environment Outlook is the primary assessment process of the UN Environment Programme (UNEP), which helps keep the global environment under review. It is a tool that informs decision-making, focusing on assessment priorities and analyzing policy challenges and opportunities to provide policy response options. It is

[6] 17 CFR 200.30–3(a)(12).

also a communications tool that brings together diverse stakeholder groups, builds capacity and aims to raise awareness on the status and trends of the environment.

Experts are expected to have a thorough understanding in one or more of the following areas: Environmental science; environment and development priorities, challenges and policy; and environmental management or governance. UNEP will select nominees by matching expertise to specific roles, paying due regard to disciplinary, gender and geographical balance. Details of the GEO–5 nominating process may be found online at *http://www.unep.org/geo/nominations/* and *http://www.globalchange.gov/globalenvironmentoutlook*. To access the nominations form on the UNEP Web site, please use *Username:* geo5_2012 and *Password:* nominee. Nominations may be made on *http://www.unep.org/geo/nominations/*. For nominations to be considered within the U.S. Government nomination process, they must also be submitted to the United States Department of State. GEO–5 will review the nominations from all participating governments, individuals and organizations and make final decisions on nominees.

Selection as a U.S. Government nominee does not guarantee selection by GEO–5 itself. Participants in the GEO process volunteer their time. Nominated individuals should agree in advance to fulfill the role for which they are nominated, should they be selected to do so by GEO. Nomination by the U.S. Government to GEO–5 does not imply a commitment by the U.S. Government to provide financial support for participation.

UNEP may provide travel and subsistence costs for non-Federal participants if requested by the participant, subject to the availability of resources. Additional guidance on compensation of expenses and remuneration of services will be available on the UNEP Web site.

How to Recommend Experts

1. Refer to the GEO–5 Web site *http://www.unep.org/geo/nominations/* for detailed background information on the 5th Assessment Report. To access the nominations form on the UNEP Web site, please use *Username:* geo5_2012 and *Password:* nominee. The document on GEO–5 nominations identifies the substantive areas covered in each of the chapters of the report. It is important to note that the time commitment required to carry out different roles in the GEO–5 process varies greatly.

2. Make sure that any of the experts that you wish to recommend are willing to serve in the role for which they are nominated.

3. Nominations to be considered within the U.S. Government nomination process must be submitted to the U.S. Department of State, Office of Environmental Policy no later than May 12, 2010. Complete the GEO–5 nomination form, one for each nominee, including an up-to-date CV, identification of the relevant chapters, and the role for which the individual is being nominated. Send this information by e-mail to *rosenmanrg@state.gov* by May 12. Please note that partial nomination packages will not be considered.

What happens next?

In a process coordinated through the U.S. Department of State, Bureau of Oceans and International Environmental and Scientific Affairs, Office of Environmental Policy, technical experts and managers of relevant science and technology programs within the U.S. government will make and review recommendations and forward a slate of nominees to GEO–5 on the basis of their qualifications. Submission of a nomination to the State Department does not guarantee that the nomination will be forwarded by the U.S. Government to UNEP.

For Further Information

Richard Rosenman of the Office of Environmental Policy, U.S. Department of State, is serving as the coordinator of this nomination process. Mr. Rosenman can be reached at 1–202–647–1126, e-mail *rosenmanrg@state.gov*.

Disclaimer: This Public Notice is a request for nominations, and is not a request for applications. No granting or money is directly associated with this request for suggestions for GEO–5. There is no expectation of U.S. Government resources or funding associated with any nominations.

Dated: May 3, 2010.

Willem H. Brakel,

Director, Office of Environmental Policy, Department of State.

BILLING CODE 4710–09–P

DEPARTMENT OF TRANSPORTATION

Federal Highway Administration

Environmental Impact Statement: Winnebago County, IL and Rock County, WI

AGENCY: Federal Highway Administration (FHWA), DOT.

ACTION: Notice of Intent.

SUMMARY: The FHWA is issuing this notice to advise the public that an environmental impact statement will not be prepared for the corridor extending from the intersection of Wisconsin Route 213 and Nye School Road northwest of Beloit, Rock County, Wisconsin to the interchange of Rockton Road and I–90 southeast of South Beloit, Winnebago County, Illinois.

FOR FURTHER INFORMATION CONTACT: Norman R. Stoner, P.E., Division Administrator, Federal Highway Administration, 3250 Executive Park Drive, Springfield, Illinois 62703, Phone: (217) 492–4600. George F. Ryan, P.E., Region Two Engineer, District 2, Illinois Department of Transportation, 819 Depot Avenue, Dixon, Illinois 61021, Phone: (815) 284–2271.

SUPPLEMENTARY INFORMATION: The FHWA, in cooperation with the Illinois Department of Transportation, published a notice of intent to prepare an Environmental Impact Statement (EIS) in the **Federal Register** dated October 26, 1995 (Volume 60, Number 207, pp. 54910–54911) to study a proposal to construct a highway on new alignment over a distance of approximately eight miles to better serve the transportation needs of the Beloit and Janesville Urbanized Areas.

Due to public opposition, lack of regional support and a change in the conditions in the region that warranted the study, this project has been cancelled and no further project activities will occur.

Comments or questions concerning this notice should be directed to FHWA or the Illinois Department of Transportation at the addresses provided above.

Issued on: April 30, 2010.

Norman R. Stoner,

Division Administrator, Springfield, Illinois.

[FR Doc. 2010–10768 Filed 5–6–10; 8:45 am]

BILLING CODE 4910–22–P

DEPARTMENT OF TRANSPORTATION

Federal Highway Administration

Environmental Impact Statement: Cook County, IL

AGENCY: Federal Highway Administration (FHWA), DOT.

ACTION: Notice of Intent.

SUMMARY: The FHWA is issuing this Notice to advise the public that an Environmental Impact Statement (EIS) will be prepared for the 75th Street Corridor Improvement Project, which involves construction of new railroad main tracks, two new rail flyover bridges, and a new rail/roadway grade separation structure within existing rail corridors in the cities of Chicago and Hometown, Cook County, Illinois.

FOR FURTHER INFORMATION CONTACT: Norman R. Stoner, P.E., Division Administrator, Federal Highway Administration, Springfield, Illinois 62703, Phone: (217) 492–4600. George Weber, Chief, Bureau of Railroads, Illinois Department of Transportation, 100 W Randolph Street, Suite 6–600, Chicago, Illinois 60601–3229, Phone: (312) 793–4222.

SUPPLEMENTARY INFORMATION: The FHWA, in cooperation with the Illinois Department of Transportation, Bureau of Railroads, will prepare an EIS on a proposal to reconfigure freight and passenger rail tracks within an existing approximately 12-mile corridor generally centered along 75th Street in south Chicago. The proposed project comprises several elements of the overall Chicago Region Environmental and Transportation Efficiency Program (CREATE), a joint effort of the Illinois Department of Transportation, the Chicago Department of Transportation, and the Association of American Railroads to restructure, modernize, and expand freight and passenger rail facilities and highway grade separations in the Chicago metropolitan area. Alternative configurations of rail flyovers and track realignments will be considered and refined. The no-action alternative will also be evaluated. A preferred alternative will be presented at a public hearing. Preliminary measures to minimize harm, construction cost estimates, and estimated right-of-way and relocation requirements will also be developed.

The proposed action will reduce rail congestion and delays by eliminating conflicts between four freight railroads and two passenger railroads operating in the corridor, improve roadway safety by eliminating an existing at-grade roadway crossing, and allow passenger rail access from the Metra Southwest Service to the LaSalle Street Station, thereby reducing congestion at Union Station. The project area consists of urban residential and industrial land uses, so no natural resource impacts are anticipated. Potential impacts may include residential relocations, effects on community cohesion and travel patterns, impacts to publicly-owned parks, and impacts to properties potentially eligible for listing on the National Register of Historic Places. There is also the potential for noise and air quality impacts.

To ensure that the full range of issues related to this proposed action are addressed, and all substantive issues are identified, this project is being developed using the principles of Context Sensitive Solutions per the Illinois Department of Transportation's Policies and Procedures. A Stakeholder Involvement Plan (SIP) will be developed that will detail the public involvement activities that will be conducted as part of this study, and will address the Coordination Plan requirements of 23 U.S.C. 139(g) within the context of the NEPA process. Under the SIP, an interdisciplinary Project Study Group will be formed to develop the project, and a Community Advisory Group will be formed to provide input to the study process. As part of the EIS process, a scoping meeting for obtaining input from Resource Agencies will be held on June 11, 2010. Public informational meetings, focus meetings with stakeholders, a public hearing, newsletters, a project Web site and interest group meetings will provide opportunities for public involvement. The project's Draft EIS will be available for public and agency review prior to the public hearing. The time and location of the public hearing will be announced in local newspapers. Comments or questions concerning this proposed action and the Draft EIS should be directed to FHWA or the Illinois Department of Transportation at the addresses provided above.

(Catalog of Federal Domestic Assistance Program Number 20.205, Highway Planning and Construction. The regulations implementing Executive Order 12372 regarding intergovernmental consultation of Federal program and activities apply to this program.)

Issued on: April 28, 2010.

Norman R. Stoner,

Division Administrator.

Federal Highway Administration

Notice of Final Federal Agency Actions on Proposed Expanded Intermodal Freight Terminal in Michigan

AGENCY: Federal Highway Administration (FHWA), DOT.

ACTION: Notice of Decision by FHWA and Notice of Limitation of Claims for Judicial Review of Actions by FHWA and Other Federal Agencies.

SUMMARY: This notice announces the availability of a Record of Decision by FHWA pursuant to the requirements of the National Environmental Protection Policy Act of 1969 (NEPA), 42 U.S.C. 4321, as amended and the Council on Environmental Quality Regulations (40 CFR Parts 1500–1508). In addition, this Notice announces actions taken by FHWA and other Federal agencies that are final within the meaning of 23 U.S.C. 139(1)(1). These actions relate to proposed improvements to the Livernois-Junction Yard, also known as the Detroit Intermodal Freight Terminal (DIFT) and associated external-to-terminal road and rail improvements in Wayne County, Michigan. These actions grant approvals for the project.

DATES: By this notice, the FHWA is advising the public of final agency actions subject to 23 U.S.C. 771 and 23 U.S.C. 139(1)(1). A claim seeking judicial review of the Federal Agency actions on the highway project will be barred unless the claim is filed on or before November 3rd, 2010 (180 days from May 7th). If the Federal law that authorizes that judicial review of a claim provides a time period of less than 180 days for filing such claim, then that shorter time period still applies.

FOR FURTHER INFORMATION CONTACT: Mr. David Williams, Environmental Program Manager, Federal Highway Administration Michigan Division, 315 West Allegan Street, Room 201, Lansing, MI 48933; phone: (517) 702–1820, Fax: (517) 377–1804; and e-mail: *David.Williams@dot.gov*. Mr. Ryan Rizzo, Major Project Manager, Federal Highway Administration Michigan Division, 315 West Allegan Street, Room 201, Lansing, MI 48933; phone: (517) 702–1833, Fax: (517) 377–1844; e-mail: *Ryan.Rizzo@dot.gov.*

SUPPLEMENTARY INFORMATION: Notice is hereby given that the FHWA and other Federal agencies have taken final agency actions by issuing approvals for the following expansion project in the State of Michigan: Detroit Intermodal Freight Terminal. The selected alternative will: Expand the Norfolk Southern (NS) and

CSX intermodal operations at the Livernois-Junction Yard; provide the opportunity to shift the NS Triple Crown operations from Melvindale and Willow Run in Romulus to the Livernois-Junction Yard; move the CP Oak intermodal operation to the Livernois-Junction Yard; provide for external rail improvements, with participation by all four Class I railroads in Michigan (NS, CSX, CP, and CN); make roadway and yard entry gate changes; and provide enhancements to the community. The selected alternatives are primarily between John Kronk and Livernois Avenue in Southwest Detroit and east Dearborn, in Wayne County, Michigan.

The actions by the Federal agencies, and the laws under which such actions were taken, are described in the Final Environmental Impact Statement for the project approved on December 1, 2009; in the FHWA Record of Decision (ROD) issued on April 22, 2010; and in other project records. The FEIS, ROD, and other documents in the FHWA project file are available by contacting the FHWA. The FHWA FEIS and ROD can be viewed and downloaded from the project Web site at: *http://www.michigan.gov/mdot/0,1607,7-151-9621_11058---,00.html* or viewed at public libraries in the project area.

This notice applies to all Federal agency decisions on the listed projects as of the issuance date of this notice and all laws under which such actions were taken, including but not limited to:

1. *General:* National Environmental Policy Act [42 U.S.C. 4321–4351]; Federal-Aid Act [23 U.S.C. 109].

2. *Air:* Clean Air Act, as amended [42 U.S.C. 7401–7671(q)].

3. *Land:* Section 4(f) of the Department of Transportation Act of 1966 [49 U.S.C. 303]; Landscaping and Scenic Enhancement (Wildflowers) [23 U.S.C. 319].

4. *Wildlife and Plants:* Endangered Species Act [16 U.S.C. 1531–1544].

5. *Historic and Cultural Resources:* Section 106 of the National Historic Preservation Act of 1966, as amended [16 U.S.C. 470(f) *et seq.*]; Archeological Resources Protection Act of 1977 [16 U.S.C. 470(aa)–11]; Archeological and Historic Preservation Act [16 U.S.C. 469–469(c)].

6. *Social and Economic:* Civil Rights Act of 1964 [42 U.S.C. 2000(d)–2000(d)(1)]; American Indians Religious Freedom Act [42 U.S.C. 1996]; Farmland Protection Act [7 U.S.C. 4201–4209]; the Uniform Relocation Assistance and Real Property Acquisition Policies of 1970, as amended [42 U.S.C. 61].

7. *Wetlands and Water Resources:* Clean Water Act [33 U.S.C. 1251–1377 (Section 404, Section 401, Section 319)]; Coastal Zone Management Act [14 U.S.C. 1451–1465]; Land and Water Conservation Fund [16 U.S.C. 4601–4604]; Safe Drinking Water Act [42 U.S.C. 300(f)–300(j)(6)]; Rivers and Harbors Act of 1899 [42 U.S.C. 401–406]; TEA–21 Wetland Mitigation [23 U.S.C. 103(b)(6)(m), 133(b)(11)]; Flood Disaster Protection Act [42 U.S.C. 4001–4128].

8. *Hazardous Materials:* Comprehensive Environmental Response, Compensation and Liability Act [42 U.S.C. 9501–9675]; Superfund Amendments and Reauthorization Act of 1986 [PL 99–499]; Resource, Conservation and Recovery Act [42 U.S.C. 6901–6992(k)].

9. *Executive Orders:* E.O. 11990, Protection of Wetlands; E.O. 11988, Floodplains Management; E.O. 12898, Federal Actions to Address Environmental Justice in Minority and Low Income Populations; E.O. 11593, Protection and Enhancement of Cultural Resources; E.O. 13007, Indian Sacred Sites; E.O. 13112, Invasive Species; E.O. 13274, Environmental Stewardship and Transportation Infrastructure Project Reviews.

(Catalog of Federal Domestic Assistance Program Number 20.205, Highway Planning and Construction. The regulations implementing Executive Order 12372 regarding intergovernmental consultation on federal programs and activities apply to this program.)

Authority: 23 U.S.C. 139(l)(1).

Issued on: April 30, 2010.

Russell L. Jorgenson,

Division Administrator, Federal Highway Administration, Lansing, Michigan.

BILLING CODE 4910–22–P

DEPARTMENT OF TRANSPORTATION

Surface Transportation Board

[Docket No. FD 35374]

Port Harbor Railroad, Inc.—Lease and Operation Exemption—Line of Tri-City Regional Port District

Port Harbor Railroad, Inc. (Port Harbor), a noncarrier, has filed a verified notice of exemption under 49 CFR 1150.31 to lease from Tri-City Regional Port District (Tri-City), and to operate, a 2.97-mile line of railroad extending between milepost 0.00 and milepost 2.97 in Madison County, Ill.

The transaction is expected to be consummated on or after June 10, 2010.

Port Harbor certifies that its projected annual revenues as a result of this transaction will not exceed those that would qualify it as a Class III rail carrier. Port Harbor further certifies that its projected annual revenues as a result of this transaction will not exceed $5 million.

According to Port Harbor, Tri-City is not a common carrier and has no intention of becoming one. Port Harbor states that, at the present time, the industries located on Tri-City's property receive service over the rail lines of the Terminal Railroad Association of St. Louis that end at milepost 0.00. From milepost 0.00 to milepost 2.97, service is performed by a contractor hired by Tri-City to provide switching service. Port Harbor explains that the proposed transaction will provide more coordinated service to shippers by licensing Port Harbor as a common carrier on the 2.97-mile line and through industrial track agreements with Port Harbor to provide switching service. The lease and operation agreement covers all track and railroad rights-of-way between milepost 0.00 and milepost 2.97, including all appurtenances thereto, and any bridges, culverts or other structures over which such track or tracks may be constructed. Port Harbor states that the proposed transaction will not involve any agreement that would limit future interchange traffic with a third-party connecting carrier.

If the verified notice contains false or misleading information, the exemption is void *ab initio.* Petitions to revoke the exemption under 49 U.S.C. 10502(d) may be filed at any time. The filing of a petition to revoke will not automatically stay the effectiveness of the exemption. Stay petitions must be filed no later than May 14, 2010 (at least 7 days before the exemption becomes effective).

An original and 10 copies of all pleadings, referring to Docket No. FD 35374, must be filed with the Surface Transportation Board, 395 E Street, SW., Washington, DC 20423–0001. In addition, one copy of each pleading must be served on Andrew P. Goldstein, McCarthy, Sweeney & Harkaway, P.C., 1825 K Street, NW., Suite 700, Washington, DC 20006.

Board decisions and notices are available on our Web site at *www.stb.dot.gov.*

Decided: May 3, 2010.

By the Board, Rachel D. Campbell, Director, Office of Proceedings.

Jeffrey Herzig,

Clearance Clerk.

BILLING CODE 4915–01–P

DEPARTMENT OF TRANSPORTATION

Maritime Administration

[Docket No. MARAD 2010 0047]

Requested Administrative Waiver of the Coastwise Trade Laws

AGENCY: Maritime Administration, Department of Transportation.

ACTION: Invitation for public comments on a requested administrative waiver of the Coastwise Trade Laws for the vessel EROS.

SUMMARY: As authorized by 46 U.S.C. 12121, the Secretary of Transportation, as represented by the Maritime Administration (MARAD), is authorized to grant waivers of the U.S.-build requirement of the coastwise laws under certain circumstances. A request for such a waiver has been received by MARAD. The vessel, and a brief description of the proposed service, is listed below. The complete application is given in DOT docket MARAD–2010–0047 at *http://www.regulations.gov.* Interested parties may comment on the effect this action may have on U.S. vessel builders or businesses in the U.S. that use U.S.-flag vessels. If MARAD determines, in accordance with 46 U.S.C. 12121 and MARAD's regulations at 46 CFR part 388 (68 FR 23084; April 30, 2003), that the issuance of the waiver will have an unduly adverse effect on a U.S.-vessel builder or a business that uses U.S.-flag vessels in that business, a waiver will not be granted. Comments should refer to the docket number of this notice and the vessel name in order for MARAD to properly consider the comments. Comments should also state the commenter's interest in the waiver application, and address the waiver criteria given in § 388.4 of MARAD's regulations at 46 CFR part 388.

DATES: Submit comments on or before June 7, 2010.

ADDRESSES: Comments should refer to docket number MARAD–2010–0047. Written comments may be submitted by hand or by mail to the Docket Clerk, U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue, SE., Washington, DC 20590. You may also send comments electronically via the Internet at *http://www.regulations.govhttp://smses.dot.gov/submit/.* All comments will become part of this docket and will be available for inspection and copying at the above address between 10 a.m. and 5 p.m., E.T., Monday through Friday, except federal holidays. An electronic version of this document and all documents entered into this docket is available on the World Wide Web at *http://www.regulations.gov*.

FOR FURTHER INFORMATION CONTACT: Joann Spittle, U.S. Department of Transportation, Maritime Administration, 1200 New Jersey Avenue, SE., Room W21–203, Washington, DC 20590. Telephone 202–366–5979.

SUPPLEMENTARY INFORMATION: As described by the applicant the intended service of the vessel EROS is:

Intended Commercial Use Of Vessel: "Occasional small charter groups."

Geographic Region: "California, Alaska, Washington, U.S. Virgin Islands."

Privacy Act

Anyone is able to search the electronic form of all comments received into any of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, etc.). DEPARTMENT OF TRANSPORTATION

Surface Transportation Board

[Docket No. FD 35373]

Stillwater Central Railroad, Inc.—Trackage Rights Exemption—Wichita, Tillman and Jackson Railway Company, Inc., and Hollis & Eastern Railroad Company

Pursuant to a written trackage rights agreement (Trackage Agreement) dated January 22, 1992, Wichita, Tillman & Jackson Railway Co. (WTJ) granted approximately 4.6 miles of restricted overhead trackage rights to Hollis & Eastern Railroad Company (H&E), extending between milepost 74.0 at Altus, Okla., and the end of the line at milepost 78.6 near Altus.[1] Now, pursuant to the Trackage Agreement and a First Supplement,[2] H&E has agreed to assign the restricted overhead trackage rights to Stillwater Central Railroad, Inc. (SLWC), over the same trackage, including the wye track connecting to SLWC and all interchange tracks connecting with BNSF Railway Company (BNSF) and Farmrail Corporation (FMRC). The assignment is being made pursuant to an Assignment Assumption Agreement and a Lease and Transportation Services Agreement between H&E and SLWC.

The transaction is scheduled to be consummated on May 21, 2010, the effective date of the exemption (30 days after the exemption is filed). The purpose of the assigned trackage rights is to enable SLWC to interchange traffic originating or terminating on a line SLWC leases between Duke, Okla., and Altus with BNSF and FMRC.

As a condition to this exemption, any employees affected by the trackage rights will be protected by the conditions imposed in *Norfolk and Western Railway—Trackage Rights—Burlington Northern, Inc.,* 354 I.C.C. 605 (1978), as modified in *Mendocino Coast Railway—Lease and Operate—California Western Railroad,* 360 I.C.C. 653 (1980), and any employees affected by the discontinuance of those trackage rights will be protected by the conditions set out in *Oregon Short Line Railroad and The Union Pacific Railroad—Abandonment Portion Goshen Branch Between Firth and Ammon, in Bingham and Bonneville Counties, Idaho,* 360 I.C.C. 91 (1979).

This notice is filed under 49 CFR 1180.2(d)(7). If the notice contains false or misleading information, the exemption is void *ab initio.* Petitions to revoke the exemption under 49 USC 10502(d) may be filed at any time. The filing of a petition to revoke will not automatically stay the effectiveness of the exemption. Stay petitions must be filed by May 14, 2010 (at least 7 days before the exemption becomes effective).

An original and 10 copies of all pleadings, referring to Docket No. FD 35373, must be filed with the Surface Transportation Board, 395 E Street, SW., Washington, DC 20423–0001. In addition, a copy of each pleading must be served on Karl Morell, Suite 225, 1455 F Street, NW., Washington, DC 20005.

Board decisions and notices are available on our Web site at *http://www.stb.dot.gov.*

Decided: May 3, 2010.

By the Board, Rachel D. Campbell, Director, Office of Proceedings.

Jeffrey Herzig,

Clearance Clerk.

[FR Doc. 2010–10793 Filed 5–6–10; 8:45 am]

BILLING CODE 4915–01–P

[1] The line is owned by the State of Oklahoma and is leased, operated, and maintained by WTJ. H&E acquired the authority in *Hollis & Eastern Railroad Company—Trackage Rights Exemption—Wichita, Tillman & Jackson Railway Co.,* Docket No. FD 32147 (ICC served Sept. 21, 1992).

[2] The parties indicate that the first supplement is awaiting approval from the State.

DEPARTMENT OF THE TREASURY

Community Development Financial Institutions Fund

Proposed Collection; Comment Request

ACTION: Notice and request for comments.

SUMMARY: The Department of the Treasury, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on continuing information collections, as required by the Paperwork Reduction Act of 1995,44 U.S.C. 3506(c)(2)(A) Currently, the Community Development Financial Institutions (CDFI) Fund, Department of the Treasury, is soliciting comments concerning the Community Development Financial Institutions Program Awardee/Allocatee Annual Report (OMB Number 1559–0027), comprised by the Institution Level Report and the Transaction Level Report. The two documents comprise certain reporting requirements for participants in the CDFI Program, the Native American CDFI Assistance (NACA) Program, and the New Markets Tax Credits (NMTC) Program. The Annual Report forms (and related documents, including the CDFI Program assistance agreement, the NACA Program assistance agreement, and the NMTC Program allocation agreement) may be found at the CDFI Fund's Web site at *www.cdfifund.gov.*

DATES: Written comments must be received on or before July 6, 2010 to be assured of consideration.

ADDRESSES: All comments on the Annual CIIS Report must be submitted in writing and sent to Greg Bischak, Program Manager for Financial Strategies and Research, Community Development Financial Institutions Fund, U.S. Department of the Treasury, 601 13th Street, NW., Suite 200 South, Washington, DC 20005, by e-mail to *cdfihelp@cdfi.treas.gov,* or by facsimile to (202) 622–7754. Please note this is not a toll free number.

FOR FURTHER INFORMATION CONTACT: Greg Bischak, Program Manager for Financial Strategies and Research, Community Development Financial Institutions

Fund, U.S. Department of the Treasury, 601 13th Street, NW., Suite 200 South, Washington, DC 20005, by e-mail to *cdfihelp@cdfi.treas.gov,* or by facsimile to (202) 622–7754. Please note this is not a toll free number.

SUPPLEMENTARY INFORMATION:

Title: CDFI Program and NMTC Program Annual Report including CIIS.

OMB Number: 1559–0027.

Abstract: The mission is to expand the capacity of financial institutions to provide credit, capital and financial services to underserved populations and communities in the United States. The CDFI Fund's strategic goal is to improve the economic conditions of underserved communities by providing capital and technical assistance to CDFIs, capital to insured depository institutions, and NMTC allocations to Community Development Entities (CDEs), which provide credit, capital, financial services, and development services to these markets. The CDFI Fund certifies entities as CDFIs and/or CDEs.

Annual Reporting Requirements: The Annual Report consists of quantitative information at the institution and transaction levels for CDFIs and CDEs and is used to assess: (1) The awardee's/allocatee's activities as detailed in its application materials; (2) the awardee's/allocatee's approved use of the assistance; (3) the awardee's/allocatee's financial condition; (4) the socio-economic characteristics of awardee's/allocatee's borrowers/investees, loan and investment terms, repayment status, and community development impacts; and (4) overall compliance with the terms and conditions of the assistance/allocation agreement entered into by the CDFI Fund and the awardee/allocatee.

A CDFI Program awardee or a NACA Program awardee must submit an Annual Report that comprises several sections, depending on the program and the type of award. The specific components that comprise an awardee's Annual Report are set forth in the assistance agreement that the awardee enters into with the CDFI Fund in order to receive a CDFI Program or a NACA Program award. In summary:

1. A CDFI Program or NACA/NATA Program awardee that is a non-regulated entity and that receives Financial Assistance (FA) only must submit an Annual Report that comprises: (i) A Financial Report (Financial Statement) reviewed or audited by an independent certified public accountant; (ii) Single Audit A–133 (if applicable); (iii) an Institution Level Report (ILR) and a Transaction Level Report (TLR) (which include, among others, questions that measure the awardee's achievement of the Performance Goals and Measures set forth in its assistance agreement); (iv) a Uses of Financial Assistance and Matching Funds Report; and (v) an Explanation of Noncompliance (if applicable).

2. A CDFI Program or NACA Program awardee that is a regulated entity and that receives FA only must submit an Annual Report that comprises: (i) An ILR and a TLR; (ii) a Uses of Financial Assistance and Matching Funds Report; (iii) an Explanation of Noncompliance (if applicable); and (iv) a Single Audit A–133 (if applicable).

3. A CDFI Program or NACA Program awardee that receives an award from the CDFI Fund that is in the form of an equity investment must also submit a Shareholder Report.

4. A CDFI Program or NACA Program awardee that receives Technical Assistance (TA) must submit an Annual Report that comprises: (i) The documents set forth in either (1) or (2) above, as applicable, if the awardee also receives FA; (ii) Uses of Technical Assistance Report; and (iii) OMB form 269A (Financial Status Report), which can be found on the website at *http://www.cdfifund.gov.*

A NMTC Program allocatee must submit an Annual Report that comprises: (i) A financial statement that has been audited by an independent certified public accountant; (ii) an ILR (including the IRS Compliance Questions section), if the allocatee has issued any Qualified Equity Investments; and (iii) a TLR if the allocatee has issued any Qualified Low-Income Community Investments in the form of loans or investments. The components that comprise an allocatee's Annual Report are set forth in the allocation agreement that the allocatee enters into with the CDFI Fund in order to receive a NMTC Program allocation.

Current Action: Extension of a currently approved collection.

Type of review: Regular review.

Affected Public: Not-for-profit institutions, businesses or other for-profit institutions and tribal entities.

Estimated Number of Annual Respondents:

CDFI Annual ILR only: 75
CDFI Annual TLR and ILR: 159
NMTC Annual Report: 207

Burden per Report Type:

CDFI Program TA awardees Estimated Time Burden: 22 hours
CDFI Program FA ILR only awardees Estimated Time Burden: 32 hours
CDFI Program FA TLR/ILR awardees Estimated Time Burden: 64 hours
NMTC Program allocatees Estimated Time Burden: 65 hours

Total Estimated Burden per Reporting Type:

CDFI Program TA reports: 1,518 hours
CDFI Program FA ILR only reports: 2,400 hours
CDFI Program FA TLR/ILR reports: 10,176 hours
NMTC Program CDE reports: 13,455 hours

Estimated Total Annual Burden Hours = 27,549 hours

Request for Comments: Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on all aspects of the information collections, but commentators may wish to focus particular attention on: (a) The cost for CDFIs and CDEs to operate and maintain the services/systems required to provide the required information; (b) ways to enhance the quality, utility, and clarity of the information to be collected; (c) whether the collection of information is necessary for the proper evaluation of the effectiveness and impact of the CDFI Fund's programs, including whether the information shall have practical utility; (d) the accuracy of the CDFI Fund's estimate of the burden of the collection of information; (e) ways to minimize the burden of the collection of information including through the use of technology, such as software for internal accounting and geocoding to capture geographic detail while streamlining and aggregating TLR reporting for upload to CIIS, and; (f) what methods might be used to improve the data quality, internal accounting and efficiency of reporting transactions for serving other targeted populations.

Authority: 12 U.S.C.4707 *et seq.*; 26 U.S.C. 45D; 12 CFR part 1805.

Dated: May 3, 2010.

Donna J. Gambrell,

Director, Community Development Financial Institutions Fund.

Community Volunteer Income Tax Assistance (VITA) Matching Grant Program—Availability of Application Packages; Correction

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Correction to a notice.

SUMMARY: This document contains a correction to a notice of the Community Volunteer Income Tax Assistance (VITA) Matching Grant Program, which was published in the **Federal Register** on Wednesday, April 28, 2010 (75 FR 22437). This notice provides notice of the availability of application packages for the 2011 Community Volunteer Income Tax Assistance (VITA) Matching Grant Program.

FOR FURTHER INFORMATION CONTACT: The Grant Program Office at (404) 338–7894 (not a toll free number) or by e-mail at *Grant.Program.Office@irs.gov.*

SUPPLEMENTARY INFORMATION:

Background

Authority for the 2011 Community Volunteer Income Tax Assistance (VITA) Matching Grant Demonstration Program for tax return preparation is contained in the Consolidated Appropriation Act, 2010, Public Law 111–117, signed December 16, 2009.

Need for Correction

As published, the notice of the Community Volunteer Income Tax Assistance (VITA) Matching Grant Program contains an error which may prove to be misleading and is in need of clarification.

Correction of Publication

Accordingly, the publication of the Community Volunteer Income Tax Assistance (VITA) Matching Grant Program, which was the subject of FR Doc. 2010–9771, is corrected as follows:

On page 22437, column 1, under the caption **DATES**: The language "Application packages are available from the IRS at this time. The deadline for submitting an application to the IRS for the Community VITA Matching Grant Program is July 9, 2010." is corrected to read "Application packages are available from the IRS beginning June 1, 2010. The deadline for submitting an application to the IRS for the Community VITA Matching Grant Program is July 9, 2010.".

LaNita Van Dyke,

Chief, Publications and Regulations Branch, Legal Processing Division, Associate Chief Counsel (Procedure and Administration).

DEPARTMENT OF THE TREASURY

Internal Revenue Service

Tax Counseling for the Elderly (TCE) Program Availability of Application Packages; Correction

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Correction to a notice.

SUMMARY: This document contains a correction to a notice of the Tax Counseling for the Elderly (TCE) Program Availability of Application Packages, which was published in the **Federal Register** on Wednesday, April 28, 2010 (75 FR 22437). This notice provides notice of the availability of application packages for the 2011 Tax Counseling for the Elderly (TCE) Program.

FOR FURTHER INFORMATION CONTACT: The Grant Program Office at (404) 338–7894 (not a toll free number) or by e-mail at *tce.grant.office@irs.gov.*

SUPPLEMENTARY INFORMATION:

Background

Authority for the 2011 Tax Counseling for the Elderly (TCE) Program for tax return preparation is contained in Section 163 of the Revenue Act of 1978, Public Law 95–600, (92 Stat. 12810), November 6, 1978. Regulations were published in the **Federal Register** at 44 FR 72113 on December 13, 1979. Section 163 gives the IRS authority to enter into cooperative agreements with private or public non-profit agencies or organizations to establish a network of trained volunteers to provide free tax information and return preparation assistance to elderly individuals. Elderly individuals are defined as individuals age 60 and over at the close of their taxable year. Because applications are being solicited before the FY 2011 budget has been approved, cooperative agreements will be entered into subject to appropriation of funds.

Need for Correction

As published, the notice of the Tax Counseling for the Elderly (TCE) Program contains an error which may prove to be misleading and is in need of clarification.

Correction of Publication

Accordingly, the publication of the Tax Counseling for the Elderly (TCE) Program, which was the subject of FR Doc. 2010–9772, is corrected as follows:

On page 22437, column 3, under the caption **DATES**: The language "Application packages are available from the IRS at this time. The deadline for submitting an application to the IRS for the Tax Counseling for the Elderly (TCE) Program is July 9, 2010." is corrected to read "Application packages are available from the IRS beginning June 1, 2010. The deadline for submitting an application to the IRS for the Tax Counseling for the Elderly (TCE) Program is July 9, 2010." .

LaNita Van Dyke,

Chief, Publications and Regulations Branch, Legal Processing Division, Associate Chief Counsel, (Procedure and Administration).

DEPARTMENT OF VETERANS AFFAIRS

[OMB Control No. 2900—New (DES)]

Agency Information Collection (Survey of Satisfaction With the Disability Evaluation System (DES)) Activities Under OMB Review

AGENCY: Veterans Benefits Administration, Department of Veterans Affairs.

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act (PRA) of 1995 (44 U.S.C. 3501–3521), this notice announces that the Veterans Benefits Administration (VBA), Department of Veterans Affairs, will submit the collection of information abstracted below to the Office of Management and Budget (OMB) for review and comment. The PRA submission describes the nature of the information collection and its expected cost and burden and it includes the actual data collection instrument.

DATES: Comments must be submitted on or before June 7, 2010.

ADDRESSES: Submit written comments on the collection of information through *http://www.Regulations.gov;* or to VA's OMB Desk Officer, OMB Human Resources and Housing Branch, New Executive Office Building, Room 10235, Washington, DC 20503 (202) 395–7316. Please refer to "OMB Control No. 2900–New (DES)" in any correspondence.

FOR FURTHER INFORMATION CONTACT: Denise McLamb, Enterprise Records Service (005R1B), Department of Veterans Affairs, 810 Vermont Avenue, NW., Washington, DC 20420, (202) 461–7485, FAX (202) 273–0443 or e-mail: *denise.mclamb@va.gov.* Please refer to "OMB Control No. 2900–New (DES)."

SUPPLEMENTARY INFORMATION:

Title: Survey of Satisfaction with the Disability Evaluation System (DES).

OMB Control Number: 2900–New (DES).

Type of Review: New collection.

Abstract: Data obtained through the DES survey will be used to evaluate and, if necessary, revise the way the DES Pilot is conducted in an effort to raise customer service standards.

An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. The **Federal Register** Notice with a 60-day comment period soliciting comments on this collection of information was published on March 1, 2010, at page 9279.

Affected Public: Individuals or households.

Estimated Annual Burden: 37 hours.

Estimated Average Burden per Respondent: 15 minutes.

Frequency of Response: One time.

Estimated Number of Respondents: 149.

Dated: May 4, 2010.

By direction of the Secretary.

Denise McLamb,

Program Analyst, Enterprise Records Service.

DEPARTMENT OF VETERANS AFFAIRS

[OMB Control No. 2900–0600]

Agency Information Collection (Regulation for Reconsideration of Denied Claims) Activity Under OMB Review

AGENCY: Veterans Health Administration, Department of Veterans Affairs.

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act (PRA) of 1995 (44 U.S.C. 3501–3521), this notice announces that the Veterans Health Administration, Department of Veterans Affairs, has submitted the collection of information abstracted below to the Office of Management and Budget (OMB) for review and comment. The PRA submission describes the nature of the information collection and its expected cost and burden and includes the actual data collection instrument.

DATES: Comments must be submitted on or before June 7, 2010.

ADDRESSES: Submit written comments on the collection of information through *http://www.Regulations.gov* or to VA's OMB Desk Officer, OMB Human Resources and Housing Branch, New Executive Office Building, Room 10235, Washington, DC 20503, (202) 395–7316. Please refer to "OMB Control No. 2900–0600" in any correspondence.

FOR FURTHER INFORMATION CONTACT: Denise McLamb, Enterprise Records Service (005R1B), Department of Veterans Affairs, 810 Vermont Avenue, NW., Washington, DC 20420, (202) 461–7485, fax (202) 273–0443 or e-mail *denise.mclamb@va.gov.* Please refer to "OMB Control No. 2900–0600."

SUPPLEMENTARY INFORMATION:

Title: Regulation for Reconsideration of Denied Claims.

OMB Control Number: 2900–0600.

Type of Review: Extension of a currently approved collection.

Abstract: Veterans who disagree with the initial decision denying their healthcare benefits in whole or in part may obtain reconsideration by

submitting a request in writing within one year of the date of the initial decision. The request must state why the decision is in error and include any new and relevant information not previously considered. This process reduces both formal appeals and allows decision making to be more responsive to veterans using the VA healthcare system.

An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. The **Federal Register** Notice with a 60-day comment period soliciting comments on this collection of information was published on March 1, 2010, at pages 9278–9279.

Affected Public: Individuals or households.

Estimated Total Annual Burden: 50,826 hours.

Estimated Average Burden per Respondent: 30 minutes.

Frequency of Response: On occasion.

Estimated Number of Respondents: 101,652.

Dated: May 4, 2010.

By direction of the Secretary

Denise McLamb,

Program Analyst, Enterprise Records Service.

Light-Duty Vehicle Greenhouse Gas Emission Standards and Corporate Average Fuel Economy Standards; Final Rule

AGENCY: Environmental Protection Agency (EPA) and National Highway Traffic Safety Administration (NHTSA).

ACTION: Final rule.

SUMMARY: EPA and NHTSA are issuing this joint Final Rule to establish a National Program consisting of new standards for light-duty vehicles that will reduce greenhouse gas emissions and improve fuel economy. This joint Final Rule is consistent with the National Fuel Efficiency Policy announced by President Obama on May 19, 2009, responding to the country's critical need to address global climate change and to reduce oil consumption. EPA is finalizing greenhouse gas emissions standards under the Clean Air Act, and NHTSA is finalizing Corporate Average Fuel Economy standards under the Energy Policy and Conservation Act, as amended. These standards apply to passenger cars, light-duty trucks, and medium-duty passenger vehicles, covering model years 2012 through 2016, and represent a harmonized and consistent National Program. Under the National Program, automobile manufacturers will be able to build a single light-duty national fleet that satisfies all requirements under both programs while ensuring that consumers still have a full range of vehicle choices. NHTSA's final rule also constitutes the agency's Record of Decision for purposes of its National Environmental Policy Act (NEPA) analysis.

DATES: This final rule is effective on July 6, 2010, *sixty days after date of publication in the* **Federal Register.** The incorporation by reference of certain publications listed in this regulation is approved by the Director of the Federal Register as of July 6, 2010.

ADDRESSES: EPA and NHTSA have established dockets for this action under Docket ID No. EPA–HQ–OAR–2009–0472 and NHTSA–2009–0059, respectively. All documents in the docket are listed on the *http://www.regulations.gov* Web site. Although listed in the index, some information is not publicly available, *e.g.,* CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the Internet and will be publicly available only in hard copy form. Publicly available docket materials are available either electronically through *http://www.regulations.gov* or in hard copy at the following locations: *EPA:* EPA Docket Center, EPA/DC, EPA West, Room 3334, 1301 Constitution Ave., NW., Washington, DC. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566–1744. *NHTSA:* Docket Management Facility, M–30, U.S. Department of Transportation, West Building, Ground Floor, Rm. W12–140, 1200 New Jersey Avenue, SE., Washington, DC 20590. The Docket Management Facility is open between 9 a.m. and 5 p.m. Eastern Time, Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT:

EPA: Tad Wysor, Office of Transportation and Air Quality, Assessment and Standards Division, Environmental Protection Agency, 2000 Traverwood Drive, Ann Arbor MI 48105; telephone number: 734–214–4332; fax number: 734–214–4816; e-mail address: *wysor.tad@epa.gov,* or Assessment and Standards Division Hotline; telephone number (734) 214–4636; e-mail address *asdinfo@epa.gov. NHTSA:* Rebecca Yoon, Office of Chief Counsel, National Highway Traffic Safety Administration, 1200 New Jersey Avenue, SE., Washington, DC 20590. Telephone: (202) 366–2992.

SUPPLEMENTARY INFORMATION:

Does this action apply to me?

This action affects companies that manufacture or sell new light-duty vehicles, light-duty trucks, and medium-duty passenger vehicles, as defined under EPA's CAA regulations,[1] and passenger automobiles (passenger cars) and non-passenger automobiles (light trucks) as defined under NHTSA's CAFE regulations.[2] Regulated categories and entities include:

Category	NAICS codes [A]	Examples of potentially regulated entities
Industry	336111, 336112	Motor vehicle manufacturers.
Industry	811112, 811198, 541514	Commercial Importers of Vehicles and Vehicle Components.

[A] North American Industry Classification System (NAICS).

This list is not intended to be exhaustive, but rather provides a guide regarding entities likely to be regulated by this action. To determine whether particular activities may be regulated by this action, you should carefully examine the regulations. You may direct questions regarding the applicability of this action to the person listed in **FOR FURTHER INFORMATION CONTACT.**

Table of Contents

[1] "Light-duty vehicle," "light-duty truck," and "medium-duty passenger vehicle" are defined in 40 CFR 86.1803–01. Generally, the term "light-duty vehicle" means a passenger car, the term "light-duty truck" means a pick-up truck, sport-utility vehicle, or minivan of up to 8,500 lbs gross vehicle weight rating, and "medium-duty passenger vehicle" means a sport-utility vehicle or passenger van from 8,500 to 10,000 lbs gross vehicle weight rating. Medium-duty passenger vehicles do not include pick-up trucks.

[2] "Passenger car" and "light truck" are defined in 49 CFR part 523.

I. Overview of Joint EPA/NHTSA National Program

A. Introduction

The National Highway Traffic Safety Administration (NHTSA) and the Environmental Protection Agency (EPA) are each announcing final rules whose benefits will address the urgent and closely intertwined challenges of energy independence and security and global warming. These rules will implement a strong and coordinated Federal greenhouse gas (GHG) and fuel economy program for passenger cars, light-duty-trucks, and medium-duty passenger vehicles (hereafter light-duty vehicles), referred to as the National Program. The rules will achieve substantial reductions of GHG emissions and improvements in fuel economy from the light-duty vehicle part of the transportation sector, based on technology that is already being commercially applied in most cases and that can be incorporated at a reasonable cost. NHTSA's final rule also constitutes the agency's Record of Decision for purposes of its NEPA analysis.

This joint rulemaking is consistent with the President's announcement on May 19, 2009 of a National Fuel Efficiency Policy of establishing consistent, harmonized, and streamlined requirements that would reduce GHG emissions and improve fuel economy for all new cars and light-duty trucks sold in the United States.[3] The National Program will deliver additional environmental and energy benefits, cost savings, and administrative efficiencies on a nationwide basis that would likely not be available under a less coordinated approach. The National Program also represents regulatory convergence by making it possible for the standards of two different Federal agencies and the standards of California and other states to act in a unified fashion in providing these benefits. The National Program will allow automakers to produce and sell a single fleet nationally, mitigating the additional costs that manufacturers would otherwise face in having to comply with multiple sets of Federal and State standards. This joint notice is also consistent with the Notice of Upcoming Joint Rulemaking issued by DOT and EPA on May 19, 2009[4] and responds to the President's January 26, 2009 memorandum on CAFE standards for model years 2011 and beyond,[5] the details of which can be found in Section IV of this joint notice.

Climate change is widely viewed as a significant long-term threat to the global environment. As summarized in the Technical Support Document for EPA's Endangerment and Cause or Contribute Findings under Section 202(a) of the Clear Air Act, anthropogenic emissions of GHGs are very likely (90 to 99 percent probability) the cause of most of the observed global warming over the last 50 years.[6] The primary GHGs of concern are carbon dioxide (CO_2), methane, nitrous oxide, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride. Mobile sources emitted 31 percent of all U.S. GHGs in 2007 (transportation sources, which do not include certain off-highway sources, account for 28 percent) and have been the fastest-growing source of U.S. GHGs since 1990.[7] Mobile sources addressed in the recent endangerment and contribution findings under CAA section 202(a)—light-duty vehicles, heavy-duty trucks, buses, and motorcycles—accounted for 23 percent of all U.S. GHG in 2007.[8] Light-duty vehicles emit CO_2, methane, nitrous oxide, and hydrofluorocarbons and are responsible for nearly 60 percent of all mobile source GHGs and over 70 percent of Section 202(a) mobile source GHGs. For light-duty vehicles in 2007, CO_2 emissions represent about 94 percent of all greenhouse emissions (including HFCs), and the CO_2 emissions measured over the EPA tests used for fuel economy compliance represent about 90 percent of total light-duty vehicle GHG emissions.[9] [10]

Improving energy security by reducing our dependence on foreign oil has been a national objective since the first oil price shocks in the 1970s. Net petroleum imports now account for approximately 60 percent of U.S.

petroleum consumption. World crude oil production is highly concentrated, exacerbating the risks of supply disruptions and price shocks. Tight global oil markets led to prices over $100 per barrel in 2008, with gasoline reaching as high as $4 per gallon in many parts of the U.S., causing financial hardship for many families. The export of U.S. assets for oil imports continues to be an important component of the historically unprecedented U.S. trade deficits. Transportation accounts for about two-thirds of U.S. petroleum consumption. Light-duty vehicles account for about 60 percent of transportation oil use, which means that they alone account for about 40 percent of all U.S. oil consumption.

1. Building Blocks of the National Program

The National Program is both needed and possible because the relationship between improving fuel economy and reducing CO_2 tailpipe emissions is a very direct and close one. The amount of those CO_2 emissions is essentially constant per gallon combusted of a given type of fuel. Thus, the more fuel efficient a vehicle is, the less fuel it burns to travel a given distance. The less fuel it burns, the less CO_2 it emits in traveling that distance.[11] While there are emission control technologies that reduce the pollutants (*e.g.,* carbon monoxide) produced by imperfect combustion of fuel by capturing or converting them to other compounds, there is no such technology for CO_2. Further, while some of those pollutants can also be reduced by achieving a more complete combustion of fuel, doing so only increases the tailpipe emissions of CO_2. Thus, there is a single pool of technologies for addressing these twin problems, *i.e.,* those that reduce fuel consumption and thereby reduce CO_2 emissions as well.

a. DOT's CAFE Program

In 1975, Congress enacted the Energy Policy and Conservation Act (EPCA), mandating that NHTSA establish and implement a regulatory program for motor vehicle fuel economy to meet the various facets of the need to conserve energy, including ones having energy independence and security, environmental and foreign policy implications. Fuel economy gains since 1975, due both to the standards and market factors, have resulted in saving billions of barrels of oil and avoiding billions of metric tons of CO_2 emissions. In December 2007, Congress enacted the Energy Independence and Securities Act (EISA), amending EPCA to require substantial, continuing increases in fuel economy standards.

The CAFE standards address most, but not all, of the real world CO_2 emissions because a provision in EPCA as originally enacted in 1975 requires the use of the 1975 passenger car test procedures under which vehicle air conditioners are not turned on during fuel economy testing.[12] Fuel economy is determined by measuring the amount of CO_2 and other carbon compounds emitted from the tailpipe, not by attempting to measure directly the amount of fuel consumed during a vehicle test, a difficult task to accomplish with precision. The carbon content of the test fuel [13] is then used to calculate the amount of fuel that had to be consumed per mile in order to produce that amount of CO_2. Finally, that fuel consumption figure is converted into a miles-per-gallon figure. CAFE standards also do not address the 5–8 percent of GHG emissions that are not CO_2, *i.e.,* nitrous oxide (N_2O), and methane (CH_4) as well as emissions of CO_2 and hydrofluorocarbons (HFCs) related to operation of the air conditioning system.

b. EPA's GHG Standards for Light-duty Vehicles

Under the Clean Air Act EPA is responsible for addressing air pollutants from motor vehicles. On April 2, 2007, the U.S. Supreme Court issued its opinion in *Massachusetts* v. *EPA,*[14] a case involving EPA's a 2003 denial of a petition for rulemaking to regulate GHG emissions from motor vehicles under section 202(a) of the Clean Air Act (CAA).[15] The Court held that GHGs fit within the definition of air pollutant in the Clean Air Act and further held that the Administrator must determine whether or not emissions from new motor vehicles cause or contribute to air pollution which may reasonably be anticipated to endanger public health or welfare, or whether the science is too uncertain to make a reasoned decision. The Court further ruled that, in making these decisions, the EPA Administrator is required to follow the language of section 202(a) of the CAA. The Court rejected the argument that EPA cannot regulate CO_2 from motor vehicles because to do so would *de facto* tighten fuel economy standards, authority over which has been assigned by Congress to DOT. The Court stated that "[b]ut that DOT sets mileage standards in no way licenses EPA to shirk its environmental responsibilities. EPA has been charged with protecting the public's 'health' and 'welfare', a statutory obligation wholly independent of DOT's mandate to promote energy efficiency." The Court concluded that "[t]he two obligations may overlap, but there is no reason to think the two agencies cannot both administer their obligations and yet avoid inconsistency." [16] The case was remanded back to the Agency for reconsideration in light of the Court's decision.[17]

On December 15, 2009, EPA published two findings (74 FR 66496): That emissions of GHGs from new motor vehicles and motor vehicle engines contribute to air pollution, and that the air pollution may reasonably be anticipated to endanger public health and welfare.

c. California Air Resources Board Greenhouse Gas Program

In 2004, the California Air Resources Board approved standards for new light-duty vehicles, which regulate the emission of not only CO_2, but also other GHGs. Since then, thirteen states and the District of Columbia, comprising approximately 40 percent of the light-duty vehicle market, have adopted California's standards. These standards apply to model years 2009 through 2016 and require CO_2 emissions for passenger cars and the smallest light trucks of 323 g/mi in 2009 and 205 g/mi in 2016, and for the remaining light trucks of 439 g/mi in 2009 and 332 g/mi in 2016. On June 30, 2009, EPA granted California's request for a waiver of preemption under the CAA.[18] The granting of the waiver permits California and the other states to proceed with implementing the California emission standards.

In addition, to promote the National Program, in May 2009, California announced its commitment to take several actions in support of the National Program, including revising its

[11] Panel on Policy Implications of Greenhouse Warming, National Academy of Sciences, National Academy of Engineering, Institute of Medicine, "Policy Implications of Greenhouse Warming: Mitigation, Adaptation, and the Science Base," National Academies Press, 1992. p. 287.

[12] Although EPCA does not require the use of 1975 test procedures for light trucks, those procedures are used for light truck CAFE standard testing purposes.

[13] This is the method that EPA uses to determine compliance with NHTSA's CAFE standards.

program for MYs 2009–2011 to facilitate compliance by the automakers, and revising its program for MYs 2012–2016 such that compliance with the Federal GHG standards will be deemed to be compliance with California's GHG standards. This will allow the single national fleet produced by automakers to meet the two Federal requirements and to meet California requirements as well. California is proceeding with a rulemaking intended to revise its 2004 regulations to meet its commitments. Several automakers and their trade associations also announced their commitment to take several actions in support of the National Program, including not contesting the final GHG and CAFE standards for MYs 2012–2016, not contesting any grant of a waiver of preemption under the CAA for California's GHG standards for certain model years, and to stay and then dismiss all pending litigation challenging California's regulation of GHG emissions, including litigation concerning preemption under EPCA of California's and other states' GHG standards.

2. Public Participation

The agencies proposed their respective rules on September 28, 2009 (74 FR 49454), and received a large number of comments representing many perspectives on the proposed rule. The agencies received oral testimony at three public hearings in different parts of the country, and received written comments from more than 130 organizations, including auto manufacturers and suppliers, States, environmental and other non-governmental organizations (NGOs), and over 129,000 comments from private citizens.

The vast majority of commenters supported the central tenets of the proposed CAFE and GHG programs. That is, there was broad support from most organizations for a National Program that achieves a level of 250 gram/mile fleet average CO_2, which would be 35.5 miles per gallon if the automakers were to meet this CO_2 level solely through fuel economy improvements. The standards will be phased in over model years 2012 through 2016 which will allow manufacturers to build a common fleet of vehicles for the domestic market. In general, commenters from the automobile industry supported the proposed standards as well as the credit opportunities and other compliance provisions providing flexibility, while also making some recommendations for changes. Environmental and public interest non-governmental organizations (NGOs), as well as most States that commented, were also generally supportive of the National Program standards. Many of these organizations also expressed concern about the possible impact on program benefits, depending on how the credit provisions and flexibilities are designed. The agencies also received specific comments on many aspects of the proposal.

Throughout this notice, the agencies discuss many of the key issues arising from the public comments and the agencies' responses. In addition, the agencies have addressed all of the public comments in the Response to Comments document associated with this final rule.

B. Summary of the Joint Final Rule and Differences From the Proposal

In this joint rulemaking, EPA is establishing GHG emissions standards under the Clean Air Act (CAA), and NHTSA is establishing Corporate Average Fuel Economy (CAFE) standards under the Energy Policy and Conservation Action of 1975 (EPCA), as amended by the Energy Independence and Security Act of 2007 (EISA). The intention of this joint rulemaking is to set forth a carefully coordinated and harmonized approach to implementing these two statutes, in accordance with all substantive and procedural requirements imposed by law.

NHTSA and EPA have coordinated closely and worked jointly in developing their respective final rules. This is reflected in many aspects of this joint rule. For example, the agencies have developed a comprehensive Joint Technical Support Document (TSD) that provides a solid technical underpinning for each agency's modeling and analysis used to support their standards. Also, to the extent allowed by law, the agencies have harmonized many elements of program design, such as the form of the standard (the footprint-based attribute curves), and the definitions used for cars and trucks. They have developed the same or similar compliance flexibilities, to the extent allowed and appropriate under their respective statutes, such as averaging, banking, and trading of credits, and have harmonized the compliance testing and test protocols used for purposes of the fleet average standards each agency is finalizing. Finally, under their respective statutes, each agency is called upon to exercise its judgment and determine standards that are an appropriate balance of various relevant statutory factors. Given the common technical issues before each agency, the similarity of the factors each agency is to consider and balance, and the authority of each agency to take into consideration the standards of the other agency, both EPA and NHTSA are establishing standards that result in a harmonized National Program.

This joint final rule covers passenger cars, light-duty trucks, and medium-duty passenger vehicles built in model years 2012 through 2016. These vehicle categories are responsible for almost 60 percent of all U.S. transportation-related GHG emissions. EPA and NHTSA expect that automobile manufacturers will meet these standards by utilizing technologies that will reduce vehicle GHG emissions and improve fuel economy. Although many of these technologies are available today, the emissions reductions and fuel economy improvements finalized in this notice will involve more widespread use of these technologies across the light-duty vehicle fleet. These include improvements to engines, transmissions, and tires, increased use of start-stop technology, improvements in air conditioning systems, increased use of hybrid and other advanced technologies, and the initial commercialization of electric vehicles and plug-in hybrids. NHTSA's and EPA's assessments of likely vehicle technologies that manufacturers will employ to meet the standards are discussed in detail below and in the Joint TSD.

The National Program is estimated to result in approximately 960 million metric tons of total carbon dioxide equivalent emissions reductions and approximately 1.8 billion barrels of oil savings over the lifetime of vehicles sold in model years (MYs) 2012 through 2016. In total, the combined EPA and NHTSA 2012–2016 standards will reduce GHG emissions from the U.S. light-duty fleet by approximately 21 percent by 2030 over the level that would occur in the absence of the National Program. These actions also will provide important energy security benefits, as light-duty vehicles are about 95 percent dependent on oil-based fuels. The agencies project that the total benefits of the National Program will be more than $240 billion at a 3% discount rate, or more than $190 billion at a 7% discount rate. In the discussion that follows in Sections III and IV, each agency explains the related benefits for their individual standards.

Together, EPA and NHTSA estimate that the average cost increase for a model year 2016 vehicle due to the National Program will be less than $1,000. The average U.S. consumer who purchases a vehicle outright is estimated to save enough in lower fuel costs over the first three years to offset

these higher vehicle costs. However, most U.S. consumers purchase a new vehicle using credit rather than paying cash and the typical car loan today is a five year, 60 month loan. These consumers will see immediate savings due to their vehicle's lower fuel consumption in the form of a net reduction in annual costs of $130–$180 throughout the duration of the loan (that is, the fuel savings will outweigh the increase in loan payments by $130–$180 per year). Whether a consumer takes out a loan or purchases a new vehicle outright, over the lifetime of a model year 2016 vehicle, the consumer's net savings could be more than $3,000. The average 2016 MY vehicle will emit 16 fewer metric tons of CO_2-equivalent emissions (that is, CO_2 emissions plus HFC air conditioning leakage emissions) during its lifetime. Assumptions that underlie these conclusions are discussed in greater detail in the agencies' respective regulatory impact analyses and in Section III.H.5 and Section IV.

This joint rule also results in important regulatory convergence and certainty to automobile companies. Absent this rule, there would be three separate Federal and State regimes independently regulating light-duty vehicles to reduce fuel consumption and GHG emissions: NHTSA's CAFE standards, EPA's GHG standards, and the GHG standards applicable in California and other States adopting the California standards. This joint rule will allow automakers to meet both the NHTSA and EPA requirements with a single national fleet, greatly simplifying the industry's technology, investment and compliance strategies. In addition, to promote the National Program, California announced its commitment to take several actions, including revising its program for MYs 2012–2016 such that compliance with the Federal GHG standards will be deemed to be compliance with California's GHG standards. This will allow the single national fleet used by automakers to meet the two Federal requirements and to meet California requirements as well. California is proceeding with a rulemaking intended to revise its 2004 regulations to meet its commitments. EPA and NHTSA are confident that these GHG and CAFE standards will successfully harmonize both the Federal and State programs for MYs 2012–2016 and will allow our country to achieve the increased benefits of a single, nationwide program to reduce light-duty vehicle GHG emissions and reduce the country's dependence on fossil fuels by improving these vehicles' fuel economy.

A successful and sustainable automotive industry depends upon, among other things, continuous technology innovation in general, and low GHG emissions and high fuel economy vehicles in particular. In this respect, this action will help spark the investment in technology innovation necessary for automakers to successfully compete in both domestic and export markets, and thereby continue to support a strong economy.

While this action covers MYs 2012–2016, many stakeholders encouraged EPA and NHTSA to also begin working toward standards for MY 2017 and beyond that would maintain a single nationwide program. The agencies recognize the importance of and are committed to a strong, coordinated national program for light-duty vehicles for model years beyond 2016.

Key elements of the National Program finalized today are the level and form of the GHG and CAFE standards, the available compliance mechanisms, and general implementation elements. These elements are summarized in the following section, with more detailed discussions about EPA's GHG program following in Section III, and about NHTSA's CAFE program in Section IV. This joint final rule responds to the wide array of comments that the agencies received on the proposed rule. This section summarizes many of the major comments on the primary elements of the proposal and describes whether and how the final rule has changed, based on the comments and additional analyses. Major comments and the agencies' responses to them are also discussed in more detail in later sections of this preamble. For a full summary of public comments and EPA's and NHTSA's responses to them, please see the Response to Comments document associated with this final rule.

1. Joint Analytical Approach

NHTSA and EPA have worked closely together on nearly every aspect of this joint final rule. The extent and results of this collaboration are reflected in the elements of the respective NHTSA and EPA rules, as well as the analytical work contained in the Joint Technical Support Document (Joint TSD). The Joint TSD, in particular, describes important details of the analytical work that are shared, as well as any differences in approach. These include the build up of the baseline and reference fleets, the derivation of the shape of the curves that define the standards, a detailed description of the costs and effectiveness of the technology choices that are available to vehicle manufacturers, a summary of the computer models used to estimate how technologies might be added to vehicles, and finally the economic inputs used to calculate the impacts and benefits of the rules, where practicable.

EPA and NHTSA have jointly developed attribute curve shapes that each agency is using for its final standards. Further details of these functions can be found in Sections III and IV of this preamble as well as Chapter 2 of the Joint TSD. A critical technical underpinning of each agency's analysis is the cost and effectiveness of the various control technologies. These are used to analyze the feasibility and cost of potential GHG and CAFE standards. A detailed description of all of the technology information considered can be found in Chapter 3 of the Joint TSD (and for A/C, Chapter 2 of the EPA RIA). This detailed technology data forms the inputs to computer models that each agency uses to project how vehicle manufacturers may add those technologies in order to comply with the new standards. These are the OMEGA and Volpe models for EPA and NHTSA, respectively. The models and their inputs can also be found in the docket. Further description of the model and outputs can be found in Sections III and IV of this preamble, and Chapter 3 of the Joint TSD. This comprehensive joint analytical approach has provided a sound and consistent technical basis for each agency in developing its final standards, which are summarized in the sections below.

The vast majority of public comments expressed strong support for the joint analytical work performed for the proposal. Commenters generally agreed with the analytical work and its results, and supported the transparency of the analysis and its underlying data. Where commenters raised specific points, the agencies have considered them and made changes where appropriate. The agencies' further evaluation of various technical issues also led to a limited number of changes. A detailed discussion of these issues can be found in Section II of this preamble, and the Joint TSD.

2. Level of the Standards

In this notice, EPA and NHTSA are establishing two separate sets of standards, each under its respective statutory authorities. EPA is setting national CO_2 emissions standards for light-duty vehicles under section 202(a) of the Clean Air Act. These standards will require these vehicles to meet an

estimated combined average emissions level of 250 grams/mile of CO_2 in model year 2016. NHTSA is setting CAFE standards for passenger cars and light trucks under 49 U.S.C. 32902. These standards will require manufacturers of those vehicles to meet an estimated combined average fuel economy level of 34.1 mpg in model year 2016. The standards for both agencies begin with the 2012 model year, with standards increasing in stringency through model year 2016. They represent a harmonized approach that will allow industry to build a single national fleet that will satisfy both the GHG requirements under the CAA and CAFE requirements under EPCA/EISA.

Given differences in their respective statutory authorities, however, the agencies' standards include some important differences. Under the CO_2 fleet average standards adopted under CAA section 202(a), EPA expects manufacturers to take advantage of the option to generate CO_2-equivalent credits by reducing emissions of hydrofluorocarbons (HFCs) and CO_2 through improvements in their air conditioner systems. EPA accounted for these reductions in developing its final CO_2 standards. NHTSA did not do so because EPCA does not allow vehicle manufacturers to use air conditioning credits in complying with CAFE standards for passenger cars.[19] CO_2 emissions due to air conditioning operation are not measured by the test procedure mandated by statute for use in establishing and enforcing CAFE standards for passenger cars. As a result, improvement in the efficiency of passenger car air conditioners is not considered as a possible control technology for purposes of CAFE.

