Since the GSA medical supply schedule is a source for pricing information that is public and transparent and reflects the best government contract price for a product, we believe it is a desirable resource for us to use in a refined process for updating the prices of high-cost supplies. For historical context, CMS has previously proposed to use VA prices that result from the competitive marketplace as comparison points to limit the Medicare prices for oxygen and certain items of durable medical equipment and prosthetic devices (62 FR 38100 through 38107, and 64 FR 44227 through 44231) in 1997 and 1999, respectively. These prior proposals were based on our determination that the Medicare payment amounts for these items as durable medical equipment or prosthetics (not as physicians' services) were not inherently reasonable. We noted, however, that our current interest in the GSA schedule for pricing high-cost supplies for payment of physicians' services is not based on considerations of inherent reasonableness, and we do not actually pay the prices in the PE database for supplies under the PFS.

We further noted that public commenters on pricing high-cost supplies have consistently requested that we ensure that the pricing information used to update the prices is provided publicly. The commenters have observed that this transparency would enable stakeholders to evaluate and provide feedback to the agency on pricing accuracy (74 FR 61776). We also acknowledged that our past attempts over several years to identify typical market prices for the high-cost supplies have been inhibited by the limited availability of public data that meet the documentation requirements we have previously established. Individual vendors do not always publish their product prices or provide typical discounts. Moreover, discounts may vary depending on suppliers and the volume of supplies purchased. In the CY 2011 PFS proposed rule (75 FR 40082), we explained that our understanding of the GSA medical supply schedule is that the publicly listed fair and reasonable prices on the schedule generally do not include volume and or certain other discounts that may be subsequently negotiated by the buyer. Consequently, we would consider the prices available on the GSA schedule to represent the "individual item ceiling" price for a single item purchase, which we believe would be appropriate to estimate the high-cost supply prices for physicians' office purchases. We solicited public comments regarding the high-cost supplies in the direct PE database for the CY 2011 PFS proposed rule, available on the CMS Web site as noted earlier in this section, and the corresponding supplies or alternative items that could be used for the same function that are currently on the GSA supply schedule. We encouraged commenters to provide a detailed analysis of the current relationships between the items in the PE database and those on the GSA schedule.

In the CY 2011 PFS proposed rule (75 FR 40082), we described a refined process for regularly updating prices for high-cost supplies under the PFS and solicit comments on how we could improve on this process. The process could occur every 2 years beginning as soon as CY 2013, although we noted that we would propose the refined process through rulemaking before revising the prices for any high-cost supply item based on the GSA schedule. We could also consider establishing a different price update period depending on whether a high-cost supply was a new supply in the PE database or had been in use for some time, in which case we might expect that the price would have stabilized and, therefore, could be updated less frequently. In general, we would expect that the periodicity of updating prices for high-cost supplies that we eventually adopted would balance the associated administrative burden with the rate of price changes, to ensure that the associated procedures remain appropriately valued, rather than increasingly misvalued, over time.

We envisioned that we would base high-cost supply price inputs on the publicly available price listed on the GSA medical supply schedule. Since the medical community would have several years to examine the GSA medical supply schedule before the refined process would be adopted, and we had found no apparent limitations on vendors placing products on the GSA schedule, beyond the schedule's interest in competitive, best value procurements, stakeholders would have the opportunity to ensure that any high-cost direct PE input for a PFS service that may currently be missing from the GSA medical supply schedule would be included before CMS needs to access the publicly available price for the item. If a supply price were not publicly available on the GSA medical supply schedule by the time CMS needs to access the price, we would propose to reduce the current price input for the supply by a percentage that would be based on the relationship between GSA prices at that time and the existing PE database prices for similar supplies (currently an average 23 percent reduction). We believe that this refined process would be desirable because it is consistent with commenters' repeated requests for the updating methodology to be transparent and predictable.

Moreover, the VA (with responsibility delegated by the GSA) determines whether prices are fair and reasonable by comparing the prices and discounts that a company offers the government

with the prices and discounts that the company offers to commercial customers. Therefore, using the GSA medical supply schedule as a source for publicly available prices would also better account for product-specific market dynamics than the alternative of an across-the-board percentage reduction for supplies not on the GSA schedule based on general price trends for the high-cost supplies on the schedule. That is, if the market price of a particular supply were not to drop according to broad trends for other high-cost supplies, suppliers would have the opportunity to provide their price to the public on the GSA schedule in order to preclude any reduction in Medicare payment for procedures associated with that supply.

Finally, we reiterated our interest in receiving detailed public comments on the refined process discussed above, including all aspects of the price update methodology that we have presented. Moreover, we believe a similar approach could potentially be appropriate to update the prices for other supplies in the PE database that would not fall under our definition of high-cost supplies, and we welcomed further public comments on that possible extension. We also invited further suggestions for alternative approaches to updating high-cost supply prices, specifically those that would result in a predictable, public, and transparent methodology that would ensure that the prices in the PE database reflect typical market prices. These principles are particularly important in order to ensure that the services that utilize the high-cost supplies when provided in the physician's office are appropriately valued under the PFS and continue to be appropriately valued over time.

Comment: Many commenters agreed with the need for a frequent, transparent price update process for high-cost supplies based on publicly available sources of pricing information. MedPAC supported CMS' description of the process update the prices of high-cost supplies presented in the CY 2011 PFS proposed rule: "As an initial step, it is reasonable to use the GSA schedule as a source for the prices of high-cost supply items and to reduce the prices of items not on the GSA schedule by the average difference between the GSA prices and the prices in CMS' PE database for similar supplies."

Response: We appreciate the general affirmation by many stakeholders of the significance of accurate pricing of high-cost supplies relative to other PE items (equipment, low-cost supplies, and clinical labor). We also value MedPAC's support for the update process that we described for the prices of high-cost supplies.

Comment: Many commenters asserted that because the medical supply prices on the GSA schedule reflect the best price for government entities, these prices are not representative of typical prices available to practitioners caring for Medicare beneficiaries. The commenters suggested that physicians in private practices do not have the requisite purchasing power to negotiate such large discounts on their own and that the sales environments for the government and private markets are vastly different. Therefore, the commenters argued, because the GSA schedule is a streamlined buying process that the government uses to buy products and services through registered vendors at pre-negotiated prices, the schedule does not provide an accurate reflection of prices faced by any physician practice. Some commenters also observed that the prices on this schedule have historically been used only by manufacturers and suppliers in the context of providing these high-cost supplies to the VA alone, and do not reflect prices to other non-governmental entities.

Response: We appreciate the differences in the purchasing power of the federal government and individual practitioners. However, we have reason to believe that prices on the GSA schedule do not reflect the full volume discounts available to large purchasers like the Federal government. In fact, while the GSA has delegated the authority to the VA to procure medical supplies under the VA Federal Supply Schedules Program, we understand that the prices that appear on the schedule do not reflect the prices the VA itself would usually pay for a medical supply. Instead, the VA determines the schedule prices to be fair and reasonable prior to placing them on the schedule, and uses that schedule price as a starting point for its own negotiations with supply vendors for specific purchases.

While several commenters explained how vendors provide the VA itself with discounts that are greater than those offered to other buyers, and a few additional commenters made uncorroborated claims that prices on the GSA supply schedule reflect discounts unavailable to other providers, we received no evidence that the prices contained on the schedule are atypical of medical supply prices in the private marketplace. We agree that the prices on the GSA schedule may reflect some discounting, but we do not believe that the prices reflect the full discounting available to the VA itself for many purchases. Instead, we believe that the discounting on the GSA schedule reflects what the VA has deemed reasonable for other government buyers in the context of prices and discounts that a vendor offers to commercial customers.

We also believe that typical practitioners receive discounts from vendors' listed prices for supply items for a variety of reasons, although we acknowledge that the basis for the discounts reflected on the GSA schedule may differ from the basis for the discounts that are available to typical practitioners. Therefore, we do not necessarily agree with the premise underlying many commenters' concerns that the usefulness of the GSA schedule as a source for PFS high-cost supply prices is necessarily undermined solely because large government buyers benefit from some exclusive discounts.

We believe that in a relative payment system, maintaining the relativity of discounting among the prices for supply items may be more significant than any concern associated with the reasons different buyers receive particular discounts. At the moment, we have no reason to believe that the prices on the GSA schedule are atypical of the non-government market, despite broad assertions by the commenters that the government may receive discounts for different reasons than those available to private purchasers. As we consider this high-cost supply update process for the future, we would be interested in receiving further public comments that substantiate the claims that medical supply prices on the GSA schedule are not representative of actual prices paid by typical practitioners caring for Medicare patients.

Comment: Some commenters expressed concern that pricing high-cost supplies based on the GSA supply schedule could result in loss of appropriate relativity in PE RVUs because pricing for other supplies would be determined using other methodologies.

Response: As stated earlier in this section, we do not actually pay the supply prices included in the PE database but instead use them to develop the PE RVUs according to our standard PE methodology as described in section II.A.2. of this final rule with comment period. However, we believe that inaccuracies in the prices for high-cost supplies that are specific to a very few PFS services may disproportionately distort physician payment by leading to inaccurate PE RVUs for services using those high-cost supplies. We believe that neglecting to incorporate any discounts or typical reductions in the market price for a

high-cost supply that is sold to a practitioner for use in a specific service would result in a greater likelihood that the service would be misvalued under a relative payment system than would similar imprecision in the prices for lower-cost supplies that are commonly used in many services and where price changes are typically less extreme. Finally, we note that we also remain interested in the possibility of using the GSA supply schedule for all PFS supply and equipment price inputs, as we stated in the CY 2011 PFS proposed rule (75 FR 40082).

Comment: One commenter suggested that using the GSA schedule for supply price inputs might allow a single supplier furnishing a small volume of a product at a divergent price to distort the PE RVU calculations. On the other hand, MedPAC stated that the current CMS' process of "using price information voluntarily submitted by specialty societies, individual practitioners, suppliers, and product developers might not result in objective and accurate prices because each group has a financial stake in the process."

Another commenter recommended that if CMS were to use the GSA schedule prices as high-cost inputs, then CMS should guarantee that physicians may purchase supplies at the GSA schedule prices. The commenter claimed that failure to do so would result in inherently unfair, lower PE RVUs for certain procedures, which could ultimately create an access to care problem for Medicare beneficiaries.

Response: We believe that our current system of accepting voluntarily submitted invoices for supply and equipment price direct PE inputs may be problematic for high-cost supplies because the prices for such supplies may be particularly susceptible to distortions that significantly influence the PE RVUs that we use for payment of the associated services. We also believe that any attempt to account for these distortions and more appropriately value the services must be transparent to the stakeholders. Because the prices on the GSA supply schedule are developed based on the interaction between parties that have competing financial interests (the VA and supply vendors), we believe that these prices are more likely to be representative of competitive market prices than are prices that are voluntarily submitted by individuals with financial stakes in the PFS payment process. We agree that distortions—whether price overstatements or understatements—in the values of the direct PE inputs, resulting in misvalued services, have the potential to create financial incentives for practitioners that are detrimental to ensuring access to medically necessary and reasonable care for Medicare beneficiaries. Based in part on prior analysis by MedPAC, we believe that the greater risk of misvalued PE RVUs results from overvaluing high-cost supplies since we believe that prices for these items may generally decrease over time as competition increases.

As we discussed in our response to a previous comment, we do not actually use the prices in the PE database for supplies but instead those prices are the basis for the PE RVUs for the associated services developed under the budget neutral PFS. Therefore, we do not agree with the commenter that we should guarantee that physicians may purchase supplies at the GSA schedule prices. Where our goal is for the high-cost supply prices we use for PFS ratesetting to reflect typical market prices for these items, especially in a relative sense, for many reasons different supplies may not be available to individual practitioners purchasing them at the prices in the PE database. The PFS is not a payment system that reimburses health care practitioners based on their individual costs, and the price available to an individual practitioner for a supply item may be high or lower than the price in the PE database that is used for setting the PFS PE RVUs for the associated procedure.

Comment: One commenter claimed that no U.S. manufacturer sells cryoablation probes through the GSA supply schedule and, therefore, asserted that the pricing process for high-cost supplies described in the CY 2011 PFS proposed rule would be inappropriate for that particular supply. Other commenters reported difficulty locating particular medical supplies on the GSA supply schedule.

Response: While we recognize that not all high-cost supplies are currently on the GSA supply schedule, as we stated in the CY 2011 PFS proposed rule (75 FR 40082), we believe that since we have provided the medical community several years to examine the GSA medical supply schedule before its use could be adopted under the PFS, stakeholders would have the opportunity to ensure that any high-cost direct PE input for a PFS service that may currently be missing from the GSA medical supply schedule would be included before CMS needs to access the publicly available price for the item. Furthermore, we have found that the use of multiple clinically related search terms under the GSA schedule search engine improves our ability to locate supply items that are related to those that we currently include in the direct PE database for the PFS. We believe that the mistaken assumption that certain supplies are unavailable on the GSA supply schedule, resulting from some commenters' inconclusive searches, may have influenced many commenters' responses to the process we discussed in the CY 2011 PFS proposed rule.

Prior to adopting use of the GSA supply schedule to update the prices for high-cost supplies under the PFS, we believe it would be appropriate to work with interested stakeholders to consider developing a crosswalk between supply items included the direct PE database and the GSA supply schedule.

Comment: One commenter contended that implementation of a process to update high-cost supply prices based on the GSA schedule would disadvantage all medical device companies that have chosen to provide devices directly to the armed services or facilities for the treatment of veterans. A few commenters speculated that many supply vendors would resist placing their products on the GSA schedule for a variety of reasons, including avoiding any unnecessary regulatory burden or the scrutiny of GSA audits.

Response: We have no reason to believe that vendors who sell directly to the VA at discounts must incorporate negotiated discounted prices on the GSA schedule, so we do not believe that utilizing publicly available prices as direct PE inputs would have a disproportionately unfair impact on suppliers who sell directly to the VA. At the same time, we also understand that not every medical supply vendor would choose to place their products on the GSA schedule. That is why we stated in the proposed rule (75 FR 40082) that if a supply price were not publicly available on the GSA medical supply schedule by the time CMS needs to access the price, we would consider proposing to reduce the current price input in the PE database for the supply by a percentage that would be based on the relationship between GSA prices at that time and the existing PE database prices for similar supplies. Vendors would need to balance their concerns about placing their products on the GSA supply schedule with the alternative pricing policy that would apply.

Comment: Several commenters objected to a reduction of supply price inputs based on the relationship between GSA prices at the time the prices are being updated and the existing PE database prices for similar supplies. Many of the commenters stated that the 23 percent reduction presented as an example in the CY 2011 PFS proposed rule (75 FR 40082) was

based on a very small sample of items and appeared arbitrary. One commenter contended that the percentage reduction would need to be validated for application to current pricing and argued that it would be inappropriate for use on an item-specific basis.

Additional commenters, including the AMA RUC, pointed out the discrepancy between the price of the "jejunostomy tube" supply item listed in the chart of high-cost supplies and in the direct PE database. These commenters were concerned that this discrepancy may have led CMS to incorrectly calculate the average difference between GSA prices and current prices in the direct PE database. One commenter reasoned that it would be unfair for CMS to change the price inputs for innovative medical devices by relying on "speculation that prices for these items may decrease over time as competition increases and new technologies disseminate into medical practice."

Response: We appreciate the commenters' concerns regarding the example of the 23 percent reduction mentioned in the CY 2011 PFS proposed rule. We provided that sample percentage as an example based on a current analysis of a small sample of supplies. We appreciate commenters correctly pointing out that we displayed an outdated price input for the supply item "jejunostomy tube" in the CY 2011 PFS proposed rule (75 FR 40080 through 40081). As we explained in the proposed rule, we are still working through the crosswalk between our supplies and the way the supplies are presented on the GSA schedule. We included the 23 percent figure as a rough guide based on a comparison of current GSA schedule and PE database prices for a small sample of high-cost supply items.

Prior to implementing any price update based on GSA supply schedule prices, we would conduct a thorough analysis of the validity of the GSA pricing data in question. We believe that using such data for price comparisons, validated, and expanded to include all applicable supply items, may be more likely to approximate typical prices for these supplies than any available alternative—especially failing to update the high-cost supply price inputs with the necessary frequency. In cases where the prices for certain high-cost supplies do not follow the broad trends for other high-cost supplies, suppliers would have the opportunity to provide their price to the public on the GSA schedule in order to preclude any reduction in Medicare payment for procedures associated with that supply.

Comment: Some commenters asserted that CMS should conduct independent market research similar in kind to the research CMS claims that the VA conducts in placing supply items and their associated prices on the GSA schedule. Another commenter recommended that CMS use a particular market research contractor to price these supplies.

Response: As we stated in the CY 2011 PFS proposed rule (75 FR 40079), we contracted with an independent contractor during CY 2009 to help us study the availability of accurate pricing information for high-cost supplies. We believe such research needs to be conducted with transparency, including using publicly available sources and contacting supply vendors directly. The contractor reported tremendous difficulty in identifying typical market prices using these methods. We have no reason to believe that a different contractor using similar methods would have greater success in acquiring market pricing information without utilizing a methodology that would be burdensome to practitioners or supply vendors or other stakeholders. Because the supply vendors in contact with the VA generally have a financial incentive to cooperate with their market research directly, we believe that the VA's methodology in this case would yield more accurate information than information derived from market researchers who do not have such cooperation, like the contractor working previously on behalf of CMS.

Comment: Several commenters, including the AMA RUC, recommended that CMS consider creating HCPCS codes to be reported by rendering physicians for high-cost supplies when used for the care of a patient during procedure. The supplies could then be removed from the direct PE database and appropriate pricing for these supply HCPCS codes could be determined by CMS on an annual basis. One commenter requested that CMS explore whether such a methodology would be budget neutral under the PFS, since the commenter did not support an approach that would reduce PFS payments for cognitive services.

Response: We appreciate the commenters' suggestions, but we believe creating separately reportable HCPCS codes for high-cost supplies and paying separately for these items would merely shift the pricing challenge rather than resolve it, and could compound the problem of misvaluing services by explicitly paying for high-cost supplies at the expense of other low-cost supplies, equipment, and clinical labor included in the PE component of PFS payment. We do not understand how this suggestion would help CMS price the supply items accurately, nor how it would lead to more appropriate payment for high-cost supplies under the relativity of the budget neutral PFS. This approach would be required to be budget neutral under the PFS and, to the extent that our current PE methodology pays less than the direct PE database cost for a supply item, payment for individual high-cost supplies at prices we establish could redistribute dollars from other PFS services to payment for these supply items if we were to pay more for them separately. Finally, unbundling payment for high-cost supplies from the associated procedures would be contrary to the current public policy interest in increasing the size of the payment bundles used for Medicare payment to encourage efficiencies in the delivery of services.

Comment: Several commenters expressed a readiness to provide any additional information that may help CMS in pricing high-cost supplies, in lieu of using the GSA schedule prices for that purpose.

Response: We appreciate commenters' offers of assistance regarding the pricing of direct PE inputs. However, based on the public comments from stakeholders that we received on the process we proposed in the CY 2009 PFS proposed rule and the experience of the CMS' contractor who attempted to acquire market pricing for supply items directly from supply vendors, we believe that use of the GSA schedule would have greater potential to provide us systematically and transparently with typical market prices for high-cost supply items that could be updated with an appropriate periodicity.

Comment: Some commenters expressed concern that CMS had not presented any information about how prices for Medicare PE purposes would actually be developed from the GSA supply schedule and had not specified how the Agency would do so nor whether (or when) CMS intended to make the approach available for public comment.

Response: We appreciate the commenters' concerns regarding the practical implementation of a high-cost supply price update process based on prices on the GSA supply schedule. In the CY 2011 PFS proposed rule (75 FR 40082), our discussion was intended to encourage broad stakeholder comment, including consideration of potential alternatives to the process presented. Prior to implementing a high-cost supply update methodology, such as the use of prices on the GSA schedule that was the focus of our proposed rule

discussion, we would expect to use annual rulemaking in order to propose a more detailed process that would be subject to modification based upon our consideration of the public comments.

In summary, we appreciate the many public comments we received on our discussion of a process that would use GSA schedule prices to update the prices for high-cost supplies utilized for developing PE RVUs under the PFS. In the context of our explicit responsibility to review and adjust the PFS values for potentially misvalued services under section 1848(c)(2)(K) of the Act (as added by section 3134 of the ACA), we believe it is especially important to soon establish a periodic and transparent process to update the cost of high-cost supplies to reflect typical market prices so that these supply items are appropriately considered in our ratesetting methodology. While public commenters expressed some concerns regarding our discussion of use of the GSA supply schedule prices in such a process, at this point we remain optimistic that this approach has significant potential to be used under the PFS and, based on our several year history of work in this area, we do not see other viable alternatives at this point. We will continue to study the issue of how to update the prices for high-cost supplies over the upcoming months, and we encourage stakeholders to also further consider the process we discussed in CY 2011 rulemaking and provide their additional thoughts and perspectives to us on an ongoing basis.

D. Geographic Practice Cost Indices (GPCIs)

1. Background

Section 1848(e)(1)(A) of the Act requires us to develop separate Geographic Practice Cost Indices (GPCIs) to measure resource cost differences among localities compared to the national average for each of the three fee schedule components (that is, work, PE, and malpractice). While requiring that the PE and malpractice GPCIs reflect the full relative cost differences, section 1848(e)(1)(A)(iii) of the Act requires that the physician work GPCIs reflect only one-quarter of the relative cost differences compared to the national average. In addition, section 1848(e)(1)(G) of the Act sets a permanent 1.5 work GPCI floor in Alaska for services furnished beginning January 1, 2009. Section 1848(e)(1)(C) of the Act requires us to review and, if necessary, adjust the GPCIs not less often than every 3 years. This section also specifies that if more than 1 year has elapsed since the last GPCI revision, we must phase in the adjustment over 2 years, applying only one-half of any adjustment in each year. As discussed in the CY 2009 PFS final rule with comment period (73 FR 69740), the CY 2009 adjustment to the GPCIs reflected the fully implemented fifth comprehensive GPCI update. CY 2010 would have typically included no adjustments to the GPCIs. However, section 3102(a) of the ACA amended section 1848(e)(1)(E) of the Act to extend the 1.0 work GPCI floor for services furnished through December 31, 2010. Additionally, section 3102(b) of the ACA added a new subparagraph (H) to section 1848(e)(1) of the Act, which specifies that for CY 2010 and CY 2011, the employee compensation and rent portions of the PE GPCI must reflect only one-half of the relative cost differences for each locality compared to the national average. The new subparagraph also includes a "hold harmless" provision for CY 2010 and CY 2011 for any PFS locality that would otherwise receive a reduction to its PE GPCI resulting from the limited recognition of cost differences. Additionally, section 1848(e)(1)(I) of the Act (as added by section 10324(c) of the ACA) established a 1.0 PE GPCI floor for services furnished in frontier States effective January 1, 2011. In May 2010, we provided our Medicare contractors with an updated CY 2010 payment file that included the 1.0 work GPCI floor and the PE GPCIs calculated according to the methodology required by section 1848(e)(1)(H) of the Act (as added by section 3102(b) of the ACA) for CY 2010, to be used for payment of services furnished on or after January 1, 2010.

For the CY 2011 PFS proposed rule, we completed the sixth review of the GPCIs and proposed new GPCIs. We noted that section 1848(e)(1)(E) of the Act (as amended by section 3102(a) of the ACA) extends the 1.0 work GPCI floor only through December 31, 2010. Under current statute, the 1.0 work GPCI floor will expire on January 1, 2011. Therefore, the CY 2011 physician work GPCIs, and summarized geographic adjustment factors (GAFs), do not reflect the 1.0 work floor. However, section 1848(e)(1)(G) of the Act (as amended by section 134(b) of the MIPPA) set a permanent 1.5 work GPCI floor in Alaska for services furnished beginning January 1, 2009 and, as noted above, section 1848(e)(1)(I) of the Act (as added by section 10324(c) of the ACA) provides for a permanent 1.0 PE GPCI floor for frontier States effective January 1, 2011. Therefore, as required by the statute, the 1.5 work GPCI floor for Alaska and the 1.0 PE GPCI floor for frontier States will be in effect for CY 2011. In addition to the limited recognition of certain cost differences for the PE GPCIs, section 1848(e)(1)(H) of the Act (as added by section 3102 (b) of the ACA) also requires us to complete an analysis of the data sources used and cost share weights assigned to the PE GPCIs. Implementation of the ACA provisions related to the CY 2011 PE GPCIs is discussed in more detail in the GPCI update section below.

2. GPCI Update

As discussed in the CY 2011 PFS proposed rule (75 FR 40083), the updated GPCI values were developed by Acumen, LLC (Acumen) under contract to CMS. As mentioned above, there are three GPCI components (physician work, PE, and malpractice), and all GPCIs are developed through comparison to a national average for each component. Additionally, each of the three GPCIs relies on its own data source(s) and methodology for calculating its value as described below.

a. Physician Work GPCIs

The physician work GPCIs are designed to capture the relative cost of physician labor by Medicare PFS locality. Previously, the physician work GPCIs were developed using the median hourly earnings from the 2000 Census of workers in seven professional specialty occupation categories which we used as a proxy for physicians' wages and calculated to reflect one-quarter of the relative cost differences for each locality compared to the national average. Physicians' wages are not included in the occupation categories because Medicare payments are a key determinant of physicians' earnings. Including physicians' wages in the physician work GPCIs would, in effect, have made the indices dependent upon Medicare payments.

The physician work GPCIs were updated in CYs 2001, 2003, 2005, and 2008 using professional earnings data from the 2000 Census. However, wage and earnings data are no longer available from the Census long form and the 2000 data are outdated. Therefore, for the proposed sixth GPCI update, we used the 2006 through 2008 Bureau of Labor Statistics (BLS) Occupational Employment Statistics (OES) data as a replacement for the 2000 Census data. The use of BLS OES data as a replacement for the 2000 Census data is discussed in more detail in the update of the PE GPCIs section. As noted above, the 1.0 work GPCI floor is set to expire under current statute on December 31, 2010. Therefore, the CY 2011 proposed

physician work GPCIs reflected the removal of this floor.

b. Practice Expense GPCIs

(1) The Affordable Care Act Requirements for PE GPCIs

(A) General Methodology for the CY 2011 GPCIs

The ACA added a new subparagraph (H) to section 1848(e)(1) of the Act which revised the methodology for calculating the PE GPCIs for CY 2010 and CY 2011 so that the employee compensation and rent portions of the PE GPCIs reflect only one-half of the relative cost differences for each locality compared to the national average. Additionally, under section 1848(e)(1)(H)(iii) of the Act (as added by section 3102(b) of the ACA), each PFS locality is held harmless so that the PE GPCI will not be reduced as a result of the change in methodology for PE GPCIs. In accordance with section 1848(e)(1)(H)(ii) of the Act (as added by section 3102(b) of the ACA), the employee compensation and rent components of the proposed CY 2011 PE GPCIs were calculated to reflect one-half of the cost differences for each PFS locality relative to the national average cost. Additionally, as required by the statute, physicians' services furnished in each PFS locality would be adjusted by the higher of the locality's PE GPCI calculated with the limited recognition of employee compensation and rent cost differences or the PE GPCI calculated without the limited recognition of cost differences.

(B) Phase-In of PE GPCIs

Section 1848(e)(1)(C) of the Act requires us to phase in GPCI adjustments over 2 years if there was more than 1 year between GPCI adjustments. In accordance with the statute, we proposed to phase in the updated PE GPCIs using one-half of the CY 2010 values and one-half of the fully implemented values (as described in this section). To apply the phase-in and hold harmless provisions of the Act, we calculated transitional PE GPCIs based on two scenarios. Under the first scenario, we calculated transitional CY 2011 PE GPCIs using the full recognition of employee compensation and rent cost differences for each locality as compared to the national average. As discussed below, the first scenario reflects the "hold harmless" transitional PE GPCI value that would apply to any PFS locality receiving a reduction to its PE GPCI resulting from the application of the limited recognition of PE cost differences. The CY 2011 transitional PE GPCI values with full recognition of cost differences were calculated using one-half of the CY 2010 PE GPCI values with full recognition of cost differences and one-half of the updated PE GPCIs with full recognition of cost differences. The first scenario represents the transitional PE GPCI values prior to the limited recognition of cost differences (the pre-ACA CY 2011 transitional values). In other words, this scenario does not include the effects of sections 1848(e)(1)(H)(i) and (ii) of the Act (as added by section 3102(b) of the ACA).

For the second scenario, we calculated transitional CY 2011 PE GPCIs with the limited recognition of cost differences for the employee compensation and rent components (as required by sections 1848(e)(1)(H)(i) and (ii) of the Act (as added by section 3102(b) of the ACA)). The CY 2011 transitional PE GPCI values with the limited recognition of cost differences were calculated using one-half of the CY 2010 PE GPCIs with the limited cost differences and one-half of the updated PE GPCIs with the limited cost differences. The hold harmless provision under section 1848(e)(1)(H)(iii) of the Act (as added by section 3102(b) of the ACA) was applied by selecting the greater of the CY 2011 transitional PE GPCI value calculated with the limited recognition of cost differences or the CY 2011 transitional PE GCPI value calculated with full recognition of cost differences (the pre-ACA CY 2011 transitional values). The phase-in of the CY 2011 PE GPCIs and application of the hold harmless provision are illustrated in Table 23 below.

TABLE 23—PHASE-IN OF THE CY 2011 PE GPCIS

	CY 2010	Updated GPCIs	CY 2011 (transitional year)	Hold harmless
File 1: PE GPCI *Without* 3102(b) of ACA.	Without ACA	Without ACA (Updated Data).	(½ of 2010) + (½ Updated GPCI)	Greater of File 1 Transitional Value or File 2 Transitional Value.
File 2: PE GPCI *With* 3102(b) of ACA.	With ACA	With ACA (Updated Data).	(½ of 2010 w/ACA) + (½ Updated GPCI w/ ACA).	

(C) Data Analysis

Section 1848(e)(1)(H)(iv) of the Act (as added by section 3102(b) of the ACA) also requires the Secretary to "analyze current methods of establishing practice expense adjustments under subparagraph (A)(i) and evaluate data that fairly and reliably establishes distinctions in the cost of operating a medical practice in different fee schedule areas." Section 1848(e)(1)(H)(iv) of the Act (as added by section 3102(b) of the ACA) requires that such analysis shall include an evaluation of the following:

- The feasibility of using actual data or reliable survey data developed by medical organizations on the costs of operating a medical practice, including office rents and non-physician staff wages, in different fee schedule areas.
- The office expense portion of the practice expense geographic adjustment, including the extent to which types of office expenses are determined in local markets instead of national markets.
- The weights assigned to each area of the categories within the practice expense geographic adjustment.

This section also requires the Secretary to make appropriate adjustments to the PE GPCIs no later than by January 1, 2012. To begin to implement this statutory requirement based on our initial analysis, we proposed to implement changes in PE data sources and cost share weights discussed herein effective beginning in CY 2011.

In accordance with section 1848(e)(1)(H)(iv) of the Act (as added by section 3102(b) of the ACA), we initially analyzed the current methods and data sources used in the establishment of the PE GPCIs. With respect to the method used, we began with a review of the GAO's March 2005 Report entitled, "MEDICARE PHYSICIAN FEES: Geographic Adjustment Indices Are Valid in Design, but Data and Methods Need Refinement" (GAO–05–119). While we have raised concerns in the past about some of the GAO's GPCI

recommendations, we noted that with respect to the PE GPCIs, the GAO did not indicate any significant issues with the methods underlying the PE GPCIs. Rather, the report focused on some of the data sources used in the method. For example, the GAO stated that the wage data used for the PE GPCIs are not current. Similarly, upon our reexamination of public comments we had received on the PE GPCIs for previous updates, we noted that the commenters predominately focused on either the data sources used in the method or raised issues such as incentivizing the provision of care in different geographic areas. However, the latter issue (incentivizing the provision of care) is outside the scope of the statutory requirement that the PE GPCIs reflect the relative costs of the mix of goods and services comprising practice expenses in the different fee schedule areas relative to the national average.

One key component of the PE GPCI method that our analysis identified involved the office expense portion of the PE GPCIs and the cost share weight assigned to this component. Most significantly, we proposed that the weight for the office rent component be revised from 12.209 percent to 8.410 percent to reflect our more detailed breakout of the types of office expenses that are determined in local markets instead of national markets. For example, for previous GPCI updates, we used the office expenses cost category as the cost share weight for office rent and, therefore, all individual components previously included in the office expenses category were adjusted for local area cost differences by the GPCIs. As discussed in section II.E. of this final rule with comment period, we proposed to disaggregate the broader office expenses component into 9 new cost categories as part of the proposed CY 2011 MEI rebasing. The disaggregation of the office expenses category indicates that the fixed capital cost category, for which the consumer price index (CPI) for owner's equivalent rent is the price proxy, is the office expense category applicable to the office rent component of the PE GPCI. Therefore, the fixed cost capital cost category is the only component of office expenses that we proposed to adjust for local area cost differences beginning in CY 2011. We proposed to assign other newly defined components of the office expenses category (for example, utilities, chemicals, paper, rubber and plastics, telephone, postage, and moveable capital) to the medical equipment, supplies, and other miscellaneous expenses cost component of the PE GPCIs. As discussed later in this section, the medical equipment, supplies, and other miscellaneous expenses component of the PE GPCIs is assumed to have a national market and, therefore, this component is not adjusted for local area cost differences.

The proposed expense categories for the PE GPCIs, along with their respective cost share weights, are primarily derived from the 2006 American Medical Association (AMA) Physician Practice Information Survey (PPIS) for self-employed physicians and selected self-employed non-medical doctor specialties. The PPIS is the most comprehensive, multispecialty, contemporaneous, and consistently collected PE data source available. It was developed by medical organizations and captures the costs of operating a medical practice, including office rents and nonphysician staff wages. Moreover, we also examined the feasibility of using the American Community Survey (ACS) and the Bureau of Labor and Statistics (BLS) Occupational Employment Statistics (OES) data for the employee compensation component of the PE GPCI. For previous updates, the employee compensation component was based on the 2000 Decennial Census long form data. Since the Census data are significantly outdated and the 2010 Census no longer includes occupational wage data, we believe the ACS or BLS OES data might be viable alternatives. While the ACS 3-year public use microsample (PUMS) is currently available, it reflects only about 3 percent of households and the data exhibit significant variation due to the small sample. In particular, the ACS PUMS has fewer than 10 observations of pharmacists in the Manhattan; Beaumont, Texas; and Southern Maine localities. Therefore, we believe it would be premature to use the ACS data for determining GPCI values. The 2006, 2007, and 2008 panels from the BLS OES represent a larger sample than the ACS PUMS and more recent data than the 2000 Census. As such, we proposed to use the BLS OES data for updating the GPCIs. We look forward to exploring the use of the full ACS data when they become available. Additionally, we explored other sources of rent data (including commercial rental data and survey data) for use in calculating the PE GPCIs. We could not identify a reliable alternative rental data source available on a national basis with coverage of nonmetropolitan areas.

We do not believe there is a national data source better than the Housing and Urban Development (HUD) data for determining the relative cost differences in office rents. Therefore, based on our review of the available data sources, we proposed to use the 2010 apartment rental data produced by HUD at the 50th percentile as a proxy for the relative cost difference in physician office rents.

In the proposed rule (75 FR 40085), we indicated that we believe our analysis of the current methods of establishing PE GPCIs and our evaluation of data that fairly and reliably establish distinctions in the cost of operating a medical practice in the different fee schedule areas meet the statutory requirements of section 1848(e)(1)(H)(iv) of the Act (as added by section 3102(b) of the ACA). A more detailed discussion of our analysis of current methods of establishing PE GPCIs and evaluation of data sources is included in Acumen's draft report. Acumen's draft report and associated analysis of the sixth GPCI update, including the PE GPCIs, was posted on the CMS Web site after display of the CY 2011 PFS proposed rule. The draft report may be accessed from the PFS Web site at: *http://www.cms.gov/PhysicianFeeSched/* under the "Downloads" section of the CY 2011 PFS proposed rule Web page. Acumen's final report and associated analysis of the sixth GPCI update will be posted on the CMS Web site after publication of the CY 2011 PFS final rule with comment.

(D) Determining the PE GPCI Cost Share Weights

To determine the cost share weights for the CY 2011 GPCIs, we proposed to use the proposed 2006-based Medicare Economic Index (MEI) as discussed in section II.E. of this final rule with comment period. The proposed MEI was rebased and revised to reflect the weighted-average annual price change for various inputs needed to provide physicians' services. As discussed in detail in that section, the proposed expense categories in the MEI, along with their respective weights, were primarily derived from data collected in the 2006 AMA PPIS for self-employed physicians and selected self-employed non-medical doctor specialties.

For the cost share weight for the PE GPCIs, we used the 2006-based MEI weight for the PE category of 51.734 percent minus the professional liability insurance category weight of 4.295 percent. Therefore, we proposed a cost share weight for the PE GPCIs of 47.439 percent. For the employee compensation portion of the PE GPCIs, we used the nonphysician employee compensation category weight of 19.153 percent. The fixed capital category weight of 8.410, for which the CPI for

owner's equivalent rent is the price proxy, was used for the office rent component. To determine the medical equipment, supplies, and other miscellaneous expenses component, we removed professional liability (4.295 percent), nonphysician employee compensation (19.153 percent), and fixed capital (8.410 percent) from the PE category weight (51.734 percent). Therefore, we proposed a cost share weight for the medical equipment, supplies, and other miscellaneous expenses component of 19.876 percent.

Furthermore, the physician compensation cost category and its weight of 48.266 percent reflected the proposed work GPCI cost share weight and the professional liability insurance weight of 4.295 percent was used for the malpractice GPCI cost share weight. In the proposed rule (75 FR 40085), we stated that we believe our analysis and evaluation of the weights assigned to each of the categories within the PE GPCIs meets the statutory requirements of section 1848(e)(1)(H)(iv) of the Act (as added by section 3102(b) of the ACA).

The proposed cost share weights for the CY 2011 GPCIs are displayed in Table 24 below.

TABLE 24—COST SHARE WEIGHTS FOR CY 2011 GPCI UPDATE

Expense category	Current cost share weight (%)	Proposed cost share weight (%)
Physician Work	52.466	48.266
Practice Expense	43.669	47.439
—Employee Compensation	18.654	19.153
—Office Rent	12.209	8.410
—Equipment, Supplies, Other	12.806	19.876
Malpractice Insurance	3.865	4.295
Total	100	100

(E) PE GPCI Floor for Frontier States

Section 10324(c) of the ACA added a new subparagraph (I) under section 1848(e)(1) of the Act to establish a 1.0 PE GPCI floor for physicians' services furnished in frontier States. In accordance with section 1848(e)(1)(I) of the Act (as added by section 10324(c) of the ACA), beginning in CY 2011, we applied a 1.0 PE GPCI floor for physicians' services furnished in States determined to be frontier States. The statute requires us to define any State as a frontier State if at least 50 percent of the State's counties are determined to be frontier counties, which the statute defines as counties that have a population density less than 6 persons per square mile. However, section 1848(e)(1)(I) of the Act (as added by section 10324(c) of the ACA) also specifies that this provision shall not apply to States receiving a non-labor related share adjustment under section 1886(d)(5)(H) of the Act (which excludes Alaska and Hawaii from qualifying as a frontier State).

Consistent with the proposed FY 2011 hospital inpatient prospective payment system (IPPS) 1.0 wage index floor for frontier States (as required by section 10324(a) of the ACA) (75 FR 30920 through 30921), we proposed to identify frontier counties by analyzing population data and county definitions based upon the most recent annual population estimates published by the U.S. Census Bureau. We divided each county's population total by each county's reported land area (according to the decennial census) in square miles to establish population density. We also proposed to update this analysis from time to time, such as upon publication of a subsequent decennial census, and if necessary, add or remove qualifying States from the list of frontier States based on the updated analysis.

For a State that qualifies as a frontier State, in accordance with section 1848(e)(1)(I) of the Act (as added by section 10324(c) of the ACA), we proposed that physicians' services furnished within that State would receive the higher of the applicable PE GPCI value calculated according to the standard CY 2011 methodology or a minimum value of 1.00. Furthermore, in accordance with section 1848(e)(1)(I) of the Act (as added by section 10324(c) of the ACA), the frontier State PE GPCI floor is not subject to budget neutrality and would only be extended to physicians' services furnished within a frontier State.

For determining the proposed CY 2011 PFS PE GPCI values, the frontier States are the following: Montana; Wyoming; North Dakota; Nevada; and South Dakota (as reflected in Table 25).

TABLE 25—FRONTIER STATES UNDER SECTION 1848(E)(1)(I) OF THE ACT

[as Added by Section 10324(c) of the ACA]

State	Total counties	Frontier counties	Percent frontier counties
Montana	56	45	80
Wyoming	23	17	74
North Dakota	53	36	68
Nevada	17	11	65
South Dakota	66	34	52

(2) Summary of the CY 2011 PE GPCIs

The PE GPCIs include three components: employee compensation, office rent, and medical equipment, supplies and miscellaneous expenses as discussed below:

• Employee Compensation: We used the 2006 through 2008 BLS OES data to determine the proposed employee

compensation component of the PE GPCIs. The proposed employee compensation component accounted for 40.4 percent of the total PE GPCIs.

• Office Rents: Consistent with the previous GPCI update, we used the most recent residential apartment rental data produced by HUD (2010) at the 50th percentile as a proxy for the relative cost differences in physician office rents. The proposed office rent component accounted for 17.7 percent of the PE GPCIs.

• Medical Equipment, Supplies, and other Miscellaneous Expenses: We assumed that items such as medical equipment and supplies have a national market and that input prices do not vary among geographic areas. As discussed in previous GPCI updates in the CY 2005 and CY 2008 PFS proposed rules, specifically the fourth GPCI update (69 FR 47503) and fifth GPCI update (72 FR 38138), respectively, some price differences may exist, but we believe these differences are more likely to be based on volume discounts rather than on geographic market differences. For example, large physicians' practices may utilize more medical equipment and supplies and therefore may or may not receive volume discounts on some of these items. To the extent that such discounting may exist, it is a function of purchasing volume and not geographic location. The proposed medical equipment, supplies, and miscellaneous expenses component was factored into the PE GPCIs with a component index of 1.000. The proposed medical equipment, supplies, and other miscellaneous expense component accounted for 41.9 percent of the PE GPCIs.

c. Malpractice GPCIs

The malpractice GPCIs are calculated based on insurer rate filings of premium data for $1 million to $3 million mature claims-made policies (policies for claims made rather than services furnished during the policy term). The CY 2011 malpractice GPCI update reflects 2006 and 2007 premium data.

d. Public Comments and CMS Responses on the Proposed 6th GPCI Update

We received many public comments regarding the CY 2011 proposed GPCIs. Summaries of the comments and our responses follow.

Comment: Many commenters requested that CMS delay implementation of the changes in underlying PE GPCI data and cost share weights until complete findings and recommendations from the Institute of Medicine's study of geographic adjustment factors for physician payment, the Secretary's Medicare Geographic Payment Summit, and the MEI technical advisory panel have been developed and considered. A few commenters acknowledged that the BLS OES data is the best data source for updating the GPCIs for CY 2011 but expressed concern that it provides data for MSAs and rest of state areas and not counties. The commenters believe that collecting data at the MSA level distorts the accuracy of the input costs and requested that CMS delay the update until the full ACS data can be evaluated and compared with the BLS OES data. A few commenters requested that CMS delay the GPCI update for CY 2011 as was done in the CY 2004 PFS final rule with comment period for the 4th GPCI update.

Additionally, several commenters stated that a more comprehensive analysis and evaluation of the PE GPCI is required by the ACA, further noting that section 1848(e)(1)(H)(v) of the Act (as added by section 3102(b) of the ACA) allows CMS until January 1, 2012 to implement the findings from the analysis of PE data. To that end, several commenters requested a more comprehensive analysis of the occupational groups used to determine the employee wage component of the PE GPCI to reflect the "true costs" incurred by physician groups in the delivery of health care to Medicare beneficiaries. The commenters cited pharmaceutical, accounting, legal, computer science, and management professionals as examples of the types of nonphysician labor costs that should be included in the determination of the employee compensation index. Several commenters also stated that HUD rental data does not reflect the "actual costs" of physician office rent and therefore should be replaced by another data source.

Response: Section 1848(e)(1)(C) of the Act requires us to review and update the GPCIs at least every 3 years. When updating the GPCIs we believe we should use the best data that are currently available. As mentioned by the commenters, the BLS OES data are more timely data than the 2000 census data (which has been used for previous GPCI updates). We believe that the BLS OES data, which are currently available, are an appropriate and relevant data source for updating the work GPCIs and employee compensation component of the PE GPCIs. Also because of the timeliness of the data, we believe that using the BLS OES data would result in a more accurate reflection of the geographic practice cost differences among PFS localities than not updating the GPCIs for CY 2011.

While we believe it is appropriate to finalize updated GPCIs for CY 2011 using the most current data, we also acknowledge that there is much ongoing analysis that may inform future GPCI changes. Therefore, as discussed below, we are not using the revised cost share weights for the CY 2011 GPCIs that would apply under the revised and rebased MEI for CY 2011. We will address the GPCI cost share weights once again in the CY 2012 PFS proposed rule, and we may make additional proposals that would further modify the GPCI data and/or methods for CY 2012.

Additionally, we will review the complete findings and recommendations from the Institute of Medicine's study of geographic adjustment factors for physician payment, the Secretary's Medicare Geographic Payment Summit, and the MEI technical advisory panel, and we will continue to study the issues as required by section 1848(e)(1)(H)(iv) of the Act (as added by section 3102(b) of the ACA). We will once again consider the GPCIs for CY 2012 in the context of our annual PFS rulemaking beginning in CY 2011 based on the information available at that time. The CY 2011 GPCIs arising from the 6th GPCI update reflect our initial review and response to the currently available GPCI data, methods, and cost share weights. Once the full ACS data are available, we will reassess the occupational groups used to determine the employee compensation component of the PE GPCI and continue to explore the use of commercial rent data as part of our ongoing analysis of the GPCIs. We anticipate that further information, including our review of the full ACS data, may lead to proposed additional refinements to the GPCIs for future years. We have addressed the CY 2011 GPCI cost share weights in response to other public comments received on the CY 2011 PFS proposed rule that are summarized later in this section.

With regard to the commenters who expressed concern that the BLS OES data are not collected at the county level, we note that the 2000 Decennial Census data are only available at the county level for approximately 10 percent of counties. For previous updates, the GAFs for more than 90 percent of counties were developed based on MSAs or larger geographic areas (for example, data for all rural areas in a State were combined and used to proxy values for each rural county in a State). Therefore, using BLS OES data and disaggregating data to the county

level is not a significant departure from previous GPCI updates.

Moreover, we acknowledge that in the CY 2004 PFS proposed and final rules (68 FR 49042 and 68 FR 63213 respectively), we updated only the malpractice GPCI because the special tabulation of census data used for the physician work GPCI and employee compensation portion of the PE GPCI was not yet available. We explained that no acceptable data sources could be found to update the work GPCIs and the employee compensation portion of the practice expense GPCIs. Therefore, we made no changes to the work GPCIs and PE GPCIs for CY 2004. However, in view of the statutory requirement to update the GPCIs at least every 3 years, we do not believe it would be appropriate to finalize an update only for malpractice GPCIs for CY 2011, while delaying the update of the work GPCI and PE GPCI, when we currently have appropriate updated data available to us for this purpose. As discussed previously, we will review the GPCIs as part of the CY 2012 PFS rulemaking cycle (beginning in CY 2011) based on the information available at that time, and we may propose changes to the GPCIs prior to the next 3-year GPCI update.

Comment: Several commenters stated that the use of HUD rental data is not an appropriate proxy for determining the office rent index and suggested that CMS use data on actual physician office rents instead. Additionally, one commenter questioned CMS' analysis of the Medical Group Management Association's (MGMA's) survey data on rent. The commenter raised questions as to why CMS rejected the use of MGMA rental data due to insufficiency in sample size and representation, despite admitting that the physician response rate on the MGMA survey was typical for surveys of business.

Response: As we have previously explained in the CY 2005 and CY 2008 final rules with comment period (69 FR 66262 and 72 FR 66245 respectively), we recognize that apartment rents may not be a perfect proxy for measuring the relative cost differences in physician office rents. However, we believe the HUD rental data are the most comprehensive and valid indicator that is available of the real estate rental market in all areas of the country. We continue to believe that HUD rental data remain the best data source for determining the relative cost differences in physicians' office rent among all areas of the country. The data are regularly updated and available nationally, and retain consistency area-to-area and year-to-year. We would welcome any alternative rental data source that is available nationally with sufficient representation among PFS localities.

With regard to our review of MGMA survey data, we have concerns with both the sample size and representativeness of the MGMA data. For example, the responses represent only about 2,250 physician practices nationwide and have disproportionate sample sizes by State, suggesting very uneven response rates geographically. In addition, we also have concerns that the MGMA data have the potential for response bias. The MGMA's substantial reliance on its membership base suggests a nonrandom selection into the respondent group. Some evidence for such issues in the MGMA data arises from the very different sample sizes by State. For example, in the MGMA data, 10 States have fewer than 10 observations each, and California, New York, and New Jersey have fewer than 10 observations per locality. Therefore, we continue to believe the MGMA survey data would not be a sufficient rental data source for all PFS localities.

Comment: One commenter expressed concern that the BLS OES wage data may result in the undervaluation of physician earnings because the data exclude incomes of self-employed professionals.

Response: The GPCIs are not an absolute measure of physician earnings; rather, they are a measure of the relative cost differences for each of the three PFS components. We have no evidence to suggest that self-employment income would have different geographic variation than non-self-employed income. Absent such evidence, we would expect that including wage data from self-employed professionals would result in a geographic distribution of professional wages similar to the BLS OES data source.

Comment: Many commenters stated that implementing PE GPCI changes in CY 2011 would reduce payment to urban areas and, therefore, would violate the "hold harmless" provision as required by the ACA.

Response: Section 1848(e)(1)(H) of the Act (as added by section 3102 (b) of the ACA) requires that we apply a limited recognition of cost differences for the rent component and employee compensation component of the PE GPCI as compared to the national average. This section also includes a "hold harmless" provision for CY 2010 and CY 2011 for any PFS locality that would receive a reduction to its PE GPCI resulting from the limited recognition of PE cost differences. For CY 2010 and CY 2011, we applied the limited recognition of PE cost differences and "hold harmless provision" in accordance with the statutory requirement, which is specific only to the limited recognition of rent and employee wage cost differences. In other words, the "hold harmless" (non-budget neutral) provision under section 1848(e)(1)(H)(iii) of the Act (as added by section 3102 (b) of the ACA) does not apply to the effects of updated data incorporated into the GPCIs as a result of our normal GPCI update process. As discussed earlier in this section, the proposed GPCI update reflected our preliminary review based on the best information currently available. We anticipate that further information may lead to proposed additional refinements to the GPCIs in future years.

Comment: One commenter recommended that CMS track the "hold harmless" transitional GPCIs to determine whether certain regions of the country are underpaid as a result of the application of the limited recognition of PE cost differences.

Response: The "hold harmless" provision under section 1848(e)(1)(H)(iii) of the Act (as added by section 3102(b) of ACA) was applied by selecting the greater of the CY 2011 transitional PE GPCI value calculated with the limited recognition of cost differences or the CY 2011 transitional PE GCPI value calculated with full recognition of cost differences. Therefore, no locality is "underpaid" by the application of the limited recognition of PE cost differences.

Comment: One commenter requested that CMS consider applying a 1.0 GPCI floor to non-frontier States that serve significant rural populations. The commenter was not specific as to which GPCI (work, PE, or malpractice) the floor should be applied.

Response: As discussed previously in this section, section 1848(e)(1)(I) of the Act (as added by section 10324(c) of the ACA) established a permanent 1.0 PE GPCI floor only for frontier States, and section 3102(a) of the ACA amended section 1848(e)(1)(E) of the Act to extend the 1.0 work GPCI floor for services furnished only through December 31, 2010. We do not otherwise have the authority to establish GPCI floors that do not consider the differences in physicians' resource costs among localities.

Comment: A few commenters requested that CMS release underlying data sources, including county level GPCI values and budget neutrality estimates, which would allow interested parties to replicate GPCI calculations.

Response: We strive to be as transparent as possible in all of our proposals. To that end, we have made

numerous files available on the CMS Web site under the downloads for the CY 2011 PFS proposed rule to assist in the public's review of the CY 2011 proposal. These files include: The preliminary contractor's report on data for the 6th GPCI update; the CY 2010 through CY 2012 GPCIs, both as proposed (including the ACA provisions) and without the ACA provisions to permit isolation of the impacts of the updated data; and web links to the publicly available source data and copies of data files that are not otherwise publicly available, for example county and locality-specific RVUs from Medicare claims data and malpractice insurance premium data. In combination, this information allows the public to apply our methodology to replicate our calculations for the proposed GPCIs.

Comment: Many commenters expressed concern about the proposed cost share weights for the rent component and medical equipment, supplies, and other miscellaneous component of the PE GPCI. The commenters stated that the proposed cost share weights would unjustifiably shift Medicare payment away from urban localities to rural localities. Several commenters suggested that portions of the "all other services" component of the office expenses cost category, (which includes maintenance services, storage, security and janitorial services, office equipment, information technology systems, and medical record systems) and the stand-alone "other professional services" cost category (which includes accounting services, legal services, office management services, continuing education, professional association memberships, journals, and professional care expenses) are wage-related and, therefore, should be adjusted for locality cost differences. Additionally, a few commenters stated that the cost share weight attributed to the rent component of the PE GPCI should vary by region because one national cost share weight for rent penalizes areas where office rent is a higher portion of practice expenses.

Response: Although we typically update the GPCI cost share weights concurrently with the most recent MEI revision and rebasing, the commenters raised many points regarding the reallocation of labor-related costs from the medical equipment and supplies and miscellaneous component to the employee compensation component of the PE GPCI. After consideration of the public comments we received on this issue, we will continue to use the current GPCI cost share weights for CY 2011. We have asked the Institute of Medicine to evaluate the accuracy of the geographic adjustment factors used for Medicare physician payment. The Institute of Medicine will prepare two reports for Congress and the Secretary of the Department of Health and Human Services. The first report, expected in spring 2011, will include an evaluation of the accuracy of geographic adjustment factors, and the methodology and data used to calculate them. The second report, expected in spring 2012, will evaluate the effects of the adjustment factors on the distribution of the health care workforce, quality of care, population health, and the ability to provide efficient, high-value care. For more information on the Institute of Medicine's study on Medicare geographic adjustment factors, we refer readers to the Institute of Medicine Web site: *http://iom.edu/Activities/HealthServices/GeographicAdjustments.aspx*.

We will explore further the options that were raised to us by the commenters and the recommendations in the forthcoming Institute of Medicine report(s). We will also continue our analysis of the cost share weights attributed to the PE GPCI as required by section 1848(e)(1)(H)(iv) of the Act (as added by section 3102(b) of the ACA), including the possibility of assigning cost share weights to the rent component of the PE GPCI that vary among fee schedule areas. We will address the GPCI cost share weights again in the CY 2012 PFS proposed rule.

Comment: MedPAC suggested an alternative method for calculating the PE GPCI. This alternative PE GPCI method would account for variations in the cost share of equipment and supplies across services.

Response: We appreciate MedPAC's suggestion of an alternative method that would vary the portion of PE that is geographically adjusted for locality differences based on the characteristics of individual services, rather than applying a uniform percentage across all PFS services. We recommend that MedPAC continue to analyze this or other alternative geographic adjustment methods, including their administrative feasibility.

Comment: A few commenters stated that the "range of disparity" between the highest and lowest paid PFS localities is too large and contradicts data studies showing little to no distinction in physician practice expenses throughout the nation. For example, the commenters stated that the AMA's analysis of its own PPIS data concluded that "expenses did not differ significantly by either metro location or Census region." One commenter requested an explanation of the discrepancy between the AMA's findings of no measurable practice expense distinctions and CMS' findings that continue to show substantial distinctions in physician practice expenses among the Medicare payment localities. Another commenter stated that a 2007 survey conducted by the journal, *Medical Economics,* indicated that the average practice expenses are highest in the Midwestern States (which is contrary to the proposed CY 2011 GPCIs).

Response: We have reviewed the studies referenced by the commenters and compared their findings with the GPCI values calculated for the CY 2011 PFS proposed rule. As mentioned by the commenters, both the AMA and *Medical Economics* studies aggregated per-physician expenses at the Census region level. The AMA PPIS analysis showed the Northeast as having the lowest per-physician expenses, followed by the Midwest then the West, with the South identified as having the highest expenses. Although there is about a 20 percent difference in total expenses between the Northeast and South, the study noted that the difference was not significant after controlling for practice setting and physician specialty. The *Medical Economics* survey findings showed about a 30 percent difference in costs, with the East showing the lowest expenses and the Midwest with the highest. Both studies demonstrated that rural areas have the highest per-physician expenses and highly populated areas the lowest.

To compare the variation of PE GPCI values calculated for the CY 2011 PFS proposed rule to the AMA and *Medical Economics* studies, we used PE RVUs to create weighted averages of the PE GPCIs by Census region. Additionally, because the AMA and *Medical Economics* data reported total per-physician practice expenses, whereas the GPCI is a cost index, we produced indices for each source to create comparable measures of variation. We then normalized each index to the lowest cost area from each data source. Consequently, the index values show the percent difference in costs relative to the lowest cost area. For example, the AMA study shows the Northeast as having the lowest per-physician expenses, thus establishing an index value of 1.00 for that area. For the AMA study, the Midwest index value is 1.07 which signifies that costs in the Midwest are 7 percent above the Northeast AMA values. The PE GPCI data indicate that the Midwest has the lowest costs; and the South, with an

index value of 1.01, has costs that are 1 percent above the Midwest GPCI values. When aggregated to the Census region, the PE GPCIs showed less variation in costs than the comparison data sources (AMA PPIS and *Medical Economics*). Using the PE GPCI data to calculate Census region indices produced only a 16 percent difference in costs between the most costly and least costly areas, equating to roughly half the variation found in the *Medical Economics* survey and about 75 percent of the variation found in the PPIS study. Table 26 compares the results on the disparity in costs by Census region.

TABLE 26—CENSUS REGION COST INDICES BY DATA SOURCE

	AMA	Medical economics	PE GPCI data	PE GPCI components		
				Rent	Wages	Office supplies
Midwest	1.07	1.29	1.00	1.00	1.04	1.00
South	1.21	1.20	1.01	1.12	1.00	1.00
West	1.11	1.06	1.14	1.47	1.17	1.00
Northeast	1.00	1.00	1.16	1.55	1.18	1.00

Additionally, the conceptual approaches to the GPCIs and the data sources noted by the commenters are sufficiently different to make comparisons extremely difficult. The different rank ordering in the costs by regions, as shown in Table E4, may also reflect the different strategies used to measure costs. Specifically, the AMA and *Medical Economics* studies ordered areas based on total physicians' expenses, whereas the GPCIs are intended to provide a local cost index that is then applied to each PFS component; work, practice expense, and malpractice expense. Based on our review of the AMA PPIS and *Medical Economics* studies, a key factor in explaining differences with the proposed GPCI values is differences in practice patterns across the different areas. Specifically, rural practitioners tend to see more patients, incurring higher expenses. However, as noted in the *Medical Economics* study, higher patient loads result in higher payment. To place this in the context of Medicare PFS payment, seeing more patients produces more billed services, allowed charges, and payments. Therefore, the greater number of patients seen by rural physicians is accounted for in total RVUs to the physician, rather than through the GPCI values.

Moreover, the very low cost ranking of the Northeast in both the AMA PPIS and *Medical Economics* datasets suggests a possible influence of economies of scale. The GPCIs are designed to capture differences in the prices of inputs facing physicians in each region. The input prices are used to create GPCI values as a measure of the relative cost differences in operating a medical practice in one locality versus another. It is likely that the AMA and *Medical Economics* studies are capturing differences in the production of services, distinct from the input prices. In particular, the geographic differences may reflect differences in economies of scale in more and less urbanized areas. More rural practitioners are less likely to work in large practices, leading to higher per-physician costs, all else being equal. For example, a two-physician practice may need the same number of front office staff as a one-physician practice. When this expense is measured on a per-physician basis, the single physician pays twice as much for front office support. This type of variation can occur within localities and may reflect the practitioner's choice to work in a small or large physician practice. Nevertheless, there is no mechanism within the existing GPCI approach to account for the influence of economies of scale, despite its potentially significant impact on the effective per-unit costs of providing care.

Comment: Several commenters recommended that CMS use data from a reliable survey of physicians' practices, such as the AMA PPIS or the MGMA survey, to develop the office rent index and employee compensation index.

Response: Because of the limited sample sizes of the AMA PPIS (n = 2,137) and MGMA studies (n = 2,246), we do not believe that it would be possible to calculate reliable indices for all Medicare PFS localities based upon these data. As mentioned previously, in the MGMA data, 10 States have fewer than 10 observations each, and California, New York, and New Jersey have fewer than 10 observations per locality.

In light of the comments received suggesting the use of survey data to determine GPCI values and the typical response rates for existing physician surveys, we are continuing to consider the possibility of establishing a physician cost report and requiring a sufficiently large sample of physicians in each locality to report data on actual costs incurred. However, we believe that a physician cost report could take years to develop and implement, and could be prohibitively expensive. We also have some concerns about the administrative burden this approach would place on physician's office staff. Therefore, we are requesting specific public comments regarding the potential benefits to be gained from establishing a physician cost report and whether this approach is appropriate to achieve potentially greater precision in measuring the relative cost differences in physicians' practices among PFS localities. We are also requesting public comments on the potential administrative burden of requiring physicians to routinely complete and submit a cost report and whether this requirement should be mandatory for all physician practices. Additionally, we have asked the Institute of Medicine to look at the use of survey data in the context of their geographic adjustment analysis. It is also our understanding that MedPAC is considering the issue of data sources used to determine geographic payment adjustments under the PFS.

Comment: One commenter stated that all geographic adjustment factors should be eliminated from the Medicare PFS "except for those designed to achieve a specific public policy goal, for example, to encourage physicians to practice in underserved areas." The commenter requested that CMS utilize the most broadly applicable methodology allowed by law to reduce geographic payment disparity.

Response: We are required by section 1848(b)(1)(C) and (e)(1)(A) of the Act to develop and apply separate GPCIs to adjust for resource cost differences among localities compared to the national average for each of the three PFS components: work, practice expense, and malpractice expense. The purpose of the GPCIs is not to reduce

geographic payment disparity; rather, the GPCIs distribute PFS payments among areas in order to adjust for area cost differences. In general the data show that urban areas usually are higher cost, while rural areas are lower cost. However, there are several provisions currently in place that have the effect of reducing geographic payment disparities. For example, the statute requires that only one-quarter of area cost differences in physician work be recognized, and we assign a 1.0 index to the medical equipment, supplies, and miscellaneous component of the PE GPCI because we believe there is a national market for these items. In addition, 34 States and 2 territories are "Statewide" payment localities wherein all physicians, whether urban or rural, are paid the same. Moreover, many geographic areas are designated as Health Professional Shortage Areas (HPSAs). Physicians in these areas may be eligible for a 10 percent HPSA bonus payment in addition to the amount paid under the Medicare PFS for services they furnish. Beginning in CY 2011, general surgeons furnishing major surgical procedures in these areas may be eligible for the HPSA surgical incentive payment program (HSIP) that also pays 10 percent in addition to the amount paid under the PFS as discussed in section VI.S.2. of this final rule with comment period. For complete information on the HPSA bonus payment program and a list of eligible areas for both programs by zip code, we refer readers to the CMS Web site at: *http://www.cms.hhs.gov/hpsapsaphysicianbonuses/01_overview.asp.* All of these factors mentioned above have the effect of reducing geographic payment disparities under the Medicare PFS.

Comment: One commenter encouraged CMS to follow the GAO's recommendations, as outlined in the GAO's March 2005 Report (GAO–05–119), for improving underlying GPCI data and methods by taking the following actions:

- Transition from Census Bureau's Decennial Census data to the annual ACS for earning and wage data.
- Include physician assistant wage data to improve the measurement of the PE GPCI.
- Consider the feasibility of using a commercial rent index or a residential rent index directly based on ACS data for determining the rent component of the PE GPCI.
- Collect malpractice premium data from all States, accounting for at least half of the malpractice business in a State.
- Standardize collection of malpractice premium data, for example by using data from Physician Insurer's Association of America.

Response: As previously discussed, the full ACS data were not available in time for the 6th GPCI update. We intend to explore the use of ACS data for determining the work GPCI and the employee compensation component of the PE GPCI, as well as evaluate its possible use as an office rent index once the data are fully available. We also intend to continue exploring the potential use of commercial rent data as part of our ongoing review and refinement of the GPCIs.

Additionally, we have considered the use of physician assistant wages in calculating the employee compensation index. However, since physician assistants can furnish medical services and bill the Medicare program directly, their wages are influenced by Medicare PFS payment. Therefore, we have some concern that a circular effect could occur if we included physician assistants among the occupational groups comprising the employee compensation component, similar to our concern with including physicians' salaries in the determination of the work GPCI.

With regard to the collection of malpractice premium data, the CY 2011 malpractice GPCI update reflects 2006 and 2007 premium data which were also used for the CY 2010 update to the malpractice RVUs. As compared to previous malpractice RVU updates, we substantially increased the number of States from which we were able to collect rate filings. We were able to collect malpractice premium data from every State except for Mississippi and Puerto Rico. Premium data were selected from at least two companies in each State, with more selected if necessary to reach 50 percent of the market share in that State. To ensure consistency across States we collected premium data from State Departments of Insurance. For States where we were not able to collect rate fillings, we used premium information from the Medical Liability Monitor Survey data from 2005 through 2008.

e. Summary of Final CY 2011 GPCIs

After consideration of the public comments received on the GPCIs, we are finalizing the 6th GPCI update using the most current data, with modifications; we are not finalizing the proposal to change the GPCI cost share weights for CY 2011. Instead, we are continuing to use the current GPCI cost share weights for determining the PE GPCI values and locality GAFs in CY 2011, and we will address the cost share weights again in the CY 2012 PFS proposed rule. As a result, the cost share weight for the physician work GPCI (as a percentage of the total) will be 52.5 percent (current and for CY 2011) rather than 48.3 percent (as proposed), and the cost share weight for the PE GPCI will be 43.7 percent (current and for CY 2011) rather than 47.4 percent (as proposed) with only a slight difference in the employee compensation component (18.7 percent rather than 19.2 percent as proposed). However, the cost share weight for the office rent component of the PE GPCI will be 12.2 percent (current and for CY 2011) rather than 8.4 percent (as proposed), and the medical equipment, supplies, and other miscellaneous expenses component will be 12.8 percent (current and for CY 2011) rather than 19.9 percent (as proposed). Moreover, the cost share weight for the malpractice GPCI will be 3.9 percent (current and for CY 2011) rather than 4.3 percent (as proposed).

Additionally, we will review the complete findings and recommendations from the Institute of Medicine's study of geographic adjustment factors for physician payment, the Secretary's Medicare Geographic Payment Summit, and the MEI technical advisory panel, and continue to study the issues as required by section 1848(e)(1)(H)(iv) of the Act (as added by section 3102(b) of the ACA). We will once again consider the GPCIs for CY 2012 in the context of our annual PFS rulemaking beginning in CY 2011 based on the information available at that time.

We are using the 2006 through 2008 panels from the BLS OES data for updating the work GPCIs and the employee compensation component of the PE GPCIs. We are also using the 2010 apartment rental data produced by HUD at the 50th percentile as a proxy for the relative cost difference in physicians' office rents and 2006 and 2007 malpractice premium data for determining the malpractice GPCIs.

As required by section 1848(e)(1)(H)(ii) and (iii) of the Act (as added by section 3102(b) of the ACA), the CY 2011 GPCIs reflect only one-half of the relative cost differences for the employee compensation and rent portions of the PE GPCI, and the "hold harmless" provision ensures that no locality receives a payment reduction resulting from the limited recognition of PE cost differences. For CY 2011, the "hold harmless" provision was applied by selecting the *greater of* the CY 2011 transitional PE GPCI value calculated with the limited recognition of cost differences or the CY 2011 transitional

PE GPCI value calculated with full recognition of cost differences.

In accordance with section 1848(e)(1)(I) of the Act (as added by section 10324(c) of the ACA), and consistent with the final FY 2011 hospital IPPS (75 FR 5160 through 5161), we applied a 1.0 PE GPCI floor for services furnished in frontier States. The frontier States are the following: Montana; Wyoming; North Dakota; Nevada; and South Dakota. As we indicated above in this section, section 1848(e)(1)(E) of the Act (as amended by section 3102(a) of the ACA) extended the 1.0 work GPCI floor only through December 31, 2010. Therefore, the CY 2011 physician work GPCIs and summarized GAFs do not reflect the 1.0 work floor. However, the permanent 1.5 work GPCI floor for Alaska (as established by section 134(b) of the MIPPA) will remain in effect for CY 2011.

We are finalizing the CY 2011 GPCIs shown in Addendum E. The GPCIs have been budget neutralized to ensure that nationwide, total RVUs are not impacted by changes in locality GPCIs. The 1.0 PE GPCI floor for frontier States and the PE GPCI "hold harmless" provision were applied to the budget neutralized GPCIs.

Typically when we complete a review and update of the GPCIs, the values shown represent the first year of the 2-year GPCI update transition. Although the CY 2011 GPCIs have been set on that basis, we note that we will be assessing the results of the various studies regarding the GPCIs and cost share weights (once they are completed), and exploring the use of the full ACS data. Based on these assessments, we may make additional proposals that would further modify the GPCIs for CY 2012, which would result in changes to the CY 2012 GPCIs shown in Addendum E to this final rule with comment period. Therefore, the final CY 2011 GPCIs may not reflect a true mid-point "phase-in" to the updated GPCIs, although, as noted above, they have been set for CY 2011 on that basis. The CY 2011 updated GAFs and GPCIs may be found in Addenda D and E of this final rule with comment period.

3. Payment Localities

The current PFS locality structure was developed and implemented in 1997. There are currently 89 localities; 34 localities are Statewide areas. There are 52 localities in the other 18 States, with 10 States having 2 localities, 2 States having 3 localities, 1 State having 4 localities, and 3 States having 5 or more localities. The District of Columbia, Maryland, and Virginia suburbs, Puerto Rico, and the Virgin Islands are additional localities that make up the remainder of the total of 89 localities. The development of the current locality structure is described in detail in the CY 1997 PFS proposed rule (61 FR 34615) and the subsequent final rule with comment period (61 FR 59494).

As we have previously noted in the CYs 2008 and 2009 proposed rules (72 FR 38139 and 73 FR 38513), any changes to the locality configuration must be made in a budget neutral manner within a State and can lead to significant redistributions in payments. For many years, we have not considered making changes to localities without the support of a State medical association in order to demonstrate consensus for the change among the professionals whose payments would be affected (with some increasing and some decreasing). However, we have recognized that, over time, changes in demographics or local economic conditions may lead us to conduct a more comprehensive examination of existing payment localities.

For the past several years, we have been involved in discussions with physician groups and their representatives about recent shifts in relative demographics and economic conditions, most notably within the current California payment locality structure. We explained in the CY 2008 PFS final rule with comment period that we intended to conduct a thorough analysis of potential approaches to reconfiguring localities and would address this issue again in future rulemaking. For more information, we refer readers to the CY 2008 PFS proposed rule (72 FR 38139) and subsequent final rule with comment period (72 FR 66245).

As a follow-up to the CY 2008 PFS final rule with comment period, we contracted with Acumen to conduct a preliminary study of several options for revising the payment localities on a nationwide basis. The contractor's interim report was posted on the CMS Web site on August 21, 2008, and we requested comments from the public. The report entitled, "Review of Alternative GPCI Payment Locality Structures," remains accessible from the CMS PFS Web page under the heading "Interim Study of Alternative Payment Localities under the PFS." The report may also be accessed directly from the following link: *http://www.cms.hhs.gov/PhysicianFeeSched/10_Interim_Study.asp#TopOfPage.*

We accepted public comments on the interim report through November 3, 2008. The alternative locality configurations discussed in the report are described briefly below in this section.

Option 1: CMS Core-Based Statistical Area (CBSA) Payment Locality Configuration

This option uses the Office of Management and Budget (OMB's) Metropolitan Statistical Area (MSA) designations for the payment locality configuration. MSAs would be considered as urban CBSAs. Micropolitan Areas (as defined by OMB) and rural areas would be considered as non-urban (rest of State) CBSAs. This approach would be consistent with the IPPS pre-reclassification CBSA assignments and with the geographic payment adjustments used in other Medicare payment systems. This option would increase the number of PFS localities from 89 to 439.

Option 2: Separate High-Cost Counties from Existing Localities (Separate Counties)

Under this approach, higher cost counties are removed from their existing locality structure and they would each be placed into their own locality. This option would increase the number of PFS localities from 89 to 214, using a 5 percent GAF differential to separate high-cost counties.

Option 3: Separate MSAs from Statewide Localities (Separate MSAs)

This option begins with statewide localities and creates separate localities for higher cost MSAs (rather than removing higher cost counties from their existing locality as described in Option 2). This option would increase the number of PFS localities from 89 to 130, using a 5 percent GAF differential to separate high-cost MSAs.

Option 4: Group Counties Within a State Into Locality Tiers Based on Costs (Statewide Tiers)

This option creates tiers of counties (within each State) that may or may not be contiguous but share similar practice costs. This option would increase the number of PFS localities from 89 to 140, using a 5 percent GAF differential to group similar counties into statewide tiers.

As discussed in Acumen's interim report, all four studied alternative locality configurations would increase the number of localities and separate higher cost areas from rural "rest of state" areas. As a result, payments to urban areas would increase, while rural areas would see a decrease in payment because they would no longer be grouped with higher cost "urbanized" areas. A number of public commenters

on the draft report expressed support for Option 3 (separate MSAs from Statewide localities) because the commenters believed this alternative would improve payment accuracy over the current locality configuration and could mitigate possible payment reductions to rural areas as compared to Option 1 (CMS CBSAs). Therefore, Acumen is conducting a more in-depth analysis of the dollar impacts that would result from the application of Option 3. For a detailed discussion of the public comments on the contractor's interim locality study report, we refer readers to the CY 2010 PFS proposed rule (74 FR 33534) and subsequent final rule with comment period (74 FR 61757).

We note that the discussion of PFS payment localities and our preliminary study of alternative payment locality configurations in the CY 2011 PFS proposed rule was intended for informational purposes only. We did not make any proposals regarding the PFS locality configurations for CY 2011 and, therefore, public comments on the PFS locality configurations are not within scope of the CY 2011 PFS proposed rule. We thank the commenters for sharing their views and suggestions; however, we are not summarizing or responding to 'out of scope' comments in this final rule with comment period.

E. PFS Update for CY 2010: Rebasing and Revising of the Medicare Economic Index (MEI)

1. Background

The Medicare Economic Index (MEI) was originally required by section 1842(b)(3) of the Act, which states that prevailing charge levels beginning after June 30, 1973 may not exceed the level from the previous year except to the extent that the Secretary finds, on the basis of appropriate economic index data, that such higher level is justified by year-to-year economic changes. We continued to use the MEI as part of the statutory update formula (specified under section 1848 of the Act) when the physician fee schedule was implemented in 1992 (56 FR 59511).

Beginning July 1, 1975, and continuing through today, the MEI has served these purposes by reflecting the weighted-average annual price change for various inputs needed to furnish physicians' services. As such, the index is necessarily a fixed-weight input price index, with an adjustment for the change in economy-wide, private nonfarm business multifactor productivity. The MEI is comprised of two broad categories: (1) Physician's own time; and (2) physician's practice expense (PE).

The MEI was first published on June 16, 1975 (40 FR 25446), and became effective for services furnished beginning July 1, 1975. The original MEI had a base period of 1971. The structure of the original MEI remained essentially unchanged from its original until the CY 1993 final rule (57 FR 55896) in which we finalized a comprehensive rebasing and revision process with a 1989 base year. The new index was based in part on the recommendations of a Congressionally-mandated meeting of experts held in March 1987. The MEI was again rebased in the CY 1999 final rule (63 FR 58845), which moved the cost structure of the index from a 1989 base to a 1996 base. The methodology for the productivity adjustment was revised in the CY 2003 final rule (67 FR 80019) to reflect the percentage change in the 10-year moving average of economy-wide private nonfarm business multifactor productivity (previously the index was adjusted by a measure of labor productivity). The current form of the MEI was detailed in the CY 2004 PFS final rule (68 FR 63239) which updated the cost structure of the index from a base year of 1996 to 2000.

We proposed to rebase and revise the MEI and incorporate it into the CY 2011 PFS update. The terms "rebasing" and "revising", while often used interchangeably, actually denote different activities. Rebasing refers to moving the base year for the structure of costs of an input price index, while revising relates to other types of changes such as changing data sources, cost categories, or price proxies used in the price index. As is always the case with a rebasing and revising exercise, we have used the most recently available, relevant, and appropriate information to develop the proposed MEI cost category weights and price proxies. In the following sections of this final rule with comment period, we detail our proposals and respond to comments regarding the updated cost weights for the MEI expense categories, our rationale for selecting the price proxies in the MEI, and the results of the rebasing and revising of the MEI.

2. Use of More Current Data

The MEI was last rebased and revised in 2003 in the CY 2004 PFS final rule with comment period (68 FR 63239). The current base year for the MEI is 2000, which means that the cost weights in the index reflect physicians' expenses in 2000. However, we believe it is desirable to periodically rebase and revise the index so that the expense shares and their associated price proxies reflect more current conditions. For the CY 2011 PFS update, we are finalizing the proposal to rebase and revise the MEI to reflect appropriate physicians' expenses in 2006.

Compared to the 2000-based MEI, we proposed to make several changes to the MEI cost structure. First, we proposed to exclude the Pharmaceutical cost category as pharmaceuticals are neither paid for under the PFS nor are they included in the definition of "physicians' services" for purposes of calculating the physician update via the SGR system (for more details see the CY 2010 PFS final rule with comment period (74 FR 61961 through 61962)). We also proposed to exclude the expenses associated with separately billable supplies since these items are not paid for under the PFS. Our primary data source, the 2006 Physician Practice Information Survey (PPIS), collected data on these costs enabling us to accurately remove them from the index. In addition, we proposed to include nine new cost categories that disaggregate the costs under the broader Office Expenses cost category. The 2000-based MEI did not break these expenses into individual cost categories. As a result of comments received, which are described more fully below in this section, we are modifying this proposal to instead include ten detailed cost categories. As indicated in the CY 2011 PFS proposed rule, we proposed to continue to adjust the MEI for economy-wide multifactor productivity based on changes in the 10-year moving average of private nonfarm business multifactor productivity. After considering the comments received, we are finalizing our proposal to continue to adjust the MEI for economy-wide multifactor productivity based on changes in the 10-year moving average of private nonfarm business multifactor productivity.

3. Rebasing and Revising Expense Categories in the MEI

The MEI is used in conjunction with the SGR system to update the PFS and represents the price component of that update. The proposed expense categories in the index, along with their respective weights, are primarily derived from data collected in the 2006 AMA PPIS for self-employed physicians and selected self-employed non-medical doctor specialties. As noted, in addition to data on medical doctors, we included data from several non-medical doctor specialties in the MEI cost weight calculations (including optometrists, oral surgeons, podiatrists, and chiropractors) consistent with the definition of the term "physician" in section 1861(r) of the Act. In summary,

the term "physician" when used in connection with the performance of functions or actions an individual is legally authorized to perform means the following: (1) A doctor of medicine or osteopathy; (2) a doctor of dental surgery or of dental medicine; (3) a doctor of podiatric medicine; (4) a doctor of optometry; or (5) a chiropractor. For a complete definition, please see section 1861(r) of the Act. We weighted the expense data from the above-referenced specialties with the self-employed physician expense data using physician counts by specialty, the same methodology used in the AMA PPIS.

The AMA PPIS data were used to determine the expenditure weights in the MEI for all of the major cost categories including total expenses, physicians' earnings, physicians' benefits, employed physician payroll, nonphysician compensation, office expenses, professional liability insurance (PLI), medical equipment, medical supplies, and other professional expenses. We are finalizing our proposal to further disaggregate both non-physician compensation and office expenses into subcategories reflecting more detailed expenses. We used several data sources for further disaggregation of expenses including: data from the 2002 Bureau of Economic Analysis (BEA) Benchmark Input-Output table (I/O), the 2006 Bureau of the Census Current Population Survey (CPS), the 2006 Bureau of Labor Statistics (BLS) Occupational Employment Survey (OES), the 2006 Employment Cost for Employee Compensation Survey (ECEC), and the 2006 Internal Revenue Service (IRS) Statistics of Income (SOI) data. The development of each of the cost categories using these sources is described in detail below.

a. Developing the Weights for Use in the MEI

Developing a rebased and revised MEI requires selecting a base year and determining the appropriate expense categories. We proposed to rebase the MEI to CY 2006. We choose CY 2006 as the base year as: 1) this is the most recent year for which comprehensive physician expense data are available; and (2) we believe these data represent an accurate proxy for the physician expense distribution in CY 2011.

Table 27 lists the set of mutually exclusive and exhaustive cost categories that make up the final rebased and revised MEI, including the addition of the All Other Products category we are adopting in response to public comments.

TABLE 27—FINAL 2006 MEI COST CATEGORIES, WEIGHTS, AND PRICE PROXIES COMPARED TO THE 2000 MEI COST CATEGORIES AND WEIGHTS

Cost category	Final 2006-cost weights (1,2)	2000 Cost weights	2006 Price proxies
Total	100.00	100.000	
Physician's Compensation (Own Time) (3)	48.266	52.466	
Wages and Salaries	43.880	42.730	AHE Total Nonfarm Private for Production & Nonsupervisory Employees.(5)
Benefits (3),(4)	4.386	9.735	ECI-Benefits Total Nonfarm Private.(6)
Physician's Practice Expense	51.734	47.534	
Nonphysician Employee Compensation	19.153	18.654	
Nonphysician Employee Wages and Salaries	13.752	13.809	
Prof/Tech Wages	6.006	5.887	ECI-Wages/Salaries: Private Professional &Technical.
Managerial Wages	1.446	3.333	ECI-Wages/Salaries: Private Managerial.
Clerical Wages	4.466	3.892	ECI-Wages/Salaries: Private Clerical.
Services Wages	1.834	0.696	ECI-Wages/Salaries: Private Service.

TABLE 27—FINAL 2006 MEI COST CATEGORIES, WEIGHTS, AND PRICE PROXIES COMPARED TO THE 2000 MEI COST CATEGORIES AND WEIGHTS—Continued

Cost category	Final 2006-cost weights (1,2)	2000 Cost weights	2006 Price proxies
Other Professional Expenses	4.513	.....	CPI–U All Items Less Food and Energy.
Other Expenses	.....	6.433	

(1) Due to rounding, weights may not sum to 100.000 percent.
(2) Sources: 2006 Physician Practice Information Survey (PPIS), Center for Health Policy Research, American Medical Association; 2006 Employment Cost for Employee Compensation, U.S. Department of Labor, Bureau of Labor Statistics; 2006 Occupational Employment Statistics (OES), BLS; U.S. Department of Commerce, Bureau of Economic Analysis 2002 Benchmark Input Output Tables, and U.S. Department of Commerce, Bureau of the Census, 2006 Current Population Survey.
(3) Includes employed physician payroll.
(4) Includes paid leave.
(5) Average Hourly Earnings (AHE)
(6) Employment Cost Index (ECI)
(7) Consumer Price Index (CPI)
(8) Producer Price Index (PPI)

The development of each of the cost categories in the final 2006 MEI is described, in detail, as follows.

b. Physician's Own Time

The component of the MEI that reflects the physician's own time is represented by the net income portion of business receipts. The proposed 2006 cost weight associated with the physician's own time (otherwise referred to as the Physician Compensation cost weight) is based on 2006 AMA PPIS data for mean physician net income (physician compensation) for self-employed physicians and for the selected self-employed specialties referenced previously in this rule.

We proposed to continue to add employed physician compensation to self-employed physician compensation in order to calculate an aggregate Physician Compensation cost weight. By including the compensation of employed physicians in the Physician Compensation expense category, these expenses will be adjusted by the appropriate price proxies for a physician's own time. The proposed 2006 Physician Compensation cost weight is 48.266 percent as compared to a 52.466 percent share in the 2000-based MEI. We split the Physician Compensation component into two subcategories: Wages & Salaries; and Benefits. For self-employed physician's compensation, the ratios for Wages & Salaries and Benefits were calculated using data from the PPIS. Self-employed physician wages & salaries accounted for 92.2 percent of physician compensation while physician benefits accounted for the remaining 7.8 percent. For employed physician payroll, the distribution for wages & salaries and benefits for 2006 was 85.8 percent and 14.2 percent, respectively. This ratio was determined by calculating a weighted average of available SOI data for partnerships, corporations, and S-corporations specific to physicians and outpatient care centers. Based on these methods, the proposed 2006 Physician Wages & Salaries cost weight was 43.880 percent and the proposed 2006 Physician Benefits cost weight was 4.386 percent.

c. Physician's Practice Expenses

To determine the remaining individual Practice Expenses cost weights, we used mean expense data from the 2006 PPIS survey expressed as a percentage of total expenses. The detailed explanations for the derivation of the individual weights under Practice Expenses are listed below.

(1) Nonphysician Employee Compensation

The cost weight for Nonphysician Employee Compensation was developed using the 2006 AMA PPIS mean expenses for these costs. We further divided this cost share into Wages & Salaries and Benefits using 2006 BLS Employer Costs for Employee Compensation (ECEC) data for the Health Care and Social Assistance (private industry) category. Although this survey does not contain data only for offices of physicians, data are available to help determine the shares associated with wages & salaries and benefits for private industry health care and social assistance services (which include offices of physicians, hospitals, nursing homes, and offices of dentists). We believe these data provide a reasonable estimate of the split between wages and benefits for employees in physicians' offices. Data for 2006 in the ECEC for Health Care and Social Assistance indicate that wages and benefits are 71.8 percent and 28.2 percent of compensation, respectively. The 2000-based MEI included a wage and benefit split of 74.0 percent and 26.0 percent of compensation.

We proposed to use 2006 Current Population Survey (CPS) data and 2006 BLS Occupational Employment Statistics (OES) data to develop cost weights for wages for nonphysician occupational groups. These are the same data sources that were used in the 2000-based MEI. We determined total annual earnings for offices of physicians using employment data from the CPS and mean annual earnings from the OES. To arrive at a distribution for these separate categories, we determined annual earnings for each of the four categories (which are Professional & Technical workers, Managers, Clerical workers, and Service workers), using the Standard Occupational Classification (SOC) system. We then determined the overall share of the total for each. The resulting proposed distribution, as well as the distribution from the 2000-based MEI, are presented in Table 28.

TABLE 28—PERCENT DISTRIBUTION OF NONPHYSICIAN PAYROLL EXPENSE BY OCCUPATIONAL GROUP: 2006 AND 2000

BLS Occupational Group	2006 Expenditure shares	2000 Expenditure shares
Total	100.000	100.000

TABLE 28—PERCENT DISTRIBUTION OF NONPHYSICIAN PAYROLL EXPENSE BY OCCUPATIONAL GROUP: 2006 AND 2000—Continued

BLS Occupational Group	2006 Expenditure shares	2000 Expenditure shares
Professional & Technical Workers	43.671	42.635
Managers	10.517	24.138
Clerical Workers	32.477	28.187
Service Workers	13.336	5.040

Values may not sum to 100 due to rounding.

The decrease in the Managers expenditure share is directly related to a decrease in the total number of employees in Management occupations in physicians' offices, in particular, "Medical and health service managers." The decrease in expenditure share may also be due, in part, to the methods used in this rebasing. That is, for the 2006-based MEI, we are using data limited to "Offices of physicians." In the 2000-based version of the index, the only data that were available to inform these estimates were inclusive of physician offices and clinics ("Offices of physicians and clinics"). An examination of 2006 CPS and OES data comparing "Outpatient care centers" to "Offices of physicians" indicates that there is a higher share of management occupations in the "Outpatient care centers" than in "Offices of physicians".

The increase in the Service Workers expenditures share is attributable to a substantive increase in the number of employees in service occupations, particularly, "Medical assistants and other health care support occupations".

(2) Office Expenses

The aggregate Office Expenses cost weight was derived using the 2006 AMA PPIS and was calculated as the mean office expenses expressed as a percentage of mean total expenses. This calculation resulted in a 20.035 percent share of total costs in 2006 compared to a 12.209 percent share in the 2000-based index. The Office Expenses cost weight used in the 2000-based MEI was based on the AMA 1997 Socioeconomic Monitoring System (SMS) survey, which defined office expenses as rent, mortgage interest, depreciation on medical buildings, utilities, and telephones. The AMA expanded the office expense question in the 2006 PPIS survey to include additional expenses, described in more detail below in this section.

As a result, and in order to provide for a higher level of precision in assigning appropriate price proxies to underlying costs, we proposed to further disaggregate the Office Expenses cost category into 9 detailed cost categories using the BEA 2002–Benchmark I/O data for Offices of Physicians, Dentists, and Other Health Practitioners (North American Industrial Classification System (NAICS) 621A00). In response to comments, and as described more fully below, we are finalizing those nine categories, as well as adding a tenth detailed cost category.

The proposed Office Expenses cost categories and associated cost weights were developed by matching the BEA I/O data as closely as possible to the 2006 AMA PPIS survey, which defined office expenses as "office (non-medical) equipment and office (nonmedical) supplies, as well as rent, mortgage, interest, maintenance, refrigeration, storage, security, janitorial, depreciation on medical buildings used in your practice, utilities, or other office computer systems (including information management systems/electronic medical record systems) and telephone." In most instances, the proposed underlying detailed cost categories and associated cost weights were chosen to be consistent with the NAICS 3-digit classification. BEA I/O expense data is published on a NAICS-basis. Some of the proposed underlying detailed cost categories such as All Other Services include various 3-digit NAICS codes for service related industries. Similar methods are used in the other legislatively-required market baskets developed by CMS. After we categorized the BEA I/O data, we calculated the relative share for each category as a percentage of the total office expenses categories within the I/O data. We then aged the 2002 weights forward to 2006 to derive the 2006 detailed Office Expense cost weights as a percent of total Office Expenses. The methodology we used to age the data forward was to apply the annual price changes from each respective price proxy to the appropriate cost categories. We repeated this practice for each year of the interval from 2002 to 2006. We then applied the resulting 2006 distributions to the aggregate 2006 AMA Office Expenses weight of 20.035 percent to yield the detailed 2006 Office Expenses' weights as a percent of total expenses.

In response to public comments that are detailed in the subsequent sections of this rule, we conducted an additional review of the BEA I/O data used to disaggregate the Office Expense cost category, comparing the I/O's detailed categories with the questions on the AMA PPIS survey. This review led to small revisions to the underlying Office Expense cost weights and resulted in the inclusion of one additional cost weight in that category: All Other Products. These products, which were previously assumed to be captured in the Other Professional Expenses category (as measured by the AMA PPIS survey), include a variety of miscellaneous products, such as miscellaneous wood and building products, that we believe respondents included in Office Expenses as maintenance expense. Table 27 provides the revised MEI weights.

We believe the introduction of these new, more detailed categories for the 2006-based index allow for an increased level of precision while maintaining appropriate levels of aggregation in the index. The individual price proxies are described in more detail in section II.E.4.of this final rule.

The following is a description of the types of expenses included in each of the detailed Office Expense cost categories.

- *Utilities:* The Utilities cost weight includes expenses classified in the fuel, oil and gas, water and sewage, and electricity industries. These types of industries are classified in NAICS and include NAICS 2211 (Electric power generation, transmission, and distribution), 2212 (Natural gas distribution), and 2213 (Water, sewage, and other systems). The cost weight for utilities is 1.266 percent.
- *Chemicals:* The Chemicals cost weight includes expenses classified in the NAICS 325 (Chemical manufacturing), excluding pharmaceuticals and biologicals. This would include, but is not limited to, expenses such as soap and cleaning compounds, as well as photocopier

toners and laser printer toners. The cost weight for chemicals is 0.723 percent.

• *Paper:* The Paper cost weight includes expenses classified in NAICS 322 (paper manufacturing) and NAICS 323 (printing and related support activities). This would include expenses associated with items such as paper, paperboard, sanitary paper products, and printing. The cost weight for paper is 0.657 percent.

• *Rubber and Plastics:* The Rubber and Plastics cost weight includes expenses classified in NAICS 326 (Plastics and Rubber Products Manufacturing). This would include, but is not limited to expenses associated with plastic bags, plastic trash cans, and plastic plumbing fixtures. The cost weight for Rubber and Plastics is 0.598 percent.

• *Telephone:* The Telephone cost weight includes expenses classified in NAICS 517 (Telecommunications) and NAICS 518 (Internet service providers), and NAICS 515 (Cable and other subscription programming). Telephone service, which is one component of the Telecommunications expenses, accounts for the majority of the expenditures in this cost category. The cost weight for Telephone services is 1.501 percent.

• *Postage:* The Postage cost weight includes expenses classified in NAICS 491 (Postal services) and NAICS 492 (Courier services). The cost weight for Postage is 0.898 percent.

• *All Other Services:* The All Other Services cost weight includes other service expenses including, but not limited to, nonresidential maintenance and repair, machinery repair, janitorial, and security services. This cost weight does not include expenses associated with professional services such as accounting, billing, legal, and marketing which are included in the Other Professional Expenses cost weight derived using the AMA PPIS survey. The cost weight for All Other Services is 3.582 percent.