These differences regarding the treatment of air conditioning improvements (related to CO_2 and HFC reductions) affect the relative stringency of the EPA standard and NHTSA standard for MY 2016. The 250 grams per mile of CO_2 equivalent emissions limit is equivalent to 35.5 mpg[20] if the automotive industry were to meet this CO_2 level all through fuel economy improvements. As a consequence of the prohibition against NHTSA's allowing credits for air conditioning improvements for purposes of passenger car CAFE compliance, NHTSA is setting fuel economy standards that are estimated to require a combined (passenger car and light truck) average fuel economy level of 34.1 mpg by MY 2016.

The vast majority of public comments expressed strong support for the National Program standards, including the stringency of the agencies' respective standards and the phase-in from model year 2012 through 2016. There were a number of comments supporting standards more stringent than proposed, and a few others supporting less stringent standards, in particular for the 2012–2015 model years. The agencies' consideration of comments and their updated technical analyses led to only very limited changes in the footprint curves and did not change the agencies' projections that the nationwide fleet will achieve a level of 250 grams/mile by 2016 (equivalent to 35.5 mpg). The responses to these comments are discussed in more detail in Sections III and IV, respectively, and in the Response to Comments document.

As proposed, NHTSA and EPA's final standards, like the standards NHTSA promulgated in March 2009 for MY 2011, are expressed as mathematical functions depending on vehicle footprint. Footprint is one measure of vehicle size, and is determined by multiplying the vehicle's wheelbase by the vehicle's average track width.[21] The standards that must be met by each manufacturer's fleet will be determined by computing the sales-weighted average (harmonic average for CAFE) of the targets applicable to each of the manufacturer's passenger cars and light trucks. Under these footprint-based standards, the levels required of individual manufacturers will depend, as noted above, on the mix of vehicles sold. NHTSA's and EPA's respective standards are shown in the tables below. It is important to note that the standards are the attribute-based curves established by each agency. The values in the tables below reflect the agencies' projection of the corresponding fleet levels that will result from these attribute-based curves.

As a result of public comments and updated economic and future fleet projections, EPA and NHTSA have updated the attribute based curves for this final rule, as discussed in detail in Section II.B of this preamble and Chapter 2 of the Joint TSD. This update in turn affects costs, benefits, and other impacts of the final standards. Thus, the agencies have updated their overall projections of the impacts of the final rule standards, and these results are only slightly different from those presented in the proposed rule.

As shown in Table I.B.2–1, NHTSA's fleet-wide CAFE-required levels for passenger cars under the final standards are projected to increase from 33.3 to 37.8 mpg between MY 2012 and MY 2016. Similarly, fleet-wide CAFE levels for light trucks are projected to increase from 25.4 to 28.8 mpg. NHTSA has also estimated the average fleet-wide required levels for the combined car and truck fleets. As shown, the overall fleet average CAFE level is expected to be 34.1 mpg in MY 2016. These numbers do not include the effects of other flexibilities and credits in the program. These standards represent a 4.3 percent average annual rate of increase relative to the MY 2011 standards.[22]

TABLE I.B.2–1—AVERAGE REQUIRED FUEL ECONOMY (mpg) UNDER FINAL CAFE STANDARDS

	2011-base	2012	2013	2014	2015	2016
Passenger Cars	30.4	33.3	34.2	34.9	36.2	37.8
Light Trucks	24.4	25.4	26.0	26.6	27.5	28.8
Combined Cars & Trucks	27.6	29.7	30.5	31.3	32.6	34.1

[19] There is no such statutory limitation with respect to light trucks.

[20] The agencies are using a common conversion factor between fuel economy in units of miles per gallon and CO_2 emissions in units of grams per mile. This conversion factor is 8,887 grams CO_2 per gallon gasoline fuel. Diesel fuel has a conversion factor of 10,180 grams CO_2 per gallon diesel fuel though for the purposes of this calculation, we are assuming 100% gasoline fuel.

[21] See 49 CFR 523.2 for the exact definition of "footprint."

[22] Because required CAFE levels depend on the mix of vehicles sold by manufacturers in a model year, NHTSA's estimate of future required CAFE levels depends on its estimate of the mix of vehicles that will be sold in that model year. NHTSA currently estimates that the MY 2011 standards will require average fuel economy levels of 30.4 mpg for passenger cars, 24.4 mpg for light trucks, and 27.6 mpg for the combined fleet.

Accounting for the expectation that some manufacturers could continue to pay civil penalties rather than achieving required CAFE levels, and the ability to use FFV credits,[23] NHTSA estimates that the CAFE standards will lead to the following average achieved fuel economy levels, based on the projections of what each manufacturer's fleet will comprise in each year of the program:[24]

TABLE I.B.2–2—PROJECTED FLEET-WIDE ACHIEVED CAFE LEVELS UNDER THE FINAL FOOTPRINT-BASED CAFE STANDARDS (mpg)

	2012	2013	2014	2015	2016
Passenger Cars	32.3	33.5	34.2	35.0	36.2
Light Trucks	24.5	25.1	25.9	26.7	27.5
Combined Cars & Trucks	28.7	29.7	30.6	31.5	32.7

NHTSA is also required by EISA to set a minimum fuel economy standard for domestically manufactured passenger cars in addition to the attribute-based passenger car standard. The minimum standard "shall be the greater of (A) 27.5 miles per gallon; or (B) 92 percent of the average fuel economy projected by the Secretary for the combined domestic and non-domestic passenger automobile fleets manufactured for sale in the United States by all manufacturers in the model year.* * *"[25]

Based on NHTSA's current market forecast, the agency's estimates of these minimum standards under the MY 2012–2016 CAFE standards (and, for comparison, the final MY 2011 standard) are summarized below in Table I.B.2–3.[26] For eventual compliance calculations, the final calculated minimum standards will be updated to reflect the average fuel economy level required under the final standards.

TABLE I.B.2–3—ESTIMATED MINIMUM STANDARD FOR DOMESTICALLY MANUFACTURED PASSENGER CARS UNDER MY 2011 AND MY 2012–2016 CAFE STANDARDS FOR PASSENGER CARS (mpg)

2011	2012	2013	2014	2015	2016
27.8	30.7	31.4	32.1	33.3	34.7

EPA is establishing GHG emissions standards, and Table I.B.2–4 provides EPA's estimates of their projected overall fleet-wide CO_2 equivalent emission levels.[27] The g/mi values are CO_2 equivalent values because they include the projected use of air conditioning (A/C) credits by manufacturers, which include both HFC and CO_2 reductions.

TABLE I.B.2–4—PROJECTED FLEET-WIDE EMISSIONS COMPLIANCE LEVELS UNDER THE FOOTPRINT-BASED CO_2 STANDARDS (g/mi)

	2012	2013	2014	2015	2016
Passenger Cars	263	256	247	236	225
Light Trucks	346	337	326	312	298
Combined Cars & Trucks	295	286	276	263	250

As shown in Table I.B.2–4, fleet-wide CO_2 emission level requirements for cars are projected to increase in stringency from 263 to 225 g/mi between MY 2012 and MY 2016. Similarly, fleet-wide CO_2 equivalent emission level requirements for trucks are projected to increase in stringency from 346 to 298 g/mi. As shown, the overall fleet average CO_2 level requirements are projected to increase in stringency from 295 g/mi in MY 2012 to 250 g/mi in MY 2016.

EPA anticipates that manufacturers will take advantage of program flexibilities such as flexible fueled vehicle credits and car/truck credit trading. Due to the credit trading between cars and trucks, the estimated improvements in CO_2 emissions are distributed differently than shown in Table I.B.2–4, where full manufacturer compliance without credit trading is assumed. Table I.B.2–5 shows EPA's projection of the achieved emission levels of the fleet for MY 2012 through 2016, which does consider the impact of car/truck credit transfer and the increase in emissions due to certain program flexibilities including flex fueled vehicle credits and the temporary lead time allowance alternative standards. The use of optional air conditioning credits is considered both in this analysis of achieved levels and of the

[23] The penalties are similar in function to essentially unlimited, fixed-price allowances.

[24] NHTSA's estimates account for availability of CAFE credits for the sale of flexible-fuel vehicles (FFVs), and for the potential that some manufacturers will pay civil penalties rather than comply with the CAFE standards. This yields NHTSA's estimates of the real-world fuel economy that will likely be achieved under the final CAFE standards. NHTSA has not included any potential impact of car-truck credit transfer in its estimate of the achieved CAFE levels.

[25] 49 U.S.C. 32902(b)(4).

[26] In the March 2009 final rule establishing MY 2011 standards for passenger cars and light trucks, NHTSA estimated that the minimum required CAFE standard for domestically manufactured passenger cars would be 27.8 mpg under the MY 2011 passenger car standard.

[27] These levels do not include the effect of flexible fuel credits, transfer of credits between cars and trucks, temporary lead time allowance, or any other credits with the exception of air conditioning.

compliance levels described above. As can be seen in Table I.B.2–5, the projected achieved levels are slightly higher for model years 2012–2015 due to EPA's assumptions about manufacturers' use of the regulatory flexibilities, but by model year 2016 the achieved level is projected to be 250 g/mi for the fleet.

TABLE I.B.2–5—PROJECTED FLEET-WIDE ACHIEVED EMISSION LEVELS UNDER THE FOOTPRINT-BASED CO_2 STANDARDS (g/mi)

	2012	2013	2014	2015	2016
Passenger Cars	267	256	245	234	223
Light Trucks	365	353	340	324	303
Combined Cars & Trucks	305	293	280	266	250

Several auto manufacturers stated that the increasingly stringent requirements for fuel economy and GHG emissions in the early years of the program should follow a more linear phase-in. The agencies' consideration of comments and of their updated technical analyses did not lead to changes to the phase-in of the standards discussed above. This issue is discussed in more detail in Sections II.D, and in Sections III and IV.

NHTSA's and EPA's technology assessment indicates there is a wide range of technologies available for manufacturers to consider in upgrading vehicles to reduce GHG emissions and improve fuel economy. Commenters were in general agreement with this assessment.[28] As noted, these include improvements to the engines such as use of gasoline direct injection and downsized engines that use turbochargers to provide performance similar to that of larger engines, the use of advanced transmissions, increased use of start-stop technology, improvements in tire rolling resistance, reductions in vehicle weight, increased use of hybrid and other advanced technologies, and the initial commercialization of electric vehicles and plug-in hybrids. EPA is also projecting improvements in vehicle air conditioners including more efficient as well as low leak systems. All of these technologies are already available today, and EPA's and NHTSA's assessments are that manufacturers will be able to meet the standards through more widespread use of these technologies across the fleet.

With respect to the practicability of the standards in terms of lead time, during MYs 2012–2016 manufacturers are expected to go through the normal automotive business cycle of redesigning and upgrading their light-duty vehicle products, and in some cases introducing entirely new vehicles not on the market today. This rule allows manufacturers the time needed to incorporate technology to achieve GHG reductions and improve fuel economy during the vehicle redesign process. This is an important aspect of the rule, as it avoids the much higher costs that would occur if manufacturers needed to add or change technology at times other than their scheduled redesigns. This time period also provides manufacturers the opportunity to plan for compliance using a multi-year time frame, again consistent with normal business practice. Over these five model years, there will be an opportunity for manufacturers to evaluate almost every one of their vehicle model platforms and add technology in a cost effective way to control GHG emissions and improve fuel economy. This includes redesign of the air conditioner systems in ways that will further reduce GHG emissions. Various commenters stated that the proposed phase-in of the standards should be introduced more aggressively, less aggressively, or in a more linear manner. However, our consideration of these comments about the phase-in, as well as our revised analyses, leads us to conclude that the general rate of introduction of the standards as proposed remains appropriate. This conclusion is also not affected by the slight difference from the proposal in the final footprint-based curves. These issues are addressed further in Sections III and IV.

Both agencies considered other standards as part of the rulemaking analyses, both more and less stringent than those proposed. EPA's and NHTSA's analyses of alternative standards are contained in Sections III and IV of this preamble, respectively, as well as the agencies' respective RIAs.

The CAFE and GHG standards described above are based on determining emissions and fuel economy using the city and highway test procedures that are currently used in the CAFE program. Some environmental and other organizations commented that the test procedures should be improved to reflect more real-world driving conditions; auto manufacturers in general do not support such changes to the test procedures at this time. Both agencies recognize that these test procedures are not fully representative of real-world driving conditions. For example, EPA has adopted more representative test procedures that are used in determining compliance with emissions standards for pollutants other than GHGs. These test procedures are also used in EPA's fuel economy labeling program. However, as discussed in Section III, the current information on effectiveness of the individual emissions control technologies is based on performance over the CAFE test procedures. For that reason, EPA is using the current CAFE test procedures for the CO_2 standards and is not changing those test procedures in this rulemaking. NHTSA, as discussed above, is limited by statute in what test procedures can be used for purposes of passenger car testing, although there is no such statutory limitation with respect to test procedures for trucks. However, the same reasons for not changing the truck test procedures apply for CAFE as well.

Both EPA and NHTSA are interested in developing programs that employ test procedures that are more representative of real-world driving conditions, to the extent authorized under their respective statutes. This is an important issue, and the agencies intend to continue to evaluate it in the context of a future rulemaking to address standards for model year 2017 and thereafter. This could include consideration of a range of test procedure changes to better represent real-world driving conditions in terms of speed, acceleration, deceleration, ambient temperatures, use of air conditioners, and the like. With respect to air conditioner operation, EPA discusses the public comments on these issues and the final procedures for determining emissions credits for controls on air conditioners in Section III.

[28] The close relationship between emissions of CO_2—the most prevalent greenhouse gas emitted by motor vehicles—and fuel consumption, means that the technologies to control CO_2 emissions and to improve fuel economy overlap to a great degree.

Finally, based on the information EPA developed in its recent rulemaking that updated its fuel economy labeling program to better reflect average real-world fuel economy, the calculation of fuel savings and CO_2 emissions reductions that will be achieved by the CAFE and GHG standards includes adjustments to account for the difference between the fuel economy level measured in the CAFE test procedure and the fuel economy actually achieved on average under real-world driving conditions. These adjustments are industry averages for the vehicles' performance as a whole, however, and are not a substitute for the information on effectiveness of individual control technologies that will be explored for purposes of a future GHG and CAFE rulemaking.

3. Form of the Standards

NHTSA and EPA proposed attribute-based standards for passenger cars and light trucks. NHTSA adopted an attribute approach based on vehicle footprint in its Reformed CAFE program for light trucks for model years 2008–2011,[29] and recently extended this approach to passenger cars in the CAFE rule for MY 2011 as required by EISA.[30] The agencies also proposed using vehicle footprint as the attribute for the GHG and CAFE standards. Footprint is defined as a vehicle's wheelbase multiplied by its track width—in other words, the area enclosed by the points at which the wheels meet the ground. Most commenters that expressed a view on this topic supported basing the standards on an attribute, and almost all of these supported the proposed choice of vehicle footprint as an appropriate attribute. The agencies continue to believe that the standards are best expressed in terms of an attribute, and that the footprint attribute is the most appropriate attribute on which to base the standards. These issues are further discussed later in this notice and in Chapter 2 of the Joint TSD.

Under the footprint-based standards, each manufacturer will have a GHG and CAFE target unique to its fleet, depending on the footprints of the vehicle models produced by that manufacturer. A manufacturer will have separate footprint-based standards for cars and for trucks. Generally, larger vehicles (*i.e.,* vehicles with larger footprints) will be subject to less stringent standards (*i.e.,* higher CO_2 grams/mile standards and lower CAFE standards) than smaller vehicles. This is because, generally speaking, smaller vehicles are more capable of achieving lower levels of CO_2 and higher levels of fuel economy than larger vehicles. While a manufacturer's fleet average standard could be estimated throughout the model year based on projected production volume of its vehicle fleet, the standard to which the manufacturer must comply will be based on its final model year production figures. A manufacturer's calculation of fleet average emissions at the end of the model year will thus be based on the production-weighted average emissions of each model in its fleet.

The final footprint-based standards are very similar in shape to those proposed. NHTSA and EPA include more discussion of the development of the final curves in Section II below, with a full discussion in the Joint TSD. In addition, a full discussion of the equations and coefficients that define the curves is included in Section III for the CO_2 curves and Section IV for the mpg curves. The following figures illustrate the standards. First, Figure I.B.3–1 shows the fuel economy (mpg) car standard curve.

Under an attribute-based standard, every vehicle model has a performance target (fuel economy for the CAFE standards, and CO_2 g/mile for the GHG emissions standards), the level of which depends on the vehicle's attribute (for this rule, footprint). The manufacturers' fleet average performance is determined by the production-weighted[31] average (for CAFE, harmonic average) of those targets. NHTSA and EPA are setting CAFE and CO_2 emissions standards defined by constrained linear functions and, equivalently, piecewise linear functions.[32] As a possible option for future rulemakings, the constrained linear form was introduced by NHTSA in the 2007 NPRM proposing CAFE standards for MY 2011–2015.

NHTSA is establishing the attribute curves below for assigning a fuel economy level to an individual vehicle's footprint value, for model years 2012 through 2016. These mpg values will be production weighted to determine each manufacturer's fleet average standard for cars and trucks. Although the general model of the equation is the same for each vehicle category and each year, the parameters of the equation differ for cars and trucks. Each parameter also changes on an annual basis, resulting in the yearly increases in stringency. Figure I.B.3–1 below illustrates the passenger car CAFE standard curves for model years 2012 through 2016 while Figure I.B.3–2 below illustrates the light truck standard curves for model years 2012–2016. The MY 2011 final standards for cars and trucks, which are specified by a constrained logistic function rather than a constrained linear function, are shown for comparison.

BILLING CODE 6560–50–P

[30] 74 FR 14196 (Mar. 30, 2009).

[31] Based on vehicles produced for sale in the United States.

[32] The equations are equivalent but are specified differently due to differences in the agencies' respective models.

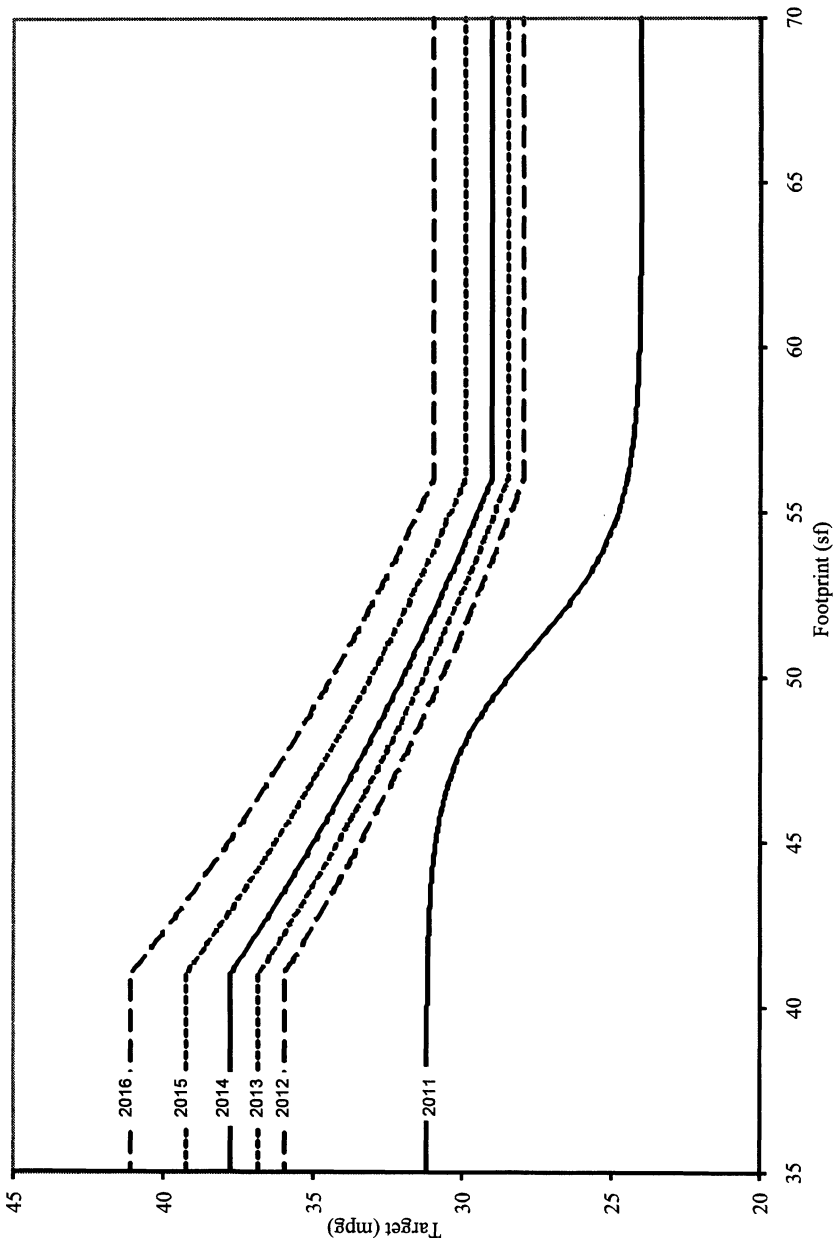

Figure I.B.3-1. MY 2011 and MY 2012-2016 Passenger Car Fuel Economy Targets

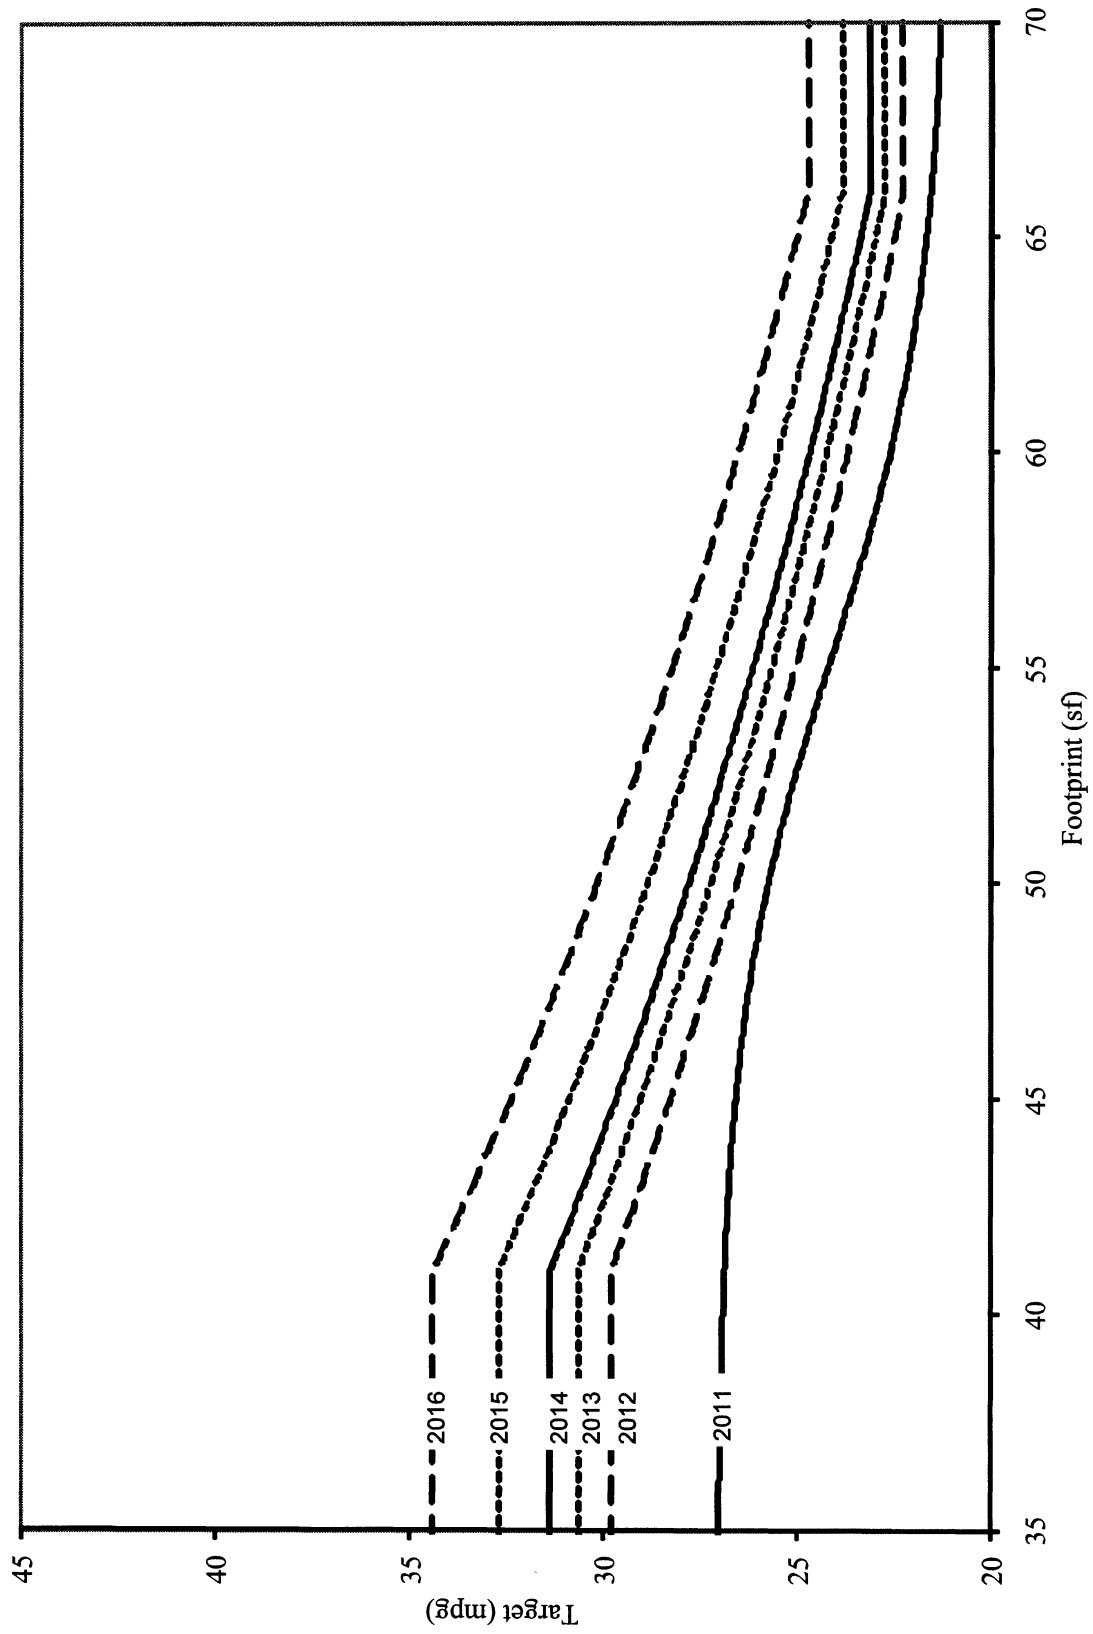

Figure I.B.3-2. MY 2011 and MY 2012-2016 Light Truck Fuel Economy Targets

EPA is establishing the attribute curves below for assigning a CO_2 level to an individual vehicle's footprint value, for model years 2012 through 2016. These CO_2 values will be production weighted to determine each manufacturer's fleet average standard for cars and trucks. As with the CAFE curves above, the general form of the equation is the same for each vehicle category and each year, but the parameters of the equation differ for cars and trucks. Again, each parameter also changes on an annual basis, resulting in the yearly increases in stringency. Figure I.B.3–3 below illustrates the CO_2 car standard curves for model years 2012 through 2016 while Figure I.B.3–4 shows the CO_2 truck standard curves for model years 2012–2016.

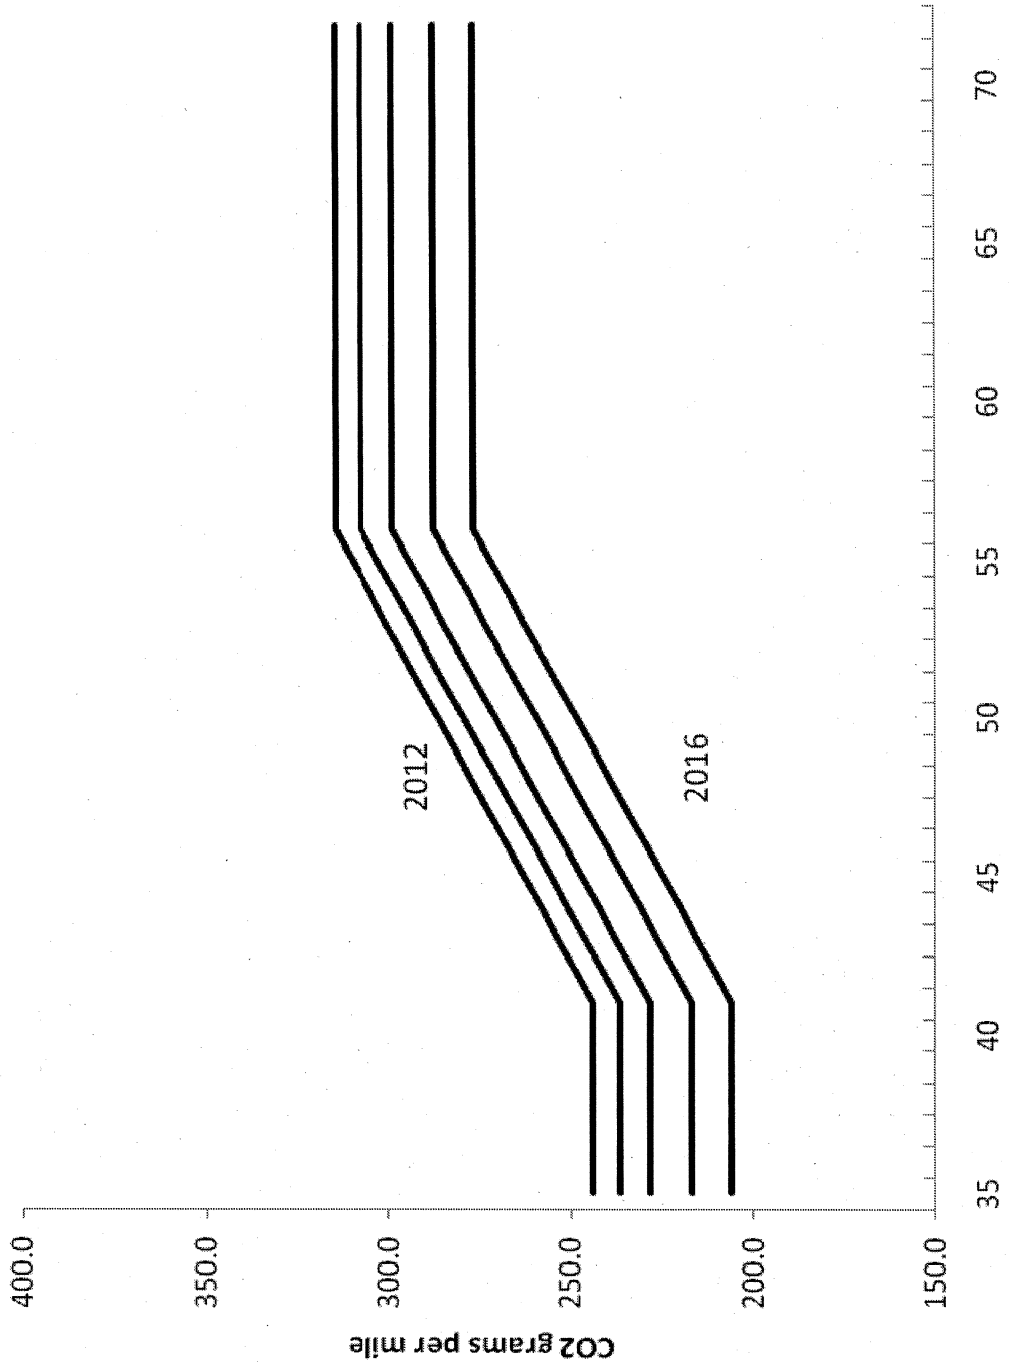

Figure I.B.3-3 CO_2 (g/mi) Car Standard Curves

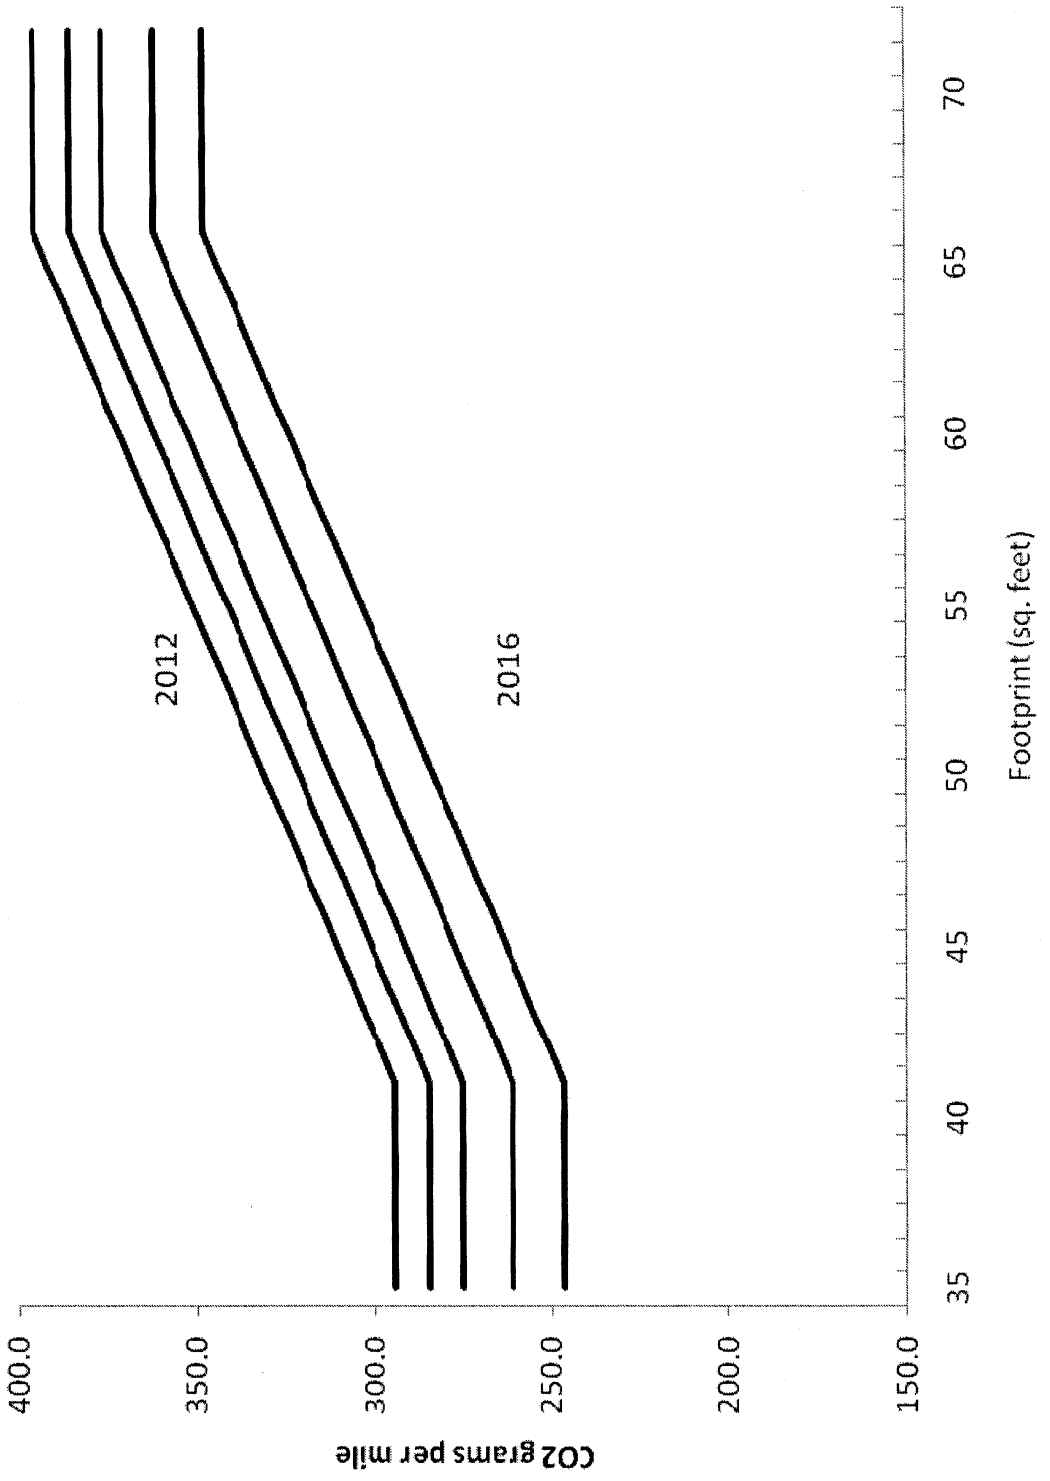

Figure I.B.3-4 CO_2 (g/mi) Truck Standard Curves

BILLING CODE 6560–50–C

NHTSA and EPA received a number of comments about the shape of the car and truck curves. We address these comments further in Section II.C below as well as in Sections III and IV.

As proposed, NHTSA and EPA will use the same vehicle category definitions for determining which vehicles are subject to the car curve standards versus the truck curve standards. In other words, a vehicle classified as a car under the NHTSA CAFE program will also be classified as a car under the EPA GHG program, and likewise for trucks. Auto industry commenters generally agreed with this approach and believe it is an important aspect of harmonization across the two agencies' programs. Some other commenters expressed concern about potential consequences, especially in how cars and trucks are distinguished. However, EPA and NHTSA are employing the same car and truck definitions for the MY 2012–2016 CAFE and GHG standards as those used in the CAFE program for the 2011 model year standards.[33] This issue is further discussed for the EPA standards in Section III, and for the NHTSA standards in Section IV. This approach of using CAFE definitions allows EPA's CO_2 standards and the CAFE standards to be harmonized across all vehicles for this program. However, EPA is not changing the car/truck definition for the purposes of any other previous rules.

Generally speaking, a smaller footprint vehicle will have higher fuel economy and lower CO_2 emissions relative to a larger footprint vehicle when both have the same degree of fuel efficiency improvement technology. In this final rule, the standards apply to a manufacturers overall fleet, not an individual vehicle, thus a manufacturers fleet which is dominated by small footprint vehicles will have a higher fuel economy requirement (lower CO_2 requirement) than a manufacturer whose fleet is dominated by large footprint vehicles. A footprint-based CO_2 or CAFE standard can be relatively neutral with respect to vehicle size and consumer choice. All vehicles, whether smaller or larger, must make improvements to reduce CO_2 emissions or improve fuel economy, and therefore all vehicles will be relatively more expensive. With the footprint-based standard approach, EPA and NHTSA believe there should be no significant effect on the relative distribution of different vehicle sizes in the fleet, which means that consumers will still be able to purchase the size of vehicle that meets their needs. While targets are manufacturer specific, rather than vehicle specific, Table I.B.3–1 illustrates the fact that different vehicle sizes will have varying CO_2 emissions and fuel economy targets under the final standards.

TABLE I.B.3—1 MODEL YEAR 2016 CO_2 AND FUEL ECONOMY TARGETS FOR VARIOUS MY 2008 VEHICLE TYPES

Vehicle type	Example models	Example model footprint (sq. ft.)	CO_2 emissions target (g/mi)	Fuel economy target (mpg)
Example Passenger Cars				
Compact car	Honda Fit	40	206	41.1
Midsize car	Ford Fusion	46	230	37.1
Fullsize car	Chrysler 300	53	263	32.6
Example Light-duty Trucks				
Small SUV	4WD Ford Escape	44	259	32.9
Midsize crossover	Nissan Murano	49	279	30.6
Minivan	Toyota Sienna	55	303	28.2
Large pickup truck	Chevy Silverado	67	348	24.7

4. Program Flexibilities

EPA's and NHTSA's programs as established in this rule provide compliance flexibility to manufacturers, especially in the early years of the National Program. This flexibility is expected to provide sufficient lead time for manufacturers to make necessary technological improvements and reduce the overall cost of the program, without compromising overall environmental and fuel economy objectives. The broad goal of harmonizing the two agencies' standards includes preserving manufacturers' flexibilities in meeting the standards, to the extent appropriate and required by law. The following section provides an overview of this final rule's flexibility provisions. Many auto manufacturers commented in support of these provisions as critical to meeting the standards in the lead time provided. Environmental groups, some States, and others raised concerns about the possibility for windfall credits and loss of program benefits. The provisions in the final rule are in most cases the same as those proposed. However consideration of the issues raised by commenters has led to modifications in certain provisions. These comments and the agencies' response are discussed in Sections III and IV below and in the Response to Comments document.

a. CO_2/CAFE Credits Generated Based on Fleet Average Performance

Under this NHTSA and EPA final rule, the fleet average standards that apply to a manufacturer's car and truck fleets are based on the applicable footprint-based curves. At the end of each model year, when production of the model year is complete, a production-weighted fleet average will be calculated for each averaging set (cars and trucks). Under this approach, a manufacturer's car and/or truck fleet that achieves a fleet average CO_2/CAFE level better than the standard can generate credits. Conversely, if the fleet average CO_2/CAFE level does not meet the standard, the fleet would incur debits (also referred to as a shortfall).

Under the final program, a manufacturer whose fleet generates credits in a given model year would have several options for using those credits, including credit carry-back, credit carry-forward, credit transfers, and credit trading. These provisions exist in the MY 2011 CAFE program under EPCA and EISA, and similar provisions are part of EPA's Tier 2 program for light-duty vehicle criteria pollutant emissions, as well as many

[33] 49 CFR 523.

other mobile source standards issued by EPA under the CAA. The manufacturer will be able to carry back credits to offset a deficit that had accrued in a prior model year and was subsequently carried over to the current model year. EPCA also provides for this. EPCA restricts the carry-back of CAFE credits to three years, and as proposed EPA is establishing the same limitation, in keeping with the goal of harmonizing both sets of standards.

After satisfying any need to offset pre-existing deficits, remaining credits can be saved (banked) for use in future years. Under the CAFE program, EISA allows manufacturers to apply credits earned in a model year to compliance in any of the five subsequent model years.[34] As proposed, under the GHG program, EPA is also allowing manufacturers to use these banked credits in the five years after the year in which they were generated (*i.e.,* five years carry-forward).

EISA required NHTSA to establish by regulation a CAFE credits transferring program, which NHTSA established in a March 2009 final rule codified at 49 CFR Part 536, to allow a manufacturer to transfer credits between its vehicle fleets to achieve compliance with the standards. For example, credits earned by over-compliance with a manufacturer's car fleet average standard could be used to offset debits incurred due to that manufacturer's not meeting the truck fleet average standard in a given year. EPA's Tier 2 program also provides for this type of credit transfer. As proposed for purposes of this rule, EPA allows unlimited credit transfers across a manufacturer's car-truck fleet to meet the GHG standard. This is based on the expectation that this flexibility will facilitate manufacturers' ability to comply with the GHG standards in the lead time provided, and will allow the required GHG emissions reductions to be achieved in the most cost effective way. Under the CAA, unlike under EISA, there is no statutory limitation on car-truck credit transfers. Therefore, EPA is not constraining car-truck credit transfers, as doing so would reduce the flexibility for lead time, and would increase costs with no corresponding environmental benefit. For the CAFE program, however, EISA limits the amount of credits that may be transferred, which has the effects of limiting the extent to which a manufacturer can rely upon credits in lieu of making fuel economy improvements to a particular portion of its vehicle fleet, but also of potentially increasing the costs of improving the manufacturer's overall fleet. EISA also prohibits the use of transferred credits to meet the statutory minimum level for the domestic car fleet standard.[35] These and other statutory limits will continue to apply to the determination of compliance with the CAFE standards.

EISA also allowed NHTSA to establish by regulation a CAFE credit trading program, which NHTSA established in the March 2009 final rule at 40 CFR part 536, to allow credits to be traded (sold) to other vehicle manufacturers. As proposed, EPA allows credit trading in the GHG program. These sorts of exchanges are typically allowed under EPA's current mobile source emission credit programs, although manufacturers have seldom made such exchanges. Under the NHTSA CAFE program, EPCA also allows these types of credit trades, although, as with transferred credits, traded credits may not be used to meet the minimum domestic car standards specified by statute.[36] Comments discussing these provisions supported the proposed approach. These final provisions are the same as proposed.

As further discussed in Section IV of this preamble, NHTSA sought to find a way to provide credits for improving the efficiency of light truck air conditioners (A/Cs) and solicited public comments to that end. The agency did so because the power necessary to operate an A/C compressor places a significant additional load on the engine, thus reducing fuel economy and increasing CO_2 tailpipe emissions. *See* Section III.C.1 below. The agency would have made a similar effort regarding cars, but a 1975 statutory provision made it unfruitful even to explore the possibility of administratively proving such credits for cars. The agency did not identify a workable way of providing such credits for light trucks in the context of this rulemaking.

b. Air Conditioning Credits Under the EPA Final Rule

Air conditioning (A/C) systems contribute to GHG emissions in two ways. Hydrofluorocarbon (HFC) refrigerants, which are powerful GHGs, can leak from the A/C system (direct A/C emissions). As just noted, operation of the A/C system also places an additional load on the engine, which results in additional CO_2 tailpipe emissions (indirect A/C related emissions). EPA is allowing manufacturers to generate credits by reducing either or both types of GHG emissions related to A/C systems. Specifically, EPA is establishing a method to calculate CO_2 equivalent reductions for the vehicle's full useful life on a grams/mile basis that can be used as credits in meeting the fleet average CO_2 standards. EPA's analysis indicates that this approach provides manufacturers with a highly cost-effective way to achieve a portion of GHG emissions reductions under the EPA program. EPA is estimating that manufacturers will on average generate 11 g/mi GHG credit toward meeting the 250 g/mi by 2016 (though some companies may generate more). EPA will also allow manufacturers to earn early A/C credits starting in MY 2009 through 2011, as discussed further in a later section. There were many comments on the proposed A/C provisions. Nearly every one of these was supportive of EPA including A/C control as part of this rule, though there was some disagreement on some of the details of the program. The HFC crediting scheme was widely supported. The comments mainly were concentrated on indirect A/C related credits. The auto manufacturers and suppliers had some technical comments on A/C technologies, and there were many concerns with the proposed idle test. EPA has made some minor adjustments in both of these areas that we believe are responsive to these concerns. EPA addresses A/C issues in greater detail in Section III of this preamble and in Chapter 2 of EPA's RIA.

c. Flexible-Fuel and Alternative Fuel Vehicle Credits

EPCA authorizes a compliance flexibility incentive under the CAFE program for production of dual-fueled or flexible-fuel vehicles (FFV) and dedicated alternative fuel vehicles. FFVs are vehicles that can run both on an alternative fuel and conventional fuel. Most FFVs are E85 capable vehicles, which can run on either gasoline or a mixture of up to 85 percent ethanol and 15 percent gasoline (E85). Dedicated alternative fuel vehicles are vehicles that run exclusively on an alternative fuel. EPCA was amended by EISA to extend the period of availability of the FFV incentive, but to begin phasing it out by annually reducing the amount of FFV incentive that can be used toward compliance with the CAFE standards.[37] Although NHTSA

[34] 49 U.S.C. 32903(a)(2).

[35] 49 U.S.C. 32903(g)(4).

[36] 49 U.S.C. 32903(f)(2).

[37] EPCA provides a statutory incentive for production of FFVs by specifying that their fuel economy is determined using a special calculation procedure that results in those vehicles being assigned a higher fuel economy level than would

Continued

expressed concern about the non-use of alternative fuel by FFVs in a 2002 report to Congress (Effects of the Alternative Motor Fuels Act CAFE Incentives Policy), EISA does not premise the availability of the FFV credits on actual use of alternative fuel by an FFV vehicle. Under NHTSA's CAFE program, pursuant to EISA, no FFV credits will be available for CAFE compliance after MY 2019.[38] For dedicated alternative fuel vehicles, there are no limits or phase-out of the credits. As required by the statute, NHTSA will continue to allow the use of FFV credits for purposes of compliance with the CAFE standards until the end of the EISA phase-out period.

For the GHG program, as proposed, EPA will allow FFV credits in line with EISA limits, but only during the period from MYs 2012 to 2015. After MY 2015, EPA will only allow FFV credits based on a manufacturer's demonstration that the alternative fuel is actually being used in the vehicles and based on the vehicle's actual performance. EPA discusses this in more detail in Section III.C of the preamble, including a summary of key comments. These provisions are being finalized as proposed, with further discussion in Section III.C of how manufacturers can demonstrate that the alternative fuel is being used.

d. Temporary Lead-Time Allowance Alternative Standards Under the EPA Final Rule

Manufacturers with limited product lines may be especially challenged in the early years of the National Program, and need additional lead time. Manufacturers with narrow product offerings may not be able to take full advantage of averaging or other program flexibilities due to the limited scope of the types of vehicles they sell. For example, some smaller volume manufacturer fleets consist entirely of vehicles with very high baseline CO_2 emissions. Their vehicles are above the CO_2 emissions target for that vehicle footprint, but do not have other types of vehicles in their production mix with which to average. Often, these manufacturers pay fines under the CAFE program rather than meet the applicable CAFE standard. EPA believes that these technological circumstances call for more lead time in the form of a more gradual phase-in of standards.

EPA is finalizing a temporary lead-time allowance for manufacturers that sell vehicles in the U.S. in MY 2009 and for which U.S. vehicle sales in that model year are below 400,000 vehicles. This allowance will be available only during the MY 2012–2015 phase-in years of the program. A manufacturer that satisfies the threshold criteria will be able to treat a limited number of vehicles as a separate averaging fleet, which will be subject to a less stringent GHG standard.[39] Specifically, a standard of 25 percent above the vehicle's otherwise applicable foot-print target level will apply to up to 100,000 vehicles total, spread over the four year period of MY 2012 through 2015. Thus, the number of vehicles to which the flexibility could apply is limited. EPA also is setting appropriate restrictions on credit use for these vehicles, as discussed further in Section III. By MY 2016, these allowance vehicles must be averaged into the manufacturer's full fleet (*i.e.,* they will no longer be eligible for a different standard). EPA discusses this in more detail in Section III.B of the preamble.

EPA received comments from several smaller manufacturers that the TLAAS program was insufficient to allow manufacturers with very limited product lines to comply. These manufacturers commented that they need additional lead time to meet the standards, because their CO_2 baselines are significantly higher and their vehicle product lines are even more limited, reducing their ability to average across their fleets compared even to other TLAAS manufacturers. EPA fully summarizes the public comments on the TLAAS program, including comments not supporting the program, in Section III.B. In summary, in response to the lead time issues raised by manufacturers, EPA is modifying the TLAAS program that applies to manufacturers with between 5,000 and 50,000 U.S. vehicle sales in MY 2009. EPA believes these provisions are necessary given that, compared with other TLAAS manufacturers, these manufacturers have even more limited product offerings across which to average and higher baseline CO_2 emissions, and thus need additional lead-time to meet the standards. These manufacturers would have an increased allotment of vehicles, a total of 250,000, compared to 100,000 vehicles (for other TLAAS-eligible manufacturers). In addition, the TLAAS program for these manufacturers would be extended by one year, through MY 2016 for these vehicles, for a total of five years of eligibility. The other provisions of the TLAAS program would continue to apply, such as the restrictions on credit trading and the level of the standard. Additional restrictions would also apply to these vehicles, as discussed in Section III. In addition, for the smallest volume manufacturers, those with below 5,000 U.S. vehicle sales, EPA is not setting standards at this time but is instead deferring standards until a future rulemaking. This is essentially the same approach we are using for small businesses, which are exempted from this rule. The unique issues involved with these manufacturers will be addressed in that future rulemaking. Further discussion of the public comment on these issues and details on these changes from the proposed program are included in Section III.

e. Additional Credit Opportunities Under the Clean Air Act (CAA)

EPA is establishing additional opportunities for early credits in MYs 2009–2011 through over-compliance with a baseline standard. The baseline standard is set to be equivalent, on a national level, to the California standards. Credits can be generated by over-compliance with this baseline in one of two ways—over-compliance by the fleet of vehicles sold in California and the CAA section 177 States (*i.e.,* those States adopting the California program), or over-compliance with the fleet of vehicles sold in the 50 States. EPA is also providing for early credits based on over-compliance with CAFE, but only for vehicles sold in States outside of California and the CAA section 177 states. Under the early credit provisions, no early FFV credits would be allowed, except those achieved by over-compliance with the California program based on California's provisions that manufacturers demonstrate actual use of the alternative fuel. EPA's early credits provisions are designed to ensure that there would be no double counting of early credits. NHTSA notes, however, that credits for overcompliance with CAFE standards during MYs 2009–2011 will still be available for manufacturers to use toward compliance in future model years, just as before.

EPA received comments from some environmental organizations and States expressing concern that these early credits were inappropriate windfall credits because they provided credits for actions that were not surplus, that is above what would otherwise be required for compliance with either State or Federal motor vehicle standards. This focused on the credits

otherwise occur. This is typically referred to as an FFV credit.

[38] *Id.*

[39] EPCA does not permit such an allowance. Consequently, manufacturers who may be able to take advantage of a lead-time allowance under the GHG standards would be required to comply with the applicable CAFE standard or be subject to penalties for non-compliance.

for over-compliance with the California standards generated during model years 2009 and perhaps 2010, where according to commenters the CAFE requirements were in effect more stringent than the California standards. EPA believes that early credits provide a valuable incentive for manufacturers that have implemented fuel efficient technologies in excess of their CAFE compliance obligations prior to MY 2012. With appropriate restrictions, these credits, reflecting over-compliance over a three model year time frame (MY 2009–2011) and not just over one or two model years, will be surplus reductions and not otherwise required by law. Therefore, EPA is finalizing these provisions largely as proposed, but in response to comments, with an additional restriction on the trading of MY 2009 credits. The overall structure of this early credit program addresses concerns about the potential for windfall credits in the first one or two model years. This issue is fully discussed in Section III.C.

EPA is providing an additional temporary incentive to encourage the commercialization of advanced GHG/fuel economy control technologies—including electric vehicles (EVs), plug-in hybrid electric vehicles (PHEVs), and fuel cell vehicles (FCVs)—for model years 2012–2016. EPA's proposal included an emissions compliance value of zero grams/mile for EVs and FCVs, and the electric portion of PHEVs, and a multiplier in the range of 1.2 to 2.0, so that each advanced technology vehicle would count as greater than one vehicle in a manufacturer's fleetwide compliance calculation. EPA received many comments on the proposed incentives. Many State and environmental organization commenters believed that the combination of these incentives could undermine the GHG benefits of the rule, and believed the emissions compliance values should take into account the net upstream GHG emissions associated with electrified vehicles compared to vehicles powered by petroleum based fuel. Auto manufacturers generally supported the incentives, some believing the incentives to be a critical part of the National Program. Most auto makers supported both the zero grams/mile emissions compliance value and the higher multipliers.

Upon considering the public comments on this issue, EPA is finalizing an advanced technology vehicle incentive program that includes a zero gram/mile emissions compliance value for EVs and FCVs, and the electric portion of PHEVs, for up to the first 200,000 EV/PHEV/FCV vehicles produced by a given manufacturer during MY 2012–2016 (for a manufacturer that produces less than 25,000 EVs, PHEVs, and FCVs in MY 2012), or for up to the first 300,000 EV/PHEV/FCV vehicles produced during MY 2012–2016 (for a manufacturer that produces 25,000 or more EVs, PHEVs, and FCVs in MY 2012). For any production greater than this amount, the compliance value for the vehicle will be greater than zero gram/mile, set at a level that reflects the vehicle's net increase in upstream GHG emissions in comparison to the gasoline vehicle it replaces. In addition, EPA is not finalizing a multiplier. EPA will also allow this early advanced technology incentive program beginning in MYs 2009–2011. The purpose of these provisions is to provide a temporary incentive to promote technologies which have the potential to produce very large GHG reductions in the future. The tailpipe GHG emissions from EVs, FCVs, and PHEVs operated on grid electricity are zero, and traditionally the emissions of the vehicle itself are all that EPA takes into account for purposes of compliance with standards set under section 202(a). This has not raised any issues for criteria pollutants, as upstream emissions associated with production and distribution of the fuel are addressed by comprehensive regulatory programs focused on the upstream sources of those emissions. At this time, however, there is no such comprehensive program addressing upstream emissions of GHGs, and the upstream GHG emissions associated with production and distribution of electricity are higher than the corresponding upstream GHG emissions of gasoline or other petroleum based fuels. In the future, vehicle fleet electrification combined with advances in low-carbon technology in the electricity sector have the potential to transform the transportation sector's contribution to the country's GHG emissions. EPA will reassess the issue of how to address EVs, PHEVs, and FCVs in rulemakings for model years 2017 and beyond, based on the status of advanced vehicle technology commercialization, the status of upstream GHG control programs, and other relevant factors. Further discussion of the temporary advanced technology vehicle incentives, including more detail on the public comments and EPA's response, is found in Section III.C.

EPA is also providing an option for manufacturers to generate credits for employing new and innovative technologies that achieve GHG reductions that are not reflected on current test procedures, as proposed. Examples of such "off-cycle" technologies might include solar panels on hybrids, adaptive cruise control, and active aerodynamics, among other technologies. These three credit provisions are discussed in more detail in Section III.

5. Coordinated Compliance

Previous NHTSA and EPA regulations and statutory provisions establish ample examples on which to develop an effective compliance program that achieves the energy and environmental benefits from CAFE and motor vehicle GHG standards. NHTSA and EPA have developed a program that recognizes, and replicates as closely as possible, the compliance protocols associated with the existing CAA Tier 2 vehicle emission standards, and with CAFE standards. The certification, testing, reporting, and associated compliance activities closely track current practices and are thus familiar to manufacturers. EPA already oversees testing, collects and processes test data, and performs calculations to determine compliance with both CAFE and CAA standards. Under this coordinated approach, the compliance mechanisms for both programs are consistent and non-duplicative. EPA will also apply the CAA authorities applicable to its separate in-use requirements in this program.

The compliance approach allows manufacturers to satisfy the new program requirements in the same general way they comply with existing applicable CAA and CAFE requirements. Manufacturers would demonstrate compliance on a fleet-average basis at the end of each model year, allowing model-level testing to continue throughout the year as is the current practice for CAFE determinations. The compliance program design establishes a single set of manufacturer reporting requirements and relies on a single set of underlying data. This approach still allows each agency to assess compliance with its respective program under its respective statutory authority.

NHTSA and EPA do not anticipate any significant noncompliance under the National Program. However, failure to meet the fleet average standards (after credit opportunities are exhausted) would ultimately result in the potential for penalties under both EPCA and the CAA. The CAA allows EPA considerable discretion in assessment of penalties. Penalties under the CAA are typically determined on a vehicle-specific basis by determining the

number of a manufacturer's highest emitting vehicles that caused the fleet average standard violation. This is the same mechanism used for EPA's National Low Emission Vehicle and Tier 2 corporate average standards, and to date there have been no instances of noncompliance. CAFE penalties are specified by EPCA and would be assessed for the entire noncomplying fleet at a rate of $5.50 times the number of vehicles in the fleet, times the number of tenths of mpg by which the fleet average falls below the standard. In the event of a compliance action arising out of the same facts and circumstances, EPA could consider CAFE penalties when determining appropriate remedies for the EPA case.

Several stakeholders commented on the proposed coordinated compliance approach. The comments indicated broad support for the overall approach EPA proposed. In particular, both regulated industry and the public interest community appreciated the attempt to streamline compliance by adopting current practice where possible and by coordinating EPA and NHTSA compliance requirements. Thus the final compliance program design is largely unchanged from the proposal. Some commenters requested additional detail or clarification in certain areas and others suggested some relatively narrow technical changes, and EPA has responded to these suggestions. EPA and NHTSA summarize these comments and the agencies' responses in Sections III and IV, respectively, below. The Response to Comments document associated with this document includes all of the comments and responses received during the comment period.

C. Summary of Costs and Benefits of the National Program

This section summarizes the projected costs and benefits of the CAFE and GHG emissions standards. These projections helped inform the agencies' choices among the alternatives considered and provide further confirmation that the final standards are an appropriate choice within the spectrum of choices allowable under their respective statutory criteria. The costs and benefits projected by NHTSA to result from these CAFE standards are presented first, followed by those from EPA's analysis of the GHG emissions standards.

For several reasons, the estimates for costs and benefits presented by NHTSA and EPA, while consistent, are not directly comparable, and thus should not be expected to be identical. Most important, NHTSA and EPA's standards would require slightly different fuel efficiency improvements. EPA's GHG standard is more stringent in part due to its assumptions about manufacturers' use of air conditioning credits, which result from reductions in air conditioning-related emissions of HFCs and CO_2. NHTSA was unable to make assumptions about manufacturers' improving the efficiency of air conditioners due to statutory limitations. In addition, the CAFE and GHG standards offer different program flexibilities, and the agencies' analyses differ in their accounting for these flexibilities (for example, FFVs), primarily because NHTSA is statutorily prohibited from considering some flexibilities when establishing CAFE standards, while EPA is not. These differences contribute to differences in the agencies' respective estimates of costs and benefits resulting from the new standards.

NHTSA performed two analyses: a primary analysis that shows the estimates of costs, fuel savings, and related benefits that the agency considered for purposes of establishing new CAFE standards, and a supplemental analysis that reflects the agency's best estimate of the potential real-world effects of the CAFE standards, including manufacturers' potential use of FFV credits in accordance with the provisions of EISA concerning their availability. Because EPCA prohibits NHTSA from considering the ability of manufacturers to use of FFV credits to increase their fleet average fuel economy when *establishing* CAFE standards, the agency's primary analysis does not include them. However, EPCA does not prohibit NHTSA from considering the fact that manufacturers may pay civil penalties rather than complying with CAFE standards, and NHTSA's primary analysis accounts for some manufacturers' tendency to do so. In addition, NHTSA's supplemental analysis of the effect of FFV credits on benefits and costs from its CAFE standards, demonstrates the real-world impacts of FFVs, and the summary estimates presented in Section IV include these effects. Including the use of FFV credits reduces estimated per-vehicle compliance costs of the program. However, as shown below, including FFV credits does not significantly change the projected fuel savings and CO_2 reductions, because FFV credits reduce the fuel economy levels that manufacturers achieve not only under the standards, but also under the baseline MY 2011 CAFE standards.

Also, EPCA, as amended by EISA, allows manufacturers to transfer credits between their passenger car and light truck fleets. However, EPCA also prohibits NHTSA from considering manufacturers' ability to increase their average fuel economy through the use of CAFE credits when determining the stringency of the CAFE standards. Because of this prohibition, NHTSA's primary analysis does not account for the extent to which credit transfers might actually occur. For purposes of its supplemental analysis, NHTSA considered accounting for the possibility that some manufacturers might utilize the opportunity under EPCA to transfer some CAFE credits between the passenger car and light truck fleets, but determined that in NHTSA's year-by-year analysis, manufacturers' credit transfers cannot be reasonably estimated at this time.[40]

EPA made explicit assumptions about manufacturers' use of FFV credits under both the baseline and control alternatives, and its estimates of costs and benefits from the GHG standards reflect these assumptions. However, under the GHG standards, FFV credits would be available through MY 2015; starting in MY 2016, EPA will only allow FFV credits based on a manufacturer's demonstration that the alternative fuel is actually being used in the vehicles and the actual GHG performance for the vehicle run on that alternative fuel.

EPA's analysis also assumes that manufacturers would transfer credits between their car and truck fleets in the MY 2011 baseline subject to the maximum value allowed by EPCA, and that unlimited car-truck credit transfers would occur under the GHG standards. Including these assumptions in EPA's analysis increases the resulting estimates of fuel savings and reductions in GHG emissions, while reducing EPA's estimates of program compliance costs.

Finally, under the EPA GHG program, there is no ability for a manufacturer to intentionally pay fines in lieu of meeting the standard. Under EPCA, however, vehicle manufacturers are allowed to pay fines as an alternative to compliance with applicable CAFE standards. NHTSA's analysis explicitly estimates the level of voluntary fine payment by individual manufacturers, which reduces NHTSA's estimates of

[40] NHTSA's analysis estimates multi-year planning effects within a context in which each model year is represented explicitly, and technologies applied in one model year carry forward to future model years. NHTSA does not currently have a reasonable basis to estimate how a manufacturer might, for example, weigh the transfer of credits from the passenger car to the light truck fleet in MY 2013 against the potential to carry light truck technologies forward from MY 2013 through MY 2016.

both the costs and benefits of its CAFE standards. In contrast, the CAA does not allow for fine payment (civil penalties) in lieu of compliance with emission standards, and EPA's analysis of benefits from its standard thus assumes full compliance. This assumption results in higher estimates of fuel savings, of reductions in GHG emissions, and of manufacturers' compliance costs to sell fleets that comply with both NHTSA's CAFE program and EPA's GHG program.

In summary, the projected costs and benefits presented by NHTSA and EPA are not directly comparable, because the GHG emission levels established by EPA include air conditioning-related improvements in equivalent fuel efficiency and HFC reductions, because of the assumptions incorporated in EPA's analysis regarding car-truck credit transfers, and because of EPA's projection of complete compliance with the GHG standards. It should also be expected that overall, EPA's estimates of GHG reductions and fuel savings achieved by the GHG standards will be slightly higher than those projected by NHTSA only for the CAFE standards because of the reasons described above. For the same reasons, EPA's estimates of manufacturers' costs for complying with the passenger car and light trucks GHG standards are slightly higher than NHTSA's estimates for complying with the CAFE standards.

A number of stakeholders commented on NHTSA's and EPA's analytical assumptions in estimating costs and benefits of the program. These comments and any changes from the proposed values are summarized in Section II.F, and further in Sections III (for EPA) and IV (for NHTSA); the Response to Comments document presents the detailed responses to each of the comments.

1. Summary of Costs and Benefits of NHTSA's CAFE Standards

NHTSA has analyzed in detail the costs and benefits of the final CAFE standards. Table I.C.1–1 presents the total costs, benefits, and net benefits for NHTSA's final CAFE standards. The values in Table I.C.1–1 display the total costs for all MY 2012–2016 vehicles and the benefits and net benefits represent the impacts of the standards over the full lifetime of the vehicles projected to be sold during model years 2012–2016. It is important to note that there is significant overlap in costs and benefits for NHTSA's CAFE program and EPA's GHG program and therefore combined program costs and benefits, which together comprise the National Program, are not a sum of the two individual programs.

TABLE I.C.1–1—NHTSA'S ESTIMATED 2012–2016 MODEL YEAR COSTS, BENEFITS, AND NET BENEFITS UNDER THE CAFE STANDARDS BEFORE FFV CREDITS

[2007 dollars]

3% Discount Rate:	$billions
Costs	51.8
Benefits	182.5
Net Benefits	130.7
7% Discount Rate:	
Costs	51.8
Benefits	146.3
Net Benefits	94.5

NHTSA estimates that these new CAFE standards will lead to fuel savings totaling 61 billion gallons throughout the useful lives of vehicles sold in MYs 2012–2016. At a 3% discount rate, the present value of the economic benefits resulting from those fuel savings is $143 billion. At a 7% discount rate, the present value of the economic benefits resulting from those fuel savings is $112 billion.[41]

The agency further estimates that these new CAFE standards will lead to corresponding reductions in CO_2 emissions totaling 655 million metric tons (mmt) during the useful lives of vehicles sold in MYs 2012–2016. The present value of the economic benefits from avoiding those emissions is $14.5 billion, based on a global social cost of carbon value of approximately $21 per metric ton (in 2010, and growing thereafter).[42] It is important to note that NHTSA's CAFE standards and EPA's GHG standards will both be in effect, and each will lead to increases in average fuel economy and CO_2 emissions reductions. The two agencies' standards together comprise the National Program, and this discussion of costs and benefits of NHTSA's CAFE standards does not change the fact that both the CAFE and GHG standards, jointly, are the source of the benefits and costs of the National Program.

TABLE I.C.1–2—NHTSA FUEL SAVED (BILLION GALLONS) AND CO_2 EMISSIONS AVOIDED (mmt) UNDER CAFE STANDARDS (WITHOUT FFV CREDITS)

	2012	2013	2014	2015	2016	Total
Fuel (b. gal.)	4.2	8.9	12.5	16.0	19.5	61.0
CO_2 (mmt)	44	94	134	172	210	655

Considering manufacturers' ability to earn credit toward compliance by selling FFVs, NHTSA estimates very little change in incremental fuel savings and avoided CO_2 emissions, assuming FFV credits would be used toward both the baseline and final standards:

TABLE I.C.1–3—NHTSA FUEL SAVED (BILLION GALLONS) AND CO_2 EMISSIONS AVOIDED (MILLION METRIC TONS, MMT) UNDER CAFE STANDARDS (WITH FFV CREDITS)

	2012	2013	2014	2015	2016	Total
Fuel (b. gal.)	4.9	8.2	11.3	15.0	19.1	58.6

[41] These figures do not account for the compliance flexibilities that NHTSA is prohibited from considering when determining the level of new CAFE standards, because manufacturers' decisions to use those flexibilities are voluntary.

[42] NHTSA also estimated the benefits associated with three more estimates of a one ton GHG reduction in 2010 ($5, $35, and $65), which will likewise grow thereafter. *See* Section II for a more detailed discussion of the social cost of carbon.

TABLE I.C.1–3—NHTSA FUEL SAVED (BILLION GALLONS) AND CO_2 EMISSIONS AVOIDED (MILLION METRIC TONS, MMT) UNDER CAFE STANDARDS (WITH FFV CREDITS)—Continued

	2012	2013	2014	2015	2016	Total
CO_2 (mmt)	53	89	123	163	208	636

NHTSA estimates that these fuel economy increases would produce other benefits both to drivers (*e.g.,* reduced time spent refueling) and to the U.S. (*e.g.,* reductions in the costs of petroleum imports *beyond* the direct savings from reduced oil purchases, as well as some disbenefits (*e.g.,* increase traffic congestion) caused by drivers' tendency to travel more when the cost of driving declines (as it does when fuel economy increases). NHTSA has estimated the total monetary value to society of these benefits and disbenefits, and estimates that the standards will produce significant net benefits to society. Using a 3% discount rate, NHTSA estimates that the present value of these benefits would total more than $180 billion over the useful lives of vehicles sold during MYs 2012–2016. More discussion regarding monetized benefits can be found in Section IV of this notice and in NHTSA's Regulatory Impact Analysis. Note that the benefit calculation in Tables I.C.1–4 through 1–7 includes the benefits of reducing CO_2 emissions,[43] but not the benefits of reducing other GHG emissions.

TABLE I.C.1–4—NHTSA DISCOUNTED BENEFITS ($BILLION) UNDER THE CAFE STANDARDS (BEFORE FFV CREDITS, USING 3 PERCENT DISCOUNT RATE)

	2012	2013	2014	2015	2016	Total
Passenger Cars	6.8	15.2	21.6	28.7	35.2	107.5
Light Trucks	5.1	10.7	15.5	19.4	24.3	75.0
Combined	11.9	25.8	37.1	48.0	59.5	182.5

Using a 7% discount rate, NHTSA estimates that the present value of these benefits would total more than $145 billion over the same time period.

TABLE I.C.1–5—NHTSA DISCOUNTED BENEFITS ($BILLION) UNDER THE CAFE STANDARDS (BEFORE FFV CREDITS, USING 7 PERCENT DISCOUNT RATE)

	2012	2013	2014	2015	2016	Total
Passenger Cars	5.5	12.3	17.5	23.2	28.6	87.0
Light Trucks	4.0	8.4	12.2	15.3	19.2	59.2
Combined	9.5	20.7	29.7	38.5	47.8	146.2

NHTSA estimates that FFV credits could reduce achieved benefits by about 3.8%:

TABLE I.C.1–6A—NHTSA DISCOUNTED BENEFITS ($BILLION) UNDER THE CAFE STANDARDS (WITH FFV CREDITS, USING A 3 PERCENT DISCOUNT RATE)

	2012	2013	2014	2015	2016	Total
Passenger Cars	7.6	13.7	19.1	25.6	34.0	100.0
Light Trucks	6.4	10.4	14.6	19.8	24.4	75.6
Combined	14.0	24.1	33.7	45.4	58.4	175.6

TABLE I.C.1–6B—NHTSA DISCOUNTED BENEFITS ($BILLION) UNDER THE CAFE STANDARDS (WITH FFV CREDITS, USING A 7 PERCENT DISCOUNT RATE)

	2012	2013	2014	2015	2016	Total
Passenger Cars	6.1	11.1	15.5	20.7	27.6	80.9
Light Trucks	5.0	8.2	11.5	15.6	19.3	59.7

[43] CO_2 benefits for purposes of these tables are calculated using the $21/ton SCC values. Note that net present value of reduced GHG emissions is calculated differently than other benefits. The same discount rate used to discount the value of damages from future emissions (SCC at 5, 3, and 2.5 percent) is used to calculate net present value of SCC for internal consistency.

TABLE I.C.1–6B—NHTSA DISCOUNTED BENEFITS ($BILLION) UNDER THE CAFE STANDARDS (WITH FFV CREDITS, USING A 7 PERCENT DISCOUNT RATE)—Continued

	2012	2013	2014	2015	2016	Total
Combined	11.2	19.3	27.0	36.4	46.9	140.7

NHTSA attributes most of these benefits—about $143 billion (at a 3% discount rate and excluding consideration of FFV credits), as noted above—to reductions in fuel consumption, valuing fuel (for societal purposes) at the future pre-tax prices projected in the Energy Information Administration's (AEO's) reference case forecast from the Annual Energy Outlook (AEO) 2010 Early Release. NHTSA's Final Regulatory Impact Analysis (FRIA) accompanying this rule presents a detailed analysis of specific benefits of the rule.

TABLE I.C.1–7—SUMMARY OF BENEFITS FUEL SAVINGS AND CO_2 EMISSIONS REDUCTION DUE TO THE RULE (BEFORE FFV CREDITS)

	Amount	Monetized value (discounted)	
		3% discount rate	7% discount rate
Fuel savings	61.0 billion gallons	$143.0 billion	$112.0 billion.
CO_2 emissions reductions	655 mmt	$14.5 billion	$14.5 billion.

NHTSA estimates that the increases in technology application necessary to achieve the projected improvements in fuel economy will entail considerable monetary outlays. The agency estimates that incremental costs for achieving its standards—that is, outlays by vehicle manufacturers over and above those required to comply with the MY 2011 CAFE standards—will total about $52 billion (*i.e.,* during MYs 2012–2016).

TABLE I.C.1–8—NHTSA INCREMENTAL TECHNOLOGY OUTLAYS ($BILLION) UNDER THE CAFE STANDARDS (BEFORE FFV CREDITS)

	2012	2013	2014	2015	2016	Total
Passenger Cars	4.1	5.4	6.9	8.2	9.5	34.2
Light Trucks	1.8	2.5	3.7	4.3	5.4	17.6
Combined	5.9	7.9	10.5	12.5	14.9	51.7

NHTSA estimates that use of FFV credits could significantly reduce these outlays:

TABLE I.C.1–9—NHTSA INCREMENTAL TECHNOLOGY OUTLAYS ($BILLION) UNDER CAFE STANDARDS (WITH FFV CREDITS)

	2012	2013	2014	2015	2016	Total
Passenger Cars	2.6	3.6	4.8	6.1	7.5	24.6
Light Trucks	1.1	1.5	2.5	3.4	4.4	12.9
Combined	3.7	5.1	7.3	9.5	11.9	37.5

The agency projects that manufacturers will recover most or all of these additional costs through higher selling prices for new cars and light trucks. To allow manufacturers to recover these increased outlays (and, to a much lesser extent, the civil penalties that some companies are expected to pay for noncompliance), the agency estimates that the standards would lead to increases in average new vehicle prices ranging from $457 per vehicle in MY 2012 to $985 per vehicle in MY 2016:

TABLE I.C.1–10—NHTSA INCREMENTAL INCREASES IN AVERAGE NEW VEHICLE COSTS ($) UNDER CAFE STANDARDS (BEFORE FFV CREDITS)

	2012	2013	2014	2015	2016
Passenger Cars	505	573	690	799	907
Light Trucks	322	416	621	752	961

TABLE I.C.1–10—NHTSA INCREMENTAL INCREASES IN AVERAGE NEW VEHICLE COSTS ($) UNDER CAFE STANDARDS (BEFORE FFV CREDITS)—Continued

	2012	2013	2014	2015	2016
Combined	434	513	665	782	926

NHTSA estimates that use of FFV credits could significantly reduce these costs, especially in earlier model years:

TABLE I.C.1–11—NHTSA INCREMENTAL INCREASES IN AVERAGE NEW VEHICLE COSTS ($) UNDER CAFE STANDARDS (WITH FFV CREDITS)

	2012	2013	2014	2015	2016
Passenger Cars	303	378	481	593	713
Light Trucks	194	260	419	581	784
Combined	261	333	458	589	737

NHTSA estimates, therefore, that the total benefits of these CAFE standards will be more than three times the magnitude of the corresponding costs. As a consequence, its standards would produce net benefits of $130.7 billion at a 3 percent discount rate (with FFV credits, $138.2 billion) or $94.5 billion at a 7 percent discount rate over the useful lives of vehicles sold during MYs 2012–2016.

2. Summary of Costs and Benefits of EPA's GHG Standards

EPA has analyzed in detail the costs and benefits of the final GHG standards. Table I.C.2–1 shows EPA's estimated lifetime discounted cost, benefits and net benefits for all vehicles projected to be sold in model years 2012–2016. It is important to note that there is significant overlap in costs and benefits for NHTSA's CAFE program and EPA's GHG program and therefore combined program costs and benefits are not a sum of the individual programs.

TABLE I.C.2–1—EPA'S ESTIMATED 2012–2016 MODEL YEAR LIFETIME DISCOUNTED COSTS, BENEFITS, AND NET BENEFITS ASSUMING THE $21/TON SCC VALUE [a] [b] [c] [d]

[2007 dollars]

3% Discount rate	$Billions
Costs	51.5
Benefits	240
Net Benefits	189
7% Discount rate	
Costs	51.5
Benefits	192
Net Benefits	140

[a] Although EPA estimated the benefits associated with four different values of a one ton GHG reduction ($5, $21, $35, $65), for the purposes of this overview presentation of estimated costs and benefits EPA is showing the benefits associated with the marginal value deemed to be central by the interagency working group on this topic: $21 per ton of CO2e, in 2007 dollars and 2010 emissions. The $21/ton value applies to 2010 CO_2 emissions and grows over time.

[b] As noted in Section III.H, SCC increases over time. The $21/ton value applies to 2010 CO_2 emissions and grows larger over time.

[c] Note that net present value of reduced GHG emissions is calculated differently than other benefits. The same discount rate used to discount the value of damages from future emissions (SCC at 5, 3, and 2.5 percent) is used to calculate net present value of SCC for internal consistency. Refer to Section III.H for more detail.

[d] Monetized GHG benefits exclude the value of reductions in non-CO_2 GHG emissions (HFC, CH_4 and N_2O) expected under this final rule. Although EPA has not monetized the benefits of reductions in these non-CO_2 emissions, the value of these reductions should not be interpreted as zero. Rather, the reductions in non-CO_2 GHGs will contribute to this rule's climate benefits, as explained in Section III.F.2. The SCC TSD notes the difference between the social cost of non-CO_2 emissions and CO_2 emissions, and specifies a goal to develop methods to value non-CO_2 emissions in future analyses.

Table I.C.2–2 shows EPA's estimated lifetime fuel savings and CO_2 equivalent emission reductions for all vehicles sold in the model years 2012–2016. The values in Table I.C.2–2 are projected lifetime totals for each model year and are not discounted. As documented in EPA's Final RIA, the potential credit transfer between cars and trucks may change the distribution of the fuel savings and GHG emission impacts between cars and trucks. As discussed above with respect to NHTSA's CAFE standards, it is important to note that NHTSA's CAFE standards and EPA's GHG standards will both be in effect, and each will lead to increases in average fuel economy and reductions in CO_2 emissions. The two agencies' standards together comprise the National Program, and this discussion of costs and benefits of EPA's GHG standards does not change the fact that both the CAFE and GHG standards, jointly, are the source of the benefits and costs of the National Program.

TABLE I.C.2–2—EPA'S ESTIMATED 2012–2016 MODEL YEAR LIFETIME FUEL SAVED AND GHG EMISSIONS AVOIDED

		2012	2013	2014	2015	2016	Total
Cars	Fuel (billion gallons)	4.0	5.5	7.3	10.5	14.3	41.6
	Fuel (billion barrels)	0.10	0.13	0.17	0.25	0.34	0.99
	CO_2 EQ (mmt)	49.3	68.5	92.7	134	177	521

TABLE I.C.2–2—EPA'S ESTIMATED 2012–2016 MODEL YEAR LIFETIME FUEL SAVED AND GHG EMISSIONS AVOIDED—Continued

		2012	2013	2014	2015	2016	Total
Light Trucks	Fuel (billion gallons)	3.3	5.0	6.6	9.0	12.2	36.1
	Fuel (billion barrels)	0.08	0.12	0.16	0.21	0.29	0.86
	CO_2 EQ (mmt)	39.6	61.7	81.6	111	147	441
Combined ..	Fuel (billion gallons)	7.3	10.5	13.9	19.5	26.5	77.7
	Fuel (billion barrels)	0.17	0.25	0.33	0.46	0.63	1.85
	CO_2 EQ (mmt)	88.8	130	174	244	325	962

Table I.C.2–3 shows EPA's estimated lifetime discounted benefits for all vehicles sold in model years 2012–2016. Although EPA estimated the benefits associated with four different values of a one ton GHG reduction ($5, $21, $35, $65), for the purposes of this overview presentation of estimated benefits EPA is showing the benefits associated with one of these marginal values, $21 per ton of CO_2, in 2007 dollars and 2010 emissions. Table I.C.2–3 presents benefits based on the $21 value. Section III.H presents the four marginal values used to estimate monetized benefits of GHG reductions and Section III.H presents the program benefits using each of the four marginal values, which represent only a partial accounting of total benefits due to omitted climate change impacts and other factors that are not readily monetized. The values in the table are discounted values for each model year of vehicles throughout their projected lifetimes. The benefits include all benefits considered by EPA such as fuel savings, GHG reductions, PM benefits, energy security and other externalities such as reduced refueling and accidents, congestion and noise. The lifetime discounted benefits are shown for one of four different social cost of carbon (SCC) values considered by EPA. The values in Table I.C.2–3 do not include costs associated with new technology required to meet the GHG standard.

TABLE I.C.2–3—EPA'S ESTIMATED 2012–2016 MODEL YEAR LIFETIME DISCOUNTED BENEFITS ASSUMING THE $21/TON SCC VALUE [a] [b] [c]

[Billions of 2007 dollars]

Discount rate	Model year					
	2012	2013	2014	2015	2016	Total
3%	$21.8	$32.0	$42.8	$60.8	$83.3	$240
7%	17.4	25.7	34.2	48.6	66.4	192

[a] The benefits include all benefits considered by EPA such as the economic value of reduced fuel consumption and accompanying savings in refueling time, climate-related economic benefits from reducing emissions of CO_2 (but not other GHGs), economic benefits from reducing emissions of PM and other air pollutants that contribute to its formation, and reductions in energy security externalities caused by U.S. petroleum consumption and imports. The analysis also includes disbenefits stemming from additional vehicle use, such as the economic damages caused by accidents, congestion and noise.

[b] Note that net present value of reduced GHG emissions is calculated differently than other benefits. The same discount rate used to discount the value of damages from future emissions (SCC at 5, 3, and 2.5 percent) is used to calculate net present value of SCC for internal consistency. Refer to Section III.H for more detail.

[c] Monetized GHG benefits exclude the value of reductions in non-CO_2 GHG emissions (HFC, CH_4 and N_2O) expected under this final rule. Although EPA has not monetized the benefits of reductions in these non-CO_2 emissions, the value of these reductions should not be interpreted as zero. Rather, the reductions in non-CO_2 GHGs will contribute to this rule's climate benefits, as explained in Section III.F.2. The SCC TSD notes the difference between the social cost of non-CO_2 emissions and CO_2 emissions, and specifies a goal to develop methods to value non-CO_2 emissions in future analyses. Also, as noted in Section III.H, SCC increases over time. The $21/ton value applies to 2010 emissions and grows larger over time.

Table I.C.2–4 shows EPA's estimated lifetime fuel savings, lifetime CO_2 emission reductions, and the monetized net present values of those fuel savings and CO_2 emission reductions. The gallons of fuel and CO_2 emission reductions are projected lifetime values for all vehicles sold in the model years 2012–2016. The estimated fuel savings in billions of barrels and the GHG reductions in million metric tons of CO_2 shown in Table I.C.2–4 are totals for the five model years throughout their projected lifetime and are not discounted. The monetized values shown in Table I.C.2–4 are the summed values of the discounted monetized-fuel savings and monetized-CO_2 reductions for the five model years 2012–2016 throughout their lifetimes. The monetized values in Table I.C.2–4 reflect both a 3 percent and a 7 percent discount rate as noted.

TABLE I.C.2–4—EPA'S ESTIMATED 2012–2016 MODEL YEAR LIFETIME FUEL SAVINGS, CO_2 EMISSION REDUCTIONS, AND DISCOUNTED MONETIZED BENEFITS AT A 3% DISCOUNT RATE

[Monetized values in 2007 dollars]

	Amount	$ value (billions)
Fuel savings	1.8 billion barrels	$182, 3% discount rate. $142, 7% discount rate.

TABLE I.C.2–4—EPA'S ESTIMATED 2012–2016 MODEL YEAR LIFETIME FUEL SAVINGS, CO_2 EMISSION REDUCTIONS, AND DISCOUNTED MONETIZED BENEFITS AT A 3% DISCOUNT RATE—Continued

[Monetized values in 2007 dollars]

	Amount	$ value (billions)
CO_{2e} emission reductions (CO_2 portion valued assuming $21/ton CO_2 in 2010).	962 MMT CO_{2e}	$17 [a b].

[a] $17 billion for 858 MMT of reduced CO_2 emissions. As noted in Section III.H, the $21/ton value applies to 2010 emissions and grows larger over time. Monetized GHG benefits exclude the value of reductions in non-CO_2 GHG emissions (HFC, CH_4 and N_2O) expected under this final rule. Although EPA has not monetized the benefits of reductions in these non-CO_2 emissions, the value of these reductions should not be interpreted as zero. Rather, the reductions in non-CO_2 GHGs will contribute to this rule's climate benefits, as explained in Section III.F.2. The SCC TSD notes the difference between the social cost of non-CO_2 emissions and CO_2 emissions, and specifies a goal to develop methods to value non-CO_2 emissions in future analyses.

[b] Note that net present value of reduced CO_2 emissions is calculated differently than other benefits. The same discount rate used to discount the value of damages from future emissions (SCC at 5, 3, and 2.5 percent) is used to calculate net present value of SCC for internal consistency. Refer to Section III.H for more detail.

Table I.C.2–5 shows EPA's estimated incremental and total technology outlays for cars and trucks for each of the model years 2012–2016. The technology outlays shown in Table I.C.2–5 are for the industry as a whole and do not account for fuel savings associated with the program.

TABLE I.C.2–5—EPA'S ESTIMATED INCREMENTAL TECHNOLOGY OUTLAYS

[Billions of 2007 dollars]

	2012	2013	2014	2015	2016	Total
Cars	$3.1	$5.0	$6.5	$8.0	$9.4	$31.9
Trucks	1.8	3.0	3.9	4.8	6.2	19.7
Combined	4.9	8.0	10.3	12.7	15.6	51.5

Table I.C.2–6 shows EPA's estimated incremental cost increase of the average new vehicle for each model year 2012–2016. The values shown are incremental to a baseline vehicle and are not cumulative. In other words, the estimated increase for 2012 model year cars is $342 relative to a 2012 model year car absent the National Program. The estimated increase for a 2013 model year car is $507 relative to a 2013 model year car absent the National Program (not $342 plus $507).

TABLE I.C.2–6—EPA'S ESTIMATED INCREMENTAL INCREASE IN AVERAGE NEW VEHICLE COST

[2007 dollars per unit]

	2012	2013	2014	2015	2016
Cars	$342	$507	$631	$749	$869
Trucks	314	496	652	820	1,098
Combined	331	503	639	774	948

D. Background and Comparison of NHTSA and EPA Statutory Authority

Section I.C of the proposal contained a detailed overview discussion of the NHTSA and EPA statutory authorities. In addition to the discussion in the proposal, each agency discusses comments pertaining to its statutory authority and the agency's responses in Sections III and IV of this notice, respectively.

II. Joint Technical Work Completed for This Final Rule

A. Introduction

In this section NHTSA and EPA discuss several aspects of the joint technical analyses on which the two agencies collaborated. These analyses are common to the development of each agency's final standards. Specifically we discuss: the development of the vehicle market forecast used by each agency for assessing costs, benefits, and effects, the development of the attribute-based standard curve shapes, the determination of the relative stringency between the car and truck fleet standards, the technologies the agencies evaluated and their costs and effectiveness, and the economic assumptions the agencies included in their analyses. The Joint Technical Support Document (TSD) discusses the agencies' joint technical work in more detail.

B. Developing the Future Fleet for Assessing Costs, Benefits, and Effects

1. Why did the agencies establish a baseline and reference vehicle fleet?

In order to calculate the impacts of the EPA and NHTSA regulations, it is necessary to estimate the composition of the future vehicle fleet absent these regulations, to provide a reference point relative to which costs, benefits, and effects of the regulations are assessed. As in the proposal, EPA and NHTSA have developed this comparison fleet in two parts. The first step was to develop a baseline fleet based on model year 2008 data. The second step was to project that fleet into model years 2011–2016. This is called the reference fleet.

The third step was to modify that MY 2011–2016 reference fleet such that it had sufficient technology to meet the MY 2011 CAFE standards. This final version of the reference fleet is the light-duty fleet estimated to exist in MY 2012–2016 in the absence of today's standards, based on the assumption that manufacturers would continue to meet the MY 2011 CAFE standards (or pay civil penalties allowed under EPCA [44]) in the absence of further increases in the stringency of CAFE standards. Each agency used this approach to develop a final reference fleet to use in its modeling. All of the agencies' estimates of emission reductions, fuel economy improvements, costs, and societal impacts are developed in relation to the respective reference fleets.

EPA and NHTSA proposed a transparent approach to developing the baseline and reference fleets, largely working from publicly available data. This proposed approach differed from previous CAFE rules, which relied on confidential manufacturers' product plan information to develop the baseline. Most of the public comments to the NPRM addressing this issue supported this methodology for developing the inputs to the rule's analysis. Because the input sheets can be made public, stakeholders can verify and check EPA's and NHTSA's modeling, and perform their own analyses with these datasets. In this final rulemaking, EPA and NHTSA are using an approach very similar to that proposed, continuing to rely on publicly available data as the basis for the baseline and reference fleets.

2. How did the agencies develop the baseline vehicle fleet?

At proposal, EPA and NHTSA developed a baseline fleet comprised of model year 2008 data gathered from EPA's emission certification and fuel economy database. MY 2008 was used as the basis for the baseline vehicle fleet because it was the most recent model year for which a complete set of data is publicly available. This remains the case. Manufacturers are not required to submit final sales and mpg figures for MY 2009 until April 2010,[45] after the CAFE standard's mandated promulgation date. Consequently, in this final rule, EPA and NHTSA made no changes to the method or the results of the MY 2008 baseline fleet used at proposal, except for some specific corrections to engineering inputs for some vehicle models reflected in the market forecast input to NHTSA's CAFE model. More details about how the agencies constructed this baseline fleet can be found in Chapter 1.2 of the Joint TSD. Corrections to engineering inputs for some vehicle models in the market forecast input to NHTSA's CAFE model are discussed in Chapter 2 of the Joint TSD.

3. How did the agencies develop the projected MY 2011–2016 vehicle fleet?

EPA and NHTSA have based the projection of total car and total light truck sales for MYs 2011–2016 on projections made by the Department of Energy's Energy Information Administration (EIA). EIA publishes a mid-term projection of national energy use called the Annual Energy Outlook (AEO). This projection utilizes a number of technical and econometric models which are designed to reflect both economic and regulatory conditions expected to exist in the future. In support of its projection of fuel use by light-duty vehicles, EIA projects sales of new cars and light trucks. In the proposal, the agencies used the three reports published by EIA as part of the AEO 2009. We also stated that updated versions of these reports could be used in the final rules should AEO timely issue a new version. EIA published an early version of its AEO 2010 in December 2009, and the agencies are making use of it in this final rulemaking. The differences in projected sales in the 2009 report (used in the NPRM) and the early 2010 report are very small, so NHTSA and EPA have decided to simply scale the NPRM volumes for cars and trucks (in the aggregate) to match those in the 2010 report. We thus employ the sales projections from the scaled updated 2009 Annual Energy Outlook, which is equivalent to AEO 2010 Early Release, for the final rule. The scaling factors for each model year are presented in Chapter 1 of the Joint TSD for this final rule.

The agencies recognize that AEO 2010 Early Release does include some impacts of future projected increases in CAFE stringency. We have closely examined the difference between AEO 2009 and AEO 2010 Early Release and we believe the differences in total sales and the car/truck split attributed to considerations of the standard in the final rule are small.[46]

In the AEO 2010 Early Release, EIA projects that total light-duty vehicle sales will gradually recover from their currently depressed levels by around 2013. In 2016, car sales are projected to be 9.4 million (57 percent) and truck sales are projected to be 7.1 million (43 percent). Although the total level of sales of 16.5 million units is similar to pre-2008 levels, the fraction of car sales is projected to be higher than that existing in the 2000–2007 timeframe. This projection reflects the impact of higher fuel prices, as well as EISA's requirement that the new vehicle fleet average at least 35 mpg by MY 2020. The agencies note that AEO does not represent the fleet at a level of detail sufficient to explicitly account for the reclassification—promulgated as part of NHTSA's final rule for MY 2011 CAFE standards—of a number of 2-wheel drive sport utility vehicles from the truck fleet to the car fleet for MYs 2011 and after. Sales projections of cars and trucks for future model years can be found in the Joint TSD for these final rules.

In addition to a shift towards more car sales, sales of segments within both the car and truck markets have been changing and are expected to continue to change. Manufacturers are introducing more crossover models which offer much of the utility of SUVs but use more car-like designs. The AEO 2010 report does not, however, distinguish such changes within the car and truck classes. In order to reflect these changes in fleet makeup, EPA and NHTSA considered several other available forecasts. EPA purchased and shared with NHTSA forecasts from two well-known industry analysts, CSM Worldwide (CSM), and J.D. Powers. NHTSA and EPA decided to use the forecast from CSM, modified as described below, for several reasons presented in the NPRM preamble [47] and draft Joint TSD. The changes between company market share and industry market segments were most significant from 2011–2014, while for 2014–2015 the changes were relatively small. Noting this, and lacking a credible forecast of company and segment shares after 2015, the agencies assumed 2016 market share and market segments to be the same as for 2015.

[44] That is, the manufacturers who have traditionally paid fines under EPCA instead of complying with the CAFE standards were "allowed," for purposes of the reference fleet, to reach only the CAFE level at which paying fines became more cost-effective than adding technology, even if that fell short of the MY 2011 standards.

[45] 40 CFR 600.512–08, Model Year Report.

[46] The agencies have also looked at the impact of the rule in EIA's projection, and concluded that the impact was small. EPA and NHTSA have evaluated the differences between the AEO 2010 (early draft) and AEO 2009 and found little difference in the fleet projections (or fuel prices). This analysis can be found in the memo to the docket: Kahan, A. and Pickrell, D. Memo to Docket EPA–HQ–OAR–2009–0472 and Docket NHTSA–2009–0059. "Energy Information Administration's Annual Energy Outlook 2009 and 2010." March 24, 2010.

[47] See, *e.g.,* 74 FR 49484.

CSM Worldwide provides quarterly sales forecasts for the automotive industry. In the NPRM, the agencies identified a concern with the 2nd quarter CSM forecast that was used as a basis for the projection. CSM projections at that time were based on an industry that was going through a significant financial transition, and as a result the market share forecasts for some companies were impacted in surprising ways. As the industry's situation has settled somewhat over the past year, the 4th quarter projection appears to address this issue—for example, it shows nearly a two-fold increase in sales for Chrysler compared to significant loss of market share shown for Chrysler in the 2nd quarter projection. Additionally, some commenters, such as GM, recognized that the fleet appeared to include an unusually high number of large pickup trucks.[48] In fact, the agencies discovered (independently of the comments) that CSM's standard forecast included all vehicles below 14,000 GVWR, including class 2b and 3 heavy duty vehicles, which are not regulated by this final rule.[49] The commenters were thus correct that light duty reference fleet projections at proposal had more full size trucks and vans due to the mistaken inclusion of the heavy duty versions of those vehicles. The agencies requested a separate data forecast from CSM that filtered their 4th quarter projection to exclude these heavy duty vehicles. The agencies then used this filtered 4th quarter forecast for the final rule. A detailed comparison of the market by manufacturer can be found in the final TSD. For the public's reference, copies of the 2nd, 3rd, and 4th quarter CSM forecasts have been placed in the docket for this rulemaking.[50]

We then projected the CSM forecasts for relative sales of cars and trucks by manufacturer and by market segment onto the total sales estimates of AEO 2010. Tables II.B.3–1 and II.B.3–2 show the resulting projections for the reference 2016 model year and compare these to actual sales that occurred in baseline 2008 model year. Both tables show sales using the traditional definition of cars and light trucks.

TABLE II.B.3–1—ANNUAL SALES OF LIGHT-DUTY VEHICLES BY MANUFACTURER IN 2008 AND ESTIMATED FOR 2016

	Cars		Light trucks		Total	
	2008 MY	2016 MY	2008 MY	2016 MY	2008 MY	2016 MY
BMW	291,796	424,923	61,324	171,560	353,120	596,482
Chrysler	537,808	340,908	1,119,397	525,128	1,657,205	866,037

[48] GM argued that the unusually large volume of large pickups led to higher overall requirements for those vehicles. As discussed below, the agencies' analysis for the final rule corrects the number of large pickups. With this correction and other updates to the agencies' market forecast and other analytical inputs, the target functions defining the final standards (and achieving the average required performance levels defining the national program) are very similar to those from the NPRM, especially for light trucks, as illustrated below in Figures II.C–7 and II.C–8.

[49] These include the Ford F–250 & F–350, Econoline E–250, & E–350; Chevy Express, Silverado 2500, & 3500; GMC Savana, Dodge 2500, & 3500; among others.

[50] The CSM Sales Forecast Excel file ("CSM North America Sales Forecasts 2Q09 3Q09 4Q09 for the Docket") is available in the docket (Docket EPA–HQ–OAR–2009–0472).

TABLE II.B.3–2—ANNUAL SALES OF LIGHT-DUTY VEHICLES BY MARKET SEGMENT IN 2008 AND ESTIMATED FOR 2016—Continued

Cars			Light trucks		
	2008 MY	2016 MY		2008 MY	2016 MY
Total Sales**	7,034,997	9,468,365		6,806,367	7,079,323

*MAV—Multi-Activity Vehicle, SUV—Sport Utility Vehicle, CUV—Crossover Utility Vehicle.
**Total Sales are based on the classic Car/Truck definition.

Determining which traditionally-defined trucks will be defined as cars for purposes of this final rule using the revised definition established by NHTSA for MYs 2011 and beyond requires more detailed information about each vehicle model. This is described in greater detail in Chapter 1 of the final TSD.

The forecasts obtained from CSM provided estimates of car and truck sales by segment and by manufacturer, but not by manufacturer for each market segment. Therefore, NHTSA and EPA needed other information on which to base these more detailed projected market splits. For this task, the agencies used as a starting point each manufacturer's sales by market segment from model year 2008, which is the baseline fleet. Because of the larger number of segments in the truck market, the agencies used slightly different methodologies for cars and trucks.

The first step for both cars and trucks was to break down each manufacturer's 2008 sales according to the market segment definitions used by CSM. For example, the agencies found that Ford's [51] cars sales in 2008 were broken down as shown in Table II.B.3–3:

TABLE II.B.3–3—BREAKDOWN OF FORD'S 2008 CAR SALES

Full-size cars	160,857 units.
Mid-size Cars	170,399 units.
Small/Compact Cars	180,249 units.
Subcompact/Mini Cars	None.
Luxury cars	87,272 units.
Specialty cars	110,805 units.

EPA and NHTSA then adjusted each manufacturer's sales of each of its car segments (and truck segments, separately) so that the manufacturer's total sales of cars (and trucks) matched the total estimated for each future model year based on AEO and CSM forecasts. For example, as indicated in Table II.B.3–1, Ford's total car sales in 2008 were 709,583 units, while the agencies project that they will increase to 1,113,333 units by 2016. This represents an increase of 56.9 percent. Thus, the agencies increased the 2008 sales of each Ford car segment by 56.9 percent. This produced estimates of future sales which matched total car and truck sales per AEO and the manufacturer breakdowns per CSM. However, the sales splits by market segment would not necessarily match those of CSM (shown for 2016 in Table II.B.3–2).

In order to adjust the market segment mix for cars, the agencies first adjusted sales of luxury, specialty and other cars. Since the total sales of cars for each manufacturer were already set, any changes in the sales of one car segment had to be compensated by the opposite change in another segment. For the luxury, specialty and other car segments, it is not clear how changes in sales would be compensated. For example, if luxury car sales decreased, would sales of full-size cars increase, mid-size cars, and so on? The agencies have assumed that any changes in the sales of cars within these three segments were compensated for by proportional changes in the sales of the other four car segments. For example, for 2016, the figures in Table II.B.3–2 indicate that luxury car sales in 2016 are 1,548,242 units. Luxury car sales are 1,048,341 units in 2008. However, after adjusting 2008 car sales by the change in total car sales for 2016 projected by EIA and a change in manufacturer market share per CSM, luxury car sales decreased to 1,523,171 units. Thus, overall for 2016, luxury car sales had to increase by 25,071 units or 6 percent. The agencies accordingly increased the luxury car sales by each manufacturer by this percentage. The absolute decrease in luxury car sales was spread across sales of full-size, mid-size, compact and subcompact cars in proportion to each manufacturer's sales in these segments in 2008. The same adjustment process was used for specialty cars and the "other cars" segment defined by CSM.

The agencies used a slightly different approach to adjust for changing sales of the remaining four car segments. Starting with full-size cars, the agencies again determined the overall percentage change that needed to occur in future year full-size car sales after 1) adjusting for total sales per AEO 2010, 2) adjusting for manufacturer sales mix per CSM and 3) adjusting the luxury, specialty and other car segments, in order to meet the segment sales mix per CSM. Sales of each manufacturer's large cars were adjusted by this percentage. However, instead of spreading this change over the remaining three segments, the agencies assigned the entire change to mid-size vehicles. The agencies did so because the CSM data followed the trend of increasing volumes of smaller cars while reducing volumes of larger cars. If a consumer had previously purchased a full-size car, we thought it unlikely that their next purchase would decrease by two size categories, down to a subcompact. It seemed more reasonable to project that they would drop one vehicle size category smaller. Thus, the change in each manufacturer's sales of full-size cars was matched by an opposite change (in absolute units sold) in mid-size cars.

The same process was then applied to mid-size cars, with the change in mid-size car sales being matched by an opposite change in compact car sales. This process was repeated one more time for compact car sales, with changes in sales in this segment being matched by the opposite change in the sales of subcompacts. The overall result was a projection of car sales for model years 2012–2016—the reference fleet—which matched the total sales projections of the AEO forecast and the manufacturer and segment splits of the CSM forecast. These sales splits can be found in Chapter 1 of the Joint TSD for this final rule.

As mentioned above, the agencies applied a slightly different process to truck sales, because the agencies could not confidently project how the change in sales from one segment preferentially went to or came from another particular segment. Some trend from larger vehicles to smaller vehicles would have been possible. However, the CSM forecasts indicated large changes in total sport utility vehicle, multi-activity vehicle and cross-over sales which could not be connected. Thus, the

[51] **Note**: In the NPRM, Ford's 2008 sales per segment, and the total number of cars was different than shown here. The change in values is due to a correction of vehicle segments for some of Ford's vehicles.

agencies applied an iterative, but straightforward process for adjusting 2008 truck sales to match the AEO and CSM forecasts.

The first three steps were exactly the same as for cars. EPA and NHTSA broke down each manufacturer's truck sales into the truck segments as defined by CSM. The agencies then adjusted all manufacturers' truck segment sales by the same factor so that total truck sales in each model year matched AEO projections for truck sales by model year. The agencies then adjusted each manufacturer's truck sales by segment proportionally so that each manufacturer's percentage of total truck sales matched that forecast by CSM. This again left the need to adjust truck sales by segment to match the CSM forecast for each model year.

In the fourth step, the agencies adjusted the sales of each truck segment by a common factor so that total sales for that segment matched the combination of the AEO and CSM forecasts. For example, projected sales of large pickups across all manufacturers were 1,286,184 units in 2016 after adjusting total sales to match AEO's forecast and adjusting each manufacturer's truck sales to match CSM's forecast for the breakdown of sales by manufacturer. Applying CSM's forecast of the large pickup segment of truck sales to AEO's total sales forecast indicated total large pickup sales of 1,379,036 units. Thus, we increased each manufacturer's sales of large pickups by 7 percent.[52] The agencies applied the same type of adjustment to all the other truck segments at the same time. The result was a set of sales projections which matched AEO's total truck sales projection and CSM's market segment forecast. However, after this step, sales by manufacturer no longer met CSM's forecast. Thus, we repeated step three and adjusted each manufacturer's truck sales so that they met CSM's forecast. The sales of each truck segment (by manufacturer) were adjusted by the same factor. The resulting sales projection matched AEO's total truck sales projection and CSM's manufacturer forecast, but sales by market segment no longer met CSM's forecast. However, the difference between the sales projections after this fifth step was closer to CSM's market segment forecast than it was after step three. In other words, the sales projection was converging to the desired result. The agencies repeated these adjustments, matching manufacturer sales mix in one step and then market segment in the next a total of 19 times. At this point, we were able to match the market segment splits exactly and the manufacturer splits were within 0.1 percent of our goal, which is well within the needs of this analysis.

The next step in developing the reference fleets was to characterize the vehicles within each manufacturer-segment combination. In large part, this was based on the characterization of the specific vehicle models sold in 2008—*i.e.,* the vehicles comprising the baseline fleet. EPA and NHTSA chose to base our estimates of detailed vehicle characteristics on 2008 sales for several reasons. One, these vehicle characteristics are not confidential and can thus be published here for careful review by interested parties. Two, because it is constructed beginning with actual sales data, this vehicle fleet is limited to vehicle models known to satisfy consumer demands in light of price, utility, performance, safety, and other vehicle attributes.

As noted above, the agencies gathered most of the information about the 2008 baseline vehicle fleet from EPA's emission certification and fuel economy database. The data obtained from this source included vehicle production volume, fuel economy, engine size, number of engine cylinders, transmission type, fuel type, etc. EPA's certification database does not include a detailed description of the types of fuel economy-improving/CO_2-reducing technologies considered in this final rule. Thus, the agencies augmented this description with publicly available data which includes more complete technology descriptions from Ward's Automotive Group.[53] In a few instances when required vehicle information (such as vehicle footprint) was not available from these two sources, the agencies obtained this information from publicly accessible Internet sites such as *Motortrend.com* and *Edmunds.com*.[54]

The projections of future car and truck sales described above apply to each manufacturer's sales by market segment. The EPA emissions certification sales data are available at a much finer level of detail, essentially vehicle configuration. As mentioned above, the agencies placed each vehicle in the EPA certification database into one of the CSM market segments. The agencies then totaled the sales by each manufacturer for each market segment. If the combination of AEO and CSM forecasts indicated an increase in a given manufacturer's sales of a particular market segment, then the sales of all the individual vehicle configurations were adjusted by the same factor. For example, if the Prius represented 30 percent of Toyota's sales of compact cars in 2008 and Toyota's sales of compact cars in 2016 was projected to double by 2016, then the sales of the Prius were doubled, and the Prius sales in 2016 remained 30 percent of Toyota's compact car sales.

The projection of average footprint for both cars and trucks remained virtually constant over the years covered by the final rulemaking. This occurrence is strictly a result of the CSM projections. There are a number of trends that occur in the CSM projections that caused the average footprint to remain constant. First, as the number of subcompacts increases, so do the number of 2-wheel drive crossover vehicles (that are regulated as cars). Second, truck volumes have many segment changes during the rulemaking time frame. There is no specific footprint related trend in any segment that can be linked to the unchanging footprint, but there is a trend that non-pickups' volumes will move from truck segments that are ladder frame to those that are unibody-type vehicles. A table of the footprint projections is available in the TSD as well as further discussion on this topic.

4. How was the development of the baseline and reference fleets for this Final Rule different from NHTSA's historical approach?

NHTSA has historically based its analysis of potential new CAFE standards on detailed product plans the agency has requested from manufacturers planning to produce light vehicles for sale in the United States. Although the agency has not attempted to compel manufacturers to submit such information, most major manufacturers and some smaller manufacturers have voluntarily provided it when requested.

The proposal discusses many of the advantages and disadvantages of the market forecast approach used by the agencies, including the agencies' interest in examining product plans as a check on the reference fleet developed by the agencies for this rulemaking. One of the primary reasons for the request for data in 2009 was to obtain permission from the manufacturers to make public their product plan information for model years 2010 and 2011. There are a number of reasons that this could be advantageous in the development of a reference fleet. First,

[52] **Note**: In the NPRM this example showed 29 percent instead of 7 percent. The significant decrease was due to using the filtered 4th quarter CSM forecast. Commenters, such as GM, had commented that we had too many full-size trucks and vans, and this change addresses their comment.

[53] Note that WardsAuto.com is a fee-based service, but all information is public to subscribers.

[54] Motortrend.com and Edmunds.com are free, no-fee Internet sites.

some known changes to the fleet may not be captured by the approach of solely using publicly available information. For example, the agencies' current market forecast includes some vehicles for which manufacturers have announced plans for elimination or drastic production cuts such as the Chevrolet Trailblazer, the Chrysler PT Cruiser, the Chrysler Pacifica, the Dodge Magnum, the Ford Crown Victoria, the Mercury Sable, the Pontiac Grand Prix, the Pontiac G5 and the Saturn Vue. These vehicle models appear explicitly in market inputs to NHTSA's analysis, and are among those vehicle models included in the aggregated vehicle types appearing in market inputs to EPA's analysis. However, although the agencies recognize that these specific vehicles will be discontinued, we continue to include them in the market forecast because they are useful as a surrogate for successor vehicles that may appear in the rulemaking time frame to replace the discontinued vehicles in that market segment.[55]

Second, the agencies' market forecast does not include some forthcoming vehicle models, such as the Chevrolet Volt, the Ford Fiesta and several publicly announced electric vehicles, including the announcements from Nissan regarding the Leaf. Nor does it include several MY 2009 or 2010 vehicles, such as the Honda Insight, the Hyundai Genesis and the Toyota Venza, as our starting point for defining specific vehicle models in the reference fleet was Model Year 2008. Additionally, the market forecast does not account for publicly announced technology introductions, such as Ford's EcoBoost system, whose product plans specify which vehicles and how many are planned to have this technology. Chrysler Group LLC has announced plans to offer small- and medium-sized cars using Fiat powertrains. Were the agencies to rely on manufacturers' product plans (that were submitted), the market forecast would account for not only these specific examples, but also for similar examples that have not yet been announced publicly.

Some commenters, such as CBD and NESCAUM, suggested that the agencies' omission of known future vehicles and technologies in the reference fleet causes inaccuracies, which CBD further suggested could lead the agencies to set lower standards. On the other hand, CARB commented that "the likely impact of this omission is minor." Because the agencies' analysis examines the costs and benefits of progressively adding technology to manufacturers' fleets, the omission of future vehicles and technologies primarily affects how much additional technology (and, therefore, how much incremental cost and benefit) is available relative to the point at which the agencies' examination of potential new standards begins. Thus, in fact, the omission only reflects the reference fleet, rather than the agencies' conclusions regarding how stringent the standards should be. This is discussed further below. The agencies believe the above-mentioned comments by CBD, NESCAUM, and others are based on a misunderstanding of the agencies' approach to analyzing potential increases in regulatory stringency. The agencies also note that manufacturers do not always use technology solely to increase fuel economy, and that use of technology to increase vehicles' acceleration performance or utility would probably make that technology unavailable toward more stringent standards. Considering the incremental nature of the agencies' analysis, and the counterbalancing aspects of potentially omitted technology in the reference fleet, the agencies believe their determination of the stringency of new standards has not been impacted by any such omissions.

Moreover, EPA and NHTSA believe that not including such vehicles after MY 2008 does not significantly impact our estimates of the technology required to comply with the standards. If included, these vehicles could increase the extent to which manufacturers are, in the reference case, expected to over-comply with the MY 2011 CAFE standards, and could thereby make the new standards appear to cost less and yield less benefit relative to the reference case. However, in the agencies' judgment, production of the most advanced technology vehicles, such as the Chevy Volt or the Nissan Leaf (for example), will most likely be too limited during MY 2011 through MY 2016 to significantly impact manufacturers' compliance positions. While we are projecting the characteristics of the future fleet by extrapolating from the MY 2008 fleet, the primary difference between the future fleet and the 2008 fleet in the same vehicle segment is the use of additional CO_2-reducing and fuel-saving technologies. Both the NHTSA and EPA models add such technologies to evaluate means of complying with the standards, and the costs of doing so. Thus, our future projections of the vehicle fleet generally shift vehicle designs towards those more likely to be typical of newer vehicles. Compared to using product plans that show continued fuel economy increases planned based on expectations that CAFE standards will continue to increase, this approach helps to clarify the costs and benefits of the new standards, as the costs and benefits of all fuel economy improvements beyond those required by the MY 2011 CAFE standards are being assigned to the final rules. In some cases, the "actual" (vs. projected or "modeled") new vehicles being introduced into the market by manufacturers are done so in anticipation of this rulemaking. On the other hand, manufacturers may plan to continue using technologies to improve vehicle performance and/or utility, not just fuel economy. Our approach prevents some of these actual technological improvements and their associated cost and fuel economy improvements from being assumed in the reference fleet. Thus, the added technology will not be considered to be free (or having no benefits) for the purposes of this rule.

In this regard, the agencies further note that manufacturer announcements regarding forward models (or future vehicle models) need not be accepted automatically. Manufacturers tend to limit accurate production intent information in these releases for reasons such as: (a) Competitors will closely examine their information for data in their product planning decisions; (b) the press coverage of forward model announcements is not uniform, meaning highly anticipated models have more coverage and materials than models that may be less exciting to the public and consistency and uniformity cannot be ensured with the usage of press information; and (c) these market projections are subject to change (sometimes significant), and manufacturers may not want to give the appearance of being indecisive, or under/over-confident to their shareholders and the public with premature release of information.

NHTSA has evaluated the use of public manufacturer forward model press information to update the vehicle fleet inputs to the baseline and reference fleet. The challenges in this approach are evidenced by the continuous stream of manufacturer press releases throughout a defined rulemaking period. Manufacturers' press releases suffer from the same types of inaccuracies that many commenters believe can affect product plans.

[55] An example of this is in the GM Pontiac line, which is in the process of being phased out during the course of this rulemaking. GM has similar vehicles within their other brands (like Chevy) that will "presumably" pick up the loss in Pontiac share. We model this simply by leaving the Pontiac brand in.

Manufacturers can often be overly optimistic in their press releases, both on projected date of release of new models and on sales volumes.

More generally and more critically, as discussed in the proposal and as endorsed by many of the public comments, there are several advantages to the approach used by the agencies in this final rule. Most importantly, today's market forecast is much more transparent. The information sources used to develop today's market forecast are all either in the public domain or available commercially. Another significant advantage of today's market forecast is the agencies' ability to assess more fully the incremental costs and benefits of the proposed standards. In addition, by developing baseline and reference fleets from common sources, the agencies have been able to avoid some errors—perhaps related to interpretation of requests—that have been observed in past responses to NHTSA's requests. An additional advantage of the approach used for this rule is a consistent projection of the change in fuel economy and CO_2 emissions across the various vehicles from the application of new technology. With the approach used for this final rule, the baseline market data comes from actual vehicles (on the road today) which have actual fuel economy test data (in contrast to manufacturer estimates of future product fuel economy)—so there is no question what is the basis for the fuel economy or CO_2 performance of the baseline market data as it is.

5. How does manufacturer product plan data factor into the baseline used in this Final Rule?

In the spring and fall of 2009, many manufacturers submitted product plans in response to NHTSA's recent requests that they do so. NHTSA and EPA both have access to these plans, and both agencies have reviewed them in detail. A small amount of product plan data was used in the development of the baseline. The specific pieces of data are:

- Wheelbase.
- Track Width Front.
- Track Width Rear.
- EPS (Electric Power Steering).
- ROLL (Reduced Rolling Resistance).
- LUB (Advance Lubrication *i.e.* low weight oil).
- IACC (Improved Electrical Accessories).
- Curb Weight.
- GVWR (Gross Vehicle Weight Rating).

The track widths, wheelbase, curb weight, and GVWR for vehicles could have been looked up on the Internet (159 were), but were taken from the product plans when available for convenience. To ensure accuracy, a sample from each product plan was used as a check against the numbers available from *Motortrend.com.* These numbers will be published in the baseline file since they can be easily looked up on the internet. On the other hand, EPS, ROLL, LUB, and IACC are difficult to determine without using manufacturer's product plans. These items will not be published in the baseline file, but the data has been aggregated into the agencies' baseline in the technology effectiveness and cost effectiveness for each vehicle in a way that allows the baseline for the model to be published without revealing the manufacturer's data.

Also, some technical information that manufacturers have provided in product plans regarding specific vehicle models is, at least insofar as NHTSA and EPA have been able to determine, not available from public or commercial sources. While such gaps do not bear significantly on the agencies' analysis, the diversity of pickup configurations necessitated utilizing a sales-weighted average footprint value [56] for many manufacturers' pickups. Since our modeling only utilizes footprint in order to estimate each manufacturer's CO_2 or fuel economy standard and all the other vehicle characteristics are available for each pickup configuration, this approximation has no practical impact on the projected technology or cost associated with compliance with the various standards evaluated. The only impact which could arise would be if the relative sales of the various pickup configurations changed, or if the agencies were to explore standards with a different shape. This would necessitate recalculating the average footprint value in order to maintain accuracy.

Additionally, as discussed in the NPRM, in an effort to update the 2008 baseline to account for the expected changes in the fleet in the near-term model years 2009–2011 described above, NHTSA requested permission from the manufacturers to make this limited product plan information public. Unfortunately, virtually no manufacturers agreed to allow the use of their data after 2009 model year. A few manufacturers, such as GM and Ford, stated we could use their 2009 product plan data after the end of production (December 31), but this would not have afforded us sufficient time to do the analysis for the final rule. Since the agencies were unable to obtain consistent updates, the baseline and reference fleets were not updated beyond 2008 model year for the final rule. The 2008 baseline fleet and projections were instead updated using the latest AEO and CSM data as discussed earlier.

NHTSA and EPA recognize that the approach applied for the current rule gives transparency and openness of the vehicle market forecast high priority, and accommodates minor inaccuracies that may be introduced by not accounting for future product mix changes anticipated in manufacturers' confidential product plans. For any future fleet analysis that the agencies are required to perform, NHTSA and EPA plan to request that manufacturers submit product plans and allow some public release of information. In performing this analysis, the agencies plan to reexamine potential tradeoffs between transparency and technical reasonableness, and to explain resultant choices.

C. Development of Attribute-Based Curve Shapes

In the NPRM, NHTSA and EPA proposed to set attribute-based CAFE and CO_2 standards that are defined by a mathematical function for MYs 2012–2016 passenger cars and light trucks. EPCA, as amended by EISA, expressly requires that CAFE standards for passenger cars and light trucks be based on one or more vehicle attributes related to fuel economy, and be expressed in the form of a mathematical function.[57] The CAA has no such requirement, though in past rules, EPA has relied on both universal and attribute-based standards (*e.g.,* for nonroad engines, EPA uses the attribute of horsepower). However, given the advantages of using attribute-based standards and given the

[56] A full-size pickup might be offered with various combinations of cab style (*e.g.,* regular, extended, crew) and box length (*e.g.,* 5½′, 6½′, 8′) and, therefore, multiple footprint sizes. CAFE compliance data for MY 2008 data does not contain footprint information, and does not contain information that can be used to reliably identify which pickup entries correspond to footprint values estimable from public or commercial sources. Therefore, the agencies have used the known production levels of average values to represent all variants of a given pickup line (*e.g.,* all variants of the F–150 and the Sierra/Silverado) in order to calculate the sales-weighted average footprint value for each pickup family. Again, this has no impact on the results of our modeling effort, although it would require re-estimation if we were to examine light truck standards of a different shape. In the extreme, one single footprint value could be used for every vehicle sold by a single manufacturer as long as the fuel economy standard associated with this footprint value represented the sales-weighted, harmonic average of the fuel economy standards associated with each vehicle's footprint values.

[57] 49 U.S.C. 32902(a)(3)(A).

goal of coordinating and harmonizing CO_2 standards promulgated under the CAA and CAFE standards promulgated under EPCA, EPA also proposed to issue standards that are attribute-based and defined by mathematical functions. There was consensus in the public comments that EPA should develop attribute-based CO_2 standards.

Comments received in response to the agencies' decision to base standards on vehicle footprint were largely supportive. Several commenters (BMW, NADA, NESCAUM) expressed support for attribute-based (as opposed to flat or universal) standards generally, and agreed with EPA's decision to harmonize with NHTSA in this respect. Many commenters (Aluminum Association, BMW, ICCT, NESCAUM, NY DEC, Schade, Toyota) also supported the agencies' decision to continue setting CAFE standards, and begin setting GHG standards, on the basis of vehicle footprint, although one commenter (NJ DEP) opposed the use of footprint due to concern that it encourages manufacturers to upsize vehicles and undercut the gains of the standard. Of the commenters supporting the use of footprint, several focused on the benefits of harmonization—both between EPA and NHTSA, and between the U.S. and the rest of the world. BMW commented, for example, that many other countries use weight-based standards rather than footprint-based. While BMW did not object to NHTSA's and EPA's use of footprint-based standards, it emphasized the impact of this non-harmonization on manufacturers who sell vehicles globally, and asked the agencies to consider these effects. NADA supported the use of footprint, but cautioned that the agencies must be careful in setting the footprint curve for light trucks to ensure that manufacturers can continue to provide functionality like 4WD and towing/hauling capacity.

Some commenters requested that the agencies consider other or more attributes in addition to footprint, largely reiterating comments submitted to the MYs 2011–2015 CAFE NPRM. Cummins supported the agencies using a secondary attribute to account for towing and hauling capacity in large trucks, for example, while Ferrari asked the agencies to consider a multi-attribute approach incorporating curb weight, maximum engine power or torque, and/or engine displacement, as it had requested in the previous round of CAFE rulemaking. An individual, Mr. Kenneth Johnson, commented that weight-based standards would be preferable to footprint-based ones, because weight correlates better with fuel economy than footprint, because the use of footprint does not necessarily guarantee safety the way the agencies say it does, and because weight-based standards would be fairer to manufacturers.

In response, EPA and NHTSA continue to believe that the benefits of footprint-attribute-based standards outweigh any potential drawbacks raised by commenters, and that harmonization between the two agencies should be the overriding goal on this issue. As discussed by NHTSA in the MY 2011 CAFE final rule,[58] the agencies believe that the possibility of gaming is lowest with footprint-based standards, as opposed to weight-based or multi-attribute-based standards. Specifically, standards that incorporate weight, torque, power, towing capability, and/or off-road capability in addition to footprint would not only be significantly more complex, but by providing degrees of freedom with respect to more easily-adjusted attributes, they would make it less certain that the future fleet would actually achieve the average fuel economy and CO_2 levels projected by the agencies. The agencies recognize that based on economic and consumer demand factors that are external to this rule, the distribution of footprints in the future may be different (either smaller or larger) than what is projected in this rule. However, the agencies continue to believe that there will not be significant shifts in this distribution as a direct consequence of this rule. The agencies are therefore finalizing MYs 2012–2016 CAFE and GHG standards based on footprint.

The agencies also recognize that there could be benefits for a number of manufacturers if there was greater international harmonization of fuel economy and GHG standards, but this is largely a question of how stringent standards are and how they are enforced. It is entirely possible that footprint-based and weight-based systems can coexist internationally and not present an undue burden for manufacturers if they are carefully crafted. Different countries or regions may find different attributes appropriate for basing standards, depending on the particular challenges they face—from fuel prices, to family size and land use, to safety concerns, to fleet composition and consumer preference, to other environmental challenges besides climate change. The agencies anticipate working more closely with other countries and regions in the future to consider how to mitigate these issues in a way that least burdens manufacturers while respecting each country's need to meet its own particular challenges.

Under an attribute-based standard, every vehicle model has a performance target (fuel economy and CO_2 emissions for CAFE and CO_2 emissions standards, respectively), the level of which depends on the vehicle's attribute (for the proposal, footprint). The manufacturers' fleet average performance is determined by the production-weighted[59] average (for CAFE, harmonic average) of those targets. NHTSA and EPA are promulgating CAFE and CO_2 emissions standards defined by constrained linear functions and, equivalently, piecewise linear functions.[60] As a possible option for future rulemakings, the constrained linear form was introduced by NHTSA in the 2007 NPRM proposing CAFE standards for MY 2011–2015. Described mathematically, the proposed constrained linear function was defined according to the following formula:[61]

$$TARGET = \frac{1}{MIN\left[MAX\left(c \times FOOTPRINT + d, \frac{1}{a}\right), \frac{1}{b}\right]}$$

Where

TARGET = the fuel economy target (in mpg) applicable to vehicles of a given footprint (*FOOTPRINT,* in square feet),

a = the function's upper limit (in mpg),

b = the function's lower limit (in mpg),

[58] *See* 74 FR 14359 (Mar. 30, 2009).

[59] Production for sale in the United States.

[60] The equations are equivalent but are specified differently due to differences in the agencies' respective models.

[61] This function is linear in fuel consumption but not in fuel economy.

c = the slope (in gpm per square foot) of the sloped portion of the function,
d = the intercept (in gpm) of the sloped portion of the function (that is, the value the sloped portion would take if extended to a footprint of 0 square feet, and the *MIN* and *MAX* functions take the minimum and maximum, respectively, of the included values; for example, *MIN*(1,2) = 1, *MAX*(1,2) = 2, and *MIN*[*MAX*(1,2),3)]=2.

Because the format is linear on a gallons-per-mile basis, not on a miles-per-gallon basis, it is plotted as fuel consumption below. Graphically, the constrained linear form appears as shown in Figure II.C–1.