• *All Other Products:* The All Other Products cost weight, which we are adding based upon our further review in response to public comments, includes other miscellaneous expenses, including but not limited to, a variety of miscellaneous building products (such as wood and concrete). The cost weight for All Other Products is 0.500 percent.

• *Fixed Capital:* The Fixed Capital cost weight includes expenses for building leases, mortgage interest, and depreciation on medical buildings. The cost weight for Fixed Capital is 8.957 percent.

• *Moveable Capital:* The Moveable Capital cost weight includes expenses and depreciation costs for non-medical equipment including but not limited to, computer equipment and software and the rental and leasing of industrial machinery equipment. The cost weight for Moveable Capital is 1.353 percent.

(3) Professional Liability Insurance (PLI) Expense

The proposed weight for PLI expense was derived from the 2006 AMA survey and was calculated as the mean PLI expense expressed as a percentage of mean total expenses. This calculation resulted in a 4.295-percent share of total costs in 2006 compared to a 3.865-percent share in the 2000-based index. The increase in the weight for PLI reflects the current prices of premiums, as well as an update to the level of coverage purchased by physicians in 2006 compared to 2000.

(4) Medical Equipment Expenses

The proposed weight for Medical Equipment was calculated using the 2006 AMA PPIS mean expense data expressed as a percentage of mean total expenses. This calculation resulted in a 1.978-percent share of total costs in 2006 compared to a 2.055-percent share in the 2000-based index. By definition, this category includes the expenses related to depreciation, maintenance contracts, and the leases or rental of medical equipment used in diagnosis or treatment of patients. The category would also include the tax-deductible portion of the purchase price or replacement value of medical equipment, if not leased.

(5) Medical Supplies Expenses

The proposed weight for Medical Supplies was calculated using the 2006 AMA PPIS mean expense data expressed as a percentage of mean total expenses. This calculation resulted in a 1.760-percent share of total costs in 2006 compared to a 2.011-percent share in the 2000-based index. By definition, this category includes the expenses related to medical supplies such as sterile gloves, needles, bandages, specimen containers, and catheters. Additionally, we proposed to exclude the expenses related to separately billable supplies as these expenses are not paid for under the PFS. The Medical Supply cost category does not include expenses related to drugs.

(6) Other Professional Expenses

The proposed weight for Other Professional expenses was calculated using the 2006 AMA PPIS mean expense data expressed as a percentage of mean total expenses. This calculation resulted in a 4.513-percent share of total costs in 2006. By definition, this category includes the expenses related to tax-deductible expenses for any other professional expenses not reported in another category from the PPIS. These expenses would include fees related to legal, marketing, accounting, billing, office management services, professional association memberships, maintenance of certification or licensure, journals and continuing education, professional car upkeep and depreciation, and any other general expenses or other professional expenses not reported elsewhere on the PPIS.

In summary, we are finalizing the proposed 2006-based MEI cost categories and respective cost weights for all categories except for the underlying detailed Office Expense cost categories and cost weights. In response to public comments, we reexamined the BEA I/O data and compared it again with the specific types of costs sought by the AMA PPIS survey question on Office Expenses. Although we are finalizing the proposed Office Expense cost weight of 20.035 percent, our re-evaluation resulted in slight changes to the underlying detail of the Office Expense cost categories and cost weights. Specifically, we are finalizing the nine proposed detailed cost categories and adding one additional detailed cost category, All Other Products. The final detailed cost categories and cost weights for the underlying Office Expense cost categories are shown in Table 27.

Table 29 shows a comparison of the proposed MEI Office Expense cost categories and weights to the final MEI Office Expense cost categories and weights. In addition to adding the subcategory All Other Products, the final Office Expenses' category weights were updated in response to public comments to reflect the removal of automobile-related expenses, which were in effect being double-counted, from the Movable Capital category. Further examination of the AMA's PPIS questions showed that automobile costs, such as those associated with leasing and depreciation, were captured in the question related to other professional expenses and are, thus accounted for in Other Professional Expenses (with a final cost weight of 4.513 percent). Notably, that cost weight is not impacted as, again, those costs were captured there in the survey.

TABLE 29—COMPARISON OF PROPOSED OFFICE EXPENSE COST CATEGORIES AND COST WEIGHTS TO THE FINAL OFFICE EXPENSE COST CATEGORIES AND COST WEIGHTS

Cost categories	2006 Final weight (%)	2006 Proposed weight (%)
Office Expenses	20.035	20.035
Utilities	1.266	1.139
Chemicals	0.723	0.679
Paper	0.657	0.616
Rubber & Plastics	0.598	0.563
Telephone	1.501	1.415
Postage	0.898	0.661
All Other Services	3.582	4.718
All Other Products	0.500	
Fixed Capital	8.957	8.410
Moveable Capital	1.353	1.834

4. Selection of Price Proxies for Use in the MEI

After the 2006 cost weights for the rebased and revised MEI were developed, we reviewed all of the price proxies to evaluate their appropriateness. As was the case in the development of the 2000-based MEI (68 FR 63239), most of the proxy measures we considered are based on BLS data and are grouped into one of the following five categories:

- *Producer Price Indices (PPIs):* PPIs measure price changes for goods sold in markets other than retail markets. These fixed-weight indexes are a measure of price change at the intermediate or final stage of production. They are the preferred proxies for physician purchases as these prices appropriately reflect the product's first commercial transaction.
- *Consumer Price Indices (CPIs):* CPIs measure changes in the prices of final goods and services bought by consumers. Like the PPIs, they are fixed-weight indexes. Since they may not represent the price changes faced by producers, CPIs are used if there are no appropriate PPIs or if the particular expenditure category is likely to contain purchases made at the final point of sale.
- *Average Hourly Earnings (AHEs):* AHEs are available for production and nonsupervisory workers for specific industries, as well as for the nonfarm business economy. They are calculated by dividing gross payrolls for wages & salaries by total hours. The series reflects shifts in employment mix and, thus, is representative of actual changes in hourly earnings for industries or for the nonfarm business economy.
- *ECIs for Wages & Salaries:* These ECIs measure the rate of change in employee wage rates per hour worked. These fixed-weight indexes are not affected by employment shifts among industries or occupations and thus, measure only the pure rate of change in wages.
- *ECIs for Employee Benefits:* These ECIs measure the rate of change in employer costs of employee benefits, such as the employer's share of Social Security taxes, pension and other retirement plans, insurance benefits (life, health, disability, and accident), and paid leave. Like ECIs for wages & salaries, the ECIs for employee benefits are not affected by employment shifts among industries or occupations.

When choosing wage and price proxies for each expense category, we evaluate the strengths and weaknesses of each proxy variable using the following four criteria:

- *Relevance:* The price proxy should appropriately represent price changes for specific goods or services within the expense category. Relevance may encompass judgments about relative efficiency of the market generating the price and wage increases.
- *Reliability:* If the potential proxy demonstrates a high sampling variability, or inexplicable erratic patterns over time, its viability as an appropriate price proxy is greatly diminished. Notably, low sampling variability can conflict with relevance—since the more specifically a price variable is defined (in terms of service, commodity, or geographic area), the higher the possibility of high sampling variability. A well-established time series is also preferred.
- *Timeliness of actual published data:* For greater granularity and the need to be as timely as possible, we prefer monthly and quarterly data to annual data.
- *Public availability:* For transparency, we prefer to use data sources that are publicly available.

The BLS price proxy categories previously described meet the criteria of relevance, reliability, timeliness, and public availability. Below we discuss the price and wage proxies for the rebased and revised MEI (as shown in Table E4), along with a summary of the public comments we received on our proposals and our responses to those comments.

a. Cost (Expense) Categories in the MEI

(1) Physician's Own Time (Physician Compensation)

For the revised and rebased MEI, we proposed to continue to use the AHE for production and non-supervisory employees for the private nonfarm economy as the proxy for the Physician Wages & Salaries component (BLS series code: CEU0500000008).

The AHE for the private nonfarm economy reflects general earnings including the impacts of supply, demand, and economy-wide productivity for the average worker in the economy. As such, use of this proxy is consistent with the original intent of the Congress for the change in the MEI to follow reflect changes in expenses of practice and general earnings levels.[1] The current 2000-based MEI uses the ECI for Total Benefits (BLS series code: CIU2030000000000I) for total private industry as the price proxy for Physician Benefits. We proposed to continue using the same proxy for the 2006-based MEI and received no public comment on this particular aspect of the index. This means that both the wage and benefit proxies for physician earnings are derived from the private nonfarm business sector and are computed on a per-hour basis.

(2) Nonphysician Employee Compensation

For the 2006-based MEI, we proposed to use the same ECI private series for each occupational group as in the 2000-based MEI. In particular, we proposed to use the ECI for Professional and Technical Workers, the ECI for Managerial Services, the ECI for Administrative Support Services, and the ECI for Service Occupations.

As described in the CY 2008 PFS proposed rule (72 FR 38190), as a result of the discontinuation of the White Collar Benefit ECI for private workers, we proposed to continue to use a composite ECI benefit index. We are continuing to use the composite ECI for non-physician employees in the proposed rebased and revised MEI; however, we proposed to rebase the weights within that blend in order to reflect the more recent 2006 data. Table 30 lists the four ECI series and corresponding weights used to construct the 2006 composite benefit index.

[1] U.S. Senate, Committee on Finance, *Social Security Amendments of 1972.* "Report of the Committee on Finance United States Senate to Accompany H.R. 1," September 26, 1972, p. 191.

TABLE 30—CMS COMPOSITE PRICE INDEX FOR NONPHYSICIAN EMPLOYEE BENEFITS

ECI series	2006 weight (%)
Benefits, Private, Professional & Related	44
Benefits, Private, Management, Business, Financial	11
Benefits, Private, Office & Administrative Support	32
Benefits, Private, Service Occupations	13

(3) Utilities

For the 2006-based MEI, we proposed to use the CPI for Fuel and Utilities (BLS series code #CUUR0000SAH2) to measure the price growth of this cost category. This cost category was not broken out separately in the 2000-based MEI.

(4) Chemicals

For the 2006-based MEI, we proposed to use the PPI for Other Basic Organic Chemical Manufacturing (BLS series code #PCU32519–32519) to measure the price changes of this cost category. We are using this industry-based PPI because BEA's 2002 benchmark I/O data show that the majority of the office of physicians' chemical expenses are attributable to Other Basic Organic Chemical Manufacturing (NAICS 32519). This cost category was not broken out separately in the 2000-based MEI.

(5) Paper

For the 2006-based MEI, we proposed to use the PPI for Converted Paper and Paperboard (BLS series code #WPU0915) to measure the price growth of this cost category. This cost category was not broken out separately in the 2000-based MEI.

(6) Rubber and Plastics

For the 2006-based MEI, we proposed to use the PPI for Rubber and Plastic Products (BLS series code #WPU07) to measure the price growth of this cost category. This cost category was not broken out separately in the 2000-based MEI.

(7) Telephone

For the 2006-based MEI, we proposed to use the CPI for Telephone Services (BLS series code #CUUR0000SEED) to measure the price growth of this cost category. This cost category was not broken out separately in the 2000-based MEI.

(8) Postage

For the 2006-based MEI, we proposed to use the CPI for Postage (BLS series code #CUUR0000SEEC01) to measure the price growth of this cost category. This cost category was not broken out separately in the 2000-based MEI.

(9) All Other Services

For the 2006-based MEI, we proposed to use the ECI for Compensation for Service Occupations (private industry) (BLS series code #CIU2010000300000I) to measure the price growth of this cost category. This cost category was not broken out separately in the 2000-based MEI.

(10) All Other Products

As noted previously, we are adding this category in this final rule with comment period in response to public comments. This category includes a variety of miscellaneous expenses such as miscellaneous building products; thus, we will use the CPI–U for All Items Less Food and Energy as a proxy for price changes. This cost category was not broken out separately in the 2000-based MEI.

(11) Fixed Capital

For the 2006-based MEI, we proposed to use the CPI for Owner's Equivalent Rent (BLS series code #CUUS0000SEHC) to measure the price growth of this cost category. This price index represents about 50 percent of the CPI for Housing, which was used in the 2000-based MEI to proxy total Office Expenses.

(12) Moveable Capital

For the 2006-based MEI, we proposed to use the PPI for Machinery and Equipment (series code #WPU11) to measure the price growth of this cost category. This cost category was not broken out separately in the 2000-based MEI.

(13) Professional Liability Insurance (PLI)

Each year, we solicit PLI premium data for physicians from a sample of commercial carriers. This information is not collected through a survey form, but instead is requested directly from, and provided by (on a voluntary basis), several national commercial carriers. As we require for our other price proxies, the professional liability price proxy is intended to reflect the pure price change associated with this particular cost category. Thus, it does not include changes in the mix or level of liability coverage. To accomplish this result, we obtain premium information from a sample of commercial carriers for a fixed level of coverage, currently $1 million per occurrence and a $3 million annual limit. This information is collected for every State by physician specialty and risk class. Finally, the State-level, physician-specialty data are aggregated by effective premium date to compute a national total, using counts of physicians by State and specialty as provided in the AMA publication, *Physician Characteristics and Distribution in the U.S.*

The resulting data provide a quarterly time series, indexed to a base year consistent with the MEI, and reflect the national trend in the average professional liability premium for a given level of coverage, generally $1 million/$3 million of claims-made mature policies. From this series, quarterly and annual percent changes in PLI are estimated for inclusion in the MEI.

The most comprehensive data on professional liability costs are held by the State insurance commissioners, but these data are available only with a substantial time lag and hence, the data currently incorporated into the MEI are much timelier. We believe that, given the limited data available on professional liability premiums, the information and methodology described above produces an adequate proxy of the PLI price trends facing physicians.

(14) Medical Equipment

The Medical Equipment cost category includes depreciation, leases, and rent on medical equipment. We proposed to use the PPI for Medical Instruments and Equipment (BLS series code: WPU156201) as the price proxy for this category, consistent with the price proxy used in the 2000-based MEI and other CMS input price indexes.

(15) Medical Materials and Supplies

As was used in the 2000-based MEI, we proposed to use a blended index comprised of a 50/50 blend of the PPI Surgical Appliances (BLS series code: WPU156301) and the CPI–U for Medical Equipment and Supplies (BLS series code: CUUR0000SEMG). We believe physicians purchase the types of supplies contained within these proxies, including such items as bandages, dressings, catheters, intravenous (I.V.) equipment, syringes, and other general disposable medical supplies, via wholesale purchase, as well as at the retail level. Consequently, we proposed to combine the two aforementioned indexes to reflect those modes of purchase.

(16) Other Professional Expenses

This category includes the residual subcategory of other professional expenses such as accounting services, legal services, office management services, continuing education, professional association memberships, journals, professional car expenses, and other general expenses and other professional expenses not captured elsewhere. Given this heterogeneous mix of goods and services, we are finalizing our proposal to use the CPI–U for All Items Less Food and Energy. In summary, we are finalizing the proposed 2006-based MEI price proxies with one modification. Since an additional cost category, All Other Products, was added to the office expense disaggregation, we are also finalizing the decision to use the CPI for All Items Less Food and Energy as the price proxy for that category.

(b) Productivity Adjustment to the MEI

The MEI has been adjusted for changes in productivity since its inception. In the CY 2003 PFS final rule (67 FR 80019), we implemented a change in the way the MEI was adjusted to account for those changes in productivity. The MEI used for the 2003 physician payment update incorporated changes in the 10-year moving average of private nonfarm business multifactor productivity that were applied to the entire index. Previously, the index incorporated changes in productivity by adjusting the labor portions of the index by changes in the 10-year moving average of economy-wide private nonfarm business labor productivity.

We proposed to continue to use the current method for adjusting the full MEI for multifactor productivity in the rebased and revised MEI, and are finalizing that proposal.

As described in the CY 2003 PFS final rule, we believe this adjustment is appropriate because it explicitly reflects the productivity gains associated with all inputs (both labor and non-labor). We believe that using the 10-year moving average percent change in private nonfarm business multifactor productivity is appropriate for deriving a stable measure that helps alleviate the influence that a peak (or a trough) of a business cycle may have on the measure. The adjustment will be based on the latest available historical e private nonfarm business multifactor productivity data as measured and published by BLS.

5. Results of Rebasing

Table 31 illustrates the results of updating the MEI cost weights for Physician Compensation, Practice Expenses (excluding PLI), and PLI from a 2000-based cost distribution to a 2006-based cost distribution, including all the proposed and finalized revisions as specified in this final rule.

TABLE 31—PERCENT DISTRIBUTION OF SELECTED PHYSICIAN EXPENSES USED TO CALIBRATE RVUS: CYS 2006 AND 2000

	CY 2006 weight (%)	CY 2000 weight (%)
Physician Compensation (Own Time)	48.266	52.466
Practice Expenses (less PLI)	47.439	43.669
PLI	4.295	3.865

The rebased and revised MEI has several differences as compared to the 2000-based MEI; these changes have been discussed in detail in prior sections of this rule. Table E8 shows the average calendar year percent change for CY 2004 to CY 2011 for both the 2000- and 2006-based MEIs. The 2006-based MEI annual percent changes differ from the 2000-based MEI annual percent changes by 0.0 to 0.8 percentage point. For CYs 2007 through 2011, the annual percent change in the rebased and revised MEI was within 0.3 percentage point of the percent change in the 2000-based MEI. In the earlier years, there were larger differences between the annual percent change in the rebased and revised MEI and the 2000-based MEI. The majority of these differences can be attributed to the lower benefit cost weight, as measured by the 2006 AMA data, and the exclusion of the Pharmaceuticals cost category. The remaining differences are attributable to the higher cost weight for PLI, as measured by the 2006 AMA data.

TABLE 32—ANNUAL PERCENT CHANGES IN THE 2000-BASED AND REVISED 2006-BASED MEI

Update year [A]	Final 2006-based MEI	Current 2000-based MEI
CY 2004	2.3	2.6
CY 2005	1.8	2.6
CY 2006	1.8	2.4
CY 2007	1.6	1.9
CY 2008	1.9	1.8
CY 2009	1.6	1.6
CY 2010	1.5	1.2
CY 2011[B]	0.4	0.3
Average Change for CYs 2004-2011	1.6	1.8

[A] Update year based on historical data through the second quarter of the prior calendar year. For example, the 2010 update is based on historical data through the second quarter 2009.

[B] Based on historical data through the 2nd quarter 2010.

As shown in Table 33, the percent change of the rebased and revised MEI for the CY 2011 PFS final rule is an increase of 0.4 percent, one tenth of a percentage point higher than the 2000-based MEI for the same period. The proposed rule included an estimated increase of 0.3 percent for 2011 based on projected data from IHS Global Insight, Inc. The 0.4 percent increase was calculated based on historical data through the second quarter of 2010, including revised data from the BLS on the 10-year moving average of BLS private nonfarm business multifactor productivity published on October 6, 2010 (*http://www.bls.gov/news.release/pdf/prod3.pdf*). The 0.1 percentage point difference in the MEI update factor from the 0.3-percent estimate indicated in the proposed rule to our current figure of 0.4 percent is primarily related to the incorporation of more recent historical data for private nonfarm business multifactor productivity.

TABLE 33—ANNUAL PERCENT CHANGE IN THE 2000-BASED AND REVISED 2006-BASED MEI FOR CY 2011

	2006–based MEI	2000–based MEI
CY 2011	0.4	0.3

TABLE 34—ANNUAL PERCENT CHANGE IN THE REVISED AND REBASED MEI CY 2011, ALL CATEGORIES [1]

Cost categories	2006 weight [2] (%)	CY 2011 percent change
MEI Total, productivity adjusted	100.000	0.4
Productivity: 10-year moving average of MFP	N/A	1.2
MEI Total, without productivity adjustment	100.000	1.6
Physician Compensation (Own Time) [3]	48.266	2.4
Wages and Salaries	43.880	2.5
Benefits	4.386	1.7
Physician's Practice Expenses	51.734	0.7
Nonphysician Employee Compensation	19.153	1.5
Nonphysician Employee Wages	13.752	1.4
Prof/Tech Wages	6.006	1.2
Managerial Wages	1.446	1.2
Clerical Wages	4.466	1.7
Services Wages	1.834	1.7
Nonphysician Employee Benefits	5.401	1.6
Other Practice Expenses	26.308	0.1
Office Expenses	20.035	0.6
Utilities	1.266	-3.1
Chemicals	0.723	-2.5
Paper	0.657	-0.3
Rubber & Plastics	0.598	-0.3
Telephone	1.501	0.8
Postage	0.898	4.7
All Other Services	3.582	1.8
All Other Products	0.500	1.4
Fixed Capital	8.957	0.6
Moveable Capital	1.353	0.1
PLI [4]	4.295	-2.9
Medical Equipment	1.978	0.5
Medical Materials and Supplies	1.760	0.4
Other Professional Expenses	4.513	1.4

[1] The estimates are based upon the latest available Bureau of Labor Statistics data on the 10-year moving average of BLS private nonfarm business multifactor productivity published on October 6, 2010 (*http://www.bls.gov/news.release/pdf/prod3.pdf*).

[2] The weights shown for the MEI components are the 2006 base-year weights, which may not sum to subtotals or totals because of rounding. The MEI is a fixed-weight, Laspeyres input price index whose category weights indicate the distribution of expenditures among the inputs to physicians' services for CY 2006. To determine the MEI level for a given year, the price proxy level for each component is multiplied by its 2006 weight. The sum of these products (weights multiplied by the price index levels) yields the composite MEI level for a given year. The annual percent change in the MEI levels is an estimate of price change over time for a fixed market basket of inputs to physicians' services.

[3] The measures of Productivity, Average Hourly Earnings, Employment Cost Indexes, as well as the various Producer and Consumer Price Indexes can be found on the Bureau of Labor Statistics (BLS) Web site at *http://stats.bls.gov*.

[4] Derived from a CMS survey of several major commercial insurers.

N/A Productivity is factored into the MEI as a subtraction from the total index growth rate; therefore, no explicit weight exists for productivity in the MEI.

6. Medicare Economic Index Technical Advisory Panel

In the CY 2011 PFS proposed rule, we notified the public of our intent to convene a Medicare Economic Index Technical Advisory Panel (MEI TAP) to study all aspects of the MEI including its cost categories, their associated cost weights and price proxies, and the adjustment of the index by an economy-wide measure of multi-factor productivity. We will be convening the MEI TAP. More details regarding this issue can be found in the next section of this rule.

7. Summary of Comments and the Associated Responses

a. Timing of Rebasing and Revising the MEI

Comment: Many commenters support the rebasing and revising of the MEI using CY 2006 as a base year and the incorporation of practice cost changes reflected in the 2006 AMA PPIS. Many of these commenters also indicated their support for the upcoming MEI technical advisory panel, but stressed that CMS should not delay moving forward with rebasing and revising the MEI for CY 2011. Several people wrote that they believe that the rebasing, along with the addition of new product categories, will result in a more accurate distribution of expenses among physician compensation, practice expense, and professional liability. The commenters believe that the proposal to rebase to 2006 will make the MEI more representative of current conditions in the health care marketplace and, in particular, more reflective of the higher burden of practice expenses in relation to physician compensation in modern physician practices. The commenters agree that the use of more current data and the expansion of the categories used in determining the MEI update are a technical improvement over the 2000-based MEI and urge CMS to proceed accordingly.

Response: We agree with the commenters that the 2006-based MEI reflects a more current estimate of the cost distribution associated with furnishing physicians' services. Therefore we are finalizing our proposals (with minor modifications described above) to rebase and revise the MEI, and are proceeding with implementation of the 2006-based MEI for CY 2011.

Comment: Many commenters indicated CMS should postpone implementation of the rebased and revised MEI until the MEI technical advisory panel can conduct a comprehensive review of all aspects of the index. These commenters believe that it is premature to finalize proposals

that will significantly change the MEI prior to receiving recommendations from the technical advisory panel and therefore strongly support convening the technical advisory panel first and rebasing and revising the MEI afterwards.

Response: We agree with the commenters that the MEI technical advisory panel should move forward (discussed in more detail below). However, we do not find any compelling technical reason to postpone finalizing the proposed changes to the index. We believe rebasing and revising the index for CY 2011 to reapportion the work, practice expense, and malpractice weights will allow the MEI to appropriately reflect more recent data. For these reasons we disagree with the commenters that support delaying the rebasing of the MEI until the technical panel has had a chance to convene and make further recommendations. Should we concur with recommendations from the technical advisory panel that would result in technical improvements to the MEI, we would propose any changes in a future rulemaking exercise.

Comment: One commenter questioned the need for changes in the MEI in 2011, particularly since there is no statutory timeframe for these changes and the most recent changes in practice expenses from the PPIS survey are in the first year of a 4-year phase-in.

Response: The current MEI reflects the physician practice cost structure for 2000. Based on both our own analysis and supporting public comments, it is evident that this cost structure has changed from 2000 to 2006. Accordingly, we believe it is technically appropriate to update to a more recent base year for use in CY 2011.

Comment: A commenter suggested that when rebasing is done in the future, CMS should propose phasing in the changes, perhaps over 2 years, in order to mitigate negative consequences.

Response: We do not believe it would be appropriate to phase in changes to the MEI associated with rebasing and revising the index. These periodic efforts are done to ensure that the MEI is reflecting the latest available information and echoes current cost distributions associated with furnishing physicians' services. Our approach is consistent across all of the Medicare market baskets in this regard and is likewise consistent with how technical improvements are incorporated into other published price indexes, such as the CPI or PPI.

Comment: Some commenters asked CMS to delay rebasing the MEI until the summit on geographic practice costs and the IOM studies have been completed.

Response: We believe that it is technically appropriate to update the MEI to reflect the more current cost structure as determined by using the 2006 AMA PPIS data. We note that the MEI is constructed independent of the GPCIs. While the GPCI weights have historically been linked to the MEI cost weights, we do not believe it would be appropriate to postpone rebasing the MEI in anticipation of the summit's or the IOM's findings.

b. PPIS Data

Comment: Many commenters stated they, like CMS, are unaware of another more robust or more current source of available data on physician practice costs than the PPIS. Other commenters noted that CMS and the AMA have supported using PPIS data to update the practice expense per hour (PE/HR) calculations beginning in CY 2010. The commenters believe that if the data were sufficient to adjust PE/HR, then they are sufficient to update the MEI. Other commenters indicate they support periodic updates to the index, recognizing the difficulties associated with updating the MEI's cost categories and weights on an annual basis.

Response: We agree with the commenters that the PPIS is the most up-to-date and comprehensive data source available on physician practice costs. We also believe that the estimates derived from the PPIS are current, valid, and appropriate for use in rebasing and revising the MEI. Likewise, we concur that a variety of data-related issues would make updating the MEI on an annual basis difficult and believe that periodic revisions such as the one we are adopting in this final rule with comment period are more appropriate.

Comment: A few commenters expressed general concerns over using data from the PPIS. One commenter specifically notes that the MEI changes are allegedly being proposed to reflect changes in medical practice based on research using PE data. The commenter has reviewed some of the research, including the research process and questioned the research data itself. Their concerns over the raw data source include issues related to sample design, sample geographic distribution, and sample size sufficiency. They questioned the choice of the data collection firm used by AMA.

Response: We conducted an extensive review of the PPIS data and continue to believe it appropriately reflects the cost distributions of physicians. We note that we rely upon the physician community to complete the AMA surveys as accurately as possible since unlike other provider types (such as hospitals and skilled nursing facilities) physicians are not required to submit annual Medicare cost report data.

Comment: Some commenters indicated that CMS did not make clear why the rebased MEI would be based on PPIS data from 2006. Several expressed concerns that the use of 4-year old data is questionable as data this old would not reflect physician expenses in 2011 (and that more up-to-date data on physician costs is surely available).

Response: As stated in the CY 2011 PFS proposed rule (75 FR 40088), we chose to rebase the MEI to 2006 in order to incorporate the 2006 AMA PPIS data. We believe the 2006 AMA PPIS data is the most up-to-date, complete, statistically valid data source available. We welcome any recommendations for more up-to-date data sources available on physician expenses. We would also note that the 2006 data from the PPIS are used to provide the cost structure that is used in the MEI. The increase in the CY 2011 MEI ultimately reflects the input price inflation, adjusted for productivity, that physicians face based on a 2006 distribution of costs. It does not, nor is it intended to, reflect physician input cost levels for 2011.

Comment: Some commenters noted that in the interest of transparency, CMS should publish on its Web site all data from the PPIS that were used in rebasing the MEI.

Response: We understand the commenter's request for transparency. Unfortunately, we are unable to publish the detailed micro level data from the AMA PPIS survey as it is proprietary information. We would suggest the commenter contact the AMA with their request.

c. Office Expenses

Comment: Several commenters appreciated the intent of the new subcategories found in Office Expenses to include more medical office-specific data and believe it will improve the index.

Response: We agree with the commenters and believe that having greater detail under the Office Expense cost category in the MEI provides a technical improvement.

Comment: Several commenters questioned the CMS proposal to create detailed categories under the broader Office Expense cost category. Some of the commenters had specific concerns about the particular subcategories. Examples included the following:

- The Chemicals and Rubber & Plastics categories (all derived from the BEA) might not be relevant (or

meaningful) to today's physicians' practice.

• Computers, computer expenses, billing, and scheduling technology and electronic medical records are high-cost, non-optional office expenses for medical practices that are not adequately captured and would represent more appropriate categories.

• CMS references data on the Office Expenses' components derived from the BEA, but the agency provided no rationale to justify the changes in Office Expenses, nor did it provide a detailed accounting methodology or solicit advice on new inputs to the index.

Response: We proposed to disaggregate the Office Expense cost category into more detailed cost categories as a result of a change to the question in the 2006 AMA PPIS survey that captured these types of costs. In addition, in rulemaking for the CY 2008 Physician Fee Schedule, we received a comment from the industry about our use of the CPI for Housing to proxy Office Expenses (72 FR 66376). At that time, we notified the public of our intent to explore the feasibility of breaking the Office Expenses category into more descriptive cost categories during the next rebasing.

In order to appropriately represent the information collected by the PPIS and to increase the level of precision of our price proxies, we proposed to disaggregate the Office Expense cost category and its associated weight into more detailed components and to proxy those costs with the most technically appropriate price proxies. Moreover, we believe it would be technically inappropriate to proxy the Office Expense cost category, which now includes a much broader range of expenses, by one price proxy, namely the CPI for Housing. For these reasons, we developed our proposals and solicited public comments.

We disagree with the commenters' assertion that the Chemicals and Rubber & Plastics categories are not relevant to today's physician practice (and note that the commenters did not provide additional information or data to support the claim that the proposed categories are not relevant). The information we relied on came directly from the BEAs' Benchmark I/O files for Offices of Physicians, Dentists, and Other Health Practitioners. The Chemicals cost category includes expenses for items such as soaps and cleaning compounds, as well as photocopier toners and laser printer toners. The Rubber and Plastics category includes expenses for items such as plastic plumbing fixtures, plastic bags, and plastic trash cans. Although we will continue to explore further additional disaggregation of expenses, we believe that the aforementioned costs are associated with, and relevant to, furnishing physicians' services.

As indicated previously, and in response to the comment, we conducted an additional review of the BEA I/O data used to disaggregate the Office Expense cost category, comparing the detailed underlying expenses with the questions on the AMA PPIS survey. This review led us to make small revisions to the underlying Office Expense cost weights, including the addition of another cost weight for the new subcategory, All Other Products. These products were initially assumed to be captured in Other Professional Expenses as measured by the AMA PPIS survey, but were determined to have been reported as Office Expenses. All Other Products would include a variety of miscellaneous products such as miscellaneous wood and apparel products. Table E4 provides the revised MEI weights. Also, as part of this additional analysis on the Office Expense categories, we determined that automobile-related expenses were captured in the PPIS question associated with Other Professional Expenses (and that its associated weight reflected respondents including those costs when answering that question). As a result, we removed automobile-related NAICS-based industry spending from the BEA I/O data that was being used to distribute expenses across the various Office Expense subcategories. As this spending was included in the Movable Capital subcategory for the proposed rule, the weight associated with that subcategory will be 1.353 rather than the 1.834 we proposed.

We disagree with the commenters' statements that the MEI does not adequately capture high-level or high-cost technology expenses (and briefly note that Movable Capital includes only non-medical movable equipment). The Office Expense cost weight (20.035 percent) was calculated using the 2006 PPIS data, which specifically requested health information technology equipment and other nonmedical office equipment to be included in the Office Expense category as follows:

> Provide [your] share (dollar amount) of the specialty or department level's share (dollar amount) of the practice's total (dollar amount) for] 2006 office expenses, including office (non-medical) equipment and office (non-medical) supplies, as well as rent, mortgage interest, maintenance, refrigeration, storage, security, janitorial, depreciation on medical buildings used in your practice, utilities, or other office computer systems (including information management systems/electronic medical record systems) and telephone.

Given that the expenses related to information management systems and electronic medical record systems were included as "office expenses" in the 2006 PPIS, the 20.035 percent weight would include these costs. Unfortunately, given the data limitations, it remains difficult to determine a percentage associated specifically with computer equipment, computer-related depreciation, and computer-related leasing. For this rebasing, the costs we classified as Moveable Capital are comprised of the expenses paid by Office of Physicians industry to the following industries based on NAICS classification:

33329A	Other industrial machinery manufacturing.
33331A	Vending, commercial, industrial, and office machinery manufacturing.
333414	Heating equipment, except warm air furnaces.
333415	Air conditioning, refrigeration, and warm air heating equipment manufacturing.
33399A	Other general purpose machinery manufacturing.
33411A	Computer terminals and other computer peripheral equipment manufacturing.
334210	Telephone apparatus manufacturing.
334220	Broadcast and wireless communications equipment.
334290	Other communications equipment manufacturing.
334300	Audio and video equipment manufacturing.
334418	Printed circuit assembly (electronic assembly) manufacturing.
334613	Magnetic and optical recording media manufacturing.
335120	Lighting fixture manufacturing.
337110	Wood kitchen cabinet and countertop manufacturing.
337215	Showcase, partition, shelving, and locker manufacturing.
532400	Commercial and industrial machinery and equipment rental and leasing.

We believe technology-related expense are captured in the MEI and that the PPI for Machinery and Equipment is an appropriate price proxy to estimate price changes. However, we will actively monitor the data moving forward to ensure these types of expenses are adequately reflected in the MEI.

Finally, we would note that the descriptions of the methodologies used to construct the subcategories under Office Expenses were both detailed and consistent with those provided in the recent proposed rules relating to the rebasing of other CMS market baskets. However, in response to the comment we hope the additional information provided here is helpful.

Comment: One commenter found it most problematic that the CMS proposal related to Office Expenses would reduce the weight of rent within physician practice expenses. Currently, rent comprises 12.2 percent of the practice expense GPCI. Under the proposed rule, rent would be reduced to 8.4 percent. The commenter also noted that their attempt to validate the proposal, using BEA 2002 Benchmark I/O use files for NAICS 621A00 as described in the proposed rule were not successful.

Response: We proposed to disaggregate the Office Expense cost weight in the 2006-based MEI in order to recognize and take advantage of the expansion of the AMA PPIS survey question to include additional expenses not included in the 2000-based survey. Consistent with the methodology used for other CMS market baskets, we relied upon the BEA I/O data to disaggregate the Office Expense cost category, which we described in the proposed rule. This methodology required a series of calculations including classifying costs as office expenses consistent with AMA PPIS survey. As noted elsewhere, and based on public comment, we have refined our methodology, as well as added additional detail in this final rule which we believe will be helpful in validating our estimates. The new methodology has resulted in a cost weight of 8.957 percent for Fixed Capital. Comments related to weights specifically associated with the PE GPCIs are found in section II.D. of this final rule with comment period.

Comment: A commenter stated that it appeared that utility costs have been included twice in the MEI calculation. The HUD data used by CMS as a source for the rent data includes utilities. However, utilities have been included a second time as a new component of the "Office Expense" category of "Other Practice Expenses" and it does not appear that the "Fixed Capital" (rent) component has been scaled down as a result. This error should be corrected, a new proposed rule published, and a new comment period opened.

Response: We disagree with the commenter's assertions that utilities expenses in the MEI are double counted. The Utilities cost weight in the MEI was derived using the BEA I/O data for NAICS 621A (Offices of Physicians, Offices of Dentist, and Offices of Other Practitioners). The BEA I/O data provide information regarding physicians' purchases from other industries. Expenses classified in the Utilities cost weight, such as NAICS 22110 (Electric power generation, transmission, and distribution), were not included in the Fixed Capital cost weight; therefore, we did not include utility costs twice in the MEI calculation. The HUD data referenced by the commenter is used in conjunction with the GPCI rent update and is independent of the development of the cost weight for Utilities in the MEI.

d. Purpose of the MEI

Comment: Several commenters requested that CMS address the problem that the "market basket" of inputs, whose prices are measured in the MEI, is outdated and, despite periodic rebasing, has not been comprehensively revised since it was originally developed in 1973. They indicated that the MEI does not reflect the inputs involved in 21st century medical practice and claim that the costs associated with complying with an array of government-imposed regulatory requirements, including increasing staffing levels, costs related to Medicare prescription drug plans and formulary compliance, compliance with rules governing referrals and interactions with other providers, and others, are not accounted for in the index. They also indicate that the MEI has not been adjusted for modern practice costs such as computers, copiers, and new medical technology.

Response: We disagree with the commenters' statement that the MEI only measures changes in specific types of practice costs that existed in 1973. Since 1973, the MEI has been rebased four times. For each of those updates, the MEI methodology and data sources were thoroughly reviewed and evaluated to ensure that the index accurately reflected the cost distributions encountered by physicians. The revisions have included changes to the structure of the index, the price proxies used, the data sources used to develop the weights, the productivity adjustment, and, as proposed in the CY 2011 PFS proposed rule, disaggregating categories within the Office Expenses category into more detail.

We also note that the MEI is a price index, not a cost index. Changes in physician costs are a function of changes in prices and changes in quantities. Examples of changes in quantities include purchasing more moveable equipment (such as health information technology), hiring additional office staff, or changing the mix of staff. The MEI was established in accordance with section 1842(b)(3) of the Act, which states the growth of prevailing charge levels is to be limited to growth in an "appropriate economic index". The relevant Senate Finance Committee report [2] provides slightly more detail on such an index, stating that:

> [I]t is necessary to move in the direction of an approach to reasonable charge reimbursement that ties recognition of fee increases to appropriate economic indexes so that the program will not merely recognize whatever increases in charges are established in a locality but would limit recognition of charge increases to rates that economic data indicate would be fair to all concerned and follow rather than lead any inflationary trends.

Thus, in accordance with Congressional intent that the index reflect and follow inflationary trends, and since its inception in 1973, the MEI has been constructed as a fixed-weight price index that measures the inflationary trends of goods and services associated with furnishing physicians' services. The data sources that are used to construct the weights have been updated regularly to include the modern inputs required by physicians in running their respective practices. The MEI then appropriately apportions the various costs into their respective categories and calculates the associated weights. It is this distribution of costs, and not the level of costs, that the MEI appropriately incorporates. Based on this distribution, the MEI measures the weighted input price inflation, adjusted by productivity, faced by physicians. The MEI is then incorporated into the SGR formula to derive the final PFS update. Having an accurate and contemporary distribution of input costs is critical to producing an accurate measure of price inflation and is the major reason we are moving forward to rebase and revise the MEI for CY 2011.

Finally, to date, we have not received any proposals from the public on how the MEI should be revised and still meet

[2] U.S. Senate, Committee on Finance, *Social Security Amendments of 1972."*Report of the Committee on Finance United States Senate to Accompany H.R. 1," September 26, 1972, p. 190.

its statutory requirements. We will continue to evaluate the validity and relevance of the index to ensure that it meets statutory requirements while adequately reflecting the evolution of the expense distribution associated with furnishing physicians' services.

Comment: A commenter asserted that the time gap between the two surveys, the PPIS and the SMS, may not be directly comparable, but a comparison of the two indicates that medical practice costs increased 79 percent from 2000 to 2006. However, the MEI only increased 18 percent from 2000 to 2006. The commenter notes that every other available measure of physician expense growth shows faster growth than the MEI.

Response: The MEI is strictly a fixed-weight price index expressly designed to measure the change in price of a fixed basket of goods. Changes in physician costs are a function of changes in prices and changes in quantities. As other commenters have noted to CMS, and CMS agrees, cost increases are only reflected in the MEI's weights to the extent the relative cost of an input changes over time. Comparing the MEI (reflecting price changes) to other cost metrics (that reflect both price changes, as well as changes in volume and mix) is inappropriate given the MEI's definition and purpose.

Comment: A commenter noted that the proposed revisions to the MEI do not do anything to improve the adequacy of the MEI. The commenter also noted that in the proposed rule, CMS estimated the 2011 MEI at just 0.3 percent, and the addition of the new components that CMS has proposed based on BEA data does nothing to increase it.

Response: The rebased and revised MEI is intended to more accurately reflect the cost structure of furnishing physicians' services, as well as measure the input price inflation encountered by physicians. Accordingly, we disagree with the commenter and believe that the 2006-based MEI offers numerous technical improvements. These improvements include updating the base year to reflect more current cost distributions, updating price proxies, and adding more detailed cost categories.

Comment: A commenter stated that the MEI is used to annually update medical practice costs in the SGR calculation. Virtually all physician groups signed on to a January 2009 letter arguing that the MEI's price inputs as currently structured do not accurately reflect current medical practice costs. No action has been taken to remedy the situation.

Response: We disagree with the commenter's claim the MEI annually updates the medical practice cost in the SGR. The purpose of the MEI in the SGR is to measure price increases related to the furnishing of physician services. It is not intended to measure cost increases, but rather to reflect the cost structure associated with furnishing physicians' services, and then subsequently measure the weighted price increases associated with that cost structure. We would also like to note that the MEI is currently part of the statutorily prescribed formula for physician payment updates and that revisions to the MEI are adopted through the notice and comment rulemaking process.

e. Technical Panel

Comment: Many commenters expressed their support for the convening of a Medicare Economic Index Technical Advisory Panel (MEI TAP).

Response: We agree that the MEI TAP should be convened and will be moving forward accordingly. This process includes announcing the panel's creation through an official CMS communication such as a **Federal Register** announcement. This announcement will provide details on the expected number of panel members, provide an opportunity for the public to nominate members, and inform the public of the objectives and scope of the panel's activities.

We will be asking this group of independent experts to evaluate only technical aspects of the MEI, including the index's inputs, input weights, price-measurement proxies, and the productivity adjustment.

Any formal recommendations made by the MEI TAP will be carefully considered by CMS. Suggested modifications that we believe would result in technical improvements to the MEI would appear in subsequent PFS proposed rules and be subject to public comment and the overall rulemaking process.

Comment: Several commenters provided many suggestions on technical issues that they believe should be considered by the technical advisory panel. The commenters generally requested that the panel perform a thorough review of all aspects and elements of the MEI.

Response: We appreciate the constructive comments on potential topics for the MEI technical advisory panel, which will be asked to fully evaluate the index. As noted above, the panel will be evaluating all technical aspects of the MEI including the cost categories, their associated weights and price proxies, and the productivity adjustment.

Comment: A commenter stated that any recommendations that are made by the panel should be published with an opportunity for comment before they are finalized.

Response: Any substantive recommendations from the technical advisory panel that CMS believes will result in technical improvements to the MEI will be subject to the rulemaking process, including giving the opportunity to the public to review and comment.

Comment: Some commenters request that CMS reach out to the medical community to ensure that the panel's work is accurate and complete. Others indicated that pending the recommendations of the technical advisory panel, CMS should: (1) Include physicians and other stakeholders in the MEI revision process, so that the impact of any recommended changes can be studied prior to implementation; and (2) clearly state their rationale for proposed changes.

Response: As mentioned previously, we will be reaching out to the public for suggestions as to the composition of an independent expert panel that will assist us in ensuring that the MEI is constructed accurately and completely, and fulfills its purpose to appropriately reflect the inflationary pressures faced by physicians in furnishing services. CMS will also present to the public any future proposed revisions to the MEI through notice and comment rulemaking, during which we will clearly state the rationale for any proposed changes and consider public comment before finalizing changes to the index.

Comment: One commenter believes that one of the possible options for resolving the SGR problem involves replacing the SGR update formula with the MEI. The commenter noted that input from the MEI technical panel should better position the MEI as a viable alternative to the SGR update formula.

Response: We welcome any technical comments the public has on the composition of the MEI, including the inputs, input weights, price-measurement proxies, and productivity adjustment. Any recommendations from the MEI TAP will be evaluated and considered for possible future rulemaking. However, we note that replacement of, or adjustments to, the SGR is outside the scope of the MEI TAP.

f. Other

Comment: Several commenters agreed with CMS' proposal to remove pharmaceuticals and separately billable medical supplies, since these are not paid under the PFS. Even though this change lessens the weight given to the practice expense component of the index, it made sense to the commenters given the separate line-item payments for these goods. Further, incident-to drugs are now paid based on average sales price (ASP) and, since last-year's changes, are no longer a factor in the SGR formula and the determination of the PFS conversion factor.

Response: We agree with the commenters on the appropriateness of removing drugs and separately billable supplies from the MEI since they are not paid under the PFS and are no longer included as costs in the SGR formula.

Comment: A commenter disagreed with the continued use of the AHE wage data for the total nonfarm business economy as a price proxy for physician income rather than using BLS data specific to all professional and technical workers.

Response: We disagree with the commenter's suggestion. We believe that the use of the average hourly earnings data for the total nonfarm business economy, which captures skill mix shifts in the labor force, is the most appropriate index for use as the price proxy for physician income in the MEI. The AHE for the nonfarm business economy reflects general earnings including the impacts of supply, demand, and economy-wide productivity for the average worker in the economy. Its use is consistent with the Congress's original intent that the index be based on changes in expenses of practice and general earnings levels.[3] It is also consistent with our use of the BLS private nonfarm business multifactor productivity measure to adjust the index as economy-wide wage increases reflect economy-wide productivity increases. Therefore, we are finalizing our proposal to continue to use average hourly earnings for the total private nonfarm economy as a price proxy for physician income in the 2006-based MEI.

Comment: A commenter stated that although CMS has expanded the designation of the data underlying some of the GPCI and MEI constructs over the designations of previous years, the descriptions used are sometimes either inconsistent or contradictory. For example, CMS noted that "for the proposed sixth GPCI update, we used the 2006 through 2008 Bureau of Labor Statistics (BLS) Occupational Employment Statistics (OES) data as a replacement for the 2000 Census data." (75 FR 40083). In contrast, CMS used "2006 Occupational Employment Statistics (OES), BLS" for the proposed 2006 MEI expense weights. (75 FR 40089, note (2)). The commenter believes it is impossible to discern from the proposed rule whether inconsistent data sets were used or whether there is simply a misprint.

Response: Because the MEI and GPCIs serve different purposes and are not interdependent, we may use data from different years and, in some instances, different sources. Both the MEI and the GPCI use the OES. However, because the MEI is based to 2006 it is appropriate to use the 2006 BLS Occupational Employment Statistics data to disaggregate the nonphysician wages cost weight into more detailed occupational cost weights.

For the proposed sixth GPCI update, CMS proposed to use OES data for 2006 through 2008. The rationale for choosing this data for the proposed GPCI update was provided in the CY 2011 PFS proposed rule (75 FR 40084).

8. Adjustments to the RVU Shares To Match the Proposed Rebased MEI Weights

As described in the previous section, CMS proposed to rebase the MEI for CY 2011 based on the most current data and establish new weights for physician work, PE, and malpractice under the MEI. As stated in the previous section, the MEI was rebased to a CY 1996 base year beginning with the CY 1999 MEI (63 FR 58845), and to a CY 2000 base year beginning with the CY 2004 MEI (68 FR 63239). For both the CY 1999 and CY 2004 rebasing, we made adjustments to ensure that estimates of aggregate PFS payments for work, PE, and malpractice were in proportion to the weights for these categories in the rebased MEI (63 FR 58829 and 69 FR 1095).

Consistent with past practice when the MEI has been rebased, we proposed to make adjustments to ensure that estimates of aggregate CY 2011 PFS payments for work, PE, and malpractice are in proportion to the weights for these categories in the rebased CY 2011 MEI.

As explained in the CY 2011 PFS proposed rule (75 FR 40095), to match the proportions for work, PE, and malpractice in the rebased CY 2011 MEI would necessitate increasing the proportion of aggregate CY 2011 PFS payments for PE and malpractice and decreasing the proportion for work. This could be accomplished by applying adjustments directly to the work, PE, and malpractice RVUs. However, as stated in the proposed rule (75 FR 40095), we are cognizant of the public comments made during prior rulemaking on issues related to scaling the work RVUs. Many commenters have indicated a preference for the work RVUs to remain stable over time and for any necessary adjustments that would otherwise be made broadly to the work RVUs to be accomplished in an alternative manner. For example, in past 5-Year Reviews of the work RVUs, many commenters cited stability in the work RVUs, among other reasons, in their requests that any required budget neutrality adjustments not be made directly to the work RVUs. Given these prior comments, for CY 2011, we proposed to make the necessary MEI rebasing adjustments without adjusting the work RVUs. Instead, we proposed to increase the PE RVUs and the malpractice RVUs. Furthermore, as noted in the proposed rule (75 FR 40096), section 1848(c)(2)(B)(ii)(II) of the Act requires that changes to RVUs cannot cause the amount of expenditures for a year to differ by more than $20 million from what expenditures would have been in the absence of the changes. Therefore, as required by section 1848(c)(2)(B)(ii) of the Act, we proposed to make an adjustment to the CY 2011 conversion factor to ensure that the adjustments to the PE RVUs and the malpractice RVUs would not cause an increase in CY 2011 PFS expenditures.

Comment: A number of commenters expressed support for the use of the most current and accurate data as inputs to "formulas used by the Agency, whether the formula for the SGR, for practice expense inputs, malpractice expense inputs, or in this case to calculating the Medicare Economic Index." These commenters supported the proposal to rebase and revise the MEI using the AMA PPIS data and the corresponding adjustments to the work, PE, and MP RVUs. Some commenters noted particularly that since the AMA PPIS has been deemed appropriate for the purpose of the PE RVU update process begun in CY 2010, using this same data source to inform the MEI costs and weights in CY 2011 is also appropriate because it will ensure that all of the major cost-based components of the fee schedule methodology will now be tied to cost data collected in the same year (2006). Furthermore, a number of commenters supported the

[3] U.S. Senate, Committee on Finance, *Social Security Amendments of 1972,* "Report of the Committee on Finance United States Senate to Accompany H.R. 1," September 26, 1972, p. 191.

proposed policy to adjust the RVU shares on the basis that the changes appear to have a modest positive impact on many of the services that were negatively affected by the implementation of the AMA PPIS data in CY 2010. These services were typically ones that are more heavily weighted to PE than work. In contrast, numerous commenters expressed dissatisfaction with the proposed policy on the premise that it "penalizes health care work that is not technology-intensive," that is, services that are typically more heavily weighted to physician work than PE, "when in fact it is the technology-intensive health expenses that are actually driving up costs." A few of these commenters suggested that CMS insulate certain services that are work-intensive from the effects of the MEI rebasing.

Response: We believe that using the most current and accurate data whenever practicable to update the PFS is a key principle for the payment system. We agree with the commenters that using the AMA PPIS data to rebase and revise the MEI in CY 2011 promotes consistency within the PFS. In using the AMA PPIS information to rebase and revise the MEI, the result is that the most current data drive the work RVU share down compared to the PE RVU and malpractice RVU shares. Since the PFS is both resource-based, relative, and budget neutral, if the data show that physicians' resources (that is, costs) have shifted proportionately more to PE and malpractice, the proportion for work must come down. We have tried to accommodate the preferences of previous commenters to preserve the stability of work RVUs by proposing to make the necessary MEI rebasing adjustments without adjusting the work RVUs. However, given the PFS budget neutrality requirement, we cannot implement some commenters' suggestion to insulate certain services that are work-intensive from the effects of the MEI rebasing without violating the inherent relativity of the system. That is, in order to insulate certain services from the effects of the MEI rebasing while adjusting the RVU shares to match the proportions for work, PE, and malpractice in the rebased MEI in a budget neutral manner as discussed previously, the individual work RVUs for those certain services would need to be increased. However, if we were to increase the work RVUs for those certain services, the services would no longer be appropriately valued relative to the other services under the PFS.

Comment: Of the many commenters who supported CMS' proposal to adjust the RVU shares to match the proportions for work, PE, and malpractice in the rebased CY 2011 MEI, the vast majority also favored adjusting the RVU shares upward for PE and malpractice while making a corresponding adjustment to the conversion factor for budget neutrality without modifying the RVUs for work. These commenters stated that stability in the work RVUs was desirable. However, some commenters also expressed concern that CMS proposed an additional downward adjustment to the conversion factor when, under current law, the effect of the SGR update formula in December of 2010 and CY 2011 would reduce PFS payments significantly. These commenters generally opposed the MEI rebasing and the adjustment to the RVUs to match the MEI weights; however, if CMS were to proceed with the policy, the commenters suggested that, at the very least the adjustments be phased in over 2 or 4 years. A few commenters suggested replacing the SGR update formula entirely with the MEI.

Response: We are sympathetic to the commenters' concern that an additional downward adjustment to the conversion factor on top of the negative effect of the statutory SGR-based update is inopportune. However, as we explained in the proposed rule (75 FR 40095) and discussed previously in this section, rather than applying adjustments directly to the work, PE, and malpractice RVUs in order to match the rebased MEI weights for those categories, we believe that it is appropriate for the work RVUs to remain stable over time. The only way we can make the adjustments without affecting the work RVUs is to also make an adjustment to the conversion factor. We note that we did not receive a public comment suggesting that we make the downward adjustment to the work RVUs instead of the conversion factor in order to meet the requirements of section 1848(c)(2)(B)(ii) of the Act for budget neutrality. In response to the commenters that suggested replacing the SGR update with the MEI, we assume the commenters are making a general suggestion for a change in the current law, which is outside the purview of CMS.

Comment: Many commenters addressed CMS' proposal to convene a technical advisory panel to review all aspects of the MEI. In light of this proposal, the majority of commenters urged CMS to delay implementation of the MEI rebasing and any other MEI changes, including the proposed adjustment to the RVU shares, until the advice of the technical advisory panel is reviewed by CMS and recommendations for change, if any, are considered. Additionally, while the commenters generally supported convening an MEI technical advisory panel, some commenters, including MedPAC, advised that CMS should go ahead and implement the rebased and revised MEI and the proposed adjustment to the RVU shares in CY 2011. These commenters noted that if the recommendations of the advisory panel indicated that the MEI should be adjusted, CMS could propose future changes accordingly.

Response: We acknowledge the overwhelming support from commenters for the MEI technical advisory panel and refer readers to section II.E.6 of this final rule with comment period for a more detailed discussion of our plans to convene the panel. We note that a more detailed summary of the public comments and our responses is included in that section.

After consideration of the public comments we received, we are finalizing our CY 2011 proposal to make MEI rebasing adjustments to the PFS work and PE RVUs and to adjust the conversion factor to maintain budget neutrality. In light of the substantial support in general for us to make adjustments to match the proportions of the work, PE, and malpractice RVU shares to the categories in the revised and rebased CY 2011 MEI and our decision, as described in section II.E.5 of this final rule, to proceed with rebasing the MEI for CY 2011, we are finalizing our proposal to adjust the RVU shares for CY 2011 to align the RVU shares with the rebased MEI weights. Specifically, we will not be making an adjustment directly to the work RVUs. Instead, we are increasing the PE RVUs by an adjustment factor of 1.181 and the malpractice RVUs by an adjustment factor of 1.358. The RVUs in Addendum B to this final rule with comment period reflect the application of these adjustment factors. We note that an application of the 1.358 adjustment factor to the malpractice RVUs for services with malpractice RVUs of 0.01 will, due to rounding, result in malpractice RVUs of 0.01.

Furthermore, section 1848(c)(2)(B)(ii)(II) of the Act requires that changes to RVUs cannot cause the amount of expenditures for a year to differ by more than $20 million from what expenditures would have been in the absence of the changes. Therefore, as required by section 1848(c)(2)(B)(ii) of the Act, we are making an adjustment of 0.9181 to the CY 2011 conversion factor to ensure that the 1.181 adjustment to the PE RVUs and the 1.358 adjustment

to the malpractice RVUs do not cause an increase in CY 2011 PFS expenditures.

F. Allowed Expenditures for Physicians' Services and the Sustainable Growth Rate

1. Medicare Sustainable Growth Rate (SGR)

The SGR is an annual growth rate that applies to physicians' services paid by Medicare. The use of the SGR is intended to control growth in aggregate Medicare expenditures for physicians' services. Payments for services are not withheld if the percentage increase in actual expenditures exceeds the SGR. Rather, the PFS update, as specified in section 1848(d)(4) of the Act, is adjusted based on a comparison of allowed expenditures (determined using the SGR) and actual expenditures. If actual expenditures exceed allowed expenditures, the update is reduced. If actual expenditures are less than allowed expenditures, the update is increased.

Section 1848(f)(2) of the Act specifies that the SGR for a year (beginning with CY 2001) is equal to the product of the following four factors:

(1) The estimated change in fees for physicians' services;

(2) The estimated change in the average number of Medicare fee-for-service beneficiaries;

(3) The estimated projected growth in real GDP per capita; and

(4) The estimated change in expenditures due to changes in statute or regulations.

In general, section 1848(f)(3) of the Act requires us to publish SGRs for 3 different time periods, no later than November 1 of each year, using the best data available as of September 1 of each year. Under section 1848(f)(3)(C)(i) of the Act, the SGR is estimated and subsequently revised twice (beginning with the FY and CY 2000 SGRs) based on later data. (The Act also provides for adjustments to be made to the SGRs for FY 1998 and FY 1999. *See* the February 28, 2003 **Federal Register** (68 FR 9567) for a discussion of these SGRs.) Under section 1848(f)(3)(C)(ii) of the Act, there are no further revisions to the SGR once it has been estimated and subsequently revised in each of the 2 years following the preliminary estimate. In this final rule with comment, we are making our preliminary estimate of the CY 2011 SGR, a revision to the CY 2010 SGR, and our final revision to the CY 2009 SGR.

2. Physicians' Services

Section 1848(f)(4)(A) of the Act defines the scope of physicians' services covered by the SGR. The statute indicates that "the term physicians' services includes other items and services (such as clinical diagnostic laboratory tests and radiology services), specified by the Secretary, that are commonly performed or furnished by a physician or in a physician's office, but does not include services furnished to a Medicare+Choice plan enrollee."

We published a definition of physicians' services for use in the SGR in the November 1, 2001 **Federal Register** (66 FR 55316). We defined physicians' services to include many of the medical and other health services listed in section 1861(s) of the Act. As discussed in the CY 2010 PFS final rule with comment period (74 FR 61961), the statute provides the Secretary with clear discretion to decide whether physician-administered drugs should be included or excluded from the definition of "physicians' services." Accordingly, we removed physician-administered drugs from the definition of "physicians' services" in section 1848(f)(4)(A) of the Act for purposes of computing the SGR and the levels of allowed expenditures and actual expenditures beginning with CY 2010, and for all subsequent years. Furthermore, in order to effectuate fully the Secretary's policy decision to remove drugs from the definition of "physicians' services," we removed physician-administered drugs from the calculation of allowed and actual expenditures for all prior years.

Additionally, payment was made under the PFS for several new benefit categories in CY 2010 including pulmonary rehabilitation (PR), cardiac rehabilitation (CR), intensive cardiac rehabilitation (ICR), and kidney disease education (KDE) services. We note further that section 101 of the MIPPA added a new benefit category for "additional preventive services" effective January 1, 2009. Although we neglected to identify and add these additional benefit categories when describing the scope of physicians' services for purposes of the SGR in course of rulemaking for CY 2010 and CY 2009, respectively, we did include payments for these services in calculating target and actual PFS expenditures beginning in CY 2009 for additional preventive services and beginning in CY 2010 for PR, CR, ICR, and KDE services.

Section 4103 of the ACA added a new benefit category for "personalized prevention plan services" (which include the annual wellness visit). Payment for these services will be made under the PFS, and payments for these services will be included in calculating target and actual PFS expenditures, beginning January 1, 2011.

Thus, for purposes of determining allowed expenditures, actual expenditures for all years, and SGRs beginning with CY 2010 and for all subsequent years, we are specifying that physicians' services include the following medical and other health services if bills for the items and services are processed and paid by Medicare carriers (and those paid through intermediaries where specified) or the equivalent services processed by the Medicare Administrative Contractors (MACs):

- Physicians' services.
- Services and supplies furnished incident to physicians' services, except for the expenditures for drugs and biologicals which are not usually self-administered by the patient.
- Outpatient physical therapy services and outpatient occupational therapy services.
- Services of PAs, certified registered nurse anesthetists, certified nurse midwives, clinical psychologists, clinical social workers, NPs, and certified nurse specialists.
- Screening tests for prostate cancer, colorectal cancer, and glaucoma.
- Screening mammography, screening pap smears, and screening pelvic exams.
- Diabetes outpatient self-management training (DSMT) services.
- MNT services.
- Diagnostic x-ray tests, diagnostic laboratory tests, and other diagnostic tests (including outpatient diagnostic laboratory tests paid through intermediaries).
- X-ray, radium, and radioactive isotope therapy.
- Surgical dressings, splints, casts, and other devices used for the reduction of fractures and dislocations.
- Bone mass measurements.
- An initial preventive physical exam.
- Cardiovascular screening blood tests.
- Diabetes screening tests.
- Telehealth services.
- Physician work and resources to establish and document the need for a power mobility device.
- Additional preventive services.
- Pulmonary rehabilitation.
- Cardiac rehabilitation.
- Intensive cardiac rehabilitation.
- Kidney disease education services.
- Personalized prevention plan services.

3. Preliminary Estimate of the SGR for 2011

Our preliminary estimate of the CY 2011 SGR is -13.4 percent. We first estimated the CY 2011 SGR in March

2010, and we made the estimate available to the MedPAC and on our Web site. Table 35 shows the March 2010 estimate and our current estimates of the factors included in the CY 2011 SGR. The majority of the difference between the March estimate and our current estimate of the CY 2011 SGR is explained by adjustments to reflect several intervening legislative changes that occurred after our March estimate was prepared.

TABLE 35—CY 2011 SGR CALCULATION

Statutory factors	March estimate	Current estimate
Fees	0.2 percent (1.002)	0.2 percent (1.002)
Enrollment	3.1 percent (1.031)	2.4 percent (1.024)
Real Per Capita GDP	0.8 percent (1.008)	0.7 percent (1.007)
Law and Regulation	−4.4 percent (0.956)	−16.2 percent (0.838)
Total	−0.4 percent (0.996)	−13.4 percent (0.866)

Note: Consistent with section 1848(f)(2) of the Act, the statutory factors are multiplied, not added, to produce the total (that is, 1.002 × 1.024 × 1.007 × 0.838 = 0.866). A more detailed explanation of each figure is provided in section II.F.6.a. of this final rule with comment period.

4. Revised Sustainable Growth Rate for CY 2010

Our current estimate of the CY 2010 SGR is 8.3 percent. Table 36 shows our preliminary estimate of the CY 2010 SGR that was published in the CY 2010 PFS final rule with comment period (74 FR 61965) and our current estimate. The majority of the difference between the preliminary estimate and our current estimate of the CY 2010 SGR is explained by adjustments to reflect several intervening legislative changes that have occurred since publication of the CY 2010 final rule with comment period.

TABLE 36—CY 2010 SGR CALCULATION

Statutory factors	Estimate from CY 2010 final rule	Current estimate
Fees	0.9 percent (1.009)	0.9 percent (1.009)
Enrollment	1.2 percent (1.012)	1.6 percent (1.016)
Real Per Capita GDP	0.7 percent (1.007)	0.7 percent (1.007)
Law and Regulation	−11.3 percent (0.887)	4.9 percent (1.049)
Total	−8.8 percent (0.912)	8.3 percent (1.083)

Note: A more detailed explanation of each figure is provided in section II.F.6.b. of this final rule with comment period.

5. Final Sustainable Growth Rate for CY 2009

The SGR for CY 2009 is 6.4 percent. Table 37 shows our preliminary estimate of the CY 2009 SGR from the CY 2009 PFS final rule with comment period (73 FR 69904), our revised estimate from the CY 2010 PFS final rule with comment period (74 FR 61966), and the final figures determined using the best available data as of September 1, 2010.

TABLE 37—CY 2009 SGR CALCULATION

Statutory factors	Estimate from CY 2009 final rule	Estimate from CY 2010 final rule	Final
Fees	2.1 percent (1.021)	1.8 percent (1.018)	1.8 percent (1.018)
Enrollment	−0.2 percent (0.998)	−0.8 percent (0.992)	−0.6 percent (0.994)
Real Per Capita GDP	1.2 percent (1.012)	0.9 percent (1.009)	1.0 percent (1.010)
Law and Regulation	4.2 percent (1.042)	4.1 percent (1.041)	4.1 percent (1.041)
Total	7.4 percent (1.074)	6.1 percent (1.061)	6.4 percent (1.064)

Note: A more detailed explanation of each figure is provided in section II.F.6.b. of this final rule with comment period.

6. Calculation of CYs 2011, 2010, and 2009 Sustainable Growth Rates

a. Detail on the CY 2011 SGR

All of the figures used to determine the CY 2011 SGR are estimates that will be revised based on subsequent data. Any differences between these estimates and the actual measurement of these figures will be included in future revisions of the SGR and allowed expenditures and incorporated into subsequent PFS updates.

(1) Factor 1—Changes in Fees for Physicians' Services (Before Applying Legislative Adjustments) for CY 2011

This factor is calculated as a weighted-average of the CY 2011 changes in fees for the different types of services included in the definition of physicians' services for the SGR. Medical and other health services paid using the PFS are estimated to account for approximately 89.4 percent of total allowed charges included in the SGR in CY 2011 and are updated using the MEI. The MEI for CY 2011 is 0.4 percent. Diagnostic laboratory tests are estimated to represent approximately 10.6 percent of Medicare allowed charges included in the SGR for CY 2011. Medicare payments for these tests are updated by the Consumer Price Index for Urban Areas (CPI–U), which is 1.1 percent for CY 2011. However, section 3401 of the ACA reduces the CPI–U update applied to clinical laboratory tests by a productivity adjustment, but does not allow this adjustment to cause the

update to be negative. The applicable productivity adjustment for CY 2011 is 1.2 percent. Adjusting the CPI–U update by the productivity adjustment results in a −0.1 percent (1.1 percent–1.2 percent) update for CY 2011. However, since section 3401 of the ACA does not allow the productivity adjustment to result in a negative CLFS update, the result is that the CLFS update for CY 2011 is 0.0 percent. Additionally, section 3401 of the ACA reduces the update applied to clinical laboratory tests by 1.75 percent for CYs 2011 through 2015. Therefore, for CY 2011, diagnostic laboratory tests will receive an update of −1.75 percent. Additionally, as discussed in the CY 2010 PFS final rule with comment period (74 FR 61961), we removed physician-administered drugs from the definition of "physicians' services" in section 1848(f)(4)(A) of the Act for purposes of computing the SGR and the levels of allowed expenditures and actual expenditures beginning with CY 2010, and for all subsequent years. Therefore, drugs represent 0.0 percent of Medicare allowed charges included in the SGR in CY 2011.

Table 38 shows the weighted-average of the MEI and laboratory price changes for CY 2010.

TABLE 38—WEIGHTED-AVERAGE OF THE MEI AND LABORATORY PRICE CHANGES FOR CY 2011

	Weight	Update
Physician	0.894	0.4
Laboratory	0.106	−1.8
Weighted-average	1.000	0.2

We estimate that the weighted-average increase in fees for physicians' services in CY 2011 under the SGR (before applying any legislative adjustments) will be 0.2 percent.

(2) Factor 2—The Percentage Change in the Average Number of Part B Enrollees From CY 2010 to CY 2011

This factor is our estimate of the percent change in the average number of fee-for-service enrollees from CY 2010 to CY 2011. Services provided to Medicare Advantage (MA) plan enrollees are outside the scope of the SGR and are excluded from this estimate. We estimate that the average number of Medicare Part B fee-for-service enrollees will increase by 2.4 percent from CY 2010 to CY 2011. Table 39 illustrates how this figure was determined.

TABLE 39—AVERAGE NUMBER OF MEDICARE PART B FEE-FOR-SERVICE ENROLLEES FROM CY 2010 TO CY 2011

[Excluding beneficiaries enrolled in MA plans]

	2010	2011
Overall	43.932 million	45.010 million
Medicare Advantage (MA)	11.683 million	11.998 million
Net	32.249 million	33.012 million
Percent Increase		2.4 percent

An important factor affecting fee-for-service enrollment is beneficiary enrollment in MA plans. Because it is difficult to estimate the size of the MA enrollee population before the start of a CY, at this time we do not know how actual enrollment in MA plans will compare to current estimates. For this reason, the estimate may change substantially as actual Medicare fee-for-service enrollment for CY 2011 becomes known.

(3) Factor 3—Estimated Real Gross Domestic Product Per Capita Growth in 2011

We estimate that the growth in real GDP per capita from CY 2010 to CY 2011 will be 0.7 percent (based on the 10-year average GDP over the 10 years of 2002 through 2011). Our past experience indicates that there have also been changes in estimates of real per capita GDP growth made before the year begins and the actual change in GDP computed after the year is complete. Thus, it is possible that this figure will change as actual information on economic performance becomes available to us in CY 2011.

(4) Factor 4—Percentage Change in Expenditures for Physicians' Services Resulting From Changes in Statute or Regulations in CY 2011 Compared With CY 2010

The statutory and regulatory provisions that will affect expenditures in CY 2011 relative to CY 2010 are estimated to have an impact on expenditures of −16.2 percent. These include the Department of Defense Appropriations Act (DODAA), the Temporary Extension Act (TEA), and the Preservation of Access to Care for Medicare Beneficiaries and Pension Relief Act (PACMBPRA) which provided for physician updates.

Furthermore, the ACA contained provisions regarding the policy on equipment utilization for imaging services, the multiple procedure payment reduction policy for imaging services, and the annual wellness visit providing personalized prevention plan services.

b. Detail on the CY 2010 SGR

A more detailed discussion of our revised estimates of the four elements of the CY 2010 SGR follows.

(1) Factor 1—Changes in Fees for Physicians' Services (Before Applying Legislative Adjustments) for CY 2010

This factor was calculated as a weighted-average of the CY 2010 changes in fees that apply for the different types of services included in the definition of physicians' services for the SGR in CY 2010.

We estimate that services paid using the PFS account for approximately 91.1 percent of total allowed charges included in the SGR in CY 2010. These services were updated using the CY 2010 MEI of 1.2 percent. We estimate that diagnostic laboratory tests represent approximately 8.9 percent of total allowed charges included in the SGR in CY 2010. Medicare payments for these tests are updated by the CPI–U, which is −1.4 percent for CY 2010. However, section 145 of the MIPPA, as modified

by section 3401 of the ACA, reduced the update applied to clinical laboratory tests by 0.5 percent for CY 2009 and CY 2010. Therefore, for CY 2010, diagnostic laboratory tests received an update of −1.9 percent. Since we removed physician-administered drugs from the definition of "physicians' services" for purposes of computing the SGR and the levels of allowed expenditures and actual expenditures beginning with CY 2010, and for all subsequent years, drugs represent 0.0 percent of Medicare allowed charges included in the SGR in CY 2010.

Table 40 shows the weighted-average of the MEI, laboratory, and drug price changes for CY 2010.

TABLE 40—WEIGHTED-AVERAGE OF THE MEI, LABORATORY, AND DRUG PRICE CHANGES FOR CY 2010

	Weight	Update
Physician	0.911	1.2
Laboratory	0.089	−1.9
Drugs	0.000	0.0
Weighted-average	1.000	0.9

After considering the elements described in Table 40, we estimate that the weighted-average increase in fees for physicians' services in CY 2010 under the SGR (before applying any legislative adjustments) will be 0.9 percent. Our estimate of this factor in the CY 2010 PFS final rule with comment period was 0.9 percent (74 FR 61966).

(2) Factor 2—The Percentage Change in the Average Number of Part B Enrollees From CY 2009 to CY 2010

We estimate that the average number of Medicare Part B fee-for-service enrollees (excluding beneficiaries enrolled in Medicare Advantage plans) increased by 1.6 percent in CY 2010. Table 41 illustrates how we determined this figure.

TABLE 41—AVERAGE NUMBER OF MEDICARE PART B FEE-FOR-SERVICE ENROLLEES FROM CY 2009 TO CY 2010

[Excluding beneficiaries enrolled in MA plans]

	2009	2010
Overall	42.846 million	43.932 million
Medicare Advantage (MA)	11.098 million	11.683 million
Net	31.748 million	32.249 million
Percent Increase		1.6 percent

Our estimate of the 1.6 percent change in the number of fee-for-service enrollees, net of Medicare Advantage enrollment for CY 2010 compared to CY 2009, is a larger change than our original estimate of 1.2 percent in the CY 2010 PFS final rule with comment period (74 FR 61967). While our current projection based on data from 8 months of CY 2010 differs from our original estimate of 1.2 percent when we had no actual data, it is still possible that our final estimate of this figure will be different once we have complete information on CY 2010 fee-for-service enrollment.

(3) Factor 3—Estimated Real Gross Domestic Product Per Capita Growth in CY 2010

We estimate that the growth in real GDP per capita will be 0.7 percent for CY 2010 (based on the 10-year average GDP over the 10 years of CY 2001 through CY 2010). Our past experience indicates that there have also been differences between our estimates of real per capita GDP growth made prior to the year's end and the actual change in this factor. Thus, it is possible that this figure will change further as complete actual information on CY 2010 economic performance becomes available to us in CY 2011.

(4) Factor 4—Percentage Change in Expenditures for Physicians' Services Resulting From Changes in Statute or Regulations in CY 2010 Compared With CY 2009

The statutory and regulatory provisions that will affect expenditures in CY 2010 relative to CY 2009 are estimated to have an impact on expenditures of 4.9 percent. These include the DODAA, TEA, and PACMBPRA which provided for physician updates. Also included are the MIPPA provisions regarding the physician update, Physician Quality Reporting Initiative (PQRI) and e-prescribing bonuses, the work GPCIs, and payment provisions related to certain pathology services. Additionally, the ACA contained provisions regarding the work GPCIs, the policy on equipment utilization for imaging services, coverage of preventive services, and a physician enrollment requirement.

c. Detail on the CY 2009 SGR

A more detailed discussion of our final revised estimates of the four elements of the CY 2009 SGR follows.

(1) Factor 1—Changes in Fees for Physicians' Services (Before Applying Legislative Adjustments) for CY 2009

This factor was calculated as a weighted-average of the CY 2009 changes in fees that apply for the different types of services included in the definition of physicians' services for the SGR in CY 2009. As we stated in the CY 2010 PFS final rule with comment period (74 FR 61965), although we removed drugs from the calculation of allowed and actual expenditures under sections 1848(d)(3)(C) and 1848(d)(4) of the Act retrospectively to the 1996/1997 base year, we determined that we were only authorized to remove drugs from the calculation of the SGR beginning with CY 2010. Therefore, we did not remove drugs from the SGR calculations for previous years, including CY 2009. Consistent with this determination, the revisions to our estimate of the CY 2009 SGR will be limited to revisions to reflect later data available as of September 1, 2010, that were not available when we published our previous estimates.

Services paid using the PFS accounted for approximately 82.3 percent of total Medicare-allowed charges included in the SGR for CY

2009 and are updated using the MEI. The MEI for CY 2009 was 1.6 percent. Diagnostic laboratory tests represented approximately 8.0 percent of total CY 2009 Medicare allowed charges included in the SGR and were updated by the CPI–U, which was 5.0 percent for CY 2009. However, section 145 of the MIPPA, as modified by section 3401 of the ACA, reduced the update applied to clinical laboratory tests by 0.5 percent for CYs 2009 and 2010. Therefore, for CY 2009, diagnostic laboratory tests received an update of 4.5 percent. Drugs represented approximately 9.7 percent of total Medicare-allowed charges included in the SGR for CY 2009. We estimate a weighted-average change in fees for drugs included in the SGR of 1.6 percent for CY 2009. Table 42 shows the weighted-average of the MEI, laboratory, and drug price changes for CY 2009.

TABLE 42—WEIGHTED-AVERAGE OF THE MEI, LABORATORY, AND DRUG PRICE CHANGES FOR CY 2009

	Weight	Update
Physician	0.823	1.6
Laboratory	0.080	4.5
Drugs	0.097	1.6
Weighted-average	1.000	1.8

After considering the elements described in Table 42, we estimate that the weighted-average increase in fees for physicians' services in CY 2009 under the SGR (before applying any legislative adjustments) was 1.8 percent. This figure is a final one based on complete data for CY 2009.

(2) Factor 2—The Percentage Change in the Average Number of Part B Enrollees From CY 2008 to CY 2009

We estimate the change in the number of fee-for-service enrollees (excluding beneficiaries enrolled in MA plans) from CY 2009 to CY 2010 was −0.6 percent. Our calculation of this factor is based on complete data from CY 2009. Table 43 illustrates the calculation of this factor.

TABLE 43—AVERAGE NUMBER OF MEDICARE PART B FROM CY 2008 TO CY 2009

[Excluding beneficiaries enrolled in MA plans]

	2008	2009
Overall	41.958 million	42.846 million
Medicare Advantage (MA)	10.008 million	11.098 million
Net	31.950 million	31.748 million
Percent Change		−0.6 percent

(3) Factor 3—Estimated Real Gross Domestic Product Per Capita Growth in CY 2009

We estimate that the growth in real per capita GDP was 1.0 percent in CY 2009 (based on the 10-year average GDP over the 10 years of CY 2000 through CY 2009). This figure is a final one based on complete data for CY 2009.

(4) Factor 4—Percentage Change in Expenditures for Physicians' Services Resulting From Changes in Statute or Regulations in CY 2009 Compared With CY 2008

Our final estimate for the net impact on expenditures from the statutory and regulatory provisions that affect expenditures in CY 2009 relative to CY 2008 is 4.1 percent. These include the DRA provision regarding payments for imaging services, the Medicare, Medicaid, and SCHIP Extension Act of 2007 (Pub. L. 110–173) (MMSEA) provision regarding the PQRI bonuses payable in CY 2009, and the MIPPA provisions regarding the physician update, mental health services, and the change in application of budget neutrality to the CF.

G. The Update Adjustment Factor (UAF)

Section 1848(d) of the Act provides that the PFS update is equal to the product of the MEI and the UAF. The UAF is applied to make actual and target expenditures (referred to in the statute as "allowed expenditures") equal. As discussed previously, allowed expenditures are equal to actual expenditures in a base period updated each year by the SGR. The SGR sets the annual rate of growth in allowed expenditures and is determined by a formula specified in section 1848(f) of the Act.

1. Calculation Under Current Law

Under section 1848(d)(4)(B) of the Act, the UAF for a year beginning with CY 2001 is equal to the sum of the following—

• *Prior Year Adjustment Component.* An amount determined by—

+ Computing the difference (which may be positive or negative) between the amount of the allowed expenditures for physicians' services for the prior year (the year prior to the year for which the update is being determined) and the amount of the actual expenditures for those services for that year;

+ Dividing that difference by the amount of the actual expenditures for those services for that year; and

+ Multiplying that quotient by 0.75.

• *Cumulative Adjustment Component.* An amount determined by—

+ Computing the difference (which may be positive or negative) between the amount of the allowed expenditures for physicians' services from April 1, 1996, through the end of the prior year and the amount of the actual expenditures for those services during that period;

+ Dividing that difference by actual expenditures for those services for the prior year as increased by the SGR for the year for which the UAF is to be determined; and

+ Multiplying that quotient by 0.33.

Section 1848(d)(4)(E) of the Act requires the Secretary to recalculate allowed expenditures consistent with section 1848(f)(3) of the Act. As discussed previously, section 1848(f)(3) specifies that the SGR (and, in turn, allowed expenditures) for the upcoming CY (CY 2011 in this case), the current

CY (that is, CY 2010) and the preceding CY (that is, CY 2009) are to be determined on the basis of the best data available as of September 1 of the current year. Allowed expenditures for a year generally are estimated initially and subsequently revised twice. The second revision occurs after the CY has ended (that is, we are making the second revision to CY 2009 allowed expenditures in this final rule with comment).

Table 44 shows the historical SGRs corresponding to each period through CY 2011.

TABLE 44—ANNUAL AND CUMULATIVE ALLOWED AND ACTUAL EXPENDITURES FOR PHYSICIANS' SERVICES FROM APRIL 1, 1996 THROUGH THE END OF THE CURRENT CALENDAR YEAR

Period	Annual allowed expenditures ($ in billions)	Annual actual expenditures ($ in billions)	Cumulative allowed expenditures ($ in billions)	Cumulative actual expenditures ($ in billions)	FY/CY SGR (%)
4/1/96–3/31/97	[1] $46.8	$46.8	$46.8	$46.8	N/A
4/1/97–3/31/98	48.3	47.0	95.2	93.9	FY 1998=3.2
4/1/98–3/31/99	50.4	47.8	145.6	141.7	FY 1999=4.2
1/1/99–3/31/99	12.7	12.4	[2]	141.7	FY 1999=4.2
4/1/99–12/31/99	40.3	37.0	[3]	178.8	FY 2000=6.9
1/1/99–12/31/99	53.0	49.5	185.8	178.8	FY 1999/2000
1/1/00–12/31/00	56.8	54.1	242.7	232.9	CY 2000=7.3
1/1/01–12/31/01	59.4	61.2	302.1	294.2	CY 2001=4.5
1/1/02–12/31/02	64.3	64.6	366.4	358.7	CY 2002=8.3
1/1/03–12/31/03	69.0	70.2	435.4	429.0	CY 2003=7.3
1/1/04–12/31/04	73.6	78.3	509.0	507.2	CY 2004=6.6
1/1/05–12/31/05	76.7	83.5	585.7	590.7	CY 2005=4.2
1/1/06–12/31/06	77.8	84.6	663.5	675.3	CY 2006=1.5
1/1/07–12/31/07	80.5	84.5	744.0	759.8	CY 2007=3.5
1/1/08–12/31/08	84.2	86.7	828.2	846.4	CY 2008=4.5
1/1/09–12/31/09	89.6	90.6	917.8	937.0	CY 2009=6.4
1/1/10–12/31/10	97.0	92.9	1,014.7	1,029.9	CY 2010=8.3
1/1/11–12/31/11	84.0	NA	1,098.7	NA	CY 2011=−13.4

[1] Allowed expenditures in the first year (April 1, 1996–March 31, 1997) are equal to actual expenditures. All subsequent figures are equal to quarterly allowed expenditure figures increased by the applicable SGR. Cumulative allowed expenditures are equal to the sum of annual allowed expenditures. We provide more detailed quarterly allowed and actual expenditure data on our Web site at the following address: *http://www.cms.hhs.gov/SustainableGRatesConFact/*. We expect to update the web site with the most current information later this month.
[2] Allowed expenditures for the first quarter of 1999 are based on the FY 1999 SGR.
[3] Allowed expenditures for the last three quarters of 1999 are based on the FY 2000 SGR.

Consistent with section 1848(d)(4)(E) of the Act, Table 44 includes our second revision of allowed expenditures for CY 2009, a recalculation of allowed expenditures for CY 2010, and our initial estimate of allowed expenditures for CY 2011. To determine the UAF for CY 2011, the statute requires that we use allowed and actual expenditures from April 1, 1996 through December 31, 2010 and the CY 2011 SGR. Consistent with section 1848(d)(4)(E) of the Act, we will be making revisions to the CY 2010 and CY 2011 SGRs and CY 2010 and CY 2011 allowed expenditures. Because we have incomplete actual expenditure data for CY 2010, we are using an estimate for this period. Any difference between current estimates and final figures will be taken into account in determining the UAF for future years.

We are using figures from Table 44 in the following statutory formula:

$$UAF_{11} = \frac{Target_{10} - Actual_{10}}{Actual_{10}} \times 0.75 + \frac{Target_{4/96-12/10} - Actual_{4/96-12/10}}{Actual_{10} \times SGR_{11}} \times 0.33$$

UAF_{11} = Update Adjustment Factor for CY 2011 = −2.9 percent

$Target_{10}$ = Allowed Expenditures for CY 2010 = $97.0 billion

$Actual_{10}$ = Estimated Actual Expenditures for CY 2010 = $92.9 billion

$Target_{4/96-12/10}$ = Allowed Expenditures from 4/1/1996–12/31/2010 = $1,014.7 billion

$Actual_{4/96-12/10}$ = Estimated Actual Expenditures from 4/1/1996–12/31/2010 = $1,029.9 billion

SGR_{11} = −13.4 percent (0.866)

$$\frac{\$97.0 - \$92.9}{\$92.9} \times 0.75 + \frac{\$1,014.7 - \$1,029.9}{\$92.9 \times 0.866} \times 0.33 = -2.9\%$$

Section 1848(d)(4)(D) of the Act indicates that the UAF determined under section 1848(d)(4)(B) of the Act for a year may not be less than –0.07 or greater than 0.03. Since –0.029 is between –0.07 and 0.03, the UAF for CY 2010 will be –0.029.

Section 1848(d)(4)(A)(ii) of the Act indicates that 1.0 should be added to the UAF determined under section 1848(d)(4)(B) of the Act. Thus, adding

1.0 to –0.029 makes the UAF equal to 0.971.

H. Physician and Anesthesia Fee Schedule Conversion Factors for CY 2011

The CY 2011 PFS CF is $25.5217. The CY 2011 national average anesthesia CF is $15.8085.

1. Physician Fee Schedule Update and Conversion Factor

a. CY 2011 PFS Update

The formula for calculating the PFS update is set forth in section 1848(d)(4)(A) of the Act. In general, the PFS update is determined by multiplying the CF for the previous year by the percentage increase in the MEI times the UAF, which is calculated as specified under section 1848(d)(4)(B) of the Act.

b. CY 2011 PFS Conversion Factor

Generally, the PFS CF for a year is calculated in accordance with section 1848(d)(1)(A) of the Act by multiplying the previous year's CF by the PFS update.

We note section 101 of the MIEA–TRHCA provided a 1-year increase in the CY 2008 CF and specified that the CF for CY 2009 must be computed as if the 1-year increase had never applied. Section 101 of the MMSEA provided a 6-month increase in the CY 2009 CF, from January 1, 2009, through June 30, 2009, and specified that the CF for the remaining portion of CY 2009 and the CFs for CY 2010 and subsequent years must be computed as if the 6-month increase had never applied. Section 131 of the MIPPA extended the increase in the CY 2009 CF that applied during the first half of the year to the entire year, provided for a 1.1 percent increase to the CY 2010 CF, and specified that the CFs for CY 2011 and subsequent years must be computed as if the increases for CYs 2008, 2009, and 2010 had never applied. Section 1011(a) of the DODAA and section 5 of the TEA specified a zero percent update for CY 2010, effective January 1, 2010 through May 31, 2010. Subsequently, section 101(a)(2) of the PACMBPRA provided for a 2.2 percent update to the CF, effective from June 1, 2010 to November 30, 2010. Therefore, under current law, the CF in effect in December 2010 is $28.3868.

In addition, when calculating the PFS CF for a year, section 1848(c)(2)(B)(ii)(II) of the Act requires that increases or decreases in RVUs may not cause the amount of expenditures for the year to differ more than $20 million from what it would have been in the absence of these changes. If this threshold is exceeded, we must make adjustments to preserve budget neutrality. We estimate that CY 2011 RVU changes would result in a decrease in Medicare physician expenditures of more than $20 million. Accordingly, we are increasing the CF by 1.0045 to offset this estimated decrease in Medicare physician expenditures due to the CY 2011 RVU changes. Furthermore, as discussed in section II.E.6 of this final rule with comment period, we are decreasing the CF by 0.9181 in order to offset the increase in Medicare physician payments due to the CY 2011 rescaling of the RVUs so that the proportions of total payments for the work, PE, and malpractice RVUs match the proportions in the final revised and rebased MEI for CY 2011. Accordingly, we calculate the CY 2011 PFS CF to be $25.5217. This final rule with comment period announces a reduction to payment rates for physicians' services in CY 2011 under the SGR formula. These payment rates are currently scheduled to be reduced under the SGR system on December 1, 2010, and then again on January 1, 2011. The total reduction in MPFS rates between November 2010 and January 2011 under the SGR system will be 24.9 percent. By law, we are required to make these reductions in accordance with section 1848(d) and (f) of the Act, and these reductions can only be averted by an Act of Congress. While Congress has provided temporary relief from these reductions every year since 2003, a long-term solution is critical. We are committed to permanently reforming the Medicare payment formula.

We illustrate the calculation of the CY 2011 PFS CF in Table 45.

TABLE 45—CALCULATION OF THE CY 2011 PFS CF

December 2010 Conversion Factor		$28.3868
CY 2011 Medicare Economic Index	0.4 percent (1.0040)	
CY 2011 Update Adjustment Factor	−2.9 percent (0.9710)	
CY 2011 RVU Budget Neutrality Adjustment	0.5 percent (1.0045)	
CY 2011 Rescaling to Match MEI Weights Budget Neutrality Adjustment	−8.2 percent (0.9181)	
CY 2011 Conversion Factor		$25.5217

We note payment for services under the PFS will be calculated as follows:

Payment = [(RVU work × GPCI work) + (RVU PE × GPCI PE) + (RVU malpractice × GPCI malpractice)] × CF.

2. Anesthesia Conversion Factor

We calculate the anesthesia CF as indicated in Table 45. Anesthesia services do not have RVUs like other PFS services. Therefore, we account for any necessary RVU adjustments through an adjustment to the anesthesia CF to simulate changes to RVUs. More specifically, if there is an adjustment to the work, PE, or malpractice RVUs, these adjustments are applied to the respective shares of the anesthesia CF as these shares are proxies for the work, PE, and malpractice RVUs for anesthesia services. Furthermore, as discussed in section II.E.6 of this final rule with comment period, we are rescaling the RVUs so that the proportions of total payments for the work, PE, and malpractice RVUs match the proportions in the final revised and rebased MEI for CY 2011. Accordingly, we are adjusting the anesthesia CF to reflect the RVUs adjustments being made to all other physician fee schedule services to match the revised and rebased MEI weights.

As explained previously, in order to calculate the CY 2011 PFS CF, the statute requires us to calculate the CFs for CYs 2009, 2010, and 2011 as if the various legislative changes to the CFs for those years had not occurred. Accordingly, under current law, the anesthesia CF in effect in December 2010 is $16.6058. We illustrate the calculation of the CY 2011 anesthesia CF in Table 46.

TABLE 46—CALCULATION OF THE CY 2011 ANESTHESIA CONVERSION FACTOR

December 2010 Anesthesia Conversion Factor		$16.6058
CY 2011 Medicare Economic Index	0.4 percent (1.0040)	

TABLE 46—CALCULATION OF THE CY 2011 ANESTHESIA CONVERSION FACTOR—Continued

CY 2011 Update Adjustment Factor	−2.9 percent (0.9710)	
CY 2011 Anesthesia Adjustment	−2.3 percent (0.97651)	
CY 2011 Anesthesia Conversion Factor		$15.8085

III. Code-Specific Issues for the PFS

A. Therapy Services

1. Outpatient Therapy Caps for CY 2011

Section 1833(g) of the Act applies an annual, per beneficiary combined cap on expenses incurred for outpatient physical therapy and speech-language pathology services under Medicare Part B. A similar separate cap for outpatient occupational therapy services under Medicare Part B also applies. The caps apply to expenses incurred for therapy services furnished in outpatient settings, other than in an outpatient hospital setting which is described under section 1833(a)(8)(B) of the Act. The caps were in effect during 1999, from September 1, 2003 through December 7, 2003, and continuously beginning January 1, 2006. The caps are a permanent provision, that is, there is no end date specified in the statute for therapy caps. Beginning January 1, 2006, the DRA provided for exceptions to the therapy caps until December 31, 2006. The exceptions process for therapy caps has been extended through December 31, 2009 pursuant to three subsequent amendments (in MEIA–TRHCA, MMSEA, and MIPPA).

Section 1833(g)(5) of the Act (as amended by section 3103 of the ACA) extended the exceptions process for therapy caps through December 31, 2010. The annual change in the therapy cap is computed by multiplying the cap amount for CY 2010, which is $1,860, by the MEI for CY 2011, and rounding to the nearest $10. This amount is added to the CY 2010 cap to obtain the CY 2011 cap. Since the MEI for CY 2011 is 0.4 percent, the therapy cap amount for CY 2011 is $1870.

The agency's authority to provide for exceptions to therapy caps (independent of the outpatient hospital exception) will expire on December 31, 2010, unless the Congress acts to extend it. If the current exceptions process expires, the caps will be applicable in accordance with the statute, except for services furnished and billed by outpatient hospital departments.

Comment: The commenters unanimously requested repeal of the therapy caps, while characterizing caps as arbitrary and medically unfounded and the combination of cap amounts for PT and SLP services as groundless. A number of commenters argued that therapy caps restrict provision of medically necessary services to beneficiaries. Several commenters reported that patients are discharged for care prior to recovery due to payment restrictions and this leads to increased medical costs for Medicare.

Response: Therapy caps are mandated by statute. We have no authority to repeal the caps, or to restructure the grouping of therapy disciplines to which the caps apply. However, we understand the concerns of the commenters, and we are actively exploring alternatives to therapy caps to inform the discussions about approaches to identify and pay for those therapy services that are necessary for patients to attain the best outcomes with the most efficient use of resources.

2. Alternatives to Therapy Caps

a. Background

In section 4541 of the Balanced Budget Act of 1997 (Pub. L. 105–33) (BBA), the Congress enacted the financial limitations on outpatient therapy services (the "therapy caps" discussed above for physical therapy, occupational therapy, and speech-language pathology). At the same time, the Congress requested that the Secretary submit a Report to Congress that included recommendations on the establishment of a revised coverage policy for outpatient physical therapy services and outpatient occupational therapy services under the statute. The Balanced Budget Refinement Act of 1999 (Pub. L. 106–113) (BBRA) placed the first of a series of moratoria on implementation of the limits. In addition, it required focused medical review of claims and revised the report requirements in section 4541(d)(2) of the BBA to request a report that included recommendations on the following: (A) The establishment of a mechanism for assuring appropriate utilization of outpatient physical therapy services, outpatient occupational therapy services, and speech-language pathology services; and (B) the establishment of an alternative payment policy for such services based on classification of individuals by diagnostic category, functional status, prior use of services (in both inpatient and outpatient settings), and such other criteria as the Secretary determines appropriate, in place of the limits. In 1999, therapy services were not defined, but services documented as therapy were billed and reported when furnished by a variety of individuals in many different settings. These services were not identified in a way that would allow analysis of utilization or development of alternative payment policies. Since that time, we have clarified the definition of therapy services and applied the qualifications of therapists consistently to outpatient settings, which have facilitated analysis of therapy services.

We have studied therapy services with the assistance of a number of contractors over the past 11 years. Reports of these projects are available on the CMS Web site at *http://www.cms.gov/TherapyServices/*. On November 9, 2004, we delivered the Report to Congress, Number 137953, "Medicare Financial Limitations on Outpatient Therapy Services" that referenced two utilization analyses. We periodically updated the utilization analyses and posted other contracted reports on the CMS web site in order to further respond to the requirements of the BBRA. Subsequent reports highlighted the expected effects of limiting services in various ways and presented plans to collect data about patient condition using available tools. The general belief was that if patient condition could be reliably described, that approach would ensure appropriate payment for appropriately utilized services.

Over the past decade, significant progress has been made in identifying the outpatient therapy services that are billed to Medicare, the demographics of the beneficiaries who utilize those services, the types of services, the HCPCS codes used to bill the services, the allowed and paid amounts of the services, and the settings, geographic locations, and provider or supplier types where services are furnished.

Some of the information that is necessary to ensure appropriate utilization and develop objective and equitable payment alternatives to therapy caps based on patient condition has proven difficult to develop. The influence of prior use of inpatient services on outpatient use of therapy services was not accessible due to systems issues and differences in the policies, billing, and reporting practices for inpatient and outpatient therapy

services. The weakness of the ICD–9–CM diagnostic codes in describing the condition of the rehabilitation patient obscured analyses of claims to assess the need for therapy services. The primary diagnosis on the claim is a poor predictor for the type and duration of therapy services required, which complicates assignment of patient cohorts for analysis. Although changes to the guidance in the Medicare Benefit Policy Manual (Pub. 100–02) on documentation of therapy services in 2005 improved the consistency of records and facilitated chart review, it became increasingly obvious that neither claims analysis nor chart review could serve as a reliable and valid method to determine a patient's need for services or to form the basis for equitable payment. We concluded that in order to develop alternative payment approaches to the therapy caps, we needed a method to identify patients with similar risk-adjusted conditions (cohorts) and then we would identify the therapy services that are necessary for the patients to attain the best outcomes with the most efficient use of resources.

While we studied therapy utilization, a number of proprietary tools were developed by researchers in the professional community to assess the outcomes of therapy. Some tool sponsors collected sufficient information to predict with good reliability the amount or length of treatment that would result in the best expected outcomes. We encouraged the use of these proprietary tools in manual instructions, but proprietary tools do not serve our purposes because modification of proprietary tools may only be done by the tool sponsor. There now are some versions of the tools in the public domain and they are being utilized widely to identify patient conditions and, by some insurers, to pay for efficient and effective treatment. Examples of such tools include the National Outcomes Measurement System (NOMS) by the American Speech-Language Hearing Association and Patient Inquiry by Focus On Therapeutic Outcomes, Inc. (FOTO).

In 2006, Focus on Therapeutic Outcomes, Inc. delivered to CMS a report titled, "Pay for Performance for Physical Therapy and Occupational Therapy," which is also available on the CMS Web site at *http://www.cms.gov/TherapyServices*. The purpose of this project was to simulate a pay-for-performance implementation, designed to align financial incentives with the achievement of better clinical outcomes from services that were delivered efficiently. The project, funded by HHS/CMS Grant 18–P–93066/9–01, demonstrated the predictive validity of the risk-adjusted pay-for-performance model and the feasibility of reducing payments without affecting services to beneficiaries who need them.

b. Current Activities

The Tax Relief and Health Care Act of 2006 (TRHCA) extended the therapy cap exceptions process through December 31, 2007 and provided funds used for two CMS projects related to developing alternative payment approaches for therapy services that are based on beneficiary needs. A 5-year project titled "Development of Outpatient Therapy Alternatives" (DOTPA), awarded to RTI International, was initiated in order to develop a comprehensive and uniform therapy-related data collection instrument, assess its feasibility, and determine the subset of the measures that we could routinely and reliably collect in support of payment alternatives. While DOTPA will identify measurement items relevant to payment, the project will not deliver a standardized measurement tool. We may either develop a tool or allow other tools to be used for payment purposes when they include those items that identify the following: (1) Beneficiary need; and (2) outcomes (that is effectiveness of therapy services). In addition to therapy caps, the DOTPA project considers our interest in value-based purchasing by identifying components of value, including beneficiary need and the effectiveness of therapy services. The DOTPA project reports are available on the contractor's Web site at *http://optherapy.rti.org/*. The data collection design and instrument development have been completed, and a Paperwork Reduction Act (PRA) package was submitted for approval of the data collection forms by the Office of Management and Budget (OMB). The **Federal Register** notice for the second round of public comment on this package was published on April 23, 2010 (75 FR 21296). The PRA package has been approved; the contractor is recruiting potential participants in the data collection, developing training materials for participants, and updating the project web site. We did not seek public comments on the DOTPA project in the proposed rule.

The TRCHA also funded the 2-year project contracted to Computer Sciences Corporation (CSC) entitled "Short Term Alternatives for Therapy Services" (STATS). STATS has provided recommendations regarding alternative payment approaches to therapy caps that could be considered before completion of the DOTPA project. The STATS project draws upon the analytical and clinical expertise of contractors and stakeholders to consider policies, measurement tools, and claims data that are currently available to provide further information about patient condition and the outcomes of therapy services. The final report, received September 13, 2010, included recommended actions we could take within 2 or 3 calendar years to replace the current cap limits on therapy services with a policy that pays appropriately for necessary therapy services.

c. Potential Short-Term Approaches to Therapy Caps

On June 30, 2009, we received a draft of the CSC report titled "STATS Outpatient Therapy Practice Guidelines," a summary of expert workgroup discussions, and several short-term payment alternatives for consideration. CSC discussed options based on the assumption that short-term policy changes should facilitate the development of adequate function and/or outcomes reporting tools. In the longterm, CSC recommended that payment be based on function or quality measurements that adequately perform risk adjustment for episode-based payment purposes.

Based on the draft report, additional stakeholder input, and subsequent communications with the contractor, in the CY 2011 PFS proposed rule (75 FR 40097 through 40099) we discussed several potential alternatives to the therapy caps that could lead to more appropriate payment for medically necessary and effective therapy services that are furnished efficiently. We solicited public comments on the proposed rule regarding all aspects of these alternatives, including the potential associated benefits or problems, clinical concerns, practitioner administrative burden, consistency with other Medicare and private payer payment policies, and claims processing considerations. We did not propose either short-term or long-term payment alternatives to the therapy caps. However, we referred readers to section II.C.4.(c) of the proposed rule for our CY 2011 proposal to expand the MPPR policy to "always therapy" services furnished in a single session in order to pay more appropriately for therapy services, taking into consideration the expected efficiencies when services are furnished together. While we did not propose the adoption of an MPPR policy for therapy services specifically as an alternative to the therapy caps, we acknowledged that by paying more appropriately for combinations of

therapy services that are commonly furnished in a single session, practitioners would be able to furnish more medically necessary therapy services to a given beneficiary before surpassing the caps. We noted that the proposed MPPR policy would have the potential to reduce the number of beneficiaries impacted by the therapy caps in a given year.

Comment: Many commenters stated that use of the financial cap on therapy services as a rationale for the proposed MPPR was unacceptable and not a sound basis for such a significant policy proposal. Quite a few commenters contrasted the cap alternatives research with the MPPR which, in the commenters' opinion, did not reflect a similar level of analysis. Instead of implementing the proposed MPPR, a large majority of the commenters urged CMS to place a high priority in resources and funding for research to identify alternatives to the cap that would ensure patients receive medically necessary therapy services.

While the commenters agreed that more therapy could be furnished to a beneficiary before surpassing the caps if the payments were reduced, the commenters believe that other, more serious access problems would result from arbitrary payment reductions under an MPPR. Many commenters were concerned that the proposed MPPR policy might restrict access to therapy services for patients with more severe problems, especially neurological problems and complex medical conditions. Less payment, explained the commenters, would force therapists to spend less time with patients, incentivize cutting corners, and encourage greater fraud and abuse. The commenters argued that the shortage of therapists, particularly physical therapists, would be exacerbated and access to therapy services would be severely jeopardized.

Response: We appreciate the effort and resources contributed by stakeholders to the discussion and development of alternatives to therapy caps. We look forward to the continued cooperation of stakeholders as we continue our work in this area over the coming years. We refer readers to section II.C.4.(c) of this final rule with comment period for a detailed discussion of the public comments and our responses regarding the proposed therapy MPPR.

The three specific short-term options that we discussed in the CY 2011 PFS proposed rule would not have required statutory changes when CSC originally delivered them. In CY 2011, some would require extension of the therapy cap exceptions process. Some would require moderate reporting changes that would yield more detailed information about patient function and progress to inform future payment approaches and facilitate the medical review of services above the therapy caps at the present time. Others require new coding and bundled per-session payment that would be a first step toward episode-based payment. They are not necessarily independent of each other.

Under each of these alternatives, administrative simplification with respect to current policies, such as HCPCS code edits and "ICD–9–CM to HCPCS code" crosswalk edits that serve to limit utilization without regard to the patient's clinical presentation, could be pursued in the context of these options.

The first option would modify the current therapy caps exceptions process to capture additional clinical information regarding therapy patient severity and complexity in order to facilitate medical review. This approach would complement the DOTPA project, which is identifying items to measure patient condition and outcomes. We believe the first option may have the greatest potential for rapid implementation that could yield useful information in the short-term. In the CY 2011 PFS proposed rule (75 FR 40097), we indicated that we were especially interested in detailed public comments on this option that could inform a potential proposal to adopt such an alternative through future rulemaking. The second option would involve introducing additional claims edits regarding medical necessity, in order to reduce overutilization. The third option would be to adopt a per-session bundled payment that would vary based on patient characteristics and the complexity of evaluation and treatment services furnished in the session. Each option would require significant provider and contractor education, and all would necessitate major claims processing systems changes. Moreover, some of the options may affect beneficiaries by changing the type or amount of services covered by Medicare or the beneficiary's cost sharing obligations.

Comment: Many commenters agreed that a long term solution to the therapy caps is desirable. Generally, the commenters supported an evidence-based payment system grounded in accurate, comprehensive analysis of the clinical characteristics of the wide range of therapy patients in diverse settings and the concept of bundled payment for episodes of care based on clinical characteristics of patients. Many commenters urged CMS to place a high priority in resources and funding for research to identify alternatives to the cap that would ensure patients receive medically necessary therapy services. The commenters asserted that such research would be a key factor in identifying clinically appropriate ways to control spending. Those who commented on this issue commended CMS for proposing alternatives that reflect in-depth analytical work, expressing appreciation to CMS and its contractor for the opportunity to participate on task forces and pledging continued assistance in trials of alternatives. The commenters also commend CMS for recommending better clinical information be included in payment decisions.

MedPAC and some other commenters supported all three alternatives as reasonable steps consistent with the end goals of value for purchases based on the care needs of beneficiaries. Many commenters supported the first option or the third option, and very few supported the second option. Regardless of the alternative chosen, commenters consistently recommended further study and analysis, with a national demonstration or pilot project to test any alternative prior to implementation.

Response: We continue to believe that the advice and assistance of stakeholders, including clinicians and practice administrators, are essential to the development of policies that are appropriate, realistic, and effective in allowing necessary therapy care while limiting overutilization. We appreciate the time and effort provided by the dedicated professionals involved in the STATS workgroups and DOTPA technical advisory panels.

Comment: A commenter suggested that diagnoses cannot be used to predict medical necessity. The same commenter argued that if the patient were assessed using self-reported functional status measures that are risk-adjusted using many variables, it would be possible to predict outcomes, identify ineffective treatment, and reduce gaming without relying on clinician-generated estimates known to be biased and fraught with poor reliability and validity.

Several other commenters stated that clinicians' judgment is essential to accurate outcomes assessment, and these commenters provided examples of clinical judgments believed essential to appropriate care planning.

Response: None of the alternatives discussed in the proposed rule would require a measurement tool scored by either a clinician or the patient. We note the disagreement among the commenters on this point.

Comment: While generally supportive of the development of alternatives to therapy caps, many commenters expressed concern that there were insufficient data and details of the options discussed in the proposed rule to develop a rational payment system based on the options at this time. Several commenters suggested that sophisticated multivariate statistical methods with a long list of clinically appropriate risk-adjustment variables would be required. Another commenter recommended using risk-adjustment models built on large aggregate datasets to develop efficiency and effectiveness projections on which payments could be based.

Response: We agree that the alternatives presented were not fully developed and that statistically sound methods of evaluation of the fully developed alternatives would be appropriate. We made no specific proposal to adopt an alternative beginning in CY 2011, but instead presented three potential options in order to gather additional public input on the overall concepts and the details to inform our future developmental work in this area. We will continue to review and consider all the information provided to us and acknowledge that, in the context of any future proposal, we would need to provide further detail as part of notice and comment rulemaking in order for the public to provide meaningful comment prior to the adoption of changes to therapy payment.

Comment: Many commenters complained that therapy payments have decreased relative to inflation over the past 10 years. The commenters described the practitioner's struggle to provide appropriate care and noted their fear of alternatives that could result in fewer resources with which to treat beneficiaries. Some commenters stated that Medicaid payments also decreased, leaving them with less flexibility to provide covered services to Medicare beneficiaries. Several commenters warned that those who bill therapy services will find "creative" ways to manage patients in the future, leading to reduced quality of care, or that therapists will be laid off, leading to access problems for beneficiaries.

Some commenters recommended that CMS take time to consider the potential alternatives to therapy caps from all angles related to cost, including the costs of different health outcomes. Several commenters reported that outpatient physical therapy saves Medicare spending by preventing more expensive procedures and surgeries.

Response: Achieving appropriate payment for quality services that quickly lead to good health outcomes is among the major goals of our payment policy. It is also our goal to limit overutilization of services, and to discourage the provision of services that are not medically reasonable and necessary or represent an abuse of Medicare funds. To that end, we will continue to develop policies aimed at paying for those therapy services that meet patients' needs. The clear challenge is to identify those needs and the services required.

Comment: One commenter was concerned that underlying therapy utilization data are flawed due to inconsistent coverage and payment policies that also negatively affect good clinical practice by restricting the therapist's clinical judgment. The commenter provided detailed examples to illustrate inconsistencies in forms and billing rules between Part A and B providers and suppliers which in the aggregate, the commenter argued, impede CMS' ability to analyze claims data for comparison purposes. Differences due to National Correct Coding Initiative (NCCI) and Medically Unlikely Edit (MUE) policies and most particularly local coverage determinations (LCDs) were also identified by the commenter as creating significant variations among contractors. The commenter was particularly concerned about requirements for specific ICD–9–CM and CPT code combinations, which limit therapy diagnoses or require specific diagnoses as primary.

Response: We develop national and local policies and guidelines as needed to interpret statutory requirements and to limit, whenever possible, abusive behaviors while encouraging high quality care and good outcomes for beneficiaries. Since no one method is entirely effective in curbing incorrect or fraudulent billing practices, a number of approaches have been adopted. We attempt to coordinate these policies and we recognize that it is sometimes difficult for providers and suppliers to stay informed about changes, especially when they treat beneficiaries whose services are impacted by different payment policies. We will continue to work cooperatively with interested stakeholders, as we did with the STATS project, to identify and resolve concerns or conflicts regarding our policies. We intend that any claims data collected in a pilot study would be unencumbered by conflicts that have been identified.

Comment: Many commenters stated that the options are identified as alternatives to the cap exceptions process, which expires December 31, 2010.

Response: The short-term alternatives discussed are potential alternatives to the therapy caps, and while it may be possible to implement some as modifications to the exceptions process, we recognize that Congress would have to act to extend the authority for a therapy cap exceptions process or to otherwise provide for certain alternatives to therapy caps.

Option (1): Revise therapy caps exceptions process by requiring the reporting of new patient function-related Level II HCPCS codes and severity modifiers.

This option would require that clinicians submit beneficiary function-related nonpayable HCPCS codes to replace the -KX modifier (Specific required documentation on file). Codes would not be submitted on every claim, but at episode onset and at periodic intervals (for example, progress report intervals of 12 sessions or 30 days—whichever is less). Codes would be submitted for all patients in order for the claims to be paid and not only those claims approaching or surpassing the therapy caps. The current -KX modifier is not useful to identify claims exceeding therapy caps, because it is used for services both before and after the caps are exceeded, and it must be used on the entire claim for facilities. New codes also would not identify claims above the cap, but they would perform the same function as the current -KX modifier to signal that documentation in the medical record supported medical necessity that should lead to an exception to the therapy caps. The codes would also provide more information for medical review.

Six Level II HCPCS G-codes representing functions addressed in the plan of care and 5 (or 7) modifiers representing severity/complexity would be utilized to report information on the claim. Examples of six new function-related G-codes:

- GXXXU—Impairments to body functions and/or structures—current.
- GXXXV—Impairments to body functions and/or structures—goal.
- GXXXW—Activity limitations and/or participation restrictions—current.
- GXXXX—Activity limitations and/or participation restrictions—goal.
- GXXXY—Environmental barriers—current.
- GXXXZ—Environmental barriers—goal.

Two potential severity/complexity scales have been suggested that would require the adoption of 5 or 7 new severity modifiers, respectively. Under one scenario, modifiers based on the

International Classification of Function would identify severity as follows:

- None (0 to 4 percent).
- MILD (5 to 24 percent).
- MODERATE (25 to 49 percent).
- SEVERE (50 to 95 percent).
- COMPLETE (96 to 100 percent).

Alternatively, a proportional severity/complexity scale would use 7 modifiers to describe impairments, limitations, or barriers—

- 0 percent;
- 1 to 19 percent;
- 20 to 39 percent;
- 40 to 59 percent;
- 50 to 79 percent;
- 80 to 99 percent; or
- 100 percent.

Implementation of this general approach might require 6 months to 2 years to modify claims processing for the current therapy caps and exceptions processing of claims, and to develop, pilot test, and refine coding before applying the approach nationally. While therapists initially would need to learn the new codes and update their billing systems, ultimately their reporting burden might be reduced because the -KX modifier would not be required on each claim line for patients with expenditures approaching or exceeding the therapy caps. This option could potentially result in a small reduction in outpatient therapy expenditures due to increased Medicare contractor scrutiny of episodes where functional severity scores did not change over time, or to other atypical reporting patterns associated with the new codes.

In the longterm, these codes and modifiers could be mapped to reliable and validated measurement tools (either currently available tools in the public domain or newly developed tools from items on the DOTPA instrument or the Continuity Assessment Record and Evaluation (CARE) tool). If statistically robust patient condition information were collected from claims data, it may be possible to develop Medicare payment approaches for outpatient therapy services that could pay appropriately and similarly for efficient and effective services furnished to beneficiaries with similar conditions who have good potential to benefit from the services furnished. At a minimum, the new codes could allow contractors to more easily identify and limit the claims for beneficiaries who show no improvement over reasonable periods of time.

Comment: Most commenters supported the concept of Option (1) although often not without concerns about the details of implementation. The commenters generally endorsed the concept of describing patients' goals in terms of activity participation and environmental barriers, in addition to impairments based on the World Health Organization's (WHO's) International Classification of Functioning, Disability and Health (ICF). Some supported Option (1) as the best of the three options as it could begin providing a national overview of functional status and severity of patients which would be essential if CMS were to pursue future episode-based payment. The majority of commenters agreed with the concept of developing an infrastructure to work toward payment reform based on episodes of care, patient characteristics, functional status, rehabilitation complexity, severity, and outcomes. Many commenters supported Option (1) as the first step in a plan to move toward Option (3) that would introduce per-session codes to bundle payment, as described in detail below, and ultimately episode-based payments, although a few suggested the severity codes could be used, after adequate testing and definition, to inform appropriate payment. Some commenters recommended developing Option (1) and suggested that further development should include: definition of terms (including the ICD–10 diagnosis codes in 2013), input from therapists, field testing, and data analysis to ensure that payment appropriately reflects patient complexity and risk before application of the codes to individual therapy disciplines.

The commenters in favor of this option supported the use of ICF language in descriptions, but consistently preferred a 7-point rating scale for severity over the 5-point scale based on the ICF. Several commenters also noted that sufficient training would be required for contractors and providers of service under this option.

Response: We appreciate the perspectives of the commenters who see Option (1) as a first step in the process of exploring alternatives to the therapy caps that could move toward payment based on the needs of beneficiaries.

Comment: Many commenters opposed this option as burdensome, easy to "game," and lacking the potential for saving money. The commenters in opposition to the option claimed it could require a great deal of research to establish, validate and value codes, and then pilot test, refine, establish inter-tester reliability, and modify the claims processing process, which could take 2 years. Instead, the same commenters recommended the use of valid and reliable measurement tools currently in the public domain and in use by clinicians. One commenter requested that CMS not use clinician-graded single item assessment scales of patient severity or complexity, unless such methodology possessed published reliability and validity on the selection and grading processes because there are more psychometrically sound published scales available that include a risk adjustment process to predict treatment success and number of visits and are less vulnerable to gaming. If scales were used, several commenters recommended that they must be sensitive and cardinal so each change would represent an equal increment.

Response: We recognize that Option (1) is not yet fully developed and would require further study. As we consider this option further, we will also assess the feasibility of using currently available validated measurement scales in the public domain. The issues of "gaming" and savings remain of interest in relationship to this and the other options.

Comment: Several commenters voiced serious concerns about the concept of using function-related codes and severity modifiers on the claim to monitor patient improvement. The commenters were alarmed that contractors would deny services when improvement was insufficiently demonstrated, or when the beneficiary's goal was to prevent deterioration of function. Several commenters were concerned that a contractor's attention to function and severity modifiers might cause the contractor to unduly limit the therapy sessions a patient needed to maintain or increase functionality.

A few commenters interpreted the statute to require only that a service be medically necessary to treat the underlying illness or condition, and not to require that the service lead to improvement. According to the commenters, a service required to maintain current function is medically necessary but the focus on identifying improvement would prevent those patients with progressive diseases from receiving therapy to prevent further decline in function when there is little probability of meeting an undefined improvement standard. A few commenters provided citations of court cases that rejected Medicare policies and practices that denied therapy services based on arbitrary rules of thumb without consideration of the patient's individual condition. Therefore, the same commenters recommended that CMS omit reference to improvement standards in any proposal related to Option (1).

Response: The policies for Medicare Part B outpatient therapy services require payment for therapy services that require the skills of a therapist. In

contrast, "Unskilled services are palliative procedures that are repetitive or reinforce previously learned skills, or maintain function after a maintenance program has been developed * * *. services related to activities for the general good and welfare of patients, for example, general exercises to promote overall fitness and flexibility and activities to provide diversion or general motivation, do not constitute therapy services for Medicare purposes" (Medicare Benefit Policy Manual, Pub. 100–02, chapter 15, section 220.2.A.). We note that when the goal of therapy is to halt degeneration of function due to disease, therapy is not palliative or related to general welfare, but may be an active treatment with measurable outcomes. For that reason, we do not anticipate that function-related codes and severity modifiers would be used exclusively as a proxy for the determination of medical necessity.

The Medicare policy goes on to state, " * * * services must be necessary for the establishment of a safe and effective maintenance program required in connection with a specific disease state. In the case of a progressive degenerative disease, service may be intermittently necessary to determine the need for assistive equipment and/or establish a program to maximize function * * *." (Pub. L. 100–02, chapter 15, section 220.2.A.). Further details concerning maintenance therapy and examples of covered services to patients with degenerative neurological diseases are found in Pub. 100–02, chapter 15, section 220.2.D.

Option (2): Enhance existing therapy caps exceptions process by applying medical necessity edits when per-beneficiary expenditures reach a predetermined value.

The existing automatic process for exceptions, and the revised exceptions process described in Option (1) above, pay practitioners indefinitely for services if they attest on the claim by appending a specific modifier to therapy HCPCS codes that the services being furnished are medically necessary and that supporting documentation is included in the medical record. Unless the local contractor uses claims edits or does post-payment review, these processes do not identify or limit unusually high annual per-beneficiary utilization. High utilization is not limited to beneficiaries with multiple or complex conditions. We would use existing therapy utilization data to develop annual per-beneficiary medical necessity payment edits, such as limits to the number of services per-session, per-episode, or per-diagnostic grouping, for exceptions to the therapy caps which would be set at benchmark payment levels that only a small percentage of beneficiaries would surpass in a single year. Once these levels were reached, additional claims would be denied and practitioners would need to appeal those denials if they wished to challenge Medicare's nonpayment.

This alternative would require 1 to 2 years to implement as an expansion of existing policy, and its effects would be anticipated by analysis of the current utilization of therapy services. Additional practitioner burden would be incurred in the small number of cases exceeding the per beneficiary expenditure edits if the practitioner chose to appeal the medical necessity denial.

Comment: Few commenters preferred Option (2) over the other two. In addition, the commenters stated that they were familiar with this approach because other insurers use a similar system of edits, so the adoption of Option (2) for Medicare patients would not represent an additional administrative burden. The commenters who favored this option reported that it would be the easiest for CMS to implement and would be the only option likely to save money in the very short-term. Some commenters who favored this option would still prefer the use of existing measurement tools to gather data about therapy services. One commenter pointed out that limits per-diagnosis should be based on reasonable data that reflect good patient outcomes.

Most of the commenters who supported Option (2) also noted that this option could influence therapy utilization and possibly outcomes, creating flawed data that were not representative of needed services. The commenters were concerned that future payment policy decisions might later be based on those flawed data.

Response: We agree that Option (2) has the benefit of being relatively easy to implement and we appreciate the perspective of some commenters on the low anticipated burden. We also recognize that a database of limited services would not be appropriate to use for estimating the full cost of medically necessary services.

Comment: Some commenters took a neutral position on this option, finding that it could be part of a viable alternative to therapy caps but only after considerable study and development. MedPAC noted that Option (2) would implement more meaningful therapy caps in the interim, while longer-term solutions were being developed and tested. At the same time, MedPAC supported CMS' efforts to identify medically unnecessary care and to implement payment systems that ensure that the program obtains value for its purchases. Other commenters were concerned that the benchmark levels for edits be realistic and not arbitrary. The commenters requested that CMS consider a method to deal with outliers without forcing denials and appeals.

Response: Option (2) could be used in combination with other options. We recognize the description we provided was not specific about the edit levels and that further deliberation would be appropriate before edits could be implemented.

Comment: The majority of commenters opposed Option (2). Although some commenters agreed that edits for medically unlikely services are useful and appropriate, they expressed concerns about this approach because edits can often be arbitrary, are not based on patient needs, and may improperly limit necessary services. Some commenters asserted that individuals with degenerative conditions may require shorter sessions over longer periods of time to address functional loss and slow deterioration and to maximize health outcomes. The commenters also opposed edits that would fail to address the affects of cognitive impairment on treatment. Several commenters cited the existing ICD–9–CPT code crosswalks, LCDs, NCCI edits, and MUEs as examples of similar edits that commenters often found to be clinically inappropriate. The commenters argued that current edits and policies based on unsupported information led to denials and appeals that were costly to therapists and CMS. The commenters urged CMS to avoid edits that lack clinical relevance or a scientific basis and create anomalies in claims data.

Response: Option (2) was developed with input from therapy professionals based on their review of therapy utilization data. If this option were to be implemented, we would, at a minimum, review the advice and recommendations of stakeholders, along with any available utilization data to inform our decisions regarding the edit levels.

Comment: A few commenters criticized Option (2) as scientifically flawed. One commenter reported that use of a combined effectiveness (that is, functional status change) and efficiency (that is, number of treatment visits) algorithm in a value-based payment process is one of the few methods where one could determine if the patient needs more or less treatment to reach optimal risk-adjusted gains in functional status. The same commenter referenced numerous research efforts that have analyzed functional status outcomes in

rehabilitation using sophisticated risk-adjustment methods and requested that CMS use these as a basis for a new payment policy.

Other commenters asserted that currently available utilization data are inadequate to develop predetermined edit values, citing studies of therapy utilization under contract to CMS and studies performed by industry that demonstrate why ICD–9 coding, lack of function/severity data, and lack of a definition for "episode" are problematic.

Response: Current therapy utilization data reveal that one percent of beneficiaries who receive services incur costs that proportionately far exceed those of the other 99 percent of beneficiaries. However, we are also aware that without some knowledge of the condition of the beneficiary, it is impossible to determine which, if any, of those services were medically necessary. While it would be desirable to analyze more detailed utilization data that include patient function/severity outcomes for setting edit values, those data are not available to us in the short-term. We believe that the existing limited utilization data, albeit not fully descriptive of patients, could inform potential future edit values for therapy services.

Comment: If CMS plans to move forward with edits, many commenters strongly requested that professional organizations be consulted to determine whether such edits are clinically appropriate and realistic. Some commenters specifically urged CMS to await the results of the DOTPA pilot in the hope of capturing meaningful clinical differences between patients before applying edits. Before such edits could reliably be applied to payment, other commenters recommended that CMS design, test, and evaluate additional data on functional status and barriers to participation. Many commenters indicated that more data are needed; especially thresholds based on episodes, condition groupings, and similar criteria that could trigger medical review, but not support denial. To that end, some commenters stated that it might be possible to support this approach under Option (2), but after Option (1) was implemented.

Response: We understand the commitment of stakeholders to the development of alternatives to the therapy caps based on clinically appropriate policies. We will consider the potential benefit of Option (1) to develop data on which to base the edits required under Option (2) as we further contemplate alternatives to the therapy caps.

Comment: A few commenters opposed Option (2) edits because the edits would virtually eliminate the exceptions process mandated by law and replace it with denial of claims at a predetermined value, which may be inconsistent with the statutory requirement for an exceptions process. The same commenters stated that there would be no basis for edits until Option (1) was implemented to provide more detailed claims-based information. Several commenters reported research showing 10 percent of Part B patients in nursing facilities have highly complex problems, with multidisciplinary needs and inconsistent patterns of therapy service use. The commenters were concerned that denials would interfere with treatment of these complex patients with special needs.

Response: Option (2) would require an existing exception to the therapy caps, which would be enhanced to allow limited billing and payment for medically necessary services that exceed the caps. The option could not be used if the exceptions process were not extended. However, the Deficit Reduction Act of 2005 that established exceptions to the caps for medically necessary therapy services also required implementation of clinically appropriate code edits in order to identify and eliminate improper payments for therapy services. CMS currently applies NCCI and MUE edits to therapy services that fail to meet a reasonable assumption of medical necessity. We view implementation of Option (2) as consistent with our current authority to create edits to control inappropriate billings.

Benchmark levels for Option (2) would be based on existing therapy utilization data and limits would be set at levels that a high percentage of beneficiaries would not exceed. While it may be helpful to have more data related to patient condition as described in Option (1) before implementing Option (2), we do not consider such information vital to the development of limits that affect a very small percentage of beneficiaries whose service payments would so far exceed average payments that they would be likely to include inappropriate billings and would be unlikely to interfere with the delivery of medically necessary services.

Comment: If the option of implementing edits were pursued, several commenters indicated that the edits should be variable based on clinical criteria, result in medical review instead of denials, and reflect issues of multidisciplinary care, care coordination, and clinical issues.

Response: If Option (2) were to be further developed, we would consider the commenters' suggestions prior to finalizing a plan for implementation, along with any new information available from additional research studies, OIG reports, or other sources.

Option (3): Introduce per-session "Evaluation/Assessment and Intervention" (E&I) codes to bundle payment for groups of current therapy HCPCS codes into a single per-session payment.

As discussed in section II.C.4.(c) of this final rule with comment period, multiple therapy services are often furnished in a single session, and we proposed to expand the MPPR policy to "always therapy" services in CY 2011 in order to take into consideration the efficiencies that occur when multiple services (the typical therapy scenario) are furnished in one session to a beneficiary. Furthermore, we note that section 1848(c)(2)(K) of the Act (as added by section 3134 of the ACA) regarding potentially misvalued codes under the PFS specifies that the Secretary may make appropriate coding changes, which may include consolidation of individual services into bundled codes for payment under the PFS, as part of her review and adjustment of the relative values for services identified as potentially misvalued.

This option would require that practitioners submit a single new Level II HCPCS code to represent all the therapy services currently reported and paid separately for an outpatient therapy session. Payment for the HCPCS code would be based on patient characteristics (as identified through prior CMS contractor analyses) and the complexity of the evaluation/assessment and intervention services furnished during the session. The new coding requirements would not necessarily disrupt the current exceptions process or the revised exceptions process described in Option (1) above. Approximately 12 E&I codes would be needed for each discipline, taking into consideration the basic algorithm shown in Table 47.

TABLE 47—EVALUATION/ASSESSMENT & INTERVENTION LEVEL II HCPCS CODES

		Evaluation/assessment complexity		
		Minimal	Moderate	Significant
Intervention level	None	E&I Code #1	E&I Code #2	E&I Code #3.
	Minimal	E&I Code #4	E&I Code #5	E&I Code #6.
	Moderate	E&I Code #7	E&I Code #8	E&I Code #9.
	Significant	E&I Code #10	E&I Code #11	E&I Code #12.

We would need to develop and test operational definitions for each E&I code so that practitioners would be able to properly report services and appropriate relative values could be established for each per-session code. We believe that a pilot study might reveal that the different practice patterns for the three therapy professions (physical therapy, occupational therapy, and speech-language pathology) could necessitate separate relative value determinations for each E&I code by type of therapy service furnished. As a result, up to 36 total new Level II HCPCS codes could be needed (12 per discipline).

We anticipate that the definitions of E&I codes 1 through 3 and 7 through 12 would describe services that may only be furnished by a "clinician" (therapist, physician, or non-physician practitioner). E&I codes 1 through 3 would be reported for sessions that consisted only of evaluations. In addition, the definitions of E&I codes 4 through 6 would describe services that could be furnished by or under the permissible supervision of all qualified outpatient therapy professionals. Based upon historical therapy utilization patterns, the vast majority of E&I codes submitted would likely fall in the 4 through 9 code range. We would expect the RVUs under the PFS for all E&I codes to take into consideration the efficiencies when multiple services (those that would be currently reported under multiple CPT codes) are furnished.

This option would require 2 to 4 years to add new codes and conduct a short-term pilot study to refine coding and value the 12 new HCPCS codes (or 36 if they are specific to each therapy discipline). There would be significant initial practitioner administrative burden to learn new codes and update billing systems. However, ultimately, with elimination of the practitioner's reporting of 76 different codes and many of the associated claims processing edits, the administrative burden of reporting therapy services to Medicare would be minimized.

This bundled approach to reporting and payment could result in more appropriate valuation of therapy services that reflects efficiencies when individually reported services are furnished in the same session. As a result, it could lead to reduced therapy expenditures, as well as a reduction in the number of beneficiaries affected by the therapy caps in a given year.

Comment: The vast majority of commenters concurred that provider payments should be influenced by underlying beneficiary characteristics. Most commenters agreed that following research and development, an episode-based payment alternative would be the most feasible payment model for outpatient therapy services in the longterm, and some recommended it be developed in a performance-based model. The commenters generally supported this option as a foundation to those goals, but recommended expert therapist input into the process and further study to determine how such an approach might affect different therapy types and settings. Several commenters noted that it would be critical to ensure clear nomenclature, the availability of an appropriate reporting methodology, and adequate payment for these codes that reflects the resources used to provide these services.

To assure appropriate payment for needed services, the commenters agreed that the outcomes resulting from provider interventions must be incorporated in payment models. The commenters believe that experience gained in a transparent development process could be carried over into future payment system reform. Therefore, the majority of commenters who supported Option (3) also requested that there be a transparent process of development and testing in which expert therapists from various settings were included. Many also argued that Option (3) should be developed only after Option (1) had been implemented and function and severity data had been collected to inform the development of Option (3).

Response: We appreciate the support of commenters for Option (3) and their interest in moving toward long-term goals by implementing short-term approaches as an incremental step. We agree that the information presented in the proposed rule was limited regarding Option (3) and that further study would be necessary before a bundled per-session payment approach could be implemented. We will consider the commenters' recommendations to develop an episode-based payment alternative in the future.

Comment: The concept of moving toward per-session codes that would be based on the severity of the patient and intensity of therapist clinical judgment and work involved in the provision of the therapy service was welcomed by many commenters. Those commenters who encouraged CMS to use this option to reduce the administrative burden of counting minutes and eliminate NCCI edits and MUEs anticipated corresponding improvement in the effective and efficient delivery of clinical interventions. The commenters urged CMS to ensure compliance of policies related to Option (3) with other payment policies, such as the delivery of medically necessary care driven by the development of an appropriate functional goal-based plan of care.

Response: While a per-session payment methodology could result in modification of current policies regarding counting treatment time, it would not necessarily result in deleting claims edits. If we were to adopt such a methodology, we would assess the current claims processing edits and determine whether they continued to be appropriate and/or implement new edits to address potential issues under the revised payment approach.

Comment: Some commenters suggested a modified definition of severity. The commenters recommended two separate severity tables of "severity or complexity," one for evaluation and the other for intervention. For each table separately, severity/complexity of clinical presentation would be rated as low, moderate, or high. In all cases, the commenters believe CMS should identify the factors to be used to determine severity for both evaluations and interventions. The commenters urged that CMS defer to professional standards of practice and state law with respect to the provision of services in each category. Other commenters

recommended modifiers for complex patients and comprehensive multidisciplinary rehabilitation settings to facilitate application of special policies for those circumstances.

Response: The tables presented in the proposed rule were illustrative of the potential Level II per-session HCPCS codes, and these codes would require further development prior to implementation. We appreciate the commenters' suggestions and will consider them as we weigh this option.

Comment: Some commenters who supported the general premise of Option (3) and some commenters who opposed it were not optimistic that per-session payment could be developed in a reliable and valid manner in the shortterm.

Response: This alternative was developed as a short-term action that would start the process toward bundled payments for therapy episodes. The work completed by expert therapist advisors to the STATS workgroups laid a foundation that could facilitate development of the initial per-session HCPCS codes, which could reasonably be based on utilization data that demonstrated which services were historically billed together most of the time. We have analyzed data regarding common therapy code combinations. While a per-session payment approach could have a significant impact on payment for therapy services, we would not expect that developing and valuing per-session E&I codes would be a particularly lengthy or complex process. We note that over the past several years, the CPT Editorial Panel has bundled multiple services into a single code numerous times in different medical specialty areas and the AMA RUC has then valued the new comprehensive service by taking into account the expected efficiencies in the physician work and/or practice expense.

Comment: Rather than consign the code definition and valuation processes integral to Option (3) to the CPT Editorial Panel and AMC RUC processes, which have little transparency, several commenters recommended that CMS develop Level II HCPCS codes for this purpose and allow for continued stakeholder input as to their valuation. Some commenters expressed appreciation for being included in the STATS process and suggested it as a model for future transparency in developing payment policies.

Response: We appreciate the confidence stakeholders expressed regarding our capacity to develop HCPCS codes and values using a transparent process that includes input from stakeholders. If we were to move toward per-session payment in the future, we would need to consider the most appropriate approach to the development and valuation of new codes to describe those services. In the meantime, we note that if the CPT Editorial Panel were to develop new codes for comprehensive therapy services, as they have developed new CY 2011 comprehensive codes for cardiac catheterization and lower extremity endovascular revascularization services that bundle services that are commonly furnished together, we would consider those therapy codes for adoption under the PFS and would value them if we recognized them for PFS payment.

Comment: Due to the nature of certain services when assessment and intervention are inseparable, some commenters asserted that interventions should not be included in this model but should be separately identified. The commenters provided the examples of active wound care management and prosthetic/orthotic management.

Response: The details of therapy E&I codes have not been proposed or finalized. We appreciate the perspective of the commenters and will keep it in mind if we were to pursue the creation of per-session therapy codes in the future.

Comment: While some commenters stated that Option (3) has the potential to simplify and increase consistency in coding for therapy services, several commenters who opposed this option and Option (1) mentioned that providers would learn to "game the system" and that all patients would be documented as severe on initial intake.

Response: We too are concerned about approaches where providers could learn to game the system. The commenters who criticized this option generally preferred the edits in Option (2).

Restriction on utilization of certain codes sometimes increases the risk of billing different codes, billing more of the same codes, or increasing patient visits, resulting in the same or greater cost to the Medicare program. The edits described in Option (2) would prevent high payments for individual beneficiaries, but might have little or no effect on the payments to providers or suppliers who increase the number of beneficiaries treated. Generally, we apply a number of different methods concurrently to reduce risk.

At times, it may be difficult to know whether the clinical judgment and objective measurements have been accurately reported or documented in the record and whether the service furnished is appropriately represented by the billed HCPCS code. Providers focused on billing inappropriately may also document inappropriately. In the long term, we hope to incentivize honest and ethical providers and suppliers of services to furnish effective and efficient, high quality services. Possible fraudulent activity may be identified by aberrant billing patterns, and the new codes could facilitate the identification of such patterns.

Several commenters expanded on the options presented as alternatives to the therapy caps or recommended options of their own. A few presented their own analyses of utilization to support their recommendations.

Comment: Several commenters recommended incorporation of currently and publicly available validated tools to inform the collection of patient-specific information and move toward performance-based payment. A few commenters suggested that the study "Pay-for-Performance for Outpatient Physical Therapy and Occupational Therapy" that Focus On Therapeutic Outcomes (FOTO) completed in 2006 under Grant #18–P–93066–/0–01 might be a good template from which to start a process to replace caps and ultimately develop a value-based purchasing process. The commenters suggested the FOTO predictive model could be used, after pilot testing, to develop a reimbursement process where care is based on need and payment is based on results.

Response: We recognize the importance of demonstrating the application of a value-based purchasing approach to physical and occupational therapy services. We posted the FOTO study on the CMS Web site at: *http://www.cms.gov/TherapyServices/downloads/P4PFinalReport06-01-06.pdf*.

We are aware that research continues on the functional status indicator and that other measurement tools are also available in the public domain. The STATS discussions resulted in some improvements in the feasibility of matching outcomes data to claims. However, there are a number of problems that would have to be resolved before any of the currently available versions of therapy outcomes tools could be incorporated into payment policy. The FOTO study did not address value-based purchasing for speech-language pathology services and there remain questions about applying the FOTO functional status indicator, or any self-reported measure, to certain cognitively impaired patients or to the Medicare population without further refinement.

As we continue to explore various options, we would be interested in the feasibility of using historical research, existing electronic input systems, and registry information to provide a conceptual framework for alternative payment systems.

Comment: Although CMS did not discuss the option of establishing therapy payments based on episodes in the discussion of short-term options, many commenters encouraged CMS to pursue that goal. Using data obtained from the severity/complexity codes described in Option (1), DOTPA, and other data initiatives, several commenters urged CMS to undertake research to develop a new episodic prospective payment system for Part B therapy services. Some commenters described the details of a plan to base therapy episode payment on groups based on patient clinical characteristics, considering mean episode costs, adjusting for high and low outliers or interrupted episodes, setting a default payment for unmapped episode groups, and also adjusting for local wage indices and providing an annual market basket payment rate update.

The opportunity for CMS to define sessions and episodes more clearly and the potential to support the overall goal of payment reform was eagerly anticipated by several commenters. The commenters applauded CMS for recognizing the potential opportunity to gather these data on episodes for payment of therapy services furnished in the institutional setting.

Episode-based payment was recommended as an alternative to the proposed therapy MPPR by numerous commenters. The commenters explained that the fundamental problem with fee-for-service payment is the incentive to over utilize therapy services in the outpatient setting and limit institutional providers from using resources flexibly. The commenters described analysis of a large database of Medicare beneficiaries as the basis for a methodology for grouping diagnosis codes to create episodes of care on which therapy payment would be based. The commenters noted that adjustment would be needed to payments for complex patients and readmissions. The same commenters supported episode payments for separate therapy disciplines based on a patient's medical diagnosis and goals. A critical goal for these commenters was to identify and account for differences in the conditions and needs of patients in skilled nursing facilities as opposed to other outpatient therapy settings.

Response: We did not discuss development of episode-based payments as an option in the CY 2011 PFS proposed rule because we recognize that substantially more research would be necessary to define the episodes and determine what resources would be needed for different groups or categories of patients before the episodes could be incorporated into a payment system, particularly one that also addressed quality, efficiency, and good health outcomes. However, the absence of discussion in our proposed rule of an episode-based payment methodology as a short-term therapy cap alternatives option should not be interpreted as our reluctance to pursue the definition of episodes or the refinement of the concept of episode-based payments.

Comment: A number of commenters supported testing variables they believe to be important in making a clinical judgment concerning a patient's severity, including: general type of patient (orthopedic, neurological, medical, etc.); impairment (body part treated); intake functional status; patient age; symptom acuity; surgical history; payer; gender; level of fear-avoidance of physical activities; and number of co-morbid conditions. Other commenters urged inclusion of clinical judgment of severity based on medical condition, physical impairments resulting from these conditions, patient function, and ability to participate in activities of daily living.

Response: As we progress in the analysis of payment alternatives to the therapy caps, we appreciate the information on variables believed to be critical by stakeholders who have conducted related research and/or furnished therapy services to a wide array of patients in different clinical settings. We welcome their expert contributions and collaboration with us on this important issue.

In conclusion, we emphasize that we continue to be committed to developing alternatives to the therapy caps that would provide appropriate payment for medically necessary and effective therapy services furnished to Medicare beneficiaries based on patient needs, rather than the current therapy caps which establish financial limitations on Medicare payment for therapy services in some outpatient settings regardless of medical necessity. The Congress has repeatedly intervened to allow exceptions to these caps for certain time periods, and the current exceptions are automatically processed based on a practitioner's attestation that medical necessity is documented in the chart for an individual patient. We believe that, ultimately, payment for therapy services should incentivize the most effective and efficient care, consistent with Medicare's focus on value in its purchasing.

The STATS contractor has worked closely with a broad variety of clinicians, administrators, scientists, researchers, and other contractors to develop the three alternatives presented in this discussion in CY 2011 rulemaking for the PFS. We are grateful for all public comments on the proposed rule from interested stakeholders, including individual therapists from both facility and nonfacility outpatient settings paid under Medicare Part B.

We are committed to finding alternatives to the current therapy cap limitations on expenditures for outpatient therapy services that will ensure that beneficiaries continue to receive those medically necessary therapy services that maximize their health outcomes. We continue to dedicate our resources to identifying alternatives that would encourage the most efficient and cost-effective treatments. We believe motivated therapists, with attention to the most cost-effective practices, can incorporate practice efficiencies that benefit patients by achieving the best possible results at the lowest cost. Our STATS and DOTPA projects, which are currently engaged in data collection and analysis to inform short-term and long-term alternatives to the therapy caps, respectively, lay the foundation for future payment alternatives for outpatient therapy services. We are optimistic that the STATS project has identified short-term, feasible alternatives that may be tested in the future. The DOTPA project will create a tool and test its use to collect patient condition information that could then be applied to identify patient need for therapy services. Together, these projects may provide the basis for a long-term plan to reshape Medicare's payment policy for outpatient therapy services to align with the value-based purchasing principles that are now guiding principles of the Medicare program.

B. Diabetes Self-Management Training (DSMT) Services (HCPCS Codes G0108 and G0109)

1. Background

Section 1861(s)(2)(S) of the Act provides for coverage of DSMT in outpatient settings without limiting this coverage to hospital outpatient departments. DSMT services consist of educational and training services furnished to an individual with diabetes by a certified provider in an outpatient setting.

Section 1861(qq)(2)(A) of the Act stipulates that training must be

furnished by a "certified provider" which is a physician or other individual or entity that also provides other items or services for which payment may be made under Medicare. This program is intended to educate beneficiaries in the successful self-management of diabetes. The program includes instructions in self-monitoring of blood glucose; education about diet and exercise; an insulin treatment plan developed specifically for the patient who is insulin-dependent; and motivation for patients to use the skills for self-management. DSMT services are reported under HCPCS codes G0108 (Diabetes outpatient self-management training services, individual, per 30 minutes) and G0109 (Diabetes outpatient self-management training services, group session (2 or more), per 30 minutes).

2. Payment for DSMT Services

In accordance with section 1848(j)(3), Medicare payment for outpatient DSMT services is made under the PFS as specified in § 414.1 through § 414.48. When we created HCPCS codes G0108 and G0109, the only direct costs included in the PE were registered nurse labor. Section 410.144(a)(4)(a) states that the DSMT team includes at least a registered dietitian and a certified diabetes educator. We initially did not establish work RVUs for DSMT services because we believed training would typically be performed by individuals other than a physician, such as a registered nurse (65 FR 83130). However, since that time, we have received requests from a number of stakeholders, including the American Association of Clinical Endocrinologists (AACE), the American Association of Diabetes Educators (AADE), and the Juvenile Diabetes Research Foundation, to include physician work in valuing DSMT services that is similar to the physician work that has been included in medical nutrition therapy (MNT) services since CY 2007 and kidney disease education (KDE) services since CY 2010. The stakeholders argued that because physicians coordinate DSMT programs, provide patient instruction, and communicate with referring physicians, physician work should be included in the RVUs for DSMT services. The stakeholders also requested that we reconsider the direct PE inputs for DMST services and include clinical labor for diabetes educators at a higher hourly rate instead of registered nurse labor. In addition, they stated that the supplies and equipment in the PE for DSMT services should be the same as for KDE services, with additional direct PE inputs for a diabetes educator curriculum, data tracking software, and DSMT program accreditation.

For CY 2011, we proposed the following:

- To assign physician work RVUs to DSMT services that are comparable, as adjusted for the service times of the HCPCS codes, to the work RVUs for MNT services. The rationale for the proposed work RVUs for the DSMT HCPCS G-codes was based on the similarity of DSMT services to MNT services in the individual (CPT code 97803) and group (CPT code 97804) setting.
- That HCPCS G0108 for 30 minutes of individual DSMT services would be crosswalked to CPT code 97803 (Medical nutrition therapy; re-assessment and intervention, individual, face-to-face with the patient, each 15 minutes) for purposes of assigning work RVUs, with the physician work RVUs for CPT code 97803 multiplied by two to account for the greater time associated with HCPCS code G0108 (that is, 30 minutes).
- That HCPCS G0109 for 30 minutes of group DSMT services would be crosswalked to CPT code 97804 (Medical nutrition therapy; group (2 or more individuals(s)), each 30 minutes) for purposes of assigning work RVUs.
- To modify the PE inputs for DSMT services to reflect the current equipment and supplies for the KDE HCPCS G-codes implemented in the CY 2010 PFS final rule with comment period (74 FR 61901) (that is, HCPCS codes G0420 (Face-to-face educational services related to the care of chronic kidney disease; individual, per session, per one hour) and G0421 (Face-to-face educational services related to the care of chronic kidney disease; group, per session, per one hour)), based on the similarity in the equipment and supplies necessary for DSMT and KDE services. We made adjustments to some of the equipment times for the 30 minute DSMT individual and group services as compared to the one hour individual and group KDE services.
- To include a diabetes educator curriculum and data tracking software in the PE inputs for DSMT services, while noting that we did not include the DSMT program accreditation costs because it is our general practice not to include these costs in the PE inputs.
- To utilize the same approach for clinical labor as we adopted for MNT services when we provided physician work RVUs for those services in CY 2007 (71 FR 69645), rather than changing the current labor type for DSMT services. Specifically, we removed all of the clinical labor from the group DSMT code and most of the clinical labor from the individual DSMT code, given that we proposed work RVUs for both DSMT HCPCS codes for CY 2011.

In the CY 2011 PFS proposed rule (75 FR 40100), we stated our belief that these proposals would value DSMT services more consistently with other similar services that are paid under the PFS. As a result of our proposed CY 2011 changes, the proposed work RVUs for HCPCS codes G0108 and G0109 were 0.90 and 0.25, respectively. As described above, we also proposed to modify the direct PE inputs for these codes for CY 2011.

Comment: Numerous commenters specifically supported the establishment of work RVUs for the DSMT services based on the work RVUs of the similar MNT services, CPT codes 97803 for 15 minutes of individual MNT services and 97804 for 30 minutes of group MNT services. Some commenters explained that addition of work RVUs would lead to higher payment rates for DSMT services, resulting in a significant positive impact on diabetes education practices and increased patient access to care for DSMT services. Several commenters suggested that this change would appropriately recognize the active role many physicians contribute to ensuring that their patients have access to DSMT services and providing care coordination and communication with the multidisciplinary DSMT team members. One commenter concurred with the proposal to update the direct PE inputs for the DSMT HCPCS codes based on those assigned to the HCPCS codes for KDE services.

Response: We appreciate the commenters' support for our proposal to establish work RVUs and to update the direct PE inputs for the DSMT services.

In conducting our review of the public comments on this issue for this final rule with comment period, we examined newly available PFS claims data for same day billings from one provider for a single Medicare beneficiary. In response to that analysis and in accordance with our PFS methodology which values services as delivered to the typical patient, we note that we have made minor adjustments to some of the direct PE inputs for supplies and equipment times for both HCPCS G-codes for DSMT services, G0108 and G0109, under our final CY 2011 policy. We made these refinements after a review of our PFS utilization data indicated that 2 units of HCPCS code G0108 (a total of 60 minutes) were typically billed together on the same day for the same patient, instead of the one unit of HCPCS code G0108 (30

minutes) which was used as the assumption for the typical session at the time of our CY 2011 proposal. As a result, we have assigned half of the amount of the direct inputs for supplies and equipment time in HCPCS code G0420 (60 minutes individual KDE services) to HCPCS code G0108 (30 minutes individual DSMT services). Regarding the direct PE inputs for HCPCS code G0109, we continue to believe that there is a similarity among the group and individual DSMT and KDE services and the education practices when these services are delivered, as reflected in their PFS utilization patterns. For this reason, we have made minor modifications to the PE inputs for HCPCS code G0109 (30 minutes of group DSMT services) to reflect half of each input for HCPCS code G0421 (60 minutes of group KDE services) that parallel the modifications we made for the individual DSMT HCPCS code described previously. We further note that these refinements to the direct PE inputs for DSMT services are based on the final adjustments that were made to the direct PE inputs for HCPCS codes G0420 and G0421 for KDE services, discussed in section V. B.2.e. of this final rule with comment period, because our approach to establishing the direct PE inputs for the DMST HCPCS G-codes is based on the inputs for KDE services.

As a result, the modifications we made to the supplies and equipment inputs for the DSMT HCPCS G-codes, G0108 and G0109, equal half of the same supply and equipment times in the one hour HCPCS G-codes for KDE services, G0420 and G0421.

In addition, because the $200 price of the diabetes educator curriculum does not meet the $500 floor we established for inclusion in the equipment database, we have bundled the diabetes educator curriculum price with the $500 data tracking software one because the patient's curriculum information is typically recorded in the tracking software. The equipment descriptor for the data tracking software was modified to read: Diabetes education data tracking software, includes curriculum. Accordingly, we changed the price input from $500 to $700 and assigned the bundled equipment a total of 4 minutes. In this way, we are including the cost of the curriculum in the direct PE inputs for DSMT services as we proposed for CY 2011, while remaining consistent with the established $500 floor on inclusion of equipment in the PE database.

After consideration of the public comments we received, we are finalizing the proposed work RVUs and direct PE input for DSMT services, with modification to make the PE adjustments described previously. The final CY 2011 direct PE database that lists the direct PE inputs is available on the CMS Web site under the downloads for the CY 2011 PFS final rule with comment period at: *http://www.cms.gov/PhysicianFeeSched/PFSFRN/list.asp#TopOfPage*. The final CY 2011 RVUs for HCPCS codes G0108 and G0109 are displayed in Addendum B to this final rule with comment period.

C. End-Stage Renal Disease Related Services for Home Dialysis (CPT codes 90963, 90964, 90965, and 90966)

1. End-Stage Renal Disease Home Dialysis Monthly Capitation Payment Services (CPT codes 90963, 90964, 90965, and 90966)

In the CY 2004 PFS final rule with comment period (68 FR 63216), we established new Level II HCPCS G-codes for end-stage renal disease (ESRD) monthly capitation payment (MCP) services. For center-based patients, payment for the G-codes varied based on the age of the beneficiary and the number of face-to-face visits furnished each month (for example, 1 visit, 2–3 visits and 4 or more visits). Under the MCP methodology, the lowest payment applied when a physician provided one visit per month; a higher payment was provided for two to three visits per month. To receive the highest payment, a physician would have to provide at least four ESRD-related visits per month. However, payment for home dialysis MCP services only varied by the age of beneficiary. Although we did not initially specify a frequency of required visits for home dialysis MCP services, we stated that we "expect physicians to provide clinically appropriate care to manage the home dialysis patient" (68 FR 63219).

Effective January 1, 2009, the CPT Editorial Panel created new CPT codes to replace the G-codes for monthly ESRD-related services, and we accepted the new codes for use under the PFS in CY 2009. The CPT codes for monthly ESRD-related services for home dialysis patients include the following, as displayed in Table 32 of the CY 2011 PFS proposed rule (75 FR 40101) and reprinted as Table 48 below: 90963, 90964, 90965, and 90966. In addition, the clinical vignettes used for the valuation of CPT codes 90963, 90964, 90965, and 90966 include scheduled (and unscheduled) examinations of the ESRD patient.

Given that we pay for a physician (or nonphysician practitioner (NPP)) to evaluate the ESRD patient over the course of an entire month under the MCP, we believe that it is clinically appropriate for the physician (or NPP) to have at least one in-person, face-to-face encounter with the patient per month. As such, for CY 2011 we proposed to require the MCP physician (or NPP) to furnish at least one in-person patient visit per month for home dialysis MCP services (as described by CPT codes 90963 through 90966). The proposed requirement would be effective for home dialysis MCP services beginning January 1, 2011. As stated in the CY 2011 PFS proposed rule (75 FR 40100), we believe this requirement reflects appropriate, high quality medical care for ESRD patients being dialyzed at home and generally would be consistent with the current standards of medical practice.

Comment: Many commenters stated that a monthly visit embodies the standard of care for home dialysis patients. However, many of the same commenters also stated that it may not always be feasible to furnish a face-to-face visit every month for home dialysis patients due to extenuating circumstances. A number of commenters explained that, in contrast to patients who dialyze in a dialysis center, home dialysis patients would need to travel to the doctor's office (or the physician would need to visit the patient's home) which would be an undue burden on both the physician and the patient. To that end, several commenters urged CMS to provide flexibility in cases where a patient does not show up for their scheduled appointment and for those that cannot travel due to significant geographic distance between the patient and the nephrologist. For example, some specialty societies stated that pediatric home dialysis patients may experience exceptional circumstances due to the scarcity of pediatric nephrologists and remote geographic locations, making the monthly face-to-face visit requirement harder to fulfill. In these circumstances, one commenter requested that CMS consider allowing the MCP physician to furnish at least 1 visit every 3 months and allowing the other monthly visits to be furnished as a telehealth service. Additionally, several commenters explained that the monthly management of a home dialysis patient involves many tasks (in addition to face-to-face visits) including: Reviewing lab tests, treatment data and the dialysis prescription; monitoring the patient's vascular access; and overseeing quality improvement activities (as well as incurring the practice expense

associated with managing the patient's care). The commenters stated that the MCP physician should not be "penalized" if the patient chooses not to attend the monthly visit. Moreover, many of the commenters who agreed that monthly visits are optimal care did not support a monthly visit requirement for the home dialysis MCP service. The commenters stated that the frequency of face-to-face visits should remain at the discretion of the nephrologist and patient. Several of the commenters who did not support a policy change also stated that requiring a monthly visit could create disincentives for providing beneficiaries with home dialysis therapy in circumstances where it may be difficult for the MCP physician to furnish a visit every month. The commenters explained that nephrologists may not want to encourage home dialysis therapy if they will not get paid as a result of a patient "opting out" of a scheduled visit.

Response: We continue to believe that furnishing monthly face-to-face visits is an important component of high quality medical care for ESRD patients being dialyzed at home and generally would be consistent with the current standards of medical practice. However, we also acknowledge that extenuating circumstances may arise that make it difficult for the MCP physician (or NPP) to furnish a visit to a home dialysis patient every month. Therefore, we will allow Medicare contractors the discretion to waive the requirement for a monthly face-to- face visit for the home dialysis MCP service on a case-by-case basis, for example, when the MCP physician's (or NPP's) notes indicate that the MCP physician (or NPP) actively and adequately managed the care of the home dialysis patient throughout the month. Additionally, as we explained in the CY 2004 PFS final rule with comment period (68 FR 63219 through 63220), we also believe that the use of other practitioners working with the MCP physician (or NPP) to furnish the required monthly visit for the home dialysis MCP service could help alleviate scheduling issues and problems related to geographic distance.

With regard to the comment on furnishing the proposed required visit for the home dialysis MCP as a telehealth service, we note that any interested parties may submit requests to add services to the list of Medicare telehealth services. Requests submitted before the end of CY 2010 will be considered for the CY 2012 PFS proposed rule. Requestors should be advised that each request to add a service to the list of Medicare telehealth services must include any supporting documentation the requestor wishes us to consider as we review the request. For more information on submitting a request for an addition to the list of Medicare telehealth services, including where to directly mail these requests, we refer readers to section IV.B. of this final rule with comment period and the CMS Web site at: *http://www.cms.hhs.gov/telehealth*.

Comment: Several commenters stated that the conditions for coverage for dialysis facilities require a monthly interaction between a clinician representing the facility and the home dialysis patient. The commenters believe that the conditions for coverage for dialysis facilities permit flexibility in the monthly visit requirement if the patient chooses to opt out of the monthly visit and requested that CMS align the proposed visit requirement for the home dialysis MCP service with the "flexibility" permitted under the conditions for coverage for dialysis facilities.

Response: With regard to conditions for coverage for dialysis facilities, § 494.90(b)(4) of the regulations specifies that the dialysis facility must ensure that all dialysis patients are seen by a physician, nurse practitioner, clinical nurse specialist, or physician's assistant providing ESRD care at least monthly. Section 494.100 requires "a dialysis facility that is certified to provide service to home patients to ensure that home dialysis services are at least equivalent to those provided to in-facility patients and meet all applicable conditions of this part." In addition, the interpretive guidance for part 494 entitled "Conditions for Coverage for ESRD Facilities" specifies that a monthly visit is required for each home patient by a physician, an advanced practice registered nurse, or a physician assistant. The visit may be conducted in the dialysis facility, at the physician's office, or in the patient's home. The guidelines state that "any patient may choose not to be seen by a physician every month" but also specify that if there is a pattern of a patient consistently missing physician and or practitioner visits, the lack of medical oversight should be addressed with the patient in the plan of care.

The requirement for at least one monthly visit with a clinician associated with the dialysis facility is a condition for coverage for the dialysis facility for purposes of participating in the Medicare program and not a direct factor in determining the payment amount for the dialysis facility. In other words, the clinician visit is not a component of the facility's composite rate. However, as mentioned in the background section, the clinical vignettes used for the valuation of the home dialysis MCP service under the PFS include scheduled (and unscheduled) examinations of the ESRD patient. Given that physician or NPP visits are a factor in determining the PFS payment amount for the home MCP service that is furnished to the typical Medicare beneficiary, we do not believe that the monthly visit requirement for the home dialysis MCP service is analogous to the visit requirement under the conditions for coverage for dialysis facilities that has no implications for setting payment rates under the PFS. Therefore, we do not agree that the visit requirement for the home dialysis MCP service necessarily should be "aligned" with the conditions for coverage for dialysis facilities.

Comment: One commenter suggested that CMS consider structuring the home dialysis MCP similar to the center-based MCP. Under this approach, the commenter suggested that a higher payment amount could be made for home dialysis MCP services with at least one in person, face-to-face visit per month.

Response: We will consider the commenter's suggestion as we continue to develop and refine Medicare payment policy for physicians and practitioners managing patients on dialysis. In the event we decide to make changes in the payment amount(s) for the home dialysis MCP services, we would do so in a future proposed rule where the public would have the opportunity to provide comments as afforded by the rulemaking process.

After consideration of the public comments we received, we are finalizing our CY 2011 proposal, with modification. We will require the MCP physician (or NPP) to furnish at least one in-person patient visit per month for home dialysis MCP services (as described by CPT codes 90963 through 90966). However, Medicare contractors will have the discretion to waive the monthly visit requirement for the home dialysis MCP service on a case-by-case basis.

2. Daily and Monthly ESRD-Related Services (CPT Codes 90951 Through 90970)

In CY 2008, the AMA RUC submitted recommendations for valuing the new CY 2009 CPT codes displayed in Table 48 that replaced the MCP HCPCS G-codes for monthly ESRD-related services. We accepted these codes for use under the PFS.

TABLE 48—MCP CODES RECOGNIZED UNDER THE PFS

MCP Code	Long descriptor
90951	End-stage renal disease (ESRD) related services monthly, for patients younger than 2 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents; with 4 or more face-to-face physician visits per month.
90952	End-stage renal disease (ESRD) related services monthly, for patients younger than 2 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents; with 2–3 face-to-face physician visits per month.
90953	End-stage renal disease (ESRD) related services monthly, for patients younger than 2 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents; with 1 face-to-face physician visit per month.
90954	End-stage renal disease (ESRD) related services monthly, for patients 2–11 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents; with 4 or more face-to-face physician visits per month.
90955	End-stage renal disease (ESRD) related services monthly, for patients 2–11 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents; with 2–3 face-to-face physician visits per month.
90956	End-stage renal disease (ESRD) related services monthly, for patients 2–11 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents; with 1 face-to-face physician visit per month.
90957	End-stage renal disease (ESRD) related services monthly, for patients 12–19 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents; with 4 or more face-to-face physician visits per month.
90958	End-stage renal disease (ESRD) related services monthly, for patients 12–19 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents; with 2–3 face-to-face physician visits per month.
90959	End-stage renal disease (ESRD) related services monthly, for patients 12–19 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents; with 1 face-to-face physician visit per month.
90960	End-stage renal disease (ESRD) related services monthly, for patients 20 years of age and older; with 4 or more face-to-face physician visits per month.
90961	End-stage renal disease (ESRD) related services monthly, for patients 20 years of age and older; with 2–3 face-to-face physician visits per month.
90962	End-stage renal disease (ESRD) related services monthly, for patients 20 years of age and older; with 1 face-to-face physician visit per month.
90963	End-stage renal disease (ESRD) related services for home dialysis per full month, for patients younger than 2 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents.
90964	End-stage renal disease (ESRD) related services for home dialysis per full month, for patients 2–11 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents.
90965	End-stage renal disease (ESRD) related services for home dialysis per full month, for patients 12–19 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents.
90966	End-stage renal disease (ESRD) related services for home dialysis per full month, for patients 20 years of age and older.

There are four additional CPT codes for ESRD-related services that are reported on a per-day basis. These daily CPT codes are: 90967 (End-stage renal disease (ESRD) related services for dialysis less than a full month of service, per day; for patients younger than 2 years of age); 90968 (End-stage renal disease (ESRD) related services for dialysis less than a full month of service, per day; for patients 2–11 years of age); 90969 (End-stage renal disease (ESRD) related services for dialysis less than a full month of service, per day; for patients 12–19 years of age); and 90970 (End-stage renal disease (ESRD) related services for dialysis less than a full month of service, per day; for patients 20 years of age and older).

For the MCP codes displayed in Table 32 of the CY 2011 PFS proposed rule, the AMA RUC initially recommended 36 minutes of clinical labor time for the pre-service period. They also recommended an additional 6 minutes in the post-period for CPT codes 90960, 90961, 90962, and 90966. For the four codes describing daily services (CPT codes 90967 through 90970), the AMA RUC recommended including 1.2 minutes of clinical labor per day, which is the prorated amount of pre-service clinical labor included in the monthly codes. The AMA RUC also recommended that CPT codes 90952 and 90953 be contractor-priced.

In the CY 2009 PFS final rule with comment period (73 FR 69898), we asked the AMA RUC to reconsider their recommended PE inputs in the interest of making certain that they accurately reflected the typical direct PE resources required for these services. In addition, we asked the AMA RUC to review the physician times for CPT codes 90960 and 90961 that are used in the calculation of the PE RVUs. We accepted the work values for the new CPT codes for ESRD-related services that were recommended by the AMA RUC.

Since CY 2009, we have continued to calculate the PE RVUs for the entire series of MCP codes displayed in Table 32 of the CY 2011 PFS proposed rule (75 FR 40101) by using the direct PE inputs from the predecessor HCPCS G-codes, except for CPT codes 90952 and 90953 which are contractor-priced. We have also continued to use the physician time associated with the predecessor HCPCS G-codes for CPT codes 90960 and 90961 for purposes of calculating the PE RVUs.

In CY 2009, the AMA RUC submitted new recommendations for CPT codes 90951 and 90954 through 90970. For each of the MCP codes (CPT code 90951 and CPT codes 90954 through 90966), the AMA RUC recommended an increased pre-service clinical staff time of 60 minutes. For each of the daily dialysis service codes (CPT codes 90967 through 90970), the AMA RUC

recommended an increased clinical labor time of two minutes, which is the prorated amount of clinical labor included in the monthly codes. The AMA RUC also recommended an additional 38 minutes of physician time for CPT codes 90960 and 90961. This resulted in a total physician time of 128 minutes and 113 minutes, respectively, for these codes. The AMA RUC continued to recommend that CPT codes 90952 and 90953 be contractor-priced.

For CY 2011, we proposed to accept these AMA RUC recommendations as more accurate reflections of the typical direct PE resources required for these services. Therefore, we proposed to develop the PE RVUs for CPT code 90951 and CPT codes 90954 through 90970 using the direct PE inputs as recommended by the AMA RUC and reflected in the proposed CY 2011 PE database, which is available on the CMS Web site under the supporting data files for the CY 2011 PFS proposed rule at: *http://www.cms.gov/PhysicianFeeSched/*. We also proposed to use the AMA RUC-recommended physician times for CPT codes 90960 and 90961. Consistent with the AMA RUC's recommendations, we proposed to continue to contractor-price CPT codes 90952 and 90953.

We did not receive public comment on our proposal to accept these AMA RUC recommendations as more accurate reflections of the typical direct PE resources required for these services. Therefore, we are finalizing our CY 2011 proposal to develop the PE RVUs for CPT code 90951 and CPT codes 90954 through 90970 using the direct PE inputs as recommended by the AMA RUC and reflected in the CY 2011 direct PE database, which is available on the CMS Web site under the supporting data files for the CY 2011 PFS final rule with comment period at: *http://www.cms.gov/PhysicianFeeSched/*. We will also use the AMA RUC-recommended physician times for CPT codes 90960 and 90961. Consistent with the AMA RUC's recommendations, we will continue to contractor-price CPT codes 90952 and 90953.

D. Portable X–Ray Set-Up (HCPCS Code Q0092)

When a portable x-ray is furnished to a single patient, as many as four component HCPCS codes may be billed and paid for the service, including the portable x-ray transportation (HCPCS code R0070 (Transportation of portable x-ray equipment and personnel to home or nursing home, per trip to facility or location, one patient seen)); the portable x-ray set-up (HCPCS code Q0092 (Set-up of portable x-ray equipment)); and the professional and technical components of the x-ray service itself (CPT 70000 series). Currently, the direct PE database contains x-ray equipment in both the radiology codes in the 70000 series of CPT and HCPCS code Q0092, the code for the set-up of a portable x-ray. In the technical component of the x-ray service is the direct PE input of a radiology room which contains x-ray equipment for the various radiology codes in the 70000 series of CPT. In addition, portable x-ray equipment is included as a direct PE input for HCPCS code Q0092. Thus, x-ray equipment currently is recognized within the direct PE values for two of the HCPCS codes that would be reported for the portable x-ray service, resulting in an overvaluation of the comprehensive portable x-ray service.

Therefore, for CY 2011 we proposed to remove portable x-ray equipment as a direct PE input for HCPCS code Q0092, in order to pay more appropriately for the x-ray equipment used to furnish a portable x-ray service. We believe the resulting payment for the comprehensive portable x-ray service would more appropriately reflect the resources used to furnish portable x-ray services by providing payment for the x-ray equipment solely through payment for the technical component of the x-ray service that is furnished.

Comment: Several commenters opposed the removal of portable x-ray equipment as a direct PE input for HCPCS code Q0092. The commenters believe the elimination of the equipment from HCPCS code Q0092 is inconsistent with longstanding CMS payment policy recognizing the unique and additional costs incurred by portable x-ray suppliers in furnishing services that involve special equipment requiring extra assembly and disassembly time. In addition, the commenters believe that the proposed equipment elimination conflicts with the statutory mandate of section 1848(c) of the Act that CMS calculate the PFS RVUs based on the actual resources used in furnishing a service because equipment is a legitimate direct PE component of the set-up component service (HCPCS code Q0092).

Response: We agree that x-ray equipment is used to furnish a portable x-ray service and the equipment set-up is reported with HCPCS code Q0092. However, because the portable x-ray set-up service would always be reported along with the technical component of the x-ray service (CPT 70000 series) that already includes x-ray equipment as a direct PE input, to include x-ray equipment again in the PE of the set-up code would clearly be duplicative. Only one item of equipment, that is, a single x-ray machine, is used in furnishing the portable x-ray service. We are, therefore, eliminating the portable x-ray equipment from HCPCS code Q0092 and, instead, recognizing the cost of such equipment in the direct PE for the technical component of the x-ray service.

Comment: According to several commenters, because CMS has not undertaken a review of all combinations of services paid under the PFS that together might comprise a "comprehensive service" to identify potentially duplicative direct PE inputs when the services are furnished together, CMS should refrain from applying the proposed policy to suppliers of portable x-ray services.

Response: While it would require an extensive analysis to review all combinations of PFS services that may be furnished together and identify potentially duplicative PE inputs, the PFS has several longstanding policies that were adopted to provide appropriate payment when certain services are furnished together. For example, existing multiple procedure payment reduction policies reduce payment for the second and subsequent surgical procedures or technical components of imaging services when furnished to the same patient by the same physician on the same day, based partly on the presence of efficiencies in the PE under such circumstances. Furthermore, as discussed in section II.C.4. of this final rule with comment period, we are adopting a new multiple procedure payment reduction policy for CY 2011 for therapy services because of the duplication in the PE when therapy services are furnished together. Finally, we note that for those CPT codes that are designated as add-on codes to primary services, we ensure that the direct PE inputs do not duplicate inputs in the primary services. Given our ongoing efforts to more appropriately value services furnished together, we believe that HCPCS code Q0092 essentially functions as an "add-on" code to the primary service that it generally accompanies, which is the technical component of an x-ray service. Therefore, we believe it is fully consistent with our ongoing efforts to recognize efficiencies through payment policy when multiple services are furnished together to remove the duplicative x-ray equipment from the direct PE inputs for HCPCS code Q0092.

Comment: A few commenters believe that elimination of x-ray equipment in HCPCS code Q0092 would have a negative impact on the financial status

of portable x-ray suppliers who are typically small business owners. According to the commenters, CMS should heed the statutory mandates of the Regulatory Flexibility Act (RFA) which require mitigation of such adverse effects.

Response: We note that the RFA requires only that we analyze regulatory options for small businesses that include a justification for the reason action is being taken, the kinds and number of small entities the rule affects, and an explanation of any meaningful options that achieve the objectives with less significant adverse economic impact on the small entities. The CY 2011 PFS proposed rule included a regulatory impact analysis (75 FR 40230 through 40245), as does section XI.A. of this final rule with comment period. As a specialty, the aggregate impact on portable x-ray suppliers from the PFS changes proposed for CY 2011 was an increase of 8 percent in the proposed rule (75 FR 40232), and it is an increase of 6 percent for CY 2011 as displayed in Table 101 of this final rule with comment period. Therefore, the combined effect of all final PFS policies for CY 2011 will not adversely impact portable x-ray suppliers.

After consideration of the public comments we received, we are finalizing our CY 2011 proposal to remove portable x-ray equipment as a direct PE input for HCPCS code Q0092.

E. Pulmonary Rehabilitation Services (HCPCS Code G0424)

In the CY 2010 PFS proposed rule (74 FR 33614), we proposed to create new HCPCS G-code G0424 (Pulmonary rehabilitation, including aerobic exercise (includes monitoring), per session, per day) to describe the services of a pulmonary rehabilitation (PR) program as specified in section 144(a) of the Medicare Improvements for Patients and Providers Act of 2008 (MIPPA). Using CPT code 93797 (Cardiac rehab without telemetry) as a reference code, we proposed to assign 0.18 work RVUs and 0.01 malpractice RVUs to G0424. To establish PE RVUs, we reviewed the PE inputs of similar services, particularly those of the respiratory therapy HCPCS codes G0237 (Therapeutic procedures to increase strength or endurance or respiratory muscles, face to face, one on one, each 15 minutes (includes monitoring)) and G0238 (Therapeutic procedures to improve respiratory function, other than described by G0237, one on one, face to face, per 15 minutes (includes monitoring)), as well as the cardiac rehabilitation codes, CPT codes 93797 and 93798 (Physician services for outpatient cardiac rehabilitation; with continuous ECG monitoring (per session)). In the CY 2010 PFS final rule with comment period (74 FR 61886), we finalized our proposal with modifications to the code descriptor and PE inputs, as recommended by some commenters.

Based on commenters' recommendations from the CY 2010 PFS final rule with comment period and further information furnished by stakeholders, for CY 2011 we proposed to increase the work RVUs for HCPCS code G0424 to 0.28 for CY 2011 to be comparable to the work RVUs for cardiac rehabilitation with monitoring (CPT code 93798) in view of the monitoring required for HCPCS code G0424.

We also proposed to increase the clinical labor time for the respiratory therapist from 15 minutes to 30 minutes and to crosswalk the PE equipment inputs for HCPCS code G0424 to those for respiratory treatment services (HCPCS code G0238), which include a 1-channel ECG and a pulse oximeter. We retained the treadmill currently assigned to HCPCS code G0424 and adjusted the equipment time to 45 minutes. While several public commenters recommended this equipment, these commenters also requested a full 60 minutes of respiratory therapist time be included in the PE for HCPCS code G0424, comparable to the 15 minutes of respiratory therapist time included in the one-on-one codes for 15 minutes of respiratory treatment services (HCPCS codes G0237 and G0238). However, because pulmonary rehabilitation services reported under HCPCS code G0424 can be furnished either individually or in groups, we believe that 30 minutes of respiratory therapist time would be more appropriate for valuing the typical pulmonary rehabilitation service.

Comment: Many commenters applauded CMS for its proposal to increase the work RVUs for HCPCS code G0424 to 0.28. While the commenters supported the increase in work RVUs in the short term, they believe that an accurate, independent assessment of the work value associated with physician's office-based pulmonary rehabilitation is the only reasonable way to determine actual physician work. The commenters stated that continuing to rely on work values related to cardiac rehabilitation is flawed, noting that the clinical characteristics of the cardiac rehabilitation patient are different from the pulmonary rehabilitation patient. Due to the expected frequency and duration of acute events, the commenters explained that the pulmonary rehabilitation patient would require greater physician involvement.

Response: Until we gain more data and experience on the use of this code to report pulmonary rehabilitation services furnished to Medicare beneficiaries under the new comprehensive benefit, we believe using the work RVUs for cardiac rehabilitation with monitoring (CPT code 93798) as a crosswalk is appropriate for this service. We further note that the crosswalk methodology is commonly used by the AMA RUC in recommending work RVUs to us for new or revised codes.

Comment: A number of commenters generally supported the increase in the clinical labor time for a respiratory therapist from 15 minutes to 30 minutes. While the commenters generally agreed with CMS' reasoning for not increasing the respiratory therapist time to 60 minutes, the commenters noted that in the physician's office setting, pulmonary therapy items and services are routinely provided one-on-one, face-to-face, requiring 60 minutes of individualized therapy services by a respiratory therapist. Some commenters believe that the proposal to increase the respiratory therapist time to only 30 minutes would place physicians at an economic disadvantage in the provision of pulmonary rehabilitation items and services when furnished in an office setting due to the limited amount of office space available to treat more than one patient in the same time period. One commenter suggested that the respiratory therapist time be increased to 45 minutes or that CMS consider the development of a HCPCS code for the provision of pulmonary rehabilitation items and services to patients on a one-on-one, face-to-face per 15 minute basis to ensure that physicians can provide this service in the office setting. Another commenter believed that HCPCS code G0424 is undervalued at 0.46 PE RVUs in comparison to the PE RVUs for other PFS services that are conceptually similar but do not include a treadmill, arm ergometer, monitoring devices, or emergency carts.

Response: Payment for services under the PFS is resource-based, and individual services are valued based upon the resources needed to provide the typical service. As we noted in the CY 2011 PFS proposed rule (75 FR 40103), pulmonary rehabilitation services reported under HCPCS code G0424 can be furnished either individually or in groups and we continue to believe that 30 minutes of respiratory therapist time is appropriate for valuing the typical pulmonary rehabilitation service. We believe that

pulmonary rehabilitation in the physician's office is most commonly furnished to a group of patients, rather than one-on-one for 60 minutes of respiratory therapist time. Regarding the commenter who was concerned that the PE for HCPCS code G0424 was undervalued in comparison to similar services that do not use the equipment necessary for HCPCS code G0424, we note that we have utilized the standard PFS PE methodology to develop the PE RVUs for HCPCS code G0424 based on the direct PE inputs we consider to be appropriate.

Comment: One commenter suggested that the valuing of HCPCS code G0424 is flawed and does not fully account for the inclusion of all professionals who are involved in the pulmonary rehabilitation program, specifically physical therapists. In addition, the commenter referenced the CY 2010 PFS final rule with comment (74 FR 61884) where CMS stated and recognized that physical therapists provide pulmonary rehabilitation services. The commenter believes that by only basing the value on services performed by respiratory therapists, CMS has miscalculated the payment for the comprehensive, multidisciplinary pulmonary rehabilitation program and recommended that CMS create a separate HCPCS code with a higher value that could be used to delineate those patients who require individualized physical therapy within the pulmonary rehabilitation program.

Response: Like all services paid under the PFS, pulmonary rehabilitation is valued based on the staff type who would typically perform this service, a respiratory therapist. Because the items and services furnished by a pulmonary rehabilitation program are individualized, we expect that evaluations and individualized treatments would be conducted by one or more members of the multidisciplinary team of the pulmonary rehabilitation program with the appropriate expertise. Therefore, individualized treatment by a physical therapist would be furnished when required by the patient as part of the pulmonary rehabilitation plan of care. However, we do not believe individualized treatment would be typical and, therefore, we do not believe the creation of a separate HCPCS code with a higher value is necessary to recognize those cases that require individualized physical therapy as part of a pulmonary rehabilitation program.

After consideration of the public comments we received, we are finalizing our CY 2011 proposal to increase the work RVUs for HCPCS code G0424 to 0.28 for CY 2011 to be comparable to the work RVUs for cardiac rehabilitation with monitoring (CPT code 93798). In addition, we are finalizing our CY 2011 proposal to increase the clinical labor time for the respiratory therapist from 15 minutes to 30 minutes and to crosswalk the PE equipment inputs for HCPCS code G0424 to those for respiratory treatment services (HCPCS code G0238), which include a 1-channel ECG and a pulse oximeter.

F. Application of Tissue Cultured Skin Substitutes to Lower Extremities (HCPCS Codes G0440 and G0441)

There are currently two biological products, Apligraf and Dermagraft, which are FDA-approved for the treatment of diabetic foot ulcers. While commonly used by podiatrists for this purpose, these products are also used by other specialists in the treatment of other clinical conditions, such as burns.

Many Medicare contractors have established local coverage determinations specifying the circumstances under which these services are covered. In the case of diabetic foot ulcers, clinical studies of Apligraf application were based on up to 5 treatments over a 12-week period. In contrast, Dermagraft was applied weekly, up to 8 treatments over a 12-week period.

The skin substitute CPT codes were reviewed and new codes were last created by the CPT Editorial Panel for CY 2006. There are currently 2 skin repair CPT codes that describe Apligraf application, one primary code, CPT code 15340 (Tissue cultured allogeneic skin substitute; first 25 sq cm or less) and one add-on code, CPT code 15341 (Tissue cultured allogeneic skin substitute; each additional 25 sq cm, or part thereof (List separately in addition to code for primary procedure)) and 4 codes that describe Dermagraft application, two initial codes based on body area, CPT codes 15360 (Tissue cultured allogeneic dermal substitute, trunk, arms, legs; first 100 sq cm or less, or 1% of body area of infants and children) and 15365 (Tissue cultured allogeneic dermal substitute, face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits; first 100 sq cm or less, or 1% of body area of infants and children) and two add-on codes, CPT codes 15361 (Tissue cultured allogeneic dermal substitute, trunk, arms, legs; each additional 100 sq cm, or each additional 1% of body area of infants and children, or part thereof (List separately in addition to code for primary procedure)) and 15366 (Tissue cultured allogeneic dermal substitute, face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits; each additional 100 sq cm, or each additional 1% of body area of infants and children, or part thereof (List separately in addition to code for primary procedure)).

In the CY 2011 PFS proposed rule (75 FR 40103), we noted that several stakeholders had expressed concern about the appropriateness and equity of the coding and payment for these services, given their similar uses and the office resources required when the products are applied repeatedly over a number of weeks for treatment of lower extremity ulcers. They were concerned that current coding, with the associated payment policies and relative values, does not provide for appropriate payment for the services based on how they are furnished. In addition, some stakeholders believe that the current coding and payment provides a financial incentive for the selection of one tissue cultured product over another, rather than facilitating clinical decision-making based solely on the most clinically appropriate product for the patient's case. For example, the Dermagraft and Apligraf application codes have 90-day and 10-day global periods, respectively, and their current values include several follow-up office visits. When patients are treated periodically with repeated applications of the products over several weeks, the patients may be seen in follow-up by the physician. However, those encounters would not be evaluation and management visits but, instead, would be procedural encounters that would typically be valued differently under the PFS than the follow-up office visits currently included in the values for the Dermagraft and Apligraf application codes. Furthermore, while different stakeholders indicated that debridement and site preparation are variably performed when these products are applied, the CPT codes for Dermagraft application allow separate reporting of these preparation services when they are performed, while the Apligraf application codes bundle these services. Since CY 2006, the PFS has accepted the AMA RUC work and PE recommendations for the Dermagraft and Apligraf application codes and has paid accordingly.

With respect to Medicare payment policy, some Medicare contractors allow the use of modifier −58 (Staged or related procedure or service by the same physician during the postoperative period) to be reported with the skin substitute application codes and provide full payment for the service

each time it is performed, even if the subsequent application(s) is within the global period of the service. Other contractors do not allow the use of modifier −58 and, therefore, provide a single payment for a series of applications over 90 days or 10 days, as applicable to the particular code reported for the product's initial application.

Because of the current inconsistencies in valuing similar skin substitute application services and the common clinical scenarios for their use for Medicare beneficiaries, in the CY 2011 PFS proposed rule (75 FR 40103), we stated that we believe it would be appropriate to temporarily create Level II HCPCS G-codes to report application of tissue cultured skin substitutes applied to the lower extremities in order to provide appropriate and consistent payment for the services as they are commonly furnished. Therefore, we proposed to create two new HCPCS G-codes for CY 2011, GXXX1 (Application of tissue cultured allogeneic skin substitute or dermal substitute; for use on lower limb, includes the site preparation and debridement if performed; first 25 sq cm or less) and GXXX2 (Application of tissue cultured allogeneic skin or dermal substitute; for use on lower limb, includes the site preparation and debridement if performed; each additional 25 sq cm), that would be recognized for payment under the PFS for the application of Apligraf or Dermagraft to the lower limb. These codes would not allow separate reporting of CPT codes for site preparation or debridement. We emphasized that we would expect that the use of these HCPCS G-codes for payment under Medicare would be temporary, while stakeholders work through the usual channels to establish appropriate coding for these services that reflects the current common clinical scenarios in which the skin substitutes are applied. Furthermore, we stated that we would expect to receive recommendations from the AMA RUC for appropriate work values and direct practice expense inputs for the applicable codes, according to the usual process for new or revised codes.

Under the PFS, as a temporary measure, the HCPCS G-codes would be assigned a 0-day global period so payment would be made each a time a covered service was furnished. We proposed to base payment on the physician work relative values and the direct PE inputs for the existing CPT codes for Apligraf application, with adjustments for the global period differences because the HCPCS G-codes and the Apligraf application CPT codes. These CPT codes resemble the new HCPCS G-codes in terms of wound size description and the inclusion of site preparation and debridement in their current values so we believe they appropriately represent the physician work involved in the proposed HPCPCS G-codes. However, we proposed to adjust the work RVUs of the Apligraf application codes to derive the HCPCS G-code proposed CY 2011 work values by extracting the values for any office visits and discharge day management services because the HCPCS G-codes have a 0-day global period. In addition, we proposed to adjust the direct PE inputs of the Apligraf application codes to develop the proposed CY 2011 direct PE inputs of the HPCPS G-codes that have a 0-day global period.

Our crosswalks and adjustments resulted in proposed CY 2011 work RVUs of 2.22 for HPCPCS code GXXX1 and 0.50 for HCPCPS GXXX2. The proposed direct PE inputs for HCPCS codes GXXX1 and GXXX2 are included in the direct PE database for the CY 2011 proposed rule that is posted on the CMS Web site at: *http://www.cms.gov/PhysicianFeeSched/PFSFRN/list.asp.*

We noted that many Medicare contractors currently have local coverage policies that specify the circumstances under which Medicare covers the application of skin substitutes. The local coverage policies may include diagnostic or prior treatment requirements, as well as frequency limitations on the number and periodicity of treatments. We stated our expectation that these policies would be updated in the context of the temporary new HCPCS G-codes that we proposed for use in CY 2011 to report the application of tissue cultured allogeneic skin or dermal substitutes. We proposed to establish the HCPCS G-codes for temporary use in CY 2011 in order to improve the consistency and resource-based nature of PFS payments for skin substitute application services that require similar resources. However, we noted our continued interest in ensuring that skin substitutes are properly utilized for Medicare beneficiaries who will benefit from that treatment. We indicated that we would continue to monitor the utilization of these services and plan to identify any concerning trends in utilization that contractors may want to examine further through medical review or other approaches.

Comment: While acknowledging concerns with the existing CPT codes for the application of skin substitutes, several commenters opposed the proposed HCPCS G-codes because the commenters believe that CMS should wait for new codes to be created by the CPT Editorial Panel and the associated recommendations to be developed by the AMA RUC for physician work and direct PE inputs for any new codes. The commenters argued that CMS' proposal to create new temporary codes would circumvent or otherwise influence the well-established processes already underway to address issues identified by the stakeholders. Several commenters pointed out that CMS' proposal would not treat the application of skin substitutes that are not tissue cultured similarly to the procedures for the application of Apligraf and Dermagraft. Because these commenters argued that inconsistencies in coding and payment for the other products would continue, several commenters recommended that CMS await a more comprehensive solution from the CPT Editorial Panel.

On the other hand, a number of commenters supported the proposal to establish the two new HCPCS G-codes, and a few of these commenters recommended no changes to the proposed HCPCS code descriptors. However, one commenter who generally supported the proposal recommended that CMS expand the proposed HCPCS code descriptors to incorporate the application of a broader range of skin substitutes that were not tissue cultured, specifically to include the application of biologically active skin substitutes.

Another commenter requested that CMS clarify the meaning of "dermal substitute." This commenter also requested that CMS delete the words "for use on lower limb" and allow the new codes to be used for application of tissue cultured skin or dermal substitutes on locations other than the lower limb. Consistent with this perspective, the commenter further recommended that CMS not recognize the existing CPT codes for application of Apligraf and Dermagraft on other areas of the body. The commenter argued that, as proposed, the HCPCS G-codes would lead to confusion and the potential for fraudulent billing because both a HCPCS G-code and a CPT code could describe the application of the same product to the lower extremities. The commenter believes that CMS should only recognize the proposed G-codes under the PFS for the application of tissue cultured skin or dermal substitutes to any body site, to allow for consistency in reporting and payment of these services.

Several commenters requested that CMS provide guidance on the proper use of the current CPT codes and new HCPCS G-codes for reporting the application of skin substitutes. Other

commenters were concerned that the temporary HCPCS G-codes could create confusion, disrupt physician's office billing policies, and otherwise burden coding staff and advised CMS to not finalize the proposal.

Response: We appreciate the perspectives of stakeholders and we share the commenters' desire for appropriate and consistent payment that is resource-based for the application of skin substitutes as these services are commonly furnished for appropriate clinical indications. We appreciate and value the work of the CPT Editorial Panel in evaluating the complexities and nuances in this area and look forward to reviewing any new codes created for CY 2012 or later years and the AMA RUC recommendations for the physician work and direct PE inputs for those new codes. We note that there are no new codes for CY 2011 that describe the application of skin substitutes and, therefore, new codes would not be available before CY 2012 at the earliest.