BILLING CODE 6560–50–P

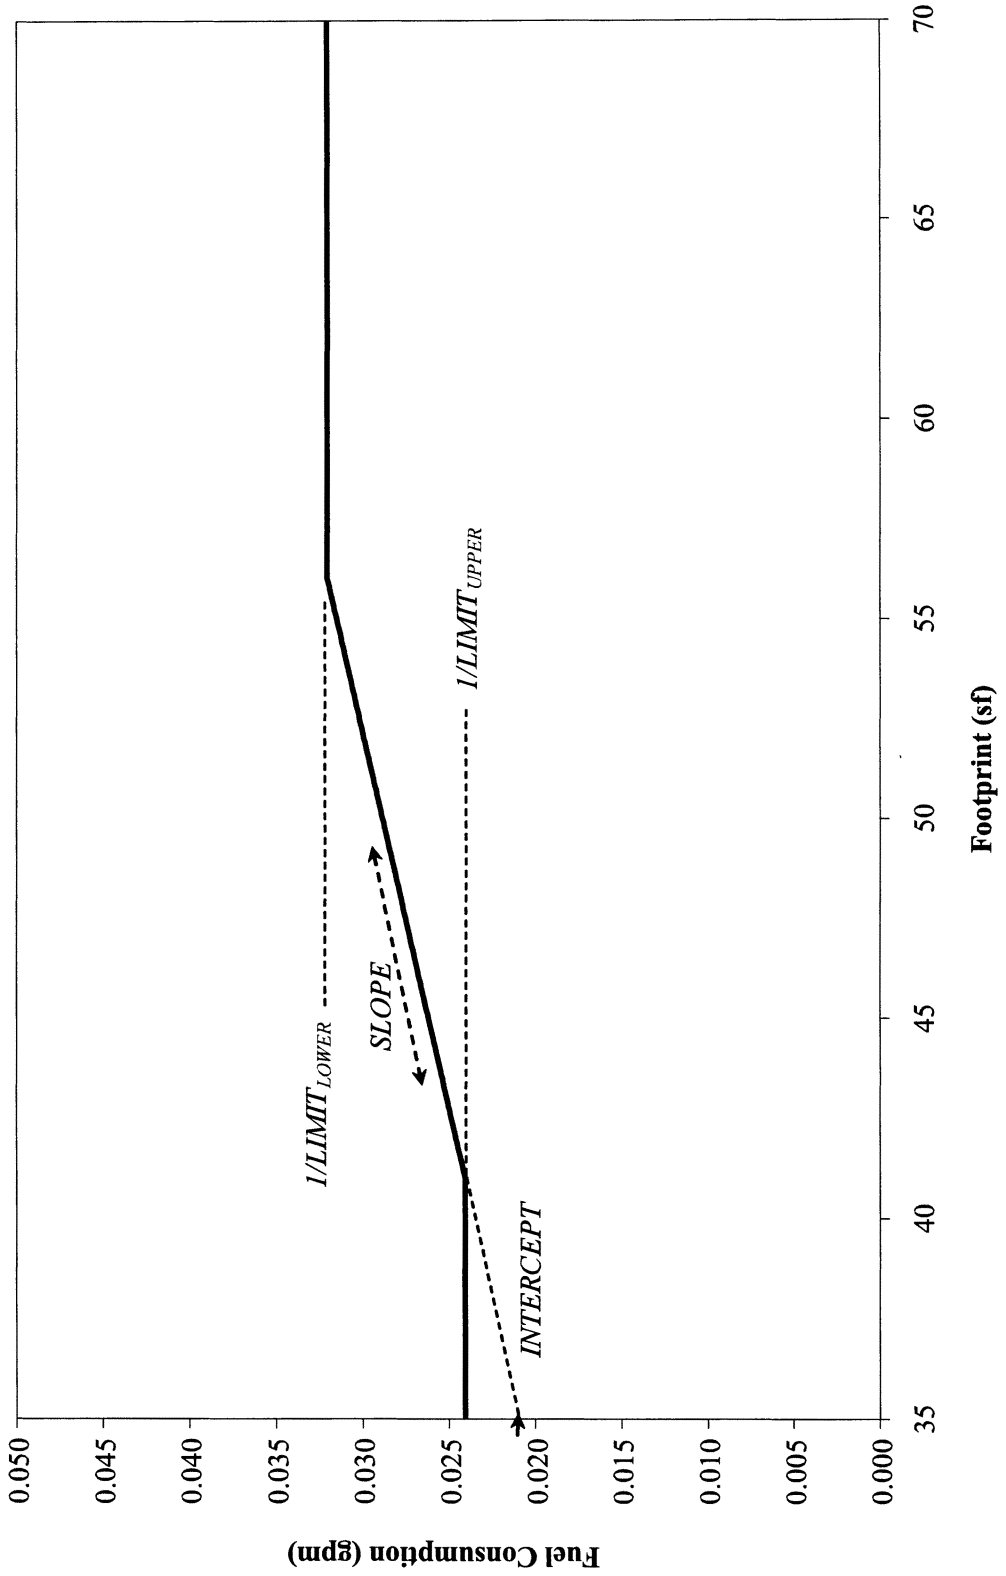

Figure II.C-1 The Shape of the Constrained Linear Form

The specific form and stringency for each fleet (passenger car and light trucks) and model year are defined through specific values for the four coefficients shown above.

EPA proposed the equivalent equation below for assigning CO_2 targets to an individual vehicle's footprint value. Although the general model of the equation is the same for each vehicle category and each year, the parameters of the equation differ for cars and trucks and for each model year. Described mathematically, EPA's proposed piecewise linear function was as follows:

Target = a, if $x \leq l$
Target = $cx + d$, if $l < x \leq h$
Target = b, if $x > h$

In the constrained linear form similar in form to the fuel economy equation above, this equation takes the simplified form:

Target = MIN [MAX (c * x + d, a), b]

Where

Target = the CO_2 target value for a given footprint (in g/mi)
a = the minimum target value (in g/mi CO_2) [62]
b = the maximum target value (in g/mi CO_2)
c = the slope of the linear function (in g/mi per sq ft CO_2)
d = is the intercept or zero-offset for the line (in g/mi CO_2)
x = footprint of the vehicle model (in square feet, rounded to the nearest tenth)
l & h are the lower and higher footprint limits or constraints or ("kinks") or the boundary between the flat regions and the intermediate sloped line (in sq ft)

Graphically, piecewise linear form, like the constrained linear form, appears as shown in Figure II.C–2.

[62] These a, b, d coefficients differ from the a, b, d coefficients in the constrained linear fuel economy equation primarily by a factor of 8887 (plus an additive factor for air conditioning).

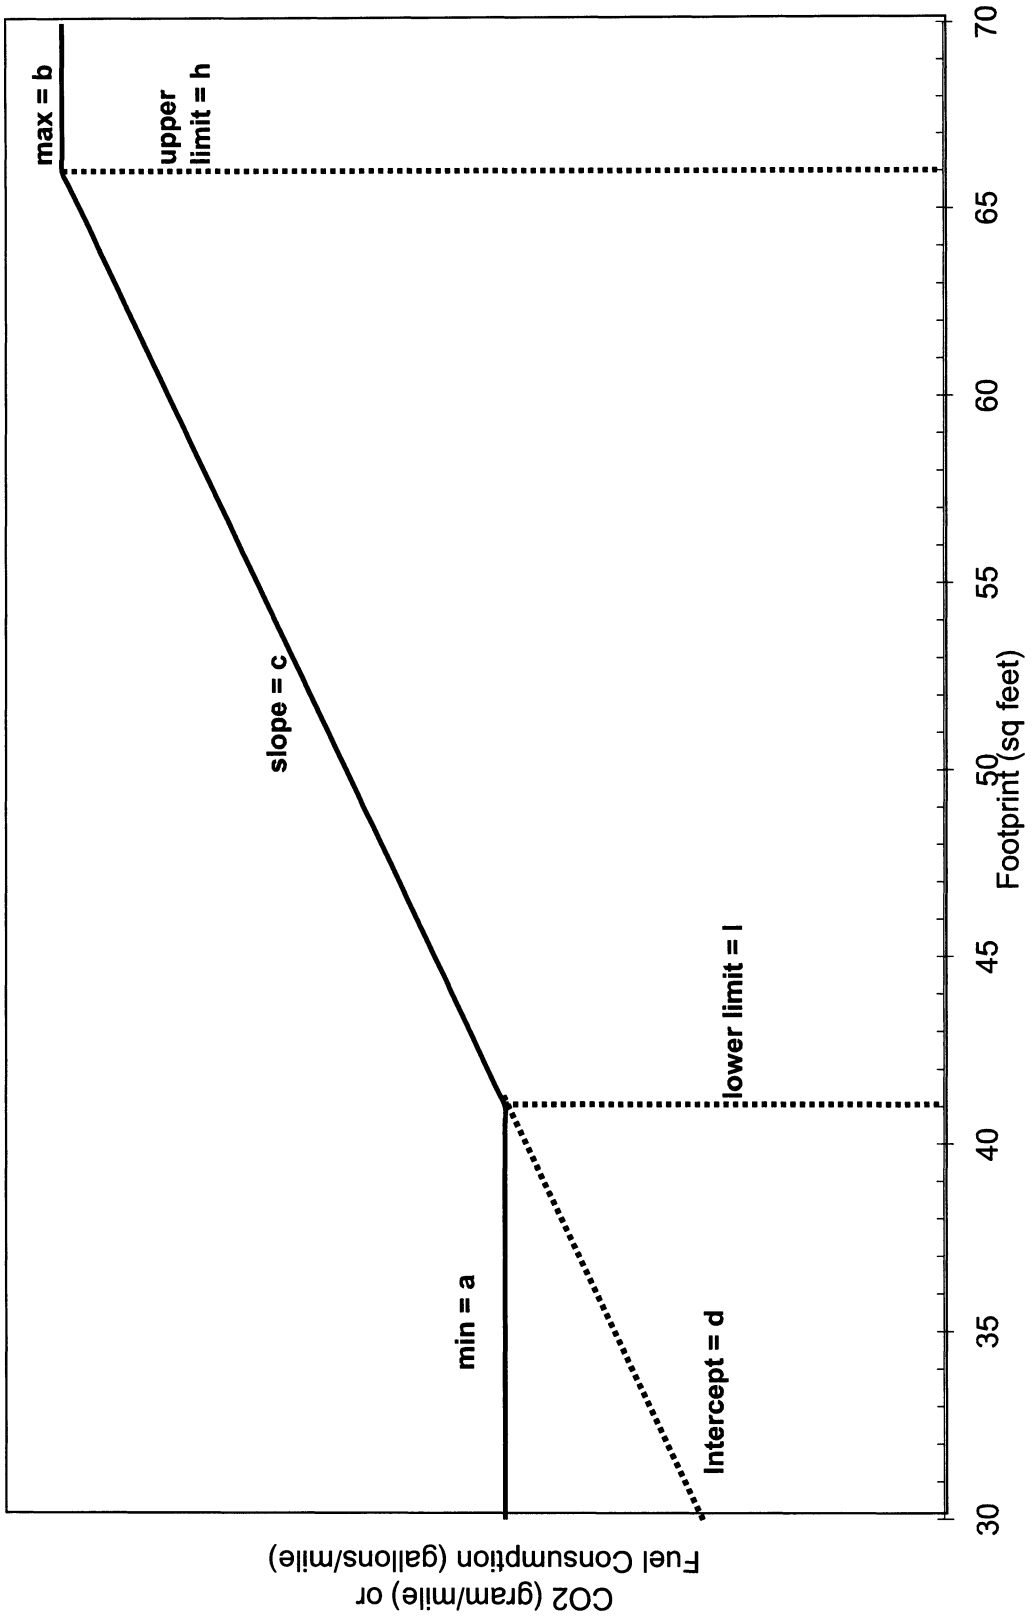

Figure II.C-2 The Shape of the Piecewise Linear Form

BILLING CODE 6560–50–C

As for the constrained linear form, the specific form and stringency of the piecewise linear function for each fleet (passenger car and light trucks) and model year are defined through specific values for the four coefficients shown above.

For purposes of the proposed rules, NHTSA and EPA developed the basic curve shapes using methods similar to those applied by NHTSA in fitting the curves defining the MY 2011 standards. The first step involved defining the relevant vehicle characteristics in the form used by NHTSA's CAFE model (*e.g.,* fuel economy, footprint, vehicle class, technology) described in Section II.B of this preamble and in Chapter 1 of the Joint TSD. However, because the baseline fleet utilizes a wide range of available fuel saving technologies, NHTSA used the CAFE model to develop a fleet to which all of the technologies discussed in Chapter 3 of the Joint TSD[63] were applied, except dieselization and strong hybridization. This was accomplished by taking the following steps: (1) Treating all manufacturers as unwilling to pay civil penalties rather than applying technology, (2) applying any technology at any time, irrespective of scheduled vehicle redesigns or freshening, and (3) ignoring "phase-in caps" that constrain the overall amount of technology that can be applied by the model to a given manufacturer's fleet. These steps helped to increase technological parity among vehicle models, thereby providing a better basis (than the baseline or reference fleets) for estimating the statistical relationship between vehicle size and fuel economy.

In fitting the curves, NHTSA and EPA also continued to fit the sloped portion of the function to vehicle models between the footprint values at which the agencies continued to apply constraints to limit the function's value for both the smallest and largest vehicles. Without a limit at the smallest footprints, the function—whether logistic or linear—can reach values that would be unfairly burdensome for a manufacturer that elects to focus on the market for small vehicles; depending on the underlying data, an unconstrained form, could result in stringency levels that are technologically infeasible and/or economically impracticable for those manufacturers that may elect to focus on the smallest vehicles. On the other side of the function, without a limit at the largest footprints, the function may provide no floor on required fuel economy. Also, the safety considerations that support the provision of a disincentive for downsizing as a compliance strategy apply weakly, if at all, to the very largest vehicles. Limiting the function's value for the largest vehicles leads to a function with an inherent absolute minimum level of performance, while remaining consistent with safety considerations.

Before fitting the sloped portion of the constrained linear form, NHTSA and EPA selected footprints above and below which to apply constraints (*i.e.,* minimum and maximum values) on the function. The agencies believe that the linear form performs well in describing the observed relationship between footprint and fuel consumption or CO_2 emissions for vehicle models within the footprint ranges covering most vehicle models, but that the single (as opposed to piecewise) linear form does not perform well in describing this relationship for the smallest and largest vehicle models. For passenger cars, the agency noted that several manufacturers offer small, sporty coupes below 41 square feet, such as the BMW Z4 and Mini, Honda S2000, Mazda MX–5 Miata, Porsche Carrera and 911, and Volkswagen New Beetle. Because such vehicles represent a small portion (less than 10 percent) of the passenger car market, yet often have performance, utility, and/or structural characteristics that could make it technologically infeasible and/or economically impracticable for manufacturers focusing on such vehicles to achieve the very challenging average requirements that could apply in the absence of a constraint, EPA and NHTSA proposed to "cut off" the linear portion of the passenger car function at 41 square feet. The agencies recognize that for manufacturers who make small vehicles in this size range, this cut off creates some incentive to downsize (*i.e.,* further reduce the size, and/or increase the production of models currently smaller than 41 square feet) to make it easier to meet the target. The cut off may also create the incentive for manufacturers who do not currently offer such models to do so in the future. However, at the same time, the agencies believe that there is a limit to the market for cars smaller than 41 square feet—most consumers likely have some minimum expectation about interior volume, among other things. The agencies thus believe that the number of consumers who will want vehicles smaller than 41 square feet (regardless of how they are priced) is small, and that the incentive to downsize in response to this final rule, if present, will be minimal. For consistency, the agency proposed to "cut off" the light truck function at the same footprint, although no light trucks are currently offered below 41 square feet. The agencies further noted that above 56 square feet, the only passenger car model present in the MY 2008 fleet were four luxury vehicles with extremely low sales volumes—the Bentley Arnage and three versions of the Rolls Royce Phantom. NHTSA and EPA therefore also proposed to "cut off" the linear portion of the passenger car function at 56 square feet. Finally, the agencies noted that although public information is limited regarding the sales volumes of the many different configurations (cab designs and bed sizes) of pickup trucks, most of the largest pickups (*e.g.,* the Ford F–150, GM Sierra/Silverado, Nissan Titan, and Toyota Tundra) appear to fall just above 66 square feet in footprint. EPA and NHTSA therefore proposed to "cut off" the linear portion of the light truck function at 66 square feet.

Having developed a set of vehicle emissions and footprint data which represent the benefit of all non-diesel, non-hybrid technologies, we determined the initial values for parameters *c* and *d* were determined for cars and trucks separately. *c* and *d* were initially set at the values for which the average (equivalently, sum) of the absolute values of the differences was minimized between the "maximum technology" fleet fuel consumption (within the footprints between the upper and lower limits) and the straight line of the function defined above at the same corresponding vehicle footprints. That is, *c* and *d* were determined by minimizing the average absolute residual, commonly known as the MAD (Mean Absolute Deviation) approach, of the corresponding straight line.

Finally, NHTSA calculated the values of the upper and lower parameters (*a* and *b*) based on the corresponding footprints discussed above (41 and 56 square feet for passenger cars, and 41 and 66 square feet for light trucks).

The result of this methodology is shown below in Figures II.C–3 and II.C–4 for passenger cars and light trucks, respectively. The fitted curves are shown with the underlying "maximum technology" passenger car and light truck fleets. For passenger cars, the mean absolute deviation of the sloped portion of the function was 14 percent.

[63] The agencies excluded diesel engines and strong hybrid vehicle technologies from this exercise (and only this exercise) because the agencies expect that manufacturers would not need to rely heavily on these technologies in order to comply with the proposed standards. NHTSA and EPA did include diesel engines and strong hybrid vehicle technologies in all other portions of their analyses.

For trucks, the corresponding MAD was 10 percent.

BILLING CODE 6560–50–P

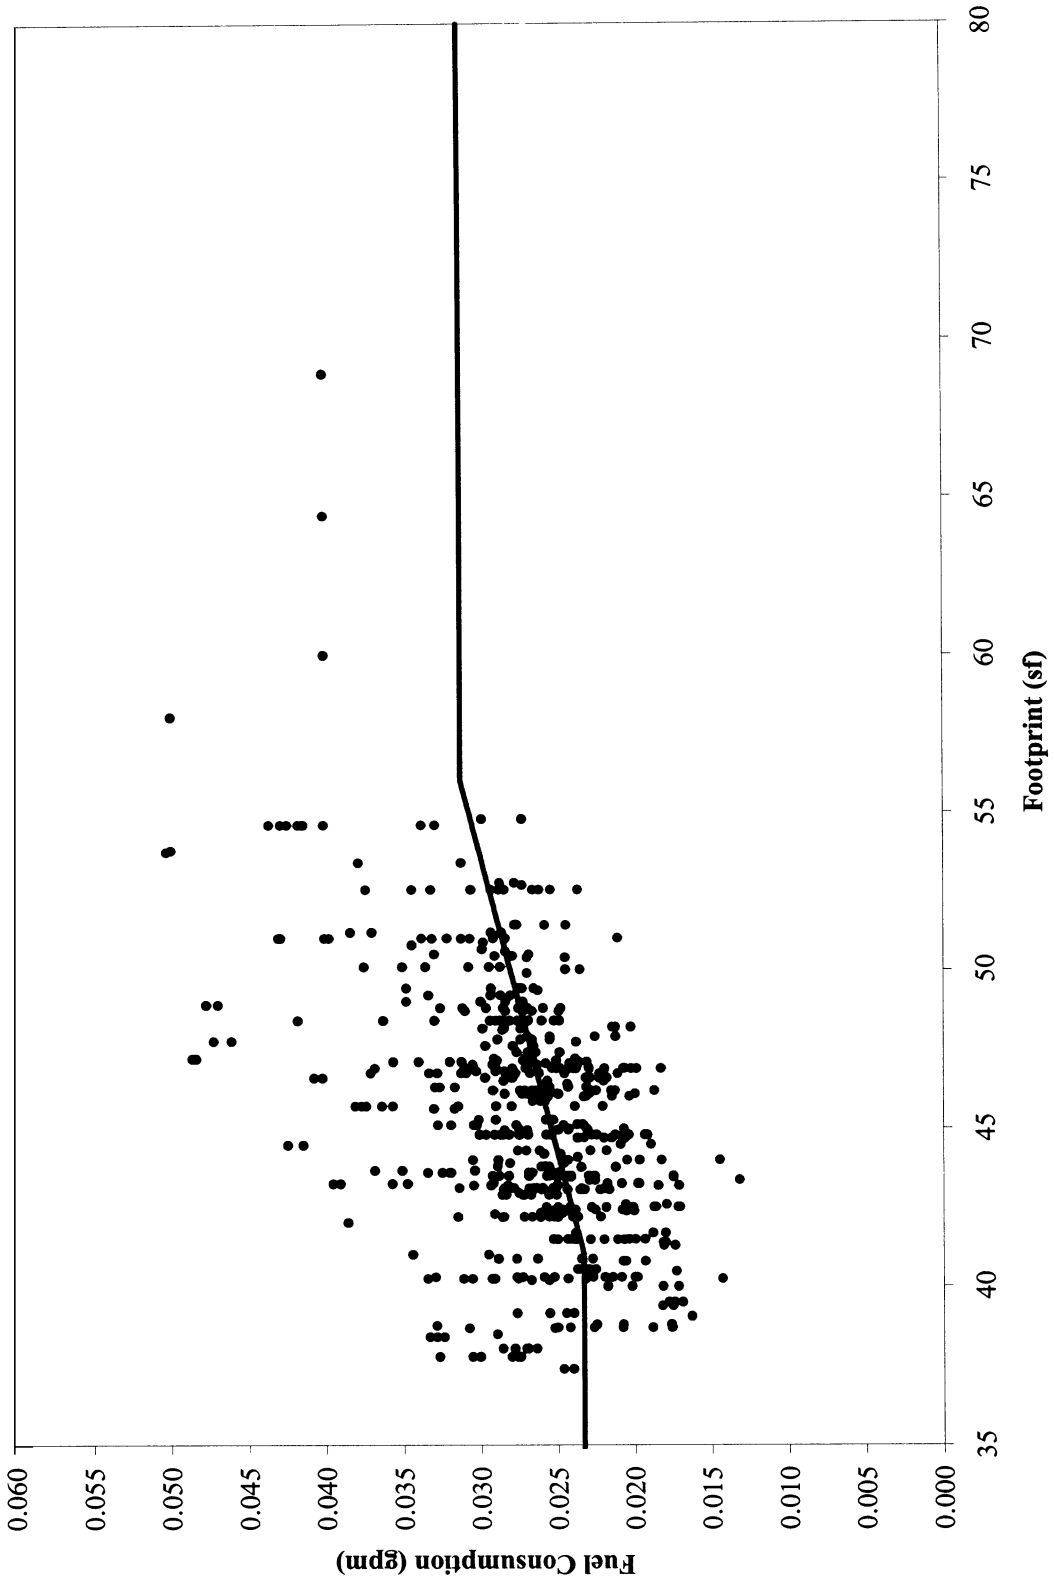

Figure II.C-3 "Maximum Technology" Passenger Fleet with Fitted Constrained Linear Function

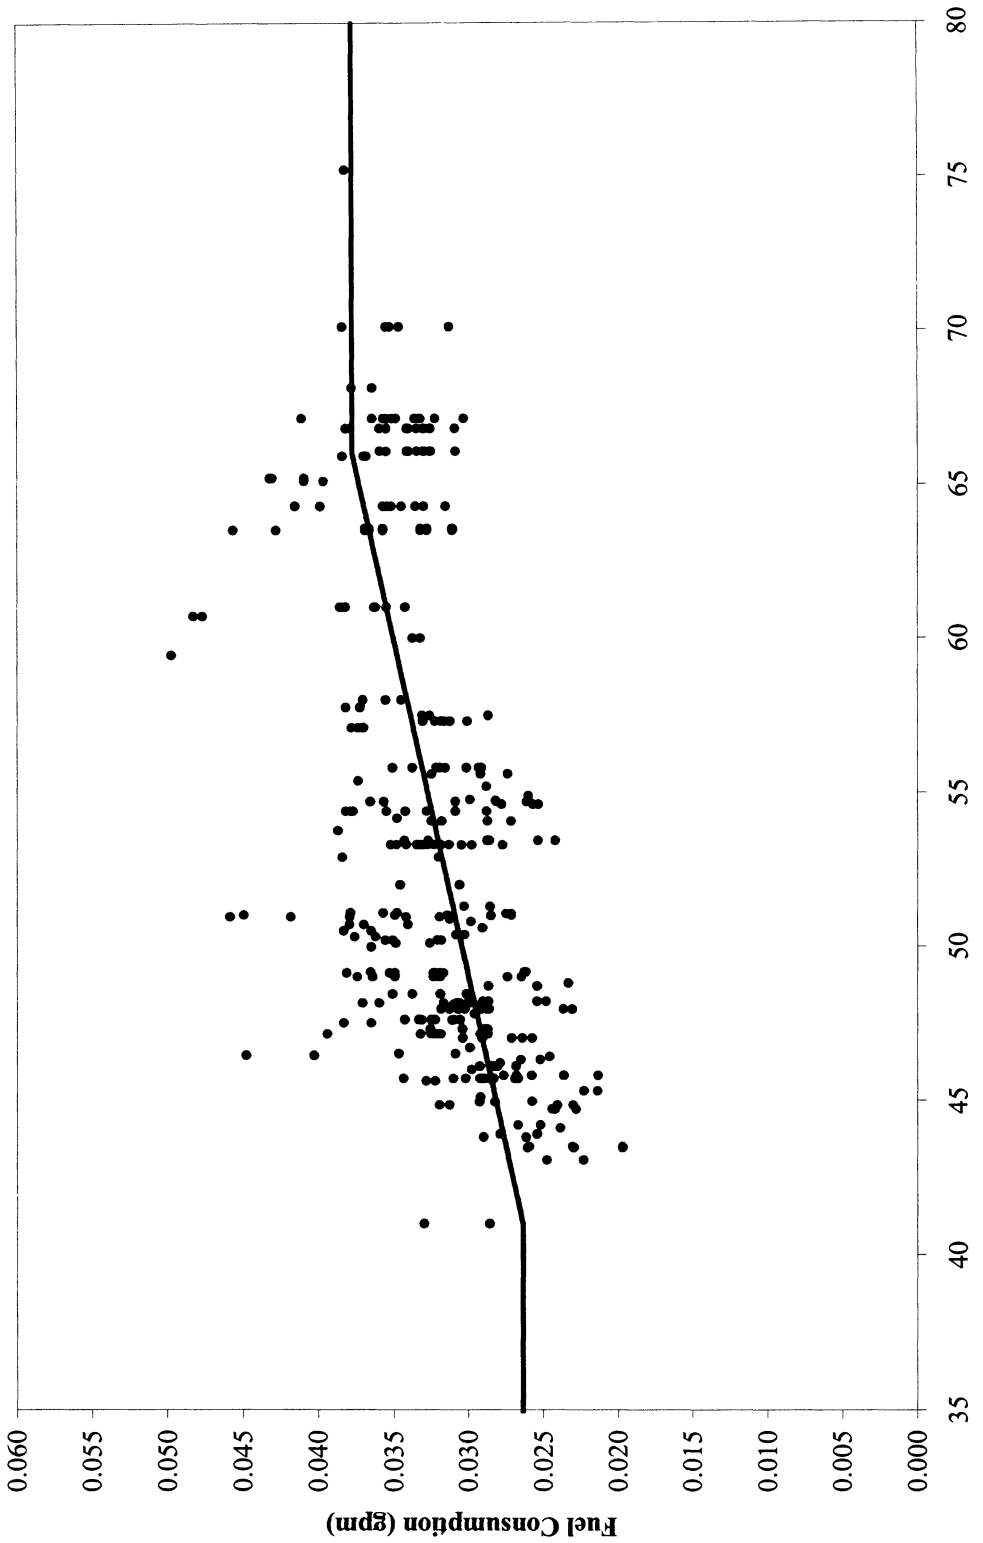

Figure II.C--4 "Maximum Technology" Light Truck with Fitted Constrained Linear Function

BILLING CODE 6560–50–C

The agencies used these functional forms as a starting point to develop mathematical functions defining the actual proposed standards as discussed above. The agencies then transposed these functions vertically (*i.e.,* on a gpm or CO_2 basis, uniformly downward) to produce the same fleetwide fuel economy (and CO_2 emission levels) for cars and light trucks described in the NPRM.

A number of public comments generally supported the agencies' choice of attribute-based mathematical functions, as well as the methods applied to fit the function. Ferrari indicated support for the use of a constrained linear form rather than a constrained logistic form, support for the application of limits on the functions' values, support for a generally less steep passenger car curve compared to MY 2011, and support for the inclusion of all manufacturers in the analysis used to fit the curves. ICCT also supported the use of a constrained linear form. Toyota expressed general support for the methods and outcome, including a less-steep passenger car curve, and the application of limits on fuel economy targets applicable to the smallest vehicles. The UAW commented that the shapes and levels of the curves are reasonable.

Other commenters suggested that changes to the agencies' methods and results would yield better outcomes. GM suggested that steeper curves would provide a greater incentive for limited-line manufacturers to apply technology to smaller vehicles. GM argued that steeper and, in their view, fairer curves could be obtained by using sales-weighted least-squares regression rather than minimization of the unweighted mean absolute deviation. Conversely, students from UC Santa Barbara commented that the passenger car and light truck curves should be flatter and should converge over time in order to encourage the market to turn, as the agencies' analysis assumes it will, away from light trucks and toward passenger cars.

NADA commented that there should be no "cut-off" points (*i.e.,* lower limits or floors), because these *de facto* "backstops" might limit consumer choice, especially for light trucks—a possibility also suggested by the Alliance. The Alliance and several individual manufacturers also commented that the cut-off point for light trucks should be shifted to 72 square feet (from the proposed 66 square feet), arguing that the preponderance of high-volume light truck models with footprints greater than 66 square feet is such that a 72 square foot cut-off point makes it unduly challenging for manufacturers serving the large pickup market and thereby constitutes a *de facto* backstop. Also, with respect to the smallest light truck models, Honda commented that the cut-off point should be set at the point defining the smallest 10 percent of the fleet, both for consistency with the passenger car cut-off point, and to provide a greater incentive for manufacturers to downsize the smallest light truck models (which provide greater functionality than passenger cars).

Other commenters focused on whether the agencies should have separate curves for different fleets or whether they should have a single curve that applied to both passenger cars and light trucks. This issue is related, to some extent, to commenters who discussed whether car and truck definitions should change. CARB, Ford, and Toyota supported separate curves for cars and trucks, generally stating that different fleets have different functional characteristics and these characteristics are appropriately addressed by separate curves. Likewise, AIAM, Chrysler, and NADA supported leaving the current definitions of car and truck the same. CBD, ICCT, and NESCAUM supported a single curve, based on concerns about manufacturers gaming the system and reclassifying passenger cars as light trucks in order to obtain the often-less stringent light truck standard, which could lead to lower benefits than anticipated by the agencies.

In addition, the students from UC Santa Barbara reported being unable to reproduce the agencies' analysis to fit curves to the passenger car and light truck fleets, even when using the model, inputs, and external analysis files posted to NHTSA's Web site when the NPRM was issued.

Having considered public comments, NHTSA and EPA have re-examined the development of curves underlying the standards proposed in the NPRM, and are promulgating standards based on the same underlying curves. The agencies have made this decision considering that, while EISA mandates that CAFE standards be defined by a mathematical function in terms of one or more attributes related to fuel economy, neither EISA nor the CAA require that the mathematical function be limited to the observed or theoretical dependence of fuel economy on the selected attribute or attributes. As a means by which CAFE and GHG standards are specified, the mathematical function can and does properly play a normative role. Therefore, NHTSA and EPA have concluded that, as supported by comments, the mathematical function can reasonably be based on a blend of analytical and policy considerations, as discussed below and in the Joint Technical Support Document.

With respect to GM's recommendation that NHTSA and EPA use weighted least-squares analysis, the agencies find that the market forecast used for analysis supporting both the NPRM and the final rule exhibits the two key characteristics that previously led NHTSA to use minimization of the unweighted Mean Absolute Deviation (MAD) rather than weighted least-squares analysis. First, projected model-specific sales volumes in the agencies' market forecast cover an extremely wide range, such that, as discussed in NHTSA's rulemaking for MY 2011, while unweighted regression gives low-selling vehicle models and high-selling vehicle models equal emphasis, sales-weighted regression would give some vehicle models considerably more emphasis than other vehicle models.[64] The agencies' intention is to fit a curve that describes a technical relationship between fuel economy and footprint, given comparable levels of technology, and this supports weighting discrete vehicle models equally. On the other hand, sales weighted regression would allow the difference between other vehicle attributes to be reflected in the analysis, and also would reflect consumer demand.

Second, even after NHTSA's "maximum technology" analysis to increase technological parity of vehicle models before fitting curves, the agencies' market forecast contains many significant outliers. As discussed in NHTSA's rulemaking for MY 2011, MAD is a statistical procedure that has been demonstrated to produce more efficient parameter estimates than least-squares analysis in the presence of significant outliers.[65] In addition, the

[64] For example, the agencies' market forecast shows MY 2016 sales of 187,000 units for Toyota's 2WD Sienna, and shows 27 model configurations with MY 2016 sales of fewer than 100 units. Similarly, the agencies' market forecast shows MY 2016 sales of 268,000 for the Toyota Prius, and shows 29 model configurations with MY 2016 sales of fewer than 100 units. Sales-weighted analysis would give the Toyota Sienna and Prius more than a thousand times the consideration of many vehicle model configurations. Sales-weighted analysis would, therefore, cause a large number of vehicle model configurations to be virtually ignored. *See* discussion in NHTSA's final rule for MY 2011 passenger car and light truck CAFE standards, 74 FR 14368 (Mar. 30, 2009), and in NHTSA's NPRM for that rulemaking, 73 FR 24423–24429 (May 2, 2008).

[65] *Id.* In the case of a dataset not drawn from a sample with a Gaussian, or normal, distribution, there is often a need to employ robust estimation methods rather than rely on least-squares approach to curve fitting. The least-squares approach has as an underlying assumption that the data are drawn

agencies remain concerned that the steeper curves resulting from weighted least-squares analysis would increase the risk that energy savings and environmental benefits would be lower than projected, because the steeper curves would provide a greater incentive to increase sales of larger vehicles with lower fuel economy levels. Based on these technical considerations and these concerns regarding potential outcomes, the agencies have decided not to re-fit curves using weighted least-squares analysis, but note that they may reconsider using least-squares regression in future analysis.

NHTSA and EPA have considered GM's comment that steeper curves would provide a greater incentive for limited-line manufacturers to apply technology to smaller vehicles. While the agencies agree that a steeper curve would, absent any changes in fleet mix, tend to shift average compliance burdens away from GM and toward companies that make smaller vehicles, the agencies are concerned, as stated above, that steeper curves would increase the risk that induced increases in vehicle size could erode projected energy and environmental benefits.

NHTSA and EPA have also considered the comments by the students from UC Santa Barbara indicating that the passenger car and light truck curves should be flatter and should converge over time. The agencies conclude that flatter curves would reduce the incentives intended in shifting from "flat" CAFE standards to attribute-based CAFE and GHG standards—those being the incentive to respond to attribute-based standards in ways that minimize compromises in vehicle safety, and the incentive for more manufacturers (than primarily those selling a wider range of vehicles) across the range of the attribute to have to increase the application of fuel-saving technologies. With regard to whether the agencies should set separate curves or a single one, NHTSA also notes that EPCA requires NHTSA to establish standards separately for passenger cars and light trucks, and thus concludes that the standards for each fleet should be based on the characteristics of vehicles in each fleet. In other words, the passenger car curve should be based on the characteristics of passenger cars, and the light truck curve should be based on the characteristics of light trucks—thus to the extent that those characteristics are different, an artificially-forced convergence would not accurately reflect those differences. However, such convergence could be appropriate depending on future trends in the light vehicle market, specifically further reduction in the differences between passenger car and light truck characteristics. While that trend was more apparent when car-like 2WD SUVs were classified as light trucks, it seems likely to diminish for the model year vehicles subject to these rules as the truck fleet will be more purely "truck-like" than has been the case in recent years.

NHTSA and EPA have also considered comments on the maxima and minima that the agencies have applied to "cut off" the linear function underlying the proposed curves for passenger cars and light trucks. Contrary to NADA's suggestion that there should be no such cut-off points, the agencies conclude that curves lacking maximum fuel economy targets (*i.e.,* minimum CO_2 targets) would result in average fuel economy and GHG requirements that would not be technologically feasible or economically practicable for manufacturers concentrating on those market segments. In addition, minimum fuel economy targets (*i.e.,* maximum CO_2 targets) are important to mitigate the risk to energy and environmental benefits of potential market shifts toward large vehicles. The agencies also disagree with comments by the Alliance and several individual manufacturers that the cut-off point for light trucks should be shifted to 72 square feet (from the proposed 66 square feet) to ease compliance burdens facing manufacturers serving the large pickup market. Such a shift would increase the risk that energy and environmental benefits of the standards would be compromised by induced increases in the sales of large pickups, in situations where the increased compliance burden is feasible and appropriate. Also, the agencies' market forecast suggests that most of the light trucks models with footprints larger than 66 square feet have curb weights near or above 5,000 pounds. This suggests, in turn, that in terms of highway safety, there is little or no need to discourage downsizing of light trucks with footprints larger than 66 square feet. Based on these energy, environmental, technological feasibility, economic practicability, and safety considerations, the agencies conclude that the light truck curve should be cut off at 66 square feet, as proposed, rather than at 72 square feet. The agencies also disagree with Honda's suggestion that the cut-off point for the smallest trucks be shifted to a larger footprint value, because doing so could potentially increase the incentive to reclassify vehicles in that size range as light trucks, and could thereby increase the possibility that energy and environmental benefits of the rule would be less than projected.

Finally, considering comments by the UC Santa Barbara students regarding difficulties reproducing NHTSA's analysis, NHTSA reexamined its analysis, and discovered some erroneous entries in model inputs underlying the analysis used to develop the curves proposed in the NPRM. These errors are discussed in NHTSA's final Regulatory Impact Analysis (FRIA) and have since been corrected. They include the following: Incorrect valvetrain phasing and lift inputs for many BMW engines, incorrect indexing for some Daimler models, incorrectly enabled valvetrain technologies for rotary engines and Atkinson cycle engines, omitted baseline applications of cylinder deactivation in some Honda and GM engines, incorrect valve phasing codes for some 4-cylinder Chrysler engines, omitted baseline applications of advanced transmissions in some VW models, incorrectly enabled advanced electrification technologies for several hybrid vehicle models, and incorrect DCT effectiveness estimates for subcompact passenger cars. These errors, while not significant enough to impact the overall analysis of stringency, did affect the fitted slope for the passenger car curve and would have prevented precise replication of NHTSA's NPRM analysis by outside parties.

After correcting these errors and repeating the curve development analysis presented in the NPRM, NHTSA obtained the curves shown below in Figures II.C–5 and II.C–6 for passenger cars and light trucks, respectively. The fitted curves are shown with the underlying "maximum technology" passenger car and light truck fleets. For passenger cars, the mean absolute deviation of the sloped portion of the function was 14 percent. For trucks, the corresponding MAD was 10 percent.

BILLING CODE 6560–50–P

from a normal distribution, and hence fits a curve using a sum-of-squares method to minimize errors. This approach will, in a sample drawn from a non-normal distribution, give excessive weight to outliers by making their presence felt in proportion to the square of their distance from the fitted curve, and, hence, distort the resulting fit. With outliers in the sample, the typical solution is to use a robust method such as a minimum absolute deviation, rather than a squared term, to estimate the fit (*see, e.g.,* "AI Access: Your Access to Data Modeling," at *http://www.aiaccess.net/English/Glossaries/GlosMod/e_gm_O_Pa.htm#Outlier*). The effect on the estimation is to let the presence of each observation be felt more uniformly, resulting in a curve more representative of the data (*see, e.g.,* Peter Kennedy, *A Guide to Econometrics,* 3rd edition, 1992, MIT Press, Cambridge, MA).

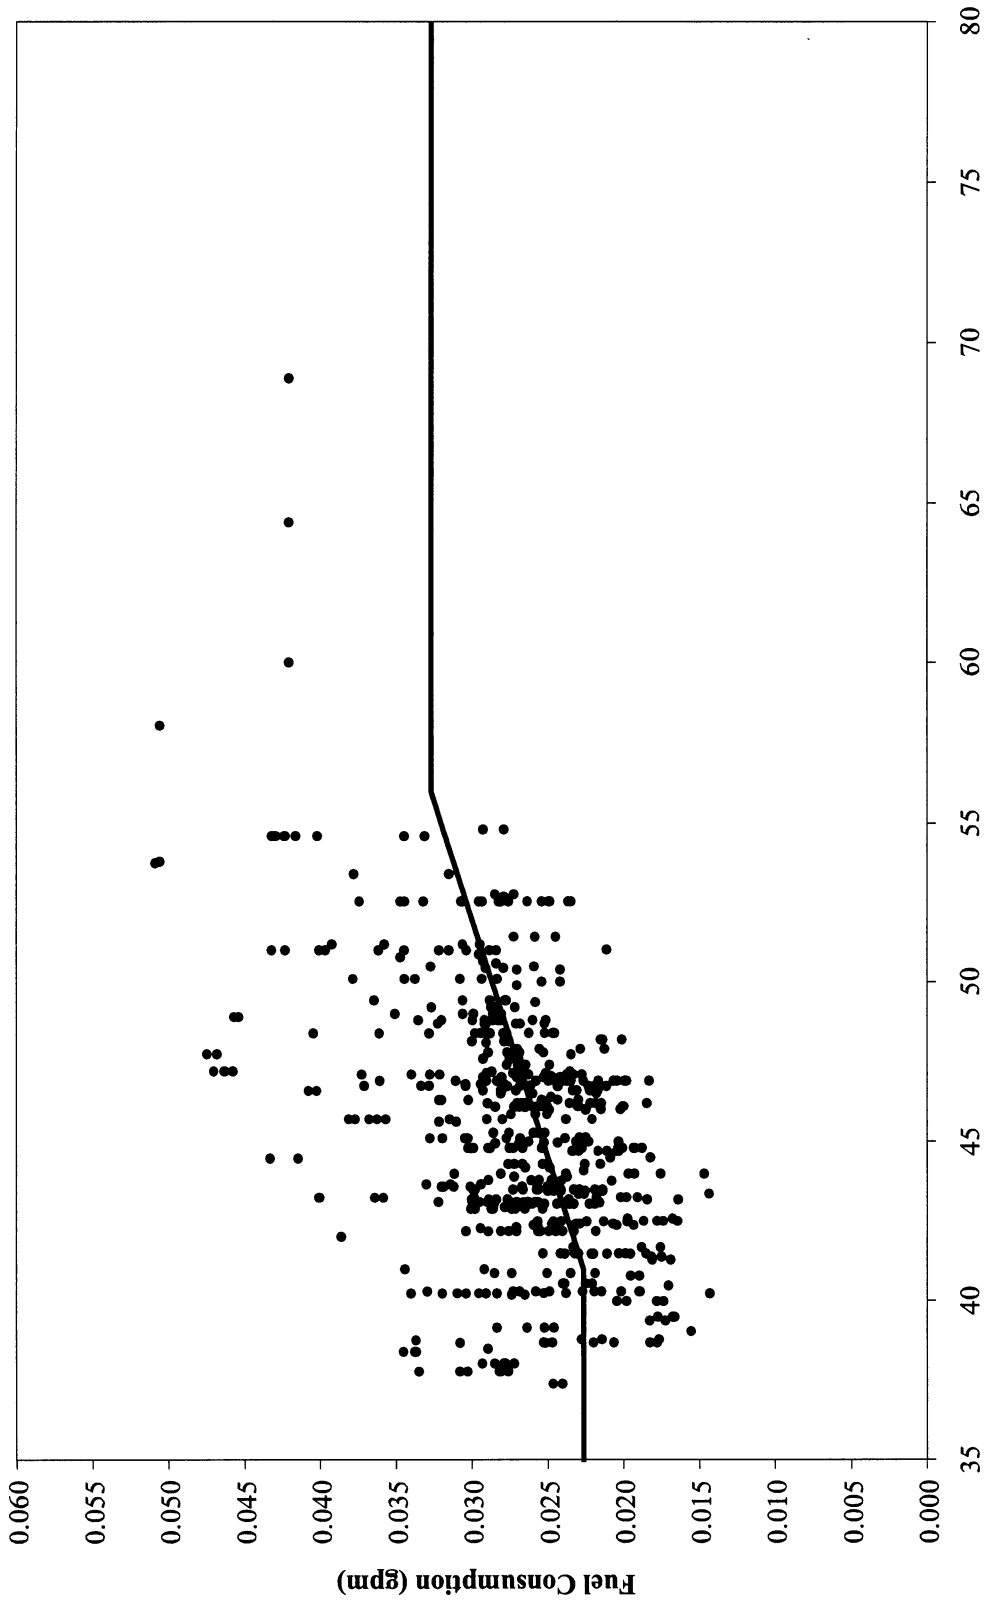

Figure II.C-5 Revised "Maximum Technology" Passenger Fleet with Fitted Constrained Linear Function

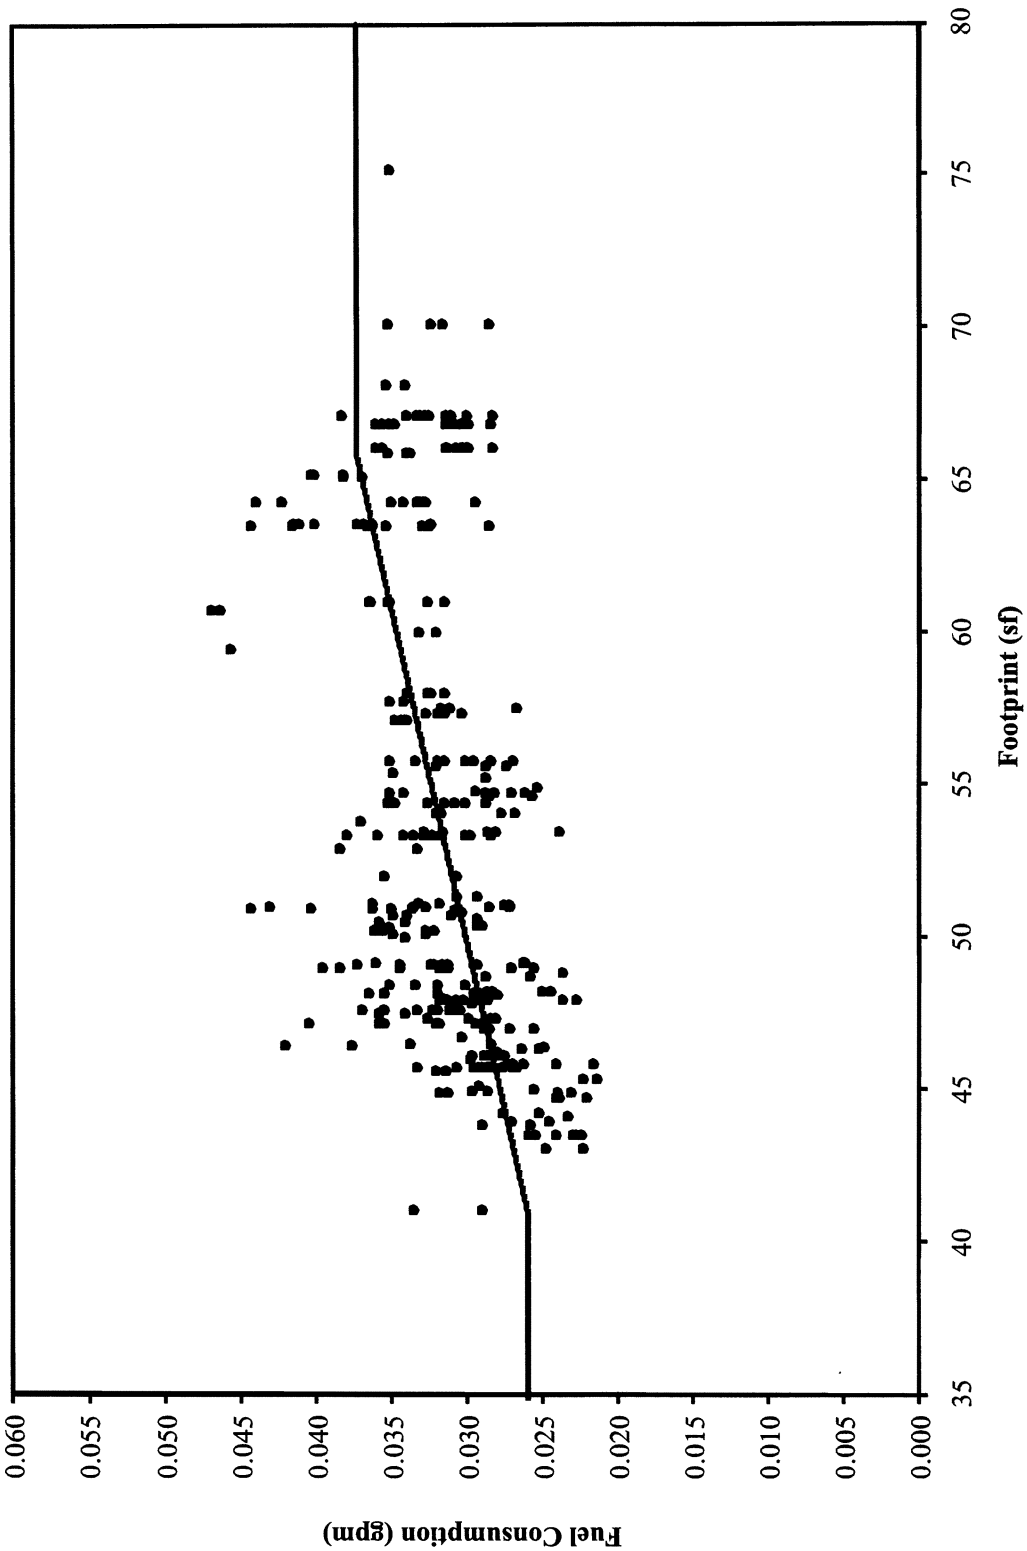

Figure II.C-6 Revised "Maximum Technology" Light Truck with Fitted Constrained Linear Function

This refitted passenger car curve is similar to that presented in the NPRM, and the refitted light truck curve is nearly identical to the corresponding curve in the NPRM. However, the slope of the refitted passenger car curve is about 27 percent steeper (on a gpm per sf basis) than the curve presented in the NPRM. For passenger cars and light trucks, respectively, Figures II.C–7 and II.C–8 show the results of adjustment—discussed in the next section—of the above curves to yield the average required fuel economy levels corresponding to the final standards.

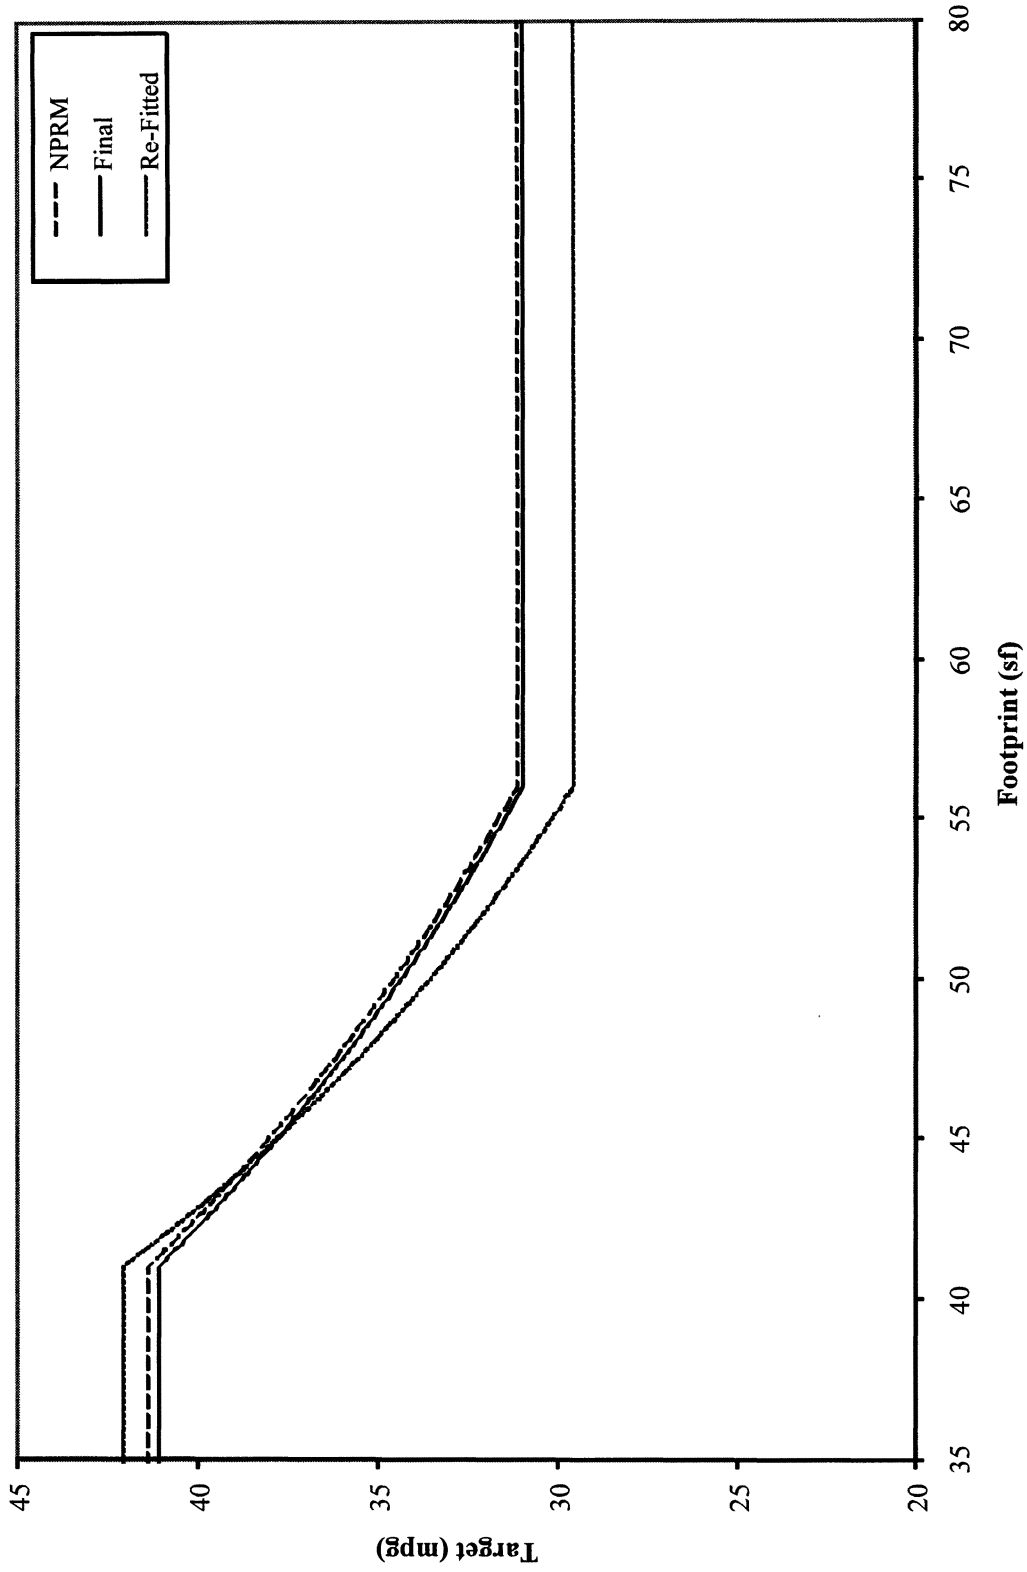

Figure II.C-7 MY 2016 Passenger Car Targets: NPRM, Final Rule, and if Using Re-Fitted Curve

Figure II.C-8 MY 2016 Light Truck Targets: NPRM, Final Rule, and if Using Re-Fitted Curve

BILLING CODE 6560–50–C

While the resultant light truck curves are visually indistinguishable from one another, the refitted curve for passenger cars would increase stringency for the smallest cars, decrease stringency for the largest cars, and provide a greater incentive to increase vehicle size throughout the range of footprints within which NHTSA and EPA project most passenger car models will be sold through MY 2016. The agencies are concerned that these changes would make it unduly difficult for manufacturers to introduce new small passenger cars in the United States, and unduly risk losses in energy and environmental benefits by increasing incentives for the passenger car market to shift toward larger vehicles.

Also, the agencies note that the refitted passenger car curve produces only a slightly closer fit to the corrected fleet than would the curve estimated in

the NPRM; with respect to the corrected fleet (between the "cut off" footprint values, and after the "maximum technology" analysis discussed above), the mean absolute deviation for the refitted curve is 13.887 percent, and that of a refitted curve held to the original slope is 13.933 percent. In other words, the data support the original slope very nearly as well as they support the refitted slope.

Considering NHTSA's and EPA's concerns regarding the change in incentives that would result from a refitted curve for passenger cars, and considering that the data support the original curves about as well as they would support refitted curves, the agencies are finalizing CAFE and GHG standards based on the curves presented in the NPRM.

Finally, regarding some commenters' inability to reproduce the agencies' NPRM analysis, NHTSA believes that its correction of the errors discussed above and its release (on NHTSA's Web site) of the updated Volpe model and all accompanying inputs and external analysis files should enable outside parties to independently reproduce the agencies' analysis. If outside parties continue to experience difficulty in doing so, we encourage them to contact NHTSA, and the agency will do its best to provide assistance.

Thus, in summary, the agencies' approach to developing the attribute-based mathematical functions for MY 2012–2016 CAFE and CO_2 standards represents the agencies' best technical judgment and consideration of potential outcomes at this time, and we are confident that the conclusions have resulted in appropriate and reasonable standards. The agencies recognize, however, that aspects of these decisions may merit updating or revision in future analysis to support CAFE and CO_2 standards or for other purposes. Consistent with best rulemaking practices, the agencies will take a fresh look at all assumptions and approaches to curve fitting, appropriate attributes, and mathematical functions in the context of future rulemakings.

The agencies also recognized in the NPRM the possibility that lower fuel prices could lead to lower fleetwide fuel economy (and higher CO_2 emissions) than projected in this rule. One way of addressing that concern is through the use of a universal standard—that is, an average standard set at a (single) absolute level. This is often described as a "backstop standard." The agencies explained that under the CAFE program, EISA requires such a minimum average fuel economy standard for domestic passenger cars, but is silent with regard to similar backstops for imported passenger cars and light trucks, while under the CAA, a backstop could be adopted under section 202(a) assuming it could be justified under the relevant statutory criteria. NHTSA and EPA also noted that the flattened portions of the curves at the largest footprints directionally address the issue of a backstop (*i.e.,* the mpg "floor" or gpm "ceiling" applied to the curves provides a universal and absolute value for that range of footprints). The agencies sought comment on whether backstop standards, or any other method within the agencies' statutory authority, should and can be implemented in order to guarantee a level of CO_2 emissions reductions and fuel savings under the attribute-based standards.

The agencies received a number of comments regarding the need for a backstop beyond NHTSA's alternative minimum standard. Comments were divided fairly evenly between support for and opposition to additional backstop standards. The following organizations supported the need for EPA and NHTSA to have explicit backstop standards: American Council for an Energy Efficient Economy (ACEEE), American Lung Association, California Air Resources Board (CARB), Environment America, Environment Defense Fund, Massachusetts Department of Environmental Protection, Natural Resources Defense Council (NRDC), Northeast States for Coordinated Air Use Management (NESCAUM), Public Citizen and Safe Climate Campaign, Sierra Club, State of Washington Department of Ecology, Union of Concerned Scientists, and a number of private citizens. Commenters in favor of additional backstop standards for all fleets for both NHTSA and EPA [66] generally stated that the emissions reductions and fuel savings expected to be achieved by MY 2016 depended on assumptions about fleet mix that might not come to pass, and that various kinds of backstop standards or "ratchet mechanisms" [67] were necessary to ensure that those reductions were achieved in fact. In addition, some commenters [68] stated that manufacturers might build larger vehicles or more trucks during MYs 2012–2016 than the agencies project, for example, because (1) any amount of slope in target curves encourages manufacturers to upsize, and (2) lower targets for light trucks than for passenger cars encourage manufacturers to find ways to reclassify vehicles as light trucks, such as by dropping 2WD versions of SUVs and offering only 4WD versions, perhaps spurred by NHTSA's reclassification of 2WD SUVs as passenger cars. Both of these mechanisms will be addressed further below. Some commenters also discussed EPA authority under the CAA to set backstops,[69] agreeing with EPA's analysis that section 202(a) allows such standards since EPA has wide discretion under that section to craft standards.

The following organizations opposed a backstop: Alliance of Automobile Manufacturers (AAM), Association of International Automobile Manufacturers (AIAM), Ford Motor Company, National Automobile Dealers Association (NADA), Toyota Motor Company, and the United Auto Workers Union. Commenters stating that additional backstops would not be necessary disagreed that upsizing was likely,[70] and emphasized the anti-backsliding characteristics of the target curves. Others argued that universal absolute standards as backstops could restrict consumer choice of vehicles. Commenters making legal arguments under EPCA/EISA[71] stated that Congress' silence regarding backstops for imported passenger cars and light trucks should be construed as a lack of authority for NHTSA to create further backstops. Commenters making legal arguments under the CAA[72] focused on the lack of clear authority under the CAA to create multiple GHG emissions standards for the same fleets of vehicles based on the same statutory criteria, and opposed EPA taking steps that would reduce harmonization with NHTSA in standard setting. Furthermore, AIAM indicated that EISA's requirement that the combined (car and truck) fuel economy level reach at least 35 mpg by

[66] ACEEE, American Lung Association, CARB, Christopher Lish, Environment America, EDF, MA DEP, NRDC, NESCAUM, Public Citizen, Sierra Club *et al.,* SCAQMD, UCS, WA DE.

[67] Commenters generally defined a "ratchet mechanism" as an automatic re-calculation of stringency to ensure cumulative goals are reached by 2016, even if emissions reductions and fuel savings fall short in the earlier years covered by the rulemaking.

[68] CBD, MA DEP, NJ DEP, Public Citizen, Sierra Club *et al.,* UCS.

[69] CARB, Public Citizen, Sierra Club *et al.*

[70] For example, the Alliance and Toyota said that upsizing would not be likely because (1) it would not necessarily make compliance with applicable standards easier, since larger vehicles tend to be heavier and heavier vehicles tend to achieve worse fuel economy/emissions levels; (2) it may require expensive platform changes; (3) target curves become increasingly more stringent from year to year, which reduces the benefits of upsizing; and (4) the mpg floor and gpm ceiling for the largest vehicles (the point at which the curve is "cut off") discourages manufacturers from continuing to upsize beyond a point because doing so makes it increasingly difficult to meet the flat standard at that part of the curve.

[71] AIAM, Alliance, Ford, NADA, Toyota.

[72] Alliance, Ford, NADA, UAW.

2020 itself constitutes a backstop.[73] One individual[74] commented that while additional backstop standards might be necessary given optimism of fleet mix assumptions, both agencies' authorities would probably need to be revised by Congress to clarify that backstop standards (whether for individual fleets or for the national fleet as a whole) were permissible.

In response, EPA and NHTSA remain confident that their projections of the future fleet mix are reliable, and that future changes in the fleet mix of footprints and sales are not likely to lead to more than modest changes in projected emissions reductions or fuel savings.[75] Both agencies thus remain confident in these fleet projections and the resulting emissions reductions and fuel savings from the standards. As explained in Section II.B above, the agencies' projections of the future fleet are based on the most transparent information currently available to the agencies. In addition, there are only a relatively few model years at issue. Moreover, market trends today are consistent with the agencies' estimates, showing shifts from light trucks to passenger cars and increased emphasis on fuel economy from all vehicles.

Finally, the shapes of the curves, including the "flattening" at the largest footprint values, tend to avoid or minimize regulatory incentives for manufacturers to upsize their fleet to change their compliance burden. Given the way the curves are fit to the data points (which represent vehicle models' fuel economy mapped against their footprint), the agencies believe that there is little real benefit to be gained by a manufacturer upsizing their vehicles. As discussed above, the agencies' analysis indicates that, for passenger car models with footprints falling between the two flattened portions of the corresponding curve, the actual slope of fuel economy with respect to footprint, if fit to that data by itself, is about 27 percent steeper than the curve the agencies are promulgating today. This difference suggests that manufacturers would, if anything, have more to gain by reducing vehicle footprint than by increasing vehicle footprint. For light trucks, the agencies' analysis indicates that, for models with footprints falling between the two flatted portions of the corresponding curve, the slope of fuel economy with respect to footprint is nearly identical to the curve the agencies are promulgating today. This suggests that, within this range, manufacturers would typically have little incentive to either incrementally increase or reduce vehicle footprint. The agencies recognize that based on economic and consumer demand factors that are external to this rule, the distribution of footprints in the future may be different (either smaller or larger) than what is projected in this rule. However, the agencies continue to believe that there will not be significant shifts in this distribution as a direct consequence of this rule.

At the same time, adding another backstop standard would have virtually no effect if the standard was weak, but a more stringent backstop could compromise the objectives served by attribute-based standards—that they distribute compliance burdens more equally among manufacturers, and at the same time encourage manufacturers to apply fuel-saving technologies rather than simply downsizing their vehicles, as they did in past decades under flat standards. This is why Congress mandated attribute-based CAFE standards in EISA. This compromise in objectives could occur for any manufacturer whose fleet average was above the backstop, irrespective of why they were above the backstop and irrespective of whether the industry as a whole was achieving the emissions and fuel economy benefits projected for the final standards, the problem the backstop is supposed to address. For example, the projected industry wide level of 250 gm/mile for MY 2016 is based on a mix of manufacturer levels, ranging from approximately 205 to 315 gram/mile[76] but resulting in an industry wide basis in a fleet average of 250 gm/mile. Unless the backstop was at a very weak level, above the high end of this range, then some percentage of manufacturers would be above the backstop even if the performance of the entire industry remains fully consistent with the emissions and fuel economy levels projected for the final standards. For these manufacturers and any other manufacturers who were above the backstop, the objectives of an attribute based standard would be compromised and unnecessary costs would be imposed. This could directionally impose increased costs for some manufacturers. It would be difficult if not impossible to establish the level of a backstop standard such that costs are likely to be imposed on manufacturers only when there is a failure to achieve the projected reductions across the industry as a whole. An example of this kind of industry wide situation could be when there is a significant shift to larger vehicles across the industry as a whole, or if there is a general market shift from cars to trucks. The problem the agencies are concerned about in those circumstances is not with respect to any single manufacturer, but rather is based on concerns over shifts across the fleet as a whole, as compared to shifts in one manufacturer's fleet that may be more than offset by shifts the other way in another manufacturer's fleet. However, in this respect, a traditional backstop acts as a manufacturer specific standard.