In proposing to create two temporary HCPCS G-codes for CY 2011, we sought a fair and balanced temporary alternative to provide appropriate and equitable payment for the application of tissue cultured skin or dermal substitutes to the lower extremities. While we understand from stakeholders that the work of the CPT Editorial Panel is ongoing in this area, our proposal was specifically to establish temporary HCPCS G-codes that would allow for more appropriate reporting and payment under certain scenarios in the short term while a more comprehensive solution is being developed and refined by expert advisors. Because our proposal was so limited in scope and temporary, clearly it was not our intention to circumvent or unduly influence the CPT Editorial Panel or the AMA RUC as these groups proceed in their comprehensive work to establish new codes and values for the application of skin substitutes. We would also not expect that the characteristics of the temporary HCPCS G-codes, in terms of terminology in the code descriptors, global periods, work values, or direct PE inputs, should shape or otherwise affect the ongoing work of stakeholders who are developing a complete approach to coding for the application of skin substitutes. We acknowledge that new CPT codes and their AMA RUC-recommended values and direct PE inputs arising from these processes may appropriately differ in one or multiple characteristics from the temporary HCPCS G-codes.

With regard to the commenters who were concerned about the limited scope of our proposal and suggested that we not proceed or that we broaden the scope of the proposed code descriptors to address inequities and inconsistencies that the commenters believe would persist under our proposal, we believe that the limited proposal continues to be the most appropriate temporary approach for CY 2011. First, it was not our intention to comprehensively address the issue of coding revisions for the application of skin substitutes because we are aware of the ongoing work of the CPT Editorial Panel in this area and would not want to undermine its deliberative process. Moreover, based on the public comments we received, we have reason to believe that a revised coding structure for the application of skin substitutes will be available soon. Second, the HCPCS G-codes that we proposed had a 0-day global period based on the FDA-approved indications and regimens for the application of the tissue cultured products to which the codes would apply, and we are not certain to what extent a 0-day global period would be appropriate for the application of other skin substitutes. Third, while several commenters provided suggestions regarding alternative language that could be used in the HCPCS G-code descriptors, it is unclear which skin substitutes products would be incorporated under the revised terms. Some of the suggested alternatives would use phrases such as "biologically active" that, as far as we know, are not fully defined in the medical community and are not currently used in the CPT code descriptors that describe the application of skin substitutes. Because of our uncertainty in this regard, we would be hesitant to make such significant revisions to the HCPCS G-code descriptors without the opportunity for public notice and comment, which would allow stakeholders the opportunity to provide input about revised code descriptors and the appropriateness of the values for the HCPCS G-codes. In contrast, our proposal relied upon the use of terms in the HCPCS G-code descriptors that are already included in the descriptors for established CPT codes and, therefore, we do not believe we would be setting a precedent that would affect the current work of the CPT Editorial Panel on this issue. Finally, we do not see a need to further clarify terms, such as "dermal substitute," in the HCPCS G-code descriptors because these are currently used in the CPT code descriptors and the same definitions would apply to the G-codes.

Furthermore, we believe it would continue to be appropriate to recognize the existing CPT codes for the application of tissue cultured skin or dermal substitutes to areas of the body other than the lower extremities. We established the 0-day global period, the physician work values, and the direct PE inputs for the proposed HCPCS G-codes based on the specific clinical scenarios where Apligraf or Dermagraft would be applied to treat lower extremity ulcers. We do not necessarily believe that the same global periods and values would be appropriate for the application of these products to other body areas under different clinical scenarios. The usual coding guidance that providers should report the most specific HCPCS code that describes the service furnished would apply in the case of the application of Apligraf or Dermagraft. If one of these products were applied to the lower extremities, we would expect the HCPCS G-codes to be reported, rather than the CPT codes, as the HCPCS G-codes are more specific to application in that body area.

Finally, because it is our common practice to create one or more new HCPCS G-codes for payment under the PFS each year, we believe that physicians' offices are experienced in integrating new codes into the reporting of services furnished and paid under the PFS. Not only are local coverage determinations commonly applicable to the application of skin substitutes, we also understand that there are a subset of physicians who regularly apply tissue cultured skin or dermal substitutes to lower extremities to treat ulcers. In this context, we believe that our national educational efforts, in addition to education by local contractors, will quickly disseminate information to the relevant practitioners about these new HCPCS G-codes and their appropriate use in CY 2011.

After consideration of the public comments we received, we are finalizing our proposal, with editorial modification, to create two new HCPCS G-codes for reporting the application of tissue cultured skin substitutes and dermal substitutes to the lower extremities in CY 2011. For internal consistency, we are changing the descriptors of HCPCS codes GXXX1 and GXXX2 from the proposed language to both refer to "skin substitute or dermal substitute." HCPCS code GXXX2 as proposed read "Application of tissue cultured allogeneic skin or dermal substitute; for use on lower limb, includes the site preparation and debridement if performed; each additional 25 sq cm." The final codes are HCPCS code G0440 (Application of

tissue cultured allogeneic skin substitute or dermal substitute; for use on lower limb, includes the site preparation and debridement if performed; first 25 sq cm or less) and HCPCS code G0441 (Application of tissue cultured allogeneic skin substitute or dermal substitute; for use on lower limb, includes the site preparation and debridement if performed; each additional 25 sq cm) that will be recognized for payment under the PFS in CY 2011.

Comment: A number of commenters supported the assignment of a 0-day global period to the application of tissue cultured skin or dermal substitutes. Many expressed the view that assigning a 0-day global period to the codes would allow the products to be prescribed and administered based on their clinical value, without concern for payment differences between products. The commenters who did not support the 0-day global period were those who believe that the proposal would further payment inequities between products used similarly. For example, one commenter reasoned that, insofar as a patient is likely to require multiple administrations of a skin substitute product during a 90-day period, providers would have a significant incentive to use the products whose application would be reported under the proposed codes rather than a product whose application procedure continues to have a 90-day global period.

Another commenter addressed the bundling of site preparation and debridement into the proposed HCPCS codes GXXX1 and GXXX2. The commenter argued that the proposed values for the new codes HCPCS G-codes would not be sufficient to account for this work. The commenter recommended that the proposed values should be adjusted upward or separate payment should be allowed for site preparation and/or debridement.

In reviewing CMS' proposed methodology for setting the physician work values for the HCPCS G-codes, one commenter contended that CMS should finalize a total of 2.86 works RVUs for GXXX1 instead of the proposed 2.22 work RVUs. The commenter claimed that the work RVUs for GXXX1 should be crosswalked from CPT code 15340 less only the physician work for the two post-procedure visits in CPT code 15340 which are not included in HCPCS code GXXX1.

Another commenter recommended that CMS review the proposed PE inputs for the new HCPCS G-codes. Specifically, the commenter explained that the only difference in clinical labor time between CPT code 15340 and HCPCS code GXXX1 should be an adjustment to account for the difference in the global period (10 days for CPT code 15340 and 0 days for HCPCS code GXXX1). The commenter also stated that HCPCS code GXXX1 should include all the pre-service clinical staff time in CPT code 15340, yet did not for the proposed rule. The commenter was unclear on whether the post-service clinical labor time was properly adjusted to account for the change in global period from CPT code 15340 to HCPCS code GXXX1.

Response: We agree with the commenters that a 0-day global period is the most appropriate for the application of tissue cultured skin substitutes or dermal substitutes to the lower limb for purposes of the temporary HCPCS G-codes, pending a comprehensive change in coding established by the CPT Editorial Panel. As discussed in the previous response, we sought a fair and balanced temporary solution to provide appropriate and consistent payment for the application of tissue cultured skin substitutes or dermal substitutes to the lower limb. The commenters who did not support the 0-day global period were those who were more broadly against the creation of the new HCPCS G-codes codes because of potential payment imbalances between products that would be included in the new codes and those that would not be. No commenters asserted that the 0-day global period would be inappropriate for the codes to which we proposed to apply that period.

The proposed physician work values for HCPSC G-codes G0440 and G0441 (proposed as HCPCS codes GXXX1 and GXXX2, respectively) were crosswalked, with adjustment for the different global periods, from CPT codes 15340 and 15341. CPT codes 15340 and 15341 currently include site preparation and debridement and, as such, the additional reporting of a separate CPT code for these activities, if performed on the same site as the skin substitute application procedure, is not permitted. We believe that the values for both the current CPT codes and the HCPCS G-codes are clinically appropriate for the services they describe, with payment for site preparation and debridement bundled if furnished.

In response to a commenter's concern, we reviewed the proposed valuation of the physician work for HCPCS codes G0440 and G0441 to ensure consistency with our proposed methodology, and we continue to believe that the appropriate work value for HCPCS code G0440 is 2.22 RVUs as we proposed. HCPCS code G0440 was crosswalked to CPT code 15340, with adjustments to account for the 0-day global period of the HCPCS G-code. CPT code 15340, with a 10-day global period, is currently valued to include two CPT code 99212 (level 2 established patient office or other outpatient visit) post-operative visits (0.48 RVUs each, 0.96 RVUs total) and half of one CPT code 99238 (Hospital discharge day management; 30 minutes or less) visit (1.28 RVUs each, 0.64 RVUs total). CPT code 15340 has a current total physician work value of 3.82 RVUs. To adjust for the 0-day global period for the minor procedure described by HCPCS code G0440, we believe it would be appropriate to deduct the value of both the two post-operative office visits and the discharge day visit. In the case of post-operative office visits, these may be separately reported and paid if medically reasonable and necessary. In addition, we also do not believe that a half discharge day visit should be a building block based on the clinical characteristics of the procedure described by HCPCS code G0440. When we make these adjustments to the work value of 3.82 RVUs for CPT code 15340, 2.22 work RVUs, the value we proposed for HCPCS code G0440, remain.

We also reviewed the proposed PE inputs included in the direct PE database for the CY 2011 PFS proposed rule. Like the physician work values, to determine the PE inputs we crosswalked HCPCS code G0440 from CPT code 15340 and HCPCS code G0441 from CPT code 15341. As one commenter observed, the difference in the values should reflect the shift from a 10-day global period to a 0-day global period. However, for PE inputs, the change in global period typically affects both the pre- and post-service PE inputs. To establish the post-operative clinical labor time for HCPCS code G0440, we subtracted out the time associated with the two CPT code 99212 visits that were removed (32 minutes total) and the half discharge day visit (19 minutes total) that was eliminated, bringing the post-operative clinical labor time down from 54 minutes to three minutes. For the pre-service activities, while 0-day global period procedures generally have 0 minutes of pre-service clinical labor time allocated to them, we believe that 5 minutes in the nonfacility setting and 10 minutes in the facility setting reflect more appropriate pre-service clinical labor times in the instance of HCPCS code G0440. These revised pre- and post-service clinical labor times were reflected in the proposed CY 2011 direct PE database for HCPCS code G0440.

While we valued the physician work and clinical labor time PE inputs

according to the crosswalk methodology as described in the CY 2011 PFS proposed rule (75 FR 40103 through 40104), upon review of the new CY 2011 HCPCS G-codes for this final rule with comment period, we noticed that we had not applied the proposed methodology to the PE inputs for equipment and supplies. Therefore, consistent with our proposal, we have adjusted the supply and equipment PE inputs for HCPCS codes G0440 and G0441 in the final CY 2011 PE database to reflect the shift to a 0-day global period from a 10-day global period for these HCPCS codes. As the equipment and supply PE inputs for the 10-day global period CPT codes reflect those necessary for multiple visits to the provider, the equipment and supply inputs for the new HCPCS G-codes codes should reflect more appropriate values for codes with a 0-day global period.

After consideration of the public comments we received, we are finalizing our proposal to value HCPCS codes G0440 and G0441 as 0-day global procedures into which site preparation and debridement are bundled. As we proposed, under our final policy we have crosswalked the physician work RVUs and direct PE inputs from CPT codes 15340 and 15341 to HCPCS codes G0440 and G0441, respectively, with adjustments. We have adjusted the work RVUs and the direct PE inputs (clinical labor, equipment, and supplies) to reflect the shift from a 10-day global period to a 0-day global period for the new HCPCS G-codes.

Comment: Several commenters were concerned about the use of the -58 modifier for 10-day and 90-day global surgical procedures for the application of skin substitutes when repeated application of a product within the global period is the typical case. The commenters were largely supportive of eliminating the use of the -58 modifier for the two new HCPCS codes which, the commenters remarked, has been the source of some confusion and has been interpreted inconsistently by Medicare contractors. The commenters explained that the change to a 0-day global period would result in no need for the -58 modifier to be reported with the HCPCS G-codes. Several commenters recommended that CMS provide guidance on use of the -58 modifier with the existing CPT codes for the application of skin substitutes, most of which have 90-day global period and all of which would continue to be recognized for payment under the PFS.

Response: Assignment of a 0-day global period for the two HCPCS G-codes eliminates the need for use of the -58 modifier with these two new codes. We recognize that the -58 modifier may continue to be used in conjunction with the other CPT codes with 10-day or 90-day global periods for the application of skin substitutes. Specific determinations of the appropriate use of the -58 modifier will continue to be the responsibility of individual Medicare contractors.

In summary, after consideration of the public comments we received, we are finalizing our CY 2011 proposal, with modification to adjust the supply and equipment direct PE inputs, as well as editorial modification to the code descriptors for consistency, to create two new HCPCS G-codes for CY 2011, G0440 (Application of tissue cultured allogeneic skin substitute or dermal substitute; for use on lower limb, includes the site preparation and debridement if performed; first 25 sq cm or less) and G0441 (Application of tissue cultured allogeneic skin substitute or dermal substitute; for use on lower limb, includes the site preparation and debridement if performed; each additional 25 sq cm), that will be recognized for payment under the PFS for the application of products described by the codes to the lower limb. These codes do not allow separate reporting of CPT codes for site preparation or debridement. Providers reporting the application of tissue cultured allogeneic skin substitute or dermal substitutes to the lower limb for payment under the PFS in CY 2011 should report HCPCS code G0440, along with HCPCS code G0441 if applicable based on wound size, and not CPT code 15340, 15341, 15360, 16361, 15365, or 15366.

Under the PFS, as a temporary measure, the HCPCS G-codes are assigned a 0-day global period so payment is made each a time a covered service is furnished. As proposed, we are basing payment on the physician work relative values and the direct PE inputs for the existing CPT codes 15340 and 15341 for Apligraf application, with adjustments for the global period differences between the HCPCS G-codes and the Apligraf application CPT codes. However, as we proposed, we have adjusted the work RVUs of the Apligraf application codes to derive the final CY 2011 HCPCS G-code work values by extracting the values for any office visits and discharge day management services because the HCPCS G-codes have a 0-day global period. In addition, with modifications of our proposed PE equipment and supply inputs to be fully consistent with our crosswalk proposal, we have adjusted the direct PE inputs of the Apligraf application codes to develop the final CY 2011 direct PE inputs for the HPCPS G-codes that have a 0-day global period.

Our crosswalks and adjustments result in CY 2011 final work RVUs of 2.22 for HCPCS code G0440 and 0.50 for HCPCS G0441. The final direct PE inputs for HCPCS codes G0440 and G0442 are included in the direct PE database for the CY 2011 PFS final rule with comment period rule.

G. Canalith Repositioning (CPT code 95992)

For CY 2009, CPT created a new code for canalith repositioning, specifically CPT code 95992 (Canalith repositioning procedure(s) (eg, Epley maneuver, Semont maneuver), per day). This service may be furnished by both physicians and therapists. Although we accepted the AMA RUC-recommended work RVUs and PE inputs, we initially bundled this procedure on an interim basis in the CY 2009 PFS final rule with comment period (73 FR 69896), indicating that we believed it would be paid through the E/M service that it would accompany. Subsequently, in view of concerns from therapists who cannot furnish E/M services, we clarified that therapists could report one of the generally defined therapy CPT codes when canalith repositioning was furnished. In the CY 2010 PFS final rule with comment period (74 FR 61766), we changed the code's status under the PFS to "not recognized for payment under Medicare," consistent with our expectation that another payable code would be reported when the service was furnished.

Based on further information from stakeholders regarding the distinct and separate nature of this procedure from an E/M service and their request that we recognize this CPT code for payment, similar to our separate payment for most other procedures commonly furnished in association with an E/M service, we proposed to recognize CPT code 95992 for payment under the CY 2011 PFS, consistent with our typical treatment of most other codes for minor procedures. In doing so, we proposed to change the code's status to "A" and utilize the CY 2009 RUC recommendations for work RVUs (0.75) and PE inputs for establishing its payment in CY 2011. (That is, status "A" means Active code. These codes are separately payable under the PFS if covered.) Because canalith repositioning (CPT code 95992) can be furnished by physicians or therapists as a therapy service under a therapy plan of care or by physicians as physicians' services outside of a therapy plan of care, we would add CPT code

95992 to the "sometimes therapy" list on the therapy code abstract file.

Comment: Many commenters supported CMS' proposal to acknowledge the distinct and separate nature of CPT code 95992 from an E/M service by recognizing CPT code 95992 for separate payment and agreed with the proposed use of the AMA RUC-recommended values for work RVUs (0.75) and PE inputs for establishing payment in CY 2011.

Response: We appreciate the commenters' support for our proposal.

After consideration of the public comments we received, we are finalizing our CY 2011 proposal to recognize CPT code 95992 for payment under the PFS. As a result, the code's status has been changed to "A" in Addendum B to this final rule with comment period and the CY 2009 AMA RUC recommendations for work RVUs (0.75) and PE inputs will be used for establishing its payment in CY 2011. (That is, status "A" means Active code. These codes are separately payable under the PFS if covered.) CPT code 95992 has also been added to the "sometimes therapy" list on the therapy code abstract file.

H. Intranasal/Oral Immunization Codes (CPT codes 90467, 90468, 90473, and 90474)

To ensure that the PE RVUs are consistent between the intranasal/oral and injectable immunization administration CPT codes that describe services that utilize similar PE resources, we proposed to crosswalk the PE values for CPT code 90471 (Immunization administration (includes percutaneous, intradermal, subcutaneous, or intramuscular injections); one vaccine (single or combination vaccine/toxoid)) to CPT codes 90467 (Immunization administration younger than age 8 years (includes intranasal or oral routes of administration) when the physician counsels the patient/family; first administration (single or combination vaccine/toxoid), per day) and 90473 (Immunization administration by intranasal or oral route; one vaccine (single or combination vaccine/toxoid)).

Similarly, we also proposed to crosswalk the PE values for CPT code 90472 (Immunization administration (includes percutaneous, intradermal, subcutaneous, or intramuscular injections); each additional vaccine (single or combination vaccine/toxoid) (List separately in addition to code for primary procedure)) to CPT codes 90468 (Immunization administration younger than age 8 years (includes intranasal or oral routes of administration) when the physician counsels the patient/family; each additional administration (single or combination vaccine/toxoid), per day (List separately in addition to code for primary procedure)) and 90474 (Immunization administration by intranasal or oral route; each additional vaccine (single or combination vaccine/toxoid) (List separately in addition to code for primary procedure)).

Comment: Many commenters expressed support for the proposal. One commenter questioned why the PE values are currently different and several other commenters urged CMS to utilize the AMA RUC recommendations and the resource-based methodology to develop PE RVUs for these services in CY 2011, rather than crosswalk the PE RVUs.

Response: We appreciate the support from the commenters for our proposal. We would note that, even with the same direct PE inputs, somewhat different PE RVUs for the various CPT codes may result from our PE methodology that relies upon the historical specialty mix, as reflected in the most recent PFS utilization data, of providers who furnished the services to allocate the indirect PE. Therefore, because we believe it is especially important to have consistent PE values for payment of these similar services under the PFS, we are unable to utilize the AMA RUC direct PE input recommendations and the resource-based methodology to develop PE RVUs for these services. While in general we value services under the PFS with reference to the direct PE inputs recommended by the AMA RUC and our standard resource-based approach to establishing PE RVUs, we note that we also commonly use crosswalks to other similar codes to establish the values for services in certain circumstances. In this instance, we believe a crosswalk is particularly appropriate in order to maintain appropriate relativity between similar services and avoid the potential for non-clinically-based bias in favor of one vaccine administration technique over another.

Comment: A few commenters questioned why the CY 2011 proposed rule referenced "physician" counseling when identifying CPT codes 90467 and 90468 and requested clarification that nurse practitioners (NPs) and physician assistants (PAs) also be included within the scope of this proposal.

Response: We would like to clarify that the reference to "physician" counseling noted by the commenters is part of the official CPT code descriptors for CPT codes 90467 and 90468. Consistent with our usual interpretation of CPT codes that include the term physician in the code descriptor, for Medicare payment purposes this specificity does not exclude NPs or PAs from providing counseling to the patient/family that is within the NP's or PA's scope of practice.

Comment: Several commenters recommended modifying the proposal by crosswalking the PE RVUs for CPT code 90466 (Immunization administration younger than age 8 years of age (includes percutaneous, intradermal, subcutaneous, or intramuscular injections) when the physician counsels the patient/family; each addition injection (single or combination vaccine/toxoid) per day (List separately in addition to code for primary procedure)) to CPT code 90468 to achieve parity and reflect the additional clinical time and other practice expenses expended to provide immunizations to young children.

Response: For CY 2011, the CPT Editorial Panel revised the reporting of immunization administration services for the pediatric population. As a result, CPT codes 90466 and 90468 have been deleted and replaced with CPT code 90461 (Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health professional; each additional vaccine/toxoid component (List separately in addition to code for primary procedure)). In addition, CPT codes 90465 (Immunization administration younger than 8 years of age (includes percutaneous, intradermal, subcutaneous, or intramuscular injections) when the physician counsels the patient/family; first injection (single or combination vaccine/toxoid), per day) and 90467 were deleted and replaced with CPT code 90460 (Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care professional; first vaccine/toxoid component).

We agree with the commenters who believe that consistency in the PE RVUs across CPT codes with different code descriptors reflecting immunization services to different populations or using different routes of administration is desirable. As a matter of longstanding policy (69 FR 66307), we have crosswalked the nonfacility PE value from CPT code 96372 (Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); subcutaneous or intramuscular) [predecessor CPT codes 90782 and 90772] to the PE values for CPT code 90471 and to the HCPCS G-codes for administration of specific vaccines. We

will continue this crosswalk for CY 2011 and, as we proposed, also crosswalk the nonfacility PE value of CPT code 90471 to CPT code 90473. The PE value for CPT code 90472 is based on the direct PE inputs for that code, according to the usual PFS methodology. We will crosswalk the nonfacility PE value of CPT code 90472 to CPT code 90474 for CY 2011 as we proposed. Finally, we are modifying our CY 2011 proposal and crosswalking the nonfacility PE RVUs for CPT codes 90472 and 90474 to new CPT code 90461 (replacement code for CPT codes 90466 and 90468) for CY 2011. In addition, we will crosswalk the nonfacility PE RVUs for CPT codes 90471 and 90473 to new CPT code 90460 (replacement code for CPT codes 90465 and 90467).

After consideration of the public comments we received and the CY 2011 changes in codes for pediatric immunization services by the CPT Editorial Panel, we are finalizing our CY 2011 proposals, with the following modifications. In summary, for CY 2011 we will—

- Crosswalk the nonfacility PE RVUs for CPT codes 90472 and 90474 to new CPT code 90461; and
- Crosswalk the nonfacility PE RVUs for CPT codes 90471 to 90473 to new CPT code 90460.

I. Refinement Panel Process

As discussed in the 1993 PFS final rule with comment period (57 FR 55938), we adopted a refinement panel process to assist us in reviewing the public comments on interim physician work RVUs for CPT codes with an interim final status in each year and developing final work values for the subsequent year. We decided that the panel would be comprised of a multispecialty group of physicians who would review and discuss the work involved in each procedure under review, and then each individual would individually rate the work of the procedure. We believed that establishing the panel with a multispecialty group would balance the interests of those who commented on the work RVUs against the budgetary and redistributive effects that could occur if we accepted extensive increases in work RVUs across a broad range of services. Historically, the refinement panel has based its recommendation to change a work value or to retain the interim value has hinged solely on the outcome of a statistical test on the ratings (an F-test).

Depending on the number and range of codes that public commenters, typically specialty societies, request be subject to refinement, we establish refinement panels with representatives from 4 groups of physicians: Clinicians representing the specialty most identified with the procedures in question; physicians with practices in related specialties; primary care physicians; and contractor medical directors (CMDs). Typically the refinement panels meet in the summer prior to the promulgation of the final rule finalizing the RVUs for the codes. Typical panels have included 8 to 10 physicians across the 4 groups. Over time, the statistical test used to evaluate the RVU ratings of individual panel members have become less reliable as the physicians in each group have tended to select a previously discussed value, rather than independently evaluating the work. In addition, the resulting RVUs have occasionally exhibited rank order anomalies (that is, a more complex procedure is assigned lower RVUs than a less complex procedure).

Recently, section 1848(c)(2)(K) of the Act (as added by section 3134 of the ACA) authorized the Secretary to review potentially misvalued codes and make appropriate adjustments to the relative values. In addition, MedPAC has encouraged CMS to critically review the values assigned to the services under the PFS. MedPAC has stated its belief that CMS has historically relied too heavily on specialty societies to identify services that are misvalued by accepting a high proportion of the recommendations of the AMA RUC.

We believe the refinement panel process continues to provide stakeholders with a meaningful opportunity to review and discuss the interim work RVUs with a clinically diverse group of experts which then provides informed recommendations to CMS. Therefore, in the CY 2011 proposed rule (75 FR 40105), we indicated that we would like to continue the refinement process, including the established composition that includes representatives from the 4 groups of physicians, but with administrative modification and clarification. Specifically, for refinement panels beginning in CY 2011 (that is, for those codes with CY 2011 interim values that would be subject to refinement during CY 2011), we proposed to eliminate the use of the F-test and instead base revised RVUs on the median work value of the panel members' ratings. We believe this approach will simplify the refinement process administratively, while resulting in a final panel recommendation that reflects the summary opinion of the panel members based on a commonly used measure of central tendency that is not significantly affected by outlier values. In addition, we clarified that we have the final authority to set the RVUs and, therefore, may make adjustments to the work RVUs resulting from refinement if policy concerns warrant their modification.

Comment: Most commenters expressed support for the proposal to eliminate the F-test, including the increased transparency of the refinement panel process that the commenters believe would result from this change. Many commenters, including the AMA RUC, agreed with the use of the median work value of the panel members' ratings and believe the median would provide a clearer view of the central tendency of the estimates provided by the survey respondents. On the other hand, several commenters believe the current process is effective and eliminates the effects of agreement between the panel members' ratings.

The AMA RUC recommended that CMS be mindful when assigning individuals to the refinement panel to ensure that all members, including CMDs, are not from the same specialties that were involved in the public comment originating the issue under review. Another commenter cautioned CMS that the refinement panels need to be balanced and should ensure that there is at least one representative on the panel who has direct experience with the procedure or service under review.

Response: We appreciate the support of the commenters regarding our proposal to use the median work value of the panel members' ratings and will move forward to finalize our proposal for refinement panels beginning in CY 2011 (refinement of CY 2011 new/revised codes with interim values).

When identifying individuals for the refinement panel, including CMDs, we attempt to select individuals from each of the different specialties with an interest in the codes being refined, not just the specialty or specialties responsible for the public comment originating the request for refinement. We also take steps to ensure that the panel members have direct experience and knowledge of the procedure or service under review. We will certainly continue our efforts in this regard. However, we note that in recent years the number of physicians who are available to participate in the refinement panel has been limited at times, and some specialty societies have had difficulty obtaining representation for the panel.

Comment: Several commenters urged CMS to use a methodology that would allow the AMA RUC-recommended value to prevail when appropriately supported by the pertinent specialty societies and when the value is strongly supported by the rank order and resources of the procedure, since the PFS final rule with comment period is the first opportunity for the public to see the RVUs for the coming calendar year. These commenters also believe a full and fair review process is warranted prior to the publication of these values in the final rule with comment period.

Response: We note that PFS payments for services are resource-based. When reviewing the AMA RUC recommendations, our decisions to value services are based on the resources needed to perform the typical service and, therefore, these decisions are based upon a thorough review of the AMA RUC recommendations in the context of the specific new or revised codes. In those cases where we reject the AMA RUC recommendations, we publish our rationale in the PFS final rule with comment period where we first make the values public. These values are published as interim final values that are subject to public comment. The public comment period serves as the opportunity for public review and we see no other alternative to this timing, given the timeframes in which the new or revised CPT codes and the AMA RUC recommendations regarding their values are available to us and in which the new or revised CPT codes must be incorporated into the PFS for payment.

Comment: Several commenters expressed concerns about the proposal to allow CMS to have the final authority to set the work RVUs if policy concerns warrant modifications to the values derived from the refinement process. These commenters opposed this proposal and recommended that the decisions of the refinement panels remain unchanged by CMS. The commenters believe a major strength of the current process is that is gives stakeholders a strong incentive to participate, knowing that the outcomes of the process will not be overturned by CMS.

Response: Although we appreciate the concerns raised by the commenters, by law, we retain the final responsibility and authority to set the RVUs and, therefore, may make adjustments to the work RVUs resulting from refinement if policy concerns (such as a rank order anomaly) warrant their modifications.

Comment: One commenter urged CMS to make the refinement process transparent and open to the public.

Response: We believe our proposal would make the refinement process more transparent, as noted by some commenters. We further believe that representation from specialty societies as part of the AMA RUC process for valuing the codes allows the input of physicians who have direct experience with the procedure or service under review.

After consideration of the public comments we received, we are finalizing our CY 2011 proposal to eliminate the use of the F-test for the refinement panels and, instead, we will base the revised RVUs on the median work value of the panel members' ratings. In addition, we note that CMS retains the final authority to set the RVUs and, therefore, make adjustments to the work RVUs resulting from refinement if policy concerns warrant their modification.

J. Remote Cardiac Monitoring Services (CPT codes 93012, 93229, 93268, and 93271)

In the CY 2011 PFS proposed rule (75 FR 40105), we reiterated our concerns about the issue of developing PE RVUs for services that are utilized 24 hours a day, 7 days a week (24/7), such as those that require certain centralized monitoring system equipment and which have been discussed in earlier PFS rulemaking cycles, most recently in the CY 2010 PFS final rule with comment period (74 FR 61755). We stated that the PE equipment methodology was developed for equipment that is in use during standard physician's office business hours and not equipment that is used in furnishing such continuous services, and that we would conduct further analysis of this issue. We indicated that services that were contractor-priced in CY 2009 remained contractor-priced in CY 2010 and that any proposed changes would be communicated through future rulemaking.

In the CY 2011 PFS proposed rule (75 FR 40105), we explained that since publication of the CY 2010 PFS final rule with comment period, we focused our additional analysis on 4 of the CPT codes that commenters have brought to our attention because they involve concurrent, remote, 24/7 attended monitoring of multiple patients from a central location: CPT code 93012 (Telephonic transmission of post-symptom electrocardiogram rhythm strip(s); 24-hour attended monitoring, per 30 day period of time; tracing only); CPT code 93229 (Wearable mobile cardiovascular telemetry with electrocardiographic recording, concurrent computerized real time data analysis and greater than 24 hours of accessible ECG data storage (retrievable with query) with ECG triggered and patient selected events transmitted to a remote attended surveillance center for up to 30 days; technical support for connection and patient instructions for use, attended surveillance, analysis and physician prescribed transmission of daily and emergent data reports); CPT code 93268 (Wearable patient activated electrocardiographic rhythm derived event recording with presymptom memory loop, 24-hour attended monitoring, per 30 day period of time; includes transmission, physician review and interpretation); and CPT 93271 code (Wearable patient activated electrocardiographic rhythm derived event recording with presymptom memory loop, 24-hour attended monitoring, per 30 day period of time; monitoring, receipt of transmissions, and analysis).

We pointed out that of these four codes, CPT code 93229 is currently contractor-priced in CY 2010, meaning that the local Medicare contractors determine payment rates for the service within the PFS geographic areas in their jurisdiction. The three services that are currently nationally-priced on the PFS are in the first year of a 4-year transition to lower payment rates based on the use of the PPIS data adopted in the CY 2010 PFS final rule with comment period. We refer readers to section II.A.2. of this final rule with comment period for a description of the general PFS PE methodology that is the basis for the following discussion of approaches to establishing PE RVUs for these four CPT codes.

In the CY 2011 PFS proposed rule, we explained that we examined several alternative methods for developing PE RVUS upon which PFS payment rates for these four CPT codes could be based. Each of these services involves transmission of information from multiple patients who wear individual monitoring devices that transmit patient-specific information to centralized equipment that is simultaneously in use for multiple patients. We stated that we believed it would be most consistent with the principles underlying the PFS PE methodology to classify the centralized monitoring equipment as an indirect cost since it is servicing multiple patients at the same time. We explained that after classifying this equipment as an indirect cost, we used our standard methodology to calculate an indirect practice cost index value for each code based on the PE/HR survey data of the historical mix of specialties providing these services. We went on to state that

establishing payment rates for these codes based on this approach would result in decreases in the payment rates for these services, including the typical contractor's price for CPT code 93229. For the three services that are nationally priced, these decreases would be relative to the lower payment rates based on the use of the PPIS data after the 4-year transition.

In the CY 2011 PFS proposed rule, we acknowledged that we had also received PE/HR data from the Remote Cardiac Services Provider Group (RCSPG), a group of Independent Diagnostic Testing Facility (IDTF) suppliers of these types of services. We explained that for sensitivity analysis purposes, we substituted these data for the PE/HR data of the specialties performing these services, while continuing to treat the centralized monitoring equipment as an indirect cost. We stated that we found that establishing payment rates for these codes based on the approach of using the submitted RCSPG PE/HR data would again result in decreases in the payment rates for these services, including the typical contractor's price for CPT code 93229. As in the prior alternative, the decreases for the nationally priced codes would be relative to the payment rates reflecting the 4-year transition to the PPIS data.

We indicated that although we believed that it would be most consistent with the principles underlying the PE methodology to classify the centralized monitoring equipment as an indirect cost, we also performed a sensitivity analysis of the payment rates if the centralized monitoring equipment were classified as a direct cost. In this simulation, we assumed that the centralized monitoring equipment was in year-round use, 7 days per week for 24 hours per day. We found that establishing payment rates for these codes based on the approach of classifying the centralized monitoring equipment as a direct cost would again result in decreases in the payment rates for the nationally priced services relative to their payment rates after the 4-year transition to the use of the PPIS data, as well as to the typical current contractor's price for CPT code 93229.

Finally, we explained that we considered proposing contractor-pricing for all four of these services for CY 2011 but were cognizant of past public comments on this issue that had requested that all of these services be priced nationally on the PFS, including the one service (CPT code 93229) that is currently contractor-priced.

In the CY 2011 PFS proposed rule, we also considered that the services currently priced nationally on the PFS were scheduled to receive lower payment rates under the 4-year transition to the PPIS data and that the contractor's price for CPT 93229 was recently reduced in the area where the majority of the billings for this service currently occur.

We concluded that after taking all these factors into consideration, we were not proposing CY 2011 methodological or direct cost input changes for CPT codes 93012, 93268, or 93271—the services that are nationally priced under the PFS. We proposed to continue contractor-pricing for CPT 93229 for CY 2011. We solicited public comments on this issue, including responses to our analysis of alternative approaches to establishing PE RVUs for 24/7 services, and further discussion of the issues we identified in our alternative pricing methodologies. In addition, while we had focused the 24/7 services analysis up until that point in time on developing the PE RVUS for remote cardiac monitoring services, we observed that there may be 24/7 services in other areas of medicine, either currently paid under the PFS or in development for the future. Therefore, we also solicited public comments on these current or emerging 24/7 services, including descriptions of the similarities or differences between these other services and remote cardiac monitoring services, particularly with respect to the issues we identified in our analysis of alternative approaches to establishing PE RVUs for remote cardiac monitoring services under the PFS.

Comment: Several commenters expressed concerns regarding CMS' discussion of PFS payment for remote cardiac monitoring, which included no proposal of changes for CY 2011. The commenters pointed out the benefits of 24/7 remote monitoring services for cardiac and other specialty services and argued that these types of services can differ in complexity and frequency from one another and from traditional medical services. In general, the commenters expressed interest in CMS accurately capturing the cost components for all of these services, primarily arguing for the consideration of these costs as direct costs.

One commenter explained that the current methodology for assigning PE RVUs does not work for remote cardiac providers whose businesses are structured differently from physicians' practices and, as a result, the RVUs assigned to the services do not reflect their proper relative cost. Although CMS focused its analysis on services characterized by concurrent, remote, 24/7 attended monitoring of multiple patients from a single location, the commenter addressed cardiac event monitoring, pacemaker monitoring, Holter monitoring, International Normalized Ratio (INR) monitoring, and a number of new monitoring technologies such as cardiac telemetry under the umbrella term of remote cardiac monitoring. The commenter asserted that the IDTF providers of remote cardiac monitoring services operate on a 24/7 basis because the services that they furnish require round-the-clock service and are, therefore, structured very differently from physicians' offices and other IDTFs. The commenter argued that CMS should utilize PE/HR data submitted by RCSPG, a group of IDTF suppliers of these types of services, to the entire ranging of cardiac monitoring services furnished by these providers. Alternatively, the commenter indicated that CMS could use the all physician indirect percentage, use an indirect practice cost index (IPCI) of one, and add equipment costs to the PE formula for allocating indirect costs in setting the PE RVUs for cardiac monitoring services. Finally, the commenter requested that if CMS did not adopt one of the previous two suggestions, then CMS should temporarily suspend the phase-in of the use of PPIS data for cardiac monitoring services. Several other commenters also requested that CMS suspend the PPIS transition for remote cardiac monitoring services.

Several commenters disagreed with CMS regarding the appropriateness of treating the centralized monitoring equipment as an indirect cost, arguing that the equipment is used specifically for patients that are receiving a specific service and, therefore, represents a direct cost like other medical equipment. The commenters contended that the centralized equipment is inherently different from other indirect practice expenses that are used to run a practice and are not tied directly to any one particular service. One commenter speculated that considering the cardiac monitoring equipment as an indirect expense would dilute the payment for this cardiac telemetry by distributing it to many people who are not providing it. Another commenter expressed concern that an indirect cost approach does not appropriately account for the significant differences in remote monitoring services and thus cannot accurately capture the cost components of each.

With respect to the remote cardiac monitoring service described by CPT code 93229 which is contractor-priced, one commenter made several specific requests, namely that CMS: (1) Nationally price CPT code 93229 rather

than contractor-price the service; (2) consider the centralized monitoring equipment associated with CPT code 93229 as a direct cost; (3) adjust the equipment utilization assumption for the centralized monitoring equipment from 100 percent to 50 percent; (4) use new direct cost inputs (for example, the cost of the monitoring device worn by patient) supplied by the commenter; (5) incorporate a new PE/HR, based on the cardiac monitoring industry-wide RCSPG PE/HR data applied to all cardiac monitoring services, based on data from two telemetry providers for CPT code 93229 that yields a PE/HR of $243.22 that would be applied to CPT code 93229, or based on data for telemetry and cardiac event monitoring (CEM) which results in a PE/HR of $214.79 that would be applied to telemetry and CEM services; and (6) apply an additional indirect allocation in the CMS PE methodology based on the equipment direct costs as previously recommended by one telemetry provider. The commenter provided equipment inputs and the associated prices and further recommended that CMS should continue to apply the clinical labor and supply input items associated with this services as recommended by the AMA RUC.

Response: We appreciate the continuing interest of the commenters in the pricing of cardiac monitoring services under the PFS. After further review of this issue, while we continue to recognize there are some unique aspects to the services, we do not agree with the commenters that the PE for cardiac monitoring services cannot be appropriately valued using the PFS PE methodology. After our review, we believe that we can appropriately identify and price the direct cost inputs for these services. Furthermore, we note that the PPIS data for allocating indirect costs is from a multispecialty, nationally representative PE survey of both physicians and NPPS and, as the most comprehensive source of PE information available to date, appropriate for use for cardiac monitoring services. Therefore, we disagree that we should suspend the PE transition to the PPIS data or otherwise change our established methodology for setting the PE RVUs furnished by a subset of providers in a certain specialty area.

We continue to believe that it is more appropriate to classify the costs associated with the centralized monitoring equipment, including the hardware and software, workstation, webserver, and call recording system, as indirect costs since it is difficult to allocate those costs to services furnished to individual patients in a manner that adequately reflects the number of patients being tested. This would be true for CPT code 93229 which has not previously been nationally priced. We believe that the ability to appropriately allocate costs to individual services is a key concept that should guide our adoption of the direct PE inputs for services paid under the PFS. Having drawn this conclusion, we plan to review the direct PE inputs for other nationally priced services that include centralized monitoring equipment under the PFS and, if we find that we have not consistently treated that equipment as an indirect cost, we may propose changes to the direct PE inputs for existing codes in a future PFS rulemaking cycle.

We agree with several commenters that it would be appropriate at this time to nationally price CPT code 93229, especially in light of our conclusion regarding how the centralized monitoring system should be treated under the PFS PE methodology and the fact that the commenters have provided current prices and associated documentation for the direct PE inputs used in the typical case. Therefore, we are accepting the AMA RUC recommendations originally made for CY 2009 (73 FR 69896) for clinical labor and supplies for CPT code 93229 and are utilizing these direct PE inputs for CY 2011. With respect to the equipment inputs provided to us by one commenter who currently furnishes the majority of services described by CPT code 93229, under our final CY 2011 policy the only piece of equipment that would be appropriately treated as a direct PE input is the cardiac telemetry monitoring device worn by the patient. The other equipment items, including the monitoring system software and hardware, workstation, webserver, and call recording system are indirect practice costs. Therefore, we are accepting the commenter's submission of $21,575 as the price for this device in the typical case, and applying a 50 percent utilization rate and useful life of 3 years as recommended by the commenter.

We do not believe it would be appropriate to deviate from our standard PFS PE methodology to adopt a PE/HR that is specific to CPT code 93229 or any other set of cardiac monitoring codes based on data from two telemetry providers, from a subset of services provided by certain specialty cardiac monitoring providers, or from a certain group of specialty providers that overall furnish only a portion of cardiac monitoring services, nor to change our established indirect PE allocation methodology. We believe the current PE methodology appropriately captures the relative costs of these services in setting their PE RVUs, based on the conclusion we have drawn following our assessment of the centralized monitoring system that is especially characteristic of services such as CPT code 93229. We note that these direct PE inputs are included in the final CY 2011 direct PE database that is posted on the CMS Web site under downloads for this CY 2011 PFS final rule with comment period at: *http://www.cms.gov/PhysicianFeeSched/PFSFRN/list.asp#TopOfPage*. We further note that the CY 2011 payment for CPT code 93229 (without considering the negative PFS update that will apply for CY 2011 under current law) is close to the current typical contractor's price for the service in CY 2010.

After consideration of the public comments we received, we are establishing a national price for CPT code 93229 based on nationally set RVUs, instead of maintaining the code as contractor-priced as we proposed. We are adopting the AMA RUC's recommendations for the clinical labor and supply inputs, and utilizing price, utilization, and useful life information provided by the commenters as equipment inputs for the cardiac telemetry monitoring device worn by the patient. The final CY 2011 RVUs for CPT code 93229 are displayed in Addendum B to this final rule with comment period. While we are making no changes to the direct PE inputs for other remote cardiac monitoring CPT codes for CY 2011, we will consider in the future whether changes could be appropriate if we conclude that these services utilize a centralized monitoring system that would most appropriately be treated an indirect cost.

Comment: While most of the commenters addressed remote cardiac monitoring services specifically discussed in the CY 2011 PFS proposed rule, several commenters addressed other types of emerging 24/7 services. One commenter described a pilot program that utilizes telehealth to monitor certain health status indicators for cardiac patients. This monitoring occurs during the day and night and includes an assessment by a nurse. The commenter stated that the initial results of the pilot show a lower rate of hospital readmissions for participants. The commenter asserted that there is currently no payment for this service, and urged CMS to consider funding for these types of programs.

Outside of cardiac monitoring, another commenter noted that there are many types of remote monitoring

services that provide important benefits, especially for chronically ill patients. The commenter explained that these may include health status monitoring services, activity and sensor monitoring services, and medication dispensing and monitoring services. The commenter asserted that the resource requirements for these types of services can differ in complexity and frequency and may involve varied resources, including equipment and other fees; training and coaching; data collection, monitoring and documentation; and personal emergency response. As such, the commenter recommended that CMS' PE methodology for remote monitoring services be as transparent and flexible as possible to allow for these differences, and to accurately capture the cost components for each. Therefore, the commenter, concluded that a direct cost approach would be the most appropriate approach in most cases.

Response: We thank the commenters for providing information on other current and emerging 24/7 services. We will consider appropriate payment for other 24/7 services under the PFS as specific codes for such services are created by the CPT Editorial Panel. Regarding direct PE inputs for other remote monitoring services, we acknowledge diversity in the direct and indirect costs to providers for furnishing various monitoring services—and all services—and believe that our current PE methodology, as discussed earlier in this section, is able to yield appropriate values across this wide range. As stated earlier in the context of remote cardiac monitoring, we believe that the ability to appropriately allocate costs to the services furnished to individual patients is a key concept that should guide our adoption of the direct PE inputs for services paid under the PFS, including remote monitoring and other 24/7 services.

We look forward to continuing a dialogue with stakeholders involved in developing and furnishing 24/7 services as medical practice evolves in order to ensure that the PFS pays appropriately for those 24/7 services that are covered by Medicare and paid as physicians' services.

IV. Medicare Telehealth Services for the Physician Fee Schedule

A. Billing and Payment for Telehealth Services

1. History

Prior to January 1, 1999, Medicare coverage for services delivered via a telecommunications system was limited to services that did not require a face-to-face encounter under the traditional model of medical care. Examples of these services included interpretation of an x-ray or electrocardiogram or electroencephalogram tracing, and cardiac pacemaker analysis.

Section 4206 of the BBA provided for coverage of, and payment for, consultation services delivered via a telecommunications system to Medicare beneficiaries residing in rural health professional shortage areas (HPSAs) as defined by the Public Health Service Act. Additionally, the BBA required that a Medicare practitioner (telepresenter) be with the patient at the time of a teleconsultation. Further, the BBA specified that payment for a teleconsultation had to be shared between the consulting practitioner and the referring practitioner and could not exceed the fee schedule payment which would have been made to the consultant for the service provided. The BBA prohibited payment for any telephone line charges or facility fees associated with the teleconsultation. We implemented this provision in the CY 1999 PFS final rule with comment period (63 FR 58814).

Effective October 1, 2001, section 223 of the Medicare, Medicaid and SCHIP Benefits Improvement Protection Act of 2000 (Pub. L. 106–554) (BIPA) added a new section 1834(m) to the Act which significantly expanded Medicare telehealth services. Section 1834(m)(4)(F)(i) of the Act defines Medicare telehealth services to include consultations, office visits, office psychiatry services, and any additional service specified by the Secretary, when delivered via a telecommunications system. We first implemented this provision in the CY 2002 PFS final rule with comment period (66 FR 55246). Section 1834(m)(4)(F)(ii) of the Act required the Secretary to establish a process that provides for annual updates to the list of Medicare telehealth services. We established this process in the CY 2003 PFS final rule with comment period (67 FR 79988).

As specified in regulations at § 410.78(b), we generally require that a telehealth service be furnished via an interactive telecommunications system. Under § 410.78(a)(3), an interactive telecommunications system is defined as multimedia communications equipment that includes, at a minimum, audio and video equipment permitting two-way, real-time interactive communication between the patient and the practitioner at the distant site. Telephones, facsimile machines, and electronic mail systems do not meet the definition of an interactive telecommunications system. An interactive telecommunications system is generally required as a condition of payment; however, section 1834(m)(1) of the statute does allow the use of asynchronous "store-and-forward" technology in delivering these services when the originating site is a Federal telemedicine demonstration program in Alaska or Hawaii. As specified in regulations at § 410.78(a)(1), store and forward means the asynchronous transmission of medical information from an originating site to be reviewed at a later time by the practitioner at the distant site.

Medicare telehealth services may be provided to an eligible telehealth individual notwithstanding the fact that the individual practitioner providing the telehealth service is not at the same location as the beneficiary. An eligible telehealth individual means an individual enrolled under Part B who receives a telehealth service furnished at an originating site. As specified in BIPA, originating sites are limited under section 1834(m)(3)(C) of the statute to specified medical facilities located in specific geographic areas. The initial list of telehealth originating sites included the office of a practitioner, a critical access hospital (CAH), a rural health clinic (RHC), a federally qualified health center (FQHC) and a hospital. More recently, section 149 of the Medicare Improvements for Patients and Providers Act of 2008 (Pub. L. 110–275) (MIPPA) expanded the list of telehealth originating sites to include hospital-based renal dialysis centers, skilled nursing facilities (SNFs), and community mental health centers (CMHCs). In order to serve as a telehealth originating site, these sites must be located in an area designated as a rural HPSA, in a county that is not in a metropolitan statistical area (MSA), or must be an entity that participate in a Federal telemedicine demonstration project that has been approved by (or receives funding from) the Secretary as of December 31, 2000. Finally, section 1834(m) of the statute does not require the eligible telehealth individual to be presented by a practitioner at the originating site.

2. Current Telehealth Billing and Payment Policies

As noted above, Medicare telehealth services can only be furnished to an eligible telehealth beneficiary in an originating site. An originating site is defined as one of the specified sites where an eligible telehealth individual is located at the time the service is being furnished via a telecommunications system. In general, originating sites must be located in a rural HPSA or in a county outside of an MSA. The

originating sites authorized by the statute are as follows:

- Offices of a physician or practitioner
- Hospitals
- CAHs
- RHCs
- FQHCs
- Hospital-Based or Critical Access Hospital-Based Renal Dialysis Centers (including Satellites)
- SNFs
- CMHCs

Currently approved Medicare telehealth services include the following:

- Initial inpatient consultations
- Follow-up inpatient consultations
- Office or other outpatient visits
- Individual psychotherapy
- Pharmacologic management
- Psychiatric diagnostic interview examination
- End Stage Renal Disease (ESRD) related services
- Individual medical nutrition therapy (MNT)
- Neurobehavioral status exam
- Individual health and behavior assessment and intervention (HBAI).

In general, the practitioner at the distant site may be any of the following, provided that the practitioner is licensed under State law to furnish the service being furnished via a telecommunications system:

- Physician
- Physician assistant (PA)
- Nurse practitioner (NP)
- Clinical nurse specialist (CNS)
- Nurse midwife
- Clinical psychologist
- Clinical social worker
- Registered dietitian or nutrition professional.

Practitioners furnishing Medicare telehealth services are located at a distant site, and they submit claims for telehealth services to the Medicare contractors that process claims for the service area where their distant site is located. Section 1834(m)(2)(A) of the Act requires that a practitioner who furnishes a telehealth service to an eligible telehealth individual be paid an amount equal to the amount that the practitioner would have been paid if the service had been furnished without the use of a telecommunications system. Distant site practitioners must submit the appropriate HCPCS procedure code for a covered professional telehealth service, appended with the –GT (Via interactive audio and video telecommunications system) or –GQ (Via asynchronous telecommunications system) modifier. By reporting the –GT or –GQ modifier with a covered telehealth procedure code, the distant site practitioner certifies that the beneficiary was present at a telehealth originating site when the telehealth service was furnished. The usual Medicare deductible and coinsurance policies apply to the telehealth services reported by distant site practitioners.

Section 1834(m)(2)(B) of the Act provides for payment of a facility fee to the originating site. To be paid the originating site facility fee, the provider or supplier where the eligible telehealth individual is located must submit a claim with HCPCS code Q3014 (Telehealth originating site facility fee), and the provider or supplier is paid according to the applicable payment methodology for that facility or location. The usual Medicare deductible and coinsurance policies apply to HCPCS code Q3014. By submitting HCPCS code Q3014, the originating site authenticates that it is located in either a rural HPSA or non-MSA county or is an entity that participates in a Federal telemedicine demonstration project that has been approved by (or receives funding from) the Secretary as of December 31, 2000 as specified in section 1834(m)(4)(C)(i)(III) of the Act.

As described above, certain professional services that are commonly furnished remotely using telecommunications technology, but that do not require the patient to be present in-person with the practitioner when they are furnished, are covered and paid in the same way as services delivered without the use of telecommunications technology when the practitioner is in-person at the medical facility furnishing care to the patient. Such services typically involve circumstances where a practitioner is able to visualize some aspect of the patient's condition without the patient being present and without the interposition of a third person's judgment. Visualization by the practitioner can be possible by means of x-rays, electrocardiogram or electroencephalogram tracings, tissue samples, etc. For example, the interpretation by a physician of an actual electrocardiogram or electroencephalogram tracing that has been transmitted via telephone (that is, electronically, rather than by means of a verbal description) is a covered physician's service. These remote services are not Medicare telehealth services as defined under section 1834(m) of the Act. Rather, these remote services that utilize telecommunications technology are considered physicians' services in the same way as services that are furnished in-person without the use of telecommunications technology; they are paid under the same conditions as in-person physicians' services (with no requirements regarding permissible originating sites), and should be reported in the same way (that is, without the –GT or –GQ modifier appended).

B. Requests for Adding Services to the List of Medicare Telehealth Services

As noted above, in the December 31, 2002 **Federal Register** (67 FR 79988), we established a process for adding services to or deleting services from the list of Medicare telehealth services. This process provides the public with an ongoing opportunity to submit requests for adding services. We assign any request to make additions to the list of Medicare telehealth services to one of the following categories:

- Category 1: Services that are similar to professional consultations, office visits, and office psychiatry services. In reviewing these requests, we look for similarities between the requested and existing telehealth services for the roles of, and interactions among, the beneficiary, the physician (or other practitioner) at the distant site and, if necessary, the telepresenter. We also look for similarities in the telecommunications system used to deliver the proposed service, for example, the use of interactive audio and video equipment.
- Category 2: Services that are not similar to the current list of telehealth services. Our review of these requests includes an assessment of whether the use of a telecommunications system to deliver the service produces similar diagnostic findings or therapeutic interventions as compared with the in-person delivery of the same service. Requestors should submit evidence showing that the use of a telecommunications system does not affect the diagnosis or treatment plan as compared to in-person delivery of the requested service.

Since establishing the process to add or remove services from the list of approved telehealth services, we have added the following to the list of Medicare telehealth services: individual HBAI services; psychiatric diagnostic interview examination; ESRD services with 2 to 3 visits per month and 4 or more visits per month (although we require at least 1 visit a month to be furnished in-person by a physician, CNS, NP, or PA in order to examine the vascular access site); individual MNT; neurobehavioral status exam; and initial and follow-up inpatient telehealth consultations for beneficiaries in hospitals and skilled nursing facilities (SNFs).

Requests to add services to the list of Medicare telehealth services must be submitted and received no later than December 31 of each calendar year to be considered for the next rulemaking cycle. For example, requests submitted before the end of CY 2010 are considered for the CY 2012 proposed rule. Each request for adding a service to the list of Medicare telehealth services must include any supporting documentation the requester wishes us to consider as we review the request. Because we use the annual PFS rulemaking process as a vehicle for making changes to the list of Medicare telehealth services, requestors should be advised that any information submitted is subject to public disclosure for this purpose. For more information on submitting a request for an addition to the list of Medicare telehealth services, including where to mail these requests, we refer readers to the CMS Web site at *http://www.cms.gov/telehealth/*.

C. Submitted Requests for Addition to the List of Telehealth Services for CY 2011

We received requests in CY 2009 to add the following services as Medicare telehealth services effective for CY 2011: (1) Individual kidney disease education (KDE) services; (2) individual diabetes self-management training (DSMT) services; (3) group KDE, DSMT, MNT, and HBAI services; (4) initial, subsequent, and discharge day management hospital care services; (5) initial, subsequent, discharge day management, and other nursing facility care services; (6) neuropsychological testing services; (7) speech-language pathology services; and (8) home wound care services. The following presents a discussion of these requests, including our proposed additions to the CY 2011 telehealth list.

1. Individual KDE Services

The American Society of Nephrology, Dialysis Patient Citizens, AMGEN, and Kidney Care Partners submitted requests to add individual KDE services, reported by HCPCS code G0420 (Face-to-face educational services related to the care of chronic kidney disease; individual, per session, per one hour), to the list of approved telehealth services for CY 2011 on a category 1 basis.

Individual KDE services, covered under the new Medicare KDE benefit effective for services furnished beginning in CY 2010, are defined as face-to-face educational services provided to a patient with stage IV chronic kidney disease (CKD). We believe the interaction between a practitioner and a beneficiary receiving individual KDE services is similar to the education, assessment, and counseling elements of individual MNT services, reported by HCPCS code G0270 (Medical nutrition therapy; reassessment and subsequent intervention(s) following second referral in same year for change in diagnosis, medical condition or treatment regimen (including additional hours needed for renal disease), individual, face to face with the patient, each 15 minutes); CPT code 97802 (Medical nutrition therapy; initial assessment and intervention, individual, face-to-face with the patient, each 15 minutes); and CPT code 97803 (Medical nutrition therapy; re-assessment and intervention, individual, face-to-face with the patient, each 15 minutes), all services that are currently on the telehealth list.

Therefore, we proposed to add HCPCS code G0420 to the list of telehealth services for CY 2011 on a category 1 basis and to revise our regulations at § 410.78(b) and § 414.65(a)(1) to include individual KDE as a Medicare telehealth service.

Comment: Several commenters expressed support for CMS' proposal to add KDE services to the list of Medicare telehealth services for CY 2011. One commenter stated that the proposal would provide patients at risk for developing chronic kidney disease and ESRD with access to educational services that may help in controlling the progression of disease. Another commenter suggested that delivery of KDE services through telehealth would provide beneficiaries with the flexibility to interact with practitioners in a manner tailored to their needs, thus facilitating a more patient-centered approach. Another commenter noted that greater flexibility in the provision of KDE services is particularly important in rural areas where individuals do not have as much access to dialysis centers.

Response: We agree with the commenters that adding KDE services to the list of Medicare telehealth services may be valuable to Medicare beneficiaries, especially insofar as it helps provide greater access to the services for beneficiaries in rural or other isolated areas.

Comment: One commenter who supported the proposal also encouraged the CMS to maintain its existing policy regarding the qualified providers for KDE services in order to appropriately ensure the quality and content conveyed to patients in educational sessions and remain concordant with the intent of MIPPA.

Response: We note that the addition of KDE to the list of Medicare telehealth services does not alter the qualifications for providers of KDE services as specified in § 410.48 of the regulations.

After consideration of the public comments we received, we are finalizing our CY 2011 proposal to add HCPCS code G0420 to the list of telehealth services for CY 2011 on a category 1 basis and to revise our regulations at § 410.78(b) and § 414.65(a)(1) to include individual KDE as a Medicare telehealth service.

2. Individual DSMT Services

The Tahoe Forest Health System and the Marshfield Clinic submitted requests to add individual DSMT services, reported by HCPCS code G0108 (Diabetes outpatient self-management training services, individual, per 30 minutes), to the list of telehealth services for CY 2011 on a category 1 basis. In the CY 2009 PFS final rule with comment period (73 FR 69743), we stated that we believe individual DSMT services are not analogous to individual MNT services because of the element of skill-based training that is encompassed within individual DSMT services that is not an aspect of individual MNT services (or any other services currently approved for telehealth). Due to the statutory requirement that DSMT services include teaching beneficiaries the skills necessary for the self-administration of injectable drugs, we have stated our belief that DSMT, whether provided to an individual or a group, must be evaluated as a category 2 service as specified in the CY 2009 PFS proposed rule (73 FR 38516). Prior to CY 2011 rulemaking, we had considered several previous requests to add DSMT to the list of Medicare telehealth services. We had not added individual DSMT to the list of telehealth services because we believe that skill-based training, such as teaching patients how to inject insulin, would be difficult to accomplish effectively without the physical presence of the teaching practitioner (70 FR 45787 and 70157, and 73 FR 38516 and 69743).

In considering the new request to add individual DSMT services to the list of telehealth services in CY 2011, we took into account requestors' argument that individual DSMT services are highly similar to individual MNT services and that injection training constitutes just a small proportion of DSMT services. Except for the component of individual DSMT services that involves instruction in self-administration of injectable drugs for eligible beneficiaries, we agreed with the requestors that individual DSMT

services are similar to individual MNT services, which are currently on the list of Medicare telehealth services. We note that Medicare coverage of DSMT services was initially authorized in the BBA. After more than a decade of Medicare coverage, the most recent information shows that DSMT continues to be significantly underutilized in the context of the eligible population of Medicare beneficiaries. While we are uncertain to what extent geographic barriers to care contribute to this underutilization, given the morbidity associated with poorly managed diabetes and the growing evidence-base regarding effective DSMT services, we believe it is very important to facilitate Medicare beneficiary access to these underutilized services. While we were previously concerned about treating the components of DSMT services differently in the context of considering DSMT services for the telehealth list, in the CY 2011 PFS proposed rule (75 FR 40108), we stated our belief that our concern regarding the skill-based injection training component of DSMT services could be addressed by imposing a requirement that a minimum portion of the training be furnished in-person. We noted that for beneficiaries who meet the coverage criteria, Medicare covers 10 hours of DSMT services in the year following the initial training, as described in the Medicare Benefit Policy Manual (Pub. 100–02, Chapter 15, Section 300.3). Taking into consideration the initial year coverage of DSMT services, for CY 2011 we proposed that a minimum of 1 hour of instruction in injection training must be furnished in-person during the year following the initial DSMT service. Imposing this condition would allow us to expand access to DSMT services by adding individual DSMT services to the list of telehealth services, while ensuring effective injection training for beneficiaries.

Therefore, we proposed to add HCPCS code G0108 to the list of telehealth services beginning in CY 2011. We also proposed that, as a condition of payment for individual DSMT services furnished as telehealth services to an eligible telehealth individual, a minimum of 1 hour of in-person instruction in the self-administration of injectable drugs must be furnished to the individual during the year following the initial DSMT service. The injection training may be furnished through either individual or group DSMT services. By reporting the –GT or –GQ modifier with HCPCS code G0108 as a telehealth service, the distant site practitioner would certify that the beneficiary has received or will receive 1 hour of in-person DSMT services for purposes of injection training during the year following the initial DSMT service. Consistent with this proposal, we proposed to revise our regulations at § 410.78(b) and § 414.65(a)(1) to include individual DSMT services as a Medicare telehealth service, with the exception of 1 hour of in-person instruction in self-administration of injectable drugs which must be furnished to the eligible telehealth individual as individual or group DSMT services during the year following the initial DSMT service.

Comment: A number of commenters expressed support for CMS' proposal to add DSMT services to the list of Medicare telehealth services. One commenter requested that CMS clarify that this proposal would permit NPs and PAs in all patient care settings to provide and bill for DSMT services furnished through telehealth technologies.

Response: As we stated in the CY 2011 PFS proposed rule (75 FR 40109), our proposal is consistent with the statutory requirements of section 1834(m)(1) of the Act and as provided in § 410.141(e) that individual DSMT services may be furnished by a physician, individual, or entity that furnishes other services for which direct Medicare payment may be made and that submits necessary documentation to, and is accredited by, an accreditation organization approved by us as described in the Benefit Policy Manual (Pub. 100–04, chapter 15, section 300.2). However, consistent with the statutory requirements of section 1834(m)(1) of the Act and as provided in § 410.78(b)(1) and (b)(2) of our regulations, Medicare telehealth services, including individual DSMT furnished as a telehealth service, can only be furnished by a licensed physician, PA, NP, CNS, certified nurse-midwife, clinical psychologist, clinical social worker, or registered dietitian or nutrition professional. Additionally, the site of the beneficiary must conform with the statutory requirements of telehealth originating sites from section 1834(m)(3)(C) of the Act and described in section IV.A. 2. of this final rule with comment period.

Comment: One commenter requested that pharmacists be added to the list of eligible Medicare telehealth distant site practitioners. The commenter stated that since pharmacists are already providing valuable DSMT services to patients in-person, these practitioners should not be excluded from providing those same valuable services via telehealth.

Response: Under section 1834(m) of the Act, payment is made for a Medicare telehealth service furnished by a physician or practitioner in a distant site. For purposes of Medicare telehealth services, the physician or practitioner must either be a physician as defined in section 1861(r) of the Act or another practitioner as defined in section 1842(b)(18)(C) of the Act. Because pharmacists do not fall within these statutory definitions, we do not have the authority to make payment to pharmacists as eligible distant site practitioners for Medicare telehealth services.

After consideration of the public comments we received, we are finalizing our CY 2011 proposal to add HCPCS code G0108 to the list of telehealth services beginning in CY 2011. As a condition of payment for individual DSMT services furnished as telehealth services to an eligible telehealth individual, a minimum of 1 hour of in-person instruction in the self-administration of injectable drugs must be furnished to the individual during the year following the initial DSMT service. The injection training may be furnished through either individual or group DSMT services. By reporting the –GT or –GQ modifier with HCPCS code G0108 as a telehealth service, the distant site practitioner certifies that the beneficiary has received or will receive 1 hour of in-person DSMT services for purposes of injection training during the year following the initial DSMT service. Consistent with this final policy, we are revising our regulations at § 410.78(b) and § 414.65(a)(1) to include individual DSMT services as a Medicare telehealth service, with the exception of 1 hour of in-person instruction in self-administration of injectable drugs which must be furnished to the eligible telehealth individual as individual or group DSMT services during the year following the initial DSMT service.

We note that, as specified in § 410.141(e), individual DSMT services may be furnished by a physician, individual, or entity that furnishes other services for which direct Medicare payment may be made and that submits necessary documentation to, and is accredited by, an accreditation organization approved by CMS. However, consistent with the statutory requirements of section 1834(m)(1) of the Act and as provided in § 410.78(b)(1) and (b)(2) of our regulations, Medicare telehealth services, including individual DSMT furnished as a telehealth service, can only be furnished by a licensed physician, PA, NP, CNS, certified nurse-midwife, clinical psychologist, clinical social worker, or registered dietitian or nutrition professional.

3. Group KDE, MNT, DSMT, and HBAI Services

The American Society of Nephrology, Dialysis Patient Citizens, AMGEN, Tahoe Forest Health Systems, Kidney Care Partners, the American Telemedicine Association, and the Marshfield Clinic submitted requests to add one or more of the following group services to the telehealth list for CY 2011:

- Group KDE services, reported by HCPCS code G0421 (Face-to-face educational services related to the care of chronic kidney disease; group, per session, per one hour);
- Group MNT services, reported by CPT code 97804 (Medical nutrition therapy; group (2 or more individual(s)), each 30 minutes);
- Group DSMT services, reported by HCPCS code G0109 (Diabetes outpatient self-management training services, group session (2 or more), per 30 minutes); and/or
- Group HBAI services, reported by CPT code 96153 (Health and behavior intervention, each 15 minutes, face-to-face; group (2 or more patients)) and 96154 (Health and behavior intervention, each 15 minutes, face-to-face; family (with the patient present)).

When furnished as individual services, HBAI and MNT services are currently on the list of Medicare telehealth services. Furthermore, we proposed to add individual KDE and DSMT services to the list of Medicare telehealth services beginning in CY 2011 as described above.

In the CY 2007 and CY 2010 PFS rulemaking cycles (70 FR 45787 and 70157, and 74 FR 33543 and 61764), we stated that we did not believe that group services could be appropriately delivered through telehealth. In the CY 2011 PFS proposed rule (75 FR 40109), we observed that currently there are no group services approved as Medicare telehealth services and that there is a different interactive dynamic between the practitioner and his or her patients in group services as compared to individual services. We previously had considered requests to add various group services to the list of Medicare telehealth services on a category 2 basis because we had believed that, especially given the interactive dynamic between practitioners and their patients, group services were not similar to other services on the list of Medicare telehealth services. Therefore, we had maintained that it was necessary to evaluate the addition of group services by comparing diagnostic findings or therapeutic interventions when services are furnished via telehealth versus when services are furnished in-person.

In the CY 2011 proposed rule (75 FR 40109), we stated that we continue to believe that the group dynamic may be a critical and defining element for certain services, and that this characteristic precludes many group services from being considered on a category 1 basis for addition to the list of Medicare telehealth services. For example, we believe that due to the therapeutic nature of the group dynamic that is integral to group psychotherapy, group psychotherapy is fundamentally different from other Medicare telehealth services and, therefore, could not be considered on a category 1 basis for addition to the telehealth services list. For the same reason, in the absence of evidence to the contrary, we do not believe group psychotherapy services could be appropriately delivered through telehealth.

However, upon further consideration, with regard to the particular group education and training services for which we received requests for addition to the Medicare telehealth services list, for CY 2011 we concluded that we believe the group dynamic is not central to the core education and training components of these particular services, specifically DSMT, MNT, KDE, and HBAI services. We believe that these group services are sufficiently similar to the individual, related services that are already on the telehealth services list or were proposed for addition beginning in CY 2011. Specifically, we believe that for these group services, which consist principally of an information exchange for the purpose of education and training, the roles of, and interactions between, the patients and the practitioner are sufficiently similar to the related individual education and training services that the services can be furnished appropriately as a telehealth service.

Therefore, we proposed to add HCPCS code G0421 for group KDE services, CPT code 97804 for group MNT services, HCPCS code G0109 for group DSMT services, and CPT codes 96153 and 96154 for group HBAI services to the Medicare telehealth services list on a category 1 basis for CY 2011. Furthermore, because the concerns we raised above regarding adequate injection training with the addition of individual DSMT are also present for group DSMT, we proposed to require the same minimum of 1 hour of in-person instruction for injection training within the year following the initial DSMT service for any beneficiary that receives DSMT services via telehealth. By reporting the –GT or –GQ modifier with HCPCS code G0109, the distant site practitioner would certify that the beneficiary has received or will receive 1 hour of in-person instruction in self-administration of injectable drugs which must be furnished to the eligible telehealth individual as individual or group DSMT services during the year following the initial DSMT service. Consistent with this proposal to add these group education and training services, we also proposed to revise our regulations at § 410.78(b) and § 414.65(a)(1) to include group KDE, MNT, DSMT, and HBAI services as Medicare telehealth services, with the exception of 1 hour of in-person instruction in self-administration of injectable drugs which must be furnished to the eligible telehealth individual as individual or group DSMT services in the year following the initial DSMT service.

Comment: Many commenters agreed with CMS' proposal to add group KDE, MNT, DSMT, and HBAI to the list of Medicare telehealth services for CY 2011. Some commenters commended CMS' willingness to expand the list of Medicare telehealth services and explained that the additions would facilitate beneficiary access to care.

Many commenters also urged CMS to make further additions to the list of Medicare telehealth services beyond those proposed for CY 2011.

Response: We believe adding these group services to the list of Medicare telehealth services will facilitate beneficiary access to care, and we appreciate the commenters' shared interest in that goal.

The process for requesting additional services to be added to the list of Medicare telehealth services is described in section IV.B. of this final rule with comment period. Requests for additions for CY 2012 must be received by the end of CY 2010. Further information is available about the process on the CMS web site at: *http://www.cms.gov/telehealth/.*

After consideration of the public comments we received, we are finalizing our CY 2011 proposal to add HCPCS code G0421 for group KDE services, CPT code 97804 for group MNT services, HCPCS code G0109 for group DSMT services, and CPT codes 96153 and 96154 for group HBAI services to the Medicare telehealth services list on a category 1 basis. Furthermore, because we have the same concerns for group DSMT services that we raised above regarding adequate injection training for individual DSMT services, we are requiring the same minimum of 1 hour of in-person instruction for injection training within

the year following the initial DSMT service for any beneficiary that receives DSMT services via telehealth. By reporting the –GT or –GQ modifier with HCPCS code G0109, the distant site practitioner would certify that the beneficiary has received or will receive 1 hour of in-person DSMT services for purposes of injection training during the year following the initial DSMT service. Consistent with the addition of these group education and training services, we are also revising our regulations at § 410.78(b) and § 414.65(a)(1) to include group KDE, MNT, DSMT, and HBAI services as Medicare telehealth services, with the exception of 1 hour of in-person instruction for injection training within the year following the initial DSMT service.

As described above for individual DSMT services, we note that group DSMT services may be furnished by a physician, individual, or entity that furnishes other services for which direct Medicare payment may be made and that submits necessary documentation to, and is accredited by, an accreditation organization approved by CMS, as specified in § 410.141(e) for DSMT services. However, consistent with the statutory requirements of section 1834(m)(1) of the Act and as provided in § 410.78(b)(1) and (b)(2) of our regulations, Medicare telehealth services, including group DSMT furnished as a telehealth service, can only be furnished by a licensed physician, PA, NP, CNS, certified nurse-midwife, clinical psychologist, clinical social worker, or registered dietitian or nutrition professional.

4. Initial, Subsequent, and Discharge Day Management Hospital Care Services

The University of Louisville School of Medicine, the American Telemedicine Association, and Mille Lacs Health System submitted various requests to add initial hospital care services (reported by CPT codes 99221 (Level 1 initial hospital care), 99222 (Level 2 initial hospital care), and 99223 (Level 3 initial hospital care)); subsequent hospital care services (reported by CPT codes 99231 (Level 1 subsequent hospital care), 99232 (Level 2 subsequent hospital care), and 99233 (Level 3 subsequent hospital care)); and/or hospital discharge day management services (reported by CPT codes 99238 (Hospital discharge day management; 30 minutes or less) and 99239 (Hospital discharge day management; more than 30 minutes) to the Medicare telehealth services list beginning in CY 2011, generally on a category 1 basis. Some of the requestors also recommended that we limit the delivery of these services through telehealth to the provision of services to patients with a psychiatric diagnosis or to those treated in a psychiatric hospital or licensed psychiatric bed.

We appreciate the recommendations of the requestors to substantially expand the list of Medicare telehealth services. The requestors submitted a number of studies regarding the outcomes of telehealth services in caring for patients with psychiatric diagnoses. However, we note that the CPT codes for hospital care services are used to report care for hospitalized patients with a variety of diagnoses, including psychiatric diagnoses. In the CY 2011 PFS proposed rule (75 FR 40110), we stated our belief that it would not be appropriate to add services to the telehealth list only for certain diagnoses because the service described by a HCPCS code is essentially the same service, regardless of the patient's diagnosis. When evaluating the addition of services for telehealth on a category 1 basis, our focus is on the roles of, and interactions among, the beneficiary, the physician or practitioner, and the telepresenter (if applicable), which generally are similar across diagnoses for services that may be reported with the same HCPCS codes. Even in the unique case of certain ESRD services, we limited additions to the list of Medicare telehealth services based on the appropriateness of certain specific codes, taking into consideration the full service descriptions (69 FR 47511). Therefore, we continue to believe that it is most appropriate to consider additions to the list of telehealth services based on the overall suitability of the services described by the relevant HCPCS codes to delivery through telehealth.

In the CY 2005, CY 2008, and CY 2009 PFS rulemakings (69 FR 47510 and 66276, 72 FR 38144 and 66250, and 73 FR 38517 and 69745, respectively), we did not add initial, subsequent, or discharge day management hospital care services to the list of approved telehealth services because of our concern regarding the use of telehealth for the ongoing evaluation and management (E/M) for the generally high acuity of hospital inpatients. While we continue to have some concern in this area, we also share the requestors' interest in improving access for hospitalized patients to care furnished by treating practitioners. Therefore, we reevaluated these services in the context of the CY 2011 requests, including considering the possibility that these services could be added on a category 1 basis based on their resemblance to services currently on the telehealth list, such as initial and follow-up inpatient telehealth consultations. The following presents a discussion of our review for the CY 2011 proposed rule of the subcategories of hospital care services included in these requests.

Currently, one of the three codes for an initial hospital care service (specifically CPT codes 99221, 99222, or 99223) is reported for the first hospital inpatient E/M visit to the patient by the admitting or a consulting practitioner when that visit is furnished in person. In addition, we note that currently there are several HCPCS G-codes on the Medicare telehealth services list that may be reported for initial and follow-up inpatient consultations through telehealth, specifically HCPCS codes G0406 (Follow-up inpatient telehealth consultation, limited, physicians typically spend 15 minutes communicating with the patient via telehealth); G0407 (Follow-up inpatient telehealth consultation, intermediate, physicians typically spend 25 minutes communicating with the patient via telehealth); G0408 (Follow-up inpatient telehealth consultation, complex, physicians typically spend 35 minutes or more communicating with the patient via telehealth); G0425 (Initial inpatient telehealth consultation, typically 30 minutes communicating with the patient via telehealth); G0426 (Initial inpatient telehealth consultation, typically 50 minutes communicating with the patient via telehealth); and G0427 (Initial inpatient telehealth consultation, typically 70 minutes or more communicating with the patient via telehealth).

While initial inpatient consultation services are currently on the list of approved telehealth services, there are no services on the current list of telehealth services that resemble initial hospital care for an acutely ill patient by the admitting practitioner who has ongoing responsibility for the patient's treatment during the hospital course. Therefore, we were unable to consider initial hospital care services on a category 1 basis for the telehealth list for CY 2011.

We reviewed the documentation submitted in support of adding the initial hospital care codes to the Medicare telehealth services list as category 2 requests. Most of the studies provided by the requestors were specific to the treatment of patients with particular diagnoses. Additionally, the studies were not specific to initial hospital care visits by admitting practitioners. Finally, most of the studies concluded that more research was required in order to establish medical equivalence between telehealth

and in-person services. Therefore, we received no information that provides robust support for the addition of initial hospital care services to the approved telehealth list on a category 2 basis. The initial hospital care codes describe the first visit to the hospitalized patient by the admitting practitioner who may or may not have seen the patient in the decision-making phase regarding hospitalization. We believe it is critical that the initial hospital visit by the admitting practitioner be conducted in-person to ensure that the practitioner with ongoing treatment responsibility comprehensively assesses the patient's condition upon admission to the hospital through a thorough in-person examination. Therefore, we did not propose to add initial hospital care services to the Medicare telehealth services list for CY 2011.

We again considered adding subsequent hospital care services reported by CPT codes 99231 through 99233 to the telehealth list for CY 2011 on a category 1 basis. In the CY 2005 and CY 2008 PFS proposed rules (69 FR 47511 and 72 FR 38155), we stated that the potential acuity of patients in the hospital setting precludes consideration of subsequent hospital visits as similar to existing telehealth services. However, as stated earlier, we also note that HCPCS codes for initial and follow-up inpatient consultation services are on the list of telehealth services. These E/M services are furnished to high acuity hospitalized patients, although not by the admitting practitioner himself or herself. However, in light of the increasingly prevalent care model that entails multidisciplinary team care for patients with complex medical illnesses that involve multiple body systems, consulting practitioners may often play a key, intensive, and ongoing role in caring for hospitalized patients. Therefore, we believe that subsequent hospital care visits by a patient's admitting practitioner may sufficiently resemble follow-up inpatient consultation services to consider these subsequent hospital care services on a category 1 basis for the telehealth list. While we still believe the potential acuity of hospital inpatients is greater than those patients likely to receive currently approved Medicare telehealth services, we also believe that it would be appropriate to permit some subsequent hospital care services to be furnished through telehealth in order to ensure that hospitalized patients have frequent encounters with their admitting practitioner. However, we also continue to believe that the majority of these visits should be in-person to facilitate the comprehensive, coordinated, and personal care that medically volatile, acutely ill patients require on an ongoing basis.

Therefore, for CY 2011 we proposed that subsequent hospital care services, specifically CPT codes 99231, 99232, and 99233, be added to the list of telehealth services on a category 1 basis for CY 2011, but with some limitations on the frequency with which these services may be furnished through telehealth. Because of our concerns regarding the potential acuity of hospital inpatients, we proposed to limit the provision of subsequent hospital care services through telehealth to once every 3 days. We were confident that admitting practitioners would continue to make appropriate in-person visits to all patients who need such care during their hospitalization. Consulting practitioners should continue to use the inpatient telehealth consultation HCPCS G-codes, specifically G0406, G0407, G0408, G0425, G0426, or G0427 when reporting consultations furnished to inpatients via telehealth.

Consistent with this proposal, we proposed to revise § 410.78(b) and § 414.65(a)(1) to include subsequent hospital care services as Medicare telehealth services, with the limitation of one telehealth subsequent hospital care service every 3 days.

We also considered adding hospital discharge day management services to the list of telehealth services. These services, reported by CPT codes 99238 and 99239, include the final examination of the patient, discussion of the hospital stay, instructions for continuing care to all relevant caregivers, and preparation of discharge records, prescriptions, and referral forms. These services are furnished when a practitioner deems it medically reasonable and necessary to assess a patient's readiness for discharge and to prepare a patient for discharge from an acute care environment to a less intensive setting. There are no services on the current list of telehealth services that resemble such preparation of a patient for discharge. We believe it is especially important that, if a practitioner furnishes a discharge day management service, the service be furnished in-person in order to allow the practitioner to comprehensively assess the patient's status in preparation for discharge so that the patient will have a higher likelihood of making a successful transition to the less intensive setting. Therefore, we did not consider hospital discharge day management services for addition to the Medicare telehealth services list on a category 1 basis.

We reviewed the documentation submitted by requestors in support of adding these codes to the Medicare telehealth services list on a category 2 basis. Most of the submitted studies were specific to the treatment of patients with specific diagnoses and were not specific to discharge services. Additionally, most of the studies concluded that more research was required in order to establish medical equivalence between telehealth and in-person services. The submitted documentation did not provide the necessary evidence to alter our previous conclusion that hospital discharge day management services should be provided in-person in light of the acuity of hospitalized patients, their typically complex post-hospitalization care needs, and the importance of patient education by the admitting practitioner who had ongoing responsibility for the patient's treatment during the hospital stay. Therefore, we did not propose to add hospital discharge day management services to the list of telehealth services for CY 2011.

Comment: Many commenters expressed support for all of CMS' proposed additions to the list of Medicare telehealth services, including subsequent hospital care services. One commenter urged CMS to focus on adding services where research demonstrates that technology can facilitate medically equivalent services and improve beneficiary access to providers, and to carefully monitor implementation of any new telehealth services to ensure that patients' experience of the care is positive and that patient outcomes are not compromised. The commenter encouraged CMS' continued attention to the evidence and the role of patient needs as CMS evaluates telehealth requests. The commenter cited CMS' decision not to propose the addition of hospital discharge day management services as a Medicare telehealth service as an example of the agency applying appropriate rigor to best reflect patient needs and preferences.

Response: We appreciate the support for our proposed additions, as well as our consideration and decisions regarding requested additions to telehealth services that we did not propose to add to the list of telehealth services for CY 2011.

After consideration of the public comments we received, we are finalizing our CY 2011 proposal to add subsequent hospital care services, specifically CPT codes 99231, 99232, and 99233, to the list of telehealth services on a category 1 basis for CY 2011, but with the limitation of one

subsequent hospital care service furnished through telehealth every 3 days. We are revising § 410.78(b) and § 414.65(a)(1) accordingly to include subsequent hospital care services as Medicare telehealth services, with the limitation of one telehealth subsequent hospital care service every 3 days. We are also finalizing our decision not to add initial or discharge day management hospital care services to the list of Medicare telehealth services.

5. Initial, Subsequent, Discharge Day Management, and Other Nursing Facility Care Services

The American Telemedicine Association and the Marshfield Clinic submitted requests to add nursing facility care codes, covering the spectrum of initial (reported by CPT codes 99304 (Level 1 initial nursing facility care), 99305 (Level 2 initial nursing facility care) and 99306 (Level 3 initial nursing facility care)); subsequent (reported by CPT codes 99307 (Level 1 subsequent nursing facility care), 99308 (Level 2 subsequent nursing facility care), 99309 (Level 3 subsequent nursing facility care), and 99310 (Level 4 subsequent nursing facility care)); discharge day management (reported by CPT codes 99315 (Nursing facility discharge day management; 30 minutes or less) and 99316 (Nursing facility discharge day management; more than 30 minutes)); and other (reported by CPT code 99318 (Evaluation and management of a patient involving an annual nursing facility assessment)) services, to the Medicare telehealth services list beginning in CY 2011. The commenters requesting the addition of these services expressed concerns regarding limited access to care if we did not allow these services to be furnished through telehealth, and requested that CMS acknowledge the recent Congressional inclusion of nursing facilities as telehealth originating sites by adding these codes to the list of Medicare telehealth services.

In the CY 2010 PFS proposed and final rules (74 FR 33544 and 74 FR 61762), we discussed concerns about potential disparities in patient acuity between nursing facility services and the current list of Medicare telehealth services. We also declined to add HCPCS codes to the Medicare telehealth services list that are used exclusively to describe Federally-mandated nursing facility visits. As discussed in the CY 2010 PFS proposed rule (74 FR 33543), the long-term care regulations at § 483.40(c) require that residents of SNFs receive initial and periodic personal visits. These regulations ensure that at least a minimal degree of personal contact between a practitioner and a SNF resident is maintained, both at the point of admission to the facility and periodically during the course of the resident's stay. We continue to believe that these Federally-mandated visits should be conducted in-person, and not as Medicare telehealth services. Therefore, in the CY 2010 PFS final rule with comment period, we revised § 410.78 to preclude physicians and other practitioners from furnishing the physician visits required under § 483.40(c) through telehealth.

We reviewed the use of telehealth for each of the subcategories of nursing facility services included in the requests for CY 2011. We identified the E/M services that fulfill Federal requirements for personal visits under § 483.40(c), and we did not propose for CY 2011 to add any HCPCS codes to the Medicare telehealth services list that are used exclusively to describe these Federally-mandated visits. These codes include the CPT codes for initial nursing facility care (CPT codes 99304 through 99306) that are used to report the initial E/M visit that fulfills Federally-mandated requirements under § 483.40(c) and other nursing facility service (CPT code 99318) that is only payable by Medicare if the visit is substituted for a Federally-mandated visit under § 483.40(c).

The nursing facility discharge day management services reported under CPT code 99315 and 99316 are E/M visits that prepare a nursing facility resident for discharge from the facility. There are no Medicare requirements that such a service be furnished. If a practitioner chooses to furnish this service, we continue to believe that an in-person visit is most appropriate in order to ensure the resident is prepared for discharge from the nursing facility. These services are furnished when a practitioner deems it medically reasonable and necessary to assess a patient's readiness for and to prepare a patient being discharged from the monitored nursing facility environment to another typically less intensive setting. There are no services on the current list of telehealth services that resemble such preparation of a patient for discharge. As in the case of hospital discharge day management services, we believe it is especially important that, if a practitioner furnishes a nursing facility discharge day management service, the service be furnished in-person. The practitioner must be able to comprehensively assess the patient's status in preparation for discharge so that the patient will have a higher likelihood of making a successful transition from the nursing facility to another setting. Therefore, we did not consider nursing facility discharge day management services for addition to the Medicare telehealth services list on a category 1 basis for CY 2011. When we considered the addition of these services under category 2, we had no evidence that nursing facility discharge services furnished through telehealth are equivalent to in-person discharge services. Therefore, we did not propose to add nursing facility discharge day management services to the CY 2011 telehealth list.

Subsequent nursing facility services, reported by CPT codes 99307 through 99310, may be used to report either a Federally-mandated periodic visit under § 483.40(c) or another E/M visit, prior to or after the initial nursing facility care visit, as long as the subsequent nursing facility care visit is medically reasonable and necessary for the resident's care. While we continue to believe that many SNF residents have complex medical care needs, we believe that it is appropriate to consider the addition of these codes to the telehealth list on a category 1 basis. As we state above in the context of our discussion of subsequent hospital care services, the HCPCS codes for initial and follow-up inpatient consultation services for nursing facility patients are on the list of Medicare telehealth services, and subsequent nursing facility services are similar to those services. These E/M services are furnished to high acuity, complex SNF patients, although not by the admitting practitioner himself or herself. Therefore, we believe that subsequent nursing facility visits by a patient's admitting practitioner sufficiently resemble follow-up inpatient consultation services to consider them on a category 1 basis for the telehealth list. We concluded for CY 2011 that it would be appropriate to permit some subsequent nursing facility care services to be furnished through telehealth to ensure that complex nursing facility patients have frequent encounters with their admitting practitioner, although we continue to believe that the Federally-mandated visits should be in-person to facilitate the comprehensive, coordinated, and personal care that these complex patients require on an ongoing basis.

Therefore, we proposed that subsequent nursing facility care services, specifically CPT codes 99307, 99308, 99309 and 99310, be added to the list of Medicare telehealth services on a category 1 basis beginning in CY 2011, with some limitations on furnishing these services through telehealth. Because of our concerns regarding the potential acuity and

complexity of SNF inpatients, we proposed to limit the provision of subsequent nursing facility care services furnished through telehealth to once every 30 days. We were especially interested in public comments, including any evidence regarding patterns of high quality care and clinical outcomes, regarding this proposal to limit the provision of subsequent nursing facility care services furnished through telehealth to once every 30 days. We remain committed to ensuring that SNF inpatients receive appropriate in-person visits and that Medicare pays only for medically reasonable and necessary care. Currently and continuing in CY 2011, an unlimited number of initial and follow-up consultation services may be furnished through telehealth to these patients, so we believe that only a limited number of subsequent nursing facility care services by the admitting practitioner would be appropriate for SNF inpatients. Finally, we specified that subsequent nursing facility care services reported for a Federally-mandated periodic visit under § 483.40(c) may not be furnished through telehealth. In light of this CY 2011 proposal, we were confident that admitting practitioners would continue to make appropriate in-person visits to all patients who need such care during their SNF stay.

Consistent with our proposal, we proposed to revise § 410.78(b) and § 414.65(a)(1) to include subsequent nursing facility care services as Medicare telehealth services, with the limitation of one telehealth subsequent nursing facility care service every 30 days. Federally-mandated periodic visits may not be furnished through telehealth, as specified currently in § 410.78(e)(2).

Comment: One commenter recommended that CMS limit the use of telehealth for subsequent nursing facility care services to CPT codes 99307 and 99308, the lower two levels of care. The commenter stated that the subsequent nursing facility care services described by CPT codes 99309 and 99310, the higher two levels of care, require a detailed to comprehensive history and examination, along with moderate to complex decisionmaking that warrant an in-person visit with the physician. The same commenter disagreed with the limitation of one telehealth subsequent nursing facility care service every 30 days and suggested that unless and until evidence of overutilization is obtained, the limit could hinder access to appropriate care under the telehealth benefit. The commenter agreed with the CMS policy that all Federally-mandated visits as defined by the long-term care regulations § 483.40(c) should be conducted in-person and not as Medicare telehealth services.

Response: We appreciate the response to our specific request for public comment regarding the addition of subsequent nursing facility care services to the list of Medicare telehealth services with the limitation of one telehealth subsequent nursing facility care service every 30 days. As we stated in the proposed rule (75 FR 40112), we remain committed to ensuring that SNF inpatients receive appropriate in-person visits and that Medicare pays only for medically reasonable and necessary care. We received no new evidence from the commenter regarding patterns of high quality care and clinical outcomes in terms of our proposal to limit the provision of subsequent nursing facility care services furnished through telehealth to once every 30 days. Because we want to ensure that nursing facility patients with complex medical conditions have appropriately frequent medically reasonable and necessary encounters with their admitting practitioner, we continue to believe that it would be appropriate to permit the full range of subsequent nursing facility care services to be furnished through telehealth. At the same time, because of our concerns regarding the potential acuity and complexity of SNF inpatients, we want to ensure that these patients continue to receive in-person visits as appropriate to manage their care. We are adding these services as Medicare telehealth services with the limitation as we proposed, and we remain confident that admitting practitioners will continue to make appropriate in-person visits to all patients who need such care during their SNF stay.

After consideration of the public comments we received, we are finalizing our CY 2011 proposal to add subsequent nursing facility care services, specifically CPT codes 99307, 99308, 99309 and 99310, to the list of Medicare telehealth services on a category 1 basis beginning in CY 2011, with limits to the provision of subsequent nursing facility care services furnished through telehealth to once every 30 days. We are revising § 410.78(b) and § 414.65(a)(1) to include subsequent nursing facility care services as Medicare telehealth services, with the limitation of one telehealth subsequent nursing facility care service every 30 days. Federally-mandated periodic visits may not be furnished through telehealth, as specified currently in § 410.78(e)(2).

6. Neuropsychological Testing Services

The American Telemedicine Association submitted a request to add neuropsychological testing services, described by CPT codes 96119 (Neuropsychological testing (for example, Halstead-Reitan Neuropsychological Battery, Wechsler Memory Scales and Wisconsin Card Sorting Test), per hour of the psychologist's or physician's time, both face-to-face time administering tests to the patient and time interpreting these test results and preparing the report); and 96119 (Neuropsychological testing (for example, Halstead-Reitan Neuropsychological Battery, Wechsler Memory scales and Wisconsin Card Sorting Test), with qualified health care professional interpretation and report, administered by technician, per hour of technician time, face-to-face), to the list of telehealth services for CY 2011 based on their similarity to other telehealth services.

In the CY 2008 PFS final rule with comment period (72 FR 66251), we stated that we have received conflicting comments and data regarding the appropriateness of furnishing neuropsychological testing via telehealth. While we appreciate the recent request for addition of these same services to the Medicare telehealth services list, we did not believe that these services are similar to services currently on the Medicare telehealth services list and, therefore, we concluded that they would not be appropriate for consideration or addition under category 1 for CY 2011. In the CY 2011 request for the addition of the these services, we received no information to indicate that the diagnostic findings of neuropsychological testing through telehealth are similar to those based upon in-person testing, and therefore that testing through telehealth does not affect the patient's diagnosis. Consequently, we did not propose to add neuropsychological testing services to the list of approved Medicare telehealth services for CY 2011.

We received no public comments regarding our discussion of the request to add neuropsychological testing to the list of Medicare telehealth services. Therefore, we are finalizing our decision not to add neuropsychological testing to the list of Medicare telehealth services for CY2011.

7. Speech-Language Pathology Services

The Marshfield Clinic submitted a request to add various speech-language pathology services to the list of approved telehealth services for CY

2011. Speech-language pathologists are not permitted under section 1842(b)(18)(C) of the Act to furnish and receive payment for Medicare telehealth services. Therefore, we did not propose to add any speech-language pathology services to the list of Medicare telehealth services for CY 2011. For further discussion of these services in the context of telehealth, we refer readers to the CY 2005 and CY 2007 PFS proposed and final rules with comment period (69 FR 47512 and 66276, and 71 FR 48995 and 69657).

Comment: One commenter stated that research has proven that audiology procedures offered via telehealth services have great potential. The commenter also stated that CMS should use its broad discretion in implementing programs to expand the list of available telehealth services to include audiology.

Response: It is not within our administrative authority to pay speech language pathologists and audiologists for services furnished via telehealth. The statute authorizes the Secretary to pay for telehealth services only when furnished by a physician or a practitioner as those terms are defined in section 1834(m)(4)(D) and (E) of the Act.

After consideration of the public comment we received, we are finalizing our decision not to add various speech-language pathology services to the list of approved telehealth services for CY 2011.

8. Home Wound Care Services

Wound Care Associates, LLC, submitted a request to add wound care in the home setting to the list of Medicare telehealth services. A patient's home is not permitted under current statute to serve as an originating site for Medicare telehealth services. Therefore, we did not propose to add home wound care services to the list of Medicare telehealth services for CY 2011.

We received no public comments regarding our discussion of the request to add wound care in the home setting to the list of Medicare telehealth services. Therefore, we are finalizing our decision not to add wound care in the home setting to the list of Medicare telehealth services for CY2011.

9. Other Issues

We received other public comments on matters related to Medicare telehealth services that were not the subject of proposals in the CY 2011 PFS proposed rule. We thank the commenters for sharing their views and suggestions. Because we did not make any proposals regarding these matters, we do not generally summarize or respond to such comments in this final rule with comment period. However, we are summarizing and responding to the following comments in order to reiterate certain information.

Comment: One commenter requested an explanation of the acceptable time and format to request or recommend changes to the criteria set in 2003 by which CMS considers specific services for Medicare coverage when furnished through telehealth.

Response: As we discussed in the CY 2010 PFS final rule with comment period (74 FR 61766), our established criteria and process for reviewing requests to add to the list of approved Medicare telehealth services were subject to full notice and comment procedures in the CY 2003 PFS proposed and final rules. Since we did not make any proposals relating to the criteria or process for CY 2011, any potential revisions to the process for adding or deleting services from the list of approved Medicare telehealth services are outside the scope of this CY 2011 final rule with comment period.

Throughout the year, we regularly meet with parties who want to share their views on topics of interest to them. These discussions may provide us with information regarding changes in medical practice and afford opportunities for the public to bring to our attention issues they believe we should consider for future rulemaking. Thus, we encourage stakeholders to contact us at any time if there are topics related to physician payment policy that they would like to discuss.

Comment: One commenter requested an explanation regarding how the payment rates for telehealth consultations are set in a manner that is consistent with section 1834(m)(2)(A) of the Act that requires Medicare to pay a practitioner who furnishes a telehealth service an amount equal to the amount that the practitioner would have been paid if the service had been furnished without the use of a telecommunications system.

Response: As we stated in the CY 2009 PFS final rule with comment period (73 FR 69745), we established the RVUs for follow-up inpatient telehealth consultations at the same level as the RVUs established for subsequent hospital care (as described by CPT codes 99231 through 99233). For CY 2010, we established the RVUs for initial inpatient telehealth consultations at the same level as the RVUs for initial hospital care (as described by CPT codes 99221 through 99223) (75 FR 61775). We believe this is appropriate because a physician or practitioner furnishing a telehealth service is paid an amount equal to the amount that would have been paid if the service had been furnished without the use of a telecommunication system. Since physicians and practitioners furnishing follow-up inpatient consultations in an in-person encounter must continue to utilize subsequent hospital care codes (as described by CPT codes 99231 through 99233) and those furnishing initial inpatient consultations in an in-person encounter must generally utilize initial hospital care codes (as described by CPT codes 99221 through 99223), we believe it is appropriate that the RVUs for the subsequent and initial telehealth HCPCS G-codes are set at the same level as the subsequent and initial hospital care codes, respectively.

D. Summary of CY 2011 Telehealth Policies

In summary, we are finalizing our proposals to add the following requested services to the list of Medicare telehealth services for CY 2011:

- Individual and group KDE services (HCPCS codes G0420 and G0421, respectively);
- Individual and group DSMT services, with a minimum of 1 hour of in-person instruction to be furnished in the year following the initial DSMT service to ensure effective injection training (HCPCS codes G0108 and G0109, respectively);
- Group MNT and HBAI services (CPT codes 97804, and 96153 and 96154, respectively);
- Subsequent hospital care services, with the limitation for the patient's admitting practitioner of one telehealth visit every 3 days (CPT codes 99231, 99232, and 99233); and
- Subsequent nursing facility care services, with the limitation for the patient's admitting practitioner of one telehealth visit every 30 days (CPT codes 99307, 99308, 99309, and 99310).

Furthermore, we are revising § 410.78(b) and § 414.65(a)(1) accordingly. Specifically, we are adding individual and group KDE services, individual and group DSMT services, group MNT services, group HBAI services, and subsequent hospital care and nursing facility care services to the list of telehealth services for which payment will be made at the applicable PFS payment amount for the service of the practitioner. In addition, we have reordered the listing of services in these two sections and removed "initial and follow-up inpatient telehealth consultations furnished to beneficiaries in hospitals and SNFs" in § 410.78(b) because these are described by the more general term "professional

consultations" that is in the same section. Finally, we are continuing to specify that the physician visits required under § 483.40(c) may not be furnished as telehealth services.

E. Telehealth Originating Site Facility Fee Payment Amount Update

Section 1834(m) of the Act establishes the payment amount for the Medicare telehealth originating site facility fee for telehealth services provided from October 1, 2001, through December 31 2002, at $20. For telehealth services provided on or after January 1 of each subsequent calendar year, the telehealth originating site facility fee is increased by the percentage increase in the MEI as defined in section 1842(i)(3) of the Act. The MEI increase for 2011 is 0.4 percent. Therefore, for CY 2011, the payment amount for HCPCS code Q3014 (Telehealth originating site facility fee) is 80 percent of the lesser of the actual charge or $24.10. The Medicare telehealth originating site facility fee and MEI increase by the applicable time period is shown in Table 49.

TABLE 49—THE MEDICARE TELEHEALTH ORIGINATING SITE FACILITY FEE AND MEI INCREASE BY THE APPLICABLE TIME PERIOD

Facility fee	MEI increase (%)	Period
$20.00	N/A	10/01/2001–12/31/2002
$20.60	3.0	01/01/2003–12/31/2003
$21.20	2.9	01/01/2004–12/31/2004
$21.86	3.1	01/01/2005–12/31/2005
$22.47	2.8	01/01/2006–12/31/2006
$22.94	2.1	01/01/2007–12/31/2007
$23.35	1.8	01/01/2008–12/31/2008
$23.72	1.6	01/01/2009–12/31/2009
$24.00	1.2	01/01/2010–12/31/2010
$24.10	0.4	01/01/2011–12/31/2011

V. Addressing Interim Final Relative Value Units From CY 2010 and Establishing Interim Relative Value Units for CY 2011

A. Background

In accordance with section 1848(c) of the Act, CMS determines work, PE, and malpractice RVUs for each service paid under the PFS. On an annual basis, the AMA RUC provides CMS with recommendations regarding physician work values for new, revised, and potentially misvalued codes. Over the last several years, CMS, in conjunction with the AMA RUC, has identified and reviewed numerous potentially misvalued CPT codes. In 2006, the AMA RUC established the Five-Year Review Identification Workgroup to identify potentially misvalued services using the following screens: "New Technology;" "Site-of-Service Anomalies;" " High Volume Growth;" "CMS Fastest Growing;" "High Intra-Service Work per Unit Time (IWPUT);" "Services Surveyed by One Specialty—Now Performed by a Different Specialty;" "Harvard-Valued, Utilization over 1 Million;" "Harvard Valued, Utilization over 100,000;" and "Codes Reported Together/Bundled CPT Services." In addition to providing recommendations to CMS for work RVUs, the AMA RUC's Practice Expense Subcommittee reviews and then the AMA RUC recommends direct PE inputs (clinical labor, medical supplies, and medical equipment) for individual services. To guide the establishment of malpractice RVUs for new and revised codes before the next 5-Year Review of Malpractice, the AMA RUC also provides crosswalk recommendations, that is, "source" codes with a similar specialty mix of practitioners furnishing the source code and the new/revised code. CMS reviews the AMA RUC recommendations on a code-by-code basis. For AMA RUC recommendations regarding physician work RVUs, we determine whether we agree with the recommended work RVUs for a service (that is, we agree the valuation is accurate), or, if we disagree, we determine an alternative value that better reflects our estimate of the physician work for the service. Because of the timing of the CPT Editorial Panel decisions, AMA RUC recommendations, and our rulemaking cycle, we publish these work RVUs in the PFS final rule with comment period as interim final values, subject to public comment. Similarly, we assess the AMA RUC's recommendations for direct PE inputs and malpractice crosswalks, and establish PE and malpractice interim final values, which are also subject to comment. We note that, with respect to interim final PE RVUs, the main aspect of our valuation that is open for public comment for a new, revised, or potentially misvalued code is the direct PE inputs and not the other elements of the PE valuation methodology, such as the indirect cost allocation methodology, that also contribute to establishing the PE RVUs for a code. The public comment period on the PFS final rule with comment period remains open for 60 days after the rule is issued.

If we receive public comments on the interim final work RVUs for a specific code indicating that refinement of the interim final work value is warranted based on sufficient information from the commenters concerning the clinical aspects of the physician work associated with the service (57 FR 55917), we refer the service to a refinement panel, as discussed in further detail in sections III.I. and V.B.1. of this final rule with comment period.

In the interval between closure of the comment period and the subsequent year's PFS final rule with comment period, we consider all of the public comments on the interim final work, PE, and malpractice RVUs for the new, revised, and potentially misvalued codes and the results of the refinement panel, if applicable. Finally, we address the interim final RVUs (including the interim final direct PE inputs) by providing a summary of the public comments and our responses to those comments, including a discussion of any changes to the interim final work or malpractice RVUs or direct PE inputs, in the following year's PFS final rule with comment period. We then typically finalize the direct PE inputs and the work, PE, and malpractice RVUs for the service in that year's PFS final rule with comment period, unless we determine it would be more appropriate to continue their interim final status for another year and solicit further public comment.

B. Addressing Interim Final RVUs From CY 2010

In this section, we address the interim final values published in Appendix C of the CY 2010 PFS final rule with comment period (74 FR 62144 through 62146), as subsequently corrected in the December 10, 2009 (74 FR 65449) and May 11, 2010 correction notices (75 FR 26350). We discuss the results of the CY 2010 refinement panel, respond to public comments received on specific interim final values (including direct PE inputs) from CY 2010, address the status of the interim final values of a number of potentially misvalued codes from CY 2009 and CY 2010, and address the other new, revised, or potentially misvalued codes with interim final values for CY 2010 that are not specifically discussed elsewhere in this final rule with comment period.

We note that the final CY 2011 direct PE database that lists the direct PE inputs is available on the CMS Web site under the downloads for the CY 2011 PFS final rule with comment period at: *http://www.cms.gov/PhysicianFeeSched/PFSFRN/*

list.asp#TopOfPage. The final CY 2011 work, PE, and malpractice RVUs are displayed in Addendum B to this final rule with comment period.

1. CY 2010 Interim Final Work RVUs Referred to the Refinement Panel

We received public comments on 4 CPT codes with CY 2010 interim final work values. We referred these services to the CY 2010 refinement panel for further review. For ease of discussion, we will be referring to these services as "refinement codes." Consistent with past practice (62 FR 59084), we convened a multispecialty panel of physicians to assist us in the review of the comments. The panel was moderated by our physician advisors, and consisted of the following voting members:

- One or two clinicians representing the commenting organization.
- Two primary care clinicians nominated by the American Academy of Family Physicians and the American College of Physicians.
- Three contractor medical directors (CMDs).
- Clinicians with practices in related specialties who were expected to have knowledge of the services under review.

We assembled a set of 300 reference services and asked the panel members to compare the clinical aspects of physician work for the refinement code to one or more of the reference services. In compiling the set of reference services, we attempted to include: (1) Services that are commonly performed for which the work RVUs are not controversial; (2) services that span the spectrum of work intensity; and (3) at least three services performed by each of the major specialties that furnish the refinement codes so that the perspective of relevant specialties would be represented. The panel process was designed to capture each participant's independent judgment and his or her clinical experience which informed and drove the discussion of the refinement code during the refinement panel proceedings. Following the discussion, each voting participant rated the physician work of the refinement code. Ratings were obtained individually and confidentially, with no attempt to achieve consensus among the panel members.

We then analyzed the ratings for each refinement code based on a presumption that the interim final work RVUs were correct unless the ratings clearly indicated a different result. Ratings of work were analyzed for consistency among the four different groups (commenting organization, primary care physicians, CMDs, and related clinicians) represented on the panel. In addition, we used statistical tests to determine whether there was sufficient agreement among the groups of the panel and whether the agreed-upon RVUs differed significantly from the interim final RVUs published in Addendum C of the CY 2010 final rule with comment period. We did not modify the interim final RVUs unless there was clear agreement for a change. If there was agreement across groups for change, but the groups did not agree on what the new RVUs should be, we eliminated the outlier group and looked for agreement among the remaining groups as the basis for new RVUs for the refinement code. This methodology is consistent with the historical refinement process as established in the November 25, 1992 PFS final rule with comment period (57 FR 55938).

Our decision to convene multispecialty panels of physicians and to apply the statistical tests described above has historically been based on our need to balance the interests of those who commented on the interim final work values with the redistributive effects that would occur in other specialties if the work values were changed. We refer readers to section III.I. of this final rule with comment period for a full discussion of the changes to the refinement process that we are adopting for refinement panels beginning in CY 2011.

Table 50 lists those refinement codes reviewed under the CY 2010 refinement panel process described in this section. The table includes the following information:

- CPT Code. This is the CPT code for a service.
- Short Descriptor. This is an abbreviated version of the narrative description of the code.
- CY 2010 Interim Final Work RVUs. The interim final work RVUs that appeared in the CY 2010 PFS final rule with comment period (74 FR 61949 through 61953), as subsequently corrected in the December 10, 2009 (74 FR 65449) and May 11, 2010 correction notices (75 FR 26350), are shown for each reviewed code.
- Requested Work RVUs. This column identifies the work RVUs requested by the commenters.
- CY 2011 Final Work RVUs. This column contains the final work RVUs after consideration by the refinement panel.

We note that we are accepting the results of the CY 2010 refinement panel for all of these codes as the final work RVUs for CY 2011. These final values are also displayed in Addendum B to this final rule with comment period.

TABLE 50—CPT CODES REVIEWED UNDER THE CY 2010 REFINEMENT PANEL PROCESS

CPT Code	Mod	Short descriptor	CY 2010 interim final work RVUs	Requested work RVUs	CY 2011 final work RVUs
74261	26	Ct colonography, w/o dye	2.28	2.40	2.40
78451	26	Ht muscle image spect, sing	1.38	1.40	1.38
78452	26	Ht muscle image spect, mult	1.62	1.75	1.62
95905	26	Motor/sens nrve conduct test	0.05	0.15	0.05

2. CY 2010 Interim Final RVUs for Which Public Comments Were Received

a. Insertion of Breast Prosthesis (CPT Code 19340)

CPT code 19340 (Immediate insertion of breast prosthesis following mastopexy, mastectomy or in reconstruction) was identified by CMS for AMA RUC review as requested by the specialty society. The AMA RUC recommended 13.78 work RVUs for CY 2010, which CMS accepted. However, as noted by a public comment on the CY 2010 PFS final rule with comment period, the interim final CY 2010 work RVUs published in the CY 2010 PFS final rule with comment period (74 FR 61779, 62023 and 62144) for this service did not reflect the increases in the evaluation and management services for the post-operative visits associated with this service that resulted from the CY 2010 changes to the consultation code policy. The work RVUs for CPT code 19340 with these increases included are 13.99 RVUs. This correction was included in the May 11, 2010 correction notice to the CY 2010 final rule with comment period (75 FR 26356). We are finalizing the interim work RVUs for CPT code 19340 of 13.99 for CY 2011.

b. Computed Tomographic Colonography (CPT Code 74261)

For CPT code 74261, (Computed tomographic (CT) colonography, diagnostic, including image postprocessing; without contrast material), the AMA RUC recommended 2.40 work RVUs. During the AMA RUC meeting, this code was compared to two CPT codes: 75635 (Computed tomographic angiography, abdominal aorta and bilateral iliofemoral lower extremity runoff, with contrast material(s), including noncontrast images, if performed, and image postprocessing (work RVUs = 2.40)) and 78815 (Positron emission tomography (PET) with concurrently acquired computed tomography (CT) for attenuation correction and anatomical localization imaging; skull base to mid-thigh (work RVUs = 2.44)). Based on the comparisons of similar physician work, physician time, and intensity/complexity measures, the AMA RUC determined that work RVUs of 2.40 were appropriate for CPT code 74261. We disagreed with the AMA RUC-recommended work RVUs and believe CPT code 74263 (Computed tomographic (CT) colonography, screening, including image postprocessing) represents a more comparable service because it has virtually the same description of work, pre-, intra-, and post-service time for which the AMA RUC recommended work RVUs of 2.28. Therefore, we assigned interim final work RVUs of 2.28 to CPT code 74261 for CY 2010.

Comment: Several commenters disagreed with the interim final work RVUs assigned by CMS and believe that equalizing the work RVUs for diagnostic and screening computed tomographic colonography ignores the reality that patients referred for diagnostic study, by definition, have greater complexity. These commenters believed that for this reason and the increased time involved with a diagnostic study, higher work RVUs are necessary to maintain the proper relativity with the corresponding screening CPT code 74263. The commenters recommended that CMS accept the AMA RUC-recommended work RVUs of 2.40 for CPT code 74261 and refer this code to the CY 2010 refinement panel for review.

Response: Based on the concerns expressed by the commenters, we referred this code to the CY 2010 refinement panel for review. As a result of the statistical analysis of the CY 2010 refinement panel ratings, we are assigning 2.40 work RVUs to CPT code 74261 as the final value for CY 2011.

c. Myocardial Perfusion Imaging (CPT Codes 78451, 78452, 78453, and 78454)

For CPT code 78451 (Myocardial perfusion imaging, tomographic (SPECT) (including attenuation correction, qualitative or quantitative wall motion, ejection fraction by first pass or gated technique, additional quantification, when performed); single study, at rest or stress (exercise or pharmacologic)), the AMA RUC recommended 1.40 work RVUs, while the AMA RUC recommended 1.75 work RVUs for CPT code 78452 (Myocardial perfusion imaging, tomographic (SPECT) (including attenuation correction, qualitative or quantitative wall motion, ejection fraction by first pass or gated technique, additional quantification, when performed); multiple studies, at rest and/or stress (exercise or pharmacologic) and/or redistribution and/or rest reinjection).

Upon review of the AMA RUC recommendations for these codes, it was unclear what methodology the AMA RUC used to calculate the recommended work RVUs for CPT code 78451. Therefore, we disagreed with the AMA RUC-recommended work RVUs of 1.40 for CPT code 78451 and believe the work RVUs for the survey 25th percentile were more appropriate. Therefore, we assigned interim final work RVUs of 1.38 to CPT code 78451 for CY 2010.

For CPT code 78452, we disagreed with the reference code used, CPT code 70496 (Computed tomographic angiography, head, with contrast material(s), including noncontrast images, if performed, and image postprocessing (work RVUs = 1.75)). We believe CPT code 78452 is comparable to CPT code 73219 (Magnetic resonance (eg, proton) imaging, upper extremity, other than joint; with contrast material(s) (work RVUs = 1.62)), which has the same pre-, intra-, and post-service time. Therefore, we assigned interim final work RVUs of 1.62 to CPT code 78452 for CY 2010.

We accepted the CY 2010 recommendations of the AMA RUC for the direct PE inputs for CPT codes 78451, 78452, 78453, and 78454 (75 FR 61955).

Comment: Several commenters disagreed with the interim final work RVUs assigned by CMS for these two services. The commenters pointed out that the specialty and AMA RUC recommendations for both of these services already reflected a tremendous reduction from the work RVUs for the services as reported by multiple component codes in previous years and expressed disappointment that additional reductions were made by CMS. The commenters explained that in an effort to maintain relativity between CPT codes 78451 and 78452, the recommended RVUs for 78451 were derived by calculating the relationship between the median survey RVUs for CPT codes 78451 and 78452 and maintaining this relationship between the recommended RVUs for CPT codes 78451 and 78452. That is, the survey work RVU relationship between CPT code 78451: 78452 is [1.50: 1.87], leading to the same relationship between the AMA RUC-recommended RVUs for 78451: 78452 of [1.40: 1.75]. The AMA RUC agreed that the computed work RVUs, 1.40 for CPT code 78451, maintain the relativity of the original survey data and provide an appropriate measure of the work for CPT code 78451.

The commenters believe that CMS does not have the special expertise necessary to choose a different reference code than the code selected by the multispecialty AMA RUC panel and disagreed with the reference code used by CMS for establishing work RVUs for CPT code 78452. The AMA RUC pointed out that the reference code has no associated computer post-processing analysis, requires the interpretation of fewer images, and has no additional cine-motion images to analyze and interpret, all of which are included in the myocardial perfusion imaging procedures.

The commenters requested that CMS accept the AMA RUC recommendations of 1.40 work RVUs for CPT code 78451 and 1.75 work RVUs for CPT code 78452 and refer these codes to the CY 2010 refinement panel for review.

Response: Based on the concerns expressed by the commenters, these codes were referred to the CY 2010 refinement panel for review. As a result of the statistical analysis of CY 2010 refinement panel ratings, the work RVUs for these codes were unchanged. Therefore, we are adopting the interim final values for these codes as final, with 1.38 work RVUs for CPT code 78451 and 1.62 work RVUs for CPT code 78452 for CY 2011.

Comment: Several commenters asserted that CMS had incorrectly crosswalked equipment time inputs for several myocardial perfusion imaging codes (CPT codes 78451, 78452, 78453, and 78454), rather than accepting the AMA RUC recommendations for these codes as CMS had stated in the CY 2010 PFS final rule with comment period (74 FR 61955). One commenter further suggested that the useful life of 5 years for the Cobalt-57 flood source was incorrect.

Response: We appreciate the commenters' assistance, and we corrected the equipment times in the May 11, 2010 correction notice to the CY 2010 PFS final rule with comment period (75 FR 26356 and 26570). We are finalizing these direct PE inputs for CY 2011. We also proposed to change the useful life of the Cobalt-57 flood source from 5 to 2 years for CY 2011 (75 FR 40056). We address our final policies regarding this proposal in section II.A.3.b.(4) of this final rule with comment period.

Comment: Several commenters expressed concern that CMS applied fully transitioned PE RVUs to the new and revised CY 2010 CPT codes, specifically CPT codes 78451, 78452, 78453, and 78554. The commenters argued that the result of the lack of a transition to use of the PPIS data was an immediate 26 percent reduction for myocardial perfusion imaging services, simply because the CPT code descriptors had been revised to capture multiple procedure components. The commenters requested that the new CPT codes follow the same blend of new and previous PE RVUs that was applied to the existing CPT codes in CY 2010 and later years.

Response: Our longstanding policy is that if the CPT Editorial Panel creates a new code for a given year, the new code would be paid at its fully implemented PFS amount and not at a transition rate for that year. Consistent with this policy, the new CY 2010 myocardial perfusion imaging codes, and all other new CY 2010 CPT codes, are not being paid based on transitional PE RVUs in CY 2010. We will continue to pay these services based on the fully implemented PE RVUs in CY 2011, the same approach we are applying to other CPT codes that were new for CY 2010 or CY 2011.

d. Nerve Conduction Test (CPT Code 95905)

For CPT code 95905 (Motor and/or sensory nerve conduction, using preconfigured electrode array(s), amplitude and latency/velocity study, each limb, includes F-wave study when performed, with interpretation and report), the AMA RUC recommended 0.05 work RVUs, which we accepted in the CY 2010 PFS final rule with comment (74 FR 61953).

Comment: One commenter requested that CMS refer CPT code 95905 to the CY 2010 refinement panel for review. The commenter believes the AMA RUC erred in its recommendation to CMS in regard to the physician work involved. The commenter noted that when this code was discussed at the AMA RUC meeting, the commenter and other specialty societies that presented this code to the AMA RUC recommended assignment of 0.15 work RVUs. The commenter also believes that the undervaluation of the physician work for this service may undermine the ability of physicians to provide the service.

Response: Based on the concerns expressed by the commenter, this code was referred to the CY 2010 refinement panel for review. As a result of the statistical analysis of the CY 2010 refinement panel ratings, the work RVUs for this code were unchanged. Therefore, we are finalizing the interim final values for CPT code 95905 as 0.05 work RVUs for CY 2011.

e. Kidney Disease Education Services (HCPCS Codes G0420 and G0421)

During rulemaking for CY 2010, we adopted policies to provide for the implementation of section 152(b) of the MIPPA which created a new benefit category for kidney disease education (KDE) services for Medicare beneficiaries diagnosed with Stage IV chronic kidney disease (CKD). The MIPPA also amended section 1848(j)(3) of the Act which allows for payment of KDE services under the PFS. For CY 2010, we proposed and finalized the RVUs for the two HCPCS G-codes established for the payment of KDE services (74 FR 61901), G0420 (Face-to-face educational services related to the care of chronic kidney disease; individual, per session, per one hour) and G0421 (Face-to-face educational services related to the care of chronic kidney disease; group, per session, per one hour). For purposes of valuing the HCPCS codes for KDE services, we based the work RVUs and the PE inputs, with minor modifications, on CPT codes for medical nutrition therapy (MNT) services, specifically CPT code 97802 (Medical nutrition therapy; initial assessment and intervention, individual, face-to-face with the patient, each 15 minutes) and CPT code 97804 (Medical nutrition therapy; group (2 or more individual(s)), each 30 minutes), because we believed these services to be similar. We crosswalked the work RVUs for HCPCS code G0420 from CPT code 97802 and for HCPCS code G0421 from CPT code 97804. We multiplied the work RVUs for HCPCS code G0420 by four and the work RVUs for HCPCS code G0421 by two to account for the fact that we crosswalked a 15 minute code to a 60 minute code (CPT code 97802 to HCPCS code G0420) and a 30 minute code to a 60 minute code (CPT code 97804 to HCPCS code G0421). In order to determine the direct PE inputs for the KDE services, we indicated that we did not perform straight multiplication of the actual MNT inputs because we did not believe that the required equipment and supplies for the KDE services would increase in direct proportion to the increased time for the codes. For both HCPCS codes G0420 and G0421, we noted that we did not increase the equipment time-in-use for the body analysis machine, printer, or scale, and that we did increase the inputs for the table, computer, paper, and other printed materials.

Comment: Several commenters expressed support for the CY 2010 work RVUs for the KDE HCPCS codes G0420 and G0421. However, one commenter requested that CMS include the supplies for the KDE services as directly proportional multiple units of the MNT services in order to appropriately pay for the costs of care, noting that HCPCS code G0420 (60 minutes) should have 4 times as many supplies as those in CPT code 97802 (15 minutes) and HCPCS code G0421 (60 minutes) should have 2 times as many as those in CPT code 97804 (30 minutes).

Response: We appreciate the commenters' support for the interim final work

Response: We appreciate the commenters' support for the interim final work RVUs we established for HCPCS codes G0420 and G0421 for KDE services and we are finalizing those work RVUs for CY 2011. After reviewing the direct PE inputs for supplies in both the KDE HCPCS G-codes (G0420 and G0421) and the MNT CPT codes (CPT codes 97802 and 97804), we agree with the commenter that we had not increased the number of sheets of paper for either HCPCS code G0420 or G0421 as we indicated we would (74 FR 61901). Therefore, we have increased the number of paper sheets from 2 in CPT code 97802 (15 minutes) to 8 in HCPCS code G0420 (60 minutes) and from 2 in CPT code 97804 (30 minutes) to 4 in HCPCS code G0421 (60 minutes). We have also made conforming changes to the printer times for both KDE HCPCS G-codes in the equipment file because we base the printer time on the number of sheets of paper. We are adopting these modified direct PE inputs for HCPCS codes G0420 and G0421 as final for CY 2011.

f. Excision of Soft Tissue and Bone Tumors (CPT codes 21011 through 21016, 21552, 21554 through 21558, 21930 through 21933, 21395, 21936, 22900 through 22905, 23071, 23073, 23075 through 23078, 23200, 23210, 23220, 24071, 24073, 24075 through 24077, 24079, 24150 through 24153, 25071, 25073, 25075 through 25078, 25170, 26111, 26113, 26115 through 26118, 26250, 26255, 26260, 26262, 27043, 27045, 27047 through 27049, 27059, 27075 through 27078, 27327 through 27329, 27337, 27339, 27364, 27365, 27615, 27616, 27618, 27619, 27632, 27634, 27619, 27645 through 27647, 28039, 28041, 28043, 28045 through 28047, 28171, 28173, and 28175)

For CY 2010, the CPT Editorial Panel split 31 excision codes into 62 codes differentiated by the size of the excised lesion, 18 codes were revised, and 12 additional codes were created. Although we had significant concerns with the pre-service times and the AMA RUC-recommended work RVUs for these codes for CY 2010, in the context of public comments on the CY 2010 proposed rule regarding the site-of-service anomaly codes, we agreed to accept the AMA RUC-recommended work values for these codes on an interim final basis for CY 2010 (74 FR 61954). We also requested that the AMA RUC reexamine the minutes allocated for positioning of the patient for these codes. We noted that we would work with the AMA RUC to address our concerns about the valuation of these codes and would consider whether it would be appropriate to propose further changes in future rulemaking. We indicated that we did not agree with the AMA RUC's recommendations for the inclusion of inpatient hospital care services in these codes, particularly in the cases of codes that would be reported for the smaller-sized tumors. As a result, we stated that we would monitor the frequency data for these codes and may propose further changes to the work RVUs in the future based on these data. We emphasized that the AMA RUC itself recommended that these services be re-reviewed to determine the accuracy of the utilization assumptions once 2 years of utilization data were available.

In addition, we noted that the CPT 2010 instructions regarding the use of the excision and resection of soft tissue and bone tumor codes advised that a complex repair may be separately reported. However, longstanding Medicare policy generally includes payment for all simple, intermediate, and complex repairs of procedural incisions and, therefore, Medicare would not separately pay for complex repairs associated with procedures reported by these codes.

Comment: Several commenters were pleased that CMS agreed to accept the AMA RUC-recommended values for these new and revised codes. One commenter endorsed CMS' decision to closely monitor the utilization rates for these codes and believes this would be important to ensure accurate payment. The commenters did not see a need for CMS or the AMA RUC to review the pre-service times assigned to the codes and stated that all of these times were derived from the AMA RUC's pre-service time package methodology, a methodology that CMS has historically supported. The commenters asserted that the times assigned are reflective of the actual patient positioning times. Therefore, the commenters urged CMS to withdraw the request that the AMA RUC revisit the pre-service times for these codes. The commenters asserted that further review would add extra time and work to the already significant workload of the AMA RUC and would not result in any changes.

Response: We appreciate the commenters' support for our acceptance of the AMA RUC-recommended values for these new and revised codes and we are finalizing the interim final work RVUs for these codes for CY 2011. As we stated in the CY 2010 PFS final rule with comment period, we will continue to monitor the frequency data for these codes and work with the AMA RUC to address our concerns and, if appropriate, propose further changes in future rulemaking. In addition, we are reiterating our request originally made in the CY 2010 PFS final rule with comment period (74 FR 61954) that the AMA RUC review the pre-service times for these codes and provide their recommendations to us.

g. Cryoablation of Prostate (CPT code 55873)

In June 2008, CMS requested that the AMA RUC review the nonfacility direct PE inputs for CPT code 55873 (Cryosurgical ablation of the prostate (includes ultrasonic guidance for interstitial cryosurgical probe placement). During this review, the AMA RUC recognized that this service was initially reviewed as a new code by the AMA RUC in February 2001. The AMA RUC believed that the intra-service physician time since the initial review had declined (from 200 minutes) as the service is now more commonly performed. The AMA RUC agreed with the specialty society that the service should be surveyed for physician work and also recommended revisions in the direct PE inputs. As a result of the AMA RUC review and input from the specialty society, the AMA RUC recommended 13.45 work RVUs and revisions to the direct PE inputs for this service for CY 2010. We reviewed these recommendations and accepted the AMA RUC-recommended work RVUs for this code and the direct PE inputs in the CY 2010 PFS final rule with comment (74 FR 61954 and 61955).

Comment: One commenter expressed concern about the reduction in the work RVUs for CPT code 55873 and the lack of public notice given prior to the reduction. The commenter believes that the intra-service time was underestimated and could vary based on the skill set of the physician. The commenter requested that CMS reinstate the work RVUs as included in the CY 2010 PFS proposed rule for CY 2010 (74 FR 33740).

Response: While we originally requested that the AMA RUC review the nonfacility direct PE inputs for CPT code 55873, we believe that it is appropriate for the AMA RUC to respond to its findings during a limited review by taking other actions that it believes to be appropriate for the particular circumstances, such as requesting that procedures be resurveyed. We followed our usual methodology for revised codes whereby we respond to the AMA RUC work recommendations and adopt interim final values in the final rule with comment period for the upcoming year. In this way, we facilitate appropriate payment for the services on an interim final basis while providing public notice and the opportunity for public comment prior to finalizing the values in the following year.

We note that the RVUs for services paid under the PFS are resource-based, and individual services are valued based upon the typical resources used to provide the service. Because clinical utilization of this service has increased over the last several years and information from the current AMA RUC survey suggests there has been a decrease in intra-service time from 200 to 100 minutes, we continue to believe the reduction in intra-service time and the revised work RVUs as recommended to us by the AMA RUC are clinically appropriate for this service. We commonly expect greater work efficiency as clinical experience with a new service increases over time, and this service fits that profile. Therefore, we are finalizing the interim final work RVUs of 13.60 for CPT code 55873 for CY 2011.

Comment: One commenter stated that the 162 minutes of clinical labor time for CPT code 55873 in the final CY 2010 PFS direct PE database should be 168 minutes. The commenter also indicated that supply code SD074 be included as an input for CPT code 55873 based on the AMA RUC's CY 2010 recommendations.

Response: We appreciate the commenter bringing this information to our attention and agree with the commenter's assessment. The 6 minutes of clinical labor time missing from the direct PE inputs for CPT code 55873 have now been included, as has the filiform, and these changes are reflected in the final CY 2011 PFS direct PE database. We are finalizing these direct PE inputs for CPT code 55873 for CY 2011.

h. Urodynamics Studies (CPT Codes 51728 and 51729)

In February 2008, the AMA RUC identified CPT codes 51726 (Complex cystometrogram (ie, calibrated electronic equipment)); 51772 (Urethral pressure profile studies (UPP) (urethral closure pressure profile), any technique); 51795 (Voiding pressure studies (VP); bladder voiding pressure, any technique); and 51797 (Voiding pressure studies, intra-abdominal (ie, rectal, gastric, intraperitoneal) (List separately in addition to code for primary procedure)) through the "Codes Reported Together" potentially misvalued codes screen as combinations of codes that were reported together more than 95 percent of the time. The AMA RUC referred all four codes to the CPT Editorial Panel for creation of CPT codes for new comprehensive services and for reorganization of the coding structure to reflect the typical procedures performed. As a result, CPT codes 51772 and 51795 were deleted, CPT code 51797 was revised, and CPT codes 51727 (Complex cystometrogram (ie, calibrated electronic equipment); with urethral pressure profile studies (ie, urethral closure pressure profile), any technique); 51728 (Complex cystometrogram (ie, calibrated electronic equipment); with voiding pressure studies (*i.e.,* bladder voiding pressure), any technique); and 51729 (Complex cystometrogram (*i.e.,* calibrated electronic equipment); with voiding pressure studies (ie, bladder voiding pressure) and urethral pressure profile studies (*i.e.,* urethral closure pressure profile), any technique) were created for CY 2010. Accordingly, the AMA RUC reviewed the clinical labor inputs for the typical patient and made minor edits regarding the intra-service time for these services. In addition, the AMA RUC made adjustments to the medical supplies and equipment. As noted in the CY 2010 PFS final rule with comment period (74 FR 61955), we accepted these recommendations for the direct PE inputs on an interim final basis.

Comment: Several commenters asserted that CPT codes 51728 and 51729 should have additional clinical labor inputs, including a greater number of minutes during the intra-service period and minutes during the pre-service period. These commenters also requested revisions to the PE supply inputs for the codes.

Response: We discuss our CY 2011 proposal and the final CY 2011 policy with respect to the direct PE inputs for CPT codes 51728 and 51729 in section II.A.3.c.(5) of this final rule with comment period. As we state there, we reviewed the direct PE inputs for these two CPT codes and three related CPT codes following revised AMA RUC recommendations for CY 2011. We agreed with the AMA RUC recommendations regarding changes for CY 2011. Specifically, we believe the pre-service nonfacility clinical labor time for the 0-day global period CPT codes 51725 (simple cystometrogram (CMG) (eg, spinal manometer)) and 51726 should be removed and the intra-service clinical labor time for CPT code 51726 should also be reduced, consistent with the usual treatment of other 0-day global codes. We believe the AMA RUC provided recommendations to us regarding the direct PE inputs for these cystometrogram services that accurately reflect the costs of the resources (that is, the clinical labor, equipment, and supplies) typically required to furnish these services to Medicare beneficiaries.

Comment: Several additional commenters alerted CMS to incorrect supply inputs for CPT codes 51728 and 51729. The commenters noted that the AMA RUC direct PE recommendations for CPT code 51728 included an additional beaker. In the case of CPT code 51729, the commenters stated that CMS did not include the recommended beaker and tubing in the direct PE database for the CY 2010 final rule with comment period.

Response: We appreciate the commenters' assistance, and we made these corrections in the May 11, 2010 correction notice to the CY 2010 PFS final rule with comment period (75 FR 26356 and 26478). We are finalizing these direct PE inputs, as corrected, for CPT codes 51728 and 51239 for CY 2011.

i. Coronary Computed Tomographic Angiography (CPT Codes 75571, 75572, 75573, and 75574)

In October 2008, the CPT Editorial Panel deleted eight Category III CPT codes (0144T through 0151T) and created four new codes for CY 2010, specifically CPT codes 75571 (Computed tomography, heart, without contrast material, with quantitative evaluation of coronary calcium); 75572 (Computed tomography, heart, with contrast material, for evaluation of cardiac structure and morphology (including 3D image postprocessing, assessment of cardiac function, and evaluation of venous structures, if performed)); 75573 (Computed tomography, heart, with contrast material, for evaluation of cardiac structure and morphology in the setting of congenital heart disease (including 3D image postprocessing, assessment of LV cardiac function, RV structure and function and evaluation of venous structures, if performed)); and 75574 (Computed tomographic angiography, heart, coronary arteries and bypass grafts (when present), with contrast material, including 3D image postprocessing (including evaluation of cardiac structure and morphology, assessment of cardiac function, and evaluation of venous structures, if performed)) to describe the evolution of the performance of cardiac and coronary computed tomography for specific clinical scenarios. We accepted the AMA RUC recommendations for direct PE inputs for these codes on an interim final basis for CY 2010 (74 FR 61955).

Comment: Several commenters stated that the final CY 2010 PFS direct PE database included incomplete direct PE inputs for CPT codes 75572 and 75573. The commenters also submitted updated pricing information for the 64-slice CT scanner.

Response: We appreciate the commenters' assistance, and we corrected these errors in the May 11, 2010 correction notice to the CY 2010 PFS final rule with comment period (75 FR 26356 and 26543). We are finalizing the direct PE inputs for CPT codes 75571, 75572, 75573, and 75574, as corrected, for CY 2011. Additionally, we proposed an updated price for the 64-slice CT scanner and its accompanying software in the CY 2011 PFS proposed rule (75 FR 40062). We address that proposal and our final CY 2011 policy in section II.A.3.c.(2) of this final rule with comment period.

j. Adjacent Tissue Transfer or Rearrangement (CPT Codes 14301 and 14302)

CPT code 14300 (Adjacent tissue transfer or rearrangement, more than 30 sq cm, unusual or complicated, any area) was identified by the Five-Year Review Identification Workgroup through its "Site-of-Service Anomalies" screen for potentially misvalued codes and subsequently identified through the "CMS Fastest Growing" screen. The service was referred to the CPT Editorial Panel to clarify the coding for tissue transfers involving different size areas. As a result, CPT code 14300 was deleted and two new codes, CPT codes 14301 (Adjacent tissue transfer or rearrangement, any area; defect 30.1 sq cm to 60.0 sq cm) and 14302 (Adjacent tissue transfer or rearrangement, any area; each additional 30.0 sq cm, or part thereof (List separately in addition to code for primary procedure)) were created. We accepted the AMA RUC recommendations for direct PE inputs on an interim final basis for CY 2010 (74 FR 61955).

Comment: One commenter stated that there were discrepancies between the AMA RUC recommendations and the direct PE inputs for CPT codes 14301 and 14302.

Response: We appreciate the commenters' assistance, and we corrected these errors in the May 11, 2010 correction notice to the CY 2010 PFS final rule with comment period (75 FR 26356 and 26368). Upon additional review of the direct PE inputs for consistency with the CY 2010 AMA RUC recommendations for this CY 2011 final rule with comment period, we also found that the instrument pack for CPT code 14301 should be EQ138 (instrument pack, medium ($1500 and up)) instead of EQ137 (instrument pack, basic ($500-$1499)). Furthermore, CPT code 14301 should have one SA054 (pack, post-op incision care (suture)) as a supply input in both the nonfacility and facility settings. The final CY 2011 PFS direct PE database reflects these additional corrections. We are finalizing the direct PE inputs for CPT codes 14301 and 14302 for CY 2011.

k. Insertion of a Temporary Prostatic Urethral Stent (CPT code 53855)

CPT code 53855 (Insertion of a temporary prostatic urethral stent, including urethral measurement) was created for CY 2010 to describe the service previously reported under the Category III CPT code 0084T. We accepted the AMA RUC recommendations for direct PE inputs on an interim final basis for CY 2010 (74 FR 61955).

Comment: One commenter stated that CPT code 53855 was incorrectly missing supply codes SD074 and SH050 as inputs in the final CY 2010 PFS direct PE database. The commenter also noted that SJ038 was incorrectly substituted for SJ032.

Response: We appreciate the commenter bringing these items to our attention and agree with the commenter's assessment. The supply items for CPT code 53588 (filiform and one unit of lidocaine) have been included in the direct PE inputs and we have replaced petroleum jelly with lubricating jelly. These changes are reflected in the final CY 2011 PFS direct PE database. We are finalizing the revised direct PE inputs for CPT code 53855 for CY 2011.

l. High Dose Rate Brachytherapy (CPT codes 77785, 77786, and 77787)

CPT codes 77785 (Remote afterloading high dose rate radionuclide brachytherapy; 1 channel); 77786 (Remote afterloading high dose rate radionuclide brachytherapy; 2–12 channels); and 77787 (Remote afterloading high dose rate radionuclide brachytherapy; over 12 channels) were identified by the Five-Year Review Identification Workgroup through the "CMS Fastest Growing" and "High Volume Growth" potentially misvalued codes screens and later revised by the CPT Editorial Panel for CY 2009. As a result, the AMA RUC made recommendations for physician work and direct PE inputs for these revised services for CY 2009, which we accepted in the CY 2009 PFS final rule with comment period (73 FR 69892). Upon acceptance of the AMA RUC recommendations, we received several comments concerning the direct PE direct inputs (for example, supply costs and the useful life of the renewable sources) related to several high dose radiation therapy and placement CPT codes. In the CY 2010 PFS proposed rule (74 FR 33532), we requested that the AMA RUC revisit the direct PE inputs for these services. In response to our request, the AMA RUC reviewed the direct PE inputs for these services and made adjustments to the clinical labor staff type, changed the time for some activities, and edited the medical supplies and equipment for the typical patient scenario. In addition, the AMA RUC also recommended further discussion between the specialty and CMS regarding appropriate resolution of the PE input price for the Iridium-192 brachytherapy source typically used in CPT codes 77785, 77786, and 77787. We accepted these direct PE recommendations for CY 2010 on an interim final basis (74 FR 61782).

Comment: One commenter informed CMS of two concerns regarding CPT codes 77785, 77786, and 77787. The commenter stated that the AMA RUC summary direct PE output table included incorrectly doubled PE inputs for each of the codes. The commenter also pointed out that the medical physicist clinical labor time for CPT code 77786 should be 54 minutes instead of 29 minutes.

Response: We appreciate the commenters' assistance, and we corrected these errors in the May 11, 2010 correction notice to the CY 2010 PFS final rule with comment period (75 FR 26356 and 26564). We are finalizing the direct PE inputs for CPT codes 77785, 77786, and 77787, as corrected, for CY 2011.

m. Injection of Facet Joint (CPT Codes 64490, 64491, 64492, 64493, 64494, and 64495)

Facet joint injection services were identified by the Five-Year Review Identification Workgroup "High Volume Growth" potentially misvalued codes screen and referred to the CPT Editorial Panel to create an appropriate coding structure to report primary and additional injections. As a result, the four existing codes describing these services were deleted and CPT codes 66490 (Injection(s), diagnostic or therapeutic agent, paravertebral facet (zygapophyseal) joint (or nerves innervating that joint) with image guidance (fluoroscopy or CT), cervical or thoracic; single level); 64491 (Injection(s), diagnostic or therapeutic agent, paravertebral facet (zygapophyseal) joint (or nerves innervating that joint) with image guidance (fluoroscopy or CT), cervical or thoracic; second level (List separately in addition to code for primary procedure)); 64492 (Injection(s), diagnostic or therapeutic agent, paravertebral facet (zygapophyseal) joint (or nerves innervating that joint) with image guidance (fluoroscopy or CT), cervical or thoracic; third and any additional level(s) (List separately in addition to code for primary procedure)); 64493 (Injection(s), diagnostic or therapeutic agent, paravertebral facet (zygapophyseal) joint (or nerves innervating that joint) with image guidance (fluoroscopy or CT), lumbar or sacral; single level); 64494 (Injection(s), diagnostic or therapeutic agent, paravertebral facet (zygapophyseal) joint (or nerves innervating that joint) with image guidance (fluoroscopy or CT), lumbar or

sacral; second level (List separately in addition to code for primary procedure)); and 64495 (Injection(s), diagnostic or therapeutic agent, paravertebral facet (zygapophyseal) joint (or nerves innervating that joint) with image guidance (fluoroscopy or CT), lumbar or sacral; third and any additional level(s) (List separately in addition to code for primary procedure)) were created for CY 2010. Accordingly, the AMA RUC reviewed the direct PE inputs as recommended by the specialty and made some minor edits to the clinical labor and medical supplies to reflect the typical patient service, which we accepted in the CY 2010 PFS final rule with comment on an interim final basis (74 FR 61955).

Comment: Several commenters stated that the equipment and supplies listed in the final CY 2010 PFS direct PE database for CPT codes 64490, 64491, 64492, 64493, 64494, and 64495 were incorrect and not consistent with the AMA RUC's recommendations.

Response: We verified that the equipment and supplies listed as direct inputs for these codes in the final CY 2011 direct PE database match the CY 2010 recommendations provided to us by the AMA RUC. We encourage stakeholders who believe a change is required in the direct PE inputs associated with a particular service in the typical case that is furnished in the facility or nonfacility setting to address these concerns with the AMA RUC. We are finalizing these direct PE inputs for CPT codes 64490, 64491, 64492, 64493, 64494, and 64495 for CY 2011.

n. Knee Arthroscopy (CPT Code 29870)

In the CY 2008 PFS final rule (72 FR 66238), we deferred the establishment of nonfacility direct PE inputs for CPT code 29870 (Arthroscopy, knee, diagnostic, with or without synovial biopsy (separate procedure)) and stated that the physicians performing arthroscopic services in the nonfacility setting should be given the opportunity to have a multispecialty review by the AMA RUC. We accepted the AMA RUC recommendations for nonfacility direct PE inputs in the CY 2010 PFS final rule with comment period on an interim final basis (74 FR 61955).

Comment: One commenter indicated that the wrong arthroscopic system was approved by the AMA RUC for CPT code 29870.

Response: We verified that the equipment input for this code in the final CY 2011 PFS direct PE database matches the recommendation provided to us by the AMA RUC. We encourage stakeholders who believe a change is required in the direct PE inputs associated with a particular service in the typical case that is furnished in the facility or nonfacility setting to address these concerns with the AMA RUC. We are finalizing the direct PE inputs for CPT code 298770 for CY 2011.

3. Status of Interim Final Work RVUs for Potentially Misvalued Site-of-Service Anomaly Codes From CY 2009 and CY 2010

In previous years, we have requested that the AMA RUC review codes that, according to Medicare claims data, have experienced a change in the typical site-of-service since the original valuation of the code. The AMA RUC reviewed and recommended to CMS revised work RVUs for 29 codes for CY 2009 and 11 codes for CY 2010 that were identified as having site-of-service anomalies. In the CYs 2009 and 2010 PFS final rules with comment period (73 FR 69883 and 74 FR 61776 through 61778, respectively), we indicated that although we would accept the AMA RUC valuations for these site-of-service anomaly codes on an interim final basis through CY 2010, we had ongoing concerns about the methodologies used by the AMA RUC to review these services. We requested that the AMA RUC reexamine the site-of-service anomaly codes and use the building block methodology to revalue the services (74 FR 61777).

For CY 2011, as discussed in more detail in section II.C.3.d. of this final rule with comment period, we are requesting that the AMA RUC reconsider its previously recommended values, which have been applied on an interim final basis in CYs 2009 and 2010, and revise the work RVUs to better reflect the intensity of the services and the revised physician times and post-procedure visits included in the valuation of these codes. Until we receive the revised values from the AMA RUC for CY 2012 and can make a determination regarding them, we are continuing to accept the existing AMA RUC-recommended work RVUs listed in Tables 14 and 15 in section II.C.3.d. of this final rule with comment period on an interim final basis for CY 2011.

4. Other New, Revised, or Potentially Misvalued Codes With CY 2010 Interim Final RVUs Not Specifically Discussed in the CY 2011 Final Rule With Comment Period

For all other CY 2010 new, revised, or potentially misvalued codes with CY 2010 interim final RVUs that are not specifically discussed in this final rule with comment period, we are finalizing, without modification, the interim final work and malpractice RVUs and direct PE inputs that we initially adopted for CY 2010.

C. Establishment of Interim Final RVUs for CY 2011

In this section, we discuss the establishment of work, PE, and malpractice interim final RVUs for CY 2011 and issues related to the processes for establishing these values. These CY 2011 work, PE, and malpractice interim final RVUs, and the associated direct PE inputs, are open to comment on this CY 2011 final rule with comment period. In general, the work, PE, and malpractice RVUs and the associated direct PE inputs for the CY 2011 new and revised codes will be finalized in the CY 2012 PFS final rule with comment period, where we will also respond to the public comments received on the values and direct PE inputs that are adopted on an interim final basis in this CY 2011 final rule with comment period. The final CY 2011 PFS direct PE database and the crosswalks for the malpractice RVUs for new and revised codes are posted on the CMS Web site under the downloads for the CY 2011 PFS final rule with comment period at: *http://www.cms.gov/PhysicianFeeSched/PFSFRN/list.asp#TopOfPage.*

For CY 2011, we received AMA RUC recommendations for 325 new, revised, and potentially misvalued CPT codes and 93 recommended deletions. Of the 325 codes, 84 were identified as potentially misvalued, 125 as new, and 116 as revised. After subtracting out CPT codes for which no work RVU recommendation were given—including codes listed on the Clinical Lab Fee Schedule (CLFS), vaccine codes, and technical component only codes—there were 291 codes for which the AMA RUC provided work RVU recommendations for CY 2011: 82 CPT codes classified by the AMA RUC as potentially misvalued, 108 as new, and 101 as revised. Of note, as displayed in Table 53, we consider 204 of the AMA RUC work recommendations for CY 2011 new and established CPT codes to be for codes identified through, created as a result of, or valued in association with service(s) identified through a potentially misvalued code screen. Additionally, we received direct PE input recommendations from the AMA RUC for 325 CPT codes for CY 2011.

For CY 2011, we note that the CPT Editorial Panel deleted CPT codes 0160T (Therapeutic repetitive transcranial magnetic stimulation treatment planning) and 0161T (Therapeutic repetitive transcranial magnetic stimulation treatment delivery and management, per session) and created two new CPT codes, 90867

(Therapeutic repetitive transcranial magnetic stimulation treatment; planning) and 90868 (Therapeutic repetitive transcranial magnetic stimulation treatment; delivery and management, per session). Due to the timing of the creation of these codes, the AMA RUC was unable to provide work and PE recommendations for CY 2011. As a result, these codes will be contractor-priced for CY 2011.

1. Establishment of Interim Final Work RVUs for CY 2011

a. Background

As we previously explained in section V.A. of this final rule with comment period, on an annual basis, the AMA RUC provides CMS with recommendations regarding physician work values for new, revised, and potentially misvalued codes. We review the AMA RUC-recommended work RVUs on a code-by-code basis. We determine whether we agree with the AMA RUC's recommended work RVUs for a service (that is, we agree the valuation is accurate), or, if we disagree, we determine an alternative value that better reflects our estimate of the physician work for the service.

As stated earlier, the AMA RUC provided work RVU recommendations for 291 CPT codes. Of the 291, we are accepting 207 (71 percent) of the AMA RUC-recommended values and providing alternative values for the remaining 84 (29 percent). Over the last several years our rate of acceptance of the AMA RUC recommendations has been higher, at 90 percent or greater. However, in response to concerns expressed by MedPAC, the Congress, and other stakeholders regarding the accurate valuation of services under the PFS, we have intensified our scrutiny of the work valuations of new, revised, and potentially misvalued codes. We note that most recently, the law was amended (section 1848(c)(2)(L) of the Act (as added by section 3134 of the ACA)) to add a new requirement which specifies that the Secretary shall establish a formal process to validate RVUs under the PFS. The validation process may include validation of work elements (such as time, mental effort and professional judgment, technical skill and physical effort, and stress due to risk) involved with furnishing a service and may include validation of the pre-, post-, and intra-service components of work. Furthermore, the Secretary is directed to validate a sampling of the work RVUs of codes identified through any of the seven categories of potentially misvalued codes specified by section 1848(c)(2)(K)(ii) of the Act (as added by section 3134 of the ACA). While we are currently in the planning stage of developing a formal validation process, we believe we should be incorporating, where appropriate, the validation principles specified in the law. That is, in reviewing the CY 2011 AMA RUC recommendations for valuing the work of new, revised, and potentially misvalued services, we have expended significant effort in evaluating whether the recommended values reflect the work elements, such as time, mental effort, and professional judgment, technical skill and physical effort, and stress due to risk, involved with furnishing the service. We subjected each of the CY 2011 codes to a rigorous clinical review, examining the pre-, post-, and intra-service components of the work. If we concluded that the AMA RUC's recommended value for a code was not accurate, we looked for comparisons with other established reference codes with clinical similarity or analogous pre-, post-, and intra-service times, and, where applicable, employed the building block approach to inform our interim final decision to establish an alternative value that we believe is more appropriate.

The AMA RUC has emphasized the need to value services "relative" to other services, explaining in its public comment on the CY 2011 PFS proposed rule that it will "continue to employ magnitude estimation in developing relative value recommendations as it is the cornerstone of the RBRVS (resource-based relative value scale)." We agree that services paid under the PFS should be reviewed and valued in manner consistent with Medicare payment policy to maintain appropriate relativity between services and promote accurate pricing. In our review of the 291 CY 2011 AMA RUC recommendations for work values, we noted that the AMA RUC used a variety of approaches and methodologies to arrive at the recommended work values. For some codes, the AMA RUC used magnitude estimation in conjunction with survey data from physician surveys conducted by the specialty societies to support the values. For other codes, the AMA RUC used magnitude estimation to override the results of the survey data, recommending to CMS a value that was not based on survey data but rather, justified in terms of its appropriate relativity within the system to other similar services. The AMA RUC may also elect to use a crosswalk approach in valuing a code by applying a work value from a currently valued code to the code under review based on the clinical similarity of the procedures or explicit considerations of pre-, intra-, and post-service times. In some instances, the AMA RUC asserted that it used the building block methodology to value the code, a methodology CMS has historically supported (74 FR 61776).

We understand that the AMA RUC believes that it must approach valuation on a code-by-code basis, and depending on the context of the particular code, some methodologies may be better suited than others for valuation purposes. However, we remain concerned over the variations and some applications of the AMA RUC's methodologies which, if we continue to accept them, could contribute to inaccuracy in the relativity of physician work valued under the PFS for different services. Our concerns at this time include the following methodological issues which we observed during our review of the CY 2011 AMA RUC work recommendations:

- AMA RUC-recommended values without benefit of a survey: For a number of codes, the AMA RUC justified the work RVUs by crosswalking the codes to existing codes deemed comparable by the AMA RUC. Since the specialty society did not conduct a survey for these codes, there are no survey data to back up the recommended work RVUs.
- Surveys conducted on existing codes produced predictable results: In providing recommendations for existing potentially misvalued codes, the AMA RUC often recommended maintaining the current work RVUs and supported this valuation by citing the survey results. Upon clinical review of a number of these cases, we are concerned over the validity of the survey results since the survey values often are very close to the current code values. Increasingly, rather than recommending the median survey value that has historically been most commonly used, the AMA RUC is choosing to recommend the 25th percentile value, potentially responding to the same concern we have identified.
- AMA RUC deviated significantly or disregarded survey results completely: For the majority of codes, the AMA RUC cited the survey results in support of the work RVU recommendations and in many instances adopted either the survey median or 25th percentile value as the AMA RUC-recommended value. However, in some instances, the AMA RUC recommended work RVUs which deviated significantly from the survey results. Rather than using the survey data, the AMA RUC appears to have relied on another methodology to value the code, such as "magnitude

estimation" or crosswalk to a comparable code.

In reviewing the 291 work RVU recommendations from the AMA RUC for CY 2011, we concluded that the strongest support for the valuation of a code occurred when the AMA RUC cited multiple germane methodologies that all yielded a similar value that was also supported by the survey. We tended to accept the AMA RUC-recommended values in these instances. However, we found the weakest and least convincing valuations occurred in cases where the AMA RUC either deviated significantly or disregarded the survey results in favor of tweaking various components of the code in order to justify a value which the AMA RUC believed was correct due to perceived "magnitude estimation" for that code. We are concerned that such actions by the AMA RUC may create problems for any systematic validation processes that could be implemented in the future as required by section 1848(c)(2)(L) of the Act (as added by section 3134 of the ACA).

Accordingly, for those CY 2011 codes for which we did not accept the AMA RUC recommendations and are instead establishing alternative interim final values, we discuss our decisions based on groupings of codes in the following sections. Table GG4 at the end of this section displays the AMA RUC recommendations and interim final work RVUs for CY 2011 new, revised, and potentially misvalued codes. b. CY 2011 Interim Final Work RVUs for New and Revised Codes (1) CY 2011 New and Revised Codes that Do Not Represent Major New Comprehensive Services

We provide an explanation in the following sections of our rationale for not accepting particular AMA RUC-recommended or Health Care Professional Advisory Committee (HCPAC)-recommended work RVUs for CY 2011 new and revised CPT codes that do not represent major new comprehensive services that are listed in Table 51 and discussed in the subsequent section. The issues are arranged by type of service in CPT code order and address only work RVUs. These codes are listed in Table 53, which includes a complete list of all new, revised, and potentially misvalued CPT codes with CY 2011 AMA RUC work RVU recommendations and CMS' interim final decisions for CY 2011.

(A) Excision and Debridement (CPT Codes 11010, 11011, 11012, 11042, 11043, 10144, 11045, 11046, 11047, and 97598)

CPT codes 11043 (Debridement; skin, subcutaneous tissue, and muscle) and 11044 (Debridement; skin, subcutaneous tissue, muscle, and bone) were identified by the AMA RUC's Five-Year Review Identification Workgroup through the "Site-of-Service Anomalies" potentially misvalued codes screen in September 2007. The AMA RUC recommended that the entire family of services described by CPT codes 11040 through 11044 and 97597 and 97598 be referred to the CPT Editorial Panel because the current descriptors allowed reporting of the codes for a bimodal distribution of patients and also to better define the terms excision and debridement. These codes were included with many other codes under review by the CPT Excision and Debridement Workgroup. CPT codes 11010, 11011, 11012, and 11042 through 11047 were reviewed by the AMA RUC and CPT codes 97597 and 97598 were reviewed by the HCPAC.

The code descriptors for CPT codes 11010 (Debridement including removal of foreign material at the site of an open fracture and/or an open dislocation (e.g., excisional debridement); skin and subcutaneous tissues); 11011 (Debridement including removal of foreign material at the site of an open fracture and/or an open dislocation (e.g., excisional debridement); skin, subcutaneous tissue, muscle fascia, and muscle); and 11012 (Debridement including removal of foreign material at the site of an open fracture and/or an open dislocation (e.g., excisional debridement); skin, subcutaneous tissue, muscle fascia, muscle, and bone) were revised to clarify to payors and providers that these codes describe debridement of a single traumatic wound caused by an open fracture which creates a single exposure, despite the number of fractures or dislocations in the same anatomic site. The AMA RUC and the specialty society agreed that the revisions made to these descriptors were editorial and the current work RVUs for these services correctly related to the typical patient and should be maintained, recommendations which we have accepted on an interim final basis for CY 2011.

The CPT Editorial Panel revised the descriptor for CPT code 11042 (Debridement subcutaneous tissue (includes epidermis and dermis, if performed); first 20 square centimeters or less). As a result, the AMA RUC reviewed the specialty-recommended work RVUs for this service, 1.12 work RVUs (the previous AMA RUC HCPAC recommendation as valued during the CY 2005 Five-Year Review of Work), and noted that they were higher than the current PFS value for this service (0.80 work RVUs). The AMA RUC determined that there was compelling evidence to consider new work RVUs for this service. The AMA RUC also reviewed the survey data for CPT code 11042 and made slight changes to the pre-, intra-, and post-service times. This service was compared to the key reference CPT code 16020 (Dressings and/or debridement of partial-thickness burns, initial or subsequent; small (less than 5% total body surface area)) (work RVUs = 0.80) and MPC CPT code 56605 (Biopsy of vulva or perineum (separate procedure); 1 lesion) (work RVUs = 1.10). Based on these comparisons, the AMA RUC agreed that the previous AMA RUC HCPAC recommendation of 1.12 work RVUs was an appropriate value as it would maintain relativity between the key reference code and the surveyed code. The AMA RUC recommended work RVUs of 1.12 for CPT code 11042.

We disagree with the AMA RUC-recommended value for this service and are maintaining the current work RVUs of 0.80. We believe the AMA RUC-recommended value (1.12 work RVUs) was based on the old surveyed value. The reference code, CPT code 16020, has more overall time but is valued at 0.80 work RVUs. In addition, the reference code has a size limitation that varies by individual body size, but the surveyed CPT code 11042 has an add-on code (CPT code 11045) for each additional 20 square centimeters. Therefore, we are not accepting the AMA RUC recommendation and are assigning an alternative value of 0.80 work RVUs to CPT code 11042 on an interim final basis for CY 2011.

For CPT code 11045 (Debridement subcutaneous tissue (includes epidermis and dermis, if performed); each additional 20 square centimeters, or part thereof (List separately in addition to code for primary procedure)), which is the add-on code to CPT code 11042, the AMA RUC recommended 0.69 work RVUs. This value was obtained by applying a 14 percent reduction to the median work value of 0.80 to maintain the relativity between CPT codes 11042 and 11045 of the survey data collected. Due to the reduction in work RVUs to CPT code 11042 by CMS, we reduced the AMA RUC-recommended work RVUs of 0.69 for CPT code 11045 and assigned 0.33 work RVUs to this service. This value was obtained by removing

the pre- and post-service time from the interim final RVUs of 0.80 for the primary procedure (CPT code 11042). Therefore, we are assigning an alternative value of 0.33 work RVUs to CPT code 11045 on an interim final basis for CY 2011.

CPT codes 11043 (Debridement, muscle and/or fascia (includes epidermis, dermis, and subcutaneous tissue, if performed); first 20 square centimeters or less) and 11044 (Debridement, bone (includes epidermis, dermis, subcutaneous tissue, muscle and/or fascia, if performed); first 20 square centimeters or less) were surveyed as 90-day global codes. However, due to disagreement with the survey vignettes and the new global period (90 days), in addition to broad variations in surveyed facility length of stay, the AMA RUC requested that CMS change the global period to 0 days. CMS agreed and the codes were resurveyed as 0-day global codes.

For CPT code 11043, the AMA RUC recommended 3.00 work RVUs. The AMA RUC reviewed the survey data and compared the surveyed code to the key reference CPT code 15002 (Surgical preparation or creation of recipient site by excision of open wounds, burn eschar, or scar (including subcutaneous tissues), or incisional release of scar contracture, trunk, arms, le.g.s; first 100 sq cm or 1% of body area of infants and children) (work RVUs = 3.65). The AMA RUC noted that the reference code had significantly more total service time as compared to the surveyed code and that the surveyed code was less intense to perform in comparison to the reference code. Based on this comparison, the AMA RUC recommended work RVUs of 3.00, the survey 25th percentile for this service.

The AMA RUC-recommended work inputs for this service include less clinical time and fewer follow-up E/M visits than are currently attributed to the performance of this service; however, the AMA RUC-recommended work RVU value decreased by only 0.14 RVUs. We disagree with the AMA RUC-recommended RVUs for this service and believe 2.00 work RVUs, the survey low value, reflects a more appropriate decrease in work RVU value given the recommended decrease in clinical time and follow-up E/M visits. Therefore, we are assigning an alternative value of 2.00 work RVUs to CPT code 11043 on an interim final basis for CY 2011.

For CPT code 11046 (Debridement, muscle and/or fascia (includes epidermis, dermis, and subcutaneous tissue, if performed); each additional 20 square centimeters, or part thereof (List separately in addition to code for primary procedure)), which is the add-on code to CPT code 11043, the RUC recommended 1.29 work RVUs, the survey 25th percentile. To maintain consistency and relativity between this add-on code and its primary code (CPT code 11043), for which we are recommending the survey low value as discussed above, and given the time and intensity the AMA RUC recommended to perform this service, we disagree with the AMA RUC-recommended work RVUs for this service and believe 0.70 work RVUs, the survey low value, are more appropriate. Therefore, we are assigning an alternative value of 0.70 work RVUs to CPT code 11046 on an interim final basis for CY 2011.

For CPT code 11044, the AMA RUC recommended 4.56 work RVUs. The AMA RUC reviewed the survey data and compared the surveyed code to the reference CPT code 15004 (Surgical preparation or creation of recipient site by excision of open wounds, burn eschar, or scar (including subcutaneous tissues), or incisional release of scar contracture, face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet and/or multiple digits; first 100 sq cm or 1% of body area of infants and children) (work RVUs = 4.58). The AMA RUC noted that the reference code had the same intra-service time and that the surveyed code and the reference code required similar mental effort and judgment to perform. Based on this comparison, the AMA RUC recommended work RVUs of 4.56, the survey 25th percentile, and believes this value accurately reflects the relative physician work to perform this service and maintains proper rank order with CPT codes 11042 and 11043. The AMA RUC-recommended work inputs for this service include less clinical time and fewer follow-up E/M visits than are currently attributed to the performance of this service; however, the AMA RUC-recommended work RVUs increased. We disagree with the AMA RUC-recommended work RVUs for this service and believe 3.60 work RVUs, the survey low value, reflect a more appropriate decrease in work RVU value given the recommended decrease in clinical time and follow-up E/M visits. Therefore, we are assigning an alternative value of 3.60 work RVUs to CPT code 11044 on an interim final basis for CY 2011.

For CPT code 11047 (Debridement, bone (includes epidermis, dermis, subcutaneous tissue, muscle and/or fascia, if performed); each additional 20 square centimeters, or part thereof) the AMA RUC recommended 2.00 work RVUs, the survey median value. To maintain consistency and relativity between this add-on code and its primary code (CPT code 11044), for which we are recommending the survey low value as discussed above, and given the time and intensity the AMA RUC recommended to perform this service, we disagree with the AMA RUC-recommended value and believe 1.20 RUVs, the survey low value, are more appropriate for this service. Therefore, we are assigning 1.20 work RVUs to CPT code 11047 on an interim final basis for CY 2011.

For CY 2011, the services previously reported by CPT codes 11040 (Debridement; skin, partial thickness) and 11041 (Debridement; skin, full thickness) will now be reported with revised CPT codes 97597 (Debridement (eg, high pressure waterjet with/without suction, sharp selective debridement with scissors, scalpel and forceps), open wound, (eg, fibrin, devitalized epidermis and/or dermis, exudate, debris, biofilm), including topical application(s), wound assessment, use of a whirlpool, when performed and instruction(s) for ongoing care, per session, total wound(s) surface area; first 20 square centimeters or less) and 97598 (Debridement (eg, high pressure waterjet with/without suction, sharp selective debridement with scissors, scalpel and forceps), open wound, (*e.g.,* fibrin, devitalized epidermis and/or dermis, exudate, debris, biofilm), including topical application(s), wound assessment, use of a whirlpool, when performed and instruction(s) for ongoing care, per session, total wound(s) surface area; each additional 20 square centimeters, or part thereof (List separately in addition to code for primary procedure)). The HCPAC recommended 0.54 work RVUs for CPT code 97597, which is a value between the CY 2010 values for CPT code 11040 (0.50 work RVUs) and CPT code 97597 (0.58 work RVUs), which we have accepted on an interim final basis in this final rule with comment period for CY 2011. However, the work RVUs for this CPT code were further subject to a work budget neutrality adjustment, as discussed in section V.C.1.b.(iii) of this final rule with comment period.

For CPT code 97598, the HCPAC recommended 0.40 work RVUs, the survey 25th percentile. We disagree with the HCPAC-recommended value for this service and, given the similarity of code descriptors between the 11000 series and the 97000 series CPT codes, we believe a more appropriate value would be 0.25 RVUs, the survey low value, as it is more consistent with the work RVU value associated with new add-on CPT code 11045, discussed above. We also believe the post-service

time for CPT code 97598 should be reduced to 0 minutes to coincide with the CPT codes in the 11000 series, which have 0 or 1 minute of post-service time. Therefore, we are assigning an alternative value of 0.25 work RVUs to CPT code 97598 and reducing the post-service time to 0 minutes on an interim final basis for CY 2011. However, the work RVUs for this CPT code were subject to a work budget neutrality adjustment, as discussed in section V.C.1.b.(iii) of this final rule with comment period.

(B) Arthrodesis Including Discectomy (CPT Code 22551)

As a result of CPT code 22554 (Arthrodesis, anterior interbody, including disc space preparation, discectomy, osteophytectomy and decompression of spinal cord and/or nerve roots; cervical, below C2) being reviewed by the AMA RUC because of its identification by the Five-Year Review Identification Workgroup "Codes Reported Together" potentially misvalued codes screen in February 2008, CPT code 22551 ((Arthrodesis, anterior interbody, including disc space preparation, discectomy, osteophytectomy and decompression of spinal cord and/or nerve roots; cervical, below C2)) was created by the CPT Editorial Panel in October 2009, to describe fusion and discectomy of the anterior cervical spine. The AMA RUC recommended 24.50 work RVUs. The specialty society requested 25.00 work RVUs. Upon review of the AMA RUC-recommended value and the reference codes used, it was unclear why the AMA RUC decided not to accept the specialty society's recommended value of 25.00 work RVUs. We disagree with the AMA RUC-recommended value of 24.50 and believe work RVUs of 25.00 are appropriate for this service. We are also requesting that the specialty society re-review with the AMA RUC the pre-service times for codes in this family since concerns were noted in the AMA RUC recommendation about the pre-service time for this service. Therefore, we are assigning an alternative value of 25.00 work RVUs to CPT code 22551 on an interim final basis for CY 2011.

(C) Strapping Lower Extremity (CPT Codes 29540 and 29550)

CPT code 29540 (Strapping; ankle and/or foot) was identified by the Five-Year Review Identification Workgroup "Harvard-Valued" potentially misvalued codes screen with utilization over 100,000 screen in October 2009. The AMA RUC recommended this whole family of services be surveyed.

For CPT code 29540, the HCPAC recommended 0.39 work RVUs. The HCPAC compared the total time required for CPT code 29540 to 29580 (Strapping; Unna boot), 18 and 27 minutes, respectively, and noted that CPT code 29540 requires less time, mental effort/judgment, technical skill and psychological stress than CPT code 29580. The HCPAC determined that CPT code 29540 was approximately 30 percent less intense and complex than CPT code 29580, resulting in work RVUs of 0.39 for CPT code 29540. We disagree with the HCPAC-recommended value for this service and believe work RVUs of 0.32 are appropriate. We believe CPT code 11720 (Debridement of nail(s) by any method(s); 1 to 5) (work RVUs = 0.32) is a more appropriate crosswalk. Therefore, we are assigning an alternative value of 0.32 work RVUs to CPT code 29540 on an interim final basis for CY 2011.

For CPT code 29550 (Strapping; toes), the HCPAC recommended 0.25 work RVUs. The HCPAC compared this service to CPT code 97762 (Checkout for orthotic/prosthetic use, established patient, each 15 minutes) (work RVUs = 0.25), which requires the same intensity and complexity to perform as CPT code 29550. The HCPAC recommended crosswalking the work RVUs for 29550 to reference CPT code 97762. The HCPAC reviewed the survey time and determined that 7 minutes pre-service, 5 minutes intra-service, and 1 minute immediate post-service time were appropriate to perform this service. We disagree with the HCPAC-recommended value for this service and believe work RVUs of 0.15, the survey low value, are appropriate, with 5 minutes of pre- and intra-service time and 1 minute of post-service time, as we believe the HCPAC-recommended pre-service time of 7 minutes is excessive. Therefore, we are assigning an alternative value of 0.15 work RVUs to CPT code 29550 on an interim final basis for CY 2011.

(D) Paraesophageal Hernia Procedures (CPT Codes 43333 and 43335)

In February 2010, the CPT Editorial Panel deleted six existing codes and created ten new codes to remove obsolete and duplicative codes and add new codes to report current surgical techniques for paraesophageal hernia repair. For CPT code 43333 (Repair, paraesophageal hiatal hernia (including fundoplication), via laparotomy, except neonatal; with implantation of mesh or other prosthesis), the AMA RUC recommended 30.00 work RVUs. The AMA RUC recommended 33.00 work RVUs for CPT code 43335 (Repair, paraesophageal hiatal hernia (including fundoplication), via thoracotomy, except neonatal; with implantation of mesh or other prosthesis). While the AMA RUC-recommended values are the survey median values, we disagree with them. We adjusted the AMA RUC-recommended values for the codes without implantation of mesh or other prosthesis upward by 2.50 work RVUs to account for the differential between those codes and the parallel codes with implantation of mesh or other prosthesis. We note that 2.50 work RVUs was the lowest differential that was recommended by the AMA RUC between the with/without implantation of mesh or other prosthesis codes in this family. That is, for CPT code 43333, the revised work RVUs were established by adding 2.50 work RVUs to the AMA RUC-recommended work RVUs of 26.60 for CPT code 43332 (Repair, paraesophageal hiatal hernia (including fundoplication), via laparotomy, except neonatal; without implantation of mesh or other prosthesis), which resulted in work RVUs of 29.10. Likewise, for CPT code 43335, the revised work RVUs were established by adding 2.50 work RVUs to the AMA RUC-recommended work RVUs of 30.00 for CPT code 43334 (Repair, paraesophageal hiatal hernia (including fundoplication), via thoracotomy, except neonatal; without implantation of mesh or other prosthesis), resulting in work RVUs of 32.50. Therefore, we are assigning alternative work RVUs of 29.10 to CPT code 43333 and 32.50 to CPT code 43335 on an interim final basis for CY 2011. However, the work RVUs for this CPT code were subject to a work budget neutrality adjustment, as discussed in section V.C.1.b.(iii) of this final rule with comment period.

(E) Vaginal Radiation Afterloading Apparatus for Clinical Brachytherapy (CPT Codes 57155 and 57156)

CPT Code 57155 (Insertion of uterine tandems and/or vaginal ovoids for clinical brachytherapy) was originally identified through the Five-Year Review Identification Workgroup "Site-of-Service Anomalies" potentially misvalued codes screen in September 2007 and was later revised by the CPT Editorial Panel to indicate insertion of a single tandem rather than tandems.

For CY 2011, the AMA RUC recommended 5.40 work RVUs for CPT code 57155 (Insertion of uterine tandems and/or vaginal ovoids for clinical brachytherapy). This value was established based on the survey 25th percentile and a review of comparable services, specifically CPT codes 55920 (Placement of needles or catheters into pelvic organs and/or genitalia (except

prostate) for subsequent interstitial radioelement application)(work RVUs = 8.31); 50382 (Removal (via snare/capture) and replacement of internally dwelling urethral stent via percutaneous approach, including radiological supervision and interpretation) (work RVUs = 5.50); and 52001 (Cystourethroscopy with irrigation and evacuation of multiple obstructing clots) (work RVUs = 5.44). We disagree with the AMA RUC-recommended value for this service because the method used to derive the value lacked a defined logic. We believe work RVUs of 3.37 are appropriate for this service, which is the same as the value assigned to CPT code 58823 (Drainage of pelvic abscess, transvaginal or transrectal approach, percutaneous (eg, ovarian, pericolic)), which we also believe is a more comparable code. Therefore, we are assigning an alternative value of 3.37 work RVUs to CPT code 57155 on an interim final basis for CY 2011.

For CPT code 57156 (Insertion of a vaginal radiation afterloading apparatus for clinical brachytherapy), the AMA RUC recommended 2.69 work RVUs, the survey 25th percentile. Given our decision to revise downward the work RVUs for CPT code 57185, a related code, upon review of the AMA RUC recommendations for CPT code 57156, we believe that the AMA RUC-recommended value of 2.69 is too high. In light of this, we are crosswalking the value of CPT code 57156 from CPT code 62319 (Injection, including catheter placement, continuous infusion or intermittent bolus, not including neurolytic substances, with or without contrast (for either localization or epidurography), of diagnostic or therapeutic substance(s) (including anesthetic, antispasmodic, opioid, steroid, other solution), epidural or subarachnoid; lumbar, sacral (caudal)) (work RVUs = 1.87), which has the same intra-service time (30 minutes) and overall lower total time than the comparison services referenced by the AMA RUC. Therefore, we are assigning an alternative value of 1.87 work RVUs to CPT code 57156 on an interim final basis for CY 2011.

(F) Vagus Nerve Stimulator (CPT Codes 61885, 64568, 64569, and 64570)

CPT code 61885 (Insertion or replacement of cranial neurostimulator pulse generator or receiver, direct or inductive coupling; with connection to a single electrode array) was identified by the Five-Year Review Identification Workgroup by its "Site-of-Service Anomalies" screen for potentially misvalued codes in September 2007. After reviewing the vagal nerve stimulator family of services, the specialty societies agreed that the family lacked clarity and the CPT Editorial Panel created three new codes to accurately describe revision of a vagal nerve stimulator lead, the placement of the pulse generator and replacement or revision of the vagus nerve electrode.

For CY 2011, the AMA RUC recommended 6.44 work RVUs for CPT code 61885. Upon review of the AMA RUC recommendations, the method used to establish the AMA RUC-recommended value for this service lacked a defined logic. Although the AMA RUC compared this service to the key reference service, CPT code 63685 (Insertion or replacement of spinal neurostimulator pulse generator or receiver, direct or inductive coupling) (Work RVUs = 6.05) and other relative services and noted the similarities in times, an appropriately rigorous methodology was not used. The AMA RUC-recommended work RVUs did not adequately account for the elimination of two inpatient visits and the reduction in outpatient visits for this service. We disagree with the AMA RUC-recommended value and believe 6.05 work RVUs, the survey 25th percentile, are appropriate for this service. Therefore, we are assigning an alternative value of 6.05 work RVUs to CPT code 61885 on an interim final basis for CY 2011.

For CPT code 64568 (Incision for implantation of cranial nerve (eg, vagus nerve) neurostimulator electrode array and pulse generator), the AMA RUC recommended 11.19 work RVUs. Similar to the rationale provided by the AMA RUC for the valuation of CPT code 61885, the method used to value this service lacked a defined logic. As with CPT code 61885 discussed above, to which this code is related, we disagree with the AMA RUC-recommended value for this service and believe the survey 25th percentile, 9.00 work RVUs, is appropriate. Therefore, we are assigning an alternative value of 9.00 work RVUs to CPT code 64568 on an interim final basis for CY 2011.

For CPT code 64569 (Revision or replacement of cranial nerve (eg, vagus nerve) neurostimulator electrode array, including connection to existing pulse generator), the AMA RUC recommended 15.00 work RVUs, the survey median value, and 13.00 work RVUs, the survey median value, for CPT code 64570 (Removal of cranial nerve (eg, vagus nerve) neurostimulator electrode array and pulse generator). Based on the reduction in work RVUs for CPT codes 61885 and 64568 that we are adopting on an interim final basis for CY 2011 and to maintain relativity for the codes in this family, we believe work RVUs of 11.00, the survey 25th percentile, are appropriate for CPT code 64569 and work RVUs of 9.10, the survey 25th percentile, are appropriate for CPT code 64570. Therefore, we are assigning an alternative value of 11.00 work RVUs to CPT code 64569 and 9.10 work RVUs to CPT code 64570 on an interim final basis for CY 2011.

(G) Ultrasound of Extremity (CPT Codes 76881 and 76882)

In October 2008, CPT code 76880 (Ultrasound, extremity, nonvascular, real time with image documentation) was identified by the Five-Year Review Identification Workgroup through its "CMS Fastest Growing" screen for potentially misvalued codes. In February 2009, the CPT Editorial Panel deleted CPT code 76880 and created two new codes, CPT codes 76881 (Ultrasound, extremity, nonvascular, real-time with image documentation; complete) and 76882 (Ultrasound, extremity, nonvascular, real-time with image documentation; limited anatomic specific) to distinguish between the comprehensive diagnostic ultrasound and the focused anatomic-specific ultrasound.

For CPT code 76881, the AMA RUC recommended work RVUs of 0.72 and a total time of 25 minutes. For CPT code 76882, the AMA RUC recommended 0.50 work RVUs and a total time of 21 minutes. The predecessor CPT code 76880 (Ultrasound, extremity, nonvascular, real time with image documentation) described a nonvascular ultrasound of the entire extremity and was assigned work RVUs of 0.59 and a total time of 18 minutes. The new CPT codes describe a complete service, CPT code 76881, and a limited service, CPT code 76882 (defined as examination of a specific anatomic structure, such as a tendon or muscle).

We disagree with the AMA RUC recommendations for these services. For CPT code 76881, we do not believe an increase in work RVUs is justified given that this service will be reported for the evaluation of the extremity, as was CPT code 76800 which is being deleted for CY 2011. Therefore, we believe work RVUs of 0.59 are appropriate for this service, consistent with the value of the predecessor code. For CPT code 76882, we believe a value of 0.41 is more appropriate, representing a statistical computation based on maintaining the relationship between the AMA RUC-recommended values for CPT codes 76881 and 76882. Therefore, we are assigning alternative work RVUs of 0.59 to CPT code 76881 and 0.41 to CPT code

76882 on an interim final basis for CY 2011.

(H) Evaluation of Fine Needle Aspirate (CPT Code 88172)

Due to confusion amongst payers and providers, in February 2010 the CPT Editorial Panel revised the descriptor for CPT code 88172 (Cytopathology, evaluation of fine needle aspirate; immediate cytohistologic study to determine adequacy of specimen(s)) and created a new code, CPT code 88177 (Cytopathology, evaluation of fine needle aspirate; immediate cytohistologic study to determine adequacy for diagnosis, each separate additional evaluation episode, same site), to report the first evaluation episode and each additional episode of cytopathology evaluation of fine needle aspirate. For CPT code 88172, the AMA RUC recommended work RVUs of 0.69 based on comparing this code to several other services, without the use of an appropriate methodology. We disagree with the AMA RUC-recommended value and believe the current work RVUs of 0.60 are appropriate and should be maintained for this service. Although the code has been revised, no explanation by the AMA RUC was provided to demonstrate an increase in work, and we do not believe the work has changed. Therefore, we are assigning an alternative value of 0.60 work RVUs to CPT code 88172 on an interim final basis for CY 2011.

(I) Immunization Administration (CPT Code 90460 and 90461)

The CPT Editorial Panel revised the reporting of immunization administration in the pediatric population in order to better align the service with the evolving best practice model of delivering combination vaccines. For CY 2011, the AMA RUC recommended 0.20 work RVUs for CPT code 90460 (Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health care profession; first vaccine/toxoid component) and 0.16 work RVUs for CPT code 90461 (Immunization administration through 18 years of age via any route of administration, with counseling by physician or other qualified health profession; each additional vaccine/toxoid component (List separately in addition to code for primary procedure)). This is an increase from the current values for the predecessor services. The AMA RUC states that the increase in recommended work RVUs is due to increased time for patient education. In addition, effective January 1, 2011, reporting and payment for these services is to be structured on a per toxoid basis rather than a per vaccine (combination of toxoids) basis as it was in prior years. We disagree with the AMA RUC-recommended values for these services and are maintaining the current work RVUs for the related predecessor codes of 0.17 RVUs for CPT code 90460 and 0.15 work RVUs for CPT code 90461 since these codes would be billed on a per toxoid basis in CY 2011. Therefore, we are assigning alternative values of 0.17 work RVUs to CPT code 90460 and 0.15 work RVUs to CPT code 90461 on an interim final basis for CY 2011.

(J) Diabetic Retinopathy Imaging (CPT Code 92228)

In February, 2010 the CPT Editorial Panel established two codes for reporting remote imaging for screening retinal disease and management of active retinal disease. For CPT code 92228 (Remote imaging for monitoring and management of active retinal disease (eg, diabetic retinopathy) with physician review, interpretation and report, unilateral or bilateral), the AMA RUC recommended 0.44 work RVUs. The AMA RUC compared this service to CPT code 92250 (Fundus photography with interpretation and report) (Work RVUs = 0.44) due to similar times and believes this service is comparable to the service under review. We disagree with the reference service used by the AMA RUC and compared this code to another diagnostic service, CPT code 92135 (Scanning computerized ophthalmic diagnostic imaging, posterior segment, (eg, scanning laser) with interpretation and report, unilateral) (Work RVUs = 0.35), which we believe is more equivalent but has more pre- and intra-service time. Upon further review of CPT code 92228 and the time and intensity needed to perform this service, we believe work RVUs of 0.30, the survey low value, are more appropriate. Therefore, we are assigning an alternative value of 0.30 work RVUs to CPT code 92228 on an interim final basis for CY 2011.

(K) Speech-Language Pathology Services (CPT Codes 92508 and 92606)

Section 143 of the MIPPA specifies that speech-language pathologists may independently report services they provide to Medicare patients. Starting in July 2009, speech-language pathologists were able to bill Medicare as independent practitioners. As a result, the American Speech-Language-Hearing Association (ASHA) requested that CMS ask the AMA RUC to review the speech-language pathology codes to newly value the professionals' services in the work and not the practice expense. ASHA indicated that it would survey the 12 speech-language pathology codes over the course of the CPT 2010 and CPT 2011 cycles. Four of these services were reviewed by the HCPAC or the AMA RUC and were included in the CY 2010 PFS final rule with comment period (74 FR 61784 and 62146). For CY 2011, the HCPAC submitted work recommendations for the remaining eight codes.

For CPT code 92508 (Treatment of speech, language, voice, communication, and/or auditory processing disorder; group, 2 or more individuals), the HCPAC recommended 0.43 work RVUs which was derived by dividing the value for CPT code 92507 (Treatment of speech, language, voice, communication, and/or auditory processing disorder; individual) (work RVUs = 1.30) by 3, as the specialty society stated to the AMA RUC that there are typically 3 participants in a group. We disagree with the HCPAC-recommended value for this service and believe it is too high. We believe work RVUs of 0.33 are more appropriate, which was derived by dividing the value for CPT code 92507 by 4 participants, as we understand from providers that 4 more accurately represents the typical number of participants in a group. Additionally, the work RVUs derived from dividing the RVUs for the related individual treatment code by 4, 0.33 RVUs, are appropriate for this group treatment service relative to the work RVUs of 0.27 for CPT code 97150 (Therapeutic procedure(s), group (2 or more individuals)) which is furnished to a similar patient population, namely patients who have had a stroke. Therefore we are assigning alternative work RVUs of 0.33 to CPT code 92508 on an interim final basis for CY 2011.

For CPT code 92606 (Therapeutic service(s) for the use of non-speech-generating device, including programming and modification), the HCPAC recommended 1.40 work RVUs, the survey median value. This service is currently bundled under the PFS and we will maintain this status for CY 2011. We are publishing the AMA RUC-recommended value in Addendum B to this final rule with comment period in accordance with our usual practice for bundled services.

(L) Sleep Testing (CPT Codes 95806 and 95807)

Sleep testing CPT codes were identified by the Five-Year Review Identification Workgroup as potentially misvalued codes through the "CMS

Fastest Growing" potentially misvalued codes screen. The CPT Editorial Panel created separate Category I CPT codes to report for unattended sleep studies. The AMA RUC recommended concurrent review of the family of sleep codes.

For CPT code 95806 (Sleep study, unattended, simultaneous recording of, heart rate, oxygen saturation, respiratory airflow, and respiratory effort (eg, thoracoabdominal movement)), the AMA RUC recommended 1.28 work RVUs. The AMA RUC recommended 1.25 work RVUs for CPT code 95807 (Sleep study, simultaneous recording of ventilation, respiratory effort, ECG or heart rate, and oxygen saturation, attended by a technologist). Although the AMA RUC-recommended values for these codes reflect the survey 25th percentile, we disagree with the values and believe the values should be reversed because of the characteristics of the services. CPT code 95807 has 5 minutes more pre-service time but a lower AMA RUC-recommended value. Therefore, we have assigned alternative values of 1.25 work RVUs to CPT code 95806 and 1.28 work RVUs to CPT code 95807 on an interim final basis for CY 2011.

(M) Subsequent Hospital Observation Care

At the June 2009 CPT Editorial Panel meeting, three new codes were approved to report subsequent observation services in a facility setting. These codes are CPT code 99224 (Level 1 subsequent observation care, per day); CPT code 99225 (Level 2 subsequent observation care, per day): and CPT code 99226 (Level 3 subsequent observation care, per day).

The AMA RUC reviewed the survey data for CPT code 99224 and accepted the following physician times: 5 minutes of pre-service, 10 minutes of intra-service, and 5 minutes of post-service time. The AMA RUC believed this code was comparable in physician time and intensity to CPT code 99231 (Level 1 subsequent hospital care, per day, for the evaluation and management of a patient), and recommended work RVUs of 0.76. Similarly, the AMA RUC reviewed the survey data for CPT code 99225 and accepted the following physician times: 9 minutes of pre-service, 20 minutes of intra-service, and 10 minutes of post-service time. The AMA RUC believed this code was comparable in physician time and intensity to CPT code 99232 (Level 2 subsequent hospital care, per day, for the evaluation and management of a patient), and recommended work RVUs of 1.39. Finally, the AMA RUC reviewed the survey data for CPT code 99226 and accepted the following physician times: 10 minutes of pre-service, 30 minutes of intra-service, and 15 minutes of post-service time. The AMA RUC believed this code was comparable in physician time and intensity to CPT code 99233 (Level 3 subsequent hospital care, per day, for the evaluation and management of a patient), and recommended work RVUs of 2.00.

Observation services are outpatient services ordered by a patient's treating practitioner. Admission of the patient to the hospital as an inpatient or the ending of observation services must also be ordered by the treating practitioner. CMS has stated that in only rare and exceptional cases would reasonable and necessary outpatient observation services span more than 48 hours. In the majority of cases, the decision whether to discharge a patient from the hospital following resolution of the reason for the observation care or to admit the patient as an inpatient can be made in less than 48 hours, usually in less than 24 hours. Consequently, we believe that the acuity level of the typical patient receiving outpatient observation services would generally be lower than that of the inpatient level. We believe that if the patient's acuity level is determined to be at the level of the inpatient, the patient should be admitted to the hospital as an inpatient. We note that CMS has publicly stated in a recent letter to the AHA that "it is not in the hospital's or the beneficiary's interest to extend observation care rather than either releasing the patient from the hospital or admitting the patient as an inpatient * * *"

Consequently, we are not accepting the AMA RUC's recommendation to value the subsequent observation care codes at the level of subsequent inpatient hospital care services. Instead, to recognize the differences in patient acuity between the two settings, we removed the pre- and post-services times from the AMA RUC-recommended values for subsequent observation care, reducing the values to approximately 75 percent of the values for the subsequent hospital care codes. Therefore, we are assigning alternative work RVUs of 0.54 to CPT code 99224, 0.96 to CPT code 99225, and 1.44 to CPT code 99226 on an interim final basis for CY 2011.

(2) Comprehensive Codes for a Bundle of Existing Component Services

A subset of AMA RUC work RVU recommendations addressed valuing new CY 2011 CPT codes resulting from the bundling of two or more existing component services performed together 95 percent or more of the time. We expect this bundling of component services to continue over the next several years as the AMA RUC further recognizes the work efficiencies for services commonly furnished together. Stakeholders should expect that increased bundling of services into fewer codes will result in reduced PFS payment for a comprehensive service by explicitly considering the efficiencies in work and/or PE that may occur when component services are furnished together.