The concept of a ratchet mechanism recognizes this problem, and would impose the new more stringent standard only when the problem arises across the industry as a whole. While the new more stringent standards would enter into force automatically, any such standards would still need to provide adequate lead time for the manufacturers. Given the limited number of model years covered by this rulemaking and the short lead-time already before the 2012 model year, a ratchet mechanism in this rulemaking that would automatically tighten the standards at some point after model year 2012 is finished and apply the new more stringent standards for model

[73] NHTSA and EPA agree with AIAM that the EISA 35 mpg requirement in MY 2020 has a backstop-like function, in that it requires a certain level of achieved fleetwide fuel economy by a certain date, although it is not literally a backstop standard. Considering that NHTSA's MY 2011 CAFE standards increased projected average fuel economy requirements (relative to the MY 2010 standards) at a significantly faster rate than would be required to achieve the 35-in-2020 requirement, and considering that the standards being finalized today would increase projected average combined fuel economy requirements to 34.1 mpg in MY 2016, four years before MY 2020, the agencies believe that the U.S. vehicle market would have to shift in highly unexpected ways in order to put the 35-in-2020 requirement at risk, even despite the fact that due to the attribute-based standards, average fuel economy requirements will vary depending on the mix of vehicles produced for sale in the U.S. in each model year. The agencies further emphasize that both NHTSA and EPA plan to conduct and document retrospective analyses to evaluate how the market's evolution during the rulemaking timeframe compares with the agencies' forecasts employed for this rulemaking. Additionally, we emphasize that both agencies have the authority, given sufficient lead time, to revise their standards upwards if necessary to avoid missing the 35-in-2020 requirement.

[74] Schade.

[75] For reference, NHTSA's March 2009 final rule establishing MY 2011 CAFE standards was based on a forecast that passenger cars would represent 57.6 percent of the MY 2011 fleet, and that MY 2011 passenger cars and light trucks would average 45.6 square feet (sf) and 55.1 sf, respectively, such that average required CAFE levels would be 30.2 mpg, 24.1 mpg, and 27.3 mpg, respectively, for passenger cars, light trucks, and the overall light-duty fleet. Based on the agencies' current market forecast, even as soon as MY 2011, passenger cars will comprise a *larger* share (59.2 percent) of the light vehicle market; passenger cars and light trucks will, on average, be smaller by 0.5 sf and 1.3 sf, respectively; and average required CAFE levels will be higher by 0.2 mpg, 0.3 mpg, and 0.3 mpg, respectively, for passenger cars, light trucks, and the overall light-duty fleet.

[76] Based on estimated standards presented in Tables III.B.1–1 and III.B.1–2.

years 2016 or earlier, would fail to provide adequate lead time for any new, more stringent standards

Additionally, we do not believe that the risk of vehicle upsizing or changing vehicle offerings to "game" the passenger car and light truck definitions is as great as commenters imply for the model years in question.[77] The changes that commenters suggest manufacturers might make are neither so simple nor so likely to be accepted by consumers. For example, 4WD versions of vehicles tend to be more expensive and, other things being equal, have inherently lower fuel economy than their 2WD equivalent models. Therefore, although there is a market for 4WD vehicles, and some consumers might shift from 2WD vehicles to 4WD vehicles if 4WD becomes available at little or no extra cost, many consumers still may not desire to purchase 4WD vehicles because of concerns about cost premium and additional maintenance requirements; conversely, many manufacturers often require the 2WD option to satisfy demand for base vehicle models. Additionally, increasing the footprint of vehicles requires platform changes, which usually requires a product redesign phase (the agencies estimate that this occurs on average once every 5 years for most models). Alternatively, turning many 2WD SUVs into 2WD light trucks would require manufacturers to squeeze a third row of seats in or significantly increase their GVWR, which also requires a significant change in the vehicle.[78] The agencies are confident that the anticipated increases in average fuel economy and reductions in average CO_2 emission rates can be achieved without backstops under EISA or the CAA. As noted above, the agencies plan to conduct retrospective analysis to monitor progress. Both agencies have the authority to revise standards if warranted, as long as sufficient lead time is provided.

The agencies acknowledge that the MY 2016 fleet emissions and fuel economy goals of 250 g/mi and 34.1 mpg for EPA and NHTSA respectively are estimates and not standards (the MY 2012–2016 curves are the standards). Changes in fuel prices, consumer preferences, and/or vehicle survival and mileage accumulation rates could result in either smaller or larger oil and GHG savings. As explained above and elsewhere in the rule, the agencies believe that the possibility of not meeting (or, alternatively, exceeding) fuel economy and emissions goals exists, but is not likely. Given this, and given the potential complexities in designing an appropriate backstop, the agencies believe the balance here points to not adopting additional backstops at this time for the MYs 2012–2016 standards other than NHTSA's finalizing of the ones required by EPCA/EISA for domestic passenger cars. Nevertheless, the agencies recognize there are many factors that are inherently uncertain which can affect projections in the future, including fuel price and other factors which are unrelated to the standards contained in this final rule. Such factors can affect consumer preferences and are difficult to predict. At this time and based on the available information, the agencies have not included a backstop for model years 2012–2016. However, if circumstances change in the future in unanticipated ways, the agencies may revisit the issue of a backstop in the context of a future rulemaking either for model years 2012–2016 or as needed for standards for model years beyond 2016. This issue will be discussed further in Sections III and IV.

D. Relative Car-Truck Stringency

The agencies proposed fleetwide standards with the projected levels of stringency of 34.1 mpg or 250 g/mi in MY 2016 (as well as the corresponding intermediate year fleetwide standards) for NHTSA and EPA respectively. To determine the relative stringency of passenger car and light truck standards for those model years, the agencies were concerned that increasing the difference between the car and truck standards (either by raising the car standards or lowering the truck standards) could encourage manufacturers to build fewer cars and more trucks, likely to the detriment of fuel economy and CO_2 reductions.[79] In order to maintain consistent car/truck standards, the agencies applied a constant ratio between the estimated average required performance under the passenger car and light truck standards, in order to maintain a stable set of incentives regarding vehicle classification.

To calculate relative car-truck stringency for the proposal, the agencies explored a number of possible alternatives, and for the reasons described in the proposal used the Volpe model in order to estimate stringencies at which net benefits would be maximized. The agencies have followed the same approach in calculating the relative car-truck stringency for the final standards promulgated today. Further details of the development of this approach can be found in Section IV of this preamble as well as in NHTSA's RIA and EIS. NHTSA examined passenger car and light truck standards that would produce the proposed combined average fuel economy levels from Table I.B.2–2 above. NHTSA did so by shifting downward the curves that maximize net benefits, holding the relative stringency of passenger car and light truck standards constant at the level determined by maximizing net benefits, such that the average fuel economy required of passenger cars remained 31 percent higher than the average fuel economy required of light trucks. This methodology resulted in the average fuel economy levels for passenger cars and light trucks during MYs 2012–2016 as shown in Table I.B.1–1. The following chart illustrates this methodology of shifting the standards from the levels maximizing net benefits to the levels consistent with the combined fuel economy standards in this final rule.

BILLING CODE 6560–50–P

[77] We note that NHTSA's recent clarification of the light truck definitions has significantly reduced the potential for gaming, and resulted in the reclassification of over a million vehicles from the light truck to the passenger car fleet.

[78] Increasing the GVWR of a light truck (assuming this was the only goal) can be accomplished in a number of ways, and must include consideration of: (1) Redesign of wheel axles; (2) improving the vehicle suspension; (3) changes in tire specification (which will likely affect ride quality); (4) vehicle dynamics development (especially with vehicles equipped with electronic stability control); and (5) brake redesign. Depending on the vehicle, some of these changes may be easier or more difficult than others.

[79] For example, since many 2WD SUVs are classified as passenger cars, manufacturers have already warned that high car standards relative to truck standards could create an incentive for them to drop the 2WD version and sell only the 4WD version.

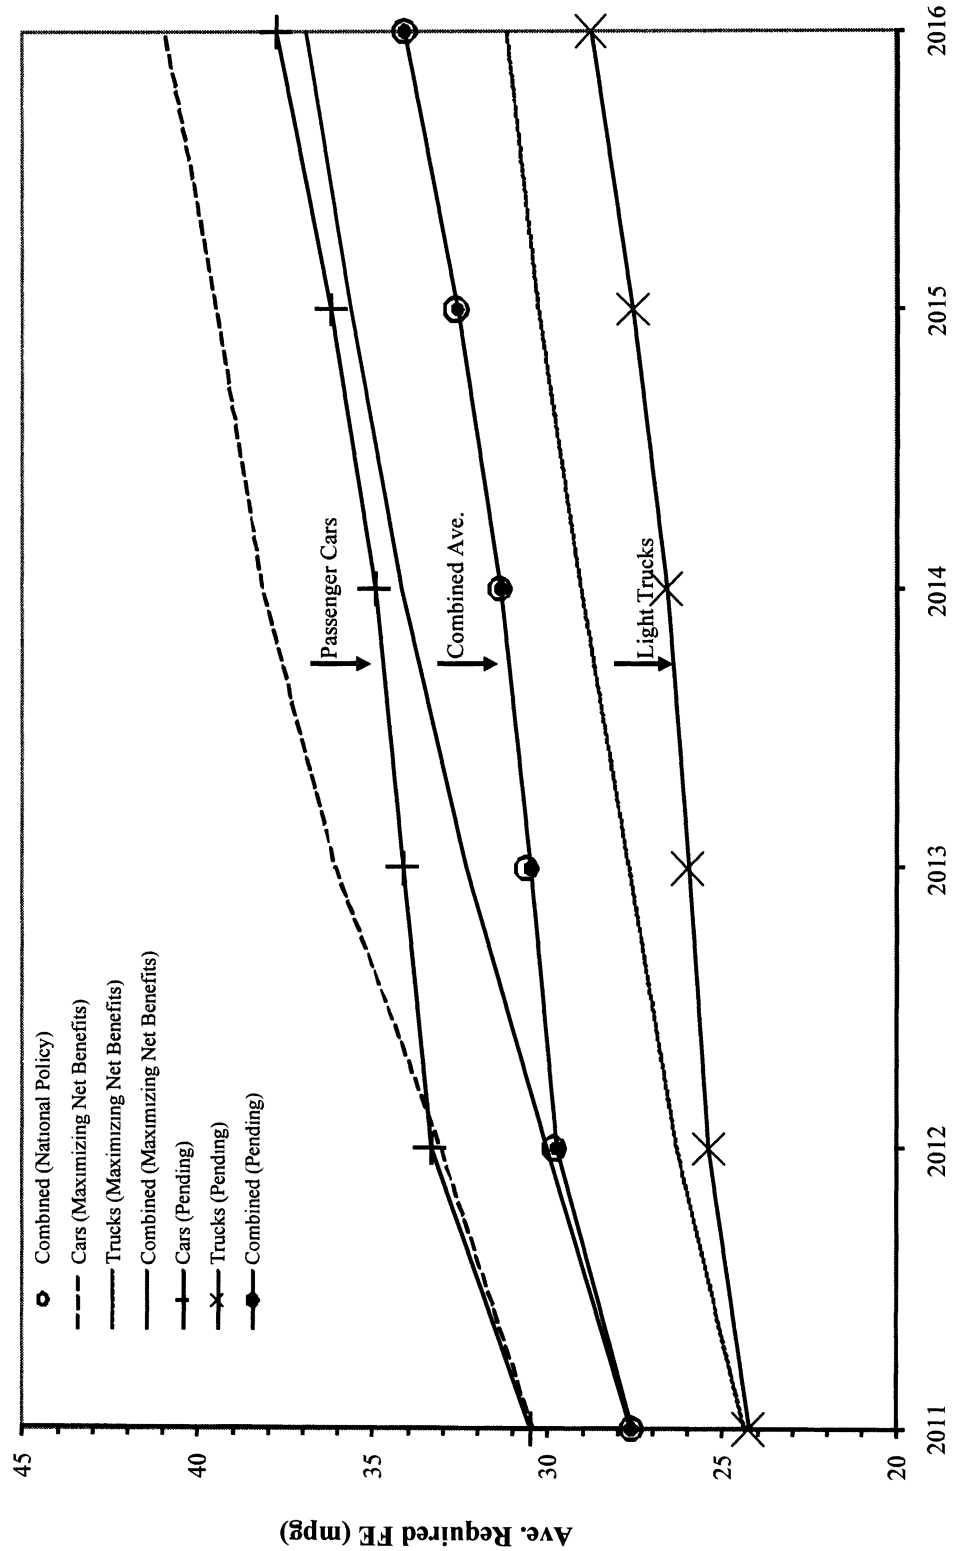

Figure II.D-1 Shifting the Standards from the Maximizing Net Benefit Levels to the Levels Consistent with the Combined Fuel Economy Standards in this Rule

BILLING CODE 6560–50–C

The final car and truck standards for EPA (Table I.B.1–4 above) were subsequently determined by first converting the average required fuel economy levels to average required CO_2 emission rates, and then applying the expected air conditioning credits for 2012–2016. These A/C credits are shown in the following table. Further details of the derivation of these factors can be found in Section III of this preamble or in the EPA RIA.

[80] We assume slightly higher A/C penetration in 2012 than was assumed in the proposal only to

Continued

TABLE II.D–1 EXPECTED FLEET A/C CREDITS (IN CO_2 EQUIVALENT g/mi) FROM 2012–2016

	Average technology penetration (%)	Average credit for cars	Average credit for trucks	Average credit for combined fleet
2012	[80] 28	3.4	3.8	3.5
2013	40	4.8	5.4	5.0
2014	60	7.2	8.1	7.5
2015	80	9.6	10.8	10.0
2016	85	10.2	11.5	10.6

The agencies sought comment on the use of this methodology for apportioning the fleet stringencies to relative car and truck standards for 2012–2016. General Motors commented that, compared to the passenger car standard, the light truck standard is too stringent because "the most fuel efficient cars and small trucks already meet the 2016 MY requirements" but "the most fuel efficient large trucks must increase fuel economy by 20 percent to meet the 2016 MY requirements." GM recommended that the agencies relax stringency specifically for large pickups, such as the Silverado.

The agencies disagree with the premise of the comment that the standard is too stringent under the applicable statutory provisions because some existing large trucks are not already meeting a later model year standard. Our analysis shows that the standards are not too stringent for manufacturers selling these vehicles. The agencies' analyses demonstrate a means by which manufacturers could apply cost-effective technologies in order to achieve the standards, and we have provided adequate lead time for the technology to be applied. More important, the agencies' analysis demonstrate that the fleetwide emission standards for MY 2016 are technically feasible, for example by implementing technologies such as engine downsizing, turbocharging, direct injection, improving accessories and tire rolling resistance, etc.

GM did not comment on the use of the methodology applied by the agencies to develop the gap between the passenger car and light truck standards—only on the outcome of the methodology. For the reasons discussed below, the agencies maintain that the methodology applied above provides an appropriate basis to determine the gap between the passenger car and light truck standards, and disagree with GM's arguments that the outcome is unfair.

First, GM's argument incorrectly suggests that every individual vehicle model must achieve its fuel economy and emissions targets. CAFE standards and new GHG emissions standards apply to fleetwide average performance, not model-specific performance, even though average required levels are based on average model-specific targets, and the agencies' analysis demonstrates that GM and other manufacturers of large trucks can cost-effectively comply with the new standards.

Second, GM implies that every manufacturer must be challenged equally with respect to fuel economy and emissions. Although NHTSA and EPA maintain that attribute-based CAFE and GHG emissions standards can more evenly balance compliance challenges, attribute-based standards are not intended to and cannot make these challenges equal, and while the agencies are mindful of the potential impacts of the standards on the relative competitiveness of different vehicle manufacturers, there is nothing in EPCA or the CAA [81] requiring that these challenges be equal.

We have also already addressed and rejected GM's suggestion of shifting the "cut off" point for light trucks from 66 square feet to 72 square feet, thereby "dropping the floor" of the target function for light trucks. As discussed in the preceding section, this is so as not to forego the rules' energy and environmental benefits, and because there is little or no safety basis to discourage downsizing of the largest light trucks.

Finally, NHTSA and EPA disagree with GM's claim that the outcome of the agencies' approach is unfairly burdensome for light trucks as compared to passenger cars. Based on the agencies' market forecast, NHTSA's analysis indicates that incremental technology outlays could, on average, be comparable for passenger cars and light trucks under the final CAFE standards, and further indicates that the ratio of total benefits to total costs could be greater under the final light truck standards than under the final passenger car standards.

E. Joint Vehicle Technology Assumptions

Vehicle technology assumptions, *i.e.,* assumptions about technologies' cost, effectiveness, and the rate at which they can be incorporated into new vehicles, are often controversial as they have a significant impact on the levels of the standards. The agencies must, therefore, take great care in developing and justifying these estimates. In developing technology inputs for the analysis of the MY 2012–2016 standards, the agencies reviewed the technology assumptions that NHTSA used in setting the MY 2011 standards, the comments that NHTSA received in response to its May 2008 Notice of Proposed Rulemaking (NPRM), and the comments received in response to the NPRM for this rule. This review is consistent with the request by President Obama in his January 26 memorandum to DOT. In addition, the agencies reviewed the technology input

correct for rounding that occurred in the curve setting process.

[81] As NHTSA explained in the NPRM, the Conference Report for EPCA, as enacted in 1975, makes clear, and the case law affirms, "a determination of maximum feasible average fuel economy should not be keyed to the single manufacturer which might have the most difficulty achieving a given level of average fuel economy." *CEI–I,* 793 F.2d 1322, 1352 (D.C. Cir. 1986). Instead, NHTSA is compelled "to weigh the benefits to the nation of a higher fuel economy standard against the difficulties of individual automobile manufacturers." *Id.* The law permits CAFE standards exceeding the projected capability of any particular manufacturer as long as the standard is economically practicable for the industry as a whole. Similarly, EPA is afforded great discretion under section 202(a) of the CAA to balance issues of technical feasibility, cost, adequacy of lead time, and safety, and certainly is not required to do so in a manner that imposes regulatory obligations uniformly on each manufacturer. *See NRDC* v. *EPA,* 655 F. 2d 318, 322, 328 (D.C. Cir. 1981) (wide discretion afforded by the statutory factors, and EPA predictions of technical feasibility afforded considerable discretion subject to constraints of reasonableness EPA predictions of technical feasibility afforded considerable discretion subject to constraints of reasonableness); and cf. *International Harvester Co.* v. *Ruckelshaus,* 479 F. 2d 615, 640 (D.C. Cir. 1973) ("as long as feasible technology permits the demand for new passenger automobiles to be generally met, the basic requirements of the Act would be satisfied, even though this might occasion fewer models and a more limited choice of engine types").

estimates identified in EPA's July 2008 Advance Notice of Proposed Rulemaking. The review of these documents was supplemented with updated information from more current literature, new product plans from manufacturers, and from EPA certification testing.

As a general matter, EPA and NHTSA believe that the best way to derive technology cost estimates is to conduct real-world tear down studies. Most of the commenters on this issue agreed. The advantages not only lie in the rigor of the approach, but also in its transparency. These studies break down each technology into its respective components, evaluate the costs of each component, and build up the costs of the entire technology based on the contribution of each component and the processes required to integrate them. As such, tear down studies require a significant amount of time and are very costly. EPA has been conducting tear down studies to assess the costs of vehicle technologies under a contract with FEV. Further details for this methodology is described below and in the TSD.

Due to the complexity and time incurred in a tear down study, only a few technologies evaluated in this rulemaking have been costed in this manner thus far. The agencies prioritized the technologies to be costed first based on how prevalent the agencies believed they might be likely to be during the rulemaking time frame, and based on their anticipated cost-effectiveness. The agencies believe that the focus on these important technologies (listed below) is sufficient for the analysis in this rule, but EPA is continuing to analyze more technologies beyond this rule as part of studies both already underway and in the future. For most of the other technologies, because tear down studies were not yet available, the agencies decided to pursue, to the extent possible, the Bill of Materials (BOM) approach as outlined in NHTSA's MY 2011 final rule. A similar approach was used by EPA in the EPA 2008 Staff Technical Report. This approach was recommended to NHTSA by Ricardo, an international engineering consulting firm retained by NHTSA to aid in the analysis of public comments on its proposed standards for MYs 2011–2015 because of its expertise in the area of fuel economy technologies. A BOM approach is one element of the process used in tear down studies. The difference is that under a BOM approach, the build up of cost estimates is conducted based on a review of cost and effectiveness estimates for each component from available literature, while under a tear down study, the cost estimates which go into the BOM come from the tear down study itself. To the extent that the agencies departed from the MY 2011 CAFE final rule estimates, the agencies explained the reasons and provided supporting analyses in the Technical Support Document.

Similarly, the agencies followed a BOM approach for developing the technology effectiveness estimates, insofar as the BOM developed for the cost estimates helped to inform the appropriate effectiveness values derived from the literature review. The agencies supplemented the information with results from available simulation work and real world EPA certification testing.

The agencies would also like to note that per the Energy Independence and Security Act (EISA), the National Academies of Sciences has been conducting a study for NHTSA to update Chapter 3 of their 2002 NAS Report, which presents technology effectiveness estimates for light-duty vehicles. The update takes a fresh look at that list of technologies and their associated cost and effectiveness values. The updated NAS report was expected to be available on September 30, 2009, but has not been completed and released to the public. The results from this study thus are unavailable for this rulemaking. The agencies look forward to considering the results from this study as part of the next round of rulemaking for CAFE/GHG standards.

1. What technologies did the agencies consider?

The agencies considered over 35 vehicle technologies that manufacturers could use to improve the fuel economy and reduce CO_2 emissions of their vehicles during MYs 2012–2016. The majority of the technologies described in this section are readily available, well known, and could be incorporated into vehicles once production decisions are made. Other technologies considered may not currently be in production, but are beyond the research phase and under development, and are expected to be in production in the next few years. These are technologies which can, for the most part, be applied both to cars and trucks, and which are capable of achieving significant improvements in fuel economy and reductions in CO_2 emissions, at reasonable costs. The agencies did not consider technologies in the research stage because the lead time available for this rule is not sufficient to move most of these technologies from research to production.

The technologies considered in the agencies' analysis are briefly described below. They fall into five broad categories: Engine technologies, transmission technologies, vehicle technologies, electrification/accessory technologies, and hybrid technologies. For a more detailed description of each technology and their costs and effectiveness, we refer the reader to Chapter 3 of the Joint TSD, Chapter III of NHTSA's FRIA, and Chapter 1 of EPA's final RIA. Technologies to reduce CO_2 and HFC emissions from air conditioning systems are discussed in Section III of this preamble and in EPA's final RIA.

Types of engine technologies that improve fuel economy and reduce CO_2 emissions include the following:

- *Low-friction lubricants*—low viscosity and advanced low friction lubricants oils are now available with improved performance and better lubrication. If manufacturers choose to make use of these lubricants, they would need to make engine changes and possibly conduct durability testing to accommodate the low-friction lubricants.
- *Reduction of engine friction losses*—can be achieved through low-tension piston rings, roller cam followers, improved material coatings, more optimal thermal management, piston surface treatments, and other improvements in the design of engine components and subsystems that improve engine operation.
- *Conversion to dual overhead cam with dual cam phasing*—as applied to overhead valves designed to increase the air flow with more than two valves per cylinder and reduce pumping losses.
- *Cylinder deactivation*—deactivates the intake and exhaust valves and prevents fuel injection into some cylinders during light-load operation. The engine runs temporarily as though it were a smaller engine which substantially reduces pumping losses.
- *Variable valve timing*—alters the timing of the intake valve, exhaust valve, or both, primarily to reduce pumping losses, increase specific power, and control residual gases.
- *Discrete variable valve lift*—increases efficiency by optimizing air flow over a broader range of engine operation which reduces pumping losses. Accomplished by controlled switching between two or more cam profile lobe heights.
- *Continuous variable valve lift*—is an electromechanically controlled system in which valve timing is changed as lift height is controlled. This yields a wide range of performance

optimization and volumetric efficiency, including enabling the engine to be valve throttled.

• *Stoichiometric gasoline direct-injection technology*—injects fuel at high pressure directly into the combustion chamber to improve cooling of the air/fuel charge within the cylinder, which allows for higher compression ratios and increased thermodynamic efficiency.

• *Combustion restart*—can be used in conjunction with gasoline direct-injection systems to enable idle-off or start-stop functionality. Similar to other start-stop technologies, additional enablers, such as electric power steering, accessory drive components, and auxiliary oil pump, might be required.

• *Turbocharging and downsizing*—increases the available airflow and specific power level, allowing a reduced engine size while maintaining performance. This reduces pumping losses at lighter loads in comparison to a larger engine.

• *Exhaust-gas recirculation boost*—increases the exhaust-gas recirculation used in the combustion process to increase thermal efficiency and reduce pumping losses.

• *Diesel engines*—have several characteristics that give superior fuel efficiency, including reduced pumping losses due to lack of (or greatly reduced) throttling, and a combustion cycle that operates at a higher compression ratio, with a very lean air/fuel mixture, relative to an equivalent-performance gasoline engine. This technology requires additional enablers, such as NO_X trap catalyst after-treatment or selective catalytic reduction NO_X after-treatment. The cost and effectiveness estimates for the diesel engine and aftertreatment system utilized in this final rule have been revised from the NHTSA MY 2011 CAFE final rule. Additionally, the diesel technology option has been made available to small cars in the Volpe and OMEGA models. Though this is not expected to make a significant difference in the modeling results, the agencies agreed with the commenters that supported such a revision.

Types of transmission technologies considered include:

• *Improved automatic transmission controls*— optimizes shift schedule to maximize fuel efficiency under wide ranging conditions, and minimizes losses associated with torque converter slip through lock-up or modulation.

• *Six-, seven-, and eight-speed automatic transmissions*—the gear ratio spacing and transmission ratio are optimized to enable the engine to operate in a more efficient operating range over a broader range of vehicle operating conditions.

• *Dual clutch or automated shift manual transmissions*—are similar to manual transmissions, but the vehicle controls shifting and launch functions. A dual-clutch automated shift manual transmission uses separate clutches for even-numbered and odd-numbered gears, so the next expected gear is pre-selected, which allows for faster and smoother shifting.

• *Continuously variable transmission*—commonly uses V-shaped pulleys connected by a metal belt rather than gears to provide ratios for operation. Unlike manual and automatic transmissions with fixed transmission ratios, continuously variable transmissions can provide fully variable and an infinite number of transmission ratios that enable the engine to operate in a more efficient operating range over a broader range of vehicle operating conditions.

• *Manual 6-speed transmission*—offers an additional gear ratio, often with a higher overdrive gear ratio, than a 5-speed manual transmission.

Types of vehicle technologies considered include:

• *Low-rolling-resistance tires*—have characteristics that reduce frictional losses associated with the energy dissipated in the deformation of the tires under load, thereby improving fuel economy and reducing CO_2 emissions.

• *Low-drag brakes*—reduce the sliding friction of disc brake pads on rotors when the brakes are not engaged because the brake pads are pulled away from the rotors.

• *Front or secondary axle disconnect for four-wheel drive systems*—provides a torque distribution disconnect between front and rear axles when torque is not required for the non-driving axle. This results in the reduction of associated parasitic energy losses.

• *Aerodynamic drag reduction*—is achieved by changing vehicle shape or reducing frontal area, including skirts, air dams, underbody covers, and more aerodynamic side view mirrors.

• *Mass reduction and material substitution*—Mass reduction encompasses a variety of techniques ranging from improved design and better component integration to application of lighter and higher-strength materials. Mass reduction is further compounded by reductions in engine power and ancillary systems (transmission, steering, brakes, suspension, etc.). The agencies recognize there is a range of diversity and complexity for mass reduction and material substitution technologies and there are many techniques that automotive suppliers and manufacturers are using to achieve the levels of this technology that the agencies have modeled in our analysis for the final standards.

Types of electrification/accessory and hybrid technologies considered include:

• *Electric power steering (EPS)*—is an electrically-assisted steering system that has advantages over traditional hydraulic power steering because it replaces a continuously operated hydraulic pump, thereby reducing parasitic losses from the accessory drive.

• *Improved accessories (IACC)*—may include high efficiency alternators, electrically driven (*i.e.,* on-demand) water pumps and cooling fans. This excludes other electrical accessories such as electric oil pumps and electrically driven air conditioner compressors. The latter is covered explicitly within the A/C credit program.

• *Air Conditioner Systems*—These technologies include improved hoses, connectors and seals for leakage control. They also include improved compressors, expansion valves, heat exchangers and the control of these components for the purposes of improving tailpipe CO_2 emissions as a result of A/C use. These technologies are discussed later in this preamble and covered separately in the EPA RIA.

• *12-volt micro-hybrid (MHEV)*—also known as idle-stop or start-stop and commonly implemented as a 12-volt belt-driven integrated starter-generator, this is the most basic hybrid system that facilitates idle-stop capability. Along with other enablers, this system replaces a common alternator with a belt-driven enhanced power starter-alternator, and a revised accessory drive system.

• *Higher Voltage Stop-Start/Belt Integrated Starter Generator (BISG)*—provides idle-stop capability and uses a higher voltage battery with increased energy capacity over typical automotive batteries. The higher system voltage allows the use of a smaller, more powerful electric motor. This system replaces a standard alternator with an enhanced power, higher voltage, higher efficiency starter-alternator, that is belt driven and that can recover braking energy while the vehicle slows down (regenerative braking).

• *Integrated Motor Assist (IMA)/Crank integrated starter generator (CISG)*—provides idle-stop capability and uses a high voltage battery with increased energy capacity over typical automotive batteries. The higher system voltage allows the use of a smaller, more

powerful electric motor and reduces the weight of the wiring harness. This system replaces a standard alternator with an enhanced power, higher voltage, higher efficiency starter-alternator that is crankshaft mounted and can recover braking energy while the vehicle slows down (regenerative braking).

• *2-mode hybrid (2MHEV)*—is a hybrid electric drive system that uses an adaptation of a conventional stepped-ratio automatic transmission by replacing some of the transmission clutches with two electric motors that control the ratio of engine speed to vehicle speed, while clutches allow the motors to be bypassed. This improves both the transmission torque capacity for heavy-duty applications and reduces fuel consumption and CO_2 emissions at highway speeds relative to other types of hybrid electric drive systems.

• *Power-split hybrid (PSHEV)*—a hybrid electric drive system that replaces the traditional transmission with a single planetary gearset and a motor/generator. This motor/generator uses the engine to either charge the battery or supply additional power to the drive motor. A second, more powerful motor/generator is permanently connected to the vehicle's final drive and always turns with the wheels. The planetary gear splits engine power between the first motor/generator and the drive motor to either charge the battery or supply power to the wheels.

• *Plug-in hybrid electric vehicles (PHEV)*—are hybrid electric vehicles with the means to charge their battery packs from an outside source of electricity (usually the electric grid). These vehicles have larger battery packs with more energy storage and a greater capability to be discharged than other hybrids. They also use a control system that allows the battery pack to be substantially depleted under electric-only or blended mechanical/electric operation.

• *Electric vehicles (EV)*—are vehicles with all-electric drive and with vehicle systems powered by energy-optimized batteries charged primarily from grid electricity.

The cost estimates for the various hybrid systems have been revised from the estimates used in the MY 2011 CAFE final rule, in particular with respect to estimated battery costs.

2. How did the agencies determine the costs and effectiveness of each of these technologies?

As mentioned above, EPA and NHTSA believe that the best way to derive technology cost estimates is to conduct real-world tear down studies. To date, the costs of the following five technologies have been evaluated with respect to their baseline (or replaced) technologies. For these technologies noted below, the agencies relied on the tear down data available and scaling methodologies used in EPA's ongoing study with FEV. Only the cost estimate for the first technology on the list below was used in the NPRM. The others were completed subsequent to the publication of the NPRM.

1. Stoichiometric gasoline direct injection and turbo charging with engine downsizing (T–DS) for a large DOHC 4 cylinder engine to a small DOHC (dual overhead cam) 4 cylinder engine.

2. Stoichiometric gasoline direct injection and turbo charging with engine downsizing for a SOHC single overhead cam) 3 valve/cylinder V8 engine to a SOHC V6 engine.

3. Stoichiometric gasoline direct injection and turbo charging with engine downsizing for a DOHC V6 engine to a DOHC 4 cylinder engine.

4. 6-speed automatic transmission replacing a 5-speed automatic transmission.

5. 6-speed wet dual clutch transmission (DCT) replacing a 6-speed automatic transmission.

This costing methodology has been published and gone through a peer review.[82] Using this tear down costing methodology, FEV has developed costs for each of the above technologies. In addition, FEV and EPA extrapolated the engine downsizing costs for the following scenarios that were outside of the noted study cases:[83]

1. Downsizing a SOHC 2 valve/cylinder V8 engine to a DOHC V6.

2. Downsizing a DOHC V8 to a DOHC V6.

3. Downsizing a SOHC V6 engine to a DOHC 4 cylinder engine.

4. Downsizing a DOHC 4 cylinder engine to a DOHC 3 cylinder engine.

The agencies relied on the findings of FEV in part for estimating the cost of these technologies in this rulemaking. However, for some of the technologies, NHTSA and EPA modified FEV's estimated costs. FEV made the assumption that these technologies would be mature when produced in large volumes (450,000 units or more). The agencies believe that there is some uncertainty regarding each manufacturer's near-term ability to employ the technology at the volumes assumed in the FEV analysis. There is also the potential for near term (earlier than 2016) supplier-level Engineering, Design and Testing (ED&T) costs to be in excess of those considered in the FEV analysis as existing equipment and facilities are converted to production of new technologies. The agencies have therefore decided to average the FEV results with the NPRM values in an effort to account for these near-term factors. This methodology was done for the following technologies:

1. Converting a port-fuel injected (PFI) DOHC I4 to a turbocharged-downsized-stoichiometric GDI DOHC I3.

2. Converting a PFI DOHC V6 engine to a T–DS-stoichiometric GDI DOHC I4.

3. Converting a PFI SOHC V6 engine to a T–DS-stoichiometric GDI DOHC I4.

4. Converting a PFI DOHC V8 engine to a T–DS-stoichiometric GDI DOHC V6.

5. Converting a PFI SOHC 3V V8 engine to a T–DS-stoichiometric GDI DOHC V6.

6. Converting a PFI SOHC 2V V8 engine to a T–DS-stoichiometric GDI DOHC V6.

7. Replacing a 4-speed automatic transmission with a 6-speed automatic transmission.

8. Replacing a 5-speed automatic transmission with a 6-speed automatic transmission.

9. Replacing a 6-speed automatic transmission with a 6-speed wet dual clutch transmission.

For the I4 to Turbo GDI I4 study applied in the NPRM, the agencies requested from FEV an adjusted cost estimate which accounted for these uncertainties as an adjustment to the base technology burden rate.[84] These new costs are used in the final rules. These details are also further described in the memo to the docket.[85] The confidential information provided by manufacturers as part of their product plan submissions to the agencies or discussed in meetings between the agencies and the manufacturers and

suppliers served largely as a check on publicly-available data.

For the other technologies, considering all sources of information (including public comments) and using the BOM approach, the agencies worked together intensively to determine component costs for each of the technologies and build up the costs accordingly. Where estimates differ between sources, we have used our engineering judgment to arrive at what we believe to be the best available cost estimate, and explained the basis for that exercise of judgment in the TSD. Building on NHTSA's estimates developed for the MY 2011 CAFE final rule and EPA's Advance Notice of Proposed Rulemaking, which relied on the EPA 2008 Staff Technical Report,[86] the agencies took a fresh look at technology cost and effectiveness values for purposes of the joint rulemaking under the National Program. For costs, the agencies reconsidered both the direct or "piece" costs and indirect costs of individual components of technologies. For the direct costs, the agencies followed a bill of materials (BOM) approach employed in NHTSA's MY 2011 final rule based on recommendation from Ricardo, Inc., as described above. EPA used a similar approach in the EPA 2008 Staff Technical Report. A bill of materials, in a general sense, is a list of components or sub-systems that make up a system—in this case, an item of fuel economy-improving technology. In order to determine what a system costs, one of the first steps is to determine its components and what they cost.

NHTSA and EPA estimated these components and their costs based on a number of sources for cost-related information. The objective was to use those sources of information considered to be most credible for projecting the costs of individual vehicle technologies. For example, while NHTSA and Ricardo engineers had relied considerably in the MY 2011 final rule on the 2008 Martec Report for costing contents of some technologies, upon further joint review and for purposes of the MY 2012–2016 standards, the agencies decided that some of the costing information in that report was no longer accurate due to downward trends in commodity prices since the publication of that report. The agencies reviewed, then revalidated or updated cost estimates for individual components based on new information. Thus, while NHTSA and EPA found that much of the cost information used in NHTSA's MY 2011 final rule and EPA's staff report was consistent to a great extent, the agencies, in reconsidering information from many sources,[87] [88] [89] [90] [91] [92] [93] revised several component costs of several major technologies: turbocharging with engine downsizing (as described above), mild and strong hybrids, diesels, stoichiometric gasoline direct injection fuel systems, and valve train lift technologies. These are discussed at length in the Joint TSD and in NHTSA's final RIA.

Once costs were determined, they were adjusted to ensure that they were all expressed in 2007 dollars using a ratio of GDP values for the associated calendar years,[94] and indirect costs were accounted for using the ICM (indirect cost multiplier) approach explained in Chapter 3 of the Joint TSD, rather than using the traditional Retail Price Equivalent (RPE) multiplier approach. A report explaining how EPA developed the ICM approach can be found in the docket for this rule. The comments addressing the ICM approach were generally positive and encouraging. However, one commenter suggested that we had mischaracterized the complexity of a few of our technologies, which would result in higher or lower markups than presented in the NPRM. That commenter also suggested that we had used the ICMs as a means of placing a higher level of manufacturer learning on the cost estimates. The latter comment is not true and the methodology behind the ICM approach is explained in detail in the reports that are available in the docket for this rule.[95] The former is open to debate given the subjective nature of the engineering analysis behind it, but upon further thought both agencies believe that the complexities used in the NPRM were appropriate and have, therefore, carried those forward into the final rule. We discuss this in greater detail in the Response to Comments document.

Regarding estimates for technology effectiveness, NHTSA and EPA also reexamined the estimates from NHTSA's MY 2011 final rule and EPA's ANPRM and 2008 Staff Technical Report, which were largely consistent with NHTSA's 2008 NPRM estimates. The agencies also reconsidered other sources such as the 2002 NAS Report, the 2004 NESCCAF report, recent CAFE compliance data (by comparing similar vehicles with different technologies against each other in fuel economy testing, such as a Honda Civic Hybrid versus a directly comparable Honda Civic conventional drive), and confidential manufacturer estimates of technology effectiveness. NHTSA and EPA engineers reviewed effectiveness information from the multiple sources for each technology and ensured that such effectiveness estimates were based on technology hardware consistent with the BOM components used to estimate costs. The agencies also carefully examined the pertinent public comments. Together, they compared the multiple estimates and assessed their validity, taking care to ensure that common BOM definitions and other vehicle attributes such as performance, refinement, and drivability were taken into account. However, because the agencies' respective models employ different numbers of vehicle subclasses and use different modeling techniques to arrive at the standards, direct comparison of BOMs was somewhat more complicated. To address this and to confirm that the outputs from the different modeling techniques produced the same result, NHTSA and EPA developed mapping techniques, devising technology packages and mapping them to corresponding incremental technology estimates. This approach helped compare the outputs

from the incremental modeling technique to those produced by the technology packaging approach to ensure results that are consistent and could be translated into the respective models of the agencies.

In general, most effectiveness estimates used in both the MY 2011 final rule and the 2008 EPA staff report were determined to be accurate and were carried forward without significant change first into the NPRM, and now into these final rules. When NHTSA and EPA's estimates for effectiveness diverged slightly due to differences in how the agencies apply technologies to vehicles in their respective models, we report the ranges for the effectiveness values used in each model. There were only a few comments on the technology effectiveness estimates used in the NPRM. Most of the technologies that were mentioned in the comments were the more advanced technologies that are not assumed to have large penetrations in the market within the timeframe of this rule, notably hybrid technologies. Even if the effectiveness figures for hybrid vehicles were adjusted, it would have made little difference in the NHTSA and EPA analysis of the impacts and costs of the rule. The response to comments document has more specific responses to these comments.

The agencies note that the effectiveness values estimated for the technologies considered in the modeling analyses may represent average values, and do not reflect the enormous spectrum of possible values that could result from adding the technology to different vehicles. For example, while the agencies have estimated an effectiveness of 0.5 percent for low friction lubricants, each vehicle could have a unique effectiveness estimate depending on the baseline vehicle's oil viscosity rating. Similarly, the reduction in rolling resistance (and thus the improvement in fuel economy and the reduction in CO_2 emissions) due to the application of low rolling resistance tires depends not only on the unique characteristics of the tires originally on the vehicle, but on the unique characteristics of the tires being applied, characteristics which must be balanced between fuel efficiency, safety, and performance. Aerodynamic drag reduction is much the same—it can improve fuel economy and reduce CO_2 emissions, but it is also highly dependent on vehicle-specific functional objectives. For purposes of the final standards, NHTSA and EPA believe that employing average values for technology effectiveness estimates, as adjusted depending on vehicle subclass, is an appropriate way of recognizing the potential variation in the specific benefits that individual manufacturers (and individual vehicles) might obtain from adding a fuel-saving technology.

Chapter 3 of the Joint Technical Support Document contains a detailed description of our assessment of vehicle technology cost and effectiveness estimates. The agencies note that the technology costs included in this final rule take into account only those associated with the initial build of the vehicle. Although comments were received to the NPRM that suggested there could be additional maintenance required with some new technologies (*e.g.,* turbocharging, hybrids, etc.), and that additional maintenance costs could occur as a result, the agencies do not believe that the amount of additional cost will be significant in the timeframe of this rulemaking, based on the relatively low application rates for these technologies. The agencies will undertake a more detailed review of these potential costs in preparation for the next round of CAFE/GHG standards.

F. Joint Economic Assumptions

The agencies' final analysis of alternative CAFE and GHG standards for the model years covered by this final rulemaking rely on a range of forecast information, economic estimates, and input parameters. This section briefly describes the agencies' choices of specific parameter values. These economic values play a significant role in determining the benefits of both CAFE and GHG standards.

In reviewing these variables and the agency's estimates of their values for purposes of this final rule, NHTSA and EPA reconsidered previous comments that NHTSA had received, reviewed newly available literature, and reviewed comments received in response to the proposed rule. For this final rule, we made three major changes to the economic assumptions. First, we revised the technology costs to reflect more recently available data. Second, we updated fuel price and transportation demand assumptions to reflect the Annual Energy Outlook (AEO) 2010 Early Release. Third, we have updated our estimates of the social cost of carbon (SCC) based on a recent interagency process. The key economic assumptions are summarized below, and are discussed in greater detail in Section III (EPA) and Section IV (NHTSA), as well as in Chapter 4 of the Joint TSD, Chapter VIII of NHTSA's RIA and Chapter 8 of EPA's RIA.

• *Costs of fuel economy-improving technologies*—These estimates are presented in summary form above and in more detail in the agencies' respective sections of this preamble, in Chapter 3 of the Joint TSD, and in the agencies' respective RIAs. The technology cost estimates used in this analysis are intended to represent manufacturers' direct costs for high-volume production of vehicles with these technologies and sufficient experience with their application so that all cost reductions due to "learning curve" effects have been fully realized. Costs are then modified by applying near-term indirect cost multipliers ranging from 1.11 to 1.64 to the estimates of vehicle manufacturers' direct costs for producing or acquiring each technology to improve fuel economy, depending on the complexity of the technology and the time frame over which costs are estimated. This accounts for both the direct and indirect costs associated with implementing new technologies in response to this final rule. The technology cost estimates for a select group of technologies have changed since the NPRM. These changes, as summarized in Section II.E and in Chapter 3 of the Joint TSD, were made in response to updated cost estimates available to the agencies shortly after publication of the NPRM, not in response to comments. In general, commenters were supportive of the cost estimates used in the NPRM and the transparency of the methodology used to generate them.

• *Potential opportunity costs of improved fuel economy*—This estimate addresses the possibility that achieving the fuel economy improvements required by alternative CAFE or GHG standards would require manufacturers to compromise the performance, carrying capacity, safety, or comfort of their vehicle models. If it did so, the resulting sacrifice in the value of these attributes to consumers would represent an additional cost of achieving the required improvements, and thus of manufacturers' compliance with stricter standards. Currently the agencies assume that these vehicle attributes do not change, and include the cost of maintaining these attributes as part of the cost estimates for technologies. However, it is possible that the technology cost estimates do not include adequate allowance for the necessary efforts by manufacturers to maintain vehicle performance, carrying capacity, and utility while improving fuel economy and reducing GHG emissions. While, in principle, consumer vehicle demand models can measure these effects, these models do not appear to be robust across specifications, since authors derive a

wide range of willingness-to-pay values for fuel economy from these models, and there is not clear guidance from the literature on whether one specification is clearly preferred over another. This issue is discussed in EPA's RIA, Section 8.1.2 and NHTSA's RIA Section VIII.H. The agencies requested comment on how to estimate explicitly the changes in vehicle buyers' welfare from the combination of higher prices for new vehicle models, increases in their fuel economy, and any accompanying changes in vehicle attributes such as performance, passenger- and cargo-carrying capacity, or other dimensions of utility. Commenters did not provide recommendations for how to evaluate the quality of different models or identify a model appropriate for the agencies' purposes. Some commenters expressed various concerns about the use of existing consumer vehicle choice models. While EPA and NHTSA are not using a consumer vehicle choice model to analyze the effects of this rule, we continue to investigate these models.

• *The on-road fuel economy "gap"*—Actual fuel economy levels achieved by light-duty vehicles in on-road driving fall somewhat short of their levels measured under the laboratory-like test conditions used by NHTSA and EPA to establish compliance with the final CAFE and GHG standards. The agencies use an on-road fuel economy gap for light-duty vehicles of 20 percent lower than published fuel economy levels. For example, if the measured CAFE fuel economy value of a light truck is 20 mpg, the on-road fuel economy actually achieved by a typical driver of that vehicle is expected to be 16 mpg (20*.80).[96] NHTSA previously used this estimate in its MY 2011 final rule, and the agencies confirmed it based on independent analysis for use in this FRM. No substantive comments were received on this input.

• *Fuel prices and the value of saving fuel*—Projected future fuel prices are a critical input into the preliminary economic analysis of alternative standards, because they determine the value of fuel savings both to new vehicle buyers and to society. For the proposed rule, the agencies had relied on the then most recent fuel price projections from the U.S. Energy Information Administration's (EIA) Annual Energy Outlook (AEO) 2009 (Revised Updated). However, for this final rule, the agencies have updated the analyses based on AEO 2010 (December 2009 Early Release) Reference Case forecasts of inflation-adjusted (constant-dollar) retail gasoline and diesel fuel prices, which represent the EIA's most up-to-date estimate of the most likely course of future prices for petroleum products.[97] AEO 2010 includes slightly lower petroleum prices compared to AEO 2009.

The forecasts of fuel prices reported in EIA's AEO 2010 Early Release Reference Case extends through 2035, compared to the AEO 2009 which only went through 2030. As in the proposal, fuel prices beyond the time frame of AEO's forecast were estimated using an average growth rate.

While EIA revised AEO 2010, the vehicle MPG standards are similar to those that were published in AEO 2009. No substantive comments were received on the use of AEO as a source of fuel prices.[98]

• *Consumer valuation of fuel economy and payback period*—In estimating the impacts on vehicle sales, the agencies assume that potential buyers value the resulting fuel savings improvements that would result from alternative CAFE and GHG standards over only part of the expected lifetime of the vehicles they purchase. Specifically, we assume that buyers value fuel savings over the first five years of a new vehicle's lifetime, and that buyers discount the value of these future fuel savings using rates of 3% and 7%. The five-year figure represents the current average term of consumer loans to finance the purchase of new vehicles. One commenter argued that higher-fuel-economy vehicles should have higher resale prices than vehicles with lower fuel economy, but did not provide supporting data. This revision, if made, would increase the net benefits of the rule. Another commenter supported the use of a five-year payback period for this analysis. In the absence of data to support changes, EPA and NHTSA have kept the same assumptions. In the analysis of net benefits, EPA and NHTSA assume that vehicle buyers benefit from the full fuel savings over the vehicle's lifetime, discounted for present value calculations at 3 and 7 percent.

• *Vehicle sales assumptions*—The first step in estimating lifetime fuel consumption by vehicles produced during a model year is to calculate the number of vehicles expected to be produced and sold.[99] The agencies relied on the AEO 2010 Early Release for forecasts of total vehicle sales, while the baseline market forecast developed by the agencies (*see* Section II.B) divided total projected sales into sales of cars and light trucks.

• *Vehicle survival assumptions*—We then applied updated values of age-specific survival rates for cars and light trucks to these adjusted forecasts of passenger car and light truck sales to determine the number of these vehicles remaining in use during each year of their expected lifetimes. No substantive comments were received on vehicle survival assumptions.

• *Total vehicle use*—We then calculated the total number of miles that cars and light trucks produced in each model year will be driven during each year of their lifetimes using estimates of annual vehicle use by age tabulated from the Federal Highway Administration's 2001 National Household Transportation Survey (NHTS),[100] adjusted to account for the effect on vehicle use of subsequent increases in fuel prices. Due to the lower fuel prices projected in AEO 2010, the average vehicle is estimated to be used slightly more (~3 percent) over its lifetime than assumed in the proposal. In order to insure that the resulting mileage schedules imply reasonable estimates of future growth in *total* car and light truck use, we calculated the rate of growth in annual car and light truck mileage at each age that is necessary for total car and light truck travel to increase at the rates forecast in the AEO 2010 Early Release Reference Case. The growth rate in average annual car and light truck use produced by this calculation is

[98] Kahan, A. and Pickrell, D. Memo to Docket EPA–HQ–OAR–2009–0472 and Docket NHTSA–2009–0059. "Energy Information Administration's Annual Energy Outlook 2009 and 2010." March 24, 2010.

[99] Vehicles are defined to be of age 1 during the calendar year corresponding to the model year in which they are produced; thus for example, model year 2000 vehicles are considered to be of age 1 during calendar year 2000, age 2 during calendar year 2001, and to reach their maximum age of 26 years during calendar year 2025. NHTSA considers the maximum lifetime of vehicles to be the age after which less than 2 percent of the vehicles originally produced during a model year remain in service. Applying these conventions to vehicle registration data indicates that passenger cars have a maximum age of 26 years, while light trucks have a maximum lifetime of 36 years. See Lu, S., NHTSA, Regulatory Analysis and Evaluation Division, "Vehicle Survivability and Travel Mileage Schedules," DOT HS 809 952, 8–11 (January 2006). Available at *http://www-nrd.nhtsa.dot.gov/Pubs/809952.pdf* (last accessed Feb. 15, 2010).

[100] For a description of the Survey, *see http://nhts.ornl.gov/quickStart.shtml* (last accessed July 27, 2009).

approximately 1.1 percent per year.[101] This rate was applied to the mileage figures derived from the 2001 NHTS to estimate annual mileage during each year of the expected lifetimes of MY 2012–2016 cars and light trucks.[102] While commenters requested further detail on the assumptions regarding total vehicle use, no specific issues were raised.

• *Accounting for the rebound effect of higher fuel economy*—The rebound effect refers to the fraction of fuel savings expected to result from an increase in vehicle fuel economy—particularly an increase required by the adoption of more stringent CAFE and GHG standards—that is offset by additional vehicle use. The increase in vehicle use occurs because higher fuel economy reduces the fuel cost of driving, typically the largest single component of the monetary cost of operating a vehicle, and vehicle owners respond to this reduction in operating costs by driving slightly more. We received comments supporting our proposed value of 10 percent, although we also received comments recommending higher and lower values. However, we did not receive any new data or comments that justify revising the 10 percent value for the rebound effect at this time.

• *Benefits from increased vehicle use*—The increase in vehicle use from the rebound effect provides additional benefits to their owners, who may make more frequent trips or travel farther to reach more desirable destinations. This additional travel provides benefits to drivers and their passengers by improving their access to social and economic opportunities away from home. These benefits are measured by the net "consumer surplus" resulting from increased vehicle use, over and above the fuel expenses associated with this additional travel. We estimate the economic value of the consumer surplus provided by added driving using the conventional approximation, which is one half of the product of the decline in vehicle operating costs per vehicle-mile and the resulting increase in the annual number of miles driven. Because it depends on the extent of improvement in fuel economy, the value of benefits from increased vehicle use changes by model year and varies among alternative standards.

• *The value of increased driving range*—By reducing the frequency with which drivers typically refuel their vehicles, and by extending the upper limit of the range they can travel before requiring refueling, improving fuel economy and reducing GHG emissions thus provides some additional benefits to their owners. No direct estimates of the value of extended vehicle range are readily available, so the agencies' analysis calculates the reduction in the annual number of required refueling cycles that results from improved fuel economy, and applies DOT-recommended values of travel time savings to convert the resulting time savings to their economic value.[103] *Please see* the Chapter 4 of the Joint TSD for details.

• *Added costs from congestion, crashes and noise*—Although it provides some benefits to drivers, increased vehicle use associated with the rebound effect also contributes to increased traffic congestion, motor vehicle accidents, and highway noise. Depending on how the additional travel is distributed over the day and on where it takes place, additional vehicle use can contribute to traffic congestion and delays by increasing traffic volumes on facilities that are already heavily traveled during peak periods. These added delays impose higher costs on drivers and other vehicle occupants in the form of increased travel time and operating expenses, increased costs associated with traffic accidents, and increased traffic noise. The agencies rely on estimates of congestion, accident, and noise costs caused by automobiles and light trucks developed by the Federal Highway Administration to estimate the increased external costs caused by added driving due to the rebound effect.[104]

• *Petroleum consumption and import externalities*—U.S. consumption and imports of petroleum products also impose costs on the domestic economy that are not reflected in the market price for crude petroleum, or in the prices paid by consumers of petroleum products such as gasoline. In economics literature on this subject, these costs include (1) higher prices for petroleum products resulting from the effect of U.S. oil import demand on the world oil price ("monopsony costs"); (2) the expected costs from the risk of disruptions to the U.S. economy caused by sudden reductions in the supply of imported oil to the U.S.; and (3) expenses for maintaining a U.S. military presence to secure imported oil supplies from unstable regions, and for maintaining the strategic petroleum reserve (SPR) to cushion against resulting price increases.[105] Reducing U.S. imports of crude petroleum or refined fuels can reduce the magnitude of these external costs. Any reduction in their total value that results from lower fuel consumption and petroleum imports represents an economic benefit of setting more stringent standards over and above the dollar value of fuel savings itself. Since the agencies are taking a global perspective with respect to the estimate of the social cost of carbon for this rulemaking, the agencies do not include the value of any reduction in monopsony payments as a benefit from lower fuel consumption, because those payments from a global perspective represent a transfer of income from consumers of petroleum products to oil suppliers rather than a savings in real economic resources. Similarly, the agencies do not include any savings in budgetary outlays to support U.S. military activities among the benefits of higher fuel economy and the resulting fuel savings. Based on a recently-updated ORNL study, we estimate that each gallon of fuel saved that results in a reduction in U.S. petroleum imports (either crude petroleum or refined fuel) will reduce the expected costs of oil supply disruptions to the U.S. economy by $0.169 (2007$). Each gallon of fuel saved as a consequence of higher standards is anticipated to reduce total U.S. imports of crude petroleum or refined fuel by 0.95 gallons.[106]

[101] It was not possible to estimate separate growth rates in average annual use for cars and light trucks, because of the significant reclassification of light truck models as passenger cars discussed previously.

[102] While the adjustment for future fuel prices reduces average mileage at each age from the values derived from the 2001 NHTS, the adjustment for expected future growth in average vehicle use increases it. The net effect of these two adjustments is to increase expected lifetime mileage by about 18 percent for passenger cars and about 16 percent for light trucks.

[106] Each gallon of fuel saved is assumed to reduce imports of refined fuel by 0.5 gallons, and the volume of fuel refined domestically by 0.5 gallons. Domestic fuel refining is assumed to utilize 90 percent imported crude petroleum and 10 percent

Continued

The energy security analysis conducted for this rule estimates that the world price of oil will fall modestly in response to lower U.S. demand for refined fuel. One potential result of this decline in the world price of oil would be an increase in the consumption of petroleum products outside the U.S., which would in turn lead to a modest increase in emissions of greenhouse gases, criteria air pollutants, and airborne toxics from their refining and use. While additional information would be needed to analyze this "leakage effect" in detail, NHTSA provides a sample estimate of its potential magnitude in its Final EIS.[107] This analysis indicates that the leakage effect is likely to offset only a modest fraction of the reductions in emissions projected to result from the rule.

EPA and NHTSA received comments about the treatment of the monopsony effect, macroeconomic disruption effect, and the military costs associated with the energy security benefits of this rule. The agencies did not receive any comments that justify changing the energy security analysis. As a result, the agencies continue to only use the macroeconomic disruption component of the energy security analysis under a global context when estimating the total energy security benefits associated with this rule. Further, the Agencies did not receive any information that they could use to quantity that component of military costs directly related to energy security, and thus did not modify that part of its analysis. A more complete discussion of the energy security analysis can be found in Chapter 4 of the Joint TSD, and Sections III and IV of this preamble.

- Air pollutant emissions

○ *Impacts on criteria air pollutant emissions*—While reductions in domestic fuel refining and distribution that result from lower fuel consumption will reduce U.S. emissions of criteria pollutants, additional vehicle use associated with the rebound effect will increase emissions of these pollutants. Thus the net effect of stricter standards on emissions of each criteria pollutant depends on the relative magnitudes of reduced emissions from fuel refining and distribution, and increases in emissions resulting from added vehicle use. Criteria air pollutants emitted by vehicles and during fuel production include carbon monoxide (CO), hydrocarbon compounds (usually referred to as "volatile organic compounds," or VOC), nitrogen oxides (NO_X), fine particulate matter ($PM_{2.5}$), and sulfur oxides (SO_X). It is assumed that the emission rates (per mile) stay constant for future year vehicles.

○ *Economic value of reductions in criteria air pollutants*—For the purpose of the joint technical analysis, EPA and NHTSA estimate the economic value of the human health benefits associated with reducing exposure to $PM_{2.5}$ using a "benefit-per-ton" method. These $PM_{2.5}$-related benefit-per-ton estimates provide the total monetized benefits to human health (the sum of reductions in premature mortality and premature morbidity) that result from eliminating one ton of directly emitted $PM_{2.5}$, or one ton of a pollutant that contributes to secondarily-formed $PM_{2.5}$ (such as NO_X, SO_X, and VOCs), from a specified source. Chapter 4.2.9 of the Technical Support Document that accompanies this rule includes a description of these values. Separately, EPA also conducted air quality modeling to estimate the change in ambient concentrations of criteria pollutants and used this as a basis for estimating the human health benefits and their economic value. Section III.H.7 presents these benefits estimates.

○ *Reductions in GHG emissions*—Emissions of carbon dioxide and other GHGs occur throughout the process of producing and distributing transportation fuels, as well as from fuel combustion itself. By reducing the volume of fuel consumed by passenger cars and light trucks, higher standards will thus reduce GHG emissions generated by fuel use, as well as throughout the fuel supply cycle. The agencies estimated the increases of GHGs other than CO_2, including methane and nitrous oxide, from additional vehicle use by multiplying the increase in total miles driven by cars and light trucks of each model year and age by emission rates per vehicle-mile for these GHGs. These emission rates, which differ between cars and light trucks as well as between gasoline and diesel vehicles, were estimated by EPA using its recently-developed Motor Vehicle Emission Simulator (Draft MOVES 2010).[108] Increases in emissions of non-CO_2 GHGs are converted to equivalent increases in CO_2 emissions using estimates of the Global Warming Potential (GWP) of methane and nitrous oxide.

○ *Economic value of reductions in CO_2 emissions* —EPA and NHTSA assigned a dollar value to reductions in CO_2 emissions using the marginal dollar value (*i.e.,* cost) of climate-related damages resulting from carbon emissions, also referred to as "social cost of carbon" (SCC). The SCC is intended to measure the monetary value society places on impacts resulting from increased GHGs, such as property damage from sea level rise, forced migration due to dry land loss, and mortality changes associated with vector-borne diseases. Published estimates of the SCC vary widely as a result of uncertainties about future economic growth, climate sensitivity to GHG emissions, procedures used to model the economic impacts of climate change, and the choice of discount rates.

EPA and NHTSA received extensive comments about how to improve the characterization of the SCC and have since developed new estimates through an interagency modeling exercise. The comments addressed various issues, such as discount rate selection, treatment of uncertainty, and emissions and socioeconomic trajectories, and justified the revision of SCC for the final rule. The modeling exercise involved running three integrated assessment models using inputs agreed upon by the interagency group for climate sensitivity, socioeconomic and emissions trajectories, and discount rates. A more complete discussion of SCC can be found in the Technical Support Document, *Social Cost of Carbon for Regulatory Impact Analysis Under Executive Order 12866* (hereafter, "SCC TSD"); revised SCC estimates corresponding to assumed values of the discount rate are shown in Table II.F–1.[109]

domestically-produced crude petroleum as feedstocks. Together, these assumptions imply that each gallon of fuel saved will reduce imports of refined fuel and crude petroleum by 0.50 gallons + 0.50 gallons*90 percent = 0.50 gallons + 0.45 gallons = 0.95 gallons.

[107] NHTSA Final Environmental Impact Statement: Corporate Average Fuel Economy Standards, Passenger Cars and Light Trucks, Model Years 2012–2016, February 2010, page 3–14.

[108] The MOVES model assumes that the per-mile rates at which cars and light trucks emit these GHGs are determined by the efficiency of fuel combustion during engine operation and chemical reactions that occur during catalytic after-treatment of engine exhaust, and are thus independent of vehicles' fuel consumption rates. Thus MOVES' emission factors for these GHGs, which are expressed per mile of vehicle travel, are assumed to be unaffected by changes in fuel economy.

[109] Interagency Working Group on Social Cost of Carbon, U.S. Government, with participation by Council of Economic Advisers, Council on Environmental Quality, Department of Agriculture, Department of Commerce, Department of Energy, Department of Transportation, Environmental Protection Agency, National Economic Council, Office of Energy and Climate Change, Office of Management and Budget, Office of Science and Technology Policy, and Department of Treasury, "*Social Cost of Carbon for Regulatory Impact Analysis Under Executive Order 12866,*" February 2010, available in docket EPA–HQ–OAR–2009–0472.

TABLE II.F–1—SOCIAL COST OF CO_2, 2010

[In 2007 dollars]

Discount Rate	5%	3%	2.5%	3%
Source of Estimate	Mean of Estimates Values			95th percentile estimate.
2010 Estimate	$5	$21	$35	$65.

• *Discounting future benefits and costs*—Discounting future fuel savings and other benefits is intended to account for the reduction in their value to society when they are deferred until some future date, rather than received immediately. The discount rate expresses the percent decline in the value of these benefits—as viewed from today's perspective—for each year they are deferred into the future. In evaluating the non-climate related benefits of the final standards, the agencies have employed discount rates of both 3 percent and 7 percent. We received some comments on the discount rates used in the proposal, most of which were directed at the discount rates used to value future fuel savings and the rates used to value of the social cost of carbon. In general, commenters were supporting one of the discount rates over the other, although some suggested that our rates were too high or too low. We have revised the discounting used when calculating the net present value of social cost of carbon as explained in Sections III.H. and VI but have not revised our discounting procedures for other costs or benefits.

For the reader's reference, Table II.F–2 below summarizes the values used to calculate the impacts of each final standard. The values presented in this table are summaries of the inputs used for the models; specific values used in the agencies' respective analyses may be aggregated, expanded, or have other relevant adjustments. See the respective RIAs for details.