For CY 2011, the AMA RUC provided CMS with recommendations for several categories of new comprehensive services that historically have been reported under multiple component codes. In some CY 2011 cases, the CPT Editorial Panel undertook relatively minor bundling, such as bundling the associated imaging with a procedure in a single new CPT code. In other cases, the CPT Editorial Panel bundled significant component codes for distinct procedures that were previously separately reported. This section focuses on the latter cases, and we note that these codes fall into three major clinical categories: Endovascular revascularization, computed tomography (CT), and diagnostic cardiac catheterization. While we acknowledge that each category of services is unique, since bundling of component services is likely to occur more often in the coming years we believe a consistent approach is especially important when valuing bundled services as part of the potentially misvalued codes initiative in order to ensure that we fully account for the resulting work efficiencies. Specifically, we recommend that the AMA RUC use, whenever possible, the building block approach, which is a consistent and transparent methodology based on the components of a code.

The new CY 2011 comprehensive codes in these three clinical categories are displayed in Table 51 and our discussion of their work values follows.

TABLE 51—NEW CY 2011 COMPREHENSIVE CODES AND WORK RVUS FOR ENDOVASCULAR REVASCULARIZATION, CT, AND DIAGNOSTIC CARDIAC CATHETERIZATION SERVICES

CPT code	Long descriptor	AMA RUC-recommended work RVUs	CY 2011 interim final Work RVUs
	Endovascular Revascularization		
37220	Revascularization, endovascular, open or percutaneous, iliac artery, unilateral, initial vessel; with transluminal angioplasty.	8.15	8.15
37221	Revascularization, endovascular, open or percutaneous, iliac artery, unilateral, initial vessel; with transluminal stent placement(s), includes angioplasty within the same vessel, when performed.	10.00	10.00
37222	Revascularization, endovascular, open or percutaneous, iliac artery, each additional ipsilateral iliac vessel; with transluminal angioplasty (List separately in addition to code for primary procedure).	3.73	3.73
37223	Revascularization, endovascular, open or percutaneous, iliac artery, each additional ipsilateral iliac vessel; with transluminal stent placement(s) (List separately in addition to code for primary procedure), includes angioplasty within the same vessel, when performed.	4.25	4.25
37224	Revascularization, endovascular, open or percutaneous, femoral/popliteal artery(s), unilateral; with transluminal angioplasty.	9.00	9.00
37225	Revascularization, endovascular, open or percutaneous, femoral/popliteal artery(s), unilateral; with atherectomy, includes angioplasty within the same vessel, when performed.	12.00	12.00
37226	Revascularization, endovascular, open or percutaneous, femoral/popliteal artery(s), unilateral; with transluminal stent placement(s), includes angioplasty within the same vessel, when performed.	10.49	10.49
37227	Revascularization, endovascular, open or percutaneous, femoral/popliteal artery(s), unilateral; with transluminal stent placement(s) and atherectomy, includes angioplasty within the same vessel, when performed.	14.50	14.50
37228	Revascularization, endovascular, open or percutaneous, tibial/peroneal artery, unilateral, initial vessel; with transluminal angioplasty.	11.00	11.00
37229	Revascularization, endovascular, open or percutaneous, tibial/peroneal artery, unilateral, initial vessel; with atherectomy, includes angioplasty within the same vessel, when performed.	14.05	14.05
37230	Revascularization, endovascular, open or percutaneous, tibial/peroneal artery, unilateral, initial vessel; with transluminal stent placement(s) , includes angioplasty within the same vessel, when performed.	13.80	13.80
37231	Revascularization, endovascular, open or percutaneous, tibial/peroneal artery, unilateral, initial vessel; with transluminal stent placement(s) and atherectomy, includes angioplasty within the same vessel, when performed.	15.00	15.00
37232	Revascularization, endovascular, open or percutaneous, tibial/peroneal artery, unilateral, each additional vessel; with transluminal angioplasty (List separately in addition to code for primary procedure).	4.00	4.00
37233	Revascularization, endovascular, open or percutaneous, tibial/peroneal artery, unilateral, each additional vessel; with atherectomy (List separately in addition to code for primary procedure), includes angioplasty within the same vessel, when performed.	6.50	6.50
37234	Revascularization, endovascular, open or percutaneous, tibial/peroneal artery, unilateral, each additional vessel; with transluminal stent placement(s) (List separately in addition to code for primary procedure), includes angioplasty within the same vessel, when performed.	5.50	5.50
37235	Revascularization, endovascular, open or percutaneous, tibial/peroneal artery, unilateral, each additional vessel; with transluminal stent placement(s) and atherectomy (List separately in addition to code for primary procedure), includes angioplasty within the same vessel, when performed.	7.80	7.80
	CT Abdomen/CT Pelvis		
74176	Computed tomography, abdomen and pelvis; without contrast material	1.74	1.74
74177	Computed tomography, abdomen and pelvis; with contrast material	1.82	1.82
74178	Computed tomography, abdomen and pelvis; without contrast material in one or both body regions, followed by with contrast material(s) and further sections in one or both body regions.	2.01	2.01
	Diagnostic Cardiac Catheterization		
93451	Right heart catheterization including measurement(s) of oxygen saturation and cardiac output, when performed.	3.02	2.72
93452	Left heart catheterization including intraprocedural injection(s) for left ventriculography, imaging supervision and interpretation, when performed.	4.32	4.75
93453	Combined right and left heart catheterization including intraprocedural injection(s) for left ventriculography, imaging supervision and interpretation, when performed.	5.98	6.24
93454	Catheter placement in coronary artery(s) including intraprocedural injection(s) for coronary angiography, imaging supervision and interpretation;.	4.95	4.79

TABLE 51—NEW CY 2011 COMPREHENSIVE CODES AND WORK RVUS FOR ENDOVASCULAR REVASCULARIZATION, CT, AND DIAGNOSTIC CARDIAC CATHETERIZATION SERVICES—Continued

CPT code	Long descriptor	AMA RUC-recommended work RVUs	CY 2011 interim final Work RVUs
93455	with catheter placement(s) in bypass graft(s) (internal mammary, free arterial, venous grafts) including intraprocedural injection(s) for bypass graft angiography.	6.15	5.54
93456	with right heart catheterization	6.00	6.15
93457	with catheter placement(s) in bypass graft(s) (internal mammary, free arterial, venous grafts) including intraprocedural injection(s) for bypass graft angiography and right heart catheterization.	7.66	6.89
93458	with left heart catheterization including intraprocedural injection(s) for left ventriculography, when performed.	6.51	5.85
93459	with left heart catheterization including intraprocedural injection(s) for left ventriculography, when performed, catheter placement(s) in bypass graft(s) (internal mammary, free arterial, venous grafts) with bypass graft angiography.	7.34	6.60
93460	with right and left heart catheterization including intraprocedural injection(s) for left ventriculography, when performed.	7.88	7.35
93461	with right and left heart catheterization including intraprocedural injection(s) for left ventriculography, when performed, catheter placement(s) in bypass graft(s) (internal mammary, free arterial, venous grafts) with bypass graft angiography.	9.00	8.10
93563	Injection procedure during cardiac catheterization including image supervision, interpretation, and report; for selective coronary angiography during congenital heart catheterization.	2.00	1.11
93564	for selective opacification of aortocoronary venous or arterial bypass graft(s) (eg, aortocoronary saphenous vein, free radial artery, or free mammary artery graft) to one or more coronary arteries and in situ arterial conduits (eg, internal mammary), whether native or used for bypass to one or more coronary arteries during congenital heart catheterization, when performed.	2.10	1.13
93565	for selective left ventricular or left arterial angiography	1.90	0.86
93566	for selective right ventricular or right atrial angiography	0.96	0.86
93567	for supravalvular aortography	1.08	0.97
93568	for pulmonary angiography	0.98	0.88

The AMA RUC used a variety of methodologies in developing RVUs for comprehensive codes in these three categories of bundled services. To develop the RVUs for the comprehensive endovascular revascularization services, the AMA RUC generally recommended the median work RVUs from the physician survey performed by the specialty society. The recommended values for the comprehensive services are an average of 27 percent lower than the summed RVUs of the component services (taking into consideration any MPPR that would currently apply) included in the bundle. To develop the RVUs for comprehensive CT services, the AMA RUC recommended taking the sum of 100 percent of the current work RVUs for the code with the highest RVUs and 50 percent for the second code. Under this methodology, the recommended work RVUs for the comprehensive CT codes are consistently approximately 25 percent lower than the sum of the RVUs for the component services. The approach of a uniform discount on the second CT service resembles an MPPR and, given the public concerns regarding our proposed expansion of current MPPR policies under the PFS for CY 2011 as discussed in section II.C.4. of this final rule with comment period, we are unsure how the AMA RUC's recommended CT methodology actually considered the physician work required for the specific component services being bundled. Nevertheless, while we believe that the application of a consistent approach to valuing comprehensive services is desirable, we agree that the decreased work RVUs the AMA RUC recommended for comprehensive services in these two categories reflect a reasonable estimation of the work efficiencies created by the bundling of the component services. Therefore, we are accepting as interim final work RVUs the AMA RUC-recommended values for endovascular revascularization and CT services listed in Table 51 for CY 2011.

To develop the RVUs for comprehensive diagnostic cardiac catheterization services, the AMA RUC generally recommended the lower of either the sum of the current RVUs for the component services or the physician survey 25th percentile value. In most cases, the AMA RUC's recommendation for the comprehensive service was actually the sum of the current work RVUs for the component services and we are unsure how this approach is resource-based with respect to physician work. We are also concerned that the physician survey appears to have overstated the work for these well-established procedures so significantly that the 25th percentile value was usually higher than the sum of the current RVUs for the component services. Under this methodology, the AMA RUC-recommended RVUs for the comprehensive codes for diagnostic cardiac catheterization are an average of only one percent lower than the sum of the RVUs for the component services (taking into consideration any MPPR that would currently apply) included in the bundle.

We do not find the AMA RUC's methodology or the resulting values in this case to be acceptable for a major code refinement exercise of this nature. If we were to accept the AMA RUC's recommended values for these cardiac catheterization codes, we essentially would be agreeing with the presumption that there are negligible work efficiencies gained in the bundling of these cardiac catheterization services. On the contrary, we believe that the AMA RUC did not fully consider or account for the efficiency gains when the component services are furnished together, including the significant reduction in service time. Rather, the AMA RUC appears to have considered only the summation of the component

services to the comprehensive service. Therefore, we are requesting that the AMA RUC reexamine these codes as quickly as possible, given the significant PFS utilization and spending for cardiac catheterization services, and put forward an alternative approach to valuing these services that would produce relative values that are resource-based and do not rely predominantly on the current component service values in a circular rationale.

Since we believe that the new comprehensive diagnostic cardiac catheterization codes would be overvalued under the AMA RUC's CY 2011 recommendations, we have employed an interim methodology to determine alternative values for these services which we are assigning as the interim final work RVUs for CY 2011. To account for efficiencies inherent in bundling, we set the work RVUs for all of the CY 2011 cardiac catheterization codes for which we received AMA RUC recommendations to 10 percent less than the sum of the current work RVUs for the component codes, taking into consideration any MPPR that would apply under current PFS policy. These values are displayed in Table 51 and in Addendum B and C to this final rule with comment period. We recognize that this interim methodology is not highly specific and further acknowledge that the use of another approach by the AMA RUC may have differential effects on the values of the new comprehensive services compared to the proportionate reduction on the sum of the RVUs for the component services that we have adopted as a temporary methodology. However, given the complexity of the component code combinations that contribute to the comprehensive cardiac catheterization codes and the apparent overstatement of physician work from the physician survey, we are unable to present a more refined, code-specific methodology for the interim final values. Instead, based upon a very conservative estimate of the work efficiencies we would expect to be present when multiple component services are bundled together into a single comprehensive service, we have set interim final work values for the cardiac catheterization codes using a 10 percent reduction on the current values. As points of comparison, we note that the current MPPR policies under the PFS for imaging and surgical services reduce payment for the second and subsequent procedures by 50 percent on the TC and complete service, respectively, and, as discussed in detail in section II.C.4. of this final rule with comment period, we are adopting a 25 percent MPPR on the PE component of payment for therapy services in CY 2011. We further note that the service-specific work efficiencies for the other two major categories of new bundled codes for CY 2011, specifically endovascular revascularization and CT, are generally between 20 and 35 percent.

(3) Work Budget Neutrality for Clinical Categories of CPT Codes

Work budget neutrality, as a concept, is applied to hold the aggregate work RVUs constant within a set of clinically related CPT codes, while maintaining the relativity of values for the individual codes within that set. In some cases, when the CPT coding framework for a clinically related set of CPT codes is revised by the creation of new CPT codes or existing CPT codes are revalued, the aggregate work RVUs recommended by the AMA RUC within a clinical category of CPT codes may change, although the actual physician work for the services has not changed. When this occurs, work budget neutrality may be applied to adjust the work RVUs of each clinically related CPT code so that the sum of the new/revised code work RVUs (weighted by projected utilization) for a set of CPT codes would be the same as the sum of the current work RVUs (weighted by projected utilization) for that set of codes.

When the AMA RUC recommends work RVUs for new or revised CPT codes, we review the work RVUs and adjust or accept the recommended values as appropriate, making note of whether any estimated changes in aggregate work RVUs would result from true changes (increases or decreases) in physician work or from structural coding changes. We then determine whether the application of budget neutrality within sets of codes is appropriate. That is, if, within a set of clinically related codes, the aggregate work RVUs would increase under the RVUs we would be adopting for the upcoming year but without a corresponding true increase in physician work, we generally view this as an indication that an adjustment to ensure work budget neutrality within the set of CPT codes is warranted.

As the AMA RUC and CMS move to bundle and revalue more existing codes, creating significant structural coding changes, ensuring work budget neutrality is an important principle so that these changes are not unjustifiably redistributive among PFS services. This year, we found four sets of clinically related CPT codes where we believe the application of work budget neutrality is appropriate. That is, in these clinical areas, we believe the increases in aggregate work RVUs for the related services that would result from the work RVUs we would adopt (either the AMA RUC-recommended work RVUs or the alternative work RVUs determined by CMS) would not represent a true increase in the physician work for these services. These codes are in the areas of paraesophageal hernia procedures, obstetrical care, esophageal motility and high resolution esophageal pressure topography, and skin excision and debridement.

Table 52 lists the CPT codes that are affected by an application of work budget neutrality in CY 2011.

TABLE 52—CY 2011 WORK BUDGET NEUTRALITY (BN) FOR CLINICAL CATEGORIES OF NEW/REVISED CODES

CPT Code	Short descriptor	AMA RUC-recommended work RVUs	CMS-recommended work RVUs pre-BN	CY 2011 interim final work RVUs
Paraesophageal Hernia Procedures, BN Factor of 0.7374				
43283	Lap esoph lengthening	4.00	4.00	2.95

91013	Esophgl motil w/stim/perfus	0.21	0.21	0.18
	Skin Excision and Debridement, BN Factor of 0.9422			
97597	Rmvl devital tis 20 cm/<	0.54	0.54	0.51
97598	Rmvl devital tis addl 20 cm<	0.40	0.25	0.24

For the paraesophageal hernia procedures, the CPT Editorial Panel deleted six existing CPT codes and created ten new codes to remove obsolete and duplicative codes and add new codes to report current surgical techniques for paraesophageal hernia procedures. Since in this case there would be more codes that describe the same physician work with a greater degree of precision, the aggregate increase in work RVUs that would result from our adoption of the CMS-recommended RVUs that are largely based on the AMA RUC's work RVU recommendations would not represent a true increase in physician work. Therefore, we believe it would be appropriate to apply work budget neutrality to this set of codes. After reviewing the AMA RUC-recommended work RVUs, we adjusted the work RVUs for two codes (CPT codes 43333 and 43335) as described previously in section V.C.1.b.(i)(4) of this final rule with comment period, and then applied work budget neutrality to the set of clinically related CPT codes. The work budget neutrality factor for these 12 paraesophageal hernia procedure CPT codes is 0.7374.

For the obstetrical care codes, the AMA RUC reviewed 17 existing obstetrical care codes as part of the potentially misvalued codes initiative. It recommended significant increases in the work RVUs for some of the comprehensive obstetrical care codes (incorporating more than one element of antepartum care, delivery, and/or postpartum care) largely to address the management of labor. While we generally agree with the resulting AMA RUC-recommended rank order of services in this family, the aggregate increase in work RVUs for the obstetrical services that would result from our adoption of the CMS-recommended work RVUs that are largely based on the AMA RUC work RVU recommendations is not indicative of a true increase in physician work for the services. Therefore, we believe it would be appropriate to apply work budget neutrality to this set of codes. After reviewing the AMA RUC-recommended work RVUs, we adjusted the work RVUs for several codes as described in the following section V.C.1.c.(6) of this final rule with comment period, and then applied work budget neutrality to the set of clinically related CPT codes. The work budget neutrality factor for the 17 obstetrical care CPT codes is 0.8922.

For esophageal motility and high resolution esophageal pressure topography, two CPT codes were deleted and the services will be reported under a revalued existing CPT code and a new add-on code in CY 2011. We agree with the AMA RUC that there is compelling evidence to change the work RVUs for the existing code to account for the inclusion of procedures with higher work RVUs that would previously have been reported under the deleted codes. We also agree with the AMA RUC-recommended work RVUs for the add-on code. While we agree with the AMA RUC's recommendations for the new work RVUs for both codes, we do not believe that this structural coding change should result in an increase in aggregate physician work for the same services and, therefore, we believe it would be appropriate to apply work budget neutrality to this set of codes. The work budget neutrality factor for these 2 codes is 0.8500.

In the skin excision and debridement category, two CPT codes were deleted and the services that would previously

have been reported under these codes will be reported under two existing codes in CY 2011. However, the two existing wound management codes have been restructured from describing two distinct procedures reported based on wound surface area to describing a primary procedure and an add-on procedure that would additionally be reported in the case of a larger wound. Once again, the increase in aggregate work RVUs that would result from our adoption of the CMS-recommended work RVUs that are largely based on the AMA RUC work RVU recommendations do not represent a true increase in physician work for these procedures. Therefore, we believe it would be appropriate to apply work budget neutrality to this set of codes. After reviewing the AMA RUC-recommended work RVUs, we adjusted the work RVUs for one code (CPT code 97598) as described previously in section V.C.1.b.(i)(1) of this final rule with comment period, and then applied work budget neutrality to the set of clinically related CPT codes. The budget neutrality factor for these 2 codes is 0.9422.

c. CY 2011 Interim Final Work RVUs for Potentially Misvalued Codes

In the following section, we provide a discussion of our rationale for not accepting particular AMA RUC-recommended work RVUs for CY 2011 CPT codes that have been identified as potentially misvalued through the AMA RUC's screens and with CMS guidance. Table 53 lists all 291 CPT codes for which the AMA RUC has provided CMS with work RVU recommendations for CY 2011. Furthermore, the table displays the AMA RUC's recommended work value as well as CMS' interim final decisions for CY 2011. For CY 2011, the AMA RUC provided work RVU recommendations for a total of 82 codes identified as potentially misvalued in categories based on the screen that identified the codes, including "Harvard-Valued;" "CMS Fastest Growing:" and "Site-of-Service Anomalies." For CY 2011, CMS is not accepting 26 of the 82 AMA RUC-recommended work values for codes identified as potentially misvalued. We are instead providing alternative interim final work RVUs as discussed in the forthcoming section.

(1) Excision and Debridement (CPT Codes 11043 and 11044)

CPT codes 11043 (Debridement; skin, subcutaneous tissue, and muscle) and 11044 (Debridement; skin, subcutaneous tissue, muscle, and bone) were identified by the AMA RUC's Five-Year Review Identification Workgroup through the "Site-of-Service Anomalies" potentially misvalued codes screen in September 2007. The AMA RUC recommended that the entire family of services described by CPT codes 11040 through 11044 and 97597 and 97598 be referred to the CPT Editorial Panel because the current descriptors allowed reporting of the codes for a bimodal distribution of patients and also to better define the terms excision and debridement. For CY 2011, the AMA RUC reviewed this family of codes which includes the two potentially misvalued codes, CPT codes 11043 and 11044, and provided work RVU recommendations to CMS. Since the family also included other new and revised codes, we have consolidated the discussion of Excision and Debridement codes in section V.C.1.b.(i)(1), which discusses new and revised codes. Section V.C.1.b.(i)(1) provides the complete discussion of CMS' interim final work RVU decisions for this family of codes. However, to summarize the CMS decisions in brief, we disagree with the AMA RUC's CY 2011 work RVU recommendations and are assigning alternative values for both CPT codes 11043 and 11044 on an interim final basis for CY 2011.

(2) Strapping Lower Extremity (CPT Code 29540)

CPT code 29540 (Strapping; ankle and/or foot) was identified as a potentially misvalued code through the Five-Year Review Identification Workgroup under the "Harvard Valued" codes potentially misvalued codes screen for services with utilization over 100,000. This code is also a member of a family of codes under review for CY 2011 and as such, the full discussion for the Strapping Lower Extremity family is provided in section V.C.1.b.(i)(3), which discusses new and revised codes. However, to summarize the CMS decision in brief, we disagree with the AMA RUC's CY 2011 work RVU recommendations and are assigning an alternative value of 0.32 RVUs to CPT code 29540 on an interim final basis for CY 2011.

(3) Control Nasal Hemorrhage (CPT Code 30901)

CPT code 30901 (Control nasal hemorrhage, anterior, simple (limited cautery and/or packing) any method) was identified as a potentially misvalued code through the Five-Year Review Identification Workgroup under the "Harvard Valued" potentially misvalued codes screen for services with utilization over 100,000. The AMA RUC agreed with the specialty society, stating that there is no compelling evidence to change the current work RVUs of 1.21. To support the current valuation, the AMA RUC compared CPT code 30901 to CPT code 36620 (Arterial catheterization or cannulation for sampling, monitoring or transfusion (separate procedure); percutaneous), and agreed that CPT code 30901 required slightly more total service time to perform but required comparable intensity and complexity. The AMA RUC also compared CPT code 30901 to the key reference code CPT code 31231 (Nasal endoscopy, diagnostic, unilateral or bilateral (separate procedure) and agreed that code CPT code 30901 would be relatively more intense/complex. We disagree with the AMA RUC's CY 2011 work RVU recommendation to maintain the current work RVUs of 1.21 for code CPT code 30901 because the AMA RUC-recommended work value does not appropriately account for the significant reduction in intra-service time. We believe the more appropriate work RVUs are 1.10, based on the survey 25th percentile. Therefore, we are assigning an alternative value of 1.10 work RVUs to CPT code 29540 on an interim final basis for CY 2011.

(4) Cystourethroscopy (CPT Codes 52281 and 52332)

CPT codes 52281 (Cystourethroscopy, with calibration and/or dilation of urethral stricture or stenosis, with or without meatotomy, with or without injection procedure for cystography, male or female) and 52332 (Cystourethroscopy, with insertion of indwelling ureteral stent (e.g., Gibbons or double-J type) were identified as a potentially misvalued code through the Five-Year Review Identification Workgroup under the "Harvard Valued" potentially misvalued codes screen for services with utilization over 100,000.

The AMA RUC reviewed the survey results and determined that the physician time of 16 minutes pre-, 20 minutes intra-, and 10 minutes immediate post-service time and maintaining the current work RVUs of 2.80 appropriately account for the time and work required to perform this procedure. We disagree with the CY 2011 AMA RUC work RVU recommendation to maintain the current RVUs for this code because the physician time to perform this service (a building block of the code) has changed since the original "Harvard values" were established, as indicated by the AMA RUC-recommended reduction in pre-service time. Accounting for the reduction in pre-service time, we calculated work RVUs that are close to the survey 25th percentile. Therefore,

we are assigning 2.60 work RVUs to CPT code 52281 on an interim final basis for CY 2011.

Similarly, for CPT code 52332, we disagree with the AMA RUC's CY 2011 work RVU recommendation to maintain the current value due to the same concerns, a significant reduction in pre-service time. Based on the same building block rationale we applied to CPT code 52281, the other code within this family, we believe 1.47, which is the survey 25th percentile and maintains rank order, is a more appropriate valuation for 52332. Therefore, we are assigning an alternative value of 1.47 work RVUs to CPT code 52332 on an interim final basis for CY 2011.

(5) Vaginal Radiation Afterloading Apparatus for Clinical Brachytherapy (CPT Code 51755)

CPT code 57155 (Insertion of uterine tandems and/or vaginal ovoids for clinical brachytherapy) was identified as a potentially misvalued code by the Five-Year Review Identification Workgroup through the "Site-of-Service Anomalies" potentially misvalued codes screen. This code is a member of a family of codes under review for CY 2011 and as such, the full discussion for the family is provided in section V.C.1.b.(1)(E), which discusses new and revised codes. However, to summarize the CMS decision in brief, we disagree with the AMA RUC's CY 2011 work RVU recommendations and are assigning an alternative value of 3.37 RVUs to CPT code 57155 on an interim final basis for CY 2011.

(6) Obstetrical Care Codes (CPT Codes 59440, 59410, 59510, 59515, 59610, 59614, 59618, and 59622)

As a result of being identified as potentially misvalued codes by the Five-Year Review Identification Workgroup "High IWPUT" screen for potentially misvalued codes, the AMA RUC reviewed the CPT codes that define obstetrical care (CPT codes 59400 through 59622). CPT codes 59400, 59410, 59510, 59515, 59610, 59614, 59618 and 59622 include antepartum care and/or delivery as well as postpartum care for which the AMA RUC recommended significantly increased work values. The AMA RUC recommended 32.69 work RVUs for CPT code 59400 (Routine obstetric care including antepartum care, vaginal delivery (with or without episiotomy, and/or forceps) and postpartum care); 18.54 work RVUs for CPT code 59410 (Vaginal delivery only (with or without episiotomy and/or forceps); including postpartum care); 36.17 work RVUs for CPT code 59510 (Routine obstetric care including antepartum care, cesarean delivery, and postpartum care); 22.00 work RVUs for CPT code 59515 (Cesarean delivery only; including postpartum care), 34.40 work RVUs for CPT code 59610 (Routine obstetric care including antepartum care, vaginal delivery (with or without episiotomy, and/or forceps) and postpartum care, after previous cesarean delivery); 20.26 work RVUs for CPT code 59614 (Vaginal delivery only, after previous cesarean delivery (with or without episiotomy and/or forceps); including postpartum care), 36.69 work RVUs for CPT code 59618 (Routine obstetric care including antepartum care, cesarean delivery, and postpartum care, following attempted vaginal delivery after previous cesarean delivery); and 22.53 work RVUs for CPT code 59622 (Cesarean delivery only, following attempted vaginal delivery after previous cesarean delivery; including postpartum care). For postpartum care with delivery, which is included in all of these codes, the AMA RUC recommended one CPT code 99214 (Level 4 established patient office or other outpatient visit).

We disagree with the AMA RUC-recommended work RVUs for these services and believe that one CPT code 99213 visit (Level 3 established patient office or other outpatient visit) more accurately reflects the services furnished for this postpartum care visit. Therefore, for all CPT code 99214 blocks for CPT codes that include postpartum care following delivery visits, we have converted the CPT code 99214 visit to a CPT code 99213 visit and have revised the work RVUs accordingly. Therefore, we are adopting alternative work RVUs and are assigning 32.16 work RVUs to CPT code 59400; 18.01 work RVUs to CPT code 59410; 35.64 work RVUs to CPT code 59510; 21.47 work RVUs to CPT code 59515; 33.87 work RVUs to CPT code 59610; 19.73 work RVUs to CPT code 59614; 36.16 work RVUs to CPT code 59618; and 22.00 work RVUs to CPT code 59622, prior to the work budget neutrality adjustment as discussed in section V.C.1.b.(3) of this final rule with comment period, on interim final basis for CY 2011.

(7) Vagus Nerve Stimulator (CPT Code 61885)

CPT code 61885 (Insertion or replacement of cranial neurostimulator pulse generator or receiver, direct or inductive coupling; with connection to a single electrode array) was identified as a potentially misvalued code by the Five-Year Review Identification Workgroup under the "Site-of-Service Anomalies" screen for potential misvalued codes. We discuss this code in the context of the Vagus Nerve Stimulator family, provided in section V.C.1.b.(i)(6), which discusses new and revised codes. However, to summarize the CMS decision in brief, we disagree with the AMA RUC's CY 2011 work RVU recommendations and are assigning an alternative value of 6.05 RVUs to CPT code 61885 on an interim final basis for CY 2011.

(8) Transforaminal Epidural Injection (CPT Code 64483)

CPT code 64483 (Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with image guidance (fluoroscopy or CT), lumbar or sacral; single level) was identified as a potentially misvalued code through the Five-Year Review Identification Workgroup under the "CMS Fastest Growing" potentially misvalued codes screen. The AMA RUC compared components of this code (pre-, intra-, and post-service times, in addition to intensity) to a number of other codes, although the AMA RUC's application of the crosswalk methodology was unclear to us. The AMA RUC recommended 1.90 work RVUs; however, we disagree with AMA RUC's CY 2011 work RVU recommendation and believe 1.75 work RVUs, based on the survey 25th percentile, more appropriately accounts for the significant reductions in pre-, intra-, and post-service time. Therefore, we are assigning an alternative value of 1.75 work RVUs to CPT code 64483 on an interim final basis for CY 2011.

(9) CT Thorax (CPT Code 71250)

CPT Code 71250 (Computed tomography, thorax; without contrast material) was identified as a potentially misvalued code by the Five-Year Review Identification Workgroup under the "CMS Fastest Growing" potentially misvalued codes screen. This service had never been surveyed by the AMA RUC until this review was conducted for CY 2011. The specialty recommended a pre-service time of 5 minutes based on the survey results and the AMA RUC concurred. The AMA RUC also agreed that the surveyed intra-service of 15 minutes and immediate post-service time of 5 minutes were typical for the physician work required for the service. While the AMA RUC accepted the survey results for physician times based on its comparisons to similar services and other considerations, the AMA RUC believed maintaining the code's current value of 1.16 work RVUs was more appropriate, noting that this recommended value is slightly lower than the survey 25th percentile of 1.20.

We disagree with the AMA RUC's CY 2011 work RVU recommendation to maintain the current value for CPT code 71250 and similar codes. As we have previously discussed, we are increasingly concerned over the validity of accepting work valuations based upon surveys conducted on existing codes as we have noticed a pattern of predictable survey results. That is, in providing recommendations for existing potentially misvalued codes in CY 2011, the AMA RUC often recommended maintaining the current work RVUs and supported this valuation by citing the survey results. Upon clinical review of a number of these cases, we are concerned over the validity of the survey results since the survey values often are very close to the current known value for the code. We are concerned that this may indicate a bias in the survey results since respondents would know the current value for the existing code at the time the survey is being conducted. Increasingly, rather than recommending the median survey value that has historically been most commonly used, the AMA RUC is choosing to recommend the 25th percentile value, potentially responding to the same concern we have identified. Therefore, based on our concern that CT codes would continue to be misvalued if we were to accept the AMA RUC recommendation to maintain the current value, we are assigning an alternative value of 1.00 work RVUs (the survey low value) to CPT code 71250 on an interim final basis for CY 2011.

(10) CT Spine (CPT Code 72125)

CPT codes 72125 (Computed tomography, cervical spine; without contrast material); 72128 (Computed tomography, thoracic spine; without contrast material); and 72131 (Computed tomography, lumbar spine; without contrast material) were identified as potentially misvalued codes by the Five-Year Review Workgroup under the "CMS Fastest Growing" screen for potentially misvalued codes. For CPT code 72125, the AMA RUC concurred with the specialty-recommended pre-service time of 5 minutes based on the survey results. The AMA RUC also agreed that the surveyed intra-service of 15 minutes and immediate post-service time of 5 minutes were typical for the physician work required for the service. The AMA RUC compared this service to other comparable services and concluded that it was appropriate to maintain the current work RVUs of 1.16.

Similarly, for CPT codes 72128 and 72131, the AMA RUC accepted the survey physician times, but also disregarded the survey work RVU results. Upon clinical review of these codes in this family, we are concerned over the validity of the survey results since the survey 25th percentile values are very close to the current value of 1.16 RVUs for the code. As we stated previously, we are concerned that this pattern may indicate a bias in the survey results. Therefore, based on our concern that the CT codes would continue to be misvalued if we were to accept the AMA RUC recommendation to maintain the current values, we are assigning alternative work RVUs of 1.00 (the survey low value) to CPT codes 72125, 72128, and 72131 on an interim final basis for CY 2011.

(11) CT Upper and CT Lower Extremity (CPT Code 73200 and 73700)

CPT codes 73200 (Computed tomography, upper extremity; without contrast material) and 73700 (Computed tomography, lower extremity; without contrast material) were identified as potentially misvalued codes by the Five-Year Review Workgroup under the "CMS Fastest Growing" screen for potentially misvalued codes. Similar to the other CT codes previously discussed, the AMA RUC reviewed the survey results and accepted the survey physician times, recommending maintaining the current work RVUs of 1.09 for these services. Our clinical review of the codes, CPT codes 73200 and 73700, as with the other CT codes previously discussed, concluded that maintaining the current values would result in an overvaluing of this type of service. We remain concerned over the validity of the survey results. Therefore, based on our concern that CT codes would continue to be misvalued if we were to accept the AMA RUC recommendation to maintain the current values, we disagree with the AMA RUC's CY 2011 work RVU recommendations. We are assigning alternative work RVUs of 1.00 (the survey low RVU value) to CPT codes 73200, and 73700 on an interim final basis for CY 2011.

(12) Radiation Treatment Management (CPT Code 77427)

CPT code 77427 (Radiation treatment management, 5 treatments) was identified as a potentially misvalued code by the Five-Year Identification Workgroup's "Site-of-Service Anomalies" screen for potentially misvalued codes in 2007. For CY 2011, the AMA RUC reviewed the specialty survey results and agreed that the surveyed physician time of 7 minutes pre-service, 70 minutes intra-service, and 10 minutes immediate post-service is appropriate. The AMA RUC also used the building block approach to value the treatment visits associated with CPT code 77427. The AMA RUC averaged the number of weekly E/M visits, that is, 4 of CPT code 99214 (Level 4 established patient office or other outpatient visit) and 2 of CPT code 99213 (Level 3 established patient office or other outpatient visit) over 6 weeks to calculate an E/M building block of 1.32 RVUs. Similarly, to value the post-operative office visits associated with this code, the AMA RUC calculated a building block of 0.57 to account for the average over 6 weeks of "E/M visits after treatment planning." The AMA RUC then crosswalked the physician times for CPT code 77427 to CPT code 77315 (Teletherapy, isodose plan (whether hand or computer calculated); complex (mantle or inverted Y, tangential ports, the use of wedges, compensators, complex blocking, rotational beam, or special beam considerations)) and used the value of CPT code 77315 as the remaining building block for CPT code 77427. Accordingly, the AMA RUC calculated total work RVUs of 3.45 and recommended this value for CPT code 77427.

Upon clinical review, we modified one of the building blocks that the AMA RUC used to calculate the work RVUs associated with the treatment E/M office visits. We believe instead of the average based upon 4 units of CPT code 99214 and 2 units of CPT code 99213, a more appropriate estimation would be an average of 3 units of CPT code 99214 and 3 units of CPT code 99213. Accordingly, we are assigning an alternative value of 2.92 work RVUs to CPT code 77427 on an interim final basis for CY 2011.

BILLING CODE 4120–01–P

Table 53: AMA RUC Recommendations and Interim Final Work RVUs for CY 2011 New, Revised, and Potentially Misvalued Codes

Notes:

[1] CY 2011 interim final work RVUs reflect adjustment for work budget neutrality.

BILLING CODE 4120–01–C

2. Establishment of Interim Final Direct PE Inputs for CY 2011

a. Background

As we previously explained in section V.A. of this final rule with comment period, on an annual basis, the AMA RUC provides CMS with recommendations regarding direct PE inputs, including clinical labor, supplies, and equipment, for new, revised, and potentially misvalued codes. These recommendations, therefore, include inputs for all direct PE categories excluding supply prices and equipment prices and useful life inputs, which are specifically discussed in section II.A.3.e. of this final rule with comment period.

We review the AMA RUC-recommended direct PE inputs on a code-by-code basis, including the recommended facility PE inputs and/or nonfacility PE inputs, as clinically appropriate for the code. We determine whether we agree with the AMA RUC's recommended direct PE inputs for a service or, if we disagree, we refine the PE inputs to represent inputs that better reflect our estimate of the PE resources required for the service in the facility and/or nonfacility settings. We also confirm that CPT codes should have facility and/or nonfacility direct PE inputs and make changes based on our clinical judgment and any PFS payment policies that would apply to the code.

We received direct PE input recommendations from the AMA RUC for 325 CPT codes for CY 2011, including those CPT codes where the AMA RUC recommended no changes to the direct PE inputs of existing codes. We note that we have included in this count those recommendations received from the AMA RUC that were provided for CY 2011 and addressed in the CY 2011 PFS proposed rule. These recommendations are discussed in section II.A.3.c. of this final rule with comment period. We have accepted for CY 2011, as interim final and without refinement, the direct PE inputs based on the recommendations submitted by the AMA RUC for the 258 codes listed in Table 54.

For the remainder of the AMA RUC's direct PE recommendations for 67 codes, we have accepted the PE recommendations submitted by the AMA RUC as interim final, but with refinements. These codes and the refinements to their direct PE inputs are listed in Table 55.

Accordingly, while Table 55 details the CY 2011 refinements of the AMA RUC's direct PE recommendations at the code-specific level, we discuss the general nature of some common refinements and the reasons for particular refinements in the following section. We note that the final CY 2011 PFS direct PE database reflects the refined direct PE inputs that we are adopting on an interim final basis for CY 2011. That database is available under downloads for the CY 2011 PFS final rule with comment period on the CMS Web site at: *http://www.cms.gov/PhysicianFeeSched/PFSFRN/list.asp#TopOfPage.*

b. CY 2011 Interim Final Direct PE Inputs for New, Revised, and Potentially Misvalued Codes

(1) General Equipment Time

Many of the refinements to the AMA RUC direct PE recommendations were made in the interest of promoting a transparent and consistent approach to equipment time inputs. In the past, the AMA RUC did not always provide us with recommendations regarding equipment time inputs. In CY 2010, we requested that the AMA RUC provide equipment times along with the other direct PE recommendations. Subsequent to that request, we provided the AMA RUC with general guidelines regarding appropriate equipment time inputs. We appreciate the AMA RUC's willingness to provide us with these additional inputs as part of their direct PE recommendations.

In general, the equipment time inputs correspond to the intra-service portion of the clinical labor times. We have clarified that assumption to consider equipment time as the sum of the times within the intra-service period when a clinician is using the piece of equipment, plus any additional time the piece of equipment is not available for use for another patient due to its use during the designated procedure. In addition, when a piece of equipment is typically used during additional visits included in a service's global period, the equipment time should also reflect that use.

Certain highly technical pieces of equipment and equipment rooms are less likely to be used by a clinician over the full course of a procedure and are typically available for other patients during time that may still be in the intra-service portion of the service. We adjust those equipment times accordingly. For example, CPT code 74178 (Computed tomography, abdomen and pelvis; without contrast material in more than one body region) includes 3 minutes of intra-service clinical labor time associated with obtaining the patient's consent for the procedure. Since it would be atypical for this activity to occur within the CT room, we believe these 3 minutes should not be attributed to the CT room.

We are refining the CY 2011 AMA RUC direct PE recommendations to conform to these equipment time policies. These refinements are reflected in the final CY 2011 PFS direct PE database and detailed in Table 55.

(2) Equipment Time and Clinical Labor for Conscious Sedation

In services that include conscious sedation recovery, clinical labor and equipment time inputs are generally established using a distinctive logic. In the case of these services, clinical labor time is based on 15 minutes of registered nurse (RN) recovery monitoring for each hour monitored following the procedure to account for a typical 1:4 nurse to patient ratio. Times for equipment used during the recovery monitoring period, therefore, are equal to four times the number of RN minutes during the recovery monitoring period.

Equipment time for pieces of equipment used in conscious sedation should generally include time to administer the anesthesia, time for the procedure, and time to monitor the patient following the procedures. Standard equipment and supplies for conscious sedation include: EQ011 (ECG, 3-channel (with SpO2, NIBP, temp, resp)); EF019 (stretcher chair); EQ032 (IV infusion pump); and SA044 (pack, conscious sedation).

We are refining the CY 2011 AMA RUC direct PE recommendations to conform to these policies. These refinements are reflected in the final CY 2011 PFS direct PE database and detailed in Table 55.

(3) Equipment Time for Add-On Codes

For add-on codes, only minutes allocated to the procedure itself are added to the time for the equipment, since any additional minutes would duplicate the equipment time already accounted for in the primary procedure that accompanies the add-on code.

We are refining the CY 2011 AMA RUC PFS direct PE recommendations to conform to this policy. These refinements are reflected in the final CY 2011 PFS direct PE database and detailed in Table 55.

(4) Changes in Standard Uses of Certain Supplies

As discussed in section II.A.3.b.(1) of this final rule with comment period, we are finalizing our proposal to remove the supply item "biohazard bag" from the direct PE database because the item is considered an indirect practice

expense. Additionally, as discussed in section II.A.3.b.(6) of this final rule with comment period, we are finalizing our CY 2011 proposal to remove the pulse oximeter with printer (CMS Equipment Code EQ211) as an input for the 118 codes that also contain the ECG, 3-channel (with SpO2, NIBP, temp, resp) (CMS Equipment Code EQ011).

We are refining the CY 2011 AMA RUC PFS direct PE recommendations to conform to these policies. These refinements are reflected in the final CY 2011 PFS direct PE database and detailed in Table 55.

(5) New Supply and Equipment Items

When clinically appropriate, the AMA RUC generally recommends the use of supply and equipment items that already exist in the direct PE database for new, revised, and potentially misvalued codes. Some recommendations include supply or equipment items that are not currently in the direct PE database. In these cases, the AMA RUC has historically recommended a new item be created and has facilitated CMS' pricing of that item by working with the specialty societies to provide sales invoices to us. We appreciate the contributions of the AMA RUC in that process.

Despite the assistance of the AMA RUC for CY 2011, we did not receive adequate information for pricing the following new supply items included in the AMA RUC's CY 2011 direct PE recommendations: SC098 (Catheter, angiographic, Berman); SD251 (Sheath Shuttle (Cook)); SD255 (Reentry Device (Frontier, Outback, Pioneer)); SD257 (Tunneler); and SD258 (Vacuum Bottle). We agree with the AMA RUC that these supply items are appropriate direct PE inputs for the associated procedures. However, because these items do not resemble current supplies in the PE database, we were unable to identify existing supplies with input prices to substitute for the AMA RUC-recommended direct PE inputs. We were also unable to estimate the prices for these new supply items based on analogy to existing supplies in the direct PE database because, as stated previously, they are not clinically similar to existing items in the direct PE database and we do not have information on the pricing of the new supply items. Therefore, our only alternative for these supply items for CY 2011 was to accept them as direct PE inputs for the associated services based on the AMA RUC recommendations, but to price them at $0 for CY 2011. For CY 2012, we will consider the prices for these supply items eligible to be updated through the process we are finalizing for CY 2011 that is described in section II.A.3.e. of this final rule with comment period.

In the case of certain other direct PE recommendations for CY 2011, the AMA RUC has recommended new supply or equipment items that we believe to be already described by existing items in the direct PE database. Therefore, we are refining the AMA RUC CY 2011 direct PE recommendations to utilize existing supply and equipment items in the PE database where appropriate. These refinements are reflected in the final CY 2011 PFS direct PE database and detailed in Table 55.

(6) Endovascular Revascularization Stents

In reviewing the supply input recommendations from the AMA RUC for CPT codes describing certain endovascular revascularization services, we considered the quantity of high-cost stents associated with some of the codes. The recommendations included two or three stents for each of the following six CPT codes: 37226 (Revascularization, femoral/popliteal artery(s), unilateral; with transluminal stent placement(s)); 37227 (Revascularization, femoral/popliteal artery(s), unilateral; with transluminal stent placement(s) and atherectomy); 37230 (Revascularization, tibial/peroneal artery, unilateral, initial vessel; with transluminal stent placement(s)); 37231 (Revascularization, tibial/peroneal artery, unilateral, initial vessel; with transluminal stent placement(s) and atherectomy); 37234 (Revascularization, tibial/peroneal artery, unilateral, each additional vessel; with transluminal stent placement(s) (List separately in addition to code for primary procedure)); and 37235 (Revascularization, tibial/peroneal artery, unilateral, each additional vessel; with transluminal stent placement(s) and atherectomy (List separately in addition to code for primary procedure)).

Given the complex clinical nature of these services, their new pricing in the nonfacility setting under the PFS, and the high cost of each stent, we were concerned that two or three stents could overestimate the number of stents used in the typical office procedure that would be reported under one of the CPT code. Therefore, we examined CY 2009 hospital OPPS claims data for the combinations of predecessor codes that would have historically been reported for each case reported in under CY 2011 under a single comprehensive code. Because of the OPPS device-to-procedure claims processing edits, all prior cases would have included HCPCS C-code for at least one stent on the claim for the case. Based on our analysis of these data, we determined that for each new CY 2011 comprehensive code, the predecessor code combinations would have used only one stent in 65 percent or more of the cases. We have no reason to believe that when these new CPT codes are reported for procedures performed in the nonfacility setting, patients would receive more than the one stent typically used in the hospital outpatient setting. Therefore, we are refining the CY 2011 AMA RUC recommendations to include one stent in the direct PE inputs for each of the six endovascular revascularization stent insertion codes, including the add-on codes. These refinements are reflected in the final CY 2011 PFS direct PE database.

(7) Nasal/Sinus Endoscopy Supply and Equipment Items

The AMA RUC recommendation for direct PE inputs for CPT code 31295 (Nasal/sinus endoscopy, surgical; with dilation of maxillary sinus ostium (e.g., balloon dilation), transnasal or via canine fossa), included irregular supply and equipment inputs. The AMA RUC recommended two similar, new supply items, specifically "kit, sinus surgery, balloon (maxillary, frontal, or sphenoid)" and "kit, sinus surgery, balloon (maxillary)" as supply inputs with a quantity of one-half for each item. We believe that this recommendation was intended to reflect an assumption that each of these distinct supplies is used in approximately half of the cases when the service is furnished. In general, the direct PE inputs should reflect the items used when the service is furnished in the typical case. Therefore, the quantity of supply items associated with a code should reflect the actual units of the item used in the typical case, and not be reflective of any estimate of the proportion of cases in which any supply item is used. We note, however, that fractional inputs are appropriate when fractional quantities of a supply item are typically used, as is commonly the case when the unit of a particular supply reflects the volume of a liquid supply item instead of quantity. Additionally, in the case of certain services with global service periods, fractional quantities of supplies may be appropriate when fractional numbers of post-service office visits are associated with a code.

Upon receipt of these recommendations, we requested that the AMA RUC clarify the initial recommendation by determining which

of these supply items would be used in the typical case. The AMA RUC recommended that the supply item "kit, sinus surgery, balloon (maxillary, frontal, or sphenoid)" be included in the inputs for the code. We considered that recommendation, but we believe that the item "kit, sinus surgery, balloon (maxillary)" is more clinically appropriate based on the description of CPT code 32195.

The AMA RUC recommendation for equipment inputs for the same code (CPT code 31295) included a parallel irregularity by distributing half of the equipment minutes to each of two similar pieces of equipment, one existing and one new: "Endoscope, rigid, sinoscopy" (ES013) and "fiberscope, flexible, sinoscopy" (new). We believe that this recommendation was intended to reflect an assumption that each of these distinct pieces of equipment is used in approximately half of the cases in which the service is furnished. In general, the direct PE inputs should reflect the items used when the service is furnished in the typical case. Therefore, the equipment time inputs associated with a code should reflect the number of minutes an equipment item is used in the typical case, and not be distributed among a set of equipment items to reflect an estimate of the proportion of cases in which a particular equipment item might be used. However, we note that in the case of certain services with global service periods, distribution of equipment minutes among similar equipment items may be appropriate when fractional numbers of post-service office visits are associated with a code. Upon review of these items, we believe that the new piece of equipment, "fiberscope, flexible, sinoscopy," is more clinically appropriate based on the description of CPT code 32195.

We are refining the CY 2011 AMA RUC direct PE recommendations to conform to these determinations. These refinements are reflected in the final CY 2011 PFS direct PE database and detailed in Table 55.

* CPT codes discussed in more detail in section II.A.3.c. of this final rule with comment period

3. Establishment of Interim Final Malpractice RVUs for CY 2011

According to our final policy as discussed in section II.B.2. of this CY 2011 final rule with comment period, we have assigned malpractice RVUs for CY 2011 new and revised codes by a crosswalk to a similar source code. We have reviewed the malpractice source code AMA RUC recommendations for 224 CY 2011 new and revised codes and we are accepting them all for CY 2011. According to our policy, we have adjusted the malpractice RVUs of the CY 2011 new/revised codes for differences in work RVUs (or, if greater, the clinical labor portion of the fully implemented PE RVUs) between the source code and the new/revised code to reflect the specific risk-of-service for the new/revised code. The source code crosswalks for the CY 2011 new/revised codes are subject to public comment on this CY 2011 final rule with comment period, as well as the CY 2011 malpractice RVUs of the new/revised codes that are listed in Addendum C to this final rule with comment period.

Table 8 lists the CY 2011 new/revised codes and their respective source codes for determining the interim final CY 2011 malpractice RVUs. We are also posting the crosswalk on the CMS Web site under the downloads for the CY 2011 PFS final rule with comment period at: *http://www.cms.gov/PhysicianFeeSched/PFSFRN/list.asp#TopOfPage.*

VI. Provisions of the Affordable Care Act

The following section addresses certain provisions of the Patient Protection and Affordable Care Act (Pub. L. 111–148), enacted on March 23, 2010, as amended by the Health Care and Education Reconciliation Act of 2010 (Pub. L. 111–152) enacted on March 30, 2010 (collectively known as the Affordable Care Act (ACA)).

A. Section 3002: Improvements to the Physician Quality Reporting System

Section 3002 of the ACA makes a number of changes to the Physician Quality Reporting System (previously referred to as the Physician Quality Reporting Initiative, or PQRI), including authorizing incentive payments through 2014, and requiring a payment adjustment beginning in 2015, for eligible professionals who do not satisfactorily submit quality data. For a more detailed discussion of the provisions of section 3002 of the ACA, please refer to section VII.F.1. of this final rule with comment period.

B. Section 3003: Improvements to the Physician Feedback Program and Section 3007: Value-Based Payment Modifier Under the Physician Fee Schedule

1. Background

As required under section 1848 (n) of the Act, as added by section 131(c) of MIPPA, we established and implemented by January 1, 2009, the Physician Resource Use Measurement & Reporting (RUR) Program (now referred to as the Physician Feedback Program) for purposes of providing confidential reports to physicians that measure the resources involved in furnishing care to Medicare beneficiaries. Section 1848(n) of the Act also authorizes us to include information on the quality of care furnished to Medicare beneficiaries by a physician or group of physicians.

We are continuing a phased implementation of the Physician Feedback Program. Phase I was discussed in the CY 2010 proposed and final rules (74 FR 33589, and 74 FR 61844, respectively), and has been completed. Phase I consisted of several activities including extensive data analysis to inform decisions about topics such as measures, attribution, and risk adjustment and formative testing of report design with practicing physicians. We concluded Phase I by sending to individual practicing physicians in 12 geographic areas [4] several hundred reports that contained per capita and episode-based cost information.

Phase I of the Physician Feedback Program focused on providing confidential feedback on resource use measures. Section 1848 (n)(1)(A)(iii) of the Act states that the Secretary may also include information on the quality of care furnished to Medicare beneficiaries by physicians (or groups of physicians) in the feedback reports. We believe that providing physicians with feedback on both quality and cost is consistent with the direction of other CMS value-based purchasing (VBP) initiatives. As a result, we decided to include quality measures in Phase II of the Physician Feedback Program and, in particular, we considered measures used in the Physician Quality Reporting System (previously referred to as the Physician Quality Reporting Initiative (PQRI)) and claims-based measures such as the measures used in the Generating Medicare Physician Quality Performance Measurement Results (GEM) project (74 FR 61846).

Section 1848 (n)(1)(A)(ii) of the Act also states that the Secretary may provide reports at the physician group level. Accordingly, as part of Phase II of the Physician Feedback Program, we will also include reporting to group practices, defined as more than one physician practicing medicine together (74 FR 61846). In addition, we noted that the definition applies to the following types of physician groups: (1) Formally established single or multi-specialty group practices; (2) physicians practicing in defined geographic regions; and (3) physicians practicing within facilities or larger systems of care (74 FR 61846). As we continue with Phase II, we plan to report to both physician group practices and their affiliated practitioners, recognizing that many physicians practice in arrangements other than solo practices. We believe that using both group and individual level reporting will also allow us to gain experience with the sample size issues that arise when individual physicians have too few Medicare beneficiaries with specific conditions to generate reliable information. (*See* the CY 2010 final rule with comment period (74 FR 61844) for a detailed discussion of plans for Phase II.)

2. Effect of the ACA of 2010 on the Program

The ACA contains two provisions relevant to the Physician Feedback Program. Section 3003 of the ACA continues the confidential feedback program and requires the Secretary, beginning in 2012, to provide reports that compare patterns of resource use of individual physicians to other physicians. In addition, section 3007 of the ACA requires the Secretary to apply a separate, budget-neutral payment modifier to the Fee-For-Service PFS payment formula. The value-based payment modifier, which will be phased in beginning January 1, 2015 through January 1, 2017, will provide for differential payment under the fee schedule to a physician or groups of physicians, and later, possibly to other eligible professionals, based upon the relative quality and cost of care of their Medicare beneficiaries. Accordingly, our goal is to have Medicare physicians receive a confidential feedback report prior to implementation of the value-based payment modifier. We view these two provisions as complementary, as we expect the work done for the Physician Feedback Program under section 3003 of the ACA will inform our implementation of the value-based

[4] The 12 geographic areas are: Boston, MA, Syracuse, NY, Northern New Jersey, Greenville, SC, Miami, FL, Little Rock, AR, Indianapolis, IN, Cleveland, OH, Lansing, MI, Phoenix, AZ, Seattle, WA, and Orange County, CA.

payment modifier under section 3007 of the ACA. The approach used for performance assessment in the confidential feedback reports will serve as the foundation for implementing the value-based payment modifier. Specifically, throughout future phases of reports under the Physician Feedback Program, we will continue to enhance our measures and methods and improve the content of the reports based on both our research and the feedback of stakeholders before the value-based payment modifier begins to affect physician payments in 2015.

We plan to engage in a large-scale effort to garner widespread stakeholder involvement with regard to how we continue to build and expand the confidential feedback program and transition to implementation of the value-based payment modifier. We recognize that such a payment modifier may have an impact on the delivery of care to Medicare beneficiaries. Reports that will be produced in the future based on changes as a result of section 3003 of the ACA will contain both cost and quality data, and work done to improve these reports with regard to fair and actionable measures in each of these domains will aid our decision making in how to apply the value-based payment modifier. We intend to seek stakeholder input on various aspects of program design, including cost and quality measures, methodologies for compositing measures, and feedback report content and delivery. Such feedback may be gathered through rulemaking, open door forums, or other mechanisms. Below we summarize the public comments received on the changes we proposed to make to Phase II of the Physician Feedback Program.

3. Summary of Comments and Phase II Proposed Changes

a. Episode Groupers

We intend that reports in Phase II of the Physician Feedback Program will be distributed in the fall of 2010. However, we proposed several changes to the program parameters for Phase II that were finalized in prior rules (75 FR 40114). First, we proposed to discontinue our use of commercially-available proprietary episode grouping software given limitations we noted in proprietary episode grouping software we used in previous phases of the program. In addition, we noted that section 3003 of the ACA requires that the Secretary develop a Medicare-specific episode grouper by January 1, 2012, and make the details of the episode grouper available to the public. It is our intent that the Medicare-specific episode grouper will address the limitations we found in the proprietary software.

We recognize that, because of its disease/condition-specific focus, episode-based cost information can be more meaningful and actionable for physicians than per capita information. We plan to provide such information in feedback reports after public grouper software is developed. Prior to that, we may consider other potential interim options for episode grouping to provide such information. As we indicated, we believe that our use of proprietary episode grouping software in the previous phases of the program had certain limitations (75 FR 40114). These software products were not intended for use with Medicare claims data, and we discovered several problems with the data outputs. Specifically, the groupers do not work well to create episodes for beneficiaries with multiple chronic conditions, which is a significant portion of Medicare beneficiaries.

For example, when a beneficiary with a chronic disease is hospitalized for an acute condition, that beneficiary most likely also receives treatments unrelated to the condition for which he or she is hospitalized, but related to the chronic disease. The groupers, which are proprietary and often referred to as "black boxes," do not enable users to understand the coding to determine how to accommodate these issues. Therefore, we had to make several decisions about how to pre-process the claims data so that the groupers could recognize and attempt to deal with these issues in the clinical grouping logic. After report production in Phase I, we discovered several problems with the pre-processing, which resulted in inaccurate episode cost information being disseminated.

Until a Medicare-specific episode grouping software is developed, we plan to produce reports for Phase II that contain annualized per capita cost information. More specifically, instead of episode-specific cost information, we plan to provide all patient per capita cost information, as well as per capita cost information for those beneficiaries with five common chronic diseases: (1) Diabetes; (2) congestive heart failure; (3) coronary artery disease; (4) chronic obstructive pulmonary disease; and (5) prostate cancer. This information will not be limited to the cost of treating the disease itself, but will provide total Part A/B per capita cost information, as well as service category breakdowns, for the care received by the subset of attributed beneficiaries with that disease.

Comment: Many commenters were supportive of CMS' decision to discontinue using the proprietary episode grouper software in Phase II and instead to develop a Medicare-specific grouper available to the public. Several of these commenters discussed the specific limitations of proprietary groupers and also the importance of developing and utilizing a Medicare-specific episode grouper available to the public. Many commenters urged CMS to include extensive testing and stakeholder input while developing the Medicare-specific grouper. These commenters asserted that it was important that the process to develop a Medicare-specific grouper be available to the public, as well as the methodology such a grouper will employ, remain transparent, and open for public review and recommendation. A few commenters expressed concern about CMS' ability to create a fair and accurate Medicare-specific episode grouper in the timeline allotted for its implementation. One commenter specifically requested that CMS, to the extent possible, express concern about the timeline enacted by Congress. Another commenter opposed dropping the episode grouper in Phase II and requested that CMS use this time to test and explore different episode grouping methodologies.

Response: We appreciate these comments in support of our proposal to discontinue our use of commercially-available proprietary episode grouping software due to concerns over their suitability for use with Medicare claims and the pending development of a Medicare-specific episode grouper. Our research has documented that the currently available episode groupers, as they are now configured, present significant challenges to their use with our highly complex patient population. Therefore, we believe it is appropriate to discontinue use of the commercially available episode groupers for the Phase II reports and until a Medicare-specific episode grouper is available. We acknowledge the suggestion, however, that CMS test and explore different episode grouping methodologies. We are bound by statute to make the details of the developed Medicare-specific episode grouper available to the public and intend to do so. We also intend to involve the stakeholder community and to receive their input during the testing stage. We acknowledge that there are many challenges involved in deciding on the methodologies to utilize in developing the episode grouper. We also acknowledge that the statutorily required timeframe for development of the grouper is one of those challenges. We believe that the episode grouper is

a useful element in appropriately providing effective and actionable cost measures for physician feedback. We intend to research and test many different methodologies in order to create a fair and appropriate episode grouper for the Medicare population and will incorporate episode-based cost measures into the physician feedback reports as early as possible.

After considering all of the public comments received regarding this issue and for the reasons we explained above, we are finalizing our proposal to discontinue use of the commercially-available proprietary episode grouping software for Phase II reports.

b. Quality Measures

We proposed to exclude data from the Physician Quality Reporting System in the Physician Feedback Program reports even though commenters have been generally supportive of including Physician Quality Reporting System measures in the reports (75 FR 40114).

The first year of the Physician Quality Reporting System was 2007, participation was still quite low, and the first round of Physician Quality Reporting feedback reports contained errors that necessitated correction. To date, work by CMS' Physician Feedback Program support contractor has been based upon claims data from 2007. Because of the low number of physicians reporting under the Physician Quality Reporting System in 2007, and because providers have the flexibility to choose which measures to report under the Physician Quality Reporting System, we believe the resulting small numbers of physicians reporting an individual measure would greatly limit meaningful peer comparisons, and thus the number of providers who would receive a feedback report. Therefore for Phase II, we proposed to use the claims-based measures developed by CMS in the GEM project (75 FR 40115).[5] This is a core set of 12 process quality measures developed by HEDIS that can be calculated using only administrative claims data. Several chronic conditions that are prevalent in the Medicare population are captured by this set of measures. However, in future phases of the program, we intend to explore the possibility of linking the Physician Feedback Program to the Electronic Health Record (EHR) incentive program for meaningful use of EHR technology (as added by the Health Information Technology for Economic and Clinical Health Act (Title IV of Division B of the Recovery Act, together with Title XIII of Division A of the Recovery Act) (HITECH)), and the group practice reporting option (GPRO) in the Physician Quality Reporting System. Both of these programs offer measures and measure sets, as well as methods of reporting data which would be conducive to meaningful peer comparisons among physicians.

Comment: Several commenters agreed with our proposal to not use Physician Quality Reporting System measures during Phase II. These commenters argued that the Physician Quality Reporting System measures are voluntarily reported, some reports have contained errors, and therefore, these data are inadequate for assessing quality for many providers. Several commenters voiced concerns and/or disagreement with using GEM measures as an alternative to the Physician Quality Reporting System measures. These commenters claimed that the GEM measures are too focused on primary care and prevention, are limited in scope (for example, do not contain any measures for prostate cancer, and breast and colorectal cancer measures are only related to screening), and have few, if any, measures pertaining to some specialties. Some commenters advocated for the future use of Physician Quality Reporting System measures claiming that more eligible professionals are participating in the program now. Several commenters agreed with CMS' decision to explore linking the Physician Feedback Program with the EHR incentive program.

Response: We appreciate these comments and we understand the commenters' concern that the 12 core GEM measures may not fully measure the broad scope of care delivered to Medicare beneficiaries. However, the GEM measures serve as an initial core measure set, upon which a larger set can be built for purposes of including in future reports. We also believe that the GEM measures will yield sufficient information to allow peer group comparisons. In contrast, the Physician Quality Reporting System data available to us for the Phase II reports were very limited and would not provide sufficient data for the minimum case size and number of peers needed to report data for many physicians. We plan to take into account the limitations commenters raised as we explore our options for choosing and developing measures for subsequent phases of the Physician Feedback Program and the development of the value-based payment modifier. As part of this process, we fully intend to explore the possibility of linking this program to the EHR incentive program for meaningful use of electronic health records, and the GPRO option in the Physician Quality Reporting System. We recognize the need to develop a comprehensive measure set that will fairly measure both quality and resource use. We intend to work with the stakeholder community to create a fair, reasonable, and actionable set of measures that we expect to publish not later than January 1, 2012 for future use in determining the value-based payment modifier.

After considering all of the comments we received and for the reasons discussed above, we are finalizing our proposal to not include Physician Quality Reporting System data in the Phase II reports.

c. Report Distribution

We proposed to distribute reports electronically in Phase II, by leveraging the infrastructure used to distribute Physician Quality Reporting System feedback reports (75 FR 40155). We believe this infrastructure will enable groups to utilize an electronic portal to download their Phase II reports. Individual practitioners will be able to contact their MACs/fiscal intermediaries to receive an e-mailed copy of their reports. We have received feedback from physicians that the reports distributed in Phase I were too long and cumbersome to manage in hard copy. We proposed consolidating the report and disseminating it electronically for easier navigation. Below we summarize our responses to public comments we received regarding this proposal.

Comment: Most commenters generally expressed support for our proposal to distribute reports electronically in Phase II utilizing the existing infrastructure that is used to distribute Physician Quality Reporting System feedback reports. One commenter in particular, noted that the Physician Quality Reporting System portal was cumbersome and that security issues created access problems. Many commenters stressed that the reports need to be easy to navigate and need to be easily understood.

Response: We agree that electronic delivery is a desirable means of distribution for these reports and are continuing to evaluate and develop methods to make future reports easily accessible, user friendly and informative. We appreciate all of the feedback from commenters regarding this proposal. While we acknowledge that users have expressed difficulty in using the Physician Quality Reporting System portal, it was the best option for electronic dissemination of the Phase II reports. In the future we will consider all of the potential options available to

[5] *http://www.cms.gov/GEM.*

us and will take these suggestions into account when developing future means of report distribution. After taking into consideration the comments summarized above, we are finalizing our proposal to distribute Phase II reports electronically utilizing the existing infrastructure used to distribute Physician Quality Reporting System feedback reports. In the future, as we disseminate increasing numbers of reports, we will provide information regarding how individuals and groups can access their reports through sub-regulatory guidance and other means of notification.

4. Implementation of Sections 3003 and 3007 of the ACA

Sections 3003 and 3007 of the ACA contain several important implementation dates. In addition to developing an episode grouper by January 1, 2012, we are required by the same date to publish the cost and quality measures we intend to use for purposes of the value-based payment modifier. The payment modifier will become effective for certain physicians and groups of physicians on January 1, 2015, with a phased implementation so that all physicians paid under the PFS will be subject to the value-based payment modifier by January 1, 2017. On or after January 1, 2017, we have the authority to also apply the payment modifier to other eligible professionals. Through the rulemaking process in 2013, we will begin implementing the program parameters for the value-based payment modifier.

In anticipation of implementing sections 3003 and 3007 of the ACA, we intend to perform extensive data analysis and research, and to seek stakeholder input on issues related to cost and quality measures so that we can be prepared to publish, by January 1, 2012, measures we intend to use for purposes of the value-based payment modifier. We intend for the work done in establishing cost and quality measures for purposes of the payment modifier to inform the continued dissemination of confidential feedback reports to both individual physicians and physician groups. Specifically, the measures chosen for purposes of the value-based payment modifier will be included in future phases of the confidential feedback reports.

As noted previously, Phase I included reports to several hundred physicians. In Phase II, during Fall 2010, we anticipate disseminating reports to about 40 large physician groups and the approximately 2,000 physicians affiliated with those groups. We anticipate future phases of the reports to include additional dissemination to increasing numbers of practitioners and groups such that virtually every applicable Medicare practitioner receives a report prior to implementation of the value-based payment modifier.

5. Summary of Comments Sought on Specific Statistical Issues Related to the ACA Sections 3003 and 3007

We recognize that there are many important decisions to be made when implementing a program that compares physicians to their peers, especially when such information can lead to differential payment. Since the inception of the Physician Feedback program, all data have been price standardized which includes accounting for geographic adjustments. We have identified important statistical issues in previous rules, and as we have done in previous rules, we sought input on several of these topics as they relate to future phases of reports. These include, but are not limited to: risk adjustment; attribution; benchmarking; peer groups; minimum case sizes; cost and quality measures; and compositing methods. Specific parameters of the Physician Feedback Program are based on the most current information we have available to us. These parameters will continue to evolve and we will continue to evaluate them as the state of the art in these areas continues to improve. Therefore, in the proposed rule, we solicited public comment on the following statistical and methodological issues (75 FR 40115).

a. Risk Adjustment

The cost data used in Phase I were risk adjusted. For the per capita costs, we used CMS' Hierarchical Condition Categories (HCC) model developed for risk adjustment in Medicare Advantage plans. This model takes into account beneficiary characteristics such as age, sex, and Medicaid status, and then predicts costs for beneficiaries based on their unique mix of health conditions. Several other socioeconomic factors, such as the median income per capita in the county where the physician practices, were used. For the episode-based costs, we used the risk adjustment method built into the proprietary grouper software. Regression analyses indicated that these additional socioeconomic factors did little to improve the fit of the model.

The cost data in Phase II are risk adjusted using the HCC model, but excluding the additional socioeconomic factors such as the median income per capita in the county where the physician practices, that had been used in Phase I. And since there are no episode-based costs in Phase II—only annual per capita costs—the HCC model will be the only method used. Other methods of risk adjustment, such as the CC (complications and co-morbidities) and MCC (major complications and co-morbidities) indicators implemented in the 2008 MS–DRG system, were considered but not employed.

The quality data included in Phase II will not be risk adjusted because the GEM measures are all clinical process measures, measure specifications provided detailed inclusion/exclusion criteria, and it is generally accepted that such measures need not be risk adjusted. Beneficiaries should receive the indicated preventive services (for example, breast cancer screening) regardless of their demographic characteristics or presence or absence of health conditions.

We solicited comment on the appropriate method for risk adjusting cost data, as well as our reasoning for not risk adjusting clinical process quality measures (75 FR 40115) and the comments we received are summarized below.

Comment: There were a number of comments regarding the need to risk adjust for socioeconomic and cultural differences (including English proficiency, literacy, poverty, and family structure) and multiple co-morbidities in order to avoid creating a disincentive for physicians who treat disadvantaged or complex patient populations. If socioeconomic factors are not added to the HCC model, commenters suggested using an alternative method to account for these factors such as a stratified analysis and comparison among similar providers and/or similar patient groups. Similarly, some commenters suggested that patients with substance abuse and mental health co-morbidities should be stratified into a distinct cohort. Other commenters suggested that exclusions be allowed for patient non-adherence or for cases of terminal illness. While there was general agreement that process measures do not require risk adjustment, several of the commenters pointed out that socioeconomic factors can also impact process and claims-based measures and risk adjustment of these measures should be considered on a measure by measure basis. Commenters asserted that outcome measures should be risk adjusted and some suggested that CMS use publically available risk models developed by specialty societies. Some commenters suggested that CMS provide evidence of the utility and reliability of using HCC to risk adjust per capita measures.

Several commenters suggested that CMS test multiple methodologies for risk adjustment and perform appropriate statistical analyses to determine variability among the different methodologies. Commenters emphasized the need to implement a methodology that would be transparent to the public and all stakeholders.

Response: We thank the commenters for their thoughtful input. In Phase II reports, we will employ the same method of risk adjustment for per capita cost measures as we use in our Medicare Advantage (MA) program, that is, the hierarchal condition category (HCC) model. We will continue to seek stakeholder input as we consider these comments and ways to improve our risk adjustment methodology.

b. Attribution

Deciding which physician(s) is/are responsible for the care of which beneficiaries is an important aspect of measurement. We must strike a balance between only attributing cost information to physicians for the services they personally delivered, and attributing costs to physicians based on a more encompassing view of the services provided to each beneficiary so as to encourage better care coordination and accountability for patient outcomes.

There are several methods that are generally used for attributing beneficiaries' costs to physicians for the purposes of measuring and comparing performance. In Phase I, we used two different attribution methodologies. Half of the reports used the multiple-proportional attribution, in which a beneficiary's costs were summed, and then divided among the physicians who treated that beneficiary in the same proportion as their share of evaluation and management (E&M) services provided. The other half of the reports used the plurality-minimum method, in which a beneficiary's entire cost (either for the episode or for the year) was attributed to the physician who performed the plurality of the E&M services, subject to a minimum percentage (in that case, 10 percent).

In Phase II reports, we plan to use the plurality-minimum method with a minimum percentage threshold of E&M services of 20 percent for individual physicians and a minimum percentage threshold of E&M services of 30 percent of the E&M services for physician group level reports (75 FR 40116). These minimum threshold determinations were based on our analysis of the claims data. We recognize that other attribution methods exist, which may be either more or less appropriate given the aspect of care one is measuring. For example, it may be desirable to attribute the entire cost of a surgical episode to the performing surgeon. Another method for attributing costs is referred to as multiple-even, in which the entire beneficiary's cost is attributed to multiple physicians who treated the beneficiary.

We sought comment on the topic of attribution methodologies, including both of those we have already used in the program, as well as others. The comments we received are summarized below.

Comment: Many commenters voiced concern about the plurality minimum attribution method that CMS has planned to use in its Phase II feedback reports. A number of commenters asked that we ensure that the plurality minimum method does not penalize primary care doctors by holding them accountable for all the services beneficiaries receive, since they only deliver a subset of all of the care a beneficiary receives. Other commenters were concerned that if there were too many visits to a specialist, the specialist might get penalized. Many commenters were opposed to the plurality minimum model, not wanting to be held accountable for care they do not influence. Others expressed concern that costs could be attributed incorrectly and also that unintended changes in referral patterns might result, as physicians might be influenced by the cost of care without regard to quality. One commenter requested that CMS consider attribution options built on threshold concepts or specific agreement between a physician/medical group and patient on responsibility for management of a specific condition with the goal of focusing measurement and attribution assignment on those patients who are truly under the care of the physician or group for the condition. Another commenter asked CMS to ensure that the same patient is attributed for resource use and quality, and additionally to clarify if patients will be attributed to primary care and specialists. Generally, specialty physician associations supported the multiple-proportional attribution method, pointing out that there is shared accountability in delivering preventive and many other services. One commenter believed that the multiple-even method should be used, and in the case of surgical episodes, the entire cost should be attributed to the performing surgeon.

Other commenters believed that the plurality minimum method was acceptable, but strongly urged CMS to continually analyze whether this methodology results in fair and accurate reports under different clinical scenarios, especially those where multiple co-morbidities are present. In addition, these commenters urged CMS to statistically examine the impact of changing the minimum thresholds. Several commenters recommended that CMS test multiple attribution models and evaluate the results. Another commenter recommended extensive chart reviews in order to ensure that the claims data supports the attribution model used. Several commenters pointed out that the choice of attribution method will not influence patient behavior and suggested incorporating patient accountability, including compliance. There were several comments about hospital costs being attributed to physicians that suggested alignment with other programs such as Hospital Value-Based Purchasing. One commenter suggested using multiple models and not a single model of attribution. One commenter noted that the problem of small numbers may make it difficult to fairly assess the costs at the individual level. Overall, commenters pointed out that the method(s) used should be accurate, transparent, and not disadvantage small or rural practices.

Response: We appreciate the input from commenters. We will continue to consider and evaluate how to apply attribution methods to physician feedback reports and seek stakeholder input. In Phase II reports, we plan to use the plurality-minimum method with a minimum percentage threshold of E&M services of 20 percent for individual physicians and a minimum percentage threshold of E&M services of 30 percent of the E&M services for physician group level reports.

c. Benchmarking and Peer Groups

Determining how to most relevantly compare physicians to a standard or to their peers is also an important policy aspect of the program. CMS' research conducted in Phase I of the program indicated that physicians prefer to be compared only to those physicians most like them (that is, the narrowest peer group). We recognize the importance of fair comparison, but are also faced with the challenge that very narrow peer groups, especially among specialist and subspecialists are most often not large enough to make statistically significant comparisons.

The individual-level reports in both phases of the program have contained, or will contain, two peer group comparisons: (1) Physicians in the same specialty in the same geographic area; and (2) physicians in the same specialty across all 12 geographic areas. In each

of these peer groups, a physician is shown where he or she falls on a distribution that specifically identified the 10th, 50th, and 90th percentiles. These benchmarks were finalized on an interim basis in the CY 2010 proposed rule (74 FR 33589).

In determining differences among providers for episode-based measures in Phase I, we used a minimum frequency test. For per capita measures in Phase I, a physician had to have a case size of 20 or more beneficiaries to be measured and compared. There was no minimum peer group size requirement.

The original MIPPA mandate requires us to make comparisons among physicians on cost, and gives the Secretary the authority to include comparisons on quality. The use of quality measures in the program was finalized in the CY 2010 final rule (74 FR 61846). In Phase II, comparisons with appropriate peer groups will be made for both measures of cost and quality. Phase II reports will be provided only to those physicians that have 30 or more patients for each of the cost measures. For the quality measures, we plan to use the measure specifications in the GEM project to define minimum case sizes, which are at least 11 beneficiaries. We also plan to impose a minimum peer group size of 30 in Phase II for each of the cost and quality measures. A minimum sample size of 30 is generally accepted in the research community as the minimum sample size to represent a group and make comparisons.

We solicited comment on the most appropriate and relevant peer groups for comparison, including the appropriate minimum case sizes and minimum peer group sizes. We were also interested in suggested methodologies that could be applied to small case sizes. The comments we received are summarized below.

Comment: Several commenters recommended that CMS establish separate benchmark measures for teaching medical facilities. These commenters argued that the proposed methodology should take into account the multiple missions of academic clinical facilities because their cases are often more complex. Other commenters recommended that CMS establish benchmarks that compared physicians to other physicians with similar practices and/or who perform similar procedures and additionally take into account sub-specialties and geography as peer groups will vary. These commenters suggested that CMS work with specialty groups and communities to develop the best comparisons. Other commenters noted that CMS needs to account for issues such as the difference between a practicing surgeon and a surgeon who does little surgery but acts more as a manager of care. These commenters asserted that this type of differentiation can be identified through review of claims history and data accessible through specialty organizations. Several commenters recommended that hospitalists and hospital groups be benchmarked against other hospital-based physicians or groups, preferably in similar practice settings, for example, emergency departments. A number of commenters suggested that CMS use metrics such as measures of statistical precision, multiple metrics including mean, median, percentiles in defining parameters for peer groups rather than use arbitrary numbers for minimum sample size. One commenter recommended that a power analysis be conducted to identify an appropriate sample size to be used for benchmarking.

Response: We appreciate the feedback we received from commenters and will take these into consideration for the future. While we will continue to explore these issues, in Phase II reports, we will use the peer group and minimum case size of 30 as outlined above and in the proposed rule.

d. Cost and Quality Measures and Compositing Methods

As mentioned above, and in previous rules, section 1848(n)(1)(A)(ii) of the Act gives the Secretary the authority to include both cost and quality information in the feedback reports. In Phase I, we chose to use only cost information, and used both per capita and episode cost measurements. As mentioned above, we previously finalized the use of quality measures in Phase II (74 FR 61846), but finalized our proposal to discontinue our use of episode cost measurements. Accordingly, we have yet to include any composite measures of cost or quality in the feedback reports.

Section 3007 of the ACA requires us to establish a value-based payment modifier to pay physicians differentially based both on their quality of care and their costs of care using composites of both quality and cost measures. Accordingly, we will need to devise a methodology in the future for compositing cost measures and quality measures, including considering, among other things, possible methodologies to develop the value-based payment modifier. In the future, episode-based cost measures developed using the Medicare-specific episode grouper software also may be considered in developing a composite of cost measures. Other domains of measures that may be considered include patient-level utilization statistics (for example, emergency department visits per 1,000 patients) and structural measures such as whether a provider has adopted an electronic health record. We recognized that measure composites are methodologically and operationally complex and, therefore, we sought early comments on this topic (75 FR 40116). The comments we received are summarized below.

Comment: Many commenters stressed the importance of measuring both quality and cost of care to ensure useful and meaningful comparisons of physician work. Several commenters asserted that focusing on cost measures alone was insufficient and urged CMS to include quality measures in the comparison to resource utilization feedback reports. These commenters asserted that composite measures of cost and quality provide the most meaningful context to capture and review resource utilization. Several comments focused on the challenge of measuring quality at the physician level and the importance that the measures be fair, meaningful and actionable, and accurately applied. Incorporation of standards and measures endorsed by the National Quality Forum (NQF) was also recommended as well as annual measure updates of quality measures. A number of commenters stressed the importance of maintaining the focus on quality and outcomes measurement. Types of quality measures suggested for inclusion in the reports included structure, patient safety, clinical processes of care, patient experience, care coordination and clinical outcomes, weighted toward clinical outcomes, care coordination, and patient experience. Several commenters remarked on the limitation of claims-based measures for quality and one recommended that outcomes measures be based on clinical rather than administrative data. One commenter stated that ICD–10 will enhance evaluation of physician performance and suggested evaluation of quality be delayed until ICD–10 is implemented. One commenter suggested a disease focus on peripheral vascular disease. Several commenters suggested that CMS work with specialty societies on using available registries of physician level data as a source of physician quality performance. Many commenters stated that quality should be weighted higher than cost, but agreed both need to be reported. Many commenters encouraged CMS to work expeditiously with

stakeholders to improve quality measures for inclusion in the value-based payment modifier. Some commenters acknowledged CMS' recognition that measure composites are methodologically and operationally complex and urged CMS to carefully test and evaluate different composite methodologies before implementing the value-based payment modifier. These commenters argued that the first step in creating a composite measure is to identify the individual components (for example, individual measures) that should go into the composite, and therefore CMS should ensure that a reliable Medicare-specific episode grouper is in place as it would be essential to this initial process. One commenter suggested any composite measures developed by CMS should be reviewed by the multi-stakeholder consultative partnership defined in section 3014 of the ACA prior to any adoption into the physician payment program.

Some commenters mentioned that the National Quality Forum and the American Medical Association's Physician Consortium for Performance Improvement (PCPI) had developed guidance on creating composite measures. These commenters argued that CMS needed to engage in more empirical work on creating composite measures before implementing a modifier for physician payment. These commenters expressed concern that an accurate value-based payment modifier based on resource use would be ready for 2015, given the substantial statistical and methodological hurdles that must be overcome in creating cost and quality composites and a single cost and quality index. They concluded by saying that CMS should continue to seek stakeholder comment throughout the composite measure development process. One commenter urged CMS to ensure that compliance with preventive health service measurements be taken into account when developing the composite measures.

Response: As required under the statute, we plan to identify the measures of resource use and quality that will comprise composites of cost and quality for the physician feedback reports and for the value-based payment modifier by January 1, 2012. We thank the commenters for their many thoughtful suggestions and recommendations on cost and quality measures and compositing methods. As we stated above, we solicited public comment to inform potential future policies on these issues, and the Physician Feedback Program in general. We thank the public for their thoughtful comments and appreciate the feedback received from stakeholders. In addition, a number of societies and organizations volunteered support and also volunteered to share research findings that they believe is applicable to this program.

We fully expect to draw on the expertise of stakeholders as we continue to work on implementing the physician feedback program and implementation of the value-based payment modifier. Moreover, we plan to engage in open and continuing dialogue with stakeholders on both the Physician Feedback Program and value-based payment modifier.

In addition to the comments we solicited and received on specific methodological issues related to production of the feedback reports, we also received a number of general comments and suggestions regarding the development of reports to ensure access, utility, and relevance.

Comment: A number of commenters suggested that the reports be: Interactive, easy to understand, timely, actionable, inclusive of sufficient detail, inclusive of data on cost categories (for example, imaging use, prescriptions, hospitalizations, etc.) and impactful. Some commenters requested the capability to drill down on data, especially if a physician is shown to be a high cost outlier. One commenter requested that the physicians have the ability to review the reports and correct any data that they believe is inaccurate. Others reiterated that all methodologies and algorithms should be in the public domain along with clear plans for evaluating the viability and impact of the reports and reporting mechanisms. We received more than one suggestion for alignment with the HITECH payment incentive program and other programs, in order to alleviate reporting burden and variation. Another commenter supported the creation of group reports, but suggested CMS explore alternative ways to define and determine affiliation with a medical practice group rather than relying solely on tax identification numbers (TINs). Many strongly encouraged CMS to engage public stakeholders intensely and specifically mentioned the importance of working with specialists, specialty societies, clinical experts, treatment guideline developers, and manufacturers on the issues that specifically pertain to their respective interests and expertise in creating measures, composite measures, and performance reporting. Finally, a commenter requested that the reports include graphical and numerical illustrations of data.

In addition, we received a number of comments on the value-based payment modifier although we did not solicit specific comments or make proposals. Our summary of these comments follows:

Comment: A number of commenters supported the idea of a value-based payment modifier using the confidential feedback reports as the foundation and applauded CMS' intentions for a transparent process seeking stakeholder input on the methodology through rulemaking and other public forums. However, other commenters expressed caution in proceeding given the lack of experience with the quality and resource measures which are yet to be published, and the evolutionary nature of the methodology to develop quality and resource scores that will comprise the value-based payment modifier. Several commenters recommended that the value-based payment modifier program be delayed until CMS could demonstrate that it has in place reliable and accurate methodologies for implementation. Several of these commenters urged CMS to thoroughly test out multiple models and methodologies and discuss advantages and disadvantages with the multiple stakeholders.

Response: We appreciate the above input from stakeholders. We will continue to seek further stakeholder input and comment through future rulemaking and other venues, such as open door forums and listening sessions, as we continue to implement the Physician Feedback Program and develop the specifications to implement the value-based payment modifier.

C. Section 3102: Extension of the Work Geographic Index Floor and Revisions to the Practice Expense Geographic Adjustment Under the Medicare Physician Fee Schedule, and Protections for Frontier States as Amended by Section 10324

Section 1848(e)(1)(E) of the Act (as amended by section 3102(a) of the ACA) extended application of the 1.0 work GPCI floor for services furnished through December 31, 2010. In addition, section 1848(e)(1) of the Act (as amended by section 3102(b) of the ACA) specified that for CY 2010 and CY 2011, the employee wage and rent portions of the PE GPCI must reflect only one-half of the relative cost differences for each locality compared to the national average and includes a "hold harmless" provision for any PFS locality that would receive a reduction to its PE GPCI resulting from the limited recognition of cost differences. Section 1848(e)(1) of the Act (as amended by section 3102(b) of the ACA) also required an analysis of the current methods and data sources

used to determine the relative cost differences in office rent and employee wages compared to the national average and the cost share weights assigned to each PE GPCI component: employee wages, office rent, and supplies. Finally, section 1848(e)(1) of the Act (as amended by section 3102(b) of the ACA) required the Secretary to make appropriate adjustments to the PE GPCI by no later than January 1, 2012. In addition, section 1848(e)(1) of the Act (as amended by section 10324(c) of the ACA) established a 1.0 PE GPCI floor for services furnished in frontier states effective January 1, 2011. The provisions of the ACA related to the GPCIs are discussed in detail in section II.D. of this final rule with comment period.

D. Section 3103: Extension of Exceptions Process for Medicare Therapy Caps

Section 1833(g)(5) of the Act (as amended by section 3103 of the ACA) extended the exceptions process for spending limitations on therapy services in certain outpatient settings through December 31, 2010. Therapy caps are discussed in detail in section III.A. of this final rule with comment period.

E. Section 3104: Extension of Payment for Technical Component of Certain Physician Pathology Services

Section 542(c) of the Medicare, Medicaid, and SCHIP Benefits Improvement and Protection Act of 2000 (BIPA) (Pub. L. 106–554), as amended by section 732 of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) (Pub. L. 108–173), section 104 of division B of the Tax Relief and Health Care Act of 2006 (MIEA–TRHCA) (Pub. L. 109–432), section 104 of the Medicare, Medicaid, and SCHIP Extension Act of 2007 (MMSEA) (Pub. L. 110–173), and section 136 of the Medicare Improvements for Patients and Providers Act of 2008 (MIPPA) (Pub. L. 110–275) was amended by section 3104 of the ACA to continue payment to independent laboratories for the TC of physician pathology services for fee-for-service Medicare beneficiaries who are inpatients or outpatients of a covered hospital through CY 2010. The technical component (TC) of physician pathology services refers to the preparation of the slide involving tissue or cells that a pathologist interprets. The professional component (PC) of physician pathology services refers to the pathologist's interpretation of the slide.

When the hospital pathologist furnishes the PC service for a hospital patient, the PC service is separately billable by the pathologist. When an independent laboratory's pathologist furnishes the PC service, the PC service is usually billed with the TC service as a combined service.

Historically, any independent laboratory could bill the Medicare contractor under the PFS for the TC of physician pathology services for hospital patients even though the payment for the costs of furnishing the pathology service (but not its interpretation) was already included in the bundled inpatient stay payment to the hospital. In the CY 2000 PFS final rule with comment period (64 FR 59408 through 59409), we stated that this policy has contributed to the Medicare program paying twice for the TC service: (1) To the hospital, through the inpatient prospective payment rate, when the patient is an inpatient; and (2) to the independent laboratory that bills the Medicare contractor, instead of the hospital, for the TC service. While the policy also permits the independent laboratory to bill for the TC of physician pathology services for hospital outpatients, in this case, there generally would not be duplicate payment because we would expect the hospital to not also bill for the pathology service, which would be paid separately to the hospital only if the hospital were to specifically bill for it. We further indicated that we would implement a policy to pay only the hospital for the TC of physician pathology services furnished to its inpatients.

Therefore, in the CY 2000 PFS final rule with comment period, we revised § 415.130(c) to state that for physician pathology services furnished on or after January 1, 2001 by an independent laboratory, payment is made only to the hospital for the TC furnished to a hospital inpatient. Ordinarily, the provisions in the PFS final rule with comment period are implemented in the following year. However, the change to § 415.130 was delayed 1 year (until January 1, 2001), at the request of the industry, to allow independent laboratories and hospitals sufficient time to negotiate arrangements.

Full implementation of § 415.130 was further delayed by section 542 of the BIPA and section 732 of the MMA, which directed us to continue payment to independent laboratories for the TC of physician pathology services for hospital patients for a 2-year period beginning on January 1, 2001 and for CYs 2005 and 2006, respectively. In the CY 2007 MPFS final rule with comment period (71 FR 69624 and 69788), we amended § 415.130 to provide that, for services furnished after December 31, 2006, an independent laboratory may not bill the carrier for the TC of physician pathology services furnished to a hospital inpatient or outpatient. However, section 104 of the MIEA–TRHCA continued payment to independent laboratories for the TC of physician pathology services for hospital patients through CY 2007, and section 104 of the MMSEA further extended such payment through the first 6 months of CY 2008.

Section 136 of the MIPPA extended the payment through CY 2009. Most recently, section 3104 of the ACA amended the prior legislation to extend the payment through CY 2010.

Consistent with this legislative change, we proposed to revise § 415.130(d) to: (1) Amend the effective date of our payment policy to reflect that for services furnished after December 31, 2010, an independent laboratory may not bill the Medicare contractor for the TC of physician pathology services furnished to a hospital inpatient or outpatient; and (2) reformat this subsection into paragraphs.

Comment: One commenter urged CMS to implement the provision to continue to pay independent laboratories for the TC of physician pathology services for fee-for-service Medicare beneficiaries who are inpatients or outpatients of a covered hospital on a permanent basis which would eliminate the potential for complicated billing that occurs each time the provision is set to expire and is subsequently extended by.

Response: Payment for the costs of furnishing the pathology service (but not its interpretation) is already included in the bundled inpatient stay payment to the hospital. We continue to believe that this payment provision represents a duplicate payment for the TC service: (1) To the hospital, through the inpatient prospective payment rate, when the patient is an inpatient; and (2) to the independent laboratory that bills the Medicare contractor, instead of the hospital, for the TC service.

After consideration of the public comment we received we are finalizing the proposed policy to continue payment to independent laboratories for the TC of physician pathology services for fee-for-service Medicare beneficiaries who are inpatients or outpatients of a covered hospital for CY 2010. Absent legislation that extends this provision, for services furnished after December 31, 2010, an independent laboratory may not bill the Medicare contractor for the TC of physician pathology services for fee-for-service Medicare beneficiaries who are inpatients or outpatients of a covered

hospital. Accordingly, we are finalizing the proposed revisions to § 415.130(d) to reflect this change.

F. Sections 3105 and 10311: Extension of Ambulance Add-Ons

1. Amendment to Section 1834(l)(13) of the Act

Section 146(a) of the MIPPA amended section 1834(l)(13)(A) of the Act to specify that, effective for ground ambulance services furnished on or after July 1, 2008 and before January 1, 2010, the ambulance fee schedule amounts for ground ambulance services shall be increased as follows:

- For covered ground ambulance transports which originate in a rural area or in a rural census tract of a metropolitan statistical area, the fee schedule amounts shall be increased by 3 percent.
- For covered ground ambulance transports which do not originate in a rural area or in a rural census tract of a metropolitan statistical area, the fee schedule amounts shall be increased by 2 percent.

Sections 3105(a) and 10311(a) of the ACA further amend section 1834(l)(13)(A) of the Act to extend the payment add-ons described above for an additional year, such that these add-ons also apply to covered ground ambulance transports furnished on or after January 1, 2010 and before January 1, 2011. We stated in the CY 2011 PFS proposed rule (75 FR 40117) that we are revising § 414.610(c)(1)(i) to conform the regulations to this statutory requirement. This statutory requirement is self-implementing. A plain reading of the statute requires only a ministerial application of the mandated rate increase, and does not require any substantive exercise of discretion on the part of the Secretary. For further information regarding the extension of these payment add-ons, please see Transmittal 706 (Change Request 6972) dated May 21, 2010.

2. Amendment to Section 146(b)(1) of MIPPA

Section 146(b)(1) of the MIPPA amended the designation of rural areas for payment of air ambulance services. The statute specified that any area that was designated as a rural area for purposes of making payments under the ambulance fee schedule for air ambulance services furnished on December 31, 2006, shall continue to be treated as a rural area for purposes of making payments under the ambulance fee schedule for air ambulance services furnished during the period July 1, 2008 through December 31, 2009. Sections 3105(b) and 10311(b) of the ACA amend section 146(b)(1) of MIPPA to extend this provision for an additional year, through December 31, 2010. Accordingly, for areas that were designated as rural on December 31, 2006, and were subsequently re-designated as urban, we have re-established the "rural" indicator on the ZIP Code file for air ambulance services, effective January 1, 2010 through December 31, 2010. We stated in the CY 2011 PFS proposed rule (75 FR 40118) that we are revising § 414.610(h) to conform the regulations to this statutory requirement. This statutory requirement is self-implementing. A plain reading of the statute requires only a ministerial application of a rural indicator, and does not require any substantive exercise of discretion on the part of the Secretary. For further information regarding the extension of this MIPPA provision, please see Transmittal 706 (Change Request 6972) dated May 21, 2010.

3. Amendment to Section 1834(l)(12) of the Act

Section 414 of the MMA added paragraph (12) to section 1834(l) of the Act, which specified that in the case of ground ambulance services furnished on or after July 1, 2004, and before January 1, 2010, for which transportation originates in a qualified rural area (as described in the statute), the Secretary shall provide for a percent increase in the base rate of the fee schedule for such transports. The statute requires this percent increase to be based on the Secretary's estimate of the average cost per trip for such services (not taking into account mileage) in the lowest quartile of all rural county populations as compared to the average cost per trip for such services (not taking into account mileage) in the highest quartile of rural county populations. Using the methodology specified in the July 1, 2004 interim final rule (69 FR 40288), we determined that this percent increase was equal to 22.6 percent. As required by the MMA, this payment increase was applied to ground ambulance transports that originated in a "qualified rural area;" that is, to transports that originated in a rural area included in those areas comprising the lowest 25th percentile of all rural populations arrayed by population density. For this purpose, rural areas included Goldsmith areas (a type of rural census tract). Sections 3105(c) and 10311(c) of the ACA amend section 1834(l)(12)(A) of the Act to extend this rural bonus for an additional year through December 31, 2010. Therefore, as directed by the ACA, we are continuing to apply the rural bonus described above (in the same manner as in previous years), to ground ambulance services with dates of service on or after January 1, 2010 and before January 1, 2011 where transportation originates in a qualified rural area.

We stated in the CY 2011 PFS proposed rule (75 FR 40118) that we are revising § 414.610(c)(5)(ii) to conform the regulations to this statutory requirement. This statutory requirement is self-implementing. The statute requires a 1-year extension of the rural bonus (which was previously established by the Secretary), and does not require any substantive exercise of discretion on the part of the Secretary. For further information regarding the extension of this rural bonus, *please see* Transmittal 706 (Change Request 6972) dated May 21, 2010.

A summary of the comments we received and our responses are included below.

Comment: Despite the extension of the ambulance payment add-ons under the ACA as discussed above, one commenter stated that "it has become increasingly difficult to continue to operate with the reimbursement cuts that went into effect January 1, 2010". They expressed concern that Medicare payment rates for ambulance services are not keeping up with inflation in the industry. They were also concerned that this is the first time in nearly a decade that the ambulance industry will be experiencing negative growth.

Response: We are not sure what reimbursement cuts the commenter is referring to in 2010. As discussed above, pursuant to sections 3105 and 10311 of the ACA, we are required to extend certain ambulance payment add-ons through December 31, 2010. Thus, as discussed above, we are revising our regulations to conform the regulations to these statutory requirements. To date, Congress has not extended these payment add-ons beyond December 31, 2010, and thus we are not authorized to provide these add-ons beyond December 31, 2010.

Comment: One commenter stated that CMS must provide instructions to its contractors that direct them to reprocess claims paid at the original 2010 rates.

Response: Several provisions of the ACA require retroactive adjustments to Medicare claims, including claims for ambulance services, because these provisions have effective dates prior to the ACA's enactment or shortly thereafter. We are currently developing the best course of action for addressing past claims that were processed under pre-ACA rules. The volume of claims that must be adjusted is unprecedented

and a careful process must be deployed to ensure that new claims coming into the Medicare program are processed timely and accurately, even as we address making retroactive adjustments. Once this process has been developed, we will provide instructions to our contractors regarding adjusting ambulance claims that were paid under the pre-ACA rules in order to apply the payment add-ons required by the ACA.

In this final rule with comment period, we are finalizing the revisions to § 414.610(c)(1)(i), (c)(5)(ii), and (h), as discussed above and in the CY 2011 PFS proposed rule, in order to conform the regulations to the requirements set forth in sections 3105 and 10311 of the ACA. We note that in § 414.610(c)(1), we have made minor formatting revisions for clarification purposes. In addition, in § 414.610(c)(1)(i), we have corrected a typographical error that appeared in the CY 2011 PFS proposed rule (75 FR 40258) by changing "December 21" to "December 31" to conform with the ACA requirements. As we discuss above, sections 3105 and 10311 of the ACA are self-implementing and do not require any substantive exercise of discretion by the Secretary.

G. Section 3107: Extension of Physician Fee Schedule Mental Health Add-On

Section 3107 of the ACA amended section 138(a)(1) of the MIPPA to continue the 5 percent increase in Medicare payment for specified mental health services through December 31, 2010. This payment increase was originally authorized under section 138 of the MIPPA from July 1, 2008 until December 31, 2009. Accordingly, payment for the 24 psychiatry CPT codes in Table 56, representing "specified services," remains increased by 5 percent through December 31, 2010.

TABLE 56—SPECIFIED MENTAL HEALTH SERVICES SUBJECT TO THE FIVE PERCENT INCREASE IN MEDICARE PAYMENT THROUGH DECEMBER 31, 2010

Office or Other Outpatient Facility
Insight Oriented, Behavior Modifying and/or Supportive Psychotherapy:
90804 (Individual psychotherapy, insight oriented, behavior modifying and/or supportive, in an office or outpatient facility, approximately 20 to 30 minutes face-to-face with the patient;)
90805 (Individual psychotherapy, insight oriented, behavior modifying and/or supportive, in an office or outpatient facility, approximately 20 to 30 minutes face-to-face with the patient; with medical evaluation and management services)
90806 (Individual psychotherapy, insight oriented, behavior modifying and/or supportive, in an office or outpatient facility, approximately 45 to 50 minutes face-to-face with the patient;)
90807 (Individual psychotherapy, insight oriented, behavior modifying and/or supportive, in an office or outpatient facility, approximately 45 to 50 minutes face-to-face with the patient; with medical evaluation and management services)
90808 (Individual psychotherapy, insight oriented, behavior modifying and/or supportive, in an office or outpatient facility, approximately 75 to 80 minutes face-to-face with the patient;)
90809 (Individual psychotherapy, insight oriented, behavior modifying and/or supportive, in an office or outpatient facility, approximately 75 to 80 minutes face-to-face with the patient; with medical evaluation and management services)
Interactive Psychotherapy:
90810 (Individual psychotherapy, interactive, using play equipment, physical devices, language interpreter, or other mechanisms of non-verbal communication, in an office or outpatient facility, approximately 20 to 30 minutes face-to-face with the patient;)
90811 (Individual psychotherapy, interactive, using play equipment, physical devices, language interpreter, or other mechanisms of non-verbal communication, in an office or outpatient facility, approximately 20 to 30 minutes face-to-face with the patient; with medical evaluation and management services)
90812 (Individual psychotherapy, interactive, using play equipment, physical devices, language interpreter, or other mechanisms of non-verbal communication, in an office or outpatient facility, approximately 45 to 50 minutes face-to-face with the patient;)
90813 (Individual psychotherapy, interactive, using play equipment, physical devices, language interpreter, or other mechanisms of non-verbal communication, in an office or outpatient facility, approximately 45 to 50 minutes face-to-face with the patient; with medical evaluation and management services)
90814 (Individual psychotherapy, interactive, using play equipment, physical devices, language interpreter, or other mechanisms of non-verbal communication, in an office or outpatient facility, approximately 75 to 80 minutes face-to-face with the patient;)
90815 (Individual psychotherapy, interactive, using play equipment, physical devices, language interpreter, or other mechanisms of non-verbal communication, in an office or outpatient facility, approximately 75 to 80 minutes face-to-face with the patient; with medical evaluation and management services)
Inpatient Hospital, Partial Hospital or Residential Care Facility
Insight Oriented, Behavior Modifying and/or Supportive Psychotherapy:
90816 (Individual psychotherapy, insight oriented, behavior modifying and/or supportive, in an inpatient hospital, partial hospital or residential care setting, approximately 20 to 30 minutes face-to-face with the patient;)
90817 (Individual psychotherapy, insight oriented, behavior modifying and/or supportive, in an inpatient hospital, partial hospital or residential care setting, approximately 20 to 30 minutes face-to-face with the patient; with medical evaluation and management services)
90818 (Individual psychotherapy, insight oriented, behavior modifying and/or supportive, in an inpatient hospital, partial hospital or residential care setting, approximately 45 to 50 minutes face-to-face with the patient;)
90819 (Individual psychotherapy, insight oriented, behavior modifying and/or supportive, in an inpatient hospital, partial hospital or residential care setting, approximately 45 to 50 minutes face-to-face with the patient; with medical evaluation and management services)
90821 (Individual psychotherapy, insight oriented, behavior modifying and/or supportive, in an inpatient hospital, partial hospital or residential care setting, approximately 75 to 80 minutes face-to-face with the patient;)
90822 (Individual psychotherapy, insight oriented, behavior modifying and/or supportive, in an inpatient hospital, partial hospital or residential care setting, approximately 75 to 80 minutes face-to-face with the patient; with medical evaluation and management services)
Interactive Psychotherapy:
90823 (Individual psychotherapy, interactive, using play equipment, physical devices, language interpreter, or other mechanisms of non-verbal communication, in an inpatient hospital, partial hospital or residential care setting, approximately 20 to 30 minutes face-to-face with the patient;)

TABLE 56—SPECIFIED MENTAL HEALTH SERVICES SUBJECT TO THE FIVE PERCENT INCREASE IN MEDICARE PAYMENT THROUGH DECEMBER 31, 2010—Continued

90824 (Individual psychotherapy, interactive, using play equipment, physical devices, language interpreter, or other mechanisms of non-verbal communication, in an inpatient hospital, partial hospital or residential care setting, approximately 20 to 30 minutes face-to-face with the patient; with medical evaluation and management services)
90826 (Individual psychotherapy, interactive, using play equipment, physical devices, language interpreter, or other mechanisms of non-verbal communication, in an inpatient hospital, partial hospital or residential care setting, approximately 45 to 50 minutes face-to-face with the patient;)
90827 (Individual psychotherapy, interactive, using play equipment, physical devices, language interpreter, or other mechanisms of non-verbal communication, in an inpatient hospital, partial hospital or residential care setting, approximately 45 to 50 minutes face-to-face with the patient; with medical evaluation and management services)
90828 (Individual psychotherapy, interactive, using play equipment, physical devices, language interpreter, or other mechanisms of non-verbal communication, in an inpatient hospital, partial hospital or residential care setting, approximately 75 to 80 minutes face-to-face with the patient;)
90829 (Individual psychotherapy, interactive, using play equipment, physical devices, language interpreter, or other mechanisms of non-verbal communication, in an inpatient hospital, partial hospital or residential care setting, approximately 75 to 80 minutes face-to-face with the patient; with medical evaluation and management services)

Comment: One commenter supported CMS' proposal to continue the current 5 percent increase in Medicare payment for specified mental health services through December 31, 2010.

Response: We appreciate the support of our efforts to implement this mandated mental health add-on provision that extends the expiration of the 5 percent increase in payment for specified outpatient mental health services from January 1, 2010 to December 31, 2010.

After consideration of the public comment we received, we are finalizing the extension of the 5 percent increase in Medicare payment under the PFS from January 1, 2010 to December 31, 2010.

H. Section 3108: Permitting Physician Assistants To Order Post-Hospital Extended Care Services

The ACA included a self-implementing provision relating to SNFs. Section 3108 of the ACA adds physician assistants (PAs) to the list of practitioners (that is, physicians, nurse practitioners (NPs), and clinical nurse specialists) that can perform the required initial certification and periodic recertification under section 1814(a)(2)(B) of the Act with respect to the SNF level of care. Accordingly, we proposed to make appropriate revisions to include PAs in § 424.20(e)(2), in which we refer to NPs, clinical nurse specialists, and PAs collectively as "physician extenders."

We received no comments on this proposal and, therefore, are finalizing this provision as proposed without further modification.

I. Section 3111: Payment for Bone Density Tests

Section 1848(b) of the Act (as amended by section 3111 of the ACA) changed the payment calculation for dual-energy x-ray absorptiometry (DXA) services described by two specified DXA CPT codes for CYs 2010 and 2011. This provision required payment for these services at 70 percent of the product of the CY 2006 RVUs for these DXA codes, the CY 2006 conversion factor (CF), and the geographic adjustment for the relevant payment year.

Effective January 1, 2007, the CPT codes for DXA services were revised. The former DXA CPT codes 76075 (Dual energy X-ray absorptiometry (DXA), bone density study, one or more sites; axial skeleton (eg, hips, pelvis, spine)); 76076 (Dual energy X-ray absorptiometry (DXA), bone density study, one or more sites; appendicular skeleton (peripheral) (for example, radius, wrist, heel)); and 76077 (Dual energy X-ray absorptiometry (DXA), bone density study, one or more sites; vertebral fracture assessment) were deleted and replaced with new CPT codes 77080, 77081, and 77082 that have the same respective code descriptors as the predecessor codes. Section 1848(b) of the Act (as amended by section 3111 of the ACA) specifies that the revised payment applies to two of the predecessor codes (CPT codes 76075 and 76077) and "any succeeding codes," which are, in this case, CPT codes 77080 and 77082.

Section 1848(b) (as amended by section 3111 of the ACA) revised the payment for CPT codes 77080 and 77082 during CY 2010 and CY 2011. We have provided payment in CY 2010 under the PFS for CPT codes 77080 and 77082 at the specified rates. (Additional information regarding the CY 2010 payment rates for these services is available in CR 6973, published May 10, 2010.)

Because the statute specifies a payment amount for these services as described previously, we proposed to impute RVUs for CY 2011 that would provide the specified payment amount for these services when multiplied by the CY 2011 CF. Specifically, we divided the payment amount based on the statutory requirements by the CY 2011 CF for the proposed rule and distributed the imputed total RVUs across the work, PE, and malpractice components proportionately to their CY 2006 distribution. Therefore, these imputed RVUs for CPT codes 77080 and 77082 were displayed in Addendum B to the CY 2011 proposed rule.

Comment: Many commenters supported the ACA provision requiring a specific payment amount for DXA services. Several commenters requested that CMS include in the final rule a sample payment calculation for CPT codes 77080 and 77082 to clarify the calculation for these two codes and to facilitate proper processing of claims by Medicare contractors. In addition, one commenter requested that CMS recalculate any imputed RVUs for DXA services based on the final conversion factor reflected in the CY 2011 PFS final rule with comment period.

Response: We appreciate the comments we received on our proposal. We note that any changes to the proposed rule calculation that resulted from changes between proposed rule values and final rule values have been incorporated in the final determination of the RVUs for these codes upon which PFS payment is based. That said, we are updating our calculation for this final rule with comment period to reflect the final CY 2011 conversion factor applicable under current law that is discussed in section II.H.1.b. of this final rule with comment period. A sample payment calculation for CPT code 77080 is included below.

Sample CY 2011 Calculation of Medicare Payment Rates for CPT Code 77080 (CY 2006 CPT Code 76075)

As discussed above, section 1848(b) of the Act (as amended by section 3111 of

the ACA) required us to provide payment for CPT code 77080 at 70 percent of the product of the CY 2006 RVUs for the specified DXA code, the CY 2006 CF, and the geographic adjustment for the relevant payment year in which the service is furnished.

The CY 2006 RVUs for CPT code 76075 (77080) can be found in Table 57 below.

TABLE 57—CY 2006 RVUS FOR CPT CODE 77080 (CY 2006 CPT CODE 76075)

CY 2006 CPT Code	Mod	CY 2006 Short descriptor	2006 Physician work RVUs	2006 Nonfacility PE RVUs	2006 Facility PE RVUs	2006 Malpractice RVUs
76075	26 ..	Dxa bone density, axial	0.30	0.10	0.10	0.01
76075	TC	Dxa bone density, axial	0.00	3.10	NA	0.17
76075	.....	Dxa bone density, axial	0.30	3.20	NA	0.18

First, we multiplied the CY 2006 RVUs listed in Table 57 above by the CY 2006 CF, which was $37.8975. These results are shown in Table 58 below.

TABLE 58—CY 2006 RVUS FOR CPT CODE 77080 MULTIPLIED BY THE CY 2006 CF

CY 2006 CPT Code	Mod	CY 2006 Physician work RVUs* 2006 CF	CY 2006 Nonfacility PE RVUs* 2006 CF	CY 2006 Facility PE RVUs* 2006 CF	CY 2006 Malpractice RVUs* 2006 CF
76075	26	$11.37	$3.79	$3.79	$0.38
76075	TC	NA	117.48	NA	6.44
76075	.....	11.37	121.27	NA	6.82

Second, we took 70 percent of the result to arrive at the CY 2011 national payment amounts for each component of the CPT code. These results are shown in Table 59 below.

TABLE 59—CY 2011 NATIONAL PAYMENT AMOUNTS FOR CPT CODE 77080

CY 2006 CPT Code	Mod	CY 2011 Physician work payment amount	CY 2011 Nonfacility PE payment amount	CY 2011 Facility PE payment amount	CY 2011 Malpractice payment amount
76075	26 ..	$7.96	$2.65	$2.65	$0.27
76075	TC	NA	82.24	NA	4.51
76075	.....	7.96	84.89	NA	4.78

Third, in order to determine the CY 2011 RVUs for CPT code 77080 (76075) that are displayed in Addendum B to this final rule with comment period, we divided the CY 2011 national payment amounts shown in Table 59 by the CY 2011 CF (discussed in section II.G.1. of this final rule with comment period) of $25.5217. These results are shown in Table 60 and in Addendum B to this final rule with comment period.

We note that RVUs under the PFS are generally resource-based and, therefore, are typically unaffected by changes to the CF. However, because the statute essentially sets a fixed payment amount for DXA services, the CF directly determines the RVUs for CPT code 77080 as we must impute RVUs for the DXA services in CY 2011. Therefore, when there are changes to the PFS CF, we must make corresponding changes to the RVUs for CPT codes 77080 and 77082 for CY 2010 and CY 2011 in order to maintain the fixed national payment amount specified in the statute, which is then subject to geographic adjustment as indicated below.

TABLE 60—CY 2011 RVUS FOR CPT CODE 77080

(NOTE: Calculated using the current law CY 2011 CF of $25.5217)

CY 2011 CPT Code	Mod	CY 2011 Physician work RVUs	CY 2011 Nonfacility PE RVUs	CY 2011 Facility PE RVUs	CY 2011 Malpractice RVUs
77080	26 ..	0.31	0.10	0.10	0.01
77080	TC	0.00	3.22	NA	0.18
77080	.....	0.31	3.32	NA	0.19

Finally, in order to provide payment for a specific DXA service furnished by a practitioner, the RVUs listed in Table 60 would be multiplied by the CY 2011 CF and subject to geographic adjustment based on the CY 2011 GPCIs that apply

to the location where the service is furnished.

In summary, after consideration of the public comments we received, we are finalizing our proposed CY 2011 payment methodology for CPT codes 77080 and 77082 in accordance with the section 1848(b) of the Act (as amended by section 3111 of the ACA). In CY 2011, payment for CPT codes 77080 and 77082 will be made at 70 percent of the product of the CY 2006 RVUs for the specified DXA codes, the CY 2006 CF, and the CY 2011 geographic adjustment.

J. Section 3114: Improved Access for Certified Nurse-Midwife Services

Section 1833(a)(1)(K) of the Act (as amended by section 3114 of the ACA) increased the amount of Medicare payment made under the PFS for certified nurse-midwife (CNM) services. Currently, section 1833(a)(1)(K) of the Act specifies that the payment amount for CNM services is 80 percent of the lesser of the actual charge or 65 percent of the PFS amount for the same service furnished by a physician. Under section 1833(a)(1)(K) of the Act (as amended by section 3114 of the ACA), effective for services furnished on or after January 1, 2011, Medicare payment for CNM services is increased to 100 percent of the PFS amount for the same service furnished by a physician (or 80 percent of the actual charge if that is less). We proposed to revise our regulations at § 414.54 (Payment for certified nurse-midwives' services) accordingly to reflect the increased payment for CNM services effective for services furnished on or after January 1, 2011.

Although CNMs are currently paid under Medicare Part B for their professional services, there is no mention of CNMs under the regulatory provision that lists the providers and suppliers of services to whom payment is made under the Medicare Part B program. Accordingly, we proposed to make a technical revision to § 410.150 (To whom payment is made) to specify that Medicare Part B pays CNMs for professional services in all settings, as well as services and supplies furnished incident to those services.

CNMs are authorized under the statute to be paid directly for services that they are legally authorized to furnish under State law and that are of the type that would otherwise be covered if furnished by a physician or incident to a physician's services. Additionally, there is no requirement for physician oversight or supervision of CNMs. Accordingly, CNMs are authorized to personally furnish diagnostic tests that fall under their State scope of practice without regard to the levels of physician supervision required under the diagnostic tests benefit. Therefore, we proposed to revise § 410.32(b)(2) (Exceptions to the levels of physician supervision required for diagnostic tests) to include CNMs who furnish diagnostic tests that fall within their State scope of practice.

Comment: Several commenters welcomed the proposed increase in Medicare payment for CNM services effective January 1, 2011, stating that this policy would provide equitable payment under Medicare to CNMs. These commenters claimed that Medicare payment to CNMs at 100 percent of the Medicare Part B PFS amount that would be paid to a physician (or 80 percent of the actual charge if that is less) represents policy reform resulting from advocacy over a number of years. The commenters believe that the Medicare payment increase will enable CNMs across the nation to expand services to women with disabilities of childbearing age, as well as to senior women who are Medicare patients. The commenters noted that previously the 35 percent payment differential between CNMs and other health professionals furnishing similar services limited the expansion of CNM services to Medicare patients. Additionally, the commenters asserted that CNMs serve a critical role as primary care providers for women throughout their lifespan and claimed that regulatory changes to unleash the potential of this group of providers were critically needed to fill the gaps in primary care.

The commenters also supported CMS' proposed technical revisions to § 410.150 and § 410.32. The proposed changes to § 410.150 would include CNMs as a supplier of services to whom Medicare payment can directly be made for their professional services in all settings and for services and supplies furnished incident to their professional services. Additionally, the commenters believe that the proposed changes to § 410.32 would clarify that when CNMs personally perform diagnostic tests, these health professionals are not subject to physician supervision for payment of diagnostic tests.

Response: We appreciate the commenters' support for implementing the new statutory provision that increases Medicare Part B payment for CNM services, effective January 1, 2011, from 80 percent of the lesser of the actual charge or 65 percent of the PFS amount that would be paid to a physician to 100 percent of the Medicare Part B PFS amount that would be paid to a physician or 80 percent of the actual charge if that is less.

After consideration of the public comments we received, we are finalizing our CY 2011 proposal to increase the Medicare Part B payment amount for CNM services under the PFS from 65 percent of the PFS amount that would be paid to a physician to 100 percent of the PFS amount that would be paid to a physician, or 80 percent of the actual charge if that is less. We are also finalizing our proposed modification to § 414.54 to reflect this statutory change, with clarification to state that the amount paid to a CNM may not exceed 100 percent of the PFS amount that would be paid to a physician for the same service furnished on or after January 1, 2011. In addition, we are finalizing, without modification, our proposed revisions to § 410.32 and § 410.150.

K. Section 3122: Extension of Medicare Reasonable Costs Payments for Certain Clinical Diagnostic Laboratory Tests Furnished to Hospital Patients in Certain Rural Areas

Section 416 of the MMA established a reasonable cost payment for outpatient clinical diagnostic laboratory tests furnished by hospitals with fewer than 50 beds that are located in qualified rural areas for cost reporting periods beginning during the 2-year period beginning on July 1, 2004.

Section 105 of the Tax Relief and Health Care Act of 2006 (Pub. L. 109–432) (TRHCA) extended the 2-year period in section 416(b) of the MMA for an additional cost-reporting year.

Section 107 of the Medicare, Medicaid, and SCHIP Extension Act of 2007 (Pub. L. 110–173) (MMSEA) extended the time period for cost reporting periods beginning on July 1, 2004 and ending on June 30, 2008. For some hospitals with cost reports that began as late as June 30, 2008, this extension affected services performed as late as June 29, 2009, because this was the date those cost reports would have closed.

Section 3122 of the ACA reinstitutes reasonable cost payment for clinical diagnostic laboratory tests performed by hospitals with fewer than 50 beds that are located in qualified rural areas as part of their outpatient services for cost reporting periods beginning on or after July 1, 2010 through June 30, 2011. For some hospitals with cost reports that begin as late as June 30, 2011, this reinstitution of reasonable cost payment could affect services performed as late as June 29, 2012, because this is the date those cost reports will close.

We received no comments on this proposal and therefore are finalizing this provision without modification.

L. Section 3134: Misvalued Codes Under the Physician Fee Schedule

Section 1848(c)(2)(K) of the Act (as added by section 3134 of the ACA) required the Secretary to periodically review and identify potentially misvalued codes and make appropriate adjustments to the relative values of those services identified as being potentially misvalued. Section 1848(c)(2)(K) of the Act (as added by section 3134 of the ACA) further specified that the Secretary may use existing processes to receive recommendations on the review and appropriate adjustment of potentially misvalued services, as well as conduct surveys or implement other data collection activities, studies, or other analyses as the Secretary determines to be appropriate to facilitate the review and appropriate adjustment of the relative values of potentially misvalued codes. Finally, section 1848(c)(2)(L) of the Act (as added by section 3134 of the ACA) provided that the Secretary shall establish a process to validate relative value units under the PFS.

We note that over the past several years, we have been working with the AMA RUC to identify approaches to addressing the issue of potentially misvalued services. Our CY 2011 approaches to categories of potentially misvalued codes are discussed in section II.C. of this final rule with comment period.

M. Section 3135: Modification of Equipment Utilization Factor for Advanced Imaging Services

1. Adjustment in Practice Expense To Reflect Higher Presumed Utilization

Section 1848(b)(4)(C) of the Act (as added by section 3135(a) of the ACA) adjusted the utilization rate beginning in CY 2011 for expensive diagnostic imaging equipment to a 75 percent assumption in the methodology for establishing the PE of the RVUs of procedures that use this equipment.

In the CY 2010 PFS final rule with comment period (74 FR 61755), we finalized a policy to increase the utilization rate to 90 percent for expensive diagnostic equipment priced at more than $1 million (CT and MRI scanners), providing for a 4-year transition to the 90 percent utilization rate from the CY 2009 utilization rate of 50 percent. Therefore, in CY 2010 we were transitioning to a 90 percent equipment utilization rate assumption, applying a 25/75 blend of the new and old PE RVUs, respectively, for the associated procedures. Section 1848(b)(4)(C) of the Act (as added by section 3135(a) of the ACA) does not provide for any further transition and, therefore, we are assigning a 75 percent equipment utilization rate assumption to CT and MRI scanners, effective January 1, 2011. Under section 1848(b)(4) of the Act (as amended by section 3135(a) of the ACA), this change in the equipment utilization rate assumption from CY 2010 to CY 2011 is not budget neutral under the PFS. The equipment utilization rate assumption remains at 50 percent for all other equipment included in the PFS PE methodology. Further discussion of our final CY 2011 policies regarding the equipment utilization rate assumption can be found in section II.A.3.a. of this final rule with comment period.

2. Adjustment in Technical Component "Discount" on Single-Session Imaging to Consecutive Body Parts

Section 1848(b)(4)(D) of the Act (as added by section 3135(a) of the ACA) increased the established PFS multiple procedure payment reduction (MPPR) for the TC of certain single-session imaging services to consecutive body areas from 25 to 50 percent, effective July 1, 2010, and section 1848(c)(2)(B)(v)(VI) of the Act (as added by section 3135(b) of the ACA) exempted this percent change from the PFS budget neutrality provision. This policy is discussed in detail in section II.C.4 of this final rule with comment period.

Effective January 1, 2006, we adopted an MPPR of 25 percent for the TC of certain diagnostic imaging procedures, applied to the second and subsequent services when more than one service in one of 11 imaging families, defined by imaging modality and contiguous body area, is furnished in a single session (70 FR 70261 through 70263). The established imaging MPPR applies to TC services and to the TC of global services. It does not apply to PC services or to the PC of global services. Under this policy, full payment was made for the TC of the highest priced procedure, while payment was made at 75 percent of the TC for each additional procedure. As of July 1, 2010 and continuing in CY 2011, payment is made at full payment for the TC of the highest paying procedure, while at 50 percent of the TC for each additional procedure, consistent with the new statutory provision. Further discussion of the MPPR policies affecting nonsurgical PFS services can be found in section II.C.4. of this final rule with comment period.

N. Section 3136: Revision for Payment for Power-Driven Wheelchairs

1. Payment Rules for Power Wheelchairs

Durable medical equipment (DME) is defined at section 1861(n) of the Act and includes wheelchairs necessary for use in the patient's home. Section 1861(n) of the Act provides that wheelchairs included in the definition of DME "may include a power-operated vehicle that may be appropriately used as a wheelchair, but only where the use of such a vehicle is determined to be necessary on the basis of the individual's medical and physical condition." The general Medicare payment rules for DME are set forth in section 1834(a) of the Act and 42 CFR part 414, subpart D of our regulations. Section 1834(a)(1) of the Act and § 414.210(a) of our regulations establish that the Medicare payment for a DME item is generally equal to 80 percent of either the lower of the actual charge or the fee schedule amount for the item less any unmet Part B deductible. The beneficiary coinsurance is generally equal to 20 percent of either the lower of the actual charge or the fee schedule amount for the item once the deductible is met.

For Medicare payment purposes, power wheelchairs or power-driven wheelchairs are classified under various HCPCS codes based on the level of performance and functional characteristics of each power wheelchair that accommodate the specific needs of patients. Power wheelchairs classified under performance Groups 1 through 3 are covered under Medicare for use in the patient's home. Power wheelchair groups were established in 2006 with the release of the Power Mobility Device Coding Guidelines published by the Durable Medical Equipment Regional Carriers (DMERCs) currently called the Durable Medical Equipment Medicare Administrative Contractors (DME MACs). The DMEPOS quality standards define certain power wheelchairs falling as "complex, rehabilitative" power wheelchairs, and these "complex, rehabilitative" power wheelchairs are treated as a separate product category for the purpose of implementing the DMEPOS Competitive Bidding Program (CBP) mandated by section 1847(a) of the Act. In both the quality standards and the DMEPOS CBP, complex, rehabilitative power wheelchairs are defined or identified as power wheelchairs classified as Group 2 power wheelchairs with power options that can accommodate rehabilitative features (for example, tilt in space) or Group 3 power wheelchairs. Section

1847(a)(2)(A) of the Act, as amended by section 154(a)(1)(B) of MIPPA, excludes complex, rehabilitative power wheelchairs classified within Group 3 from the DMEPOS CBP.

With the exception of power wheelchairs furnished during calendar year 1990, power wheelchairs have been paid under the capped rental category of DME since January 1, 1989. The payment rules for capped rental DME are provided at section 1834(a)(7) of the Act and § 414.229 of our regulations. Payment for these items is generally on a monthly rental basis, with rental payments capped at 13 months. After a 13-month period of continuous use during which rental payments are made, the statute and regulations require that the supplier transfer title to the wheelchair to the beneficiary. In addition, effective for power wheelchairs furnished on or after January 1, 1991, section 1834(a)(7) of the Act, as amended by section 4152(c)(2)(D) of the Omnibus Budget Reconciliation Act of 1990 (Pub. L. 101–508), mandates that the supplier of the power wheelchair offer the patient the option to purchase rather than rent the item. Since 1991, over 95 percent of Medicare beneficiaries have exercised this lump-sum purchase option for power wheelchairs.

Consistent with payment for other DMEPOS items, § 414.210(f)(1) permits payment for replacement of capped rental DME if the item has been in continuous use for the equipment's reasonable useful lifetime or is lost, stolen, or irreparably damaged. Section 414.210(f)(1) states the reasonable useful lifetime for equipment is determined through program instructions. In the absence of CMS program instructions, the carrier may determine the reasonable useful lifetime for equipment, but in no case can it be less than 5 years. Computation is based on when the equipment is delivered to the beneficiary, not the age of the equipment. If the beneficiary elects to obtain a new capped rental item after the reasonable useful lifetime, a new 13-month rental payment period would begin for the new equipment in accordance with the requirements of § 414.229.

Pursuant to section 1834(a)(7)(A)(i)(II) of the Act and § 414.229(b), the current capped rental fee schedule amounts applicable to wheelchairs for months 1 thru 3 of the 13-month capped rental period are calculated to pay 10 percent of the purchase price recognized in the statute for the item. The rental fee schedule amounts for months 4 through 13 of the 13-month capped rental period are calculated to pay 7.5 percent of the purchase price for the item. The purchase price is determined consistent with section 1834(a)(8) of the Act and § 414.229(c) and § 414.220(e) and (f) and is calculated based on average allowed payments for the purchase of new items, and is updated by the covered item update, as required by section 1834(a)(14) of the Act and § 414.229(d). The purchase fee schedule amount for new power wheelchairs acquired on a lump sum purchase basis is 100 percent of the purchase price calculated for the item, as discussed above.

2. Revision of Payment Amounts for Power Wheelchairs

Section 3136(a) of the ACA made several changes to section 1834(a)(7)(A) of the Act. Section 3136(a)(1) of the ACA amends section 1834(a)(7)(A) of the Act by adding a new subclause (III) to section 1834(a)(7)(A)(i) of the Act. Subclause (III) revises the capped rental fee schedule amounts for all power wheelchairs, modifying the current payment structure of 10 percent of the purchase price for months 1 through 3 and 7.5 percent of that purchase price for months 4 through 13 that was previously discussed.

The rental fee schedule amount for months 1 through 3 of the 13-month capped rental period for power wheelchairs is revised to 15 percent of the purchase price for the item. The rental fee schedule amounts for months 4 through 13 of the 13-month capped rental period for power wheelchairs is revised to 6 percent of the purchase price for the item. The statutory provision does not change the methodologies used to calculate and subsequently update the purchase price of power wheelchairs. Therefore, the methodology described previously for determining the purchase price amounts will continue to apply.

Pursuant to section 3136(c) of the ACA, the changes made by section 3136(a) of the ACA apply to power-driven wheelchairs furnished on or after January 1, 2011. Furthermore, as discussed previously, section 3136(c)(2) of the ACA states that the changes made by section 3136(a) of the ACA, including the new payment structure for power wheelchairs, do not apply to payment made for items and services furnished pursuant to contracts entered into under section 1847 of the Act for the DMEPOS CBP prior to January 1, 2011, which applies to the implementation of the first round of the DMEPOS CBP. As a result, contract suppliers furnishing power wheelchairs in competitive bidding areas (CBA) pursuant to contracts entered into prior to January 1, 2011, as part of Round 1 of the DMEPOS CBP will continue to be paid based under the current regulations using 10 percent of the purchase price for months 1 through 3 and 7.5 percent for each of the remaining months. We did not receive public comment on our proposed changes to § 414.202, § 414.229, and § 414.408, and therefore we are finalizing our proposals without modification.

3. Elimination of Lump Sum Payment for Standard Power Wheelchairs

Section 3136(a)(2) of the ACA further amends section 1834(a)(7)(A)(iii) of the Act by inserting the term "complex, rehabilitative" before the term "power-driven wheelchairs." As a result, section 1834(a)(7)(A)(iii) of the Act now extends the lump sum purchase option only to complex, rehabilitative power wheelchairs. As discussed above, "complex, rehabilitative" power wheelchairs are power wheelchairs that are classified as: (1) Group 2 power wheelchairs with power options that can accommodate rehabilitative features (for example, tilt in space), or (2) Group 3 power wheelchairs. We consider all other power wheelchairs to be standard power wheelchairs. Therefore, we proposed to interpret the language "complex, rehabilitative" in section 1834(a)(7)(A) of the Act consistent with this longstanding classification. As a result, the changes made by section 3136 of the ACA to section 1834(a)(7)(A)(iii) of the Act eliminate the lump sum purchase option for standard power wheelchairs.

Pursuant to section 3136(c) of the ACA, the changes made to section 1834(a)(7)(A)(iii) of the Act apply to power-driven wheelchairs furnished on or after January 1, 2011. The lump sum purchase payment option will no longer extend to standard power driven wheelchairs furnished on or after January 1, 2011.

Furthermore, section 3136(c)(2) of the ACA states that the changes made by section 3136(a) of the ACA, including the limitation of the lump sum purchase payment option to complex, rehabilitative power wheelchairs, do not apply to payment made for items and services furnished pursuant to contracts entered into under section 1847 of the Act for the DMEPOS CBP prior to January 1, 2011, pursuant to the implementation of the first round of the DMEPOS CBP. As a result, contract suppliers furnishing power wheelchairs in CBAs in accordance with contracts entered into prior to January 1, 2011 as part of Round 1 of the DMEPOS CBP must continue to offer beneficiaries the lump sum purchase option for all power wheelchairs.

We proposed changes to § 414.229 and § 414.408 to reflect our interpretation of these statutory requirements.

Comment: Several commenters stated that the changes regarding the lump sum payment option will make it more difficult for many suppliers to furnish standard power wheelchairs because suppliers usually purchase wheelchairs from manufacturers using the full lump sum payments. One commenter stated that some homecare providers will need to arrange for loans to obtain sufficient finances to purchase wheelchairs that are then paid for by the Medicare program and beneficiaries over the longer 1-month payment period and if the recent capital markets for loans do not improve, CMS should consider a delay in implementing our regulations.

Response: While we recognize that the regulatory changes require adjustments by standard power wheelchair suppliers, we do not believe that section 3136(a)(2) of the ACA provides flexibility to delay the implementation of this provision. Moreover, these concerns are related to the financial relationships developed by manufacturers of standard power wheelchairs with the suppliers who furnish patients with wheelchairs, which is not within the purview of our regulations. As we explained in the proposed rule (75 FR 40121), power wheelchairs have been paid under the capped rental category of DME since 1989, and the option to purchase in addition to the rental payment method was established in 1991. Thus, section 3136(a)(2) of the ACA and the regulatory changes implementing that provision are not establishing a new rental payment methodology. We expect suppliers will be able to adapt expeditiously to furnishing standard power wheelchairs under a rental payment structure. Finally, we believe that there may be some financial benefit to suppliers as a result of this change. As is the case for manual wheelchairs furnished to Medicare beneficiaries, suppliers of standard power wheelchairs furnished to Medicare beneficiaries on or after January 1, 2011, may be able to rent these items to multiple beneficiaries if the beneficiaries use the items for fewer than 13 continuous months. In many cases where a power wheelchair is rented to multiple beneficiaries, the supplier will receive more than 13 monthly payments for the item, including payments based on 15 percent of the statutory purchase price for the first 3 months that each beneficiary rents the item.

Comment: Several commenters raised a concern that the elimination of the lump sum payment method will cause a significant increase in monthly rental claims submitted for standard power wheelchairs; thereby, increasing administrative claims processing costs. One commenter noted that in the event claims processing contractors have difficulty processing claims, we did not discuss how to apply interest rates for Medicare overpayments or underpayments.

Response: We appreciate this comment regarding the efficient implementation of the provision of section 3136 of the ACA, which includes a requirement that payment for all standard power wheelchairs be made on a monthly rental basis effective January 1, 2011. We are working with our contractors to make the necessary changes to the claims processing systems in order to be ready to process additional standard power wheelchair rental claims with dates of service on or after January 1, 2011. Also, we have coordinated within CMS and our partners to update educational materials for our beneficiaries. With regard to overpayments or underpayments, these issues will be handled in the same manner as overpayments or underpayments are handled for capped rental DME in general.

Comment: Several commenters stressed the need to clarify the conditions of payment requirements for power wheelchairs that are rented after a break in service or change in patient condition. These commenters stated that because the majority of power wheelchairs have been paid under the lump sum purchase payment method, physicians and suppliers performed the documentation requirements set forth in § 410.38(c)(2) prior to initial delivery of the standard power wheelchairs. These documentation requirements specify the physician or treating practitioner must conduct a face-to-face examination of the patient to determine that the power wheelchair is medically necessary before it is dispensed to the beneficiary. In addition, the supplier must perform an on-site evaluation of the patient's home to develop supporting documentation for the initial delivery and payment for a power wheelchair. As a result of the elimination of the lump sum purchase option for standard power wheelchairs, more power wheelchairs will be paid under the rental payment method after January 1, 2011. Thus, the commenters urged that the regulations should clarify whether a new face-to-face examination and home evaluation must be performed when a break in service of greater than 60 days occurs.

Response: This comment is outside the scope of the CY 2011 PFS proposed rule. We did not propose any changes to the conditions of payment set forth in § 410.28(c)(2). We again note, however, that payments on a rental basis for capped rental items, including power wheelchairs, have been made since January 1, 1989. The payment and coverage requirements identified by the commenters for power mobility devices (PMDs), including power-operated vehicles or scooters and standard and complex, rehabilitative power wheelchairs, must be met before the item is furnished to the beneficiary on either a purchase or rental basis. Section 3136 of the ACA, which in part eliminates the purchase option for standard power wheelchairs furnished on or after January 1, 2011, has no impact on these requirements. They remain in effect for all PMDs furnished to Medicare beneficiaries on a purchase or rental basis, including rented power wheelchairs. Payment for capped rental items is limited to 13 months of continuous use, defined at § 414.230. Section 414.230(d) sets forth the criteria for a new rental period: during this 13-month capped rental period, a break in use of the equipment for more than 60 continuous days, plus the days remaining in the rental month in which use ceases, would result in the start of a new period of continuous use and a new 13-month capped rental period if the supplier submits a new prescription, new medical necessity documentation, and documentation that describes the reason for the interruption in use and documents that medical necessity in the prior rental episode ended. Section 3136 of the ACA has no impact on the requirements set forth in § 414.230 regarding continuous use of capped rental items.

Comment: One commenter requested a revision to the billing modifiers for Advance Beneficiary Notice of Noncoverage (ABN) to utilize when a supplier bills for furnishing a wheelchair that has features beyond what is covered by Medicare.

Response: This comment is outside the scope of the CY 2011 PFS proposed rule because we did not propose any changes to the billing modifiers for ABNs. Nevertheless, we encourage interested parties to follow our HCPCS editorial process and submit coding recommendations by following the instructions found at our Web site at *http://www.cms.gov/MedHCPCSGenInfo.*

Comment: One commenter requested clarification on whether the beneficiary retains ownership of power wheelchair associated accessories (for example

elevated leg rests or adjustable height arms rests) during or after the rental period. These associated accessories are not included with the rental of the standard power wheelchair base equipment.

Response: Payment for accessories for power wheelchairs that are not included in the basic equipment package for the wheelchair and are separately payable items under the inexpensive or routinely purchased (IRP) DME category is made on either a rental or lump sum purchase basis. If payment is made on a lump sum basis to the supplier for an associated accessory, then the beneficiary owns the accessory for use with the standard power wheelchair during and after the 13-month wheelchair rental period. If payment is made on a rental basis for an accessory in the IRP category and it appears that the beneficiary will use the wheelchair for the full 13-month capped rental period, the beneficiary may elect to purchase the accessory, and the Medicare allowed payment for purchase of the accessory would be equal to the lowed of the actual charge or the purchase fee schedule amount, less cumulative paid rental amounts. Title to an accessory for a power wheelchair that is not included in the basic equipment package for the wheelchair and is a separately payable item under the capped rental DME category is transferred to the beneficiary following the 13-month capped rental period.

Comment: One commenter requested information on how to apply the calculation of the reasonable useful lifetime to a standard power wheelchair which had been in continuous use for 10 months prior to being returned to a supplier and then after appropriate cleaning and servicing is placed with a different beneficiary. Also, the commenter requested how to apply the calculation of the reasonable useful lifetime if the standard power wheelchair is assigned to several beneficiaries under similar circumstances and remains in continuous use beyond 13 months because of use by multiple beneficiaries prior to title being transferred to the last beneficiary.

Response: The regulations applicable to calculation of the reasonable useful lifetime are located at § 414.210(f) and state that computation of the reasonable useful lifetime of equipment is based on when the equipment is delivered to the beneficiary, not the age of the equipment. At the end of 13 months rental use of a DME item, the supplier must transfer title to the item, such as a power wheelchair, to the beneficiary in accordance with § 414.229(f)(2). If, following transfer of title, it is determined that the power wheelchair will not last for the entire reasonable useful lifetime, the supplier is required by § 414.210(e)(4) to replace the equipment at no cost to the beneficiary or the Medicare program.

Comment: One commenter expressed concern that the proposed changes to § 414.408(f)(1) will force suppliers to convert to a rental payment model of furnishing standard power wheelchairs prior to the end of the 3 year contract period for DMEPOS Round 1 Rebid CBAs although their bids included an assumption that the lump sum payment method would continue into subsequent years. Another commenter believed inequalities occur by continuing the option of a lump sum payment method for standard power wheelchairs in Round 1 Rebid CBAs but not in other geographic areas.

Response: Section 3136(c)(2) of the ACA states that the change made by section 3136(a) of the ACA, eliminating the lump sum payment method for standard power wheelchairs, does not apply to payment made for items and services furnished pursuant to contracts entered into under section 1847 of the Act for the DMEPOS CBP prior to January 1, 2011 pursuant to the implementation of the first round of the DMEPOS competitive bidding program (CBP). We noted that although these changes will not apply to payment made for items and services furnished pursuant to the contracts awarded following the Round 1 Rebid, contract suppliers must prepare for the elimination of the lump sum payment method for standard power wheelchairs that will take effect at the end of the 3 year contract period. When the Round 1 contracts are recompeted, suppliers will submit bids for furnishing power wheelchairs on a rental only basis.

Comment: One commenter suggested Medicare should consider implementing a serial number tracking program for power wheelchairs to improve anti-fraud efforts.

Response: This comment is outside the scope of the CY 2011 PFS proposed rule. We appreciate the commenter's suggestion and will consider studying the feasibility of a nationwide serial tracking program for power wheelchairs for future rulemaking efforts. We were informed that nationwide there are more than 106 styles of power wheelchairs available from 22 manufacturers. A nationwide serial tracking program would require significant program resources and stakeholder input which we would need to conduct prior to rulemaking.

After considering the comments received, we are adopting, without modification, our proposed changes to § 414.229 and § 414.408 that eliminate the lump sum payment option for standard power wheelchairs.

O. Section 3139: Payment for Biosimilar Biological Products

Section 3139 of the ACA amends section 1847A of the Act to provide for Medicare payment of biosimilar biological products using the average sale price (ASP) methodology.

Section 1847A(c)(6)(H) of the Act, as added by the ACA, defines a biosimilar biological product as a biological product approved under an abbreviated application for a license of a biological product that relies in part on data or information in an application for another biological product licensed under section 351 of the Public Health Service Act (PHSA). The reference biological product for a biosimilar biological product is defined by the statute as the biological product licensed under such section 351 of the PHSA that is referred to in the application of the biosimilar biological product.

The ACA also amends section 1847A(b) of the Act by adding paragraph 8 to specify that the payment amount for a biosimilar biological product will be the sum of the following two amounts: The ASP of all NDCs assigned to the biosimilar biological product determined using the methodology in section 1847A(b)(6) of the Act, and 6 percent of the payment amount determined using the methodology in section 1847A(b)(4) of the Act for the corresponding reference biological product. Sections 7001 to 7003 of the ACA also established a licensing pathway for biosimilar biological products, and in accordance with the statute, the effective date for Medicare ASP statutory provisions is July 1, 2010. We proposed to make conforming regulation text changes at § 414.902 and § 414.904 and we solicited comments regarding our conforming changes.

We anticipate that as biosimilar biological drug products are approved, we will receive ASP sales data through the ASP data submission process and publish national payment amounts in a manner that is consistent with our current approach to other drugs and biologicals that are paid under section 1847A of the Act and set forth in 42 CFR part 414 subpart J. Until we have collected sufficient sales data as reported by manufacturers, payment limits will be determined in accordance with the provisions in section

1847A(c)(4) of the Act. If no manufacturer data is collected, prices will be determined by local contractors using any available pricing information, including provider invoices. More information about the ASP payment methodology and the data submission process may be found on the CMS Web site at *http://www.cms.gov/McrPartBDrugAvgSalesPrice/01_overview.asp* and in section VII.A.1., "Carry Over ASP," of this final rule with comment period.

Comment: Several commenters supported the proposed regulation text changes.

Response: Based on the comments that we received, we are finalizing our proposal and regulation text without additional modification.

Comment: Several commenters requested that CMS assign biosimilars and other brand name drugs and biologicals separate HCPCS codes in order to facilitate the tracking of items paid under section 3139 of the ACA, as well as branded drugs and biologicals subject to fees under section 9008 of the ACA.

Response: We appreciate the comments; however, our proposal did not address procedures for assignment of HCPCS codes, and so these comments are outside the scope of this rule. For more information about the HCPCS coding process, we refer you to *http://www.cms.gov/MedHCPCSGenInfo/.*

In summary, we are finalizing our proposed definitions of biosimilar biological, reference biological and our proposed payment methodology without additional modification.

P. Section 3401: Revision of Certain Market Basket Updates and Incorporation of Productivity Improvements Into Market Basket Updates That Do Not Already Incorporate Such Improvements

1. ESRD Market Basket Discussion

Section 3401(h) of the ACA amended section 1881(b)(14)(F) of the Act and directs the Secretary to annually increase payment amounts established under the ESRD market basket. Please see section VII.E. of this final rule with comment for a detailed description of these provisions.

2. Productivity Adjustment Regarding the Ambulatory Surgical Center Payment System, and the Ambulance, Clinical Laboratory and DMEPOS Fee Schedules

Section 3401 of the ACA requires that the update factor under certain payment systems be annually adjusted by changes in economy-wide productivity. The year that the productivity adjustment is effective varies by payment system. Specifically, section 3401 of the ACA requires that, in CY 2011 (and in subsequent years) update factors under the ambulatory surgical center (ASC) payment system, the ambulance fee schedule (AFS), the clinical laboratory fee schedule (CLFS), and the DMEPOS fee schedules be adjusted by changes in economy-wide productivity. Section 3401(a) of the ACA amends section 1886(b)(3)(B) of the Act to add clause (xi)(II) which sets forth the definition of this productivity adjustment. The statute defines the productivity adjustment to be equal to the 10-year moving average of changes in annual economy-wide private nonfarm business multifactor productivity (MFP) (as projected by the Secretary for the 10-year period ending with the applicable fiscal year, year, cost reporting period, or other annual period) (the "MFP adjustment"). The Bureau of Labor Statistics (BLS) is the agency that publishes the official measure of private non-farm business MFP. *Please see http://www.bls.gov/mfp* which is the link to the BLS historical published data on the measure of MFP.

As stated in the PFS proposed rule (75 FR 40123), the projection of MFP is currently produced by IHS Global Insight (IGI), an economic forecasting firm. As described in the CY 2011 PFS proposed rule, in order to generate a forecast of MFP, IGI replicated the MFP measure calculated by the BLS using a series of proxy variables derived from the IGI US Macro-economic models. These models take into account a very broad range of factors that influence the total U.S. economy. IGI forecasts the underlying proxy components such as Gross Domestic Product (GDP), capital, and labor inputs required to estimate MFP and then combines those projections according to the BLS methodology.

In Table 34 of the proposed rule (75 FR 40123), we identified each of the MFP component series employed by the BLS and the corresponding concepts estimated by IGI that appeared to be the best measure at the time of the proposed rule. IGI found that the historical growth rates of the BLS components used to calculate MFP and the IGI components identified and listed in the PFS proposed rule (75 FR 40123) were consistent across all series and therefore suitable proxies for calculating MFP. We proposed a method in which IGI uses the growth rates of the forecasted IGI concepts to project BLS' components of MFP. The resulting MFP adjustment derived from using this method was proposed to be used under section 3401 of the ACA to adjust the updates for the ASC payment system, the AFS, the CLFS, and the DMEPOS fee schedules.

Since the proposed rule, BLS issued revised estimates of private nonfarm business MFP (released on August 24, 2010). We also received public comments on the proposed calculation of the MFP adjustment. We summarize these comments and our responses below.

Comment: Several commenters stated that CMS provided no details in the proposed rule on the data and calculations that it used in making the MFP estimates, instead referring readers to the BLS, which only provides historical data. The commenters stated that this level of information is insufficient for public comment. The commenters requested that CMS fully disclose the methods and data sources used for the MFP estimate for public comment before implementing the multifactor productivity adjustment to the ASC payment system and to the other payment systems. Another commenter stated that transparency is needed concerning the assumptions underlying the projection of MFP and the commenter asked that CMS address this in the final rule so a better understanding can be gained about how CMS arrived at its MFP adjustment.

Response: The CY 2011 PFS proposed rule included a citation to the BLS Web site. This link provided a lengthy detailed description of the methodology that is used by the BLS to construct an estimate of MFP for the private nonfarm business sector, including a discussion of the underlying series used in the MFP calculation. For the forecasted estimate of MFP, we then identified in Table 34 in the CY 2011 PFS proposed rule (75 FR 40123) the forecasted series that closely align to the series used by BLS. The data source for these forecasted series is IGI, an economic forecasting firm. Following the methodology as described in the BLS documentation that we provided in the CY 2011 PFS proposed rule, a forecast of MFP was created using the IGI series. Given the information that was presented in the CY 2011 PFS proposed rule, we believe that we provided adequate information regarding the methods, calculations, and data sources used for the MFP estimate. In this final rule with comment period, we have included below a more detailed description of this methodology for even greater transparency.

In response to the public comments we received requesting additional information on the assumptions underlying the projection of MFP, we note that the projection of MFP is not driven by specific assumptions. The

underlying series forecasted by IGI are derived from a set of complex economic forecasting models that project various components of the total U.S. economy. These models are intended to capture many drivers of economic growth in the U.S. economy. Therefore, the underlying series that IGI uses to calculate a forecast of MFP are products of this economy-wide macroeconomic model as opposed to being based on a specific set of assumptions.

Comment: Several commenters expressed concern that current economic conditions are distorting the factor used for the productivity adjustment, potentially leading to unintended consequences. These commenters claim that the original intent of the productivity adjustment was to hold providers to a standard of productivity improvement achieved by the rest of the economy. However, the commenters stated that when productivity gains are driven by undesirable trends in the economy, this adjustment could lead to excessive cuts. The current "jobless recovery" is inflating productivity as output increases but a key input—employment—continues to stagnate. The commenters claim that cutting Medicare payments by this inflated figure could hurt hospitals and other health care providers and suppliers that have been one of the few sources of continued job growth in this economy.

Response: We are required by law to implement section 3401 of the ACA, which requires that in CY 2011 (and in subsequent years) update factors under the ASC payment system, the AFS, the CLFS, and the DMEPOS fee schedules be adjusted by the 10-year moving average of changes in annual economy-wide multi-factor productivity for the private non-farm business sector.

Although we believe that the IGI method of calculating a forecast of MFP discussed in the CY 2011 PFS proposed rule (75 FR 40123) is appropriate and accurately reflects the 10-year moving average of changes in annual economy-wide multi-factor productivity, in response to this comment, CMS and IGI reevaluated the series that are used to calculate MFP to ensure that the underlying components that are ultimately selected are those that will produce a measure of MFP that most closely tracks the official measure of MFP as published by BLS. While the concepts listed in Table 34 of the CY 2011 PFS proposed rule were similar to the underlying concepts used by BLS (as discussed in the proposed rule), CMS and IGI subsequently determined that there are technically superior IGI series for output and labor that can be used to derive a calculation of MFP (still using the method as described in the proposed rule), that will ultimately result in a more appropriate forecast of MFP. The IGI method is described in more detail below and we note that the methodology is the same methodology as was described in the CY 2011 PFS proposed rule, which is aligned closely with the methodology employed by the BLS. For more information regarding the BLS method for estimating productivity we refer the commenter to the following link: *http://www.bls.gov/mfp/mprtech.pdf.*

Table 61 lists the MFP component series employed by the BLS and the corresponding concepts estimated by IGI as specified in Table 34 of the CY 2011 PFS proposed rule and in this final rule. Please note that, in BLS' revised MFP estimates published on August 24, 2010, the index series was rebased from 2000=100 to 2005=100. Thus, Table 61 refers to the BLS series in 2005 dollars whereas Table 34 of the CY 2011 PFS proposed rule referred to the BLS series in 2000 dollars.

TABLE 61—MULTIFACTOR PRODUCTIVITY COMPONENT SERIES EMPLOYED BY THE BUREAU OF LABOR STATISTICS AND IHS GLOBAL INSIGHT

BLS series	IGI series—proposed rule	IGI series—final rule
Real value-added output, constant 2005 dollars	Real gross non-farm value added output, chained 2005 dollar billions.	Non-housing non-government non-farm real GDP, Billions of chained 2005 dollars—annual rate.
Private non-farm business sector labor input; 2005=100.00.	Hours of all persons—private nonfarm business sector; 1992=1.0.	Man-hours in private nonfarm establishments, Billions of hours—annual rate.
Aggregate capital inputs; 2005=100.00	Real effective capital stock used for full employment GDP, chained 2005 dollar billions.	Real effective capital stock used for full employment GDP, Billions of chained 2005 dollars.

In this final rule with comment period, we are finalizing the same IGI method as described in the CY 2011 PFS proposed rule, with minor technical improvements to the underlying concepts used to calculate MFP. We have also included a more detailed description below of the methodology (which was described in the proposed rule and which we are finalizing in this final rule with comment period) used to calculate MFP in response to the public comments we received.

To create a forecast of BLS' MFP index, the forecasted annual growth rates of the "non-housing, non-government, non-farm, real GDP", "man-hours in private nonfarm establishments", and "real effective capital stock" series (ranging from 2009 to 2020) are used to "grow" the levels of the "real value-added output," "private non-farm business sector labor input," and "aggregate capital input" series published by the BLS. Using these three key concepts, MFP is derived by subtracting the contribution of labor and capital inputs from output growth.

However, in order to estimate MFP, we need to understand the relative contributions of labor and capital to total output growth. Therefore, two additional measures are needed to operationalize the estimation of the IGI MFP projection: Labor compensation and capital income. The sum of labor compensation and capital income represents total income. The BLS calculates labor compensation and capital income (in current dollar terms) to derive the nominal values of labor and capital inputs. IGI uses the "non-government total compensation" and "flow of capital services from the total private non-residential capital stock" series as proxies for the BLS' income measures. These two proxy measures for income are divided by total income to obtain the shares of labor compensation and capital income to total income.

In order to estimate labor's contribution and capital's contribution to the growth in total output, the growth rates of the proxy variables for labor and capital inputs are multiplied by their respective shares of total income. These contributions of labor and capital to output growth are subtracted from total output growth to calculate the "change

in the growth rates of multifactor productivity":

MFP = Total output growth—{(labor input growth*labor compensation share) + (capital input growth * capital income share)}

The change in the growth rates (also referred to as the compound growth rates) of the IGI MFP are multiplied by 100 in order to calculate the percent change in growth rates (the percent change in growth rates are published by the BLS for its historical MFP measure). Finally, the growth rates of the IGI MFP are converted to index levels based to 2005 to be consistent with the BLS' methodology.

For benchmarking purposes, the historical growth rates of IGI's proxy variables were used to estimate a historical measure of MFP, which was compared to the historical MFP estimate published by the BLS. The comparison revealed that the growth rates of the components were consistent across all series, and therefore validated the use of the proxy variables in generating the IGI MFP projections.

The resulting MFP index was then interpolated to a quarterly frequency using the Bassie method for temporal disaggregation. The Bassie technique utilizes an indicator (pattern) series for its calculations. IGI uses the index of output per hour (published by the BLS) as an indicator when interpolating the MFP index.

As discussed below, for each of these payment systems, the update factor is the percentage increase (or percentage decrease for the CLFS) in the consumer price index for all urban consumers (CPI–U) (referred to as the "CPI–U update factor").

For all four payment systems, section 3401 of the ACA generally states that the Secretary shall reduce the CPI–U adjustment by the MFP adjustment. In order to calculate the MFP-adjusted updates to these payment systems, we proposed that the MFP percentage adjustment would be subtracted from the CPI–U update factor. For example, if the update factor (CPI–U) is 4.0 percent, and the projected MFP is 1.3 percent, the MFP–Adjusted update factor (or MFP–Adjusted CPI–U for these payment systems) would be a 2.7 percent increase.

We proposed that the end of the 10-year moving average of changes in the MFP should coincide with the end of this CPI–U timeframe (75 FR 40123). Since the CPI–U update factor is reduced by the MFP adjustment to determine the annual update for these payment systems, we stated that we believe it is appropriate for the numbers associated with both parts of the calculation to be projected as of the same end date. In this way, changes in market conditions are aligned.

In this final rule with comment period, we wanted to further clarify how for each payment system, the end of the 10-year moving average of changes in the MFP will coincide with the period on which the CPI–U is calculated. In the case of the ASC payment system, the CPI–U projected for the 12-month period ending with the midpoint of the year involved, which is CY 2011 for this final rule with comment period. Therefore, the end of the 10-year moving average of changes in the MFP is projected so that it ends with the midpoint of the year involves, which is CY 2011 for this final rule with comment period. In the case of the AFS, CLFS, and DMEPOS fee schedules, the CPI–U is estimated for the period ending June 30th of the year preceding the update year itself, which is CY 2010 for this final rule with comment period. Therefore, the end of the 10-year moving average of changes in the MFP is estimated so that it ends June 30th of the year preceding the update year itself, which is CY 2010 for this final rule with comment period.

We proposed to round the final annual adjustment to the one-tenth of one percentage point level up or down as applicable according to conventional rounding rules (that is, if the number we are rounding is followed by 5, 6, 7, 8, or 9, we will round the number up; if the number we are rounding is followed by 0, 1, 2, 3, or 4, we will round the number down).

In the following sections, we provide more information on the statutory requirements and proposals for each of the four payment systems. The statutory requirements for the ASC payment system were also addressed in the CY 2011 OPPS/ASC final rule with comment period. We note that, in the CY 2011 PFS proposed rule (75 FR 40123 through 40125), we described the legislative provision and outlined the methodology used to calculate and apply the MFP adjustment to determine the annual updates for ASC payment system, the AFS, the CLFS, and the DMEPOS fee schedules for CY 2011 and each subsequent year. We stated that we would set forth the final MFP adjustment for CY 2011 in this final rule with comment period. Also, we stated in the CY 2011 PFS proposed rule (75 FR 40123) that once we finalize the methodology for determining and applying the MFP adjustment to the CPI–U update factors for these payment systems, for subsequent calendar years, as we have done in the past, we would notify the general public of the annual update to the AFS, CLFS, and DMEPOS fee schedules via CMS instruction and on the CMS Web site. These notifications would set forth both the CPI–U percentage increase (or, for the CLFS, the percentage decrease) and the MFP adjustment for the applicable year. For ASCs, for subsequent calendar years, as we have done in the past, we stated that we would continue to notify the general public of the annual update to the ASC payment amount via the annual OPPS/ASC rulemaking process.

In summary, as discussed previously, we are finalizing the same IGI method as described in the CY 2011 proposed rule to calculate the MFP adjustment, with minor technical improvements to the underlying concepts used to calculate the MFP adjustment. Furthermore, as proposed, the MFP adjustment is calculated so that the end of the 10-year moving average of changes in the MFP will coincide with the end of the CPI–U timeframe for each of the four payment systems (that is, the ASC payment system, AFS, CLFS, and DMEPOS fee schedules) so that market conditions are aligned. Also, as proposed, we will round the final annual adjustment to the one-tenth of one percentage point level up or down as applicable according to conventional rounding rules. Using the methodology finalized previously, the final MFP adjustment for CY 2011 is 1.3 percent for the ASC payment system, and 1.2 percent for the AFS, CLFS, and DMEPOS fee schedules. We are also finalizing our proposal to calculate the MFP-adjusted updates for the ASC payment system, the AFS, the CLFS and the DMEPOS fee schedules for CY 2011 and each subsequent year by subtracting the MFP adjustment from each payment system's CPI–U update factor, as further described in the following sections.

a. Ambulatory Surgical Centers (ASCs)

Section 1833(i)(2)(C)(i) of the Act requires that, if the Secretary has not updated the ASC payment amounts in a calendar year, the payment amounts "shall be increased by the percentage increase in the Consumer Price Index for all urban consumers (U.S. city average) as estimated by the Secretary for the 12-month period ending with the midpoint of the year involved." Because the Secretary does update the ASC payment amounts annually, we adopted a policy, which we codified at § 416.171(a)(2)(ii), to update the ASC conversion factor using the CPI–U for CY 2010 and subsequent calendar years. Therefore, the annual update to the ASC payment system is the CPI–U (referred to as the CPI–U update factor). Section 3401(k) of the ACA amends section

1833(i)(2)(D) of the Act by adding a new clause (v) which requires that "any annual update under [the ASC payment] system for the year [after application of any reduction in any update for failure to report on quality measures, if the Secretary implements a quality reporting program for ASCs] shall be reduced by the productivity adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act" (which we refer to as the MFP adjustment) effective with the calendar year beginning January 1, 2011. Section 3401(k) of the ACA states that application of the MFP adjustment to the ASC payment system may result in the update to the ASC payment system being less than zero for a year and may result in payment rates under the ASC payment system for a year being less than such payment rates for the preceding year.

In accordance with section 1833(i)(2)(C)(i) of the Act, before applying the MFP adjustment, the Secretary first determines the "percentage increase" in the CPI–U, which we interpret cannot be a negative number. Thus, in the instance where the percentage change in the CPI–U for a year is negative, we proposed to hold the CPI–U update factor for the ASC payment system to zero. Section 1833(i)(2)(D)(v) of the Act, as added by section 3401(k) of the ACA, then requires that the Secretary reduce the CPI–U update factor (which would be held to zero if the CPI–U percentage change is negative) by the MFP adjustment, and states that application of the MFP adjustment may reduce this percentage change below zero. If the application of the MFP adjustment to the CPI–U percentage increase would result in an MFP-adjusted CPI–U update factor that is less than zero, then the annual update to the ASC payment rates would be negative and payments would decrease relative to the prior year.

Table 62 provides illustrative examples of how we proposed the MFP adjustment would be applied to the ASC payment system. These examples show the implication of a positive CPI–U update factor with a smaller MFP adjustment, a positive CPI–U update factor with a large MFP adjustment, and a CPI–U update factor of zero. We discussed the application of the MFP adjustment to the CPI–U update factor for the ASC payment system under the OPPS/ASC CY 2011 proposed rule (75 FR 46359). We solicited comment on the specific mathematical calculation of the MFP adjustment and noted that comments on the application of the MFP adjustment to the CPI–U update factor under the ASC payment system should be made to the OPPS/ASC CY 2011 proposed rule (75 FR 46359). As discussed previously, we received and responded to comments on the calculation of the MFP adjustment and have finalized this methodology as described above. In the CY 2011 OPPS/ASC final rule with comment period, we respond to any comments received and finalize the methodology for applying the MFP adjustment to the CPI–U update factor for ASCs.

TABLE 62—MULTIFACTOR PRODUCTIVITY ADJUSTED PAYMENT UPDATE: ILLUSTRATIVE EXAMPLE

CPI–U (percent)	MFP Adjustment (percent)	MFP-Adjusted CPI–U update factor (percent)
4.0	1.3	2.7
4.0	4.7	−0.7
0.0	0.2	−0.2

b. Ambulance Fee Schedule (AFS)

In accordance with section 1834(l)(3)(B) of the Act, the AFS rates are required to be increased each year by the percentage increase in the CPI–U (U.S. city average) for the 12-month period ending with June of the previous year. We refer to this update as the Ambulance Inflation Factor (AIF). Section 3401(j) of the ACA amends section 1834(l)(3) of the Act to add a new subclause (C) which states that, for CY 2011 and each subsequent year, after determining the percentage increase under section 1834(l)(3)(B) of the Act (that is, the CPI–U percentage increase, or AIF), the Secretary shall reduce such percentage increase by the MFP adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act (as discussed previously). Section 3401(j) of the ACA further amends section 1834(l)(3) of the Act to state that the application of subclause (C) (that is, the reduction of the CPI–U percentage increase by the MFP adjustment) may result in that percentage increase being less than zero for a year, and may result in payment rates for a year being less than such payment rates for the preceding year.

In accordance with section 1834(l)(3) of the Act as amended by section 3401(j) of the ACA, before applying the MFP adjustment, the Secretary first determines the "percentage increase" in the CPI–U, which we interpret cannot be a negative number. Thus, in the instance where the percentage change in the CPI–U for a year is negative, we proposed to hold the AIF to zero. The statute then requires that the Secretary reduce the CPI–U percentage increase (which would be held to zero if the CPI–U percentage change is negative) by the MFP adjustment, and states that application of the MFP adjustment may reduce this percentage increase below zero. If the application of the MFP adjustment to the CPI–U percentage increase would result in an MFP-adjusted AIF that is less than zero, then the annual update to the AFS would be negative and payments would decrease relative to the prior year.

Table 63 provides illustrative examples of how we proposed the MFP adjustment would be applied to the AFS. Finally, we proposed to revise § 414.610(f) to require that the AIF be reduced by the MFP adjustment as required by the statute in determining the annual update under the ambulance fee schedule for CY 2011 and each subsequent year, and to revise § 414.620 to state that changes in payment rates resulting from the incorporation of the AIF and the MFP adjustment will be announced by CMS by instruction and on the CMS Web site, as we previously discussed.

TABLE 63—EXAMPLES OF THE APPLICATION OF THE MULTIFACTOR PRODUCTIVITY ADJUSTMENT TO THE AMBULANCE FEE SCHEDULE

[In percent]

A CPI–U	B AIF	C MFP Adjustment	D Final update rounded
2.0	2.0	1.3	0.7
0.0	0.0	1.3	−1.3
−2.0	0.0	1.3	−1.3
1.0	1.0	1.3	−0.3

Comment: A few commenters stated that the payment rates for ambulances have consistently fallen further behind the actual cost of providing the service. One commenter stated that the annual update as adjusted by the MFP adjustment would create a permanent disparity between future increases in Medicare's reimbursement for ambulance services and the increased costs of providing those services. The commenter stated that the two largest operational costs for ambulance services are personnel and fuel, neither of which readily lends itself to operational efficiencies. In particular, they claim that small and rural providers lack the volume of transports needed to obtain any meaningful economies of scale. These commenters acknowledge that the MFP adjustment is mandated by law, but they state that it will likely result in a net decrease in the already insufficient base reimbursement rate for air

ambulances. One commenter urged CMS to take whatever steps are within its authority to mitigate the potentially devastating effects of this new requirement.

Response: As discussed previously and in the CY 2011 PFS proposed rule (75 FR 40124), we are required by law to implement section 3401(j) of the ACA, which requires that for CY 2011 and each subsequent year, after determining the percentage increase under section 1834(l)(3)(B) of the Act (that is, the CPI–U percentage increase, or AIF), the Secretary shall reduce such percentage increase by the MFP adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act. In response to the request that we "mitigate" any potentially negative effects of the MFP adjustment, we reiterate that we are required to apply the MFP adjustment to the AIF in the manner specified by the ACA, and we are not authorized by statute to implement measures to mitigate the effects of this adjustment. We note that certain temporary payment add-ons, currently codified at section 1834(l)(12) and (13) of the Act and at section 146(b)(1) of the MIPAA, were extended by the ACA through December 31, 2010 (see section VI.F(1) and (3). of this final rule). To date, Congress has not extended these payment add-ons beyond December 31, 2010. Therefore, we are finalizing the methodology for applying the MFP adjustment to the AIF for the AFS as described in the proposed rule. We did not receive any comments regarding the proposed changes to § 414.610(f) and § 414.620 as discussed above. Therefore, we are revising the regulation text in § 414.610(f) and § 414.620 as proposed, with the following minor technical change. In § 414.610(f), for clarification purposes, we have made a technical revision to refer to the definition of the productivity adjustment in section 1886(b)(3)(B)(xi)(II) of the Act.

c. Clinical Laboratory Fee Schedule

Section 1833(h)(2)(A)(i) of the Act, as amended by section 3401(l) of the ACA, states that the Secretary shall set the CLFS "for the 12-month period beginning July 1, 1984, adjusted annually (to become effective on January 1 of each year) by, subject to clause (iv) [as added by the ACA], a percentage increase or decrease equal to the percentage increase or decrease in the Consumer Price Index for All Urban Consumers (United States city average) minus, for each of the years 2009 through 2010, 0.5 percentage points". Therefore, the adjustment to the fee schedule can be an increase or a decrease.

Section 3401(l) of the ACA also adds new clause (iv) that applies in CY 2011 and each subsequent year. This clause requires the Secretary to reduce the adjustment in clause (i): (1) By the MFP adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act for 2011 and each subsequent year and (2) by 1.75 percentage points for each year of 2011 through 2015 (the "percentage adjustment"). However, section 3401(l) of the ACA states that the MFP adjustment will not apply in a year where the adjustment to the fee schedule determined under clause (i) is zero or a percentage decrease for a year. Further, the application of the MFP adjustment shall not result in an adjustment to the fee schedule under clause (i) of less than zero for a year.

Therefore, we proposed to apply the MFP adjustment as follows:

- If the CPI–U update factor is positive, it would be reduced by the MFP adjustment. However, if application of the MFP adjustment would result in a negative update, the update would be held to zero.
- If the CPI–U update factor is zero or negative, the MFP adjustment would not be applied.

Section 3401(l) of the ACA also states that the application of the percentage adjustment may result in an adjustment to the fee schedule under clause (i) being less than zero for a year and may result in payment rates for a year being less than such payment rates for the preceding year. Therefore, we are applying the percentage reduction of 1.75 percentage points to any adjustment to the fee schedule under the CLFS as directed by section 3401(l) of the ACA.

Table 64 provides illustrative examples of how we proposed these adjustments would be applied to fees under the CLFS.

TABLE 64—EXAMPLES OF THE APPLICATION OF THE MULTIFACTOR PRODUCTIVITY ADJUSTMENT TO THE CLINICAL LAB FEE SCHEDULE

A	B	C	D	E
CPI–U	MFP Adjustment	Productivity adjusted update	(−1.75%) Percentage point reduction	Resultant change to CLFS
		Greater of 0.0% or (Col. A) − (Col. B)		Col. C − Col. D
2.0%	1.3%	0.7%	−1.75%	−1.05%
0.0%	N/A	0.0%	−1.75%	−1.75%
−2.0%	N/A	0.0%	−1.75%	−1.75%

We did not receive any public comments on the proposed methodology for applying the MFP adjustment and the percentage adjustment to the CPI–U update factor for the CLFS. Therefore, we are finalizing the methodology for applying the MFP adjustment and the percentage adjustment to the CPI–U update factor for the CLFS as described in the proposed rule.

d. DMEPOS Fee Schedule

Sections 1834(a)(14), 1834(h)(4), and 1842(s)(1) of the Act mandate annual updates to the fee schedule amounts established in accordance with these respective sections for covered items of durable medical equipment defined in section 1834(a)(13) of the Act, prosthetic devices, orthotics, and prosthetics defined in section 1834(h)(4)(B) and (C) of the Act, and parenteral and enteral nutrients, equipment, and supplies described in section 1842(s)(2)(D) of the Act. The annual updates for 2011 for these sections are based on the percentage increase in the CPI–U for the 12-month period ending with June 2010. The annual updates for years subsequent to 2011 will be based on the percentage increase in the CPI–U for the 12-month period ending with June of the previous year (that is, June 2011 for 2012, June 2012 for 2013, etc.). Since 1990 for durable medical equipment, prosthetic devices, orthotics, and prosthetics and since 2003 for

parenteral and enteral nutrients, equipment, and supplies, we have notified the public of these annual fee schedule updates through program instructions.

Section 3401(m) of the ACA amends section 1834(a)(14) of the Act to add a new subparagraph (L) which provides that, for CY 2011 and each subsequent year, the fee schedule update factor based on the CPI–U for the 12-month period ending with June of the previous year is to be reduced by the MFP adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act (as discussed previously). Section 3401(m) of the ACA further amends section 1834(a)(14) of the Act to state that the application of subparagraph (L) (that is, the reduction of the CPI–U percentage increase by the MFP adjustment) may result in that percentage increase being less than zero for a year, and may result in payment rates for a year being less than such payment rates for the preceding year.

Section 3401(n) of ACA amends section 1834(h)(4)(A) of the Act to add a new clause (xi) which provides that, for CY 2011 and each subsequent year, the fee schedule update factor based on the CPI–U for the 12-month period ending with June of the previous year is to be reduced by the MFP adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act (as discussed previously). Section 3401(n) of the ACA further amends section 1834(h)(4) of the Act to state that the application of subparagraph (A)(xi) (that is, the reduction of the CPI–U percentage increase by the MFP adjustment) may result in that percentage increase being less than zero for a year, and may result in payment rates for a year being less than such payment rates for the preceding year.

Section 3401(o) of ACA amends section 1842(s)(1) of the Act to add a new subparagraph (B) and clause (ii) which provides that, for CY 2011 and each subsequent year, the fee schedule update factor based on the CPI–U for the 12-month period ending with June of the previous year is to be reduced by the MFP adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act (as discussed above). Section 3401(o) of the ACA further amends section 1842(s)(1) of the Act to state that the application of subparagraph (B)(ii) (that is, the reduction of the CPI–U percentage increase by the MFP adjustment) may result in that percentage increase being less than zero for a year, and may result in payment rates for a year being less than such payment rates for the preceding year.

The MFP adjustments to the CPI–U percentage increases used in calculating the fee schedule adjustment factors for these DMEPOS items and services as mandated by sections 3401(m), (n), and (o) of ACA are simple mathematical calculations and are ministerial in nature. Therefore, we plan to implement these adjustments for 2011 and subsequent years as part of the annual program instructions related to the DMEPOS fees schedule updates.

Comment: Several commenters stated that there were flawed assumptions underlying the statutory requirements of section 3401 of the ACA. Since the MFP measures the contributions to productivity of all sectors involved in production, the commenters argued that the indiscriminate application of the MFP to DMEPOS items was fundamentally flawed.

Response: As discussed previously, sections 3401(m), (n), and (o) of the ACA require us to implement the MFP adjustments to the CPI–U percentage increases for DMEPOS items and services. Therefore, we are finalizing our proposal to apply the MFP adjustments to the CPI–U percentage increases for DMEPOS items and services for calendar year 2011 and subsequent years.

Q. Section 4103: Medicare Coverage of Annual Wellness Visit Providing a Personalized Prevention Plan

1. Background and Statutory Authority

a. Medicare Coverage of Preventive Physical Examinations and Routine Checkups

Section 1862(a)(7) of the Act explicitly prohibits Medicare payment for routine physical checkups with certain exceptions. One exception is for the Initial Preventive Physical Exam (also referred to as the "Welcome to Medicare" exam) established for new beneficiaries effective for services furnished on or after January 1, 2005. Section 4103 of the ACA has provided another exception to section 1862(a)(7) of the Act. Congress expanded Medicare coverage under Part B to include an Annual Wellness Visit (AWV) Providing Personalized Prevention Plan Services (hereinafter referred to as the annual wellness visit) in sections 1861(s)(2)(FF) and 1861(hhh) of the Act. This expanded benefit is effective on January 1, 2011.

Preventive care has become an increasing focus of the Medicare program. For instance, section 101 of the MIPPA expanded Medicare's authority to establish coverage for additional preventive services that meet specified criteria. Among other things, the AWV will encourage beneficiaries to obtain the preventive services already covered by Medicare, and that are appropriate for each individual beneficiary.

b. Requirements for Coverage of an Annual Wellness Visit

Section 4103 of the ACA provides for coverage of an AWV, which includes and/or takes into account a health risk assessment (HRA), and creates a personalized prevention plan for beneficiaries, subject to certain eligibility and other limitations. Section 4103 of the ACA also requires the identification of elements that must be provided to a beneficiary as part of the first visit for personalized prevention plan services and requires the establishment of a yearly schedule for appropriate provision of such elements thereafter.

The ACA specifies elements to be included in a personalized prevention plan, including establishment of, or update to, the individual's medical and family history, a list of the individual's current providers and suppliers and medications prescribed for the individual; measurement of height, weight, body-mass index (BMI) or waist circumference, and blood pressure; detection of any cognitive impairment; establishment or update of an appropriate screening schedule for the next 5 to 10 years; establishment or update of a list of risk factors and conditions (including any mental health conditions) for which interventions are recommended or underway; and furnishing of personalized health advice and referral, as appropriate, to health education or preventive counseling services or programs. The ACA also permits the Secretary to add other elements to the AWV determined to be appropriate.

2. Regulatory Revisions—Summary of Proposed Rule and Comments

The following is a summary of the provisions of the proposed rule and of the comments received. We received 75 public comments on the proposed rule regarding the AWV. Commenters included national and state professional associations, medical societies and national medical advisory groups, hospital associations and hospitals, physicians, registered dietitians, occupational therapists, senior advisory groups, health insurance associations, manufacturers, and others. While a number of commenters expressed concern that the proposal was either too prescriptive, not sufficiently targeted to development of an individual's personalized prevention plan, or was

not broad enough to include additional screening or prevention services; a large majority of commenters applauded CMS' efforts in developing the rule and generally supported its major elements. Many suggested clarification and revision of the rule in a number of different areas, including the proposed definitions of "detection of any cognitive impairment," and "health professional," and the components of the first and subsequent AWVs. One special concern of a number of commenters was related to the health risk assessment (HRA). Some provisions of section 4103 of the ACA require the HRA be included in the new AWV, which is effective January 1, 2011. Other provisions of section 4103 of the ACA give the Secretary a longer period of time to develop an HRA in consultation with relevant groups and entities.

a. Revisions to § 411.15, Particular Services Excluded From Coverage

To conform the regulations to the statutory requirements of the ACA, we proposed to revise § 411.15 by specifying an exception to the routine physical checkups exclusion from coverage in § 411.15(a)(1) and modifying § 411.15(k)(15). We proposed to add a provision to permit coverage of AWVs that meet the eligibility limitations and the conditions for coverage we are specifying in § 410.15 (Annual Wellness Visit Providing Personalized Prevention Plan Services).

Coverage of the AWV is furnished under Medicare Part B only. As provided in the statute, this new coverage allows payment for an AWV if provided on or after January 1, 2011 for an individual who is no longer within 12 months after the effective date of his or her first Medicare Part B coverage period, and has not received either an IPPE or an AWV within the past 12 months.

b. Revisions to Part 410, Subpart B—Medical and Other Health Services

We proposed to add § 410.15, Annual wellness visits providing Personalized Prevention Plan Services: Conditions for and limitations on coverage, to codify the coverage of the annual wellness visit providing personalized prevention plan services.

We proposed to define several terms in § 410.15(a), including: (1) Detection of any cognitive impairment; (2) Review of the individual's functional ability and level of safety; (3) Health professional; (4) Establishment of, or update to the individual's medical and family history; (5) Eligible beneficiary; (6) First annual wellness visit providing personalized prevention plan services; and (7) Subsequent annual wellness visit providing personalized prevention plan services.

Further, the ACA allows the addition of any other element determined appropriate by the Secretary for inclusion in an AWV. We reviewed the relevant medical literature, current clinical practice guidelines, and the recommendations of the United States Preventive Services Task Force (USPSTF). Pursuant to that review, we proposed to add depression screening and functional status screening as elements of the first AWV only. In its December 2009 Recommendation Statement, the USPSTF recommends screening adults for depression when staff-assisted depression care supports are in place to assure accurate diagnosis, effective treatment and follow-up (Grade: B recommendation). That is, the USPSTF recommends the service; there is high certainty that the net benefit is moderate or there is moderate certainty that the net benefit is moderate to substantial.

The USPSTF is currently updating its 1996 recommendation regarding screening for hearing impairment in older adults as well as its recommendation on falls in the elderly. Until those recommendations can be published, functional status screening (including assessment of hearing impairment, ability to successfully perform activities of daily living, fall risk, and home safety) appears supportable by evidence only for the first AWV.

We also proposed that the definition of the term "Establishment of, or an update to the individual's medical and family history" include more than a list of all of an individual's prescribed medications as provided in the statute, but also supplements such as vitamins and calcium that an individual may be exposed to or use. Supplements such as these are commonly used by many beneficiaries and the medical literature supports that their use be closely monitored by health professionals because they can interact with prescribed medications and may result in unintended medical problems in individual cases. The statute expressly permits the Secretary to add other elements such as this to the AWVs.

To facilitate future consideration of coverage of additional elements in the definitions of the first and subsequent AWVs in § 410.15(a), we proposed that the determination of other required elements for those purposes will be made through the national coverage determination (NCD) process. The NCD process, as described in section 1862(l) of the Act, is evidence based, transparent, and furnishes the opportunity for public comment.

(1) Definitions

We proposed to add the following definitions to § 410.15(a):

• *Detection of any cognitive impairment,* for purposes of this section, means assessment of an individual's cognitive function by direct observation, with due consideration of information obtained by way of patient report, concerns raised by family members, friends, caretakers, or others.

Comment: A number of commenters strongly supported the mandatory inclusion of "detection of any cognitive impairment" in the new AWV, but several suggested the proposed definition did not go far enough and needed to be clarified. One commenter suggested that the definition was "too vague and may be interpreted as optional by a provider unless a subjective memory complaint is raised by the individual or a concern is raised by family members, friends, caretakers, or others", and that a brief cognitive screening test was necessary "to accurately identify the presence of cognitive deficits, and to indicate whether additional testing is necessary * * *" Another commenter expressed concern that "physicians cannot accurately assess cognitive function * * * by relying on direct observation or by report of the patient or knowledgeable informant." The commenter cited several recent publications and their own experience in support of revising the definition to include use of a standardized screening test. A number of commenters supporting the importance of the "detection of cognitive impairment" element, however, agreed with the definition that is used in the proposed rule, which does not require a standardized screening tool.

Response: We agree with the commenters that the "detection of cognitive impairment" is an important element of the AWV. As Boustani and colleagues (Ann Internal Medicine 2003;138:927–937) noted: "Dementia causes a high burden of suffering for patients, their families, and society. For patients, it leads to increased dependency and complicates other comorbid conditions. For families, it leads to anxiety, depression, and increased time spent caring for a loved one. The annual societal cost of dementia is approximately $100 billion (health care and related costs as well as lost wages for patients and family caregivers)."

Several commenters suggested revising the proposed definition by the

addition of a standardized screening tool. With the considerable variability in the range and causes of cognitive impairment, it is difficult to more specifically define this element without limiting it to specific diseases such as Alzheimer's since dementia in and of itself is broadly defined. The American Psychiatric Association stated: "the essential features of a dementia are acquired multiple cognitive deficits that usually include memory impairment and at least one of the following phenomena in the absence of a delirium that might explain the deficit: aphasia, apraxia, agnosia, or a disturbance in executive functioning (the ability to think abstractly and to plan, initiate, sequence, monitor, and stop complex behavior) (*http://www.psychiatryonline.com/content.aspx?aID=152634#152634*)." However, an evidence-based, standardized screening tool is not currently available. The USPSTF noted: "most screening tests have been evaluated in studies with small sample sizes, and the populations of patients on whom screening instruments have been tested have varied greatly, making it difficult to determine the overall performance of screening tests for dementia" (*http://www.uspreventiveservicestaskforce.org/3rduspstf/dementia/dementrr.pdf*). They concluded "that the evidence is insufficient to recommend for or against routine screening for dementia in older adults (I grade)." Since there is no nationally recognized screening tool for the detection of cognitive impairments at the present time, we are adopting the language in § 410.15(a) as proposed.

We disagree with one of the commenter's assertions that, in general, a physician cannot accurately assess cognitive function by direct observation or report of the patient or by report of the patient knowledgeable informant. We believe that physicians can use their best clinical judgment in the detection and diagnosis of cognitive impairments, along with determining whether additional resources may need to be used in the course of screening and treatment of the patient. We will continue to actively monitor advancements in screening, collaborate with the USPSTF, and will consider revising this element if the evidence is sufficient and a standardized screening test becomes available.

• *Review of the individual's functional ability and level of safety,* for purposes of this section includes, at a minimum, assessment of the following topics:

++ Hearing impairment;

++ Ability to successfully perform activities of daily living;

++ Fall risk;

++ Home safety.

Comment: One commenter asked CMS to add "assessment of level of support" to the proposed definition of "review of the individual's functional ability and level of safety" to recognize that the availability of a caregiver is an important indication of a beneficiary's ability to function and of their level of safety.

Response: We agree that family caregivers play an important role in the lives of the individuals they care for and support. However, we believe that the term as defined in the proposed rule is flexible enough to include a discussion of the availability of a caregiver as part of the review of functional ability and level of safety, if determined appropriate by the health professional furnishing the AWV. Therefore, we are not adopting this public comment and are adopting the definition as proposed.

• *Health professional,* for purposes of this section means:

++ A physician who is a doctor of medicine or osteopathy (as defined in section 1861(r)(1) of the Act); or

++ A practitioner as described in clause (i) of section 1842(b)(18)(C) of the Act, that is, a physician assistant, nurse practitioner, or clinical nurse specialist (as defined in section 1861(aa)(5) of the Act); or

++ A medical professional (including a health educator, registered dietitian, or nutritionist) or a team of medical professionals, who are working under the supervision of a physician as defined in this definition.

Comment: A number of commenters requested clarification of specific elements of the definition of the term "Health professional" and offered specific suggestions for revisions that might be made in the definition in the final rule. One commenter suggested that section 4103 of the ACA provided that the AWV could be performed by a health professional or a team of health professionals such as a registered nurse that works under the supervision of a physician. When registered nurses or other medical professionals who are not Medicare-recognized providers or practitioners perform the AWV under the supervision of a physician, the commenter assumes that the visit "would be billed by the supervising physician who may or may not see the patient during the visit." The commenter believed that because the AWV has its own benefit category then Medicare payments would not fall under the "incident to" benefit (section 1861(s)(2)(B) of the Act and the 'incident to' criteria would not need to be met.

Response: We agree with the commenter that the AWV has its own benefit category as provided in section 1861(s)(2)(FF) and section 1861 (hhh) of the Act and, therefore, is not subject to the "incident to" rules. The commenter is also correct that our intent is that where the wellness visit is performed by a "team of medical professionals working under the supervision of a physician" it is the supervising physician who would bill Medicare Part B for the visit. In this final rule, we are clarifying that the visit would be furnished under the "direct supervision" (as defined in 42 CFR 410.32(b)(3)(ii)), of a physician (as defined in paragraph (i) of this definition). Direct supervision in the office setting means that the physician must be present in the office suite and immediately available to furnish assistance and direction throughout the performance of the procedure. It does not mean that the physician must be present in the room when the procedure is performed. In response to the public comment, we are amending the definition of the term "health professional" in the final rule to read in paragraph (iii) as follows:

"A medical professional (including a health educator, a registered dietitian, or nutrition professional, or other licensed practitioner or a team of such medical professionals, working under the direct supervision (as defined in 42 CFR 410.32(b)(3)(ii)) of a physician as defined in paragraph (i) of this definition."

Comment: A commenter asserted that the definition of "health professional" should recognize other potential members of the team beyond those listed in the examples in the statute. The commenter recommends that CMS "specify who may or should be a part of the team and should define 'medical professional' as licensed health practitioners whose services are specifically covered and regulated by Medicare. Otherwise, in the commenter's view, paraprofessionals, non-licensed providers or others may be inappropriately used as part of the team. The commenter supported the requirement "that the team should be directed by a physician," but believes "CMS should provide some standards for the members of the team as a protection for consumers and to assure that funding for this visit will be spent on authentic, appropriate and regulated services." The commenter also suggested that occupational therapists be specifically included as a potential component of the team.

Another commenter asked CMS to clarify "how the required tasks in the visit will be performed and how care coordination will occur among the eligible medical professionals and/or team that provides the AWV."

Response: While we appreciate the commenters' concerns, we are not assigning particular tasks or restrictions for specific members of the team in this final rule. We believe it is better for the supervising physician to assign specific tasks to qualified team members (as long as they are licensed in the State and working within their state scope of practice). This approach gives the physicians and the team the flexibility needed to address the beneficiary's particular needs on a particular day. It also empowers the physician to determine whether specific medical professionals (such as occupational therapists) who will be working on his or her wellness team are needed on a particular day. The physician is able to determine the coordination of various team members during the AWV.

Comment: One commenter urged CMS to revise its proposed definition of "Health professional" to include the phrase "practicing in any particular patient care setting." The commenter believed that this clarification is needed to "encourage retail based practitioners to provide these services, thereby making this benefit more appealing for patients." The commenter suggested that "retail based health practitioners are uniquely positioned to ensure the optimal utilization of this new benefit."

Response: Although we are interested in encouraging the maximum use of the AWV and encourage all of the health professionals listed in section 1861(hhh)(3) of the Act that are qualified to furnish this service to participate in providing this part B service, we are not adopting the commenter's suggestion to include the phrase "practicing an any particular patient care setting." This particular phrase is not used in section 1861(hhh)(3) of the Act, which instead references specific health professionals that may furnish the AWV without regard to a particular physical location. Moreover, we note that the phrase "any particular patient care setting" is ambiguous, and may in fact unintentionally narrow the availability of the benefit or raise unnecessary questions regarding the setting. Therefore, we are not adopting the commenter's suggested revision of that definition to include language on specific patient care settings.

Comment: One commenter noted that certified nurse-midwives (CNMs) are not specifically mentioned in the ACA as it relates to the AWV, though nurse practitioners and clinical nurse specialists are enumerated among practitioners eligible to participate. The commenter requested that CMS review the education, background and scope of practice services under the Medicare program and ensure that CNMs are clearly eligible to provide the Medicare AWV.

Response: Congress defined the term "health professional" as including certain practitioners "described in clause (i) of section 1842(b)(18)(C)" of the Act. Clause (i) specifically includes physician assistants (PAs), nurse practitioners (NPs) and clinical nurse specialists. CNMs, in contrast, are identified in clause (iii) of 1842 (b)(18)(C) of the Act. Given the specificity of the cross-reference to only clause (i), we presume that Congress acted intentionally by not including a reference to clause (iii). Thus, we believe additional legislation would be needed to recognize CNMs as a "health professional" under this section. However, we note, that it is possible that a CNM could be chosen by a physician as a member of the team of professionals under the physician's supervision.

Comment: One commenter requested that CMS clarify the language of the proposed rule in the definition of "medical professional" in § 410.31(a). Section 4103 of the ACA uses the terms "registered dietitian" or "nutrition professional" in its definition of "medical professional" eligible to be involved in the AWV. The proposed rule used the term "nutritionist" instead of "nutrition professional." The commenter asks CMS to replace the term "nutritionist" with "nutrition professional" in § 410.15(a).