The agencies recognize that each of these values has some degree of uncertainty, which the agencies further discuss in the Joint TSD. The agencies have conducted a range of sensitivities and present them in their respective RIAs. For example, NHTSA has conducted a sensitivity analysis on several assumptions including (1) forecasts of future fuel prices, (2) the discount rate applied to future benefits and costs, (3) the magnitude of the rebound effect, (4) the value to the U.S. economy of reducing carbon dioxide emissions, (5) inclusion of the monopsony effect, and (6) the reduction in external economic costs resulting from lower U.S. oil imports. This information is provided in NHTSA's RIA.

TABLE II.F–2—ECONOMIC VALUES FOR BENEFITS COMPUTATIONS

[2007$]

Fuel Economy Rebound Effect	10%.
"Gap" between test and on-road MPG	20%.
Value of refueling time per ($ per vehicle-hour)	$24.64.
Average tank volume refilled during refueling stop	55%.
Annual growth in average vehicle use	1.15%.
Fuel Prices (2012–50 average, $/gallon):	
Retail gasoline price	$3.66.
Pre-tax gasoline price	$3.29.
Economic Benefits From Reducing Oil Imports ($/gallon)	
"Monopsony" Component	$0.00.
Price Shock Component	$0.17.
Military Security Component	$0.00.
Total Economic Costs ($/gallon)	$0.17.
Emission Damage Costs (2020, $/ton or $/metric ton)	
Carbon monoxide	$0.
Volatile organic compounds (VOC)	$1,300.
Nitrogen oxides (NO_X)—vehicle use	$5,100.
Nitrogen oxides (NO_X)—fuel production and distribution	$ 5,300.
Particulate matter ($PM_{2.5}$)—vehicle use	$ 240,000.
Particulate matter ($PM_{2.5}$)—fuel production and distribution	$ 290,000.
Sulfur dioxide (SO_2)	$ 31,000.
Carbon dioxide (CO_2) emissions in 2010	$5.
	$21.
	$35.
	$65.
Annual Increase in CO_2 Damage Cost	variable, depending on estimate.
External Costs From Additional Automobile Use ($/vehicle-mile)	
Congestion	$ 0.054.
Accidents	$ 0.023.
Noise	$ 0.001.

TABLE II.F–2—ECONOMIC VALUES FOR BENEFITS COMPUTATIONS—Continued

[2007$]

Total External Costs	$ 0.078.
External Costs From Additional Light Truck Use ($/vehicle-mile)	
Congestion	$0.048.
Accidents	$0.026.
Noise	$0.001.
Total External Costs	$0.075.
Discount Rates Applied to Future Benefits	3%, 7%.

G. What are the estimated safety effects of the final MYs 2012–2016 CAFE and GHG standards?

The primary goals of the final CAFE and GHG standards are to reduce fuel consumption and GHG emissions, but in addition to these intended effects, the agencies must consider the potential of the standards to affect vehicle safety,[110] which the agencies have assessed in evaluating the appropriate levels at which to set the final standards. Safety trade-offs associated with fuel economy increases have occurred in the past, and the agencies must be mindful of the possibility of future ones. These past safety trade-offs occurred because manufacturers chose, at the time, to build smaller and lighter vehicles—partly in response to CAFE standards—rather than adding more expensive fuel-saving technologies (and maintaining vehicle size and safety), and the smaller and lighter vehicles did not fare as well in crashes as larger and heavier vehicles. Historically, as shown in FARS data analyzed by NHTSA, the safest vehicles have been heavy and large, while the vehicles with the highest fatal-crash rates have been light and small, both because the crash rate is higher for small/light vehicles and because the fatality rate per crash is higher for small/light vehicle crashes.

Changes in relative safety are related to shifts in the distribution of vehicles on the road. A policy that induces a widening in the size distribution of vehicles on the road, could result in negative impacts on safety, The primary mechanism in this rulemaking for mitigating the potential negative effects on safety is the application of footprint-based standards, which create a disincentive for manufacturers to produce smaller-footprint vehicles. This is because as footprint decreases, the corresponding fuel economy/GHG emission target becomes more stringent.[111] The shape of the footprint curves themselves have also been designed to be approximately "footprint neutral" within the sloped portion of the functions—that is, to neither encourage manufacturers to increase the footprint of their fleets, nor to decrease it. Upsizing also is discouraged through a "cut-off" at larger footprints. For both cars and light trucks there is a "cut-off" that affects vehicles smaller than 41 square feet. The agencies recognize that for manufacturers who make small vehicles in this size range, this cut off creates some incentive to downsize (*i.e.* further reduce the size and/or increase the production of models currently smaller than 41 square feet) to make it easier to meet the target. The cut off may also create some incentive for manufacturers who do not currently offer such models to do so in the future. However, at the same time, the agencies believe that there is a limit to the market for cars smaller than 41 square feet—most consumers likely have some minimum expectation about interior volume, among other things. In addition, vehicles in this market segment are the lowest price point for the light-duty automotive market, with a number of models in the $10,000 to $15,000 range. In order to justify selling more vehicles in this market in order to generate fuel economy or CO_2 credits (that is, for this final rule to be the incentive for selling more vehicles in this small car segment), a manufacturer would need to add additional technology to the lowest price segment vehicles, which could be challenging. Therefore, due to these two reasons (a likely limit in the market place for the smallest sized cars and the potential consumer acceptance difficulty in adding the necessary technologies in order to generate fuel economy and CO_2 credits), the agencies believe that the incentive for manufacturers to increase the sale of vehicles smaller than 41 square feet due to this rulemaking, if present, is small. For further discussion on these aspects of the standards, *please see* Section II.C above and Chapter 2 of the Joint TSD.

Manufacturers have stated, however, that they will reduce vehicle weight as one of the cost-effective means of increasing fuel economy and reducing CO_2 emissions, and the agencies have incorporated this expectation into our modeling analysis supporting today's final standards. NHTSA's previous analyses examining the relationship between vehicle mass and fatalities found fatality increases as vehicle weight and size were reduced, but these previous analyses did not differentiate between weight reductions and size (*i.e.,* weight and footprint) reductions.

The question of the effect of changes in vehicle mass on safety in the context of fuel economy is a complex question that poses serious analytic challenges and has been a contentious issue for many years, as discussed by a number of commenters to the NPRM. This contentiousness arises, at least in part, from the difficulty of isolating vehicle mass from other confounding factors (*e.g.,* driver behavior, or vehicle factors such as engine size and wheelbase). In addition, several vehicle factors have been closely related historically, such as vehicle mass, wheelbase, and track width. The issue has been reviewed and analyzed in the literature for more than two decades. For the reader's reference, much more information about safety in the CAFE context is available in Chapter IX of NHTSA's FRIA. Chapter 7.6 of EPA's final RIA also contained

[110] In this rulemaking document, vehicle safety is defined as *societal* fatality rates which include fatalities to occupants of all the vehicles involved in the collisions, plus any pedestrians.

[111] We note, however, that vehicle footprint is not synonymous with vehicle size. Since the footprint is only that portion of the vehicle between the front and rear axles, footprint-based standards do not discourage downsizing the portions of a vehicle in front of the front axle and to the rear of the rear axle, or to other portions of the vehicle outside the wheels. The crush space provided by those portions of a vehicle can make important contributions to managing crash energy. At least one manufacturer has confidentially indicated plans to reduce overhang as a way of reducing mass on some vehicles during the rulemaking time frame. Additionally, simply because footprint-based standards create no incentive to downsize vehicles, does not mean that manufacturers may not choose to do so if doing so makes it easier to meet the overall standard (as, for example, if the smaller vehicles are so much lighter that they exceed their targets by much greater amounts).

additional discussion on mass and safety.

Over the past several years, as also discussed by a number of commenters to the NPRM, contention has arisen with regard to the applicability of analysis of historical crash data to future safety effects due to mass reduction. The agencies recognize that there are a host of factors that may make future mass reduction different than what is reflected in the historical data. For one, the footprint-based standards have been carefully developed by the agencies so that they do not encourage vehicle footprint reductions as a way of meeting the standards, but so that they do encourage application of fuel-saving technologies, including mass reduction. This in turn encourages manufacturers to find ways to separate mass reduction from footprint reduction, which will very likely result in a future relationship between mass and fatalities that is safer than the historical relationship. However, as manufacturers pursue these methods of mass reduction, the fleet moves further away from the historical trends, which the agencies recognize.

NHTSA's NPRM analysis of the safety effects of the proposed CAFE standards was based on NHTSA's 2003 report concerning mass and size reduction in MYs 1991–1999 vehicles, and evaluated a "worst-case scenario" in which the safety effects of the combined reductions of both mass and size for those vehicles were determined for the future passenger car and light truck fleets.[112] In the NPRM analysis, mass and size could not be separated from one another, resulting in what NHTSA recognized was a larger safety disbenefit than was likely under the MYs 2012–2016 footprint-based CAFE standards. NHTSA emphasized, however, that actual fatalities would likely be less than these "worst-case" estimates, and possibly significantly less, based on the various factors discussed in the NPRM that could reduce the estimates, such as careful mass reduction through material substitution, etc.

For the final rule, as discussed in the NPRM and in recognition of the importance of conducting analysis that better reflects, within the limits of our current knowledge, the potential safety effects of future mass reduction in response to the final CAFE and GHG standards that is highly unlikely to involve concurrent reductions in footprint, NHTSA has revised its analysis in consultation with EPA. Perhaps the most important change has been that NHTSA agreed with commenters that it was both possible and appropriate to separate the effect of mass reductions from the effect of footprint reductions. NHTSA thus performed a new statistical analysis, hereafter referred to as the 2010 Kahane analysis, of the MYs 1991–99 vehicle database from its 2003 report (now including rather than excluding 2-door cars in the passenger car fleet), assessing relationships between fatality risk, mass, and footprint for both passenger cars and LTVs (light trucks and vans).[113] As part of its results, the new report presents an "upper-estimate scenario," a "lower-estimate scenario," as well as an "actual regression result scenario" representing potential safety effects of future mass reductions without corresponding vehicle size reductions, that assume, by virtue of being a cross-sectional analysis of historical data, that historical relationships between vehicle mass and fatalities are maintained. The "upper-estimate scenario" and "lower-estimate scenario" are based on NHTSA's judgment as a vehicle safety agency, and are not meant to convey any more or less likelihood in the results, but more to convey a sense of bounding for potential safety effects of reducing mass while holding footprint constant. The upper-estimate scenario reflects potential safety effects given the report's finding that, using the one-step regression method of the 2003 Kahane report, the regression coefficients show that mass and footprint each accounted for about half the fatality increase associated with downsizing in a cross-sectional analysis of MYs 1991–1999 cars. A similar effect was found for lighter LTVs. Applying the same regression method to heavier LTVs, however, the coefficients indicated a significant societal fatality reduction when mass, but not footprint, is reduced in the heavier LTVs.[114] Fatalities are reduced primarily because mass reduction in the heavier LTVs will reduce risk to occupants of the other cars and lighter LTVs involved in collisions with these heavier LTVs.[115] Thus, even in the "upper-estimate scenario," the potential fatality increases associated with mass reduction in the passenger cars would be to a large extent offset by the benefits of mass reduction in the heavier LTVs.

The lower-estimate scenario, in turn, reflects NHTSA's estimate of potential safety effects if future mass reduction is accomplished entirely by material substitution, smart design,[116] and component integration, among other things, that can reduce mass without perceptibly changing a vehicle's shape, functionality, or safety performance, maintaining structural strength without compromising other aspects of safety. If future mass reduction follows this path, it could limit the added risk close to only the effects of mass *per se* (the ability to transfer momentum to other vehicles or objects in a collision), resulting in estimated effects in passenger cars that are substantially smaller than in the upper-estimate scenario based directly on the regression results. The lower-estimate scenario also covers both passenger cars and LTVs.

Overall, based on the new analyses, NHTSA estimated that fatality effects could be markedly less than those estimated in the "worst-case scenario" presented in the NPRM. The agencies believe that the overall effect of mass reduction in cars and LTVs may be close to zero, and may possibly be beneficial in terms of the fleet as a whole if mass reduction is carefully applied in the future (as with careful material substitution and other methods of mass reduction that can reduce mass without perceptibly changing a car's shape, functionality, or safety performance,

[112] The analysis excluded 2-door cars.

[113] "Relationships Between Fatality Risk, Mass, and Footprint in Model Year 1991–1999 and Other Passenger Cars and LTVs," Charles J. Kahane, NCSA, NHTSA, March 2010. The text of the report may be found in Chapter IX of NHTSA's FRIA, where it constitutes a section of that chapter. We note that this report has not yet been externally peer-reviewed, and therefore may be changed or refined after it has been subjected to peer review. The results of the report have not been included in the tables summarizing the costs and benefits of this rulemaking and did not affect the stringency of the standards. NHTSA has begun the process for obtaining peer review in accordance with OMB guidance. The agency will ensure that concerns raised during the peer review process are addressed before relying on the report for future rulemakings. The results of the peer review and any subsequent revisions to the report will be made available in a public docket and on NHTSA's Web site as they are completed.

[114] Conversely, the coefficients indicate a significant increase if footprint is reduced.

[115] We note that there may be some (currently non-quantifiable) welfare losses for purchasers of these heavier LTVs, the mass of which is reduced in response to these final standards. This is due to the fact that in certain crashes, as discussed below and in greater detail in Chapter IX of the NHTSA FRIA, more mass will always be helpful (although certainly in other crashes, the amount of mass reduction modeled by the agency will not be enough to have any significant effect on driver/occupant safety). However, we believe the effects of this will likely be minor. Consumer welfare impacts of the final rule are discussed in more detail in Chapter VIII of the NHTSA FRIA.

[116] Manufacturers may reduce mass through smart design using computer aided engineering (CAE) tools that can be used to better optimize load paths within structures by reducing stresses and bending moments applied to structures. This allows better optimization of the sectional thicknesses of structural components to reduce mass while maintaining or improving the function of the component. Smart designs also integrate separate parts in a manner that reduces mass by combining functions or the reduced use of separate fasteners. In addition, some "body on frame" vehicles are redesigned with a lighter "unibody" construction.

and maintain its structural strength without making it excessively rigid). This is especially important if the mass reduction in the heavier LTVs is greater (in absolute terms) than in passenger cars, as discussed further below and in the 2010 Kahane report.

The following sections will address how the agencies addressed potential safety effects in the NPRM for the proposed standards, how commenters responded, and the work that NHTSA has done since the NPRM to revise its estimates of potential safety effects for the final rule. The final section discusses some of the agencies' plans for the future with respect to potential analysis and studies to further enhance our understanding of this important and complex issue.

1. What did the agencies say in the NPRM with regard to potential safety effects?

In the NPRM preceding these final standards, NHTSA's safety assessment derived from the agency's belief that some of these vehicle factors, namely vehicle mass and footprint, could not be accurately separated. NHTSA relied on the 2003 study by Dr. Charles Kahane, which estimates the effect of 100-pound reductions in MYs 1991–1999 heavy light trucks and vans (LTVs), light LTVs, heavy passenger cars, and light passenger cars.[117] The study compares the fatality rates of LTVs and cars to quantify differences between vehicle types, given drivers of the same age/gender, etc. In that analysis, the effect of "weight reduction" is not limited to the effect of mass *per se,* but includes all the factors, such as length, width, structural strength, safety features, and size of the occupant compartment, that were naturally or historically confounded with mass in MYs 1991–1999 vehicles. The rationale was that adding length, width, or strength to a vehicle historically also made it heavier.

NHTSA utilized the relationships between mass and safety from Kahane (2003), expressed as percentage increases in fatalities per 100-pound mass reduction, and examined the mass effects assumed in the NPRM modeling analysis. While previous CAFE rulemakings had limited mass reduction as a "technology option" to vehicles over 5,000 pounds GVWR, both NHTSA's and EPA's modeling analyses in the NPRM included mass reduction of up to 5–10 percent of baseline curb weight, depending on vehicle subclass, in response to recently-submitted manufacturer product plans as well as public statements indicating that these levels were possible and likely. 5–10 percent represented a maximum bound; EPA's modeling, for example, included average vehicle weight reductions of 4 percent between MYs 2011 and 2016, although the average per-vehicle mass reduction was greater in absolute terms for light trucks than for passenger cars. NHTSA's assumptions for mass reduction were also limited by lead time such that mass reductions of 1.5 percent were included for redesigns occurring prior to MY 2014, and mass reductions of 5–10 percent were only "achievable" in redesigns occurring in MY 2014 or later. NHTSA further assumed that mass reductions would be limited to 5 percent for small vehicles (*e.g.,* subcompact passenger cars), and that reductions of 10 percent would only be applied to the larger vehicle types (*e.g.,* large light trucks).

Based on these assumptions of how manufacturers might comply with the standards, NHTSA examined the effects of the identifiable safety trends over the lifetime of the vehicles produced in each model year. The effects were estimated on a year-by-year basis, assuming that certain known safety trends would result in a reduction in the target population of fatalities from which the mass effects are derived.[118] Using this method, NHTSA found a 12.6 percent reduction in fatality levels between 2007 and 2020. The estimates derived from applying Kahane's 2003 percentages to a baseline of 2007 fatalities were then multiplied by 0.874 to account for changes that the agency believed would take place in passenger car and light truck safety between the 2007 baseline on-road fleet used for that particular analysis and year 2020.[119]

NHTSA and EPA both emphasized that the safety effect estimates in the NPRM needed to be understood in the context of the 2003 Kahane report, which is based upon a cross-sectional analysis of the actual on-road safety experience of 1991–1999 vehicles. For those vehicles, heavier usually also meant larger-footprint. Hence, the numbers in those analyses were used to predict the safety-related fatalities that could occur in the unlikely event that weight reduction for MYs 2012–2016 is accomplished entirely by reducing mass *and* reducing footprint. Any estimates derived from those analyses represented a "worst-case" estimate of safety effects, for several reasons.

First, manufacturers are far less likely to reduce mass by "downsizing" (making vehicles smaller overall) under the current attribute-based standards, because the standards are based on vehicle footprint. The selection of footprint as the attribute in setting CAFE and GHG standards helps to reduce the incentive to alter a vehicle's physical dimensions. This is because as footprint decreases, the corresponding fuel economy/GHG emission target becomes more stringent.[120] The shape of the footprint curves themselves have also been designed to be approximately "footprint neutral" within the sloped portion of the functions—that is, to neither encourage manufacturers to increase the footprint of their fleets, nor to decrease it. For further discussion on these aspects of the standards, *please see* Section II.C above and Chapter 2 of the Joint TSD. However, as discussed in Sections III.H.1 and IV.G.6 below, the agencies acknowledge some uncertainty regarding how consumer purchases will change in response to the vehicles

[117] Kahane, Charles J., PhD, "Vehicle Weight, Fatality Risk and Crash Compatibility of Model Year 1991–99 Passenger Cars and Light Trucks," DOT HS 809 662, October 2003, Executive Summary. *Available at http://www.nhtsa.dot.gov/cars/rules/regrev/evaluate/809662.html* (last accessed March 10, 2010).

[118] NHTSA explained that there are several identifiable safety trends that are already in place or expected to occur in the foreseeable future and that were not accounted for in the study. For example, two important new safety standards that have already been issued and will be phasing in during the rulemaking time frame. Federal Motor Vehicle Safety Standard No. 126 (49 CFR 571.126) will require electronic stability control in all new vehicles by MY 2012, and the upgrade to Federal Motor Vehicle Safety Standard No. 214 (Side Impact Protection, 49 CFR 571.214) will likely result in all new vehicles being equipped with head-curtain air bags by MY 2014. Additionally, the agency stated that it anticipates continued improvements in driver (and passenger) behavior, such as higher safety belt use rates. All of these will tend to reduce the absolute number of fatalities resulting from mass reductions. Thus, while the percentage increases in Kahane (2003) was applied, the reduced base resulted in smaller absolute increases than those that were predicted in the 2003 report.

[119] Blincoe, L. and Shankar, U, "The Impact of Safety Standards and Behavioral Trends on Motor Vehicle Fatality Rates," DOT HS 810 777, January 2007. See Table 4 comparing 2020 to 2007 (37,906/43,363 = 12.6% reduction (1-.126 = .874)

[120] We note, however, that vehicle footprint is not synonymous with vehicle size. Since the footprint is only that portion of the vehicle between the front and rear axles, footprint-based standards do not discourage downsizing the portions of a vehicle in front of the front axle and to the rear of the rear axle, or to other portions of the vehicle outside the wheels. The crush space provided by those portions of a vehicle can make important contributions to managing crash energy. NHTSA noted in the NPRM that at least one manufacturer has confidentially indicated plans to reduce overhang as a way of reducing mass on some vehicles during the rulemaking time frame. Additionally, simply because footprint-based standards create no incentive to downsize vehicles, does not mean that manufacturers may not choose to do so if doing so makes it easier to meet the overall standard (as, for example, if the smaller vehicles are so much lighter that they exceed their targets by much greater amounts).

designed to meet the MYs 2012–2016 standards. This could potentially affect the mix of vehicles sold in the future, including the mass and footprint distribution.

As a result, the agencies found it likely that a significant portion of the mass reduction in the MY 2012–2016 vehicles would be accomplished by strategies, such as material substitution, smart design, reduced powertrain requirements,[121] and mass compounding, that have a lesser safety effect than the prevalent 1980s strategy of simply making the vehicles smaller. The agencies noted that to the extent that future mass reductions could be achieved by these methods—without any accompanying reduction in the size or structural strength of the vehicle—then the fatality increases associated with the mass reductions anticipated by the model as a result of the proposed standards could be significantly smaller than those in the worst-case scenario.

However, even though the agencies recognized that these methods of mass reduction could be technologically feasible in the rulemaking time frame, and included them as such in our modeling analyses, the agencies diverged as to how potential safety effects accompanying such methods of mass reduction could be evaluated, particularly in relation to the worst-case scenario presented by NHTSA. NHTSA stated that it could not predict how much smaller those increases would be for any given mixture of mass reduction methods, since the data on the safety effects of mass reduction alone (without size reduction) was not available due to the low numbers of vehicles in the current on-road fleet that have utilized these technologies extensively. Further, to the extent that mass reductions were accomplished through use of light, high-strength materials, NHTSA emphasized that there would be significant additional costs that would need to be determined and accounted for than were reflected in the agency's proposal.

Additionally, NHTSA emphasized that while it thought material substitution and other methods of mass reduction could considerably lessen the potential safety effects compared to the historical trend, NHTSA also stated that it did not believe the effects in passenger cars would be smaller than zero. EPA disagreed with this, and stated in the NPRM that the safety effects could very well be smaller than zero. Even though footprint-based standards discourage downsizing as a way of "balancing out" sales of larger/heavier vehicles, they do not discourage manufacturers from reducing crush space in overhang areas or from reducing structural support as a way of taking out mass.[122] Moreover, NHTSA's analysis had also found that lighter cars have a higher involvement rate in fatal crashes, even after controlling for the driver's age, gender, urbanization, and region of the country. Being unable to explain this clear trend in the crash data, NHTSA stated that it must assume that mass reduction is likely to be associated with higher fatal-crash rates, no matter how the weight reduction is achieved.

NHTSA also noted in the NPRM that several studies by Dynamic Research, Inc. (DRI) had been repeatedly cited to the agency in support of the proposition that reducing vehicle mass while maintaining track width and wheelbase would lead to significant safety benefits. In its 2005 studies, one of which was published and peer-reviewed through the Society of Automotive Engineers as a technical paper, DRI attempted to assess the independent effects of vehicle weight and size (in terms of wheelbase and track width) on safety, and presented results indicating that reducing vehicle weight tends to reduce fatalities, but that reducing vehicle wheelbase and track width tends to increase fatalities. DRI's analysis was based on FARS data for MYs 1985–1998 passenger cars and 1985–1997 light trucks, similar to the MYs 1991–1999 car and truck data used in the 2003 Kahane report. However, DRI included 2-door passenger cars, while the 2003 Kahane report excluded those vehicles out of concern that their inclusion could bias the results of the regression analysis, because a significant proportion of MYs 1991–1999 2-door cars were sports and "muscle" cars, which have particularly high fatal crash rates for their relatively short wheelbases compared to the rest of the fleet. While in the NPRM NHTSA rejected the results of the DRI studies based in part on this concern, the agencies note that upon further consideration, NHTSA has agreed for this final rule that the inclusion of 2-door cars in regression analysis of historical data is appropriate, and indeed has no overly-biasing effects.

The 2005 DRI studies also differed from the 2003 Kahane report in terms of their estimates of the effect of vehicle weight on rollover fatalities. The 2003 Kahane report analyzed a single variable, curb weight, as a surrogate for both vehicle size and weight, and found that curb weight reductions would increase rollover fatalities. The DRI study, in contrast, attempted to analyze curb weight, wheelbase, and track width separately, and found that curb weight reduction would *decrease* rollover fatalities, while wheelbase reduction and track width reduction would increase them. DRI suggested that heavier vehicles may have higher rollover fatalities for two reasons: first, because taller vehicles tend to be heavier, so the correlation between vehicle height and weight and vehicle center-of-gravity height may make heavier vehicles more rollover-prone; and second, because heavier vehicles may have been less rollover-crashworthy due to FMVSS No. 216's constant (as opposed to proportional) requirements for MYs 1995–1999 vehicles weighing more than 3,333 lbs unloaded.

Overall, DRI's 2005 studies found a reduction in fatalities for cars (580 in the first study, and 836 in the second study) and for trucks (219 in the first study, 682 in the second study) for a 100 pound reduction in curb weight without accompanying wheelbase or track width reductions. In the NPRM, NHTSA disagreed with the results of the DRI studies, out of concern that DRI's inclusion of 2-door cars in its analysis biased the results, and because NHTSA was unable to reproduce DRI's results despite repeated attempts. NHTSA stated that it agreed intuitively with DRI's conclusion that vehicle mass reductions without accompanying size reductions (as through substitution of a heavier material for a lighter one) would be less harmful than downsizing, but without supporting real-world data and unable to verify DRI's results, NHTSA stated that it could not conclude that mass reductions would result in safety benefits. EPA, in contrast, believed that DRI's results contained some merit, in particular because the study separated the effects of mass and size and EPA stated that applying them using the curb weight reductions in EPA's modeling analysis would show an overall reduction of fatalities for the proposed standards.

On balance, both agencies recognized that mass reduction could be an important tool for achieving higher levels of fuel economy and reducing CO_2 emissions, and emphasized that NHTSA's fatality estimates represented a worst-case scenario for the potential effects of the proposed standards, and

[121] Reduced powertrain requirements do not include a reduction in performance. When vehicle mass is reduced, engine torque and transmission gearing can be altered so that acceleration performance is held constant instead of improving. A detailed discussion is included in Chapter 3 of the Technical Support Document.

[122] However, we recognize that FMVSS and NCAP ratings may limit the manufacturer's ability to reduce crush space or structural support.

that actual fatalities will be less than these estimates, possibly significantly less, based on the various factors discussed in the NPRM that could reduce the estimates. The agencies sought comment on the safety analysis and discussions presented in the NPRM.

2. What public comments did the agencies receive on the safety analysis and discussions in the NPRM?

Several dozen commenters addressed the safety issue. Claims and arguments made by commenters in response to the safety effects analysis and discussion in the NPRM tended to follow several general themes, as follows:

- NHTSA's safety effects estimates are inaccurate because they do not account for:
  - While NHTSA's study only considers vehicles from MYs 1991–1999, more recently-built vehicles are safer than those, and future vehicles will be safer still;
  - Lighter vehicles are safer than heavier cars in terms of crash-avoidance, because they handle and brake better;
  - Fatalities are linked more to other factors than mass;
  - The structure of the standards reduces/contributes to potential safety effects from mass reduction;
  - NHTSA could mitigate additional safety effects from mass reduction, if there are any, by simply regulating safety more;
  - Casualty risks range widely for vehicles of the same weight or footprint, which skews regression analysis and makes computer simulation a better predictor of the safety effects of mass reduction;
- DRI's analysis shows that lighter vehicles will save lives, and NHTSA reaches the opposite conclusion without disproving DRI's analysis;
  - Possible reasons that NHTSA and DRI have reached different conclusions:
    - NHTSA's study should distinguish between reductions in size and reductions in weight like DRI's;
    - NHTSA's study should include two-door cars;
    - NHTSA's study should have used different assumptions;
    - NHTSA's study should include confidence intervals;
- NHTSA should include a "best-case" estimate in its study;
- NHTSA should not include a "worst-case" estimate in its study;

The agencies recognize that the issue of the potential safety effects of mass reduction, which was one of the many factors considered in the balancing that led to the agencies' conclusion as to appropriate stringency levels for the MYs 2012–2016 standards, is of great interest to the public and could possibly be a more significant factor in regulators' and manufacturers' decisions with regard to future standards beyond MY 2016. The agencies are committed to analyzing this issue thoroughly and holistically going forward, based on the best available science, in order to further their closely related missions of safety, energy conservation, and environmental protection. We respond to the issues and claims raised by commenters in turn below.

NHTSA's estimates are inaccurate because NHTSA's study only considers vehicles from MYs 1991–1999, but more recently-built vehicles are safer than those, and future vehicles will be safer still

A number of commenters (CAS, Adcock, NACAA, NJ DEP, NY DEC, UCS, and Wenzel) argued that the 2003 Kahane report, on which the "worst-case scenario" in the NPRM was based, is outdated because it considers the relationship between vehicle weight and safety in MYs 1991–1999 passenger cars. These commenters generally stated that data from MYs 1991–1999 vehicles provide an inaccurate basis for assessing the relationship between vehicle weight and safety in current or future vehicles, because the fleets of vehicles now and in the future are increasingly different from that 1990s fleet (more crossovers, fewer trucks, lighter trucks, etc.), with different vehicle shapes and characteristics, different materials, and more safety features. Several of these commenters argued that NHTSA should conduct an updated analysis for the final rule using more recent data—Wenzel, for example, stated that an updated regression analysis that accounted for the recent introduction of crossover SUVs would likely find reduced casualty risk, similar to DRI's previous finding using fatality data. CEI, in contrast, argued that the "safety trade-off" would not be eliminated by new technologies and attribute-based standards, because additional weight inherently makes a vehicle safer to its own occupants, citing the 2003 Kahane report, while AISI argued that Desapriya had found that passenger car drivers and occupants are two times more likely to be injured than drivers and occupants in larger pickup trucks and SUVs.

Several commenters (Adcock, CARB, Daimler, NESCAUM, NRDC, Public Citizen, UCS, Wenzel) suggested that NHTSA's analysis was based on overly pessimistic assumptions about how manufacturers would choose to reduce mass in their vehicles, because manufacturers have a strong incentive in the market to build vehicles safely. Many of these commenters stated that several manufacturers have already committed publicly to fairly ambitious mass reduction goals in the mid-term, but several stated further that NHTSA should not assume that manufacturers will reduce the same amount of mass in all vehicles, because it is likely that they will concentrate mass reduction in the heaviest vehicles, which will improve compatibility and decrease aggressivity in the heaviest vehicles. Daimler emphasized that all vehicles will have to comply with the Federal Motor Vehicle Safety Standards, and will likely be designed to test well in NHTSA's NCAP tests.

Other commenters (Aluminum Association, CARB, CAS, ICCT, MEMA, NRDC, U.S. Steel) also emphasized the need for NHTSA to account for the safety benefits to be expected in the future from use of advanced materials for lightweighting purposes and other engineering advances. The Aluminum Association stated that advanced vehicle design and construction techniques using aluminum can improve energy management and minimize adverse safety effects of their use,[123] but that NHTSA's safety analysis could not account for those benefits if it were based on MYs 1991–1999 vehicles. CAS, ICCT, and U.S. Steel discussed similar benefits for more recent and future vehicles built with high strength steel (HSS), although U.S. Steel cautioned that given the stringency of the proposed standards, manufacturers would likely be encouraged to build smaller and lighter vehicles in order to achieve compliance, which fare worse in head-on collisions than larger, heavier vehicles. AISI, in contrast to U.S. Steel, stated that in its research with the Auto/Steel Partnership and in programs supported by DOE, it had found that the use of new Advanced HSS steel grades could enable mass of critical crash structures, such as front rails and bumper systems, to be reduced by 25 percent without degrading performance in standard NHTSA frontal or IIHS offset

[123] The Aluminum Association (NHTSA–2009–0059–0067.3) stated that its research on vehicle safety compatibility between an SUV and a mid-sized car, done jointly with DRI, shows that reducing the weight of a heavier SUV by 20% (a realistic value for an aluminum-intensive vehicle) could reduce the combined injury rate for both vehicles by 28% in moderately severe crashes. The commenter stated that it would keep NHTSA apprised of its results as its research progressed. Based on the information presented, NHTSA believes that this research appears to agree with NHTSA's latest analysis, which finds that a reduction in weight for the heaviest vehicles may improve overall fleet safety.

instrumented crash tests compared to their "heavier counterparts."

Agencies' response: NHTSA, in consultation with EPA and DOE, plans to begin updating the MYs 1991–1999 database on which NHTSA's safety analyses in the NPRM and final rule are based in the next several months in order to analyze the differences in safety effects against vehicles built in more recent model years. As this task will take at least a year to complete, beginning it immediately after the NPRM would not have enabled the agency to complete it and then conduct a new analysis during the period between the NPRM and the final rule.

For purposes of this final rule, however, we believe that using the same MYs 1991–1999 database as that used in the 2003 Kahane study provides a reasonable basis for attempting to estimate safety effects due to reductions in mass. While commenters often stated that updating the database would help to reveal the effect of recently-introduced lightweight vehicles with extensive material substitution, there have in fact not yet been a significant number of vehicles with substantial mass reduction/material substitution to analyze, and they must also show up in the crash databases for NHTSA to be able to add them to its analysis. Based on NHTSA's research, specifically, on three statistical analyses over a 12-year period (1991–2003) covering a range of 22 model years (1978–1999), NHTSA believes that the relationships between mass, size, and safety has only changed slowly over time, although we recognize that they may change somewhat more rapidly in the future.[124] As the on-road fleet gains increasing numbers of vehicles with increasing amounts of different methods of mass reduction applied to them, we may begin to discern changes in the crash databases due to the presence of these vehicles, but any such changes are likely to be slow and evolutionary, particularly in the context of MYs 2000–2009 vehicles. The agencies do expect that further analysis of historical data files will continue to provide a robust and practicable basis for estimating the potential safety effects that might occur with future reductions in vehicle mass. However, we recognize that estimates derived from analysis of historical data, like estimates from any other type of analysis (including simulation-based analysis, which cannot feasibly cover all relevant scenarios), will be uncertain in terms of predicting actual future outcomes with respect to a vehicle fleet, driving population, and operating environment that does not yet exist.

The agencies also recognize that more recent vehicles have more safety features than 1990s vehicles, which are likely to make them safer overall. To account for this, NHTSA did adjust the results of both its NPRM and final rule analysis to include known safety improvements, like ESC and increases in seat belt use, that have occurred since MYs 1991–1999.[125] However, simply because newer vehicles have more safety countermeasures, does not mean that the weight/safety relationship necessarily changes. More likely, it would change the target population (the number of fatalities) to which one would apply the weight/safety relationship. Thus, we still believe that some mass reduction techniques for both passenger cars and light trucks can make them less safe, in certain crashes as discussed in NHTSA's FRIA, than if mass had not been reduced.[126]

As for NHTSA's assumptions about mass reduction, in its analysis, NHTSA generally assumed that lighter vehicles could be reduced in weight by 5 percent while heavier light trucks could be reduced in weight by 10 percent. NHTSA recognizes that manufacturers might choose a different mass reduction scheme than this, and that its quantification of the estimated effect on safety would be different if they did. We emphasize that our estimates are based on the assumptions we have employed and are intended to help the agency consider the potential effect of the final standards on vehicle safety. Thus, based on the 2010 Kahane analysis, reductions in weight for the heavier light trucks would have positive overall safety effects,[127] while mass reductions for passenger cars and smaller light trucks would have negative overall safety effects.

NHTSA's estimates are inaccurate because they do not account for the fact that lighter vehicles are safer than heavier cars in terms of crash-avoidance, because they handle and brake better

ICCT stated that lighter vehicles are better able to avoid crashes because they "handle and brake slightly better," arguing that size-based standards encourage lighter-weight car-based SUVs with "significantly better handling and crash protection" than 1996–1999 mid-size SUVs, which will reduce both fatalities and fuel consumption. ICCT stated that NHTSA did not include these safety benefits in its analysis. DRI also stated that its 2005 report found that crash avoidance improves with reduction in curb weight and/or with increases in wheelbase and track, because "Crash avoidance can depend, amongst other factors, on the vehicle directional control and rollover characteristics." DRI argued that, therefore, "These results indicate that vehicle weight reduction tends to decrease fatalities, but vehicle wheelbase and track reduction tends to increase fatalities."

Agencies' response: In fact, NHTSA's regression analysis of crash fatalities per million registration years measures the effects of crash avoidance, if there are any, as well as crashworthiness. Given that the historical empirical data for passenger cars show a trend of higher crash rates for lighter cars, it is unclear whether lighter cars have, in the net, superior crash avoidance, although the agencies recognize that they may have advantages in certain individual situations. EPA presents a discussion of improved accident avoidance as vehicle mass is reduced in Chapter 7.6 of its final RIA. The important point to emphasize is that it depends on the situation—it would oversimplify drastically to point to one situation in which extra mass helps or hurts and then extrapolate effects for crash avoidance across the board based on only that.

For example, the relationship of vehicle mass to rollover and directional stability is more complex than commenters imply. For rollover, it is true that if heavy pickups were always more top-heavy than lighter pickups of the same footprint, their higher center of gravity could make them more rollover-prone, yet some mass can be placed so as to lower a vehicle's center of gravity and make it less rollover-prone. For mass reduction to be beneficial in rollover crashes, then, it must take

[124] NHTSA notes the CAS' comments regarding changes in the vehicle fleets since the introduction of CAFE standards in the late 1970s, but believes they apply more to the differences between late 1970s through 1980s vehicles and 2010s vehicles than to the differences between 1990s and 2010s vehicles. NHTSA believes that the CAS comments regarding the phase-out of 1970s vehicles and their replacement with safer, better fuel-economy-achieving 1980s vehicles paint with rather too large a brush to be relevant to the main discussion of whether the 2003 Kahane report database can reasonably be used to estimate safety effects of mass reduction for the MYs 2012–2016 fleet.

[125] See NHTSA FRIA Chapter IX.

[126] If one has a vehicle (vehicle A), and both reduces the vehicle's mass and adds new safety equipment to it, thus creating a variant (vehicle A_1), the variant might conceivably have a level of overall safety for its occupants equal to that of the original vehicle (vehicle A). However, vehicle A_1 might not be as safe as second variant (vehicle A_2) of vehicle A, one that is produced by adding to vehicle A the same new safety equipment added to the first variant, but this time without any mass reduction.

[127] This is due to the beneficial effect on the occupants of vehicles struck by the downweighted larger vehicles.

center of gravity height into account along with other factors such as passenger compartment design and structure, suspension, the presence of various safety equipment, and so forth.

Similarly, for directional stability, it is true that having more mass increases the "understeer gradient" of cars—*i.e.,* it reinforces their tendency to proceed in a straight line and slows their response to steering input, which would be harmful where prompt steering response is essential, such as in a double-lane-change maneuver to avoid an obstacle. Yet more mass and a higher understeer gradient could help when it is better to remain on a straight path, such as on a straight road with icy patches where wheel slip might impair directional stability. Thus, while less vehicle mass can sometimes improve crash avoidance capability, there can also be situations when more vehicle mass can help in other kinds of crash avoidance.

Further, NHTSA's research suggests that additional vehicle mass may be even more helpful, as discussed in Chapter IX of NHTSA's FRIA, when the average driver's response to a vehicle's maneuverability is taken into account. Lighter cars have historically (1976–2009) had higher collision-involvement rates than heavier cars—even in multi-vehicle crashes where directional and rollover stability is not particularly an issue.[128] Based on our analyses using nationally-collected FARS and GES data, drivers of lighter cars are more likely to be the culpable party in a 2-vehicle collision, even after controlling for footprint, the driver's age, gender, urbanization, and region of the country.

Thus, based on this data, it appears that lighter cars may not be driven as well as heavier cars, although it is unknown why this is so. If poor drivers intrinsically chose light cars (self-selection), it might be evidenced by an increase in antisocial driving behavior (such as DWI, drug involvement, speeding, or driving without a license) as car weight decreases, after controlling for driver age and gender—in addition to the increases in merely culpable driver behavior (such as failure to yield the right of way). But analyses in NHTSA's 2003 report did not show an increase in antisocial driver behavior in the lighter cars paralleling their increase in culpable involvements.

NHTSA also hypothesizes that certain aspects of lightness and/or smallness in a car may give a driver a perception of greater maneuverability that ultimately results in driving with less of a "safety margin," *e.g.,* encouraging them to weave in traffic. That may appear paradoxical at first glance, as maneuverability is, in the abstract, a safety plus. Yet the situation is not unlike powerful engines that could theoretically enable a driver to escape some hazards, but in reality have long been associated with high crash and fatality rates.[129]

NHTSA's estimates are inaccurate because fatalities are linked more to other factors than mass

Tom Wenzel stated that the safety record of recent model year crossover SUVs indicates that weight reduction in this class of vehicles (small to mid-size SUVs) resulted in a reduction in fatality risk. Wenzel argued that NHTSA should acknowledge that other vehicle attributes may be as important, if not more important, than vehicle weight or footprint in terms of occupant safety, such as unibody construction as compared to ladder-frame, lower bumpers, and less rigid frontal structures, all of which make crossover SUVs more compatible with cars than truck-based SUVs.

Marc Ross commented that fatalities are linked more strongly to intrusion than to mass, and stated that research by safety experts in Japan and Europe suggests the main cause of serious injuries and deaths is intrusion due to the failure of load-bearing elements to properly protect occupants in a severe crash. Ross argued that the results from this project have "overturned the original views about compatibility," which thought that mass and the mass ratio were the dominant factors. Since footprint-based standards will encourage the reduction of vehicle weight through materials substitution while maintaining size, Ross stated, they will help to reduce intrusion and consequently fatalities, as the lower weight reduces crash forces while maintaining size preserves crush space. Ross argued that this factor was not considered by NHTSA in its discussion of safety. ICCT agreed with Ross' comments on this issue.

In previous comments on NHTSA rulemakings and in several studies, Wenzel and Ross have argued generally that vehicle design and "quality" is a much more important determinant of vehicle safety than mass. In comments on the NPRM, CARB, NRDC, Sierra Club, and UCS echoed this theme.

ICCT commented as well that fatality rates in the EU are much lower than rates in the U.S., even though the vehicles in the EU fleet tend to be smaller and lighter than those in the U.S. fleet. Thus, ICCT argued, "This strongly supports the idea that vehicle and highway design are far more important factors than size or weight in vehicle safety." ICCT added that "It also suggests that the rise in SUVs in the U.S. has not helped reduce fatalities." CAS also commented that Germany's vehicle fleet is both smaller and lighter than the American fleet, and has lower fatality rates.

Agencies' response: NHTSA and EPA agree that there are many features that affect safety. While crossover SUVs have lower fatality rates than truck-based SUVs, there are no analyses that attribute the improved safety to mass alone, and not to other factors such as the lower center of gravity or the unibody construction of these vehicles. While a number of improvements in safety can be made, they do not negate the potential that another 100 lbs. could make a passenger car or crossover vehicle safer for its occupants, because of the effects of mass per se as discussed in NHTSA's FRIA, albeit similar mass reductions could make heavier LTVs safer to other vehicles without necessarily harming their own drivers and occupants. Moreover, in the 2004 response to docket comments, NHTSA explained that the significant relationship between mass and fatality risk persisted even after controlling for vehicle price or nameplate, suggesting that vehicle "quality" as cited by Wenzel and Ross is not necessarily more important than vehicle mass.

As for reductions in intrusions due to material substitution, the agencies agree generally that the use of new and innovative materials may have the potential to reduce crash fatalities, but such vehicles have not been introduced in large numbers into the vehicle fleet. The agencies will continue to monitor the situation, but ultimately the effects of different methods of mass reduction on overall safety in the real world (not just in simulations) will need to be analyzed when vehicles with these types of mass reduction are on the road in sufficient quantities to provide statistically significant results. For example, a vehicle that is designed to be

much stiffer to reduce intrusion is likely to have a more severe crash pulse and thus impose greater forces on the occupants during a crash, and might not necessarily be good for elderly and child occupant safety in certain types of crashes. Such trade-offs make it difficult to estimate overall results accurately without real world data. The agencies will continue to evaluate and analyze such real world data as it becomes available, and will keep the public informed as to our progress.

ICCT's comment illustrates the fact that different vehicle fleets in different countries can face different challenges. NHTSA does not believe that the fact that the EU vehicle fleet is generally lighter than the U.S. fleet is the exclusive reason, or even the primary factor, for the EU's lower fatality rates. The data ICCT cites do not account for significant differences between the U.S. and EU such as in belt usage, drunk driving, rural/urban roads, driving culture, etc.

The structure of the standards reduces/contributes to potential safety risks from mass reduction

Since switching in 2006 to setting attribute-based light truck CAFE standards, NHTSA has emphasized that one of the benefits of a footprint-based standard is that it discourages manufacturers from building smaller, less safe vehicles to achieve CAFE compliance by "balancing out" their larger vehicles, and thus avoids a negative safety consequence of increasing CAFE stringency.[130] Some commenters on the NPRM (Daimler, IIHS, NADA, NRDC, Sierra Club *et al.*) agreed that footprint-based standards would protect against downsizing and help to mitigate safety risks, while others stated that there would still be safety risks even with footprint-based standards—CEI, for example, argued that mass reduction inherently creates safety risks, while IIHS and Porsche expressed concern about footprint-based standards encouraging manufacturers to manipulate wheelbase, which could reduce crush space and worsen vehicle handling. U.S. Steel and AISI both commented that the "aggressive schedule" for the proposed increases in stringency could encourage manufacturers to build smaller, lighter vehicles in order to comply.

Some commenters also focused on the shape and stringency of the target curves and their potential effect on vehicle safety. IIHS agreed with the agencies' tentative decision to cut off the target curves at the small-footprint end. Regarding the safety effect of the curves requiring less stringent targets for larger vehicles, while IIHS stated that increasing footprint is good for safety, CAS, Wenzel, and the UCSB students stated that decreasing footprint may be better for safety in terms of risk to occupants of other vehicles. Daimler, Wenzel, and the University of PA Environmental Law Project commented generally that more similar passenger car and light truck targets at identical footprints (as Wenzel put it, a single target curve) would improve fleet compatibility and thus, safety, by encouraging manufacturers to build more passenger cars instead of light trucks.

Agencies' response: The agencies continue to believe that footprint-based standards help to mitigate potential safety risks from downsizing if the target curves maintain sufficient slope, because, based on NHTSA's analysis, larger-footprint vehicles are safer than smaller-footprint vehicles.[131] The structure of the footprint-based curves will also discourage the upsizing of vehicles. Nevertheless, we recognize that footprint-based standards are not a panacea—NHTSA's analysis continues to show that there was a historical relationship between lower vehicle mass and increased safety risk in passenger cars even if footprint is maintained, and there are ways that manufacturers may increase footprint that either improve or reduce vehicle safety, as indicated by IIHS and Porsche.

With regard to whether the agencies should set separate curves or a single one, NHTSA also notes in Section II.C that EPCA requires NHTSA to establish standards separately for passenger cars and light trucks, and thus concludes that the standards for each fleet should be based on the characteristics of vehicles in each fleet. In other words, the passenger car curve should be based on the characteristics of passenger cars, and the light truck curve should be based on the characteristics of light trucks—thus to the extent that those characteristics are different, an artificially-forced convergence would not accurately reflect those differences. However, such convergence could be appropriate depending on future trends in the light vehicle market, specifically further reduction in the differences between passenger car and light truck characteristics. While that trend was more apparent when car-like 2WD SUVs were classified as light trucks, it seems likely to diminish for the model year vehicles subject to these rules as the truck fleet will be more purely "truck-like" than has been the case in recent years.

NHTSA's estimates are inaccurate because NHTSA could mitigate additional safety risks from mass reduction, if there are any, by simply regulating safety more

Since NHTSA began considering the potential safety risks from mass reduction in response to increased CAFE standards, some commenters have suggested that NHTSA could mitigate those safety risks, if any, by simply regulating more.[132] In response to the safety analysis presented in the NPRM, several commenters stated that NHTSA should develop additional safety regulations to require vehicles to be designed more safely, whether to improve compatibility (Adcock, NY DEC, Public Citizen, UCS), to require seat belt use (CAS, UCS), to improve rollover and roof crush resistance (UCS), or to improve crashworthiness generally by strengthening NCAP and the star rating system (Adcock). Wenzel commented further that "Improvements in safety regulations will have a greater effect on occupant safety than FE standards that are structured to maintain, but may actually increase, vehicle size."

Agencies' response: NHTSA appreciates the commenters' suggestions and notes that the agency is continually striving to improve motor vehicle safety consistent with its mission. As noted above, improving safety in other areas affects the target population that the mass/footprint relationship could affect, but it does not necessarily change the relationship.

The 2010 Kahane analysis discussed in this final rule evaluates the relative safety risk when vehicles are made lighter than they might otherwise be absent the final MYs 2012–2016 standards. It does consider the effect of known safety regulations as they are projected to affect the target population.

Casualty risks range widely for vehicles of the same weight or footprint, which skews regression analysis and makes computer simulation a better predictor of the safety effects of mass reduction

[130] We note that commenters were divided on whether they believed there was a clear correlation between vehicle size/weight and safety (CEI, Congress of Racial Equality, Heritage Foundation, IIHS, Spurgeon, University of PA Environmental Law Project) or whether they believed that the correlation was less clear, for example, because they believed that vehicle design was more important than vehicle mass (CARB, Public Citizen).

[131] *See* Chapter IX of NHTSA's FRIA.

[132] *See, e.g.,* MY 2011 CAFE final rule, 74 FR 14403–05 (Mar. 30, 2009).

Wenzel commented that he had found, in his most recent work, after accounting for drivers and crash location, that there is a wide range in casualty risk for vehicles with the same weight or footprint. Wenzel stated that for drivers, casualty risk does generally decrease as weight or footprint increases, especially for passenger cars, but the degree of variation in the data for vehicles (particularly light trucks) at a given weight or footprint makes it difficult to say that a decrease in weight or footprint will necessarily result in increased casualty risk. In terms of risk imposed on the drivers of other vehicles, Wenzel stated that risk increases as light truck weight or footprint increases.

Wenzel further stated that because a regression analysis can only consider the average trend in the relationship between vehicle weight/size and risk, it must "ignore" vehicles that do not follow that trend. Wenzel therefore recommended that the agency employ computer crash simulations for analyzing the effect of vehicle weight reduction on safety, because they can "pinpoint the effect of specific vehicle designs on safety," and can model future vehicles which do not yet exist and are not bound to analyzing historical data. Wenzel cited, as an example, a DRI simulation study commissioned by the Aluminum Association (Kebschull 2004), which used a computer model to simulate the effect of changing SUV mass or footprint (without changing other attributes of the vehicle) on crash outcomes, and showed a 15 percent net decrease in injuries, while increasing wheelbase by 4.5 inches while maintaining weight showed a 26 percent net decrease in serious injuries.

Agencies' response: The agencies have reviewed Mr. Wenzel's draft report for DOE to which he referred in his comments, but based on NHTSA's work do not find such a wide range of safety risk for vehicles with the same weight, although we agree there is a range of risk for a given footprint. Wenzel found that for drivers, casualty risk does generally decrease as weight or footprint increases, especially for passenger cars, and that in terms of risk imposed on the drivers of other vehicles, risk increases as light truck weight or footprint increases, but concluded that the variation in the data precluded the possibility of drawing any conclusions. In the 2010 Kahane study presented in the FRIA, NHTSA undertook a similar analysis in which it correlated weight to fatality risk for vehicles of essentially the same footprint.[133] The "decile analysis," provided as a check on the trend/direction of NHTSA's regression analysis, shows that societal fatality risk generally increases and rarely decreases for lighter relative to heavier cars of the same footprint. Thus, while Mr. Wenzel was reluctant to draw a conclusion, NHTSA believes that both our research and Mr. Wenzel's appear to point to the same conclusion. We agree that there is a wide range in casualty risk among cars of the same footprint, but we find that that casualty risk is correlated with weight. The correlation shows that heavier cars have lower overall societal fatality rates than lighter cars of very similar footprint.

The agencies agree that simulation can be beneficial in certain circumstances. NHTSA cautions, however, that it is difficult for a simulation analysis to capture the full range of variations in crash situations in the way that a statistical regression analysis does. Vehicle crash dynamics are complex, and small changes in initial crash conditions (such as impact angle or closing speed) can have large effects on injury outcome. This condition is a consequence of variations in the deformation mode of individual components (*e.g.,* buckling, bending, crushing, material failure, etc.) and how those variations affect the creation and destruction of load paths between the impacting object and the occupant compartment during the crash event. It is therefore difficult to predict and assess structural interactions using computational methods when one does not have a detailed, as-built geometric and material model. Even when a complete model is available, prudent engineering assessments require extensive physical testing to verify crash behavior and safety. Despite all this, the agencies recognize that detailed crash simulations can be useful in estimating the relative structural effects of design changes over a limited range of crash conditions, and will continue to evaluate the appropriate use of this tool in the future.

Simplified crash simulations can also be valuable tools, but only when employed as part of a comprehensive analytical program. They are especially valuable in evaluating the relative effect and associated confidence intervals of feasible design alternatives. For example, the method employed by Nusholtz *et al.*[134] could be used by a vehicle designer to estimate the benefit of incremental changes in mass or wheelbase as well as the tradeoffs that might be made between them once that designer has settled on a preliminary design. A key difference between the research by Nusholtz and the research by Kebschull that Mr. Wenzel cited[135] is in their suggested applications. The former is useful in evaluating proposed alternatives early in the design process—Nusholtz specifically warns that the model provides only "general insights into the overall risk * * * and cannot be used to obtain specific response characteristics." Mr. Wenzel implies the latter can "isolate the effect of specific design changes, such as weight reduction" and thus quantify the fleet-wide effect of substantial vehicle redesigns. Yet while Kebschull reports injury reductions to three significant digits, there is no validation that vehicle structures of the proposed weight and stiffness are even feasible with current technology. Thus, while the agencies agree that computer simulations can be useful tools, we also recognize the value of statistical regression analysis for determining fleet-wide effects, because it inherently incorporates real-world factors in historical safety assessments.

DRI's analysis shows that lighter vehicles will save lives, and NHTSA reaches the opposite conclusion without disproving DRI's analysis

The difference between NHTSA's results and DRI's results for the relationship between vehicle mass and vehicle safety has been at the crux of this issue for several years. While NHTSA offered some theories in the NPRM as to why DRI might have found a safety benefit for mass reduction, NHTSA's work since then has enabled it to identify what we believe is the most likely reason for DRI's findings.

[133] Subsections 2.4 and 3.3 of new report.

[134] Nusholtz, G.S., G. Rabbiolo, and Y. Shi, "Estimation of the Effects of Vehicle Size and Mass on Crash-Injury Outcome Through Parameterized Probability Manifolds," Society of Automotive Engineers (2003), Document No. 2003–01–0905. *Available at http://www.sae.org/technical/papers/2003–01–0905* (last accessed Feb. 15, 2010).

[135] Mr. Wenzel cites the report by Kebschull et al. [2004, DRI–TR–04–04–02] as an example of what he regards as the effective use of computer crash simulation. NHTSA does not concur that this analysis represents a viable analytical method for evaluating the fleet-wide tradeoffs between vehicle mass and societal safety. The simulation method employed was not a full finite element representation of each major structural component in the vehicles in question. Instead, an Articulated Total Body (ATB) representation was constructed for each of two representative vehicles. In the ATB model, large structural subsystems were represented by a single ellipsoid. Consolidated load-deflection properties of these subsystems and the joints that tie them together were "calibrated" for an ATB vehicle model by requiring that it reproduce the acceleration pulse of a physical NHTSA crash test. NHTSA notes that vehicle simulation models that are calibrated to a single crash test configuration (*e.g.,* a longitudinal NCAP test into a rigid wall) are often ill-equipped to analyze alternative crash scenarios (*e.g.,* vehicle-to-vehicle crashes at arbitrary angles and lateral offsets).

The potential near multicollinearity of the variables of curb weight, track width, and wheelbase creates some degree of concern that any regression models with those variables could inaccurately calibrate their effects. However, based on its own experience with statistical analysis, NHTSA believes that the specific two-step regression model used by DRI increases this concern, because it weakens relationships between curb weight and dependent variables by splitting the effect of curb weight across the two regression steps.

The comments below are in response to NHTSA's theories in the NPRM about the source of the differences between NHTSA's and DRI's results. The majority of them are answered more fully in the 2010 Kahane report included in NHTSA's FRIA, but we respond to them in this document as well for purposes of completeness.

NHTSA and DRI may have reached different conclusions because NHTSA's study does not distinguish between reductions in size and reductions in weight like DRI's

Several commenters (CARB, CBD, EDF, ICCT, NRDC, and UCS) stated that DRI had been able to separate the effect of size and weight in its analysis, and in so doing proved that there was a safety benefit to reducing weight without reducing size. The commenters suggested that if NHTSA properly distinguished between reductions in size and reductions in weight, it would find the same result as DRI.

Agencies' response: In the 2010 Kahane analysis presented in the FRIA, NHTSA did attempt to separate the effects of vehicle size and weight by performing regression analyses with footprint (or alternatively track width and wheelbase) and curb weight as separate independent variables. For passenger cars, NHTSA found that the regressions attribute the fatality increase due to downsizing about equally to mass and footprint—that is, the effect of reducing mass alone is about half the effect of reducing mass *and* reducing footprint. Unlike DRI's results, NHTSA's regressions for passenger cars and for lighter LTVs did not find a safety benefit to reducing weight without reducing size; while NHTSA did find a safety benefit for reducing weight in the heaviest LTVs, the magnitude of the benefit as compared to DRI's was significantly smaller. NHTSA believes that these differences in results may be an artifact of DRI's two-step regression model, as explained above.

NHTSA and DRI may have reached different conclusions because NHTSA's study does not include two-door cars like DRI's

One of NHTSA's primary theories in the NPRM as to why NHTSA and DRI's results differed related to DRI's inclusion in its analysis of 2-door cars. NHTSA had excluded those vehicles from its analysis on the grounds that 2-door cars had a disproportionate crash rate (perhaps due to their inclusion of muscle and sports cars) which appeared likely to skew the regression. Several commenters argued that NHTSA should have included 2-door cars in its analysis. DRI and James Adcock stated that 2-door cars should not be excluded because they represent a significant portion of the light-duty fleet, while CARB and ICCT stated that because DRI found safety benefits whether 2-door cars were included or not, NHTSA should include 2-door cars in its analysis. Wenzel also commented that NHTSA should include 2-door cars in subsequent analyses, stating that while his analysis of MY 2000–2004 crash data from 5 states indicates that, in general, 4-door cars tend to have lower fatality risk than 2-door cars, the risk is even lower when he accounts for driver age/gender and crash location. Wenzel suggested that the increased fatality risk in the 2-door car population seemed primarily attributable to the sports cars, and that that was not sufficient grounds to exclude all 2-door cars from NHTSA's analysis.

Agencies' response: The agencies agree that 2-door cars can be included in the analysis, and NHTSA retracts previous statements that DRI's inclusion of them was incorrect. In its 2010 analysis, NHTSA finds that it makes little difference to the results whether 2-door cars are included, partially included, or excluded from the analysis. Thus, analyses of 2-door and 4-door cars combined, as well as other combinations, have been included in the analysis. That said, no combination of 2-door and 4-door cars resulted in NHTSA's finding a safety benefit for passenger cars due to mass reduction.

NHTSA and DRI may have reached different conclusions due to different assumptions

DRI commented that the differences found between its study and NHTSA's may be due to the different assumptions about the linearity of the curb weight effect and control variable for driver age, vehicle age, road conditions, and other factors. NHTSA's analysis was based on a two-piece linear model for curb weight with two different weight groups (less than 2,950 lbs., and greater than or equal to 2.950 lbs). The DRI analysis assumed a linear model for curb weight with a single weight group. Additionally, DRI stated that NHTSA's use of eight control variables (rather than three control variables like DRI used) for driver age introduces additional degrees of freedom into the regressions, which it suggested may be correlated with the curb weight, wheelbase, and track width, and/or other control variables. DRI suggested that this may also affect the results and cause or contribute to the differences in outcomes between NHTSA and DRI.

Agencies' response: NHTSA's FRIA documents that NHTSA analyzed its database using both a single parameter for weight (a linear model) and two parameters for weight (a two-piece linear model). In both cases, the logistic regression responded identically, allocating the same way between weight, wheelbase, track width, or footprint.[136] Thus, NHTSA does not believe that the differences between its results and DRI's results are due to whether the studies used a single weight group or two weight groups.

The FRIA also documents that NHTSA examined NHTSA's use of eight control variables for driver age (ages 14–30, 30–50, 50–70, 70+ for males and females separately, versus DRI's use of three control variables for age (FEMALE = 1 for females, 0 for males, YOUNGDRV = 35–AGE for drivers under 35, 0 for all others, OLDMAN = AGE–50 for males over 50, 0 for all others; OLDWOMAN = AGE–45 for females over 45, 0 for all others) to see if that affected the results. NHTSA ran its analysis using the eight control variables and again using three control variables for age, and obtained similar results each time.[137] Thus, NHTSA does not believe that the differences between its results and DRI's results are due to the number of control variables used for driver age.

NHTSA's and DRI's conclusions may be similar if confidence intervals are taken into account

DRI commented that NHTSA has not reported confidence intervals, while DRI has reported them in its studies. Thus, DRI argued, it is not possible to determine whether the confidence intervals overlap and whether the differences between NHTSA's and DRI's analyses are statistically significant.

Agencies' response: NHTSA has included confidence intervals for the main results of the 2010 Kahane analysis, as shown in Chapter IX of NHTSA's FRIA. For passenger cars, the NHTSA results are a statistically

[136] Subsections 2.2 and 2.3 of new report.

[137] *Id.*

significant increase in fatalities with a 100 pound reduction while maintaining track width and wheelbase (or footprint); the DRI results are a statistically significant decrease in fatalities with a 100 pound reduction while maintaining track width and wheelbase. The DRI results are thus outside the confidence bounds of the NHTSA results and do not overlap.

NHTSA should include a "best-case" estimate in its study

Several commenters (Center for Auto Safety, NRDC, Public Citizen, Sierra Club *et al.,* and Wenzel) urged NHTSA to include a "best-case" estimate in the final rule, showing scenarios in which lives were saved rather than lost. Public Citizen stated that there would be safety benefits to reducing the weight of the heaviest vehicles while leaving the weight of the lighter vehicles unchanged, and that increasing the number of smaller vehicles would provide safety benefits to pedestrians, bicyclists, and motorcyclists. Sierra Club *et al.* stated that new materials, smart design, and lighter, more advanced engines can all improve fuel economy while maintaining or increasing vehicle safety. Both Center for Auto Safety and Sierra Club argued that the agency should have presented a "best-case" scenario to balance out the "worst-case" scenario presented in the NPRM, especially if NHTSA itself believed that the worst-case scenario was not inevitable. NRDC requested that NHTSA present both a "best-case" and a "most likely" scenario. Wenzel simply stated that NHTSA did not present a "best-case" scenario, despite DRI's finding in 2005 that fatalities would be reduced if track width was held constant.

Agencies' response: NHTSA has included an "upper estimate" and a "lower estimate" in the new 2010 Kahane analysis. The lower estimate assumes that mass reduction will be accomplished entirely by material substitution or other techniques that do not perceptibly change a vehicle's shape, structural strength, or ride quality. The lower estimate examines specific crash modes and is meant to reflect the increase in fatalities for the specific crash modes in which a reduction in mass *per se* in the case vehicle would result in a reduction in safety: namely, collisions with larger vehicles not covered by the regulations (*e.g.,* trucks with a GVWR over 10,000 lbs), collisions with partially-movable objects (*e.g.,* some trees, poles, parked cars, etc.), and collisions of cars or light LTVs with heavier LTVs—as well as the specific crash modes where a reduction in mass *per se* in the case vehicle would benefit safety: namely, collisions of heavy LTVs with cars or lighter LTVs. NHTSA believes that this is the effect of mass *per se, i.e.,* the effects of reduced mass will generally persist in these crashes regardless of how the mass is reduced. The lower estimate attempts to quantify that scenario, although any such estimate is hypothetical and subject to considerable uncertainty. NHTSA believes that a "most likely" scenario cannot be determined with any certainty, and would depend entirely upon agency assumptions about how manufacturers intend to reduce mass in their vehicles. While we can speculate upon the potential effects of different methods of mass reduction, we cannot predict with certainty what manufacturers will ultimately do.

NHTSA should not include a "worst-case" estimate in its study

NRDC, Public Citizen and Sierra Club *et al.* commented that NHTSA should remove the "worst-case scenario" estimate from the rulemaking, generally because it was based on an analysis that evaluated historical vehicles, and future vehicles would be sufficiently different to render the "worst-case scenario" inapplicable.

Agencies' response: NHTSA stated in the NPRM that the "worst-case scenario" addressed the effect of a kind of downsizing (*i.e.,* mass reduction accompanied by footprint reduction) that was not likely to be a consequence of attribute-based CAFE standards, and that the agency would refine its analysis of such a scenario for the final rule. NHTSA has not used the "worst-case scenario" in the final rule. Instead, we present three scenarios: the first is an estimate based directly on the regression coefficients of weight reduction *while maintaining footprint* in the statistical analyses of historical data. As discussed above, presenting this scenario is possible because NHTSA attempted to separate the effects of weight and footprint reduction in the new analysis. However, even the new analysis of LTVs produced some coefficients that NHTSA did not consider entirely plausible. NHTSA also presents an "upper estimate" in which those coefficients for the LTVs were adjusted based on additional analyses and expert opinion as a safety agency and a "lower estimate," which estimates the effect if mass reduction is accomplished entirely by safety-conscious technologies such as material substitution.

3. How has NHTSA refined its analysis for purposes of estimating the potential safety effects of this Final Rule?

During the past months, NHTSA has extensively reviewed the literature on vehicle mass, size, and fatality risk. NHTSA now agrees with DRI and other commenters that it is essential to analyze the effect of mass independently from the effects of size parameters such as wheelbase, track width, or footprint—and that the NPRM's "worst-case" scenario based on downsizing (in which weight, wheelbase, and track width could all be changed) is not useful for that purpose. The agency should instead provide estimates that better reflect the more likely effect of the regulation—estimating the effect of mass reduction that maintains footprint.

Yet it is more difficult to analyze multiple, independent parameters than a single parameter (*e.g.,* curb weight), because there is a potential concern that the near multicollinearity of the parameters—the strong, natural and historical correlation of mass and size—can lead to inaccurate statistical estimates of their effects.[138] NHTSA has performed new statistical analyses of its historical database of passenger cars, light trucks, and vans (LTVs) from its 2003 report (now including also 2-door cars), assessing relationships between fatality risk, mass, and footprint. They are described in Subsections 2.2 (cars) and 3.2 (LTVs) of the 2010 Kahane report presented in Chapter IX of the FRIA. While the potential concerns associated with near multicollinearity are inherent in regression analyses with multiple size/mass parameters, NHTSA believes that the analysis approach in the 2010 Kahane report, namely a single-step regression analysis, generally reduces those concerns[139] and models the trends in the historical data. The results differ substantially from DRI's, based on a two-step regression analysis. Subsections 2.3 and 2.4 of the 2010

[138] Greene, W. H. (1993). *Econometric Analysis,* Second Edition. New York: Macmillan Publishing Company, pp. 266–268; Allison, P.D. (1999), *Logistic Regression Using the SAS System.* Cary, NC: SAS Institute Inc., pp. 48–51. The report shows variance inflation factor (VIF) scores in the 5–7 range for curb weight, wheelbase, and track width (or, alternatively, curb weight and footprint) in NHTSA's database, exceeding the 2.5 level where near multicollinearity begins to become a concern in logistic regression analyses.

[139] NHTSA believes that, given the near multicollinearity of the independent variables, the two-step regression augments the possibility of estimating inaccurate coefficients for curb weight, because it weakens relationships between curb weight and dependent variables by splitting the effect of curb weight across the two regression steps as discussed further in Subsection 2.3 of NHTSA's report.

Kahane report attempt to account for the differences primarily by applying selected techniques from DRI's analyses to NHTSA's database.

The statistical analyses—logistic regressions—of trends in MYs 1991–1999 vehicles generate one set of estimates of the possible effects of reducing mass by 100 pounds while maintaining footprint. While these effects might conceivably carry over to future mass reductions, there are two reasons that future safety effects of mass reduction could differ from projections from historical data:

- The statistical analyses are "cross-sectional" analyses that estimate the increase in fatality rates for vehicles weighing n-100 pounds relative to vehicles weighing n pounds, across the spectrum of vehicles on the road, from the lightest to the heaviest. They do not directly compare the fatality rates for a specific make and model before and after a 100-pound reduction from that model. Instead, they use the differences across makes and models as a surrogate for the effects of actual reductions within a specific model; those cross-sectional differences could include trends that are statistically, but not causally related to mass.
- The manner in which mass changed across MY 1991–1999 vehicles might not be consistent with future mass reductions, due to the availability of newer materials and design methods.

Therefore, Subsections 2.5 and 3.4 of the 2010 Kahane report supplement those estimates with one or more scenarios in which some of the logistic regression coefficients are replaced by numbers based on additional analyses and NHTSA's judgment of the likely effect of mass *per se* (the ability to transfer momentum to other vehicles or objects in a collision) and of what trends in the historical data could be avoided by current mass-reduction technologies such as materials substitution. The various scenarios may be viewed as a plausible range of point estimates for the effects of mass reduction while maintaining footprint, but they should not be construed as upper and lower bounds. Furthermore, being point estimates, they are themselves subject to uncertainties, such as, for example, the sampling errors associated with statistical analyses.

The principal findings and conclusions of the 2010 Kahane report are as follows:

Passenger cars: This database with the one-step regression method of the 2003 Kahane report estimates an increase of 700–800 fatalities when curb weight is reduced by 100 pounds *and* footprint is reduced by 0.65 square feet (the historic average footprint reduction per 100-pound mass reduction in cars). The regression attributes the fatality increase *about equally to curb weight and to footprint.* The results are approximately the same whether 2-door cars are fully included or partially included in the analysis or whether only 4-door cars are included (as in the 2003 report). Regressions by curb weight, track width and wheelbase produce findings quite similar to the regressions by curb weight and footprint, but the results with the single "size" variable, footprint, rather than the two variables, track width and wheelbase vary even less with the inclusion or exclusion of 2-door cars.

In Subsection 2.3 of the new report, a two-step regression method that resembles (without exactly replicating) the approach by DRI, *when applied to the same (NHTSA's) crash and registration data,* estimates a large *benefit* when mass is reduced, offset by even larger fatality increases when track width and wheelbase (or footprint) are reduced. NHTSA believes that the benefit estimated by this method is inaccurate, due to the potential concerns with the near multicollinearity of the parameters (curb weight, track width, and wheelbase) [140] even though the analysis is theoretically unbiased.[141] Almost any analysis incorporating those parameters has a possibility of inaccurate coefficients due to near multicollinearity; however, based on our own experience with other regression analyses of crash data, NHTSA believes a DRI-type two-step method augments the possibility of estimating inaccurate coefficients for curb weight, because it weakens relationships between curb weight and dependent variables by splitting the effect of curb weight across the two regression steps.

In Subsection 2.4 of the new report, as a check on the results from the regression methods, NHTSA also performed what we refer to as "decile" analyses: Simpler, tabular data analysis that compares fatality rates of cars of different mass but similar footprint. Decile analysis is not a precise tool because it does not control for confounding factors such as driver age/gender or the specific type of car, but it may be helpful in identifying the general directional trend in the data when footprint is held constant and curb weight varies. The decile analyses show that fatality risk in MY 1991–1999 cars generally increased and rarely decreased for lighter relative to heavier cars *of the same footprint.* They suggest that the historical, cross-sectional trend was generally in the lighter ↔ more fatalities direction and not in the opposite direction, as might be suggested by the regression coefficients from the method that resembles DRI's approach.

The regression coefficients from NHTSA's one-step method suggest that mass and footprint each accounted for about half the fatality increase associated with downsizing in a cross-sectional analysis of 1991–1999 cars. They estimate the historical difference in *societal* fatality rates (*i.e.,* including fatalities to occupants of all the vehicles involved in the collisions, plus any pedestrians) of cars of different curb weights but the same footprint. They may be considered an "upper-estimate scenario" of the effect of future mass reduction—if it were accomplished in a manner that resembled the historical cross-sectional trend—*i.e.,* without any particular regard for safety (other than not to reduce footprint).

However, NHTSA believes that future vehicle design is likely to take advantage of safety-conscious technologies such as materials substitution that can reduce mass without perceptibly changing a car's shape or ride and maintain its structural strength. This could avoid much of the risk associated with lighter and smaller vehicles in the historical analyses, especially the historical trend toward higher crash-involvement rates for lighter and smaller vehicles.[142] It could thereby shrink the added risk close to just the effects of mass *per se* (the ability to transfer momentum to other vehicles or objects in a collision). Subsection 2.5 of the 2010 Kahane report attempts to quantify a "lower-estimate scenario" for the potential effect of mass reduction achieved by safety-conscious technologies; the estimated effects are substantially smaller than in the upper-

[140] As evidenced by VIF scores in the 5–7 range, exceeding the 2.5 level where near multicollinearity begins to become a concern in logistic regression analyses.

[141] Subsection 2.3 of the 2010 Kahane report attempts to explain why the two-step method, when applied to NHTSA's 2003 database, produces results a lot like DRI's, but it does not claim that DRI obtained its results from its own database for exactly those reasons. NHTSA did not analyze DRI's database. The two-step method is "theoretically unbiased" in the sense that it seeks to estimate the same parameters as the one-step analysis.

[142] This is discussed in greater depth in Subsections 2.1 and 2.5 of the 2010 Kahane report. The historic trend toward higher crash-involvement rates for lighter and smaller vehicles is documented in IIHS Advisory No. 5, July 1988, *http://www.iihs.org/research/advisories/iihs_advisory_5.pdf*; IIHS News Release, February 24, 1998, *http://www.iihs.org/news/1998/iihs_news_022498.pdf*; Auto Insurance Loss Facts, September 2009, *http://www.iihs.org/research/hldi/fact_sheets/CollisionLoss_0909.pdf.*

estimate scenario based directly on the regression results.

We note, again, that the preceding paragraph is conditional. Nothing in the CAFE standard requires manufacturers to use material substitution or, more generally, take a safety-conscious approach to mass reduction.[143] Federal Motor Vehicle Safety Standards include performance tests that verify historical improvements in structural strength and crashworthiness, but few FMVSS provide test information that sheds light about how a vehicle rides or otherwise helps explain the trend toward higher crash-involvement rates for lighter and smaller vehicles. It is possible that using material substitution and other current mass reduction methods could avoid the historical trend in this area, but that remains to be studied as manufacturers introduce more of these vehicles into the on-road fleet in coming years. A detailed discussion of methods currently used for reducing the mass of passenger cars and light trucks is included in Chapter 3 of the Technical Support Document.

LTVs: The principal difference between LTVs and passenger cars is that mass reduction in the heavier LTVs is estimated to have significant societal benefits, in that it reduces the fatality risk for the occupants of cars and light LTVs that collide with the heavier LTVs. By contrast, footprint (size) reduction in LTVs has a harmful effect (for the LTVs' own occupants), as in cars. The regression method of the 2003 Kahane report applied to the database of that report estimates a societal increase of 231 fatalities when curb weight is reduced by 100 pounds *and* footprint is reduced by 0.975 square feet (the historic average footprint reduction per 100-pound mass reduction in LTVs). But the regressions attribute an overall *reduction* of 266 fatalities to the 100-pound mass reduction and an increase of 497 fatalities to the .975-square-foot footprint reduction. The regression results constitute one of the scenarios for the possible societal effects of future mass reduction in LTVs.

However, NHTSA cautions that some of the regression coefficients, even by NHTSA's preferred method, might not accurately model the historical trend in the data, possibly due to near multicollinearity of curb weight and footprint or because of the interaction of both of these variables with LTV type.[144] Based on supplementary analyses and discussion in Subsections 3.3 and 3.4, the new report defines an additional upper-estimate scenario that NHTSA believes may more accurately reflect the historical trend in the data and a lower-estimate scenario that may come closer to the effects of mass *per se.* All three scenarios, however, attribute a societal fatality reduction to mass reduction in the heavier LTVs.

Overall effects of mass reduction while maintaining footprint in cars and LTVs: The immediate purpose of the new report's analyses of relationships between fatality risk, mass, and footprint is to develop the four parameters that the Volpe model needs in order to predict the safety effects, if any, of the modeled mass reductions in MYs 2012–2016 cars and LTVs over the lifetime of those vehicles. The four numbers are the overall percentage increases or decreases, per 100-pound mass reduction while holding footprint constant, in crash fatalities involving: (1) Cars < 2,950 pounds (which was the median curb weight of cars in MY 1991–1999), (2) cars ≥ 2,950 pounds, (3) LTVs < 3,870 pounds (which was the median curb weight of LTVs in those model years), and (4) LTVs ≥ 3,870 pounds. Here are the percentage effects for each of the three alternative scenarios, again, the "upper-estimate scenario" and the "lower-estimate scenario" have been developed based on NHTSA's expert opinion as a vehicle safety agency:

FATALITY INCREASE PER 100-POUND REDUCTION (%) [145]

	Actual regression result scenario	NHTSA expert opinion upper-estimate scenario [146]	NHTSA expert opinion lower-estimate scenario
Cars < 2,950 pounds	2.21	2.21	1.02
Cars ≥ 2,950 pounds	0.90	0.90	0.44
LTVs < 3,870 pounds	0.17	0.55	0.41
LTVs ≥ 3,870 pounds	−1.90	−0.62	−0.73

In all three scenarios, the estimated effects of a 100-pound mass reduction while maintaining footprint are an increase in fatalities in cars < 2,950 pounds, substantially smaller increases in cars ≥ 2,950 pounds and LTVs < 3,870 pounds, and a societal benefit for LTVs ≥ 3,870 pounds (because it reduces fatality risk to occupants of cars and lighter LTVs they collide with). These are the estimated effects of reducing each vehicle by exactly 100pounds. However, the actual mass reduction will vary by make, model, and year. The aggregate effect on fatalities can only be estimated by attempting to forecast, as NHTSA has using inputs to the Volpe model, the mass reductions by make and model. It should be noted, however, that a 100-pound reduction would be 5 percent of the mass of a 2000-pound car but only 2 percent of a 5000-pound LTV. Thus, a forecast that mass will decrease by an equal or greater percentage in the heavier vehicles than in the lightest cars would be proportionately more influenced by the benefit for mass reduction in the heavy LTVs than by the fatality increases in the other groups; it is likely to result in an estimated net benefit under one or more of the scenarios. It should also be noted, again, that the

[143] Footprint-based standards do not specify how or where to remove mass while maintaining footprint, nor do they categorically forbid footprint reductions, even if they discourage them.

[144] For example, mid-size SUVs of the 1990s typically had high mass relative to their short wheelbase and footprint (and exceptionally high rates of fatal rollovers); minivans typically have low mass relative to their footprint (and low fatality rates); heavy-duty pickup trucks used extensively for work tend to have more mass, for the same footprint, as basic full-sized pickup trucks that are more often used for personal transportation.

[145] Reducing mass by 100 pounds in these vehicles is estimated to have the listed percentage effect on fatalities in crashes involving these vehicles. For example, if these vehicles are involved in crashes that result in 10,000 fatalities, 2.21 means that if mass is reduced by 100 pounds, fatalities will increase to 10,221 and −0.73 means fatalities will decrease to 9,927. In the scenario based on actual regression results, the 1.96-sigma sampling errors in the above estimates are ±0.91 percentage points for cars < 2,950 pounds and also for cars ≥ 2,950 pounds, ±0.82 percentage points for LTVs < 3,870 pounds, and ±1.18 percentage points for LTVs ≥ 3,870 pounds. In other words, the fatality increase in the cars < 2,950 pounds and the societal fatality reduction attributed to mass reduction in the LTVs ≥ 3,870 pounds are statistically significant. The sampling errors associated with the scenario based on actual regression results perhaps also indicate the general level of statistical noise in the other two scenarios.

[146] For passenger cars, the upper-estimate scenario *is* the actual-regression-result scenario.

three scenarios are point estimates and are subject to uncertainties, such as the sampling errors associated with the regression results. In the scenario based on actual regression results, the 1.96-sigma sampling errors in the above estimates are ± 0.91 percentage points for cars < 2,950 pounds and also for cars ≥ 2,950 pounds, ± 0.82 percentage points for LTVs < 3,870 pounds, and ± 1.18 percentage points for LTVs ≥ 3,870 pounds. In other words, the fatality increase in the cars < 2,950 pounds and the societal fatality reduction attributed to mass reduction in the LTVs ≥ 3,870 pounds are statistically significant. The sampling errors associated with the scenario based on actual regression results perhaps also indicate the general level of statistical noise in the other two scenarios.

4. What are the estimated safety effects of this Final Rule?

The table below shows the estimated safety effects of the modeled reduction in vehicle mass provided in the NPRM and in this final rule in order to meet the MYs 2012–2016 standards, based on the analysis described briefly above and in much more detail in Chapter IX of the FRIA. These are combined results for passenger cars and light trucks. A positive number is an estimated increase in fatalities and a negative number (shown in parentheses) is an estimated reduction in fatalities over the lifetime of the model year vehicles compared to the MY 2011 baseline fleet.

	MY 2012	MY 2013	MY 2014	MY 2015	MY 2016
NPRM "Worst Case"	34	54	194	313	493
NHTSA Expert Opinion Final Rule Upper Estimate	9	14	26	24	22
NHTSA Expert Opinion Final Rule Lower Estimate	2	4	(17)	(53)	(80)
Actual Regression Result Scenario	0	2	(94)	(206)	(301)

NHTSA emphasizes that the table above is based on the NHTSA's assumptions about how manufacturers might choose to reduce the mass of their vehicles in response to the final rule, which are very similar to EPA's assumptions. In general, as discussed above, the agencies assume that mass will be reduced by as much as 10 percent in the heaviest LTVs but only by as much as 5 percent in other vehicles and that substantial mass reductions will take place only in the year that models are redesigned. The actual mass reduction that is likely to occur in response to the standards will of course vary by make and model, depending on each manufacturer's particular approach, with likely more opportunity for the largest LTVs that still use separate frame construction.

The "upper estimate" presented above, as discussed in the FRIA, assumes only that manufacturers will reduce vehicle mass without reducing footprint. Thus, under such a scenario, safety effects could be somewhat adverse if, for example, manufacturers chose to reduce crush space associated with vehicle overhang as a way of reducing mass without changing footprint. The "lower estimate," in turn, is based on the assumption that manufacturers will reduce vehicle mass solely through methods like material substitution, which (under these assumptions) fully maintain not only footprint but also all structural integrity, and other aspects of vehicle safety. Under these scenarios, safety effects could be worse if mass reduction was not undertaken thoughtfully to maintain existing safety levels, but could also be better if it was undertaken with a thorough and extensive vehicle redesign to maximize both mass reduction and safety.

And finally, while NHTSA does not believe that the "worst-case" scenario presented in the NPRM is likely to occur during the MYs 2012–2016 timeframe, we cannot guarantee that manufacturers will never choose to reduce vehicle footprint, particularly if market forces lead to increased sales of small vehicles in response to sharp increases in the price of petroleum, though this situation would not be in direct response to the CAFE/GHG standards. Thus, we cannot completely reject the worst-case scenario for all vehicles, although we can and do recognize that the footprint-based standards will significantly limit the likelihood of its occurrence within the context of this rulemaking.

In summary, the agencies recognize the balancing inherent in achieving higher levels of fuel economy and lower levels of CO_2 emissions through reduction of vehicle mass. Based on the 2010 Kahane analysis that attempts to separate the effects of mass reductions and footprint reductions, and to account better for the possibility that mass reduction will be accomplished entirely through methods that preserves structural strength and vehicle safety, the agencies now believe that the likely deleterious safety effects of the MYs 2012–2016 standards may be much lower than originally estimated. They may be close to zero, or possibly beneficial if mass reduction is carefully undertaken in the future and if the mass reduction in the heavier LTVs is greater (in absolute terms) than in passenger cars. In light of these findings, we believe that the balancing is reasonable.

5. How do the agencies plan to address this issue going forward?

NHTSA and EPA believe that it is important for the agencies to conduct further study and research into the interaction of mass, size and safety to assist future rulemakings. The agencies intend to begin working collaboratively and to explore with DOE, CARB, and perhaps other stakeholders an interagency/intergovernmental working group to evaluate all aspects of mass, size and safety. It would also be the goal of this team to coordinate government supported studies and independent research, to the extent possible, to help ensure the work is complementary to previous and ongoing research and to guide further research in this area. DOE's EERE office has long funded extensive research into component advanced vehicle materials and vehicle mass reduction. Other agencies may have additional expertise that will be helpful in establishing a coordinated work plan. The agencies are interested in looking at the weight-safety relationship in a more holistic (complete vehicle) way, and thanks to this CAFE rulemaking NHTSA has begun to bring together parts of the agency—crashworthiness, and crash avoidance rulemaking offices and the agency's Research & Development office—in an interdisciplinary way to better leverage the expertise of the agency. Extending this effort to other agencies will help to ensure that all aspects of the weight-safety relationship are considered completely and carefully with our future research. The agencies also intend to carefully consider comments received in response to the NPRM in developing plans for future studies and research and to solicit input from stakeholders.

The agencies also plan to watch for safety effects as the U.S. light-duty vehicle fleet evolves in response both to the CAFE/GHG standards and to consumer preferences over the next several years. Additionally, as new and

advanced materials and component smart designs are developed and commercialized, and as manufacturers implement them in more vehicles, it will be useful for the agencies to learn more about them and to try to track these vehicles in the fleet to understand the relationship between vehicle design and injury/fatality data. Specifically, the agencies intend to follow up with study and research of the following:

First, NHTSA is in the process of contracting with an independent institution to review the statistical methods that NHTSA and DRI have used to analyze historical data related to mass, size and safety, and to provide recommendation on whether the existing methods or other methods should be used for future statistical analysis of historical data. This study will include a consideration of potential near multicollinearity in the historical data and how best to address it in a regression analysis. This study is being initiated because, in response to the NPRM, NHTSA received a number of comments related to the methodology NHTSA used for the NPRM to determine the relationship between mass and safety, as discussed in detail above.

Second, NHTSA and EPA, in consultation with DOE, intend to begin updating the MYs 1991–1999 database on which the safety analyses in the NPRM and final rule are based with newer vehicle data in the next several months. This task will take at least a year to complete. This study is being initiated in response to the NPRM comments related to the use of data from MYs 1991–1999 in the NHTSA analysis, as discussed in detail above.

Third, in order to assess if the design of recent model year vehicles that incorporate various mass reduction methods affect the relationships among vehicle mass, size and safety, NHTSA and EPA intend to conduct collaborative statistical analysis, beginning in the next several months. The agencies intend to work with DOE to identify vehicles that are using material substitution and smart design. After these vehicles are identified, the agencies intend to assess if there are sufficient data for statistical analysis. If there are sufficient data, statistical analysis would be conducted to compare the relationship among mass, size and safety of these smart design vehicles to vehicles of similar size and mass with more traditional designs. This study is being initiated because, in response to the NPRM, NHTSA received comments related to the use of data from MYs 1991–1999 in the NHTSA analysis that did not include new designs that might change the relationship among mass, size and safety, as discussed in detail above.

NHTSA may initiate a two-year study of the safety of the fleet through an analysis of the trends in structural stiffness and whether any trends identified impact occupant injury response in crashes. Vehicle manufacturers may employ stiffer light weight materials to limit occupant compartment intrusion while controlling for mass that may expose the occupants to higher accelerations resulting in a greater chance of injury in real-world crashes. This study would provide information that would increase the understanding of the effects on safety of newer vehicle designs.

In addition, NHTSA and EPA, possibly in collaboration with DOE, may conduct a longer-term computer modeling-based design and analysis study to help determine the maximum potential for mass reduction in the MYs 2017–2021 timeframe, through direct material substitution and smart design while meeting safety regulations and guidelines, and maintaining vehicle size and functionality. This study may build upon prior research completed on vehicle mass reduction. This study would further explore the comprehensive vehicle effects, including dissimilar material joining technologies, manufacturer feasibility of both supplier and OEM, tooling costs, and crash simulation and perhaps eventual crash testing.

III. EPA Greenhouse Gas Vehicle Standards

A. Executive Overview of EPA Rule

1. Introduction

The Environmental Protection Agency (EPA) is establishing GHG emissions standards for the largest sources of transportation GHGs—light-duty vehicles, light-duty trucks, and medium-duty passenger vehicles (hereafter light vehicles). These vehicle categories, which include cars, sport utility vehicles, minivans, and pickup trucks used for personal transportation, are responsible for almost 60% of all U.S. transportation related emissions of the six gases discussed above (Section I.A). This action represents the first-ever EPA rule to regulate vehicle GHG emissions under the Clean Air Act (CAA) and will establish standards for model years 2012–2016 and later light vehicles sold in the United States.

EPA is adopting three separate standards. The first and most important is a set of fleet-wide average carbon dioxide (CO_2) emission standards for cars and trucks. These standards are CO_2 emissions-footprint curves, where each vehicle has a different CO_2 emissions compliance target depending on its footprint value. Vehicle CO_2 emissions will be measured over the EPA city and highway tests. The rule allows for credits based on demonstrated improvements in vehicle air conditioner systems, including both efficiency and refrigerant leakage improvement, which are not captured by the EPA tests. The EPA projects that the average light vehicle tailpipe CO_2 level in model year 2011 will be 325 grams per mile while the average vehicle fleetwide average CO_2 emissions compliance level for the model year 2016 standard will be 250 grams per mile, an average reduction of 23 percent from today's CO_2 levels.

EPA is also finalizing standards that will cap tailpipe nitrous oxide (N_2O) and methane (CH_4) emissions at 0.010 and 0.030 grams per mile, respectively. Even after adjusting for the higher relative global warming potencies of these two compounds, nitrous oxide and methane emissions represent less than one percent of overall vehicle greenhouse gas emissions from new vehicles. Accordingly, the goal of these two standards is to limit any potential increases of tailpipe emissions of these compounds in the future but not to force reductions relative to today's low levels.

This final rule responds to the Supreme Court's 2007 decision in *Massachusetts* v. *EPA* [147] which found that greenhouse gases fit within the definition of air pollutant in the Clean Air Act. The Court held that the Administrator must determine whether or not emissions from new motor vehicles cause or contribute to air pollution which may reasonably be anticipated to endanger public health or welfare, or whether the science is too uncertain to make a reasoned decision. The Court further ruled that, in making these decisions, the EPA Administrator is required to follow the language of section 202(a) of the CAA. The case was remanded back to the Agency for reconsideration in light of the court's decision.

The Administrator has responded to the remand by issuing two findings under section 202(a) of the Clean Air

[147] 549 U.S.C. 497 (2007). For further information on *Massachusetts* v. *EPA* see the Endangerment and Cause or Contribute Findings for Greenhouse Gases under Section 202(a) the Clean Air Act, published in the Federal Register on December 15, 2009 (74 FR 66496). There is a comprehensive discussion of the litigation's history, the Supreme Court's findings, and subsequent actions undertaken by the Bush Administration and the EPA from 2007–2008 in response to the Supreme Court remand. This information is also available at: *http://www.epa.gov/climatechange/endangerment.html.*

Act.[148] First, the Administrator found that the science supports a positive endangerment finding that the mix of six greenhouse gases (carbon dioxide (CO_2), methane (CH_4), nitrous oxide (N_2O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF_6)) in the atmosphere endangers the public health and welfare of current and future generations. This is referred to as the endangerment finding. Second, the Administrator found that the combined emissions of the same six gases from new motor vehicles and new motor vehicle engines contribute to the atmospheric concentrations of these key greenhouse gases and hence to the threat of climate change. This is referred to as the cause and contribute finding. Motor vehicles and new motor vehicle engines emit carbon dioxide, methane, nitrous oxide, and hydrofluorocarbons. EPA provides more details below on the legal and scientific bases for this final rule.

As discussed in Section I, this GHG rule is part of a joint National Program such that a large majority of the projected benefits are achieved jointly with NHTSA's CAFE rule which is described in detail in Section IV of this preamble. EPA projects total CO_2 equivalent emissions savings of approximately 960 million metric tons as a result of the rule, and oil savings of 1.8 billion barrels over the lifetimes of the MY 2012–2016 vehicles subject to the rule. EPA projects that over the lifetimes of the MY 2012–2016 vehicles, the rule will cost $52 billion but will result in benefits of $240 billion at a 3 percent discount rate, or $192 billion at a 7 percent discount rate (both values assume the average SCC value at 3%, *i.e.,* the $21/ton SCC value in 2010). Accordingly, these light vehicle greenhouse gas emissions standards represent an important contribution under the Clean Air Act toward meeting long-term greenhouse gas emissions and import oil reduction goals, while providing important economic benefits as well. The results of our analysis of 2012–2016 MY vehicles, which we refer to as our "model year analysis," are summarized in Tables III.H.10–4 to III.H.10–7.

We have also looked beyond the lifetimes of 2012–2016 MY vehicles at annual costs and benefits of the program for the 2012 through 2050 timeframe. We refer to this as our "calendar year" analysis (as opposed to the costs and benefits mentioned above which we refer to as our "model year analysis"). In our calendar year analysis, the new 2016 MY standards are assumed to apply to all vehicles sold in model years 2017 and later. The net present values of annual costs for the 2012 through 2050 timeframe are $346 billion for new vehicle technology which will provide $1.5 billion in fuel savings, both values at a 3 percent discount rate. At a 7 percent discount rate over the same period, the technology costs are estimated at $192 billion which will provide $673 billion in fuel savings. The social benefits during the 2012 through 2050 timeframe are estimated at $454 billion and $305 billion at a 3 and 7 percent discount rate, respectively. Both of these benefit estimates assume the average SCC value at 3% (*i.e.,* the $21/ton SCC value in 2010). The net benefits during this time period are then $1.7 billion and $785 million at a 3 and 7 percent discount rate, respectively. The results of our "calendar year" analysis are summarized in Tables III.H 10–1 to III.H.10–3.

2. Why is EPA establishing this Rule?

This rule addresses only light vehicles. EPA is addressing light vehicles as a first step in control of greenhouse gas emissions under the Clean Air Act for four reasons. First, light vehicles are responsible for almost 60% of all mobile source GHG emissions, a share three times larger than any other mobile source subsector, and represent about one-sixth of all U.S. greenhouse gas emissions. Second, technology exists that can be readily and cost-effectively applied to these vehicles to reduce their greenhouse gas emissions in the near term. Third, EPA already has an existing testing and compliance program for these vehicles, refined since the mid-1970s for emissions compliance and fuel economy determinations, which would require only minor modifications to accommodate greenhouse gas emissions regulations. Finally, this rule is an important step in responding to the Supreme Court's ruling in *Massachusetts* v. *EPA,* which applies to other emissions sources in addition to light-duty vehicles. In fact, EPA is currently evaluating controls for motor vehicles other than those covered by this rule, and is also reviewing seven motor vehicle related petitions submitted by various states and organizations requesting that EPA use its Clean Air Act authorities to take action to reduce greenhouse gas emissions from aircraft (under § 231(a)(2)), ocean-going vessels (under § 213(a)(4)), and other nonroad engines and vehicle sources (also under § 213(a)(4)).

a. Light Vehicle Emissions Contribute to Greenhouse Gases and the Threat of Climate Change

Greenhouse gases are gases in the atmosphere that effectively trap some of the Earth's heat that would otherwise escape to space. Greenhouse gases are both naturally occurring and anthropogenic. The primary greenhouse gases of concern that are directly emitted by human activities include carbon dioxide, methane, nitrous oxide, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride.

These gases, once emitted, remain in the atmosphere for decades to centuries. Thus, they become well mixed globally in the atmosphere and their concentrations accumulate when emissions exceed the rate at which natural processes remove greenhouse gases from the atmosphere. The heating effect caused by the human-induced buildup of greenhouse gases in the atmosphere is very likely the cause of most of the observed global warming over the last 50 years.[149] The key effects of climate change observed to date and projected to occur in the future include, but are not limited to, more frequent and intense heat waves, more severe wildfires, degraded air quality, heavier and more frequent downpours and flooding, increased drought, greater sea level rise, more intense storms, harm to water resources, continued ocean acidification, harm to agriculture, and harm to wildlife and ecosystems. A detailed explanation of observed and projected changes in greenhouse gases and climate change and its impact on health, society, and the environment is included in EPA's technical support document for the recently promulgated Endangerment and Cause or Contribute Findings for Greenhouse Gases Under Section 202(a) of the Clean Air Act.[150]

Mobile sources represent a large and growing share of United States greenhouse gases and include light-duty vehicles, light-duty trucks, medium-duty passenger vehicles, heavy duty trucks, airplanes, railroads, marine vessels and a variety of other sources. In 2007, all mobile sources emitted 31% of

[148] *See* 74 FR 66496 (Dec. 15, 2009), "Endangerment and Cause or Contribute Findings for Greenhouse Gases Under Section 202(a) of the Clean Air Act".

[149] "Technical Support Document for Endangerment and Cause or Contribute Findings for Greenhouse Gases Under Section 202(a) of the Clean Air Act" Docket: EPA–HQ–OAR–2009–0472–11292.

[150] 74 FR 66496 (Dec. 15, 2009). Both the **Federal Register** Notice and the Technical Support Document for Endangerment and Cause or Contribute Findings are found in the public docket No. EPA–OAR–2009–0171, in the public docket established for this rulemaking, and at *http://epa.gov/climatechange/endangerment.html.*

all U.S. GHGs, and were the fastest-growing source of U.S. GHGs in the U.S. since 1990. Transportation sources, which do not include certain off-highway sources such as farm and construction equipment, account for 28% of U.S. GHG emissions, and Section 202(a) sources, which include light-duty vehicles, light-duty trucks, medium-duty passenger vehicles, heavy-duty trucks, buses, and motorcycles account for 23% of total U.S. GHGs.[151]

Light vehicles emit carbon dioxide, methane, nitrous oxide and hydrofluorocarbons. Carbon dioxide (CO_2) is the end product of fossil fuel combustion. During combustion, the carbon stored in the fuels is oxidized and emitted as CO_2 and smaller amounts of other carbon compounds.[152] Methane (CH_4) emissions are a function of the methane content of the motor fuel, the amount of hydrocarbons passing uncombusted through the engine, and any post-combustion control of hydrocarbon emissions (such as catalytic converters).[153] Nitrous oxide (N_2O) (and nitrogen oxide (NO_X)) emissions from vehicles and their engines are closely related to air-fuel ratios, combustion temperatures, and the use of pollution control equipment. For example, some types of catalytic converters installed to reduce motor vehicle NO_X, carbon monoxide (CO) and hydrocarbon emissions can promote the formation of N_2O.[154] Hydrofluorocarbons (HFC) emissions are progressively replacing chlorofluorocarbons (CFC) and hydrochlorofluorocarbons (HCFC) in these vehicles' cooling and refrigeration systems as CFCs and HCFCs are being phased out under the Montreal Protocol and Title VI of the CAA. There are multiple emissions pathways for HFCs with emissions occurring during charging of cooling and refrigeration systems, during operations, and during decommissioning and disposal.[155]

[151] Inventory of U.S. Greenhouse Gases and Sinks: 1990–2007.

[152] Mobile source carbon dioxide emissions in 2006 equaled 26 percent of total U.S. CO_2 emissions.

[153] In 2006, methane emissions equaled 0.32 percent of total U.S. methane emissions. Nitrous oxide is a product of the reaction that occurs between nitrogen and oxygen during fuel combustion.

[154] In 2006, nitrous oxide emissions for these sources accounted for 8 percent of total U.S. nitrous oxide emissions.

[155] In 2006, HFC from these source categories equaled 56 percent of total U.S. HFC emissions, making it the single largest source category of U.S. HFC emissions.

b. Basis for Action Under the Clean Air Act

Section 202(a)(1) of the Clean Air Act (CAA) states that "the Administrator shall by regulation prescribe (and from time to time revise) * * * standards applicable to the emission of any air pollutant from any class or classes of new motor vehicles * * *, which in his judgment cause, or contribute to, air pollution which may reasonably be anticipated to endanger public health or welfare." As noted above, the Administrator has found that the elevated concentrations of greenhouse gases in the atmosphere may reasonably be anticipated to endanger public health and welfare.[156] The Administrator defined the "air pollution" referred to in CAA section 202(a) to be the combined mix of six long-lived and directly emitted GHGs: Carbon dioxide (CO_2), methane (CH_4), nitrous oxide (N_2O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF_6). The Administrator has further found under CAA section 202(a) that emissions of the single air pollutant defined as the aggregate group of these same six greenhouse gases from new motor vehicles and new motor vehicle engines contribute to air pollution. As a result of these findings, section 202(a) requires EPA to issue standards applicable to emissions of that air pollutant. New motor vehicles and engines emit CO_2, methane, N_2O and HFC. This preamble describes the provisions that control emissions of CO_2, HFCs, nitrous oxide, and methane. For further discussion of EPA's authority under section 202(a), see Section I.C.2 of the preamble to the proposed rule (74 FR at 49464–66).

There are a variety of other CAA Title II provisions that are relevant to standards established under section 202(a). The standards are applicable to motor vehicles for their useful life. EPA has the discretion in determining what standard applies over the vehicles' useful life and has exercised that discretion in this rule. See Section III*.E.*4 below.

The standards established under CAA section 202(a) are implemented and enforced through various mechanisms. Manufacturers are required to obtain an EPA certificate of conformity before they may sell or introduce their new motor vehicle into commerce, according to CAA section 206(a). The introduction into commerce of vehicles without a certificate of conformity is a prohibited act under CAA section 203 that may subject a manufacturer to civil penalties and injunctive actions (see CAA sections 204 and 205). Under CAA section 206(b), EPA may conduct testing of new production vehicles to determine compliance with the standards. For in-use vehicles, if EPA determines that a substantial number of vehicles do not conform to the applicable regulations then the manufacturer must submit and implement a remedial plan to address the problem (see CAA section 207(c)). There are also emissions-based warranties that the manufacturer must implement under CAA section 207(a). Section III.E describes the rule's certification, compliance, and enforcement mechanisms.

[156] 74 FR 66496 (Dec. 15, 2009).

c. EPA's Endangerment and Cause or Contribute Findings for Greenhouse Gases Under Section 202(a) of the Clean Air Act

On December 7, 2009 EPA's Administrator signed an action with two distinct findings regarding greenhouse gases under section 202(a) of the Clean Air Act. On December 15, 2009, the final findings were published in the Federal Register. This action is called the Endangerment and Cause or Contribute Findings for Greenhouse Gases under Section 202(a) of the Clean Air Act (Endangerment Finding).[157] Below are the two distinct findings:

- Endangerment Finding: The Administrator finds that the current and projected concentrations of the six key well-mixed greenhouse gases—carbon dioxide (CO_2), methane (CH_4), nitrous oxide (N_2O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF_6)—in the atmosphere threaten the public health and welfare of current and future generations.
- Cause or Contribute Finding: The Administrator finds that the combined emissions of these well-mixed greenhouse gases from new motor vehicles and new motor vehicle engines contribute to the greenhouse gas pollution which threatens public health and welfare.

Specifically, the Administrator found, after a thorough examination of the scientific evidence on the causes and impact of current and future climate change, and careful review of public comments, that the science compellingly supports a positive finding that atmospheric concentrations of these greenhouse gases result in air pollution which may reasonably be anticipated to endanger both public health and welfare. In her finding, the Administrator relied heavily upon the major findings and conclusions from the

[157] 74 FR 66496 (Dec. 15, 2009)

recent assessments of the U.S. Climate Change Science Program and the U.N. Intergovernmental Panel on Climate Change.[158] The Administrator made a positive endangerment finding after considering both observed and projected future effects of climate change, key uncertainties, and the full range of risks and impacts to public health and welfare occurring within the United States. In addition, the finding focused on impacts within the U.S. but noted that the evidence concerning risks and impacts occurring outside the U.S. provided further support for the finding.

The key scientific findings supporting the endangerment finding are that:

— Concentrations of greenhouse gases are at unprecedented levels compared to recent and distant past. These high concentrations are the unambiguous result of anthropogenic emissions and are very likely the cause of the observed increase in average temperatures and other climatic changes.

— The effects of climate change observed to date and projected to occur in the future include more frequent and intense heat waves, more severe wildfires, degraded air quality, heavier downpours and flooding, increasing drought, greater sea level rise, more intense storms, harm to water resources, harm to agriculture, and harm to wildlife and ecosystems. These impacts are effects on public health and welfare within the meaning of the Clean Air Act.

The Administrator found that emissions of the single air pollutant defined as the aggregate group of these same six greenhouse gases from new motor vehicles and new motor vehicle engines contribute to the air pollution and hence to the threat of climate change. Key facts supporting this cause and contribute finding for on-highway vehicles regulated under section 202(a) of the Clean Air Act are that these sources are responsible for 24% of total U.S. greenhouse gas emissions, and more than 4% of total global greenhouse gas emissions.[159] As noted above, these findings require EPA to issue standards under section 202(a) "applicable to emission" of the air pollutant that EPA found causes or contributes to the air pollution that endangers public health and welfare. The final emissions standards satisfy this requirement for greenhouse gases from light-duty vehicles. Under section 202(a) the Administrator has significant discretion in how to structure the standards that apply to the emission of the air pollutant at issue here, the aggregate group of six greenhouse gases. EPA has the discretion under section 202(a) to adopt separate standards for each gas, a single composite standard covering various gases, or any combination of these. In this rulemaking EPA is finalizing separate standards for nitrous oxide and methane, and a CO_2 standard that provides for credits based on reductions of HFCs, as the appropriate way to issue standards applicable to emission of the single air pollutant, the aggregate group of six greenhouse gases. EPA is not setting any standards for perfluorocarbons (PFCs) or sulfur hexafluoride (SF_6) as they are not emitted by motor vehicles.

3. What is EPA adopting?

a. Light-Duty Vehicle, Light-Duty Truck, and Medium-Duty Passenger Vehicle Greenhouse Gas Emission Standards and Projected Compliance Levels

The following section provides an overview of EPA's final rule. The key public comments are not discussed here, but are discussed in the sections that follow which provide the details of the program. Comments are also discussed in the Response to Comments document.

The CO_2 emissions standards are by far the most important of the three standards and are the primary focus of this summary. As proposed, EPA is adopting an attribute-based approach for the CO_2 fleet-wide standard (one for cars and one for trucks), using vehicle footprint as the attribute. These curves establish different CO_2 emissions targets for each unique car and truck footprint. Generally, the larger the vehicle footprint, the higher the corresponding vehicle CO_2 emissions target. Table III.A.3–1 shows the greenhouse gas standards for light vehicles that EPA is finalizing for model years (MY) 2012 and later:

TABLE III.A.3–1—INDUSTRY-WIDE GREENHOUSE GAS EMISSIONS STANDARDS

Standard/covered compounds	Form of standard	Level of standard	Credits	Test cycles
CO_2 Standard:[160] Tailpipe CO_2.	Fleetwide average footprint CO_2-curves for cars and trucks.	Projected Fleetwide CO_2 level of 250 g/mi (See footprint curves in Sec. III.B.2).	CO_2-e credits[161]	EPA 2-cycle (FTP and HFET test cycles).[162]
N_2O Standard: Tailpipe N_2O.	Cap per vehicle	0.010 g/mi	None *	EPA FTP test.
CH_4 Standard: Tailpipe CH_4.	Cap per vehicle	0.030 g/mi	None *	EPA FTP test.

* For N_2O and CH_4, manufacturers may optionally demonstrate compliance with a CO_2-equivalent standard equal to its footprint-based CO_2 target level, using the FTP and HFET tests.

One important flexibility associated with the CO_2 standard is the option for

[158] The U.S. Climate Change Science Program (CCSP) is now called the U.S. Global Change Research Program (GCRP).

[159] This figure includes the greenhouse gas contributions of light vehicles, heavy duty vehicles, and remaining on-highway mobile sources. Light-duty vehicles are responsible for over 70 percent of Section 202(a) mobile source GHGs, or about 17% of total U.S. greenhouse gas emissions. U.S. EPA.2009 Technical Support Document for Endangerment and Cause or Contribute Findings for Greenhouse Gases under Section 202(a) of the Clean Air Act. Washington, DC. pp. 180–194. Available at *http://epa.gov/climatechange/endangerment/downloads/Endangerment%20TSD.pdf.*

[160] While over 99 percent of the carbon in automotive fuels is converted to CO_2 in a properly functioning engine, compliance with the CO_2 standard will also account for the very small levels of carbon associated with vehicle tailpipe hydrocarbon (HC) and carbon monoxide (CO) emissions, converted to CO_2 on a mass basis, as discussed further in Section III.B.

[161] CO_2-e refers to CO_2-equivalent, and is a metric that allows non-CO_2 greenhouse gases (such as hydrofluorocarbons used as automotive air conditioning refrigerants) to be expressed as an equivalent mass (*i.e.,* corrected for relative global warming potency) of CO_2 emissions.

[162] FTP is the Federal Test Procedure which uses what is commonly referred to as the "city" driving schedule, and HFET is the Highway Fuel Economy Test which uses the "highway" driving schedule. Compliance with the CO_2 standard will be based on the same 2-cycle values that are currently used for

Continued

manufacturers to obtain credits associated with improvements in their air conditioning systems. EPA is adopting the air conditioning provisions with minor modifications. As will be discussed in greater detail in later sections, EPA is establishing test procedures and design criteria by which manufacturers can demonstrate improvements in both air conditioner efficiency (which reduces vehicle tailpipe CO_2 by reducing the load on the engine) and air conditioner refrigerants (using lower global warming potency refrigerants and/or improving system design to reduce GHG emissions associated with leaks). Neither of these strategies to reduce GHG emissions from air conditioners will be reflected in the EPA FTP or HFET tests. These improvements will be translated to a g/mi CO_2-equivalent credit that can be subtracted from the manufacturer's tailpipe CO_2 compliance value. EPA expects a high percentage of manufacturers to use this flexibility to earn air conditioning-related credits for MY 2012–2016 vehicles such that the average credit earned is about 11 grams per mile CO_2-equivalent in 2016.

A second flexibility, being finalized essentially as proposed, is CO_2 credits for flexible and dual fuel vehicles, similar to the CAFE credits for such vehicles which allow manufacturers to gain up to 1.2 mpg in their overall CAFE ratings. The Energy Independence and Security Act of 2007 (EISA) mandated a phase-out of these flexible fuel vehicle CAFE credits beginning in 2015, and ending after 2019. EPA is allowing comparable CO_2 credits for flexible fuel vehicles through MY 2015, but for MY 2016 and beyond, the GHG rule treats flexible and dual fuel vehicles on a CO_2-performance basis, calculating the overall CO_2 emissions for flexible and dual fuel vehicles based on a fuel use-weighted average of the CO_2 levels on gasoline and on the alternative fuel, and on a manufacturer's demonstration of actual usage of the alternative fuel in its vehicle fleet.

Table III.A.3–2 summarizes EPA projections of industry-wide 2-cycle CO_2 emissions and fuel economy levels that will be achieved by manufacturer compliance with the GHG standards for MY 2012–2016.

For MY 2011, Table III.A.3–2 uses the NHTSA projections of the average fuel economy level that will be achieved by the MY 2011 fleet of 30.8 mpg for cars and 23.3 mpg for trucks, converted to an equivalent combined car and truck CO_2 level of 326 grams per mile.[163] EPA believes this is a reasonable estimate with which to compare the MY 2012–2016 CO_2 emission standards. Identifying the proper MY 2011 estimate is complicated for many reasons, among them being the turmoil in the current automotive market for consumers and manufacturers, uncertain and volatile oil and gasoline prices, the ability of manufacturers to use flexible fuel vehicle credits to meet MY 2011 CAFE standards, and the fact that most manufacturers have been surpassing CAFE standards (particularly the car standard) in recent years. Taking all of these considerations into account, EPA believes that the MY 2011 projected CAFE achieved values, converted to CO_2 emissions levels, represent a reasonable estimate.

Table III.A.3–2 shows projected industry-wide average CO_2 emissions values. The Projected CO_2 Emissions for the Footprint-Based Standard column shows the CO_2 g/mi level corresponding with the footprint standard that must be met. It is based on the promulgated CO_2-footprint curves and projected footprint values, and will decrease each year to 250 grams per mile (g/mi) in MY 2016. For MY 2012–2016, the emissions impact of the projected utilization of flexible fuel vehicle (FFV) credits and the temporary lead-time allowance alternative standard (TLAAS, discussed below) are shown in the next two columns. The Projected CO_2 Emissions column gives the CO_2 emissions levels projected to be achieved given use of the flexible fuel credits and temporary lead-time allowance program. This column shows that, relative to the MY 2011 estimate, EPA projects that MY 2016 CO_2 emissions will be reduced by 23 percent over five years. The Projected A/C Credit column represents the industry wide average air conditioner credit manufacturers are expected to earn on an equivalent CO_2 gram per mile basis in a given model year. In MY 2016, the projected A/C credit of 10.6 g/mi represents 14 percent of the 76 g/mi CO_2 emissions reductions associated with the final standards. The Projected 2-cycle CO_2 Emissions column shows the projected CO_2 emissions as measured over the EPA 2-cycle tests, which will allow compliance with the standard assuming projected utilization of the FFV, TLAAS, and A/C credits.

TABLE III.A.3–2—PROJECTED FLEETWIDE CO_2 EMISSIONS VALUES

[Grams per mile]

Model year	Projected CO_2 emissions for the footprint-based standard	Projected FFV credit	Projected TLAAS credit	Projected CO_2 emissions	Projected A/C credit	Projected 2-cycle CO_2 emissions
2011	.....	.....	.....	(326)	.....	(326)
2012	295	6.5	1.2	303	3.5	307
2013	286	5.8	0.9	293	5.0	298
2014	276	5.0	0.6	282	7.5	290
2015	263	3.7	0.3	267	10.0	277
2016	250	0.0	0.1	250	10.6	261

EPA is also finalizing a series of flexibilities for compliance with the CO_2 standard which are not expected to significantly affect the projected compliance and achieved values shown above, but which should reduce the costs of achieving those reductions. These flexibilities include the ability to earn: Annual credits for a manufacturer's over-compliance with its unique fleet-wide average standard, early credits from MY 2009–2011, credit for "off-cycle" CO_2 reductions from new and innovative technologies that are not reflected in CO_2/fuel economy tests, as

CAFE standards compliance; EPA projects that fleet-wide in-use or real world CO_2 emissions are approximately 25 percent higher, on average, than 2-cycle CO_2 values. Separate mechanisms apply for A/C credits.

[163] As discussed in Section IV of this preamble.

well as the carry-forward and carry-backward of credits, and the ability to transfer credits between a manufacturer's car and truck fleets. These flexibilities are being adopted with only very minor changes from the proposal, as discussed in Section III.C.

EPA is finalizing an incentive to encourage the commercialization of advanced GHG/fuel economy control technologies, including electric vehicles (EVs), plug-in hybrid electric vehicles (PHEVs), and fuel cell vehicles (FCVs), for model years 2012–2016. EPA's proposal included an emissions compliance value of zero grams/mile for EVs and FCVs, and the electric portion of PHEVs, and a multiplier in the range of 1.2 to 2.0, so that each advanced technology vehicle would count as greater than one vehicle in a manufacturer's fleet-wide compliance calculation. Several commenters were very concerned about these credits and upon considering the public comments on this issue, EPA is finalizing an advanced technology vehicle incentive program to assign a zero gram/mile emissions compliance value for EVs and FCVs, and the electric portion of PHEVs, for up to the first 200,000 EV/PHEV/FCV vehicles produced by a given manufacturer during MY 2012–2016. For any production greater than this amount, the compliance value for the vehicle will be greater than zero gram/mile, set at a level that reflects the vehicle's average net increase in upstream greenhouse gas emissions in comparison to the gasoline or diesel vehicle it replaces. EPA is not finalizing a multiplier based on the concerns potentially excessive credits using that incentive. EPA agrees that the multiplier, in combination with the zero grams/mile compliance value, would be excessive. EPA will also allow this early advanced technology incentive program beginning in MYs 2009 through 2011. Further discussion on the advanced technology vehicle incentives, including more detail on the public comments and EPA's response, is found in Section III.C.

EPA is also finalizing a temporary lead-time allowance (TLAAS) for manufacturers that sell vehicles in the U.S. in MY 2009 and for which U.S. vehicle sales in that model year are below 400,000 vehicles. This allowance will be available only during the MY 2012–2015 phase-in years of the program. A manufacturer that satisfies the threshold criteria will be able to treat a limited number of vehicles as a separate averaging fleet, which will be subject to a less stringent GHG standard.[164] Specifically, a standard of 125 percent of the vehicle's otherwise applicable foot-print target level will apply to up to 100,000 vehicles total, spread over the four-year period of MY 2012 through 2015. Thus, the number of vehicles to which the flexibility could apply is limited. EPA also is setting appropriate restrictions on credit use for these vehicles, as discussed further in Section III. By MY 2016, these allowance vehicles must be averaged into the manufacturer's full fleet (*i.e.,* they will no longer be eligible for a different standard). EPA discusses this in more detail in Section III.B of the preamble.

EPA received comments from several smaller manufacturers that the TLAAS program was insufficient to allow manufacturers with very limited product lines to comply. These manufacturers commented that they need additional lead-time to meet the standards, because their CO_2 baselines are significantly higher and their vehicle product lines are even more limited, reducing their ability to average across their fleets compared even to other TLAAS manufacturers. EPA fully summarizes the public comments on the TLAAS program, including comments not supporting the program, in Section III.B. In summary, in response to the lead time issues raised by manufacturers, EPA is modifying the TLAAS program that applies to manufacturers with between 5,000 and 50,000 U.S. vehicle sales in MY 2009. These manufactures would have an increased allotment of vehicles, a total of 250,000, compared to 100,000 vehicles for other TLAAS-eligible manufacturers. In addition, the TLAAS program for these manufacturers would be extended by one year, through MY 2016 for these vehicles, for a total of five years of eligibility. The other provisions of the TLAAS program would continue to apply, such as the restrictions on credit trading and the level of the standard. Additional restrictions would also apply to these vehicles, as discussed in Section III.B.5. In addition, for the smallest volume manufacturers, those with U.S. sales of below 5,000 vehicles, EPA is not setting standards at this time but is instead deferring standards until a future rulemaking. This is the same approach we are using for small businesses. The unique issues involved with these manufacturers will be addressed in that future rulemaking. Further discussion of the public comment on these issues and details on these changes from the proposed program are included in Section III.B.6. The agency received comments on its compliance with the Regulatory Flexibility Act. As stated in Section III.I.3, small entities are not significantly impacted by this rulemaking.

EPA is also adopting caps on the tailpipe emissions of nitrous oxide (N_2O) and methane (CH_4)—0.010 g/mi for N_2O and 0.030 g/mi for CH_4—over the EPA FTP test. While N_2O and CH_4 can be potent greenhouse gases on a relative mass basis, their emission levels from modern vehicle designs are extremely low and represent only about 1% of total late model light vehicle GHG emissions. These cap standards are designed to ensure that N_2O and CH_4 emissions levels do not rise in the future, rather than to force reductions in the already low emissions levels. Accordingly, these standards are not designed to require automakers to make any changes in current vehicle designs, and thus EPA is not projecting any environmental or economic costs or benefits associated with these standards.

EPA has attempted to build on existing practice wherever possible in designing a compliance program for the GHG standards. In particular, the program structure will streamline the compliance process for both manufacturers and EPA by enabling manufacturers to use a single data set to satisfy both the new GHG and CAFE testing and reporting requirements. Timing of certification, model-level testing, and other compliance activities also follow current practices established under the Tier 2 emissions and CAFE programs.

EPA received numerous comments on issues related to the impacts on stationary sources, due to the Clean Air Act's provisions for permitting requirements related to the issuance of the proposed GHG standards for new motor vehicles. Some comments suggested that EPA had underestimated the number of stationary sources that may be subject to GHG permitting requirements; other comments suggested that EPA did not adequately consider the permitting impact on small business sources. Other comments related to EPA's interpretation of the CAA's provisions for subjecting stationary sources to permit regulation after GHG standards are set. EPA's response to these comments is contained in the Response to Comments document; however, many of these comments pertain to issues that EPA is addressing in its consideration of the final Greenhouse Gas Permit Tailoring

[164] EPCA does not permit such an allowance. Consequently, manufacturers who may be able to take advantage of a lead-time allowance under the GHG standards would be required to comply with the applicable CAFE standard or be subject to penalties for non-compliance.

Rule, Prevention of Significant Deterioration and Title V Greenhouse Gas Tailoring Rule; Proposed Rule, 74 FR 55292 (October 27, 2009) and will thus be fully addressed in that rulemaking.

Some of the comments relating to the stationary source permitting issues suggested that EPA should defer setting GHG standards for new motor vehicles to avoid such stationary source permitting impacts. EPA is issuing these final GHG standards for light-duty vehicles as part of its efforts to expeditiously respond to the Supreme Court's nearly three year old ruling in *Massachusetts* v. *EPA,* 549 U.S. 497 (2007). In that case, the Court held that greenhouse gases fit within the definition of air pollutant in the Clean Air Act, and that EPA is therefore compelled to respond to the rulemaking petition under section 202(a) by determining whether or not emissions from new motor vehicles cause or contribute to air pollution which may reasonably be anticipated to endanger public health or welfare, or whether the science is too uncertain to make a reasoned decision. The Court further ruled that, in making these decisions, the EPA Administrator is required to follow the language of section 202(a) of the CAA. The Court stated that under section 202(a), "[i]f EPA makes [the endangerment and cause or contribute findings], the Clean Air Act requires the agency to regulate emissions of the deleterious pollutant." 549 U.S. at 534. As discussed above, EPA has made the two findings on contribution and endangerment. 74 FR 66496 (December 15, 2009). Thus, EPA is required to issue standards applicable to emissions of this air pollutant from new motor vehicles.

The Court properly noted that EPA retained "significant latitude" as to the "timing * * * and coordination of its regulations with those of other agencies" (id.). However it has now been nearly three years since the Court issued its opinion, and the time for delay has passed. In the absence of these final standards, there would be three separate Federal and State regimes independently regulating light-duty vehicles to increase fuel economy and reduce GHG emissions: NHTSA's CAFE standards, EPA's GHG standards, and the GHG standards applicable in California and other states adopting the California standards. This joint EPA–NHTSA program will allow automakers to meet all of these requirements with a single national fleet because California has indicated that it will accept compliance with EPA's GHG standards as compliance with California's GHG standards. 74 FR at 49460. California has not indicated that it would accept NHTSA's CAFE standards by themselves. Without EPA's vehicle GHG standards, the states will not offer the Federal program as an alternative compliance option to automakers and the benefits of a harmonized national program will be lost. California and several other states have expressed strong concern that, without comparable Federal vehicle GHG standards, the states will not offer the Federal program as an alternative compliance option to automakers. Letter dated February 23, 2010 from Commissioners of California, Maine, New Mexico, Oregon and Washington to Senators Harry Reid and Mitch McConnell (Docket EPA–HQ–OAR–2009–0472–11400). The automobile industry also strongly supports issuance of these rules to allow implementation of the national program and avoid "a myriad of problems for the auto industry in terms of product planning, vehicle distribution, adverse economic impacts and, most importantly, adverse consequences for their dealers and customers." Letter dated March 17, 2010 from Alliance of Automobile Manufacturers to Senators Harry Reid and Mitch McConnell, and Representatives Nancy Pelosi and John Boehner (Docket EPA–HQ–OAR–2009–0472–11368). Thus, without EPA's GHG standards as part of a Federal harmonized program, important GHG reductions as well as benefits to the automakers and to consumers would be lost.[165] In addition, delaying the rule would impose significant burdens and uncertainty on automakers, who are already well into planning for production of MY 2012 vehicles, relying on the ability to produce a single national fleet. Delaying the issuance of this final rule would very seriously disrupt the industry's plans.

Instead of delaying the LDV rule and losing the benefits of this rule and the harmonized national program, EPA is directly addressing concerns about stationary source permitting in other actions that EPA is taking with regard to such permitting. That is the proper approach to address the issue of stationary source permitting, as compared to delaying the issuance of this rule for some undefined, indefinite time period.

Some parties have argued that EPA's issuance of this light-duty vehicle rule amounts to a denial of various administrative requests pending before EPA, in which parties have requested that EPA reconsider and stay the GHG endangerment finding published on December 15, 2009. That is not an accurate characterization of the impact of this final rule. EPA has not taken final action on these administrative requests, and issuance of this vehicle rule is not final agency action, explicitly or implicitly, on those requests. Currently, while we carefully consider the pending requests for reconsideration on endangerment, these final findings on endangerment and contribution remain in place. Thus under section 202(a) EPA is obligated to promulgate GHG motor vehicle standards, although there is no statutory deadline for issuance of the light-duty vehicle rule or other motor vehicle rules. In that context, issuance of this final light-duty vehicle rule does no more than recognize the current status of the findings—they are final and impose a rulemaking obligation on EPA, unless and until we change them. In issuing the vehicle rule we are not making a decision on requests to reconsider or stay the endangerment finding, and are not in any way prejudicing or limiting EPA's discretion in making a final decision on these administrative requests.

For discussion of comments on impacts on small entities and EPA's compliance with the Regulatory Flexibility Act, see the discussion in Section III.I.3.

b. Environmental and Economic Benefits and Costs of EPA's Standards

In Table III.A.3–3 EPA presents estimated annual net benefits for the indicated calendar years. The table also shows the net present values of those benefits for the calendar years 2012–2050 using both a 3 percent and a 7 percent discount rate. As discussed previously, EPA recognizes that much of these same costs and benefits are also attributable to the CAFE standard contained in this joint final rule.

[165] As discussed elsewhere, EPA's GHG standards achieve greater overall reductions in GHGs than NHTSA's CAFE standards.

TABLE III.A.3–3—PROJECTED QUANTIFIABLE BENEFITS AND COSTS FOR CO_2 STANDARD

[In million 2007$]

	2020	2030	2040	2050	NPV, 3%[a]	NPV, 7%[a]
Quantified Annual Costs[b]	−$20,100	−$64,000	−$101,900	−$152,200	−$1,199,700	−$480,700
Benefits From Reduced CO_2 Emissions at Each Assumed SCC Value[c d e]						
Avg SCC at 5%	900	2,700	4,600	7,200	34,500	34,500
Avg SCC at 3%	3,700	8,900	14,000	21,000	176,700	176,700
Avg SCC at 2.5%	5,800	14,000	21,000	30,000	299,600	299,600
95th percentile SCC at 3%	11,000	27,000	43,000	62,000	538,500	538,500
Other Impacts						
Criteria Pollutant Benefits[f g h i]	B	1,200–1,300	1,200–1,300	1,200–1,300	21,000	14,000
Energy Security Impacts (price shock)	2,200	4,500	6,000	7,600	81,900	36,900
Reduced Refueling	2,400	4,800	6,300	8,000	87,900	40,100
Value of Increased Driving[j]	4,200	8,800	13,000	18,400	171,500	75,500
Accidents, Noise, Congestion	−2,300	−4,600	−6,100	−7,800	−84,800	−38,600
Quantified Net Benefits at Each Assumed SCC Value[c d e]						
Avg SCC at 5%	27,500	81,500	127,000	186,900	1,511,700	643,100
Avg SCC at 3%	30,300	87,700	136,400	200,700	1,653,900	785,300
Avg SCC at 2.5%	32,400	92,800	143,400	209,700	1,776,800	908,200
95th percentile SCC at 3%	37,600	105,800	165,400	241,700	2,015,700	1,147,100

[a] Note that net present value of reduced GHG emissions is calculated differently than other benefits. The same discount rate used to discount the value of damages from future emissions (SCC at 5, 3, 2.5 percent) is used to calculate net present value of SCC for internal consistency. Refer to Section III.F for more detail.

[b] Quantified annual costs are negative because of fuel savings (see Table III.H.10–1 for a breakdown of the vehicle technology costs and fuel savings). The fuel savings outweigh the vehicle technology costs and, therefore, the costs are presented here are negative values.

[c] Monetized GHG benefits exclude the value of reductions in non-CO_2 GHG emissions (HFC, CH_4 and N_2O) expected under this final rule. Although EPA has not monetized the benefits of reductions in these non-CO_2 emissions, the value of these reductions should not be interpreted as zero. Rather, the reductions in non-CO_2 GHGs will contribute to this rule's climate benefits, as explained in Section III.F.2. The SCC Technical Support Document (TSD) notes the difference between the social cost of non-CO_2 emissions and CO_2 emissions, and specifies a goal to develop methods to value non-CO_2 emissions in future analyses.

[d] Section III.H.6 notes that SCC increases over time. Corresponding to the years in this table, the SCC estimates range as follows: for Average SCC at 5%: $5–$16; for Average SCC at 3%: $21–$45; for Average SCC at 2.5%: $35–$65; and for 95th percentile SCC at 3%: $65–$136. Section III.H.6 also presents these SCC estimates.

[e] Note that net present value of reduced GHG emissions is calculated differently than other benefits. The same discount rate used to discount the value of damages from future emissions (SCC at 5, 3, 2.5 percent) is used to calculate net present value of SCC for internal consistency. Refer to SCC TSD for more detail.

[f] Note that "B" indicates unquantified criteria pollutant benefits in the year 2020. For the final rule, we only modeled the rule's $PM_{2.5}$- and ozone-related impacts in the calendar year 2030. For the purposes of estimating a stream of future-year criteria pollutant benefits, we assume that the benefits out to 2050 are equal to, and no less than, those modeled in 2030 as reflected by the stream of estimated future emission reductions. The NPV of criteria pollutant-related benefits should therefore be considered a conservative estimate of the potential benefits associated with the final rule.

[g] The benefits presented in this table include an estimate of PM-related premature mortality derived from Laden et al., 2006, and the ozone-related premature mortality estimate derived from Bell et al., 2004. If the benefit estimates were based on the ACS study of PM-related premature mortality (Pope et al., 2002) and the Levy et al., 2005 study of ozone-related premature mortality, the values would be as much as 70% smaller.

[h] The calendar year benefits presented in this table assume either a 3% discount rate in the valuation of PM-related premature mortality ($1,300 million) or a 7% discount rate ($1,200 million) to account for a twenty-year segmented cessation lag. Note that the benefits estimated using a 3% discount rate were used to calculate the NPV using a 3% discount rate and the benefits estimated using a 7% discount rate were used to calculate the NPV using a 7% discount rate. For benefits totals presented at each calendar year, we used the mid-point of the criteria pollutant benefits range ($1,250).

[i] Note that the co-pollutant impacts presented here do not include the full complement of endpoints that, if quantified and monetized, would change the total monetized estimate of impacts. The full complement of human health and welfare effects associated with PM and ozone remain unquantified because of current limitations in methods or available data. We have not quantified a number of known or suspected health effects linked with ozone and PM for which appropriate health impact functions are not available or which do not provide easily interpretable outcomes (*e.g.,* changes in heart rate variability). Additionally, we are unable to quantify a number of known welfare effects, including reduced acid and particulate deposition damage to cultural monuments and other materials, and environmental benefits due to reductions of impacts of eutrophication in coastal areas.

[j] Calculated using pre-tax fuel prices.

4. Basis for the GHG Standards Under Section 202(a)

EPA statutory authority under section 202(a)(1) of the Clean Air Act (CAA) is discussed in more detail in Section I.C.2 of the proposed rule (74 FR at 49464–65). The following is a summary of the basis for the final GHG standards under section 202(a), which is discussed in more detail in the following portions of Section III.

With respect to CO_2 and HFCs, EPA is adopting attribute-based light-duty car and truck standards that achieve large and important emissions reductions of GHGs. EPA has evaluated the technological feasibility of the standards, and the information and analysis performed by EPA indicates that these standards are feasible in the lead time provided. EPA and NHTSA have carefully evaluated the effectiveness of individual technologies as well as the interactions when technologies are combined. EPA's projection of the technology that would be used to comply with the standards indicates that manufacturers will be able to meet the standards by employing

a wide variety of technologies that are already commercially available and can be incorporated into their vehicles at the time of redesign. In addition to the consideration of the manufacturers' redesign cycle, EPA's analysis also takes into account certain flexibilities that will facilitate compliance especially in the early years of the program when potential lead time constraints are most challenging. These flexibilities include averaging, banking, and trading of various types of credits. For the industry as a whole, EPA's projections indicate that the standards can be met using technology that will be available in the lead-time provided. At the same time, it must be noted that because technology is commercially available today does not mean it can automatically be incorporated fleet-wide during the model years in question. As discussed below, and in detail in Section III.D.7, EPA and NHTSA carefully analyzed issues of adequacy of lead time in determining the level of the standards, and the agencies are convinced both that lead time is sufficient to meet the standards but that major further additions of technology across the fleet is not possible during these model years.

To account for additional lead-time concerns for various manufacturers of typically higher performance vehicles, EPA is adopting a Temporary Lead-time Allowance similar to that proposed that will further facilitate compliance for limited volumes of such vehicles in the program's initial years. For a few very small volume manufacturers, EPA is deferring standards pending later rulemaking.

EPA has also carefully considered the cost to manufacturers of meeting the standards, estimating piece costs for all candidate technologies, direct manufacturing costs, cost markups to account for manufacturers' indirect costs, and manufacturer cost reductions attributable to learning. In estimating manufacturer costs, EPA took into account manufacturers' own practices such as making major changes to model technology packages during a planned redesign cycle. EPA then projected the average cost across the industry to employ this technology, as well as manufacturer-by-manufacturer costs. EPA considers the per vehicle costs estimated from this analysis to be within a reasonable range in light of the emissions reductions and benefits received. EPA projects, for example, that the fuel savings over the life of the vehicles will more than offset the increase in cost associated with the technology used to meet the standards.

EPA has also evaluated the impacts of these standards with respect to reductions in GHGs and reductions in oil usage. For the lifetime of the model year 2012–2016 vehicles we estimate GHG reductions of approximately 960 million metric tons CO_2 eq. and fuel reductions of 1.8 billion barrels of oil. These are important and significant reductions. EPA has also analyzed a variety of other impacts of the standards, ranging from the standards' effects on emissions of non-GHG pollutants, impacts on noise, energy, safety and congestion. EPA has also quantified the cost and benefits of the standards, to the extent practicable. Our analysis to date indicates that the overall quantified benefits of the standards far outweigh the projected costs. Utilizing a 3% discount rate, we estimate the total net social benefits over the life of the model year 2012–2016 vehicles is $192 billion, and the net present value of the net social benefits of the standards through the year 2050 is $1.9 trillion dollars.[166] These values are estimated at $136 billion and $787 billion, respectively, using a 7% discount rate and the SCC discounted at 3 percent.[167]

Under section 202(a) EPA is called upon to set standards that provide adequate lead-time for the development and application of technology to meet the standards. EPA's standards satisfy this requirement, as discussed above. In setting the standards, EPA is called upon to weigh and balance various factors, and to exercise judgment in setting standards that are a reasonable balance of the relevant factors. In this case, EPA has considered many factors, such as cost, impacts on emissions (both GHG and non-GHG), impacts on oil conservation, impacts on noise, energy, safety, and other factors, and has, where practicable, quantified the costs and benefits of the rule. In summary, given the technical feasibility of the standard, the moderate cost per vehicle in light of the savings in fuel costs over the life time of the vehicle, the very significant reductions in emissions and in oil usage, and the significantly greater quantified benefits compared to quantified costs, EPA is confident that the standards are an appropriate and reasonable balance of the factors to consider under section 202(a). See *Husqvarna AB* v. *EPA,* 254 F. 3d 195, 200 (DC Cir. 2001) (great discretion to balance statutory factors in considering level of technology-based standard, and statutory requirement "to [give appropriate] consideration to the cost of applying * * * technology" does not mandate a specific method of cost analysis); see also *Hercules Inc.* v. *EPA,* 598 F. 2d 91, 106 (DC Cir. 1978) ("In reviewing a numerical standard we must ask whether the agency's numbers are within a zone of reasonableness, not whether its numbers are precisely right"); *Permian Basin Area Rate Cases,* 390 U.S. 747, 797 (1968) (same); *Federal Power Commission* v. *Conway Corp.,* 426 U.S. 271, 278 (1976) (same); *Exxon Mobil Gas Marketing Co.* v. *FERC,* 297 F. 3d 1071, 1084 (DC Cir. 2002) (same).

EPA recognizes that the vast majority of technologies which we are considering for purposes of setting standards under section 202(a) are commercially available and already being utilized to a limited extent across the fleet. The vast majority of the emission reductions, which would result from this rule, would result from the increased use of these technologies. EPA also recognizes that this rule would enhance the development and limited use of more advanced technologies, such as PHEVs and EVs. In this technological context, there is no clear cut line that indicates that only one projection of technology penetration could potentially be considered feasible for purposes of section 202(a), or only one standard that could potentially be considered a reasonable balancing of the factors relevant under section 202(a). EPA therefore evaluated two sets of alternative standards, one more stringent than the promulgated standards and one less stringent.

The alternatives are 4% per year increase in standards which would be less stringent and a 6% per year increase in the standards which would be more stringent. EPA is not adopting either of these. As discussed in Section III.D.7, the 4% per year forgoes CO_2 reductions which can be achieved at reasonable cost and are achievable by the industry within the rule's timeframe. The 6% per year alternative requires a significant increase in the projected required technology penetration which appears inappropriate in this timeframe due to the limited available lead time and the current difficult financial condition of the automotive industry. (See Section III.D.7 for a detailed discussion of why EPA is not adopting either of the alternatives.) EPA also believes that the no backsliding standards it is adopting

[166] Based on the mean SCC at 3 percent discount rate, which is $21 per metric ton CO_2 in 2010 rising to $45 per metric ton CO_2 in 2050.

[167] SCC was discounted at 3 percent to maintain internal consistency in the SCC calculations while all other benefits were discounted at 7 percent. Specifically, the same discount rate used to discount the value of damages from future CO_2 emissions is used to calculate net present value of SCC.

for N_2O and CH_4 are appropriate under section 202(a).

B. GHG Standards for Light-Duty Vehicles, Light-Duty Trucks, and Medium-Duty Passenger Vehicles

EPA is finalizing new emission standards to control greenhouse gases (GHGs) from light-duty vehicles. First, EPA is finalizing an emission standard for carbon dioxide (CO_2) on a gram per mile (g/mile) basis that will apply to a manufacturer's fleet of cars, and a separate standard that will apply to a manufacturer's fleet of trucks. CO_2 is the primary greenhouse gas resulting from the combustion of vehicular fuels, and the amount of CO_2 emitted is directly correlated to the amount of fuel consumed. Second, EPA is providing auto manufacturers with the opportunity to earn credits toward the fleet-wide average CO_2 standards for improvements to air conditioning systems, including both hydrofluorocarbon (HFC) refrigerant losses (*i.e.,* system leakage) and indirect CO_2 emissions related to the increased load on the engine. Third, EPA is finalizing separate emissions standards for two other GHGs: Methane (CH_4) and nitrous oxide (N_20). CH_4 and N_2O emissions relate closely to the design and efficient use of emission control hardware (*i.e.,* catalytic converters). The standards for CH_4 and N_2O will be set as a cap that will limit emissions increases and prevent backsliding from current emission levels. The final standards described below will apply to passenger cars, light-duty trucks, and medium-duty passenger vehicles (MDPVs). As an overall group, they are referred to in this preamble as light vehicles or simply as vehicles. In this preamble section passenger cars may be referred to simply as "cars", and light-duty trucks and MDPVs as "light trucks" or "trucks." [168]

EPA's program includes a number of credit opportunities and other flexibilities to help manufacturers comply, especially in the early years of the program. EPA is establishing a system of averaging, banking, and trading of credits integral to the fleet averaging approach, based on manufacturer fleet average CO_2 performance, as discussed in Section III.B.4. This approach is similar to averaging, banking, and trading (ABT) programs EPA has established in other programs and is also similar to provisions in the CAFE program. In addition to traditional ABT credits based on the fleet emissions average, EPA is also including A/C credits as an aspect of the standards, as mentioned above. EPA is also including several additional credit provisions that apply only in the initial model years of the program. These include flex fuel vehicle credits, incentives for the early commercialization of certain advanced technology vehicles, credits for new and innovative "off-cycle" technologies that are not captured by the current test procedures, and generation of credits prior to model year 2012. The A/C credits and additional credit opportunities are described in Section III.C. These credit programs will provide flexibility to manufacturers, which may be especially important during the early transition years of the program. EPA will also allow a manufacturer to carry a credit deficit into the future for a limited number of model years. A parallel provision, referred to as credit carry-back, will be part of the CAFE program. Finally, EPA is finalizing an optional compliance flexibility, the Temporary Leadtime Allowance Alternative Standard program, for intermediate volume manufacturers, and is deferring standards for the smallest manufacturers, as discussed in Sections III.B.5 and 6 below.

1. What fleet-wide emissions levels correspond to the CO_2 standards?

The attribute-based CO_2 standards are projected to achieve a national fleet-wide average, covering both light cars and trucks, of 250 grams/mile of CO_2 in model year (MY) 2016. This includes CO_2-equivalent emission reductions from A/C improvements, reflected as credits in the standard. The standards will begin with MY 2012, with a generally linear increase in stringency from MY 2012 through MY 2016. EPA will have separate standards for cars and light trucks. The tables in this section below provide overall fleet average levels that are projected for both cars and light trucks over the phase-in period which is estimated to correspond with the standards. The actual fleet-wide average g/mi level that will be achieved in any year for cars and trucks will depend on the actual production for that year, as well as the use of the various credit and averaging, banking, and trading provisions. For example, in any year, manufacturers may generate credits from cars and use them for compliance with the truck standard. Such transfer of credits between cars and trucks is not reflected in the table below. In Section III.F, EPA discusses the year-by-year estimate of emissions reductions that are projected to be achieved by the standards.

In general, the schedule of standards acts as a phase-in to the MY 2016 standards, and reflects consideration of the appropriate lead-time for each manufacturer to implement the requisite emission reductions technology across its product line.[169] Note that 2016 is the final model year in which standards become more stringent. The 2016 CO_2 standards will remain in place for 2017 and later model years, until revised by EPA in a future rulemaking.

EPA estimates that, on a combined fleet-wide national basis, the 2016 MY standards will achieve a level of 250 g/mile CO_2, including CO_2-equivalent credits from A/C related reductions. The derivation of the 250 g/mile estimate is described in Section III.B.2.

EPA has estimated the overall fleet-wide CO_2-equivalent emission levels that correspond with the attribute-based standards, based on the projections of the composition of each manufacturer's fleet in each year of the program. Tables III.B.1–1 and III.B.1–2 provides these estimates for each manufacturer.[170]

As a result of public comments and updated economic and future fleet projections, the attribute based curves have been updated for this final rule, as discussed in detail in Section II.B of this preamble and Chapter 2 of the Joint TSD. This update in turn affects costs, benefits, and other impacts of the final standards—thus EPA's overall projection of the impacts of the final rule standards have been updated and the results are different than for the NPRM, though in general not by a large degree.

[168] As described in Section III.B.2., GHG emissions standards will use the same vehicle category definitions as are used in the CAFE program.

[169] *See* CAA section 202(a)(2).

[170] These levels do not include the effect of flexible fuel credits, transfer of credits between cars and trucks, temporary lead time allowance, or any other credits.

TABLE III.B.1–1—ESTIMATED FLEET CO_2-EQUIVALENT LEVELS CORRESPONDING TO THE STANDARDS FOR CARS

[g/mile]

Manufacturer	Model year				
	2012	2013	2014	2015	2016
BMW	266	259	250	239	228
Chrysler	269	262	254	243	232
Daimler	274	267	259	249	238

Subaru	315	305	296	281	267
Suzuki	320	310	300	286	272
Tata	321	310	301	287	272
Toyota	342	333	323	308	294
Volkswagen	341	331	322	307	293

These estimates were aggregated based on projected production volumes into the fleet-wide averages for cars and trucks (Table III.B.1–3).[171]

TABLE III.B.1–3—ESTIMATED FLEET-WIDE CO_2-EQUIVALENT LEVELS CORRESPONDING TO THE STANDARDS

Model year	Cars	Trucks
	CO_2 (g/mi)	CO_2 (g/mi)
2012	263	346
2013	256	337
2014	247	326
2015	236	312
2016 and later	225	298

As shown in Table III.B.1–3, fleet-wide CO_2-equivalent emission levels for cars under the approach are projected to decrease from 263 to 225 grams per mile between MY 2012 and MY 2016. Similarly, fleet-wide CO_2-equivalent

[171] Due to rounding during calculations, the estimated fleet-wide CO_2-equivalent levels may vary by plus or minus 1 gram.

emission levels for trucks are projected to decrease from 346 to 398 grams per mile. These numbers do not include the effects of other flexibilities and credits in the program. The estimated achieved values can be found in Chapter 5 of the Regulatory Impact Analysis (RIA).

EPA has also estimated the average fleet-wide levels for the combined car and truck fleets. These levels are provided in Table III.B.1–4. As shown, the overall fleet average CO_2 level is expected to be 250 g/mile in 2016.

TABLE III.B.1–4—ESTIMATED FLEET-WIDE COMBINED CO_2-EQUIVALENT LEVELS CORRESPONDING TO THE STANDARDS

Model year	Combined car and truck
	CO_2 (g/mi)
2012	295
2013	286
2014	276
2015	263
2016	250

As noted above, EPA is finalizing standards that will result in increasingly stringent levels of CO_2 control from MY 2012 though MY 2016—applying the CO_2 footprint curves applicable in each model year to the vehicles expected to be sold in each model year produces fleet-wide annual reductions in CO_2 emissions. Comments from the Center for Biological Diversity (CBD) challenged EPA to increase the stringency of the standards for all of the years of the program, and even argued that 2016 standards should be feasible in 2012. Other commenters noted the non-linear increase in the standards from 2011 (CAFE) to the 2012 GHG standards. As explained in greater detail in Section III.D below and the relevant support documents, EPA believes that the level of improvement achieves important CO_2 emissions reductions through the application of feasible control technology at reasonable cost, considering the needed lead time for this program. EPA further believes that the averaging, banking and trading provisions, as well as other credit-generating mechanisms, allow manufacturers further flexibilities which reduce the cost of the CO_2 standards and help to provide adequate lead time. EPA believes this approach is justified under section 202(a) of the Clean Air Act.

EPA has analyzed the feasibility under the CAA of achieving the CO_2 standards, based on projections of what actions manufacturers are expected to take to reduce emissions. The results of the analysis are discussed in detail in Section III.D below and in the RIA. EPA also presents the estimated costs and benefits of the car and truck CO_2 standards in Section III.H. In developing the final rule, EPA has evaluated the kinds of technologies that could be utilized by the automobile industry, as well as the associated costs for the industry and fuel savings for the consumer, the magnitude of the GHG reductions that may be achieved, and other factors relevant under the CAA.

With respect to the lead time and cost of incorporating technology improvements that reduce GHG emissions, EPA and NHTSA place important weight on the fact that during MYs 2012–2016 manufacturers are expected to redesign and upgrade their light-duty vehicle products (and in some cases introduce entirely new vehicles not on the market today). Over these five model years there will be an opportunity for manufacturers to evaluate almost every one of their vehicle model platforms and add technology in a cost-effective way to control GHG emissions and improve fuel economy. This includes redesign of the air conditioner systems in ways that will further reduce GHG emissions. The time-frame and levels for the standards, as well as the ability to average, bank and trade credits and carry a deficit forward for a limited time, are expected to provide manufacturers the time needed to incorporate technology that will achieve GHG reductions, and to do this as part of the normal vehicle redesign process. This is an important aspect of the final rule, as it will avoid the much higher costs that will occur if manufacturers needed to add or change technology at times other than these scheduled redesigns. This time period will also provide manufacturers the opportunity to plan for compliance using a multi-year time frame, again in accord with their normal business practice. Further details on lead time, redesigns and feasibility can be found in Section III–D.

Consistent with the requirement of CAA section 202(a)(1) that standards be applicable to vehicles "for their useful life," EPA is finalizing CO_2 vehicle standards that will apply for the useful life of the vehicle. Under section 202(i) of the Act, which authorized the Tier 2 standards, EPA established a useful life period of 10 years or 120,000 miles, whichever first occurs, for all Tier 2 light-duty vehicles and light-duty trucks.[172] Tier 2 refers to EPA's standards for criteria pollutants such as NO_X, HC, and CO. EPA is finalizing new CO_2 standards for the same group of vehicles, and therefore the Tier 2 useful life will apply for CO_2 standards as well. The in-use emission standard will be 10% higher than the model-level certification emission test results, to address issues of production variability and test-to-test variability. The in-use standard is discussed in Section II*I.E.*

EPA is requiring manufacturers to measure CO_2 for certification and compliance purposes using the same test procedures currently used by EPA for measuring fuel economy. These procedures are the Federal Test Procedure (FTP or "city" test) and the Highway Fuel Economy Test (HFET or "highway" test).[173] This corresponds with the data used to develop the footprint-based CO_2 standards, since the data on control technology efficiency was also developed in reference to these test procedures. Although EPA recently updated the test procedures used for fuel economy labeling, to better reflect the actual in-use fuel economy achieved by vehicles, EPA is not using these test procedures for the CO_2 standards in this final rule, given the lack of data on control technology effectiveness under these procedures.[174] There were a number of commenters that advocated for a change in either the test procedures or the fuel economy calculation weighting factors. The U.S. Coalition for Advanced Diesel Cars urged a changing of the city/highway weighting factors from their current values of 45/55 to 43/57 to be more consistent with the EPA (5-cycle) fuel economy labeling rule. EPA has decided that such a change would not be appropriate, nor consistent with the technical analyses supporting the 5-cycle fuel economy label rulemaking. The city/highway weighting of 43/57 was found to be appropriate when the city fuel economy is based on a combination of Bags 2 and 3 of the FTP and the city portion of the US06 test cycle, and when the highway fuel economy is based on a combination of the HFET and the highway portion of the US06 cycle. When city and highway fuel economy are based on the FTP and HFET cycles, respectively, the appropriate city/highway weighting is not 43/57, but very close to 55/45. Therefore, the weighting of the city and

[172] *See* 65 FR 6698 (February 10, 2000).

[173] EPA established the FTP for emissions measurement in the early 1970s. In 1976, in response to the Energy Policy and Conservation Act (EPCA) statute, EPA extended the use of the FTP to fuel economy measurement and added the HFET. The provisions in the 1976 regulation, effective with the 1977 model year, established procedures to calculate fuel economy values both for labeling and for CAFE purposes.

[174] *See* 71 FR 77872, December 27, 2006.

highway fuel economy values contained in this rule is appropriate for and consistent with the use of the FTP and HFET cycles to measure city and highway fuel economy.

The American Council for an Energy-Efficient Economy (ACEEE), Cummins, and Sierra Club all suggested using more real-world test procedures. It is not feasible at this time to base the final CO_2 standards on EPA's five-cycle fuel economy formulae. Consistent with its name, these formulae require vehicle testing over five test cycles, the two cycles associated with the proposed CO_2 standards, plus the cold temperature FTP, the US06 high speed, high acceleration cycle and the SC03 air conditioning test. EPA considered employing the five-cycle calculation of fuel economy and GHG emissions for this rule, but there were a number of reasons why this was not practical. As discussed extensively in the Joint TSD, setting the appropriate levels of CO_2 standards requires extensive knowledge of the CO_2 emission control effectiveness over the certification test cycles. Such knowledge has been gathered over the FTP and HFET cycles for decades, but is severely lacking for the other three test cycles. EPA simply lacks the technical basis to project the effectiveness of the available technologies over these three test cycles and therefore, could not adequately support a rule which set CO_2 standards based on the five-cycle formulae. The benefits of today's rule do presume a strong connection between CO_2 emissions measured over the FTP and HFET cycles and onroad operation. Since CO_2 emissions determined by the five-cycle formulae are believed to correlate reasonably with onroad emissions, this implies a strong connection between emissions over the FTP and HFET cycles and the five cycle formulae. However, while we believe that this correlation is reasonable on average for the vehicle fleet, it may not be reasonable on a per vehicle basis, nor for any single manufacturer's vehicles. Thus, we believe that it is reasonable to project a direct relationship between the percentage change in CO_2 emissions over the two certification cycles and onroad emissions (a surrogate of which is the five-cycle formulae), but not reasonable to base the certification of specific vehicles on that untested relationship. Furthermore, EPA is allowing for off-cycle credits to encourage technologies that may not be not properly captured on the 2-cycle city/highway test procedure (although these credits could apply toward compliance with EPA's standards, not toward compliance with the CAFE standards). For future analysis, EPA will consider examining new drive cycles and test procedures for fuel economy.[175]

EPA is finalizing standards that include hydrocarbons (HC) and carbon monoxide (CO) in its CO_2 emissions calculations on a CO_2-equivalent basis. It is well accepted that HC and CO are typically oxidized to CO_2 in the atmosphere in a relatively short period of time and so are effectively part of the CO_2 emitted by a vehicle. In terms of standard stringency, accounting for the carbon content of tailpipe HC and CO emissions and expressing it as CO_2-equivalent emissions will add less than one percent to the overall CO_2-equivalent emissions level. This will also ensure consistency with CAFE calculations since HC and CO are included in the "carbon balance" methodology that EPA uses to determine fuel usage as part of calculating vehicle fuel economy levels.

2. What are the CO_2 attribute-based standards?

EPA is finalizing the same vehicle category definitions that are used in the CAFE program for the 2011 model year standards.[176] This approach allows EPA's CO_2 standards and the CAFE standards to be harmonized across all vehicles. In other words, vehicles will be subject to either car standards or truck standards under both programs, and not car standards under one program and trucks standards under the other. The CAFE vehicle category definitions differ slightly from the EPA definitions for cars and light trucks used for the Tier 2 program and other EPA vehicle programs. However, EPA is not changing the vehicle category definitions for any other light-duty mobile source programs, except the GHG standards.

EPA is finalizing separate car and truck standards, that is, vehicles defined as cars have one set of footprint-based curves for MY 2012–2016 and vehicles defined as trucks have a different set for MY 2012–2016. In general, for a given footprint the CO_2 g/mi target for trucks is less stringent then for a car with the same footprint.

Some commenters requested a single or converging curve for both cars and trucks.[177] EPA is not finalizing a single fleet standard where all cars and trucks are measured against the same footprint curve for several reasons. First, some vehicles classified as trucks (such as pick-up trucks) have certain attributes not common on cars which attributes contribute to higher CO_2 emissions—notably high load carrying capability and/or high towing capability.[178] Due to these differences, it is reasonable to separate the light-duty vehicle fleet into two groups. Second, EPA wishes to harmonize key program design elements of the GHG standards with NHTSA's CAFE program where it is reasonable to do so. NHTSA is required by statute to set separate standards for passenger cars and for non-passenger cars. As discussed in Section IV, EPCA does not preclude NHTSA from issuing converging standards if its analysis indicates that these are the appropriate standards under the statute applicable separately to each fleet.

Finally, most of the advantages of a single standard for all light duty vehicles are also present in the two-fleet standards finalized here. Because EPA is allowing unlimited credit transfer between a manufacturer's car and truck fleets, the two fleets can essentially be viewed as a single fleet when manufacturers consider compliance strategies. Manufacturers can thus choose on which vehicles within their fleet to focus GHG reducing technology and then use credit transfers as needed to demonstrate compliance, just as they will if there was a single fleet standard. The one benefit of a single light-duty fleet not captured by a two-fleet approach is that a single fleet prevents potential "gaming" of the car and truck definitions to try and design vehicles which are more similar to passenger cars but which may meet the regulatory definition of trucks. Although this is of concern to EPA, we do not believe at this time that concern is sufficient to outweigh the other reasons for finalizing separate car and truck fleet standards. However, it is possible that in the future, recent trends may continue such that cars may become more truck-like and trucks may become more car-like. Therefore, EPA will reconsider whether it is appropriate to use converging curves if justified by future analysis.

For model years 2012 and later, EPA is finalizing a series of CO_2 standards that are described mathematically by a family of piecewise linear functions

[175] There were also a number of comments on air conditioner test procedures; these will be discussed in Section III.C and the RIA.

[176] *See* 49 CFR 523.

[177] CBD, ICCT and NESCAUM supported a single curve and the students at UC Santa Barbara commented on converging curves.

[178] There is a distinction between body-on-frame trucks and unibody cars and trucks that make them technically different in a number of ways. Also, 2WD vehicles tend to have lower CO_2 emissions than their 4WD counterparts (all other things being equal). More discussion of this can be found in the TSD and RIA.

(with respect to vehicle footprint).[179] The form of the function is as follows:

CO_2 = a, if x ≤ l

CO_2 = cx + d, if l < x ≤ h

CO_2 = b, if x > h

Where:

CO_2 = the CO_2 target value for a given footprint (in g/mi)
a = the minimum CO_2 target value (in g/mi)
b = the maximum CO_2 target value (in g/mi)
c = the slope of the linear function (in g/mi per sq ft)
d = is the zero-offset for the line (in g/mi CO_2)
x = footprint of the vehicle model (in square feet, rounded to the nearest tenth)
l & h are the lower and higher footprint limits, constraints, or the boundary ("kinks") between the flat regions and the intermediate sloped line

EPA's parameter values that define the family of functions for the CO_2 fleetwide average car and truck standards are as follows:

TABLE III.B.2–1—PARAMETER VALUES FOR CARS

[For CO_2 gram per mile targets]

Model year	a	b	c	d	Lower constraint	Upper constraint
2012	244	315	4.72	50.5	41	56
2013	237	307	4.72	43.3	41	56
2014	228	299	4.72	34.8	41	56
2015	217	288	4.72	23.4	41	56
2016 and later	206	277	4.72	12.7	41	56

TABLE III.B.2–2—PARAMETER VALUES FOR TRUCKS

[For CO_2 gram per mile targets]

Model year	a	b	c	d	Lower constraint	Upper constraint
2012	294	395	4.04	128.6	41	66

2016 and later	247	348	4.04	81.1	41	66

The equations can be shown graphically for each vehicle category, as shown in Figures III.B.2–1 and III.B.2–2. These standards (or functions) decrease from 2012–2016 with a vertical shift.

The EPA received a number of comments on both the attribute and the shape of the curve. For reasons described in Section IIC and Chapter 2 of the TSD, the EPA feels that footprint is the most appropriate choice of attribute for this rule. More background discussion on other alternative attributes and curves EPA explored can be found in the EPA RIA. EPA recognizes that the CAA does not mandate that EPA use an attribute based standard, as compared to NHTSA's obligations under EPCA. The EPA believes that a footprint-based program will harmonize EPA's program and the CAFE program as a single national program, resulting in reduced compliance complexity for manufacturers. EPA's reasons for using an attribute based standard are discussed in more detail in the Joint TSD. Also described in these other sections are the reasons why EPA is finalizing the slopes and the constraints as shown above. For future analysis, EPA will consider other options and suggestions made by commenters.

EPA also received public comments from three manufacturers, General Motors, Ford Motor Company, and Chrysler, suggesting that the GHG program should harmonize with an EPCA provision that allows a manufacturer to exclude emergency vehicles from its CAFE fleet by providing written notice to NHTSA.[180] These manufacturers believe this provision is necessary because law enforcement vehicles (*e.g.,* police cars) must be designed with special performance and features necessary for police work—but which tend to raise GHG emissions and reduce fuel economy relative to the base vehicle. These commenters provided several examples of features unique to these special purpose vehicles that negatively impact GHG emissions, such as heavy-duty suspensions, unique engine and transmission calibrations, and heavy-duty components (*e.g.,* batteries, stabilizer bars, engine cooling). These manufacturers believe consistency in addressing these vehicles between the EPA and NHTSA programs is critical, as a manufacturer may be challenged to continue providing the performance needs of the Federal, State, and local government purchasers of emergency vehicles.

EPA is not finalizing such an emergency vehicle provision in this rule, since we believe that it is feasible for manufacturers to apply the same types of technologies to the base emergency vehicle as they would to other vehicles in their fleet. However, EPA also recognizes that, because of the unique "performance upgrading" needed to convert a base vehicle into one that meets the performance demands of the law enforcement community—which tend to reduce GHGs relative to the base vehicles—there could be situations where a manufacturer is more challenged in meeting the GHG standards than the CAFE standards, simply due to inclusion of these higher-emitting vehicles in the GHG program fleet. While EPA is not finalizing such an exclusion for emergency vehicles today, we do believe it is important to assess this issue in the future. EPA plans to assess the unique characteristics of these emergency vehicles and whether special provisions for addressing them are warranted. EPA plans to undertake this evaluation as part of a follow-up rulemaking in the next 18 months (this rulemaking is discussed in the context of small

3. Overview of How EPA's CO_2 Standards Will Be Implemented for Individual Manufacturers

This section provides a brief overview of how EPA will implement the CO_2 standards. Section III.E explains EPA's approach to certification and compliance in detail. As proposed, EPA is finalizing two kinds of standards—fleet average standards determined by a manufacturer's fleet makeup, and in-use standards that will apply to the individual vehicles that make up the manufacturer's fleet. Although this is similar in concept to the current light-duty vehicle Tier 2 program, there are important differences. In explaining EPA's CO_2 standards, it is useful to summarize how the Tier 2 program works.

Under Tier 2, manufacturers select a test vehicle prior to certification and test the vehicle and/or its emissions hardware to determine both its emissions performance when new and the emissions performance expected at the end of its useful life. Based on this testing, the vehicle is assigned to one of several specified bins of emissions levels, identified in the Tier 2 rule, and this bin level becomes the emissions standard for the test group the test vehicle represents. All of the vehicles in the group must meet the emissions level for that bin throughout their useful life. The emissions level assigned to the bin is also used in calculating the manufacturer's fleet average emissions performance.

Since compliance with the Tier 2 fleet average depends on actual test group sales volumes and bin levels, it is not possible to determine compliance at the time the manufacturer applies for and receives a certificate of conformity for a test group. Instead, at certification, the manufacturer demonstrates that the vehicles in the test group are expected to comply throughout their useful life with the emissions bin assigned to that test group, and makes a good faith demonstration that its fleet is expected to comply with the Tier 2 average when the model year is over. EPA issues a certificate for the vehicles covered by the test group based on this demonstration, and includes a condition in the certificate that if the manufacturer does not comply with the fleet average then production vehicles from that test group will be treated as not covered by the certificate to the extent needed to bring the manufacturer's fleet average into compliance with Tier 2.

EPA is retaining the Tier 2 approach of requiring manufacturers to demonstrate in good faith at the time of certification that vehicles in a test group will meet applicable standards throughout useful life. EPA is also retaining the practice of conditioning certificates upon attainment of the fleet average standard. However, there are several important differences between a Tier 2 type of program and the CO_2 standards program. These differences and resulting modifications to EPA's certification protocols are summarized below and are described in detail in Section II*.E.*

EPA will continue to certify test groups as it does for Tier 2, and the CO_2 emission results for the test vehicle will serve as the initial or default standard for all of the vehicles in the test group. However, manufacturers will later collect and submit data for individual vehicle model types [181] within each test group, based on the extensive fuel economy testing that occurs through the course of the model year. This model type data will be used to assign a distinct certification level for each model type, thus replacing the initial test group data as the compliance value for each model. It is these model type values that will be used to calculate the fleet average after the end of the model year.[182] The option to substitute model type data for the test group data is at the manufacturer's discretion, except they are required, as they are under the CAFE test protocols, to submit sufficient vehicle test data to represent no less than 90 percent of their actual model year production. The test group emissions data will continue to apply for any model type that is not covered by vehicle test data specific to that model type.

EPA's CO_2 standards also differ from Tier 2 in that the fleet average calculation for Tier 2 is based on test group bin levels and test group sales whereas under the CO_2 program the CO_2 fleet average could be based on a combination of test group and model type emissions and model type production. For the new CO_2 standards, the final regulations use production rather than sales in calculating the fleet average in order to closely conform with the CAFE program, which is a production-based program.[183] Production as defined in the regulations is relatively easy for manufacturers to track, but once the vehicle is delivered to dealerships the manufacturer becomes once step removed from the sale to the ultimate customer, and it becomes more difficult to track that final transaction. There is no environmental impact of using production instead of actual sales, and many commenters supported maintaining alignment between EPA's program and the CAFE program where possible.

4. Averaging, Banking, and Trading Provisions for CO_2 Standards

As explained above, EPA is finalizing a fleet average CO_2 program for passenger cars and light trucks. EPA has previously implemented similar averaging programs for a range of motor vehicle types and pollutants, from the Tier 2 fleet average for NO_X to motorcycle hydrocarbon (HC) plus oxides of nitrogen (NO_X) emissions to NO_X and particulate matter (PM) emissions from heavy-duty engines.[184] The program will operate much like EPA's existing averaging programs in that manufacturers will calculate production-weighted fleet average emissions at the end of the model year and compare their fleet average with a fleet average emission standard to determine compliance. As in other EPA averaging programs, the Agency is also finalizing a comprehensive program for averaging, banking, and trading of credits which together will help manufacturers in planning and implementing the orderly phase-in of emissions control technology in their production, consistent with their typical redesign schedules.[185]

Averaging, Banking, and Trading (ABT) of emissions credits has been an important part of many mobile source programs under CAA Title II, both for fuels programs as well as for engine and vehicle programs. ABT is important because it can help to address many issues of technological feasibility and lead-time, as well as considerations of cost. ABT is an integral part of the standard setting itself, and is not just an add-on to help reduce costs. In many cases, ABT resolves issues of lead-time

[181] "Model type" is defined in 40 CFR 600.002–08 as "* * * a unique combination of car line, basic engine, and transmission class." A "car line" is essentially a model name, such as "Camry," "Malibu," or "F150." The fleet average is calculated on the basis of model type emissions.

[182] The final in-use vehicle standards for each vehicle will also be based on the testing used to determine the model type values. As discussed in Section II*.E.*4, an in-use adjustment factor will be applied to the vehicle test results to determine the in-use standard that will apply during the useful life of the vehicle.

[183] "Production" is defined as "vehicles produced and delivered for sale" and is not a measure of the number of vehicles actually sold.

[184] For example, *see* the Tier 2 light-duty vehicle emission standards program (65 FR 6698, February 10, 2000), the 2010 and later model year motorcycle emissions program (69 FR 2398, January 15, 2004), and the 2007 and later model year heavy-duty engine and vehicle standards program (66 FR 5001, January 18, 2001).

[185] *See* final regulations at 40 CFR 86.1865–12.

or technical feasibility, allowing EPA to set a standard that is either numerically more stringent or goes into effect earlier than could have been justified otherwise. This provides important environmental benefits and at the same time it increases flexibility and reduces costs for the regulated industry. A wide range of commenters expressed general support for the ABT provisions. Some commenters noted issues regarding specific provisions of the ABT program, which will be discussed in the appropriate context below. Several commenters requested that EPA publicly release manufacturer-specific ABT data to improve the transparency of credit transactions. These comments are addressed in Section II*I.E.*

This section discusses generation of credits by achieving a fleet average CO_2 level that is lower than the manufacturer's CO_2 fleet average standard. The final rule includes a variety of additional ways credits may be generated by manufacturers. Section III.C describes these additional opportunities to generate credits in detail. Manufacturers may earn credits through A/C system improvements beyond a specified baseline. Credits can also be generated by producing alternative fuel vehicles, by producing advanced technology vehicles including electric vehicles, plug-in hybrids, and fuel cell vehicles, and by using technologies that improve off-cycle emissions. In addition, early credits can be generated prior to the program's MY 2012 start date. The credits will be used to determine a manufacturer's compliance at the end of the model year. These credit generating opportunities are described below in Section III.C.

As explained earlier, manufacturers will determine the fleet average standard that applies to their car fleet and the standard for their truck fleet from the applicable attribute-based curve. A manufacturer's credit or debit balance will be determined by comparing their fleet average with the manufacturer's CO_2 standard for that model year. The standard will be calculated from footprint values on the attribute curve and actual production levels of vehicles at each footprint. A manufacturer will generate credits if its car or truck fleet achieves a fleet average CO_2 level lower than its standard and will generate debits if its fleet average CO_2 level is above that standard. At the end of the model year, each manufacturer will calculate a production-weighted fleet average for each averaging set (cars and trucks). A manufacturer's car or truck fleet that achieves a fleet average CO_2 level lower than its standard will generate credits, and if its fleet average CO_2 level is above that standard its fleet will generate debits.

The regulations will account for the difference in expected lifetime vehicle miles traveled (VMT) between cars and trucks in order to preserve CO_2 reductions when credits are transferred between cars and trucks. As directed by EISA, NHTSA accomplishes this in the CAFE program by using an adjustment factor that is applied to credits when they are transferred between car and truck compliance categories. The CAFE adjustment factor accounts for two different influences that can cause the transfer of car and truck credits (expressed in tenths of a mpg), if left unadjusted, to potentially negate fuel reductions. First, mpg is not linear with fuel consumption, *i.e.,* a 1 mpg improvement above a standard will imply a different amount of actual fuel consumed depending on the level of the standard. Second, NHTSA's conversion corrects for the fact that the typical lifetime miles for cars is less than that for trucks, meaning that credits earned for cars and trucks are not necessarily equal. NHTSA's adjustment factor essentially converts credits into vehicle lifetime gallons to ensure preservation of fuel savings and the transfer credits on an equal basis, and then converts back to the statutorily-required credit units of tenths of a mile per gallon. To convert to gallons NHTSA's conversion must take into account the expected lifetime mileage for cars and trucks. Because EPA's standards are expressed on a CO_2 gram per mile basis, which is linear with fuel consumption, EPA's credit calculations do not need to account for the first issue noted above. However, EPA is accounting for the second issue by expressing credits when they are generated in total lifetime Megagrams (metric tons), rather than through the use of conversion factors that would apply at certain times. In this way credits may be freely exchanged between car and truck compliance categories without the need for adjustment. Additional detail regarding this approach, including a discussion of the vehicle lifetime mileage estimates for cars and trucks can be found in Section II*I.E.*5. A discussion of the derivation of the estimated vehicle lifetime miles traveled can be found in Chapter 4 of the Joint Technical Support Document.

A manufacturer that generates credits in a given year and vehicle category may use those credits in essentially four ways, although with some limitations. These provisions are very similar to those of other EPA averaging, banking, and trading programs. These provisions have the potential to reduce costs and compliance burden, and support the feasibility of the standards in terms of lead time and orderly redesign by a manufacturer, thus promoting and not reducing the environmental benefits of the program.

First, EPA proposed that the manufacturer must use any credits earned to offset any deficit that had accrued in the current year or in a prior model year that had been carried over to the current model year. NRDC commented that such a provision is necessary to prevent credit "shell games" from delaying the adoption of new technologies. EPA's Tier 2 program includes such a restriction, and EPA is applying an identical restriction to the GHG program. Simply stated, a manufacturer may not bank (or carry forward) credits if that manufacturer is also carrying a deficit. In such a case, the manufacturer is obligated to use any current model year credits to offset that deficit. Using current model year credits to offset a prior model year deficit is referred to in the CAFE program as credit carry-back. EPA's deficit carry-forward, or credit carry-back provisions are described further, below.

Second, after satisfying any needs to offset pre-existing deficits, remaining credits may be banked, or saved for use in future years. Credits generated in this program will be available to the manufacturer for use in any of the five model years after the model year in which they were generated, consistent with the CAFE program under EISA. This is also referred to as a credit carry-forward provision.

EPA received a number of comments regarding the credit carry-back and carry-forward provisions. Many supported the proposed consistency of these provisions with EISA and the flexibility provided by these provisions, and several offered qualified or tentative support. For example, NRDC encouraged EPA to consider further restrictions in the 2017 and later model years. Public Citizen expressed concern regarding the complexity of the program and how these provisions might obscure a straightforward determination of compliance in any given model year. At least two automobile manufacturers suggested modeling the program after California, which allows credits to be carried forward for three additional years following a discounting schedule.

For other new emission control programs, EPA has sometimes initially restricted credit life to allow time for the Agency to assess whether the credit program is functioning as intended. When EPA first offered averaging and

banking provisions in its light-duty emissions control program (the National Low Emission Vehicle Program), credit life was restricted to three years. The same is true of EPA's early averaging and banking program for heavy-duty engines. As these programs matured and were subsequently revised, EPA became confident that the programs were functioning as intended and that the standards were sufficiently stringent to remove the restrictions on credit life. EPA is therefore acting consistently with our past practice in finalizing reasonable restrictions on credit life in this new program. The Agency believes that a credit life of five years represents an appropriate balance between promoting orderly redesign and upgrade of the emissions control technology in the manufacturer's fleet and the policy goal of preventing large numbers of credits accumulated early in the program from interfering with the incentive to develop and transition to other more advanced emissions control technologies. As discussed below in Section III.C, early credits generated by a manufacturer are also be subject to the five year credit carry-forward restriction based on the year in which they are generated. This limits the effect of the early credits on the long-term emissions reductions anticipated to result from the new standards.

Third, the new program enables manufacturers to transfer credits between the two averaging sets, passenger cars and trucks, within a manufacturer. For example, credits accrued by over-compliance with a manufacturer's car fleet average standard may be used to offset debits accrued due to that manufacturer's not meeting the truck fleet average standard in a given year. EPA believes that such cross-category use of credits by a manufacturer provides important additional flexibility in the transition to emissions control technology without affecting overall emission reductions. Comments regarding the credit transfer provisions expressed general support, noting that it does not matter to the environment whether a gram of greenhouse gas is generated from a car or a truck. Additional comments regarding EPA's streamlined megagram approach and method of accounting for expected vehicle lifetime miles traveled are summarized in Section II*.E.*

Finally, accumulated credits may be traded to another vehicle manufacturer. As with intra-company credit use, such inter-company credit trading provides flexibility in the transition to emissions control technology without affecting overall emission reductions. Trading credits to another vehicle manufacturer could be a straightforward process between the two manufacturers, but could also involve third parties that could serve as credit brokers. Brokers may not own the credits at any time. These sorts of exchanges are typically allowed under EPA's current emission credit programs, *e.g.,* the Tier 2 light-duty vehicle NO_X fleet average standard and the heavy-duty engine NO_X fleet average standards, although manufacturers have seldom made such exchanges. Comments generally reflected support for the credit trading flexibility, although some questioned the extent to which trading might actually occur. As noted above, comments regarding program transparency are addressed in Section II*.E.*

If a manufacturer has accrued a deficit at the end of a model year—that is, its fleet average level failed to meet the required fleet average standard—the manufacturer may carry that deficit forward (also referred to credit carry-back) for a total of three model years after the model year in which that deficit was generated. EPA continues to believe that three years is an appropriate amount of time that gives the manufacturers adequate time to respond to a deficit situation but does not create a lengthy period of prolonged non-compliance with the fleet average standards.[186] As noted above, such a deficit carry-forward may only occur after the manufacturer has applied any banked credits or credits from another averaging set. If a deficit still remains after the manufacturer has applied all available credits, and the manufacturer did not obtain credits elsewhere, the deficit may be carried forward for up to three model years. No deficit may be carried into the fourth model year after the model year in which the deficit occurred. Any deficit from the first model year that remains after the third model year will constitute a violation of the condition on the certificate, which will constitute a violation of the Clean Air Act and will be subject to enforcement action.

The averaging, banking, and trading provisions are generally consistent with those included in the CAFE program, with a few notable exceptions. As with EPA's approach, CAFE allows five year carry-forward of credits and three year carry-back. Under CAFE, transfers of credits across a manufacturer's car and truck averaging sets are also allowed, but with limits established by EISA on the use of transferred credits. The amount of transferred credits that can be used in a year is limited, and transferred credits may not be used to meet the CAFE minimum domestic passenger car standard. CAFE allows credit trading, but again, traded credits cannot be used to meet the minimum domestic passenger car standard. EPA did not propose, and is not finalizing, these constraints on the use of transferred credits.

Additional details regarding the averaging, banking, and trading provisions and how EPA will implement these provisions can be found in Section II*.E.*

5. CO_2 Temporary Lead-Time Allowance Alternative Standards

EPA proposed adopting a limited and narrowly prescribed option, called the Temporary Lead-time Allowance Alternative Standards (TLAAS), to provide additional lead time for a certain subset of manufacturers. As noted in the proposal, this option was designed to address two different situations where we project that more lead time is needed, based on the level of emissions control technology and emissions control performance currently exhibited by certain vehicles. One situation involves manufacturers who have traditionally paid CAFE fines instead of complying with the CAFE fleet average, and as a result at least part of their vehicle production currently has significantly higher CO_2 and lower fuel economy levels than the industry average. More lead time is needed in the program's initial years to upgrade these vehicles to meet the aggressive CO_2 emissions performance levels required by the final rule. The other situation involves manufacturers who have a limited line of vehicles and are therefore unable to average emissions performance across a full line of production. For example, some smaller volume manufacturers produce only vehicles with emissions above the corresponding CO_2 footprint target, and do not have other types of vehicles (that exceed their compliance targets) in their production mix with which to average. Often, these manufacturers also pay fines under the CAFE program rather than meeting the applicable CAFE standard. Because voluntary non-compliance through payment of civil penalties is impermissible for the GHG standards under the CAA, both of these types of manufacturers need additional lead time to upgrade vehicles and meet the standards. EPA proposed that this subset of manufacturers be allowed to

[186] EPA emission control programs that incorporate ABT provisions (*e.g.,* the Tier 2 program and the Mobile Source Air Toxics program) have provided this three-year deficit carry-forward provision for this reason. *See* 65 FR 6745 (February 10, 2000), and 71 FR 8427 (February 26, 2007).

produce up to 100,000 vehicles over model years 2012–2015 that would be subject to a somewhat less stringent CO_2 standard of 1.25 times the standard that would otherwise apply to those vehicles. Only manufacturers with total U.S. sales of less than 400,000 vehicles per year in MY 2009 would be eligible for this allowance. Those manufacturers would have to exhaust designated program flexibilities in order to be eligible, and credit generating and trading opportunities for the eligible vehicles would be restricted. *See* 74 FR 49522–224.

EPA is finalizing the optional TLAAS provisions, with certain limited modifications, so that these manufacturers can have sufficient lead time to meet the tougher MY 2016 GHG standards, while preserving consumer choice of vehicles during this time.[187] EPA is finalizing modified provisions to address the unique lead-time issues of smaller volume manufacturers. One provision involves additional flexibility under the TLAAS program for manufacturers below 50,000 U.S. vehicle sales, as discussed further in Section III.B.5.b below. Another provision defers the CO_2 standards for the smallest volume manufacturers, those below 5,000 U.S. vehicle sales, as discussed in Section III.B.6.

Comments from several manufacturers strongly supported the TLAAS program as critical to provide the lead time needed for manufacturers to meet the standards. Volkswagen commented that TLAAS is an important aspect of EPA's proposal and that it responds to the needs of some smaller manufacturers for additional lead time and flexibility under the CAA. Daimler Automotive Group commented that TLAAS is a critical element of the program and falls squarely within EPA's discretion to provide appropriate lead time to limited-line low-volume manufacturers. BMW also commented that TLAAS is needed because most of the companies with limited lines will have to meet a more stringent fleet standard by 2016 than full-line manufacturers because they sell "feature-dense" vehicles (as opposed to light-weight large wheel-base vehicles) and no pick-up trucks. BMW commented that their MY 2016 footprint-based standard is projected to be 4 percent more stringent than the fleet average standard of 250 g/mile. The Alliance of Automobile Manufacturers supported the flexibilities proposed by EPA, including TLAAS. As discussed in detail below, EPA received extensive comments from many smaller volume manufacturers that the proposed TLAAS program was insufficient to address lead time and feasibility issues they will face under the program.

In contrast, EPA also received comments from the Center for Biological Diversity opposing the TLAAS program, commenting that an exception for high performance vehicles is not allowed under EPCA or the CAA and that it rewards manufacturers that pay penalties under CAFE and penalizes those that have complied with CAFE. This commenter suggests that manufacturers could decrease vehicle mass or power output of engines, purchase credits from another manufacturer, or earn off-cycle credits. EPA responds to these comments below.

After carefully considering the public comments, EPA continues to believe that the TLAAS program is essential in providing necessary lead time and flexibility to eligible manufacturers in the early years of the standards. First, EPA believes that it is acting well within its legal authority in adopting the various TLAAS provisions. EPA is required to provide sufficient lead time for industry as a whole for standards under section 202(a)(1), which mandates that standards are to take effect only "after providing such period as the Administrator finds necessary to permit the development and application of the requisite technology, giving appropriate consideration to the cost of compliance within such period." Thus, although section 202(a)(1) does not explicitly authorize this or any other specific lead time provision, it affords ample leeway for EPA to craft provisions designed to provide adequate lead time, and to tailor those provisions as appropriate. We show below that the types of technology penetrations required for TLAAS-eligible vehicles in the program's earlier years raise critical issues as to adequacy of lead time. As discussed in the EPA feasibility analysis provided in Section III.D.6 and III.D.7 several manufacturers eligible for TLAAS are projected to face a compliance shortfall in MY 2016 without the TLAAS program, even with the full application of technologies assumed by the OMEGA Model, including hybrid use of up to 15 percent. These include BMW, Jaguar Land Rover, Daimler, Porsche, and Volkswagen In addition, the smaller volume manufacturers of this group (*i.e.,* Jaguar Land Rover and Porsche) face the greatest shortfall (see Table III.D.6–4). Even with TLAAS, these manufacturers will need to take technology steps to comply with standards above and beyond those of other manufacturers. These manufacturers have relatively few models with high baseline emissions and this flexibility allows them additional lead time to adapt to a longer term strategy of meeting the final standards within their vehicle redesign cycles.

Second, EPA has carefully evaluated other means of eligible manufacturers to meet the standards, such as utilizing available credit opportunities. Indeed, eligibility for the TLAAS, and for temporary deferral of regulation for very small volume manufacturers, is conditioned on first exhausting the various programmatic flexibilities including credit utilization. At the same time, a basic reason certain manufacturers are faced with special lead time difficulties is their inability to generate credits which can be then be averaged across their fleet because of limited product lines. And although purchasing credits is an option under the program, there are no guarantees that credits will be available. Historic practice in fact suggests that manufacturers do not sell credits to competitors. While some of the smaller manufacturers covered by the TLAAS program may be in a position to obtain credits, they are not likely to be available for the TLAAS manufacturers across the board in the volume needed to comply without the TLAAS provisions. At the same time the TLAAS provisions have been structured such that any credits that do become available would likely be used before a manufacturer would turn to the more restricted and limiting TLAAS provisions.

As discussed in Section III.C., off-cycle credits are available if manufacturers are able to employ new and innovative technologies not already in widespread use, which provide real-world emissions reductions not captured on the current test cycles. Further, these credits are eligible only for technologies that are newly introduced on just a few vehicle models, and are not yet in widespread use across the fleet. The magnitude of these credits are highly uncertain because they are based on new technologies, and EPA is not aware of any such technologies that would provide enough credits to bring these manufacturers into compliance without TLAAS lead time flexibility. Manufacturers first must develop these technologies and then demonstrate their emissions reductions capabilities, which will require lead time. Moreover, the technologies mentioned in the proposal which are the most likely to be eligible based on present knowledge, including solar panels and active

[187] *See* final regulations at 40 CFR 86.1818–12(e).

aerodynamics, are likely to provide only small incremental emissions reductions.

We agree with the comment that reducing vehicle mass or power are potential methods for reducing emissions that should be employed by TLAAS-eligible manufacturers to help them meet standards. However, based on our assessment of the lead time needed for these manufacturers to comply with the standards, especially given their more limited product offerings and higher baseline emissions, we believe that additional time is needed for them to come into compliance. EPA can permissibly consider the TLAAS and other manufacturers' lead time, cost, and feasibility issues in developing the primary standards and has discretion in setting the overall stringency of the standards to account for these factors. *Natural Resources Defense Council* v. *Thomas,* 805 F. 2d 410, 421 (DC Cir. 1986) (even when implementing technology-forcing provisions of Title II, EPA may base standards on an industry-wide capability "taking into account the broad spectrum of technological capabilities as well as cost and other factors" across the industry). EPA is not legally required to set standards that drive these manufacturers or their products out of the market, nor is EPA legally required to preserve a certain product line or vehicle characteristic. Instead EPA has broad discretion under section 202(a)(1) to set standards that reasonably balance lead time needs across the industry as a whole and vehicle availability. In this rulemaking, EPA has consistently emphasized the importance of obtaining very significant reductions in emissions of GHGs from the industry as a whole, and obtaining those reductions through regulatory approaches that avoid limiting the ability of manufacturers to provide model availability and choice for consumers. The primary mechanism to achieve this is the use of a footprint attribute curve in setting the increasingly stringent model year standards. The TLAAS provisions are a temporary and strictly limited modification to these attribute standards allowing the TLAAS manufacturers lead time to upgrade their product lines to meet the 2016 GHG standards. EPA has made a reasonable choice here to preserve the overall stringency of the program, and to afford increased flexibility in the program's early years to a limited class of vehicles to assure adequate lead time for all manufacturers to meet the strictest of the standards by MY 2016.

As described below, EPA also carefully considered the comments of smaller volume manufacturers and believes additional lead time is needed. Therefore, EPA is finalizing the TLAAS program, similar to that proposed, and is also finalizing an additional TLAAS option for manufacturers with annual U.S. sales under 50,000 vehicles. EPA is also deferring standards for manufacturers with annual sales of less than 5,000 vehicles. These new TLAAS provisions and the small volume manufacturer deferment are discussed in detail below and in Section III.B.6.

a. Base TLAAS Program

As proposed, EPA is establishing the TLAAS program for a specified subset of manufacturers. This alternative standard is an option only for manufacturers with total U.S. sales of less than 400,000 vehicles per year, using 2009 model year final sales numbers to determine eligibility for these alternative standards. For manufacturers with annual U.S. sales of 50,000 or more but less than 400,000 vehicles, EPA is finalizing the TLAAS program largely as proposed. EPA proposed that under the TLAAS, qualifying manufacturers would be allowed to produce up to 100,000 vehicles that would be subject to a somewhat less stringent CO_2 standard of 1.25 times the standard that would otherwise apply to those vehicles. This 100,000 volume is not an annual limit, but is an absolute limit for the total number of vehicles which can use the TLAAS program over the model years 2012–2015. Any additional production would be subject to the same standards as any other manufacturer. EPA is retaining this limit for manufacturers with baseline MY 2009 sales of 50,000 but less than 400,000. In addition, as discussed further below, EPA is finalizing a variety of restrictions on the use of the TLAAS program, to ensure that only manufacturers who need more lead time for the kinds of reasons noted above are likely to use the program.

Volvo and Saab commented that basing eligibility strictly on MY 2009 sales would be problematic for these companies, which are being spun-off from larger manufacturer in the MY 2009 time frame due to the upheaval in the auto industry over the past few years. These commenters offered a variety of suggestions including using MY 2010 as the eligibility cut-off instead of MY 2009, reassessing eligibility on a year-by-year basis as corporate relationships change, or allowing companies separated from a larger parent company by the end of 2010 to use their MY 2009 branded U.S. sales to qualify for TLAAS. In response to these concerns, EPA recognizes that these companies currently being sold by larger manufacturers will share the same characteristics of the manufacturers for which the TLAAS program was designed. As newly independent companies, these firms will face the challenges of a narrower fleet of vehicles across which to average, and may potentially be in a situation, at least in the first few years, of paying fines under CAFE. Lead time concerns in the program's initial years are in fact particularly acute for these manufacturers since they will be newly independent, and thus would have even less of an opportunity to modify their vehicles to meet the standards. Therefore, EPA is finalizing an approach that allows manufacturers with U.S. "branded sales" in MY 2009 under the umbrella of a larger manufacturer that become independent by the end of calendar year 2010 to use their MY 2009 branded sales to qualify for TLAAS eligibility. In other words, a manufacturer will be eligible for TLAAS if it produced vehicles for the U.S. market in MY 2009, its branded sales of U.S. vehicles were less than 400,000 in MY 2009 but whose vehicles were sold as part of a larger manufacturer, and it becomes independent by the end of calendar year 2010, if the new entity has sales below 400,000 vehicles.

Manufacturers with no U.S. sales in MY 2009 are not eligible to utilize the TLAAS program. EPA does not support the commenter's suggestion of a year-by-year eligibility determination because it opens up the TLAAS program to an unknown universe of potential eligible manufacturers, with the potential for gaming. EPA does not believe the TLAAS program should be available to new entrants to the U.S. market since these manufacturers are not transitioning from the CAFE regime which allows fine paying as a means of compliance to a CAA regime which does not, and hence do not present the same types of lead time issues. Manufacturers entering the U.S. market for the first time thus will be fully subject to the GHG fleet-average standards.

As proposed, manufacturers qualifying for TLAAS will be allowed to meet slightly less stringent standards for a limited number of vehicles. An eligible manufacturer could have a total of up to 100,000 units of cars or trucks combined over model years 2012–2015 which would be subject to a standard 1.25 times the standard that would otherwise apply to those vehicles under the primary program. In other words, the footprint curves upon which the individual manufacturer standards for the TLAAS fleets are based would be

less stringent by a factor of 1.25 for up to 100,000 of an eligible manufacturer's vehicles for model years 2012–2015. EPA believes that 100,000 units over four model years achieves an appropriate balance, as the emissions impact is quite small, but does provide companies with necessary lead time during MY 2012–2015. For example, for a manufacturer producing 400,000 vehicles per year, this would be a total of up to 100,000 vehicles out of a total production of up to 1.6 million vehicles over the four year period, or about 6 percent of total production.

Finally, for manufacturers of 50,000 but less than 400,000 U.S. vehicles sales during 2009, the program expires at the end of MY 2015 as proposed. EPA continues to believe the program reasonably addresses a real world lead time constraint for these manufacturers, and does so in a way that balances the need for more lead time with the need to minimize any resulting loss in potential emissions reductions. In MY 2016, the TLAAS option thus ends for all but the smallest manufacturers opting for TLAAS, and manufacturers must comply with the same CO_2 standards as non-TLAAS manufacturers; under the CAFE program companies would continue to be allowed to pay civil penalties in lieu of complying with the CAFE standards. However, because companies must meet both the CAFE standards and the EPA CO_2 standards, the National Program will have the practical impact of providing a level playing field for almost all except the smallest companies beginning in MY 2016. This option, even with the modifications being adopted, thereby results in more fuel savings and CO_2 reductions than would be the case under the CAFE program by itself.

EPA proposed that manufacturers meeting the cut-point of below 400,000 sales for MY 2009 but whose U.S. sales grew above 400,000 in any subsequent model years would remain eligible for the TLAAS program. The total sales number applies at the corporate level, so if a corporation owns several vehicle brands the aggregate sales for the corporation must be used. These provisions would help prevent gaming of the provisions through corporate restructuring. Corporate ownership or control relationships would be based on determinations made under CAFE for model year 2009 (except in the case of a manufacturer being sold by a larger manufacturer by the end of calendar year 2010, as discussed above). In other words, corporations grouped together for purposes of meeting CAFE standards in MY 2009, must be grouped together for determining whether or not they are eligible under the 400,000 vehicle cut point. EPA is finalizing these provisions with the following modifications. EPA recognizes the dynamic corporate restructuring occurring in the auto industry and believes it is important to structure additional provisions to ensure there is no ability to game the TLAAS provisions and to ensure no unintended loss of feasible environmental benefits. Therefore, EPA is finalizing a provision that if two or more TLAAS eligible companies are later merged, with one company having at least 50% or more ownership of the other, or if the companies are combined for the purposes of EPA certification and compliance, the TLAAS allotment is not additive. The merged company will only be allowed the allotment for what is considered the parent company under the new corporate structure. Further, if the newly formed company would have exceeded the 400,000 vehicle cut point based on combined MY 2009 sales, the new entity is not eligible for TLAAS in the model year following the merger. EPA believes that such mergers and acquisitions would give the parent company additional opportunities to average across its fleet, eliminating one of the primary needs for the TLAAS program. This provision will not be retroactive and will not affect the TLAAS program in the year of the merger or for previous model years. EPA believes these additional provisions are essential to ensure the integrity of the TLAAS program by ensuring that it does not become available to large manufacturers through mergers and acquisitions.

As proposed, the TLAAS vehicles will be separate car and truck fleets for that model year and subject to the less stringent footprint-based standards of 1.25 times the primary fleet average that would otherwise apply. The manufacturer will determine what vehicles are assigned to these separate averaging sets for each model year. As proposed, credits from the primary fleet average program can be transferred and used in the TLAAS program. Credits generated within the TLAAS program may also be transferred between the TLAAS car and truck averaging sets (but not to the primary fleet as explained below) for use through MY 2015 when the TLAAS ends.