Response: We agree with the commenter and we are replacing the term "nutritionist" with the term "nutrition professional" in § 410.15(a) of the final rule, which is consistent with the language used in section 4103 of the ACA.

Comment: One commenter is concerned about the CMS proposal to require the term "physician" for purposes of the definition of "health professional" to be either a doctor of medicine or a doctor of osteopathy as defined in section 1861(r)(1) of the Act. The commenter suggests that we use the full definition of a "physician as defined in section 1861(r) of the Act.

Response: Section 4103 of the ACA does not specifically define what type of physician is eligible for performing or supervising the team of health professionals who will be performing or supervising the AWV. In developing the proposed rule, we considered the various types of physicians that are identified in section 1861(r)(2), (r)(3), (r)(4), and (r)(5) of the Act. These include doctors of dental surgery, doctors of podiatric medicine, doctors of optometry, and chiropractors, whose scope of medical practice is generally limited by State law to a particular part (or parts) of the human anatomy. Given the State licensing restrictions, some individuals who are physicians for certain limited purposes under section1861(r) of the Act could exceed their scope of practice if they attempted to furnish the AWV. Based on this information, we are leaving the definition of a physician unchanged in the final rule.

- *Establishment of, or an update to the individual's medical and family history,* for purposes of this section, means, at minimum, the collection and documentation of the following:

++ Past medical and surgical history, including experiences with illnesses, hospital stays, operations, allergies, injuries, and treatments.

++ Use or exposure to medications and supplements, including calcium and vitamins.

++ Medical events experienced by the beneficiary's parents and any siblings and children, including diseases that may be hereditary or place the individual at increased risk.

Comment: A number of commenters requested that additional items be included in the definition of the term "Establishment of, or an update to the individual's medical and family history," such as tobacco use, sexual history, history and results of pelvic exams, and falls history.

Response: Our proposed definition at § 410.15(a) was not intended to establish an exhaustive list of the elements of an individual's medical and family history. We included the phrase "at minimum" to reflect that the listed criteria represent a floor and not a ceiling on the items included in the medical and family history. We agree that the items of additional information identified by the commenters are relevant and could be included in the medical and family history that is maintained by the health professional for the Medicare beneficiary. However, we believe that the term as defined in the proposed rule is flexible enough to encompass the additional items requested by the commenters. Therefore, we are not adopting the commenters' specific language and are implementing the proposed definition in this final rule.

- *Eligible beneficiary,* for purposes of this section, means an individual who is no longer within 12 months after the

effective date of his or her first Medicare Part B coverage period, and has not received either an initial preventive physical examination or an AWV providing a personalized prevention plan within the past 12 months.

Comment: Several commenters suggested that CMS misinterpreted the eligibility criteria for the AWV and its relationship to the one-time initial preventive physical examination defined in section 1861(ww)(1) of the Act, which is only covered during the first 12 months after a beneficiary's enrollment in Medicare Part B takes effect.

In suggesting that CMS' proposed definition was inappropriate, one commenter pointed to statutory language that states: "A beneficiary shall only be eligible to receive an initial preventive physical examination (as defined under subsection (ww)(1)) at any time during the 12-month period after the date that the beneficiary's coverage begins under Part B and shall be eligible to receive personalized prevention plan services under this subsection provided that the beneficiary has not received such services within the preceding 12 month period." The commenter argued that this language intends either an initial preventive physical examination or an AWV to be available during the 12-month period after an individual's Part B coverage begins provided the individual has not received either service within the preceding 12-months. To further bolster this argument, the commenter points to clause (ii) of paragraph (G) directing the Secretary to "establish procedures to make beneficiaries aware of the option to select an initial preventive physical examination or personalized prevention plan services during the period of 12-months after the date that a beneficiary's coverage begins under Part B, which shall include information regarding any relevant differences between such services."

Response: The statutory text cited by the commenter fails to reflect a later Congressional amendment. Specifically, Congress replaced the language of paragraph (G) by section 10402(b) of the ACA. That amendment replaced the text cited by the commenter so that the version of paragraph (G) that was enacted into law reads: "A beneficiary shall be eligible to receive only an initial preventive physical examination (as defined under subsection (ww)(1)) during the 12-month period after the date that the beneficiary's coverage begins under Part B and shall be eligible to receive personalized prevention plan services under this subsection each year thereafter provided that the beneficiary has not received either an initial preventive physical examination or personalized prevention plan services within the preceding 12-month period."

This amendment clarifies that only an initial preventive physical examination is covered during the 12-month period after an individual's Part B coverage begins, and that coverage of the new AWVs begins during the individual's second year of Part B coverage. In other words, they were intended to be sequential, not concurrent, benefits. We believe the proposed definition of "eligible beneficiary" included in the proposed rule correctly implements this aspect of sections 4103 and 10402(b) of the ACA. Therefore, we are finalizing the proposed definition without accepting the commenters' suggestion.

(2) Requirements of the First Annual Wellness Visit Providing Personalized Prevention Plan Services

We proposed that the first AWV providing personalized prevention plan services for purposes of this benefit include the following:

- Establishment of an individual's medical and family history.
- Establishment of a list of current providers and suppliers that are regularly involved in providing medical care to the individual.
- Measurement of an individual's height, weight, body mass index (or waist circumference, if appropriate), blood pressure, and other routine measurements as deemed appropriate, based on the individual's medical and family history.
- Detection of any cognitive impairment that the individual may have.
- Review of the individual's potential (risk factors) for depression, including current or past experiences with depression or other mood disorders, based on the use of an appropriate screening instrument for persons without a current diagnosis of depression, which the health professional as defined in this section may select from various available screening questions or standardized questionnaires designed for this purpose and recognized by national professional medical organizations.
- Review of the individual's functional ability and level of safety, based on direct observation or the use of appropriate screening questions or a screening questionnaire, which the health professional as defined in this section may select from various available screening questions or standardized questionnaires designed for this purpose and recognized by national professional medical organizations.
- Establishment of the following:

++ A written screening schedule, such as a checklist, for the next 5 to 10 years as appropriate, based on recommendations of the USPSTF and the Advisory Committee on Immunization Practices, and the individual's health status, screening history, and age-appropriate preventive services covered by Medicare.

++ A list of risk factors and conditions for which primary, secondary or tertiary interventions are recommended or are underway, including any mental health conditions or any such risk factors or conditions that have been identified through an initial preventive physical examination (as described under § 410.16), and a list of treatment options and their associated risks and benefits.

- Furnishing of personalized health advice to the individual and a referral, as appropriate, to health education or preventive counseling services or programs aimed at reducing identified risk factors and improving self management, or community-based lifestyle interventions to reduce health risks and promote self-management and wellness, including weight loss, physical activity, smoking cessation, fall prevention, and nutrition.
- Any other element determined appropriate through the National Coverage Determination process.

Comment: A number of commenters were supportive of the proposal to use the national coverage determination process and rely on the USPSTF recommendations in developing the definitions of the first and subsequent AWV definitions, along with the addition of any other elements in the future, since the services need to be based on evidence. One commenter suggested that CMS publish a notice in the **Federal Register** about consideration of other preventive services via the NCD process. The commenter expressed concern that many groups and members of the public were more familiar with the regulatory notification process than the NCD process.

Response: We appreciate the commenter's concerns regarding receiving timely information about topics that CMS is considering for coverage of preventive services via the NCD process. As discussed in the preamble, the NCD process is an evidence-based, transparent process and furnishes the opportunity for public comment, and is described in section 1862(l) of the Act. The CMS Web site at *http://www.cms.gov/mcd/index_list.asp?list_type=nca* contains a

list of all national coverage analyses that are currently under consideration. Those interested in receiving information via e-mail regarding national coverage analyses under consideration can sign up to receive e-mail notifications via the CMS coverage listserv at *http://www.cms.gov/InfoExchange/03_listserv.asp#TopOfPage.* Given the relatively fast timeline described in section 1862(l) of the Act, we do not believe it is feasible to add a requirement for publication of a notice in the **Federal Register** whenever an NCD is opened. Therefore, we are not adopting the public comment. Please note that we do publish a listing in the **Federal Register** of all NCDs that are issued. This information is included in the quarterly notice issued pursuant to section1871(c) of the Act.

Comment: Several commenters noted that we did not include the health risk assessment (HRA) in our proposal that section 4103 of the ACA ultimately requires to be part of the AWV. Several of these commenters strongly supported the CMS approach of not immediately implementing the HRA requirement on January 1, 2011. Some commenters noted that a separate ACA provision also concerns the establishment of an HRA, but used later deadlines. Specifically, section 1861(hhh)(4)(A) of the Act requires consultation to develop publically available guidelines for HRAs by March 23, 2011. One commenter noted that "the relative recent enactment of the Affordable Care Act provided CMS little time to establish standard processes related to a health risk assessment (HRA)." Another commenter stressed the need for a standardized HRA model or models that is/are recognized and accepted nationally. Another commenter urged us to act as expeditiously as possible in a consultative way by directly engaging the major medical organizations and stakeholders who represent physicians and other clinicians who see Medicare beneficiaries. One commenter recommended that the "HRA program should also be pilot-tested before widely imposed to determine such critical factors as the effectiveness of the guidelines and the administrative burden imposed on the physicians."

However, other commenters expressed the view that the HRA is such a fundamental element of the new AWV that it should be added to the final rule and required beginning January 1, 2011. One commenter indicated that the absence of an HRA "will delay the opportunity to improve beneficiaries' health and to control costs as a result. We believe that the HRA is the lynchpin that makes the wellness visit more than another office visit and should be included as a required element beginning January 1, 2011." Several of these commenters suggested that CMS should rely on the National Committee for Quality Assurance (NCQA) certification process, the Utilization Review Accreditation Committee (URAC) accreditation process, or another certification process that already exists effective January 1, 2011, at least as an interim measure.

Response: We agree with commenters that the HRA is an important part of the AWV and we are working to fully implement this relevant provision of the ACA. However, because the statute has specified a time frame and procedures that require consultation with relevant groups and entities prior to publication of the required HRA guidelines, it is not possible to complete those procedures by January 1, 2011. Moreover, we do not believe it would be prudent to mandate an interim HRA without completing the consultation process that Congress has specifically required. The point of the consultation is to achieve a greater national consensus on the HRA to be used. As one of the large physician specialty groups has noted during the public comment period, a standardized HRA is needed to "ensure use of appropriate and robust HRA from a marketplace where considerable variation exists today." We agree with this commenter that what is needed is an HRA "that has been standardized by the Department of Health and Human Services." The development of an evidence-based, standardized model, nonetheless requires extensive work and input from a number of public agencies, professional societies and private organizations. It is important to carefully complete that process so that the evidence-based standard will have a sound scientific foundation and broad acceptance.

Consistent with the statutory deadlines, and one commenter's suggestion "that the Secretary of HHS expedite the development of a standardized HRA," CMS is collaborating with the Centers for Disease Control and Prevention (CDC) which is directed by section 4004(f) of the ACA to develop a personalized prevention plan tool and has an in-depth knowledge of HRAs. We understand that CDC is planning to convene an open scientific meeting in Atlanta at the beginning of 2011 to facilitate that development. This meeting should allow broad public input into the development of an evidence-based standardized HRA, as recommended by the American Medical Association (AMA) which urged "CMS to continue to develop the HRA guidelines, in consultation with the AMA and other relevant stakeholders representing physicians," and the American College of Physicians (ACP) which recommended "that the agency engage directly with the most relevant stakeholders * * * to ensure that the HRA fulfills the vital role of promoting optimal preventive care and related interventions envisioned by the ACA." CMS has also commissioned a technology assessment from the Agency for Healthcare Research and Quality (AHRQ) to be completed by the end of 2010 that will help in the development of the HRA guidelines and model.

While commenters have suggested that we require the use of one or more currently available assessment tools until an evidence-based standardized model is available, we believe it would be premature and inefficient to make such a recommendation at this time without adequate scientific review and broader stakeholder input. As noted in the proposed rule, HRA guidelines and standards are being developed by the CDC and when a model HRA instrument is available and determined by the Secretary to be appropriate for the use of Medicare beneficiaries, we will revise these regulations to include the HRA as an element in the definition of the AWV.

Comment: Several comments expressed concern that there were too many required elements in the definition of the "First annual wellness visit" and that the definition should be modified so that some of the elements are discretionary based on an individual's medical history or the results of an HRA and one suggested that CMS should "clarify the role that the HRA care plan plays in addressing these elements as a prelude to the office visit." This commenter noted that the proposed CMS definition "assumes that the physician does not already know the patient's medical and family history or other providers and suppliers involved in the patient's care" which may not always be the case.

One commenter stated that the AWV "is supposed to deliver a service tailored to the specific needs of the patient based on some combination of the HRA results, medical history, and practitioner expertise. Some elements could be required for every patient because the level of appropriateness does not vary much from patient to patient based on age, gender, and other factors. However, there are some elements the need for which varies greatly from patient to patient and even over time." This commenter

recommended "that CMS add general language stating that certain elements can be addressed, at least to some degree, as part of the HRA."

Response: We agree that a physician's or other health professional's need to include certain elements of the AWV may vary with the professional's knowledge of the individual's medical and family history and, in particular, with the results of an HRA, if available. However, until HRA guidelines have been developed and a standardized HRA model or models has/have been recognized and accepted nationally by the Secretary for use by Medicare beneficiaries, we do not believe it is appropriate to include more flexibility or alternatives to the proposed elements of the first wellness visit. Therefore, we are leaving the proposed elements (i) through (viii) of the definition of the first AWV unchanged in this final rule.

(3) Requirements of Subsequent Annual Wellness Visits Providing Personalized Prevention Plan Services

We proposed that subsequent AWVs providing personalized prevention plan services for purposes of this benefit include the following:

- An update of the individual's medical and family history.
- An update of the list of current providers and suppliers that are regularly involved in providing medical care to the individual, as that list was developed for the first AWV providing personalized prevention plan services.
- Measurement of an individual's weight (or waist circumference), blood pressure, and other routine measurements as deemed appropriate, based on the individual's medical and family history.
- Detection of any cognitive impairment, as that term is defined in this section, that the individual may have.
- An update to both of the following:

++ The written screening schedule for the individual as that schedule was developed at the first AWV providing personalized prevention plan services.

++ The list of risk factors and conditions for which primary, secondary or tertiary interventions are recommended or are under way for the individual as that list was developed at the first AWV providing personalized prevention plan services.

- Furnishing of personalized health advice to the individual and a referral, as appropriate, to health education or preventive counseling services or programs as that advice and related services are defined in paragraph (a) of this section.
- Any other element determined through the NCD process.

We proposed that body-mass index (BMI) should be calculated at the first AWV and may be recalculated at subsequent AWVs, if indicated. Given the general stability of adult height, we would not expect the BMI to meaningfully change in the absence of significant weight change. In the proposed rule, we did not require measurement of the individual's height in the subsequent annual visit.

We proposed to add two distinct elements to the definition of the first AWV only: Depression screening and functional status and level of safety assessment. Our review of the medical literature and the USPSTF recommendations indicates that the optimum frequency for those services is unknown. In the proposed rule, we stated we believe it would be premature and beyond the current evidence to require depression screening and functional status assessment included in the definition of subsequent visits, but they may be performed at these visits, if indicated.

Comment: A number of commenters expressed concern that the proposed definition of the term "Subsequent annual wellness visit * * *" did not include the depression screening and the functional ability and level of safety screening, elements (v) and (vi), respectively, that were included in the proposed definition of the term "First annual wellness visit." One commenter noted that "while the USPSTF states that the optimal interval for screening is unknown, it does recognize that recurrent screening may be needed for certain patients." At a minimum, the commenter suggested that "the regulations should require additional screening for depression after new chronic conditions are diagnosed and when reduction in functioning is noted." The commenter also indicated that yearly screening for functional ability and level of safety "is important to determine changes in functional impairments identified in previous screening as well as any new limitations. Such screening will assist in determining care plans, further assessments, and other services to allow a beneficiary to remain in the community as long as possible."

Response: We agree that depression screening in older adults is important. We have reviewed the USPSTF guidelines (*http://www.uspreventiveservicestaskforce.org/uspstf09/adultdepression/addeprrs.htm*) and have decided not to include it as a required element for subsequent AWVs largely since the USPSTF states that "the optimum interval for screening for depression is unknown." In addition, the USPSTF only recommends depression screening "when staff-assisted depression care supports are in place to assure accurate diagnosis, effective treatment, and follow-up." It is unclear if these supports are universally available in physician offices to allow adequate routine screening at the AWV. The USPSTF further notes: "recurrent screening may be most productive in patients with a history of depression, unexplained somatic symptoms, comorbid psychological conditions (for example, panic disorder or generalized anxiety), substance abuse, or chronic pain." If an individual is determined to be in this category from prior screening, such as at the IPPE or through an HRA, then it would appear appropriate on an individual basis to continue screening and to tailor the AWV based on risk.

Regarding functional ability and safety, we agree that for certain individuals, functional status and safety assessments (for example, fall prevention) may be important to consider on a more routine basis. For the general Medicare population, there are no A or B recommendations by the USPSTF in these areas and thus we have decided not to add functional status and safety assessments as universally required elements for the subsequent AWV. The AWV does allow for an individualized approach with a personalized prevention plan. For certain individuals where these areas are determined to be priorities, specific evaluations may be voluntary parts of subsequent visits. Since we closely monitor the USPSTF recommendations for updates or changes, if specific new or revised recommendations come out in the future, we may consider modifications at that time.

Comment: Several commenters requested that we add additional screening elements to the first and subsequent AWVs regarding: (1) Alcohol use status; (2) Tobacco use or other substance use status; (3) Sexual health and incontinence; (4) Physical activity level; (5) Risk of falls; (6) Nutrition status including under nutrition and/or malnutrition; (7) Vision and eye health; (8) an assessment for osteoarthritis; and (9) assessment of gait and balance.

Response: We appreciate the suggestions provided. The intent of the proposed definition for "establishment of, or an update to the individual's medical and family history" means at a minimum the collection and documentation of the information outlined in the proposed definition of this term. Additional items like those

suggested by the commenters can be identified and discussed as part of the establishment of, or an update to the individual's medical and family history. We do not believe that it is necessary to outline an exhaustive list of various items that may be included in the definition. We believe that physical activity level and risk of falls are adequately addressed in the definition of "review of the individual's functional ability and level of safety".

We recognize that the health professional (or supervising physician in the case of a team of medical professionals) furnishing the AWV is qualified and would be able to determine the specific additional information that needs to be discussed in order to establish a comprehensive medical and family history and provide the best care possible for the individual.

In the future, as the medical science continues to evolve, CMS may consider adding other elements to the first and subsequent AWVs through use of the national coverage determination process, if considered appropriate.

Comment: One commenter requested that the first and subsequent AWVs include a detailed current medications and supplements list as part of the individual's medical and family history.

Response: We agree that medications and supplements such as vitamins and calcium are an important part of an individual's medical and family history. We included in the proposed definition of the "Establishment of, or an update to the individual's medical and family history" provisions for the collection and documentation of use or exposure to medications and supplements, including calcium and vitamins. We believe the information included in the definition addresses the commenter's concerns and, therefore, we are implementing element (i) of the first AWV and element (i) of the subsequent AWV, as proposed, in this final rule.

Comment: One commenter suggested that measurement of BMI be viewed as a vital sign that should be included in both the first and subsequent AWVs.

Response: We explained in the preamble to the proposed rule that "body mass index (BMI) should be calculated at the first AWV and may be recalculated at subsequent visits if indicated. Given the general stability of adult height, we would not expect the BMI to meaningfully change in the absence of significant weight change, and therefore we are not requiring measurement of the individual's height during subsequent AWVs. Accordingly, in this final rule, we are not adding the BMI requirement to the subsequent AWV.

Comment: Several commenters suggested CMS should specify in the final rule that an individual's family history of various diseases, obesity, or risk factors for a disease such as diabetes should be included in the list of risk factors and conditions for which primary, secondary or tertiary interventions are recommended for an individual as described in element (vii)(B) of the first AWV and element (v)(B) of the subsequent AWV.

Response: We agree that the risk factors and conditions identified by the commenters should be reflected in the list of risk factors referenced in element (vii)(B) of the first AWV and element (V)(B) of the subsequent AWV for possible referral if the individual's health professional determines that it is appropriate to do so, based on the information obtained during the first and/or subsequent AWV. Therefore, we believe no additional changes to the description of "individual's medical and family history" as part of the elements of the first and subsequent AWVs are in order.

Comment: We received a number of comments from physicians, health care providers, and others urging us to add voluntary advance care planning as an element to the definitions of both the "first annual wellness visit" and the "subsequent annual wellness visit." They base their recommendation upon a number of recent research studies, and the inclusion by statute of a similar element in the existing initial preventive physical examination (IPPE) benefit. One commenter noted that "the new wellness visit was wisely designed to build on the initial preventive physical exam, providing an ongoing, systematic focus on wellness and prevention by harmonizing Medicare services into a coordinated benefit." Another commenter stated that "the AWV provides an appropriate setting for providers to initiate voluntary conversations about future care wishes, as they counsel beneficiaries on other aspects of their health and achieving their personal health goals." The commenter added that the "care plans discussed in the 'Welcome to Medicare visit' should not be frozen in time, but revisited as an important component of patient wellness."

Response: We agree that voluntary advance care planning should be added as an element of the definitions of both the "first annual wellness visit" and the "subsequent annual wellness visit" based on the evidence described below, and the inclusion of a similar element in the IPPE benefit (also referred to as the Welcome to Medicare visit), since January 1, 2009. We believe that this will help the physician to better align the personal prevention plan services with the patient's personal priorities and goals.

Recently, Detering and colleagues (British Medical Journal 2010; 340:c1345) reported that "advance care planning improves end of life care and patient and family satisfaction and reduces stress, anxiety, and depression in surviving relatives." Silveira and colleagues (New England Journal of Medicine 2010; 362:1211–8) reported that "data suggest that most elderly patients would welcome these discussions." Lastly, a study by Fischer and colleagues (Journal of the American Geriatric Society 2010; 58:400–401) found "no evidence that these (advance directive) discussions or completing an advance directive lead to harm."

Based on the available evidence and other relevant information, we are adding to the final regulation a definition of the term "voluntary advance care planning" to read as follows:

"Voluntary advance care planning" means, for purposes of this section, verbal or written information regarding the following areas:

(1) An individual's ability to prepare an advance directive in the case where an injury or illness causes the individual to be unable to make health care decisions.

(2) Whether or not the physician is willing to follow the individual's wishes as expressed in an advance directive.

This definition is based on the definition of "end-of-life planning", which is included as an element of the IPPE as described in section 1861(ww)(3) of the Act. Thus, the addition of "voluntary advance care planning" to the AWVs extends to those visits a similar element to the one already in the one-time IPPE.

We are also revising the definitions of the terms "First annual wellness visit" and "Subsequent annual wellness visit" by inserting a new element (ix) to the definition of the term "first annual wellness visit" and a new element (vii) to the definition of the term "subsequent annual wellness visit" in § 410.15 (a) of the final regulation text that would read as follows: "Voluntary advance care planning as that term is defined in this section upon agreement with the individual."

Comment: Commenters requested that we specifically require that certain referrals for various services be included as part of the personalized prevention plan including: (1) Community-based and other lifestyle management services; (2) kidney disease education services; (3) urogynecologist visits to discuss

incontinence issues; and (4) tobacco use cessation counseling and related services.

Response: In the proposed rule, the definition for the first AWV included provisions for the furnishing of personalized health advice and a referral, as appropriate, to health education or preventive counseling services or programs aimed at reducing identified risk factors and improving self-management, including weight loss, physical activity, smoking cessation, fall prevention, and nutrition. Under the definition of the subsequent AWV, we included provisions for furnishing of personalized health advice to the individual and a referral as appropriate, to health education or preventive counseling services.

We believe that the health professionals who are furnishing the AWVs whether they be first or subsequent visits are the most qualified to determine an appropriate list of referrals for education services and preventive counseling services for each individual. We believe that the proposed definitions for the first and subsequent AWVs address commenters' concerns regarding community-based and lifestyle management services, kidney disease education services, referrals to further discuss treatment for incontinence issues, and tobacco use cessation counseling services.

Comment: One commenter suggested that CMS require the identification of a family caregiver that provides care for and supports a beneficiary with chronic conditions. The commenter states that "it is vitally important for medical professionals to know whether the beneficiary has a family caregiver or has a family member/friend who will fill that role."

Response: We appreciate the role that family caregivers provide in the lives of individuals with chronic conditions. We expect that the identification of a family care giver will be addressed when the health professional furnishing the AWV discusses the patient's ability to successfully perform activities of daily living. However, we do not believe the identification of a caregiver should be required of beneficiaries who wish to take advantage of AWVs so we are not requiring such identification in the final rule.

Comment: Several commenters suggested that CMS use its authority under section 4105 of the ACA to expand Medicare coverage of certain preventive services that are already available under Part B such as screening for abdominal aortic aneurysms, HIV screening, colorectal cancer screening, breast cancer screening (mammography), and counseling/intensive behavioral (nutrition) counseling in accordance with the USPSTF recommendations for these services. Other commenters suggested using this authority to expand Medicare Part B coverage for preventive immunizations to include vaccinations such as herpes zoster and tetanus shots, which are currently covered under Part D in accordance with the recommendations of the Advisory Committee on Immunizations Practices (ACIP) for adults age 65 and older.

Response: We appreciate the commenters' support for expanded coverage of preventive services under the Part B program. Section 4105 of the ACA grants the Secretary the authority to modify or eliminate coverage of certain preventive services that are already available to certain beneficiaries to the extent that such modification or elimination of coverage is consistent with the recommendations of the USPSTF. Many of the items requested (including coverage of ultrasound screening for abdominal aortic aneurysms, medical nutrition therapy, certain colorectal cancer screening tests, and mammography) are already recognized as "preventive services" in section 1861(ww)(2) of the Act. Because those items are already covered by Medicare, we will need to further evaluate whether coverage for those items or services should be modified in light of the specific grades of the USPSTF as permitted under section 4105 of the ACA. Due to the complexities of considering whether to modify or eliminate coverage of certain preventive services under Medicare Part B, we decided not to address this subject in the proposed rule, which focuses instead on implementation of section 4103 and 4104 of the ACA.

We note that we may consider other expansions in Medicare coverage for "additional preventive services" in the future through section 1861(ddd)(1) of the Act. Under the "additional preventive service" statute, however, the recommendations of the Advisory Committee on Immunizations Practices (ACIP) alone do not provide a basis for expanded coverage. Additional information regarding Medicare coverage for additional preventive services can be found in the **Federal Register** (November 19, 2008, (73 FR 69869 through 69870 and 69933)) and § 410.64. We will continue to monitor the USPSTF recommendations for updates or changes, and when appropriate, consider possible coverage through the NCD process. We also note that individuals can request a NCD using the procedures set forth in our Guidance Document: "Factors CMS Considers in Opening a National Coverage Determination," available at *http://www.cms.gov/mcd/ncpc_view_document.asp?id=6.* We also note that the Secretary has exercised the authority granted by section 1861(ddd)(1) of the Act to add coverage under Part B of "additional preventive services" such as HIV screening for individuals at high risk consistent with the USPSTF recommendations. Since many of the items that the commenters requested are already covered as "preventive services" or "additional preventive services," we are not making any changes based on these comments at the present time. We will continue to monitor access to these preventive services and may exercise the authority granted by section 4105 of the ACA in the future.

Comment: A commenter requested CMS to "consider whether there are opportunities to leverage its 'coverage with evidence development' process to help build the evidence base for new preventive services." The commenter further suggested CMS "review those preventive services with a USPSTF grade of 'I' ('insufficient evidence to recommend for or against') and consider the development of a 'coverage with evidence development' initiative to help generate the data needed to fully assess certain preventive services" via partnerships with other federal agencies.

Response: We are interested in increasing the evidence base concerning new preventive services. We will need to further consider whether the CED process could be used for items or services that currently are rated with an "I." We note that under § 410.64 of these regulations, an "additional preventive service" must have a grade of A or B recommendation by the USPSTF. Because this suggestion will require further study, we are not making any changes to our final rule at this time.

Comment: Several commenters provided suggestions for continuing education and outreach regarding issues related to the new AWV. One commenter asked that we educate providers about evidence based recommendations for colorectal cancer screening and monitor adherence to guidelines via performance measures. Another commenter requested education and outreach materials regarding the AWV and materials that also explain the differences between the initial preventive physical examination and the new AWV. An additional commenter requested that we inform patients of the importance of preventive services including colorectal cancer

screening options (colonoscopy, sigmoidoscopy, and fecal occult blood tests).

Response: We agree that it is important to raise awareness concerning the expanded Medicare coverage provided under the ACA. We will issue appropriate manual instructions and other educational information to the Medicare providers and beneficiaries, including an MLN Matters article (Medicare Learning Network) and information in the 2011 Medicare and You Handbook regarding implementation of the new AWV benefit.

Comment: One commenter recommended that we eliminate the initial preventive physical examination since it is similar to the provisions of the new AWV.

Response: We appreciate the attention being drawn to the similarity between the initial preventive physical examination and the new AWV. While we did model some of the elements of the new AWV after elements in the initial preventive physical exam, we note that these statutory provisions are separate and distinct benefits and that Medicare beneficiaries will be eligible to receive both of these benefits in sequence if the appropriate regulatory requirements are met.

In summary, as a result of the comments received, we are making the following changes in this final rule:

- We are amending the definition of the term "health professionals" to read in paragraph (iii) as follows: "A medical professional (including a health educator, a registered dietitian, or nutrition professional, or other licensed practitioner or a team of such medical professionals, working under the direct supervision (as defined in § 410.32(b)(3)(ii)) of a physician as defined in paragraph (i) of this definition."
- We are adding to the final regulation the definition of the term "voluntary advance care planning" to read as follows:

"Voluntary Advance care planning" means, for purposes of this section, verbal or written information regarding the following areas:

(1) An individual's ability to prepare an advance directive in the case where an injury or illness causes the individual to be unable to make health care decisions.

(2) Whether or not the physician is willing to follow the individual's wishes as expressed in an advance directive.

- We are also revising the definitions of the terms "First AWV" and "Subsequent AWV" by inserting a new element (ix) to the definition of the term "first AWV" and a new element (vii) to the definition of the term "subsequent AWV" in § 410.15(a) of the final regulation text that would read as follows: "Voluntary advance care planning as that term is defined in this section upon agreement with the individual."

3. Payment for the Annual Wellness Visit Providing Personalized Prevention Plan Services (PPPS)

Section 4103 of the ACA created a new benefit for an "annual wellness visit" (AWV) with personalized prevention plan services. The ACA amended section 1861(s)(2) of the Act by adding a new subparagraph (FF) to provide for coverage of the AWV beginning January 1, 2011. Section 4103 of the ACA also added new subsection (hhh) to section 1861 of the Act to define "personalized prevention plan services" and to specify who may furnish these services. Finally, section 4103 of the ACA amended section 1848(j)(3) of the Act and provided for payment of AWVs under the PFS, and specifically excluded the AWV from the hospital OPPS. Therefore, a single payment under the PFS would be made when an AWV is furnished by a physician, physician assistant, nurse practitioner, or clinical nurse specialist, or by a medical professional or team of medical professionals, as determined appropriate by the Secretary, under the supervision of a physician.

To allow for Medicare reporting and payment of the AWV, we proposed to create two new HCPCS G-codes for reporting the first wellness visit and creation of a personalized prevention plan and the subsequent visits available to the beneficiary every 12 months. Specifically, we proposed to establish the following two new HCPCS codes for CY 2011: GXXXA (AWV; includes a personalized prevention plan of service (PPPS), first visit) and GXXXB (AWV; includes a personalized prevention plan of service (PPPS), subsequent visit). A beneficiary's first AWV to any practitioner would be reported to Medicare under HCPCS code GXXXA, even if the beneficiary had previously received an initial preventive physical examination (IPPE) that was covered by Medicare. Beneficiaries, in their first 12 months of Part B coverage, would continue to be eligible only for an IPPE. After the first 12 months of Part B coverage, on or after January 1, 2011, beneficiaries would be eligible for an AWV described by HCPCS code GXXXA or GXXXB, provided that the beneficiary has not received an IPPE or AWV within the preceding 12-month period.

Comment: Several commenters noted that the IPPE and the first AWV are very similar services with significant overlap. These commenters urged CMS not to develop a separate coding structure for the first AWV as it would be a burden for practitioners to review and determine the specific preventive service the beneficiary is eligible for on a given date. In addition, the commenters noted that a delay in information being available through the Common Working File (CWF) may cause practitioners to inaccurately determine a beneficiary's eligibility for a particular service, be it the IPPE, the first AWV, or a subsequent AWV. One commenter requested that CMS clarify that a beneficiary may choose either an IPPE or a first AWV during the beneficiary's first 12 months of Part B coverage.

Response: The set of services described by the IPPE is very specific and while the services contained in the IPPE may be similar to the services included in the AWV, these are two separate benefits under Medicare. Just as there are component services specified for the IPPE, there are component services specified for the AWV. Moreover, according to section 1861(hhh)(4)(G) of the Act (as added by section 4103(b) of the ACA), a beneficiary is eligible only for the IPPE during the 12-month period after the date the beneficiary's coverage begins under Part B and is only eligible for the AWV each year thereafter. Therefore, in order to be able to identify the particular benefit and services furnished to a beneficiary and ensure coverage of the services, we believe that we must distinguish between the IPPE and the AWV through the use of distinct HCPCS codes. We understand that there may be instances where practitioners may experience a delay in the information available through the CWF, but we expect the situations where this would affect the services furnished (and subsequently billed) by a practitioner would be uncommon. The CWF will reflect the beneficiary's eligibility for the IPPE or first or subsequent AWV based on all claims submitted to date to the Medicare contractors. Only under the limited circumstances where a practitioner previously furnished an IPPE or AWV to the beneficiary but had not yet submitted the claim to Medicare would a practitioner inaccurately determine a beneficiary's eligibility for the IPPE or first or subsequent AWV.

Comment: Several commenters urged CMS to recognize the CPT codes in the Preventive Medicine Services series, ranging from 99381 (Initial comprehensive preventive medicine

evaluation and management of an individual including an age and gender appropriate history, examination, counseling/anticipatory guidance/risk factor reduction interventions, and the ordering of laboratory/diagnostic procedures, new patient; infant (age younger than 1 year)) through 99397 (Periodic comprehensive preventive medicine reevaluation and management of an individual including an age and gender appropriate history, examination, counseling/anticipatory guidance/risk factor reduction interventions, and the ordering of laboratory/diagnostic procedures, established patient; 65 years and older), for reporting and payment of the AWV, rather than creating the two new HPCPCS G-codes as proposed. The commenters noted that the practitioner could report the appropriate CPT code based on the beneficiary's age and new or established patient status, allowing specific reporting of the AWV with a CPT code that would result in appropriate payment for the service provided to the beneficiary. In addition, the commenters urged CMS to use the existing CPT Editorial Panel and the AMA RUCs process to modify these existing codes so they would be applicable for AWV services.

Response: Prior to the establishment of the IPPE benefit, Preventive Medicine Services CPT codes in the range from 99381 through 99397 were excluded from Medicare coverage because preventive medicine evaluation and management services were noncovered by Medicare. When the IPPE benefit was implemented, we created HCPCS code G0402 (Initial preventive physical examination; face-to-face visit, services limited to new beneficiary during the first 12 months of Medicare enrollment) as we have specifically defined through the regulatory process the elements that are required for this service to be billed and paid by Medicare. We refer readers to the Medicare Claims Processing Manual, Pub. 100–04, chapter 18, section 80 for additional information regarding the components of the IPPE. When implementing the IPPE, we recognized that CPT codes describing preventive services were available, but we did not believe it was appropriate to use these existing CPT codes for the IPPE, given the general nature of the services they describe in contrast to the specific nature of the IPPE service.

Similarly, in section VI.Q.2. of this final rule with comment period, we have adopted the final specific components of the AWV for CY 2011, consistent with the statutory requirements for the service. While we acknowledge that the elements of the preventive medicine evaluation and management (E/M) services reported by the CPT codes could significantly overlap with the components of the AWV, we believe that it is important to utilize specific HCPCS codes to identify the AWV as there are coverage periodicity requirements that apply to the AWV, as well as specific requirements regarding the elements of the AWV. While we understand the commenters' request to use the established set of CPT codes for the AWV, we do not believe that the existing CPT code descriptors should be subject to adjustment and limitation based on this new benefit as these CPT codes are currently used by many practitioners to report noncovered preventive medicine E/M services furnished to Medicare beneficiaries. In addition, coverage for the AWV begins on January 1, 2011, and we believe that our authority to create and maintain Level II HCPCS codes allows us a mechanism to implement these codes quickly and effectively. While we would not necessarily be opposed to the use of CPT codes to report the AWV in the future if CPT codes existed that met our specific purposes, time does not allow for the establishment of new CPT codes or the revision of existing codes for the AWVs that are covered as of January 1, 2011.

After consideration of the public comments we received, we are finalizing our CY 2011 proposal to adopt two new HCPCS G-codes for reporting the AWV in CY 2011. While we proposed these codes as GXXXA and GXXXB for the first and subsequent AWVs, respectively, the final codes and their descriptors are G0438 (Annual wellness visit; includes a personalized prevention plan of service (PPPS), first visit) and G0439 (Annual wellness visit; includes a personalized prevention plan of service (PPPS), subsequent visit). We note that practitioners furnishing a preventive medicine E/M service that does not meet the requirements for the IPPE or the AWV would continue to report one of the preventive medicine E/M services CPT codes in the range of 99381 through 99397 as appropriate to the patient's circumstances, and these codes continue to be noncovered by Medicare.

A beneficiary would be eligible for one first AWV covered by Medicare that must include all of the required elements that we have adopted in our final policy for CY 2011, as discussed in section VI.Q.2. of this final rule with comment period. All subsequent AWVs would include the required elements for those visits as also described in section VI.Q.2. of this final rule with comment period. All AWVs other than the beneficiary's first AWV would be reported as subsequent visits, even if a different practitioner furnished the subsequent AWV. We expect there to be continuity and communication among the practitioners caring for beneficiaries over time with respect to AWVs, and this would include the case where a different practitioner furnishing a subsequent AWV would update the information in the patient's medical record based on the patient's interval history since the previous AWV.

As we stated in the CY 2011 PFS proposed rule (75 FR 40128), the first AWV described by HCPCS code GXXXA (G0438) is similar to the IPPE that is currently reported with HCPCS code G0402 (Initial preventive physical examination; face-to-face visit, services limited to new beneficiary during the first 12 months of Medicare enrollment). We believe that the physician work and nonfacility PE of the IPPE and the first AWV are very similar, given that both represent an initial beneficiary visit focused on prevention. In the CY 2010 PFS final rule with comment period discussion of payment for the IPPE (74 FR 61767), we noted that in the context of physician work and intensity, HCPCS code G0402 was most equivalent to CPT code 99204 (Level 4 new patient office or other outpatient visit). Therefore, for CY 2011, we proposed to crosswalk the same physician work RVUs of 2.43 from CPT code 99204 to HCPCS codes G0402 and GXXXA (G0438). Similarly, we believe the direct PE inputs for all of these services are similar and, therefore, we proposed to assign the same direct PE inputs to HCPCS codes G0402 and GXXXA (G0438) as are included for CPT code 99204. We noted that currently, the direct PE inputs for HCPCS code G0402 also include preventive assessment forms, and we proposed to add this supply to the PE for HCPCS code GXXXA (G0438) as well because we believe it would be used in the first AWV. The proposed CY 2011 PE and malpractice RVUs for HCPCS code GXXXA (G0438) were displayed in Addendum B to the proposed rule (75 FR 40640). We also noted that we proposed no facility PE RVUs for HCPCS code GXXXA (G0438) because only a single payment would be made under the PFS when this service is furnished. There is no separate facility payment for GXXXA (G0438) when a practitioner furnishes this service in the facility setting.

Moreover, in the CY 2011 PFS proposed rule (75 FR 40128), we also indicated that we believe that a subsequent AWV described by HCPCS code GXXXB (G0439) is most similar,

from the perspectives of physician work and PE, to CPT code 99214 (Level 4 established patient office or other outpatient visit). The subsequent AWV is a patient visit for PPPS that includes certain required elements, such as updating information regarding the patient's history, risk factors, and regular medical care providers and suppliers since the prior AWV, and obtaining routine measurements. We believe the physician work and direct PE of a subsequent AWV are similar, in terms of E/M visit level, to the first AWV, which we proposed to value like a level 4 new patient office or other outpatient visit, as we had previously valued the IPPE. However, the subsequent AWV would typically be for an established patient and, as described earlier in this section, we proposed that only certain AWV elements must be furnished in the first AWV. As a result, in the CY 2011 PFS proposed rule (75 FR 40129), we stated that we believe it would be most appropriate to value the subsequent AWV based upon an E/M visit for an established patient. Therefore, for CY 2011 we proposed to crosswalk the same physician work RVUs of 1.50 from CPT code 99214 to HCPCS code GXXXB (G0439). Furthermore, we believe the direct PE inputs for these two services are also similar and, therefore, we proposed to assign the same direct PE inputs to HCPCS code GXXXB (G0439) as were assigned to CPT code 99214. We note that we also proposed to add the same preventive assessment forms to the PE for HCPCS code GXXXB (G0439) as we proposed to add for HCPCS code GXXXA (G0438) because we believe this supply would be used in both the first and subsequent AWVs. The proposed CY 2011 PE and malpractice RVUs for HCPCS code GXXXB were displayed in Addendum B to the CY 2011 PFS proposed rule (75 FR 40640). Similar to our treatment of HCPCS code GXXXA (G0438) for the first AWV, we proposed no facility PE RVUs for HCPCS code GXXXB (G0439) as only a single payment would be made under the PFS when this service is furnished. There is no separate facility payment for GXXXB (G0439) when a practitioner furnishes this service in the facility setting.

Comment: A number of commenters supported the proposed payment for the first and subsequent AWVs based on a crosswalk to level 4 new and established patient office and other outpatient visits. Several commenters recommended that CMS vary the payment for the AWV based on the visit's complexity, arguing that beneficiaries with multiple health risk factors would require additional practitioner time and intensity for the AWV. One commenter recommended that CMS value the first and subsequent AWVs based on the values applicable to level 5 new and established patient office and other outpatient visits, arguing that the typical Medicare beneficiary would have multiple health risk factors that would need to be addressed in the AWV through a complex plan specific to that beneficiary's situation. Other commenters argued that CMS should recognize the preventive medicine E/M services CPT codes from 99381 through 99387, whose values vary based on age and new or established patient status, to ensure appropriate payment for the first and subsequent AWVs. Furthermore, one commenter also pointed out that the existing preventive medicine E/M services CPT codes are currently being revalued by the AMA RUC as part of the Fourth 5-Year Review of Work to ensure that the values for the services are commensurate with the level of practitioner work involved in furnishing the medical service.

A few commenters noted that they currently bill preventive medicine services E/M CPT codes 99381 through 99397 which are noncovered in Medicare, and indicated as such with status "N" (Noncovered service), in conjunction with Medicare-covered E/M visits. The commenters requested that CMS clarify whether practitioners would continue to be able to bill additional preventive services in the CPT code range of 99381 through 99397 in conjunction with the AWV.

Response: As discussed earlier in this section, we are adopting the final HCPCS codes G0438 and G0439 for reporting the first and subsequent AWVs, rather than recognizing the CPT codes for preventive medicine E/M services as covered only for purposes of the AWVs. With respect to the values for those preventive medicine E/M services CPT codes that some commenters believe would be appropriate for payment of the first and subsequent AWVs, we have not adopted the values for Medicare because the codes are noncovered by Medicare. Nevertheless, we publish the AMA RUC-recommended work values and the PE RVUs that result from application of our standard PE methodology to the AMA RUC-recommended PE inputs in Addendum B for the CPT codes. We compared the values we proposed for HCPCS codes G0438 and G0439 with the preventive medicine E/M services CPT codes because of the commenters' reasoning that these AMA RUC-recommended values would result in appropriate payment for AWVs. The values we proposed for HCPCS codes G0438 based on the work value and direct PE inputs for a level 4 new patient office or other outpatient visit are actually slightly higher (2.43 work RVUs; 2.14 fully implemented nonfacilty PE RVUs) than the new patient, 65 years and older CPT preventive medicine E/M services code (2.06 work RVUs; 1.87 nonfacility PE RVUs). In contrast, the values we proposed for HCPCS code G0439 based on the work value and direct PE inputs for a level 4 established patient office or other outpatient visit are slightly lower (1.50 work RVUs; 1.59 nonfacilty PE RVUs) than the establish patient, 65 years and old CPT preventive services code (1.71 work RVUs; 1.62 nonfacility RVUs). We note that if the AMA RUC provides revised recommendations to us for these preventive medicine E/M services CPT codes for a future year, we may conduct this analysis again based on that new information.

As discussed above, we note that additional preventive medicine services E/M CPT codes 99381 through 99397, noncovered by Medicare and indicated with status "N," may be furnished in conjunction with Medicare-covered E/M visits, including the AWV. However, we believe that it would be difficult to distinguish an AWV from another preventive medicine E/M service furnished in the same encounter that would be reported under a preventive medicine services E/M CPT code as there is substantial overlap in the components of CPT codes 99381 through 99397 and HCPCS codes G0438 and G0439 reported for the AWV.

Based on the final elements of the first and subsequent AWVs as adopted in section VI.Q.2. of this final rule, we do not believe that the first and subsequent AWVs would usually require the 60 or 40 minutes of physician face-to-face time that is typically associated with the level 5 new or established patient office or other patient visit, respectively. We continue to believe, as we proposed, that the typical physician time would be 45 or 25 minutes of face-to-face time, like that of the level 4 new or established patient office or other outpatient visit, respectively. We also believe the direct PE inputs for the AWV may be appropriately crosswalked to the direct PE inputs for the level 4 new or established patient office or other outpatient visit, with the addition of preventive assessment forms to both HCPCS codes G0438 and G0439, as we also proposed.

Comment: One commenter suggested that the upcoming definition of a health risk assessment (HRA) may add more

work to the AWV. The commenter recommended that once the HRA has been established, CMS should incorporate the RVUs from CPT code 99420 (Administration and interpretation of health risk assessment instrument (eg, health hazard appraisal) into the RVUs associated with the AWV to ensure that the costs of the HRA are recognized as part of the AWV service.

Response: As discussed previously in this section, the HRA guidelines and the model HRA tool are not yet available. As is our standard process, when more information becomes available on the nature of a particular service or the elements of the services change, we reevaluate the valuation of the services. Therefore, when the HRA is incorporated into the AWV, we will reevaluate the values for HCPCS codes G0438 and G0439.

After consideration of the public comments we received, we are finalizing our CY 2011 proposal to crosswalk the physician work RVUs of 2.43 from CPT code 99204 (level 4 new patient office or other outpatient visit) to HCPCS codes G0402 (IPPE) and G0438 (first AWV) and the physician work RVUs of 1.50 from CPT code 99214 (level 4 established patient office or outpatient visit) to HCPCS code G0439 (subsequent AWV). Similarly, we believe the direct PE inputs for all of these services are similar and, therefore, we are assigning the same direct PE inputs to HCPCS codes G0402 and G0438 as are included for CPT code 99204 and the same direct PE inputs to HCPCS code G0439 as are assigned to CPT code 99214. Preventive assessment forms have been added as supplies to both HCPCS codes G0438 and G0439. The final direct PE inputs for these codes are included in the final CY 2011 direct PE database available under downloads for the CY 2011 PFS final rule with comment period on the CMS web site at: *http://www.cms.gov/PhysicianFeeSched/PFSFRN/list.asp#TopOfPage.* The final work, PE, and malpractice RVUs for HCPCS codes G0438 and G0439 are displayed in Addendum B to this final rule with comment period. There is no separate facility payment for HCPCS code G0438 or G0439 when a practitioner furnishes either service in the facility setting.

In the CY 2011 PFS proposed rule (75 FR 40129), we noted that while we believe there could be overlap in the direct PE, malpractice expense, and physician work in both history taking and examination of the patient in the context of the initial or subsequent AWV and another E/M service, we did not propose to limit the level of a medically necessary E/M visit when furnished and billed with an AWV. As we stated in the CY 2005 PFS final rule with comment period with respect to the IPPE (69 FR 66289 through 66290), we do not want to prohibit the reporting of an appropriate level of service when it is necessary to evaluate and treat the beneficiary for acute and chronic conditions. However, at the same time, we believe the practitioner is better able to discuss health promotion, disease prevention, and the educational opportunities available with beneficiaries when their health status has been stabilized and the beneficiary is physically receptive. Therefore, depending on the clinical circumstances, a CPT code for a medically necessary E/M visit may be reported and appended with CPT modifier-25 (Significant, separately identifiable evaluation and management service by the same physician on the same day of the procedure or other service) to designate the E/M visit as a separately identifiable service from the initial or subsequent AWV. However, in the CY 2011 PFS proposed rule (75 FR 40129) we explained that we believe this scenario would be uncommon, and that we expect that no components of an encounter attributable to the AWV would be used in determining the level of a separate E/M visit that would also be reported.

Comment: A few commenters disagreed with CMS' assertion that reporting a significant, separately identifiable E/M visit for the same encounter as an AWV would be unusual. The commenters believe that reporting an E/M visit with an AWV would be typical, as the age and health conditions of the typical Medicare beneficiary would likely result in problem-oriented E/M services being furnished in association with the AWV in order to fully address the medical problems that were identified in the encounter. The commenters explained that providing this care during the same encounter as the AWV would be both clinically appropriate and convenient for the beneficiary.

Response: While we continue to believe that a practitioner is better able to discuss health promotion, disease prevention, and health education opportunities with beneficiaries when their health status has been stabilized and the beneficiary is physically receptive to prevention, the goal of the AWV, we acknowledge that the AWV encounter may provide an annually recurring opportunity for a beneficiary to receive medical care for his or her health problems. However, we continue to believe that a beneficiary who has an acute medical problem or condition would not receive optimal benefit from the AWV, which focuses on health promotion in the longer term. We encourage practitioners to be thoughtful regarding the best timing of the AWV to maximize its impact on beneficiary health since the AWV is covered by Medicare no more frequently than once every 12 months. Therefore, as we proposed, depending on the clinical circumstances, a CPT code for a medically necessary E/M visit may be reported and appended with CPT modifier −25 (Significant, separately identifiable evaluation and management service by the same physician on the same day of the procedure or other service) to designate the E/M visit as a separately identifiable service from the initial or subsequent AWV.

With respect to beneficiary cost-sharing, section 4103(c)(1) of the ACA amended section 1833(a)(1) of the Act and added subparagraph (X), referring to the PPPS to state that the amount paid shall be 100 percent of the lesser of the actual charge for the services or the amount determined under the payment basis determined under section 1848 of the Act, thereby eliminating coinsurance for the AWV. Finally, section 4103(c)(4) of the ACA amended section 1833(b) of the Act to specify that the Part B deductible will not apply to the AWV.

Comment: Many commenters expressed support for CMS' proposal to waive the beneficiary deductible and coinsurance for the AWV. The commenters noted that this waiver would likely encourage more beneficiaries to receive an AWV.

Response: We appreciate the commenters' support for our proposal to eliminate the beneficiary cost-sharing for the AWV as the statute requires. We refer readers to section VI.R. of this final rule with comment period for further discussion of the waiver of the deductible and coinsurance for preventive services beginning in CY 2011.

In summary, for CY 2011 we are adopting the following new HCPCS G-codes for reporting the AWV: G0438 (Annual wellness visit; includes a personalized prevention plan of service (PPPS), first visit); and G0439 (Annual wellness visit; includes a personalized prevention plan of service (PPPS), subsequent visit). These codes are valued for payment under the PFS using a crosswalk methodology for the work RVUs and direct PE inputs from the level 4 new and established patient office or other outpatient visit CPT codes. The final work, PE, and malpractice RVUs for HCPCS codes G0438 and G0439 are displayed in

Addendum B to this final rule with comment period. The deductible and coinsurance for the AWV is waived when coverage begins in CY 2011. Finally, the CPT code for a medically necessary E/M visit may be reported and appended with CPT modifier −25 (Significant, separately identifiable evaluation and management service by the same physician on the same day of the procedure or other service) to designate the E/M visit as a separately identifiable service from the initial or subsequent AWV when both are provided in the same encounter.

R. Section 4104: Removal of Barriers to Preventive Services in Medicare

1. Definition of "Preventive Services"

Section 4104 of the ACA revised section 1861(ddd) of the Act and added paragraph (3), which defined the term "preventive services" as follows:

- The specific services currently listed in section 1861(ww)(2) of the Act with the explicit exclusion of electrocardiograms (as specified in section 1861(ww)(2)(M) of the Act);
- The initial preventive physical examination (IPPE) established by section 611 of the MMA and defined in section 1861(ww)(1) of the Act; and
- The annual wellness visit including personalized preventive plan services, as specified by section 1861(hhh) of the Act as added by section 4103 of the ACA. We refer readers to section VI.Q. of this final rule with comment period for the CY 2011 provisions related to the coverage of and payment for the annual wellness visit. The regulations regarding coverage of the IPPE are specified in § 410.16 and remain unchanged by the ACA.

The specific preventive services included in the definition of "preventive services" in section 1861(ddd)(3)(A) of the Act as cross-referenced to section 1861(ww)(2) of the Act, excluding electrocardiograms, include the following:

- Pneumococcal, influenza, and hepatitis B vaccine and administration.
- Screening mammography.
- Screening pap smear and screening pelvic exam.
- Prostate cancer screening tests.
- Colorectal cancer screening tests.
- Outpatient diabetes self-management training (DSMT).
- Bone mass measurement.
- Screening for glaucoma.
- Medical nutrition therapy (MNT) services.
- Cardiovascular screening blood tests.
- Diabetes screening tests.
- Ultrasound screening for abdominal aortic aneurysm (AAA).
- Additional preventive services identified for coverage through the national coverage determination (NCD) process.

In the CY 2011 PFS proposed rule (75 FR 41029), we indicated that at that time the only additional preventive service identified for coverage through the NCD process was HIV testing. A proposed NCD for smoking cessation services for asymptomatic patients was released in May 2010 on the CMS Web site at: *http://www.cms.gov/mcd/index_list.asp?list_type=nca.* We stated that we would address the applicability of section 1861(ddd)(3)(A) of the Act (as added by section 4104 of the ACA) to these services if an NCD establishing them as additional preventive services was finalized. As of August 25, 2010, CMS finalized an NCD for "Counseling to Prevent Tobacco Use" and established smoking cessation services for asymptomatic patients, thus qualifying them as "additional preventive services" as defined at section 1861(ddd)(3)(A) of the Act, as cross-referenced to section 1861(ww)(2) of the Act.

We proposed to add the definition of "preventive services" in § 410.2 to implement the provisions of section 1861(ddd)(3) of the Act (as added by section 4104 of the ACA).

Comment: Many commenters supported CMS' definition of "preventive services," observing that the definition was fully aligned with section 1861(ddd)(3) of the Act (as added by section 4104 of the ACA).

Response: We appreciate the support of the commenters and are adopting this definition of "preventive services" in this final rule with comment period.

Comment: Several commenters expressed confusion about Medicare's definition of "preventive services" and its relationship to those services with a United States Preventive Services Task Force (USPSTF) recommendation grade of A [An "A" rating means the USPSTF recommends the service. There is high certainty that the net benefit is substantial.] or B [A "B" rating means the USPSTF recommends the service. There is high certainty that the net benefit is moderate or there is moderate certainty that the net benefit is moderate to substantial.].

Response: It appears that some of the commenters' confusion may be due to the use of two similar terms in the Medicare Act. In section 1861(ddd) of the Act, Congress defined two terms of art. The term, "preventive services," is described in section 1861(ddd)(3) of the Act and in this final rule with comment period in § 410.2. Congress also defined the term "additional preventive services" and that term was previously defined in § 410.64 of our regulations. Under section 1861(ddd)(1) of the Act, in order for the Secretary to add an "additional preventive service," the Secretary is required to use the national coverage determination process. Moreover, in addition to other standards, the item or service must be recommended with a grade of A or B by the USPSTF.

In section 1861(ddd)(3) of the Act (as added by section 4104 of the ACA), Congress expanded Medicare coverage under Part B to encourage the use of "preventive services." Among other things, Congress removed some of the Part B cost-sharing obligations to encourage patients to obtain certain of these services. We note that "additional preventive services" are one of the categories of specific services that are covered under section 1861(ww)(2) of the Act and, therefore, also fall within the term "preventive services" based on the cross-reference in section 1861(ddd)(3)(A) of the Act. Other specific services that are listed in section 1861(ww)(2) of the Act and that are included in the definition of "preventive services" are not required to have a grade A or B recommendation from the USPSTF. As we stated in the CY 2011 PFS proposed rule (75 FR 40130), "[n]ot all preventive services described in subparagraph (A) of section 1861(ddd)(3) of the Act are recommended by the USPSTF with a grade of A or B, and, therefore, some of the preventive services do not meet the criteria in sections 1833(a)(1) and (b)(1) of the Act for the waiver of the deductibles and coinsurance." We hope that this technical explanation helps to eliminate any confusion concerning the two separate terms of art.

Comment: Several commenters observed that some services, such as intensive behavioral (nutrition) counseling, have been given a grade A or B recommendation by the USPSTF but are not listed as "additional preventive services" in the CY 2011 PFS proposed rule. Another commenter requested that CMS identify all USPSTF-recommended services as "additional preventive services" and, therefore, recognize them as having a benefit category under Medicare, even if their coinsurance and deductible are not waived because their USPSTF recommendation is not a grade A or B.

Response: Under section 1861(ddd)(1) of the Act and our regulations in § 410.64, an item or service must meet other standards in addition to having received a grade of A or B recommendation by the USPSTF in order for the Secretary to determine that an item is an "additional preventive

service." As we previously noted, "additional preventive services" must also be established by using the NCD process. While some of the services recommended by the commenters for addition to Medicare's list of "additional preventive services" have a grade A or B recommendation by the USPSTF, this recommendation alone is not sufficient for those services to be included as "additional preventive services" that are covered by Medicare Part B. For instance, some of the USPSTF recommendations may be directed to a particular patient population (for example, pediatric services) that may not include Medicare beneficiaries.

However, we acknowledge the potential value to Medicare beneficiaries of those preventive services recommended by the USPSTF for populations covered by Medicare based on the medical evidence that led to the grade A or B recommendation. While certain preventive services with such a recommendation may not yet be covered by Medicare, these services have the potential to improve the health of beneficiaries. Therefore, we plan to proactively pursue Medicare coverage of "additional preventive services" with a grade A or B USPSTF recommendation through our current processes on our own initiative in light of our commitment to the health and wellness of Medicare beneficiaries.

Comment: A few commenters suggested the inclusion of additional services in the definition of "preventive services," including items or services that have not been reviewed by the USPSTF or where there is no NCD. In addition, several commenters urged CMS to recognize recommendations from organizations other than the USPSTF when considering services for inclusion as "additional preventive services."

Response: Because the term "preventive services," is specifically defined by statute in section 1861(ddd)(3) of the Act, we do not have unlimited authority to simply add items or services to this definition. As we have noted, however, the Secretary may add items or services as "additional preventive services" if the item or service meets the existing criteria in § 410.64. Among other things, the statute specifically requires that a new "additional preventive service" must have a grade A or B recommendation by the USPSTF.

We do not have the authority under section 1861(ddd)(1)(B) of the Act to add "additional preventive services" based on the recommendations of other groups or organizations. We recognize that in other sections of the ACA, Congress specifically recognized the expertise of other organizations with respect to coverage of preventive health services. For instance, in section 1001 of the ACA, Congress amended section 2713 of the Public Health Service Act so that certain group health plans and health insurance issuers must provide coverage of preventive health services that were recommended by several other organizations. The Medicare statute, however, does not permit recommendations from other advisory bodies to substitute for recommendations from the USPSTF regarding Medicare coverage of "additional preventive services."

Comment: A number of commenters supported CMS' inclusion of certain vaccines in the definition of "preventive services." Other commenters were concerned that the USPSTF does not currently review or provide recommendations regarding vaccine or vaccine administration and instead urged CMS to consider recommendations from the CDC's Advisory Committee on Immunization Practices (ACIP). Several commenters requested that vaccines such as diphtheria, pertussis, herpes zoster, tetanus, hepatitis A vaccine, meningococcal vaccine, measles-mumps-rubella, and varicella be considered "additional preventive services" as they are recommended by the ACIP. The commenters requested that CMS provide coverage for all vaccines recommended by the ACIP under Part B, noting that currently some vaccines are covered under Part B while others are covered under Part D.

Response: Medicare has covered certain vaccines and their administration under Part B, including influenza, pneumococcal, and hepatitis B, as a result of a specific statute, section 1861(s)(10) of the Act. Those services are specifically cross-referenced in section 1861(ww)(2)(A) of the Act, and are included in the definition of "preventive services" by section 1861(ddd)(3)(A) of the Act. While we acknowledge that the ACIP currently makes recommendations concerning immunizations, section 1861(ddd)(1) of the Act does not permit us to use recommendations from the ACIP as the basis for coverage of vaccines as "additional preventive services." As the commenters observed, vaccines that are not covered by Medicare Part B may be covered by Part D.

Comment: Several commenters requested that CMS not wait for an NCD for smoking cessation services but, instead, proactively identify smoking cessation services as preventive services effective for CY 2011.

Response: The Medicare statute requires the Secretary to use the national NCD process when considering adding services as an "additional preventive service." Consistent with the public process and timeframes required by section 1862(l) of the Act, our NCD expanding coverage for counseling to prevent tobacco use for asymptomatic patients was effective on August 25, 2010. Thus, the "additional preventive services" covered by Medicare Part B currently include services described by HCPCS codes G0436 (Smoking and tobacco cessation counseling visit for the asymptomatic patient; intermediate, greater than 3 minutes, up to 10 minutes) and G0437 (Smoking and tobacco cessation counseling visit for the asymptomatic patient; intensive, greater than 10 minutes).

Comment: Several commenters requested coverage of routine HIV testing for all individuals, including persons at low risk for HIV infection, regardless of risk, based on more recent data, or based upon the C rating of the USPSTF.

Response: We are not able to accept the public comment to extend coverage for HIV screening for all individuals under the Medicare program because the USPSTF grade A or B recommendation was limited to specific populations and the USPSTF specifically made a grade C recommendation about HIV screening for "adolescents and adults who are not at increased risk for HIV infection." Our statute and regulations only permit coverage of "additional preventive services" which have been recommended with a grade of A or B by the USPSTF and do not permit coverage as "additional preventive services" of services with grade C recommendations.

As a result of the NCD, Medicare covers screening of at risk individuals for HIV described by three HCPCS codes, specifically G0432 (Infectious agent antigen detection by enzyme immunoassay (EIA) technique, qualitative or semi-qualitative, multiple-step method, HIV–1 or HIV–2, screening); G0433 (Infectious agent antigen detection by enzyme-linked immunosorbent assay (ELISA) technique, antibody, HIV–1 or HIV–2, screening); and G0435 (Infectious agent antigen detection by rapid antibody test or oral mucosa transudate, HIV–1 or HIV–2, screening)). These HCPCS codes are all listed in Table 65 of the following section because their beneficiary cost-sharing will be waived in CY 2011.

Comment: Several commenters encouraged CMS to develop transparency in its interactions with the USPSTF and CMS coverage

determinations. The commenters urged CMS to support increased opportunities for stakeholders to participate in the USPSTF process.

Response: As required by section 1862(l) of the Act, the NCD process includes an opportunity for public comment on a proposed decision. With respect to any proposed NCD for an "additional preventive service," we include a summary of the USPSTF recommendations in our proposed decision memorandum. The Secretary is required to respond to the public comments when issuing a final determination. We believe that this process is open and transparent and that the public comments have improved the quality of our final decisions.

While some commenters have requested greater opportunities for public participation prior to the USPSTF recommendations, the process that the USPSTF utilizes in making its expert recommendations is beyond the scope of this rulemaking. The USPSTF, first convened by the U.S. Public Health Service in 1984, and since 1998 sponsored by the AHRQ, is an independent panel of private-sector experts in prevention and primary care that makes recommendations that are independent of the U.S. government. The USPSTF conducts impartial assessments of the scientific evidence for the effectiveness of a broad range of clinical preventive services, including screening, counseling, and preventive medications. The mission of the USPSTF is to evaluate the benefits of individual services based on age, gender, and risk factors for disease; make recommendations about which preventive services should be incorporated routinely into primary medical care and for which populations; and identify a research agenda for clinical preventive care. The USPSTF has partners from the fields of primary care, public health, health promotion, policy, and quality improvement. Liaisons from these groups and from Federal health agencies, including CMS, contribute their expertise in the peer review of draft USPSTF documents and help disseminate the work of the USPSTF to their members.

After consideration of the public comments we received, we are finalizing our proposed definition of preventive services. Specifically, preventive services include the IPPE; the AWV; pneumococcal, influenza, and hepatitis B vaccine and administration; screening mammography; screening pap smear and screening pelvic exam; prostate cancer screening tests; colorectal cancer screening tests; outpatient diabetes self-management training (DSMT); bone mass measurement; screening for glaucoma; medical nutrition therapy (MNT) services; cardiovascular screening blood tests; diabetes screening tests; ultrasound screening for abdominal aortic aneurysm (AAA); and additional preventive services identified for coverage through the NCD process. To date, two items or services have been added as "additional preventive services" by NCDs. These services are HIV screening for at risk individuals and smoking and tobacco cessation counseling for asymptomatic individuals.

We are adopting the proposed definition of "preventive services" in § 410.2 to implement the provisions of section 1861(ddd)(3) of the Act (as added by section 4104 of the ACA), with modification of § 410.2(3) to read "Annual Wellness Visit (AWV), providing Personalized Prevention Plan Services (PPPS) (as specified by section 1861(hhh)(1) of the Act)" to utilize wording that is consistent with final § 410.15, Annual Wellness Visits Providing Personalized Prevention Plan Services: Conditions for and Limitations on Coverage.

Furthermore, in this final rule with comment period, we are making a technical revision to § 410.64 (Additional Preventive Services) to conform with section 1861(ddd)(1) of the Act, as amended by section 4104 of the ACA. We are revising § 410.64(a) by removing the words "not otherwise described in this subpart" and adding the words "not described in subparagraphs (1) or (3) of § 410.2 of this subpart" in their place. This change reflects section 1861(ddd)(1) of the Act (as amended by section 4104(a)(2) of the ACA).

2. Deductible and Coinsurance for Preventive Services

Section 4104(b)(4) of the ACA amended section 1833(a)(1) of the Act by requiring 100 percent Medicare payment for the IPPE and for those Medicare-covered preventive services recommended by the United States Preventive Services Task Force (USPSTF) with a grade of A or B for any indication or population and that are appropriate for the individual. In other words, this provision waived any coinsurance that would otherwise be applicable under section 1833(a)(1) of the Act for the IPPE and for those items and services listed in section 1861(ww)(2) of the Act (excluding electrocardiograms) to which the USPSTF has given a grade of A or B recommendation. In addition, section 4103(c)(1) of the ACA amended section 1833(a)(1) of the Act to waive the coinsurance for the AWV. The coinsurance represents the beneficiary's share of the payment to the provider or supplier for furnished services. Coinsurance generally refers to a percentage (for example, 20 percent) of the Medicare payment rate for which the beneficiary is liable and is applicable under the PFS, while copayment generally refers to an established amount that the beneficiary must pay that is not necessarily related to a particular percentage of the Medicare payment, and is applicable under the OPPS. We refer readers to the CY 2011 OPPS/ASC final rule with comment period for provisions related to payment for preventive services, including waiver of the deductible and copayment, under the OPPS.

Section 4104(c) of the ACA amended section 1833(b)(1) of the Act to waive the Part B deductible for preventive services described in subparagraph (A) of section 1861(ddd)(3) of the Act that have a grade of A or B recommendation from the USPSTF for any indication or population and are appropriate for the individual. In addition, section 1833(b)(1) of the Act (as amended by section 4103(c)(4) of the ACA) waived the Part B deductible for the AWV including personalized prevention plan services. These provisions are effective for services furnished on or after January 1, 2011. Section 101(b)(2) of the MIPPA previously amended section 1833(b) of the Act to waive the deductible for the IPPE effective January 1, 2009.

Not all preventive services described in subparagraph (A) of section 1861(ddd)(3) of the Act are recommended by the USPSTF with a grade of A or B and, therefore, some of the preventive services do not meet the criteria in sections 1833(a)(1) and (b)(1) of the Act for the waiver of the deductible and coinsurance. However, with certain exceptions noted below, the changes made by section 4104 of the ACA do not affect most of the preexisting provisions in sections 1833(a) and 1833(b) of the Act (codified in regulations in § 410.160(b) and § 410.152) that waive the deductible and coinsurance for specific services. For example, section 1833(a)(1)(D) of the Act already waives the coinsurance and section 1833(b)(3) of the Act already waives the deductible for clinical laboratory tests (including tests furnished for screening purposes). Section 4104 of the ACA does not change these provisions and, therefore, the waiver of both the deductible and coinsurance remain in place for all clinical laboratory tests, regardless of

whether the particular clinical laboratory test meets the USPSTF grading criteria specified in sections 1833(a)(1) and 1833(b)(1) of the Act (as amended by section 4104 of the ACA) for waiver of the deductible and coinsurance as a preventive service. Similarly, both the deductible and coinsurance were already waived, prior to the ACA, for influenza and pneumococcal vaccines and their administration, and the deductible (but not the coinsurance) was already waived for screening mammography, screening pelvic exams, colorectal cancer screening procedures, ultrasound screening for abdominal aortic aneurysms, and the IPPE.

As discussed in the CY 2011 PFS proposed rule (75 FR 40130), the following preventive services listed in section 1833(ddd)(3)(A) of the Act (as added by section 4104 of the ACA) are not recommended by the USPSTF with a grade of A or B for any indication or population: digital rectal examination furnished as a prostate cancer screening service; glaucoma screening; DSMT services; and barium enema furnished as a colorectal cancer screening service.

Specifically, HCPCS code G0102 (Prostate cancer screening; digital rectal exam), which does not have a grade of A or B from the USPSTF for any indication or population, will continue to be subject to the deductible and coinsurance as there is no statutory provision to the contrary. However, the deductible and coinsurance for HCPCS code G0103 (Prostate cancer screening; prostate specific antigen test (PSA)) will continue to be waived in accordance with sections 1833(a)(1)(D) and 1833(b)(3) of the Act (applying to clinical laboratory tests), even though this service also does not have a grade of A or B from the USPSTF.

Glaucoma screening services, described by HCPCS codes G0117 (Glaucoma screening for high risk patients furnished by an optometrist or ophthalmologist) and G0118 (Glaucoma screening for high risk patient furnished under the direct supervision of an optometrist or ophthalmologist), will continue to be subject to the deductible and coinsurance because these services are not recommended with a grade of A or B by the USPSTF for any indication or population and there is no other statutory provision to exempt them. Similarly, DSMT services are currently not rated by the USPSTF, and there is no other statutory provision to except them from applicability of the deductible and coinsurance. Therefore the deductible and coinsurance requirements will continue to apply.

Barium enemas furnished as colorectal cancer screening tests, described by HCPCS codes G0106 (Colorectal cancer screening; alternative to G0104, screening sigmoidoscopy, barium enema) and G0120 (Colorectal cancer screening; alternative to G0105, screening colonoscopy, barium enema), do not have a grade of A or B from the USPSTF for any indication or population. However, the deductible does not apply to barium enemas furnished as colorectal cancer screening tests, because colorectal cancer screening tests are explicitly excluded from the deductible in section 1833(b)(8) of the Act. However, there is no specific exclusion of barium enemas from the coinsurance requirement in section 1833(b)(1) of the Act and, therefore, this requirement, as applicable, continues to apply to barium enemas. We note that the USPSTF has given a grade A recommendation to screening colonoscopy, screening flexible sigmoidoscopy, and fecal occult blood screening tests, and that, as a result, both the deductible and coinsurance are waived for these colorectal cancer screening tests under section 4104 of the ACA.

In developing recommendations regarding preventive services for the CY 2011 PFS proposed rule, we recognized that the USPSTF may make recommendations that are specific to a clinical indication or population, at times including characteristics such as gender and age in its recommendations. In accordance with section 4014 of the ACA, we proposed to waive the deductible and coinsurance for a Medicare-covered preventive service, with no limits on the indication or population, as long as that service is recommended by the USPSTF with a grade of A or B for at least one indication and/or population. However, we noted that all existing Medicare coverage policies for such services, including any limitations based on indication or population would continue to apply. In some cases, national coverage policies may currently limit Medicare coverage based on the indication or population, consistent with the USPSTF recommendations with a grade of A or B for the indication or population. In other cases where Medicare does not explicitly noncover preventive services for a specific population or indication, we stated that we would expect that, particularly in those cases where the USPSTF recommendation grade is a D (that is, the USPSTF recommends against the service because there is moderate or high certainty that the service has no net benefit or that the harms outweigh the benefits), practitioners would only order those preventive services that are clinically appropriate for the beneficiary. We noted that if we had concerns in the future about the appropriateness of preventive services for an indication or population in light of the USPSTF's recommendations, we may consider using our authority under section 1834(n)(1) of the Act (as added by section 4105 of the ACA) to modify Medicare coverage of any preventive service to be consistent with the recommendations of the USPSTF.

We note also that the USPSTF ceased to make recommendations with regard to vaccines and vaccine administration after CY 1996, so as not to conflict with the recommendations of the CDC's ACIP. However, the USPSTF's most recent vaccine recommendations gave a grade of B to influenza and pneumococcal vaccines and their administration and a grade of A to hepatitis B vaccine and its administration. While sections 1833(a)(1) and 1833(b)(1) of the Act (as amended by section 4104 of the ACA) require that a preventive service receive a grade A or B recommendation from the USPSTF for the coinsurance and deductible to be waived, the statute does not specify that the recommended grade must be furnished by the USPSTF within any given timeframe. The USPSTF grades from 1996 for these vaccination services are the most current USPSTF grades and have never been withdrawn. Therefore, we believe that these preventive services meet the requirements of the statute for the waiver of the deductible and coinsurance. We also noted that the CDC's ACIP currently recommends influenza, pneumococcal, and hepatitis B vaccines.

We proposed to update § 410.160(b), which lists the services for which expenses incurred are not subject to the Part B annual deductible and do not count toward meeting that deductible. Specifically, we proposed to revise § 410.160(b)(2) to include influenza and hepatitis B vaccines and their administration, in addition to pneumococcal vaccine and its administration. In addition, in § 410.160(b), we also proposed to add exceptions for bone mass measurement, MNT services, and the AWV.

In § 410.152, we proposed to revise paragraph (l) to establish the amount of payment under the applicable payment system for providers and suppliers of the services listed in paragraph (1). Table 38 of the CY 2011 PFS proposed rule (75 FR 40131 through 40135) identified the HCPCS codes that we

proposed to identify as "preventive services," in addition to the IPPE and the AWV, as well as the most recent USPSTF grade, if any, that was the basis for our policy with regard to waiver of the deductible and coinsurance. Table 38 also identified the Medicare payment system under which the HCPCS code would be paid when furnished outside of the facility setting.

Comment: Many commenters supported CMS' proposal to waive the deductible and coinsurance for those Medicare-covered preventive services with a grade A or B USPSTF recommendation for any indication or population, as well as for the IPPE and the AWV. The commenters acknowledged that CMS did not propose to modify current Medicare policy that may cover a preventive service only under specific circumstances. The commenters supported CMS' proposal to rely on practitioners' clinical judgment to order preventive services that are clinically appropriate for specific beneficiaries. Many commenters noted that CMS' "quick implementation" of this provision underscores the agency's commitment to removing barriers to preventive health care.

A few commenters expressed concern regarding how CMS may incorporate USPSTF recommendations into the Medicare benefit structure in the future and cautioned CMS not to adopt policies that would result in Medicare not covering important preventive services for an older population. For example, the USPSTF recommendations for mammography in women do not apply to individuals age 75 or older, and the commenters were concerned that future changes to CMS policies could result in Medicare not covering important preventive services for an older population.

Response: We appreciate the commenters' support for our proposal to waive the beneficiary deductible and coinsurance for most preventive services beginning in CY 2011. We continue to believe that is appropriate to waive the beneficiary deductible and coinsurance for preventive services with a grade A or B recommendation by the USPSTF for any indication or population, if Medicare covers the particular service under Part B. However, we reiterate that if we develop concerns in the future about the appropriateness of preventive services for an indication or population in light of the USPSTF's recommendations, we may consider using our authority under section 1834(n)(1) of the Act (as added by section 4105 of the ACA) to modify Medicare coverage of any preventive service to be consistent with the recommendations of the USPSTF.

Comment: Several commenters expressed concern over the USPSTF rating of I for glaucoma screening [An "I" rating means that the USPSTF concludes that the current evidence is insufficient to assess the balance of benefits and harms of the service. Evidence is lacking, of poor quality, or conflicting, and the balance of benefits and harms cannot be determined]. Others were concerned about the rating of D for prostate cancer screening [A "D" rating means that the USPSTF recommends against the service. There is moderate or high certainly that the service has no net benefit or that the harms outweigh the benefits]. Other commenters noted the lack of a specific USPSTF rating for DSMT services. The commenters argued that because these services were covered by Medicare as preventive services, the beneficiary cost-sharing should be waived to ensure access to these services.

Response: Glaucoma screening, digital prostrate screening, and DSMT services are covered by Medicare under Part B and are specific categories of "preventive services" included in section 1861(ddd)(3)(A) of the Act (as added by section 4014 of the ACA). However, as these services do not have a USPSTF grade A or B recommendation, the deductible and coinsurance cannot be waived. Thus, the coinsurance and deductible will continue to apply to these services when they are furnished to a Medicare beneficiary.

Comment: Some commenters were concerned that ultrasound screening for abdominal aortic aneurysm (AAA), while a preventive service covered by Medicare and with a grade B recommendation from the USPSTF, would continue to require a physician referral in order for the preventive service to be furnished and for the waiver of cost-sharing to apply. Furthermore, the commenters objected to the current requirement that coverage of ultrasound screening for AAA relies upon a referral as a result of the IPPE because the IPPE is only available to beneficiaries during their first 12 months of Part B enrollment.

Response: Ultrasound screening for AAA is a preventive service covered by Medicare, with certain restrictions set forth in § 410.19 of our regulations. Because this service has a grade B recommendation from the USPSTF, the deductible and coinsurance will be waived beginning in CY 2011 for covered services. While we appreciate the commenters' concerns regarding the existing requirements for ultrasound screening for AAA, the current requirement for a referral as a result of the IPPE is required by section 1861(s)(2)(AA) of the Act and continues to apply.

Comment: In the context of many commenters' recommendations to add new preventive services for coverage under Part B as "additional preventive services," most commenters also recommended that the beneficiary cost-sharing for these services be waived. The services addressed by the commenters included services with current grade A or B USPSTF recommendations, those with other grade USPSTF recommendations, those that have never been reviewed by the USPSTF, those with recommendations from other advisory organizations but the USPSTF, and other vaccines for which the USPSTF no longer makes recommendations.

Response: As discussed earlier in this section, the statute permits us to add "additional preventive services" to Medicare coverage only if those services have a grade A or B recommendation from the USPSTF. Other grade USPSTF recommendations or recommendations from other advisory groups, including the ACIP, cannot substitute for the grade A or B USPSTF recommendation. In the event that we add "additional preventive services" in the future, as we have HIV screening for at risk individuals and smoking and tobacco cessation counseling for asymptomatic individuals in CY 2010, the Medicare deductible and coinsurance will be waived for those services.

Comment: One commenter expressed concern that CMS was limiting the waiver of beneficiary cost-sharing to only those vaccines covered under Medicare Part B. The commenter contended that the ACIP recommends vaccines that are covered under Medicare Part D, and not Part B, and therefore not subject to the waiver.

Response: We recognize that many preventive vaccines such as herpes zoster and hepatitis A are covered for beneficiaries under Medicare Part D and the commenter is correct that Medicare Part D is not included in section 1861(ddd) of the Act (as amended by section 4104 of the ACA). Section 1861(ddd)(1)(C) of the Act limits "additional preventive services" to those appropriate for individuals entitled to benefits under Medicare Part A or enrolled under Medicare Part B only. In addition, the statute only permits expansions if the item or services based on a grade of A or B recommendation by the USPSTF.

Comment: Several commenters appreciated the clarity of Table 38 in the

CY 2011PFS proposed rule (75 FR 40131 through 40135), and requested that a table such as this be made available on the CMS Web site that reflects CMS' final policies regarding preventive services and beneficiary cost-sharing on a HCPCS code-specific basis. Other commenters requested additional provider and beneficiary educational materials to clarify preventive services benefits under Medicare, to identify which preventive services would continue to be subject to beneficiary cost-sharing, and to specify which preventive services would meet the requirements for the waiver of deductible and coinsurance where Medicare would make 100 percent payment.

Response: We are in the process of developing educational materials that will reflect and communicate to beneficiaries and providers the CY 2011 changes to beneficiary cost-sharing for preventive services under Medicare. We agree with the commenters that it is critical to effectively educate beneficiaries and providers about the preventive services covered by Medicare and specifically those services that will be paid at 100 percent by Medicare beginning in CY 2011 to help expand access to these important services. MLN Matters articles, quick reference guides, and the Medicare and You Handbook will all be developed and/or updated to reflect the provisions of the ACA and are examples of some the provider and beneficiary educational materials that will be available. We appreciate the recommendations of the commenters regarding the format for specific information that we could make available on the CMS web site, and we will keep these suggestions in mind as we further refine our educational strategy.

After consideration of the public comments we received, we are finalizing our proposal to waive the deductible and coinsurance for most preventive services, and for the IPPE and the AWV, beginning in CY 2011.

Table 65 displays the HCPCS codes that we are finalizing as "preventive services" under section 1861(ddd)(3)(A) of the Act (as added by section 4014 of the ACA) and identifies the HCPCS codes for the IPPE and the AWV. Table 65 also indicates the most recent USPSTF grade, if any, that is the basis for our policy with regard to waiver of the deductible and coinsurance, as applicable, and the Medicare payment system under which the HCPCS code would be paid when furnished outside of the facility setting.

Since the publication of the CY 2011 PFS proposed rule, final Level II HCPCS codes have been assigned for the AWV, as well as the "additional preventive services" for HIV screening for at risk individuals and smoking and tobacco cessation counseling for asymptomatic individuals. Therefore, these services and their associated Level II HCPCS codes are all displayed in Table 65. In addition, beginning in CY 2011, Medicare will no longer recognize CPT code 90658 (Influenza virus vaccine, split virus, when administered to individuals 3 years of age and older, for intramuscular use) but, instead will use 5 new HCPCS Q codes to report influenza vaccines that would otherwise have been reported under CPT code 90658. Therefore, these HCPCS Q-codes are included in Table 65, and they will be recognized as of January 1, 2011. CPT code 90658 is no longer displayed in the table. Finally, it has come to our attention since publication of the CY 2011 PFS proposed rule that CPT code 86689 (HTLV or HIV antibody, confirmatory test (e.g., Western Blot)) describes a diagnostic test, not specifically an HIV screening test that would be reported for a screening service that is covered by Medicare, and, therefore, this CPT is not included in Table 65.

We are adopting proposed § 410.152 to specify the amounts of payment, with modification of (13) to read "Annual Wellness Visit (AWV), providing Personalized Prevention Plan Services (PPPS)" and proposed § 410.160 to specify exclusion from the Part B annual deductible, with modification of (12) to read "Annual Wellness Visit (AWV), providing Personalized Prevention Plan Services (PPPS)." These modifications utilize wording that is consistent with final § 410.15, Annual Wellness Visits Providing Personalized Prevention Plan Services: Conditions for and Limitations on Coverage.

Section 10501(i)(2) of the ACA amended the definition of Federally Qualified Health Center (FQHC) services as defined in section 1861(aa)(3)(A) of the Act by replacing the specific references to services provided under section 1861(qq) and (vv) of the Act (diabetes outpatient self-management training services and medical nutrition therapy services, respectively) with preventive services as defined in section 1861(ddd)(3) of the Act, as established by section 4014(a)(3) of the ACA. These changes are effective for services provided on or after January 1, 2011. Accordingly, we are proposing to conform the regulations to the new statutory requirement by adding a new section § 405.2449 which would add the new preventive services definition to the definition of FQHC services effective for services provided on or after January 1, 2011.

Section 1861(ddd)(3) of the Act defines "preventive services" as consisting of the following three components:

- Screening and preventive services described in section 1861(ww)(2) of the Act (other than electrocardiograms described in subparagraph (M) of that subsection).
- An initial preventive physical examination, as defined in section 1861(ww) of the Act.
- Personalized prevention plan services as defined in section 1861(hhh)(1) of the Act.

We proposed to add each of these three components into the new Medicare FQHC preventive services definition in a new § 405.2449.

Section 4104(b) of the ACA, as amended by section 10406 of the ACA, waives coinsurance for preventive services by adding section 1833(a)(1)(Y) to the Act to require waiver of coinsurance for preventive services that are recommended with a grade of A or B by the USPSTF for any indication or population. This provision is specifically designed to remove barriers to affording and obtaining such preventive services under Medicare.

In addition, section 10501(i)(3)(B)(ii) of the ACA added section 1833(a)(1)(Z) to the Act to require a 20 percent coinsurance on all FQHC services after implementation of the FQHC prospective payment system. We believe we can give both section 1833(a)(1)(Y) and (Z) of the Act, and the definition of FQHC services (revised to include the broader scope of preventive services) their best effect by providing Medicare payment at 100 percent for preventive services as defined at section 1861 (ddd)(3) of the Act, effective January 1, 2011.

Section 1833(b)(4) of the Act stipulates that the Medicare Part B deductible shall not apply to FQHC services. The ACA makes no change to this provision; therefore Medicare will continue to waive the Part B deductible for all FQHC services, including preventive services added by the ACA.

We received a number of public comments on the addition of preventive services to the Medicare FQHC benefit. These comments included questions regarding how these benefits are paid and clarification on the waiver of coinsurance on these benefits in the Medicare FQHC setting. The comments are addressed individually below.

Comment: One commenter indicated that prior to enactment of the ACA, many health centers provided added preventive services as part of the

primary and preventive care offered at the center. Yet when provided to Medicare beneficiaries, they received no additional reimbursement. The commenter noted that since the inception of the Medicare FQHC benefit in 1992, Medicare added thirteen new services to its coverage, yet those services have not been included as FQHC services, except for diabetes self management training and medical nutrition therapy which were added by the Deficit Reduction Act.

Response: We recognize that prior to enactment of the ACA, many FQHCs may have provided some or all of the same preventive services since added to the Medicare FQHC benefit package by the ACA. We also agree that many new preventive services have been added to Medicare since 1992, and except for diabetes self management training and medical nutrition therapy, which were added by the Deficit Reduction Act of 2005, these services had not been specifically added to the Medicare FQHC benefit package under the law. We believe the addition of these preventive services to the Medicare FQHC benefit through provisions in the ACA, along with the waiver of beneficiary cost sharing for these services in the Medicare FQHC setting, eliminates both prior statutory restrictions from Medicare coverage in the FQHC setting as well as potential financial barriers beneficiaries might otherwise face in obtaining these services.

Comment: One commenter requested further clarification in both this preamble and the final regulation text at § 405.2449 on the application of the waiver of coinsurance in the FQHC setting and CMS' statement that it will allow 100 percent reimbursement for these preventive services. The commenter stated that health centers are reimbursed 100 percent of their costs for the provision of influenza, pneumococcal, and Hepatitis B vaccinations, in accordance with Section 1861(s)(10)(A) of the Act. The commenter further noted that this reimbursement is done separately and outside the Medicare FQHC upper payment limit. The commenter asserted that the payment limit negatively impacts an overwhelming majority of health centers, and therefore encouraged CMS to use a similar method to determine the reimbursement for these new FQHC preventive services. The commenter further asserted that using a similar method to determine reimbursement would allow for health centers to provide more comprehensive preventive care to their patients, alleviate the financial restrictions faced by health centers in providing these critical services, and would be in the best interests of CMS, health centers, and their patients. Finally, the commenter noted that because the list of new preventive services includes the provision of influenza, pneumococcal and hepatitis B vaccinations, CMS must ensure that health centers do not lose their current reimbursement structure for these services.

Response: No coinsurance will be imposed upon ACA-added preventive services in Medicare FQHCs. Accordingly, final settlement with FQHCs will reflect the policy that no coinsurance amounts will be subtracted from the reasonable cost of ACA-added preventive benefits. Final settlement is determined on the basis of the Medicare cost report, the CMS–222–92. We made no proposal to exempt ACA-added preventive services from tests of reasonableness such as the Medicare FQHC upper payment limits. Further, we do not agree that CMS should use the same methodology presently employed to pay FQHCs for influenza and pneumococcal vaccinations (see discussion of Hepatitis B vaccinations below) to pay for new Medicare FQHC preventive services added by the ACA. We believe the average cost per-visit payment methodology, which is the general payment methodology employed by Medicare to pay for Medicare FQHC services, was implicit in the proposal as we proposed no changes to Medicare FQHC payment regulations to implement this new preventive services addition. In addition, we believe the general payment methodology for Medicare FQHCs, which is based on an all-inclusive-cost-per-visit, is better suited and most appropriate for payment of new preventive services such as the annual wellness visit. It is our belief that the Medicare FQHC per-visit upper payment limits ($126.10 urban and $109.14 rural in CY 2011) remain reasonable and adequate not only for existing Medicare FQHC services but also for new preventive services as well. Accordingly, we cannot accept the comment to exclude new preventive services from the Medicare FQHC upper payment limits. The Medicare FQHC upper payment limits and the general per-visit payment methodology employed to pay for Medicare FQHC services will apply to new Medicare FQHC preventive services.

While we clarify the waiver of coinsurance and application of Medicare FQHC payment methodology and upper payment limits to new preventive services in this preamble, we cannot accept the comment to provide further clarification within the final regulation text at § 405.2449. Section 405.2449 is placed within Medicare FQHC regulations which pertain to the description of Medicare FQHC services and not payment. We made no proposal to change payment and accordingly make no changes to Medicare FQHC payment regulations.

Finally, we note that we did not propose, nor are we making any changes to, how influenza, pneumococcal and hepatitis B vaccinations are paid in Medicare FQHCs. Accordingly, health centers will not lose their current reimbursement structure for these services. We agree that health centers are reimbursed 100 percent of their costs for the provision of influenza and pneumococcal vaccinations. We further agree that payment for influenza and pneumococcal vaccinations in Medicare FQHCs is done separately and outside the Medicare FQHC upper payment limit. However, we note for clarification purposes that prior to the effective date of the ACA provisions adding new preventive services to the Medicare FQHC benefit, the waiver of Part B coinsurance did not extend to Hepatitis B vaccinations. Hepatitis B vaccinations were covered in Medicare FQHCs in accordance with Section 1861(aa)(3)(A) of the Act which through reference to section 1861(aa)(1)(A) of the Act included all section 1861(s)(10) of the Act services including section 1861(s)(10)(B) of the Act, Hepatitis B vaccinations. The waiver of the 20 percent Medicare Part B coinsurance in Section 1833(a)(3)(A) of the Act extended only to Section 1861(s)(10)(A) of the Act services and not to section 1861(s)(10)(B) of the Act Hepatitis B vaccinations. To summarize this clarification, prior to the effective date of the ACA provisions adding new preventive services to the Medicare FQHC benefit, the waiver of Medicare Part B coinsurance did not extend to Section 1861(s)(10)(B) of the Act Hepatitis B vaccinations, hence these services were subject to Medicare Part B coinsurance and paid at 80 percent (not 100 percent) of reasonable costs in accordance with the provisions in section 1833(a)(3) of the Act. Effective with implementation of ACA provisions on January 1, 2011, Part B coinsurance on Hepatitis B vaccinations is waived as they are now included in the definition of "preventive services" in section 1861(ddd)(3)(A) of the Act as cross-referenced to section 1861(ww)(2) of the Act.

Consistent with our response to public comment above, and in conformance with the preventive services definition in section

1861(ddd)(3) of the Act, we are finalizing this new Medicare FQHC preventive services provision without modification. We will conform the regulations to the new statutory requirements by adding a new section § 405.2449, adding the new preventive services definition to the definition of FQHC services effective for services provided on or after January 1, 2011.

BILLING CODE 4120–01–P

TABLE 65: CY 2011 Deductible and Coinsurance for Preventive Services Under Section 1861(ddd)(3)(A) of the Act (Includes the IPPE and the Annual Wellness Visit)

Preventive Service	CPT/ HCPCS Code	Long Descriptor	USPSTF Rating[1]	Payment Method	CY 2010 Coinsurance/Deductible	CY 2011 Coinsurance/Deductible
Initial Preventive Physical Examination, IPPE	G0402	Initial preventive physical examination; face to face visits, services limited to new beneficiary during the first 12 months of Medicare enrollment	***Not Rated**	PFS	Coinsurance applies & deductible is waived	WAIVED
	G0403	Electrocardiogram, routine ECG with 12 leads; performed as a screening for the initial preventive physical examination with interpretation and report		PFS	Not Waived	Not Waived

[1] U.S. Preventive Services Task Force Recommendations:

A -- The USPSTF recommends the service. There is high certainty that the net benefit is substantial.

B -- The USPSTF recommends the service. There is high certainty that the net benefit is moderate or there is moderate certainty that the net benefit is moderate to substantial.

C -- The USPSTF recommends against routinely providing the service. There may be considerations that support providing the service in an individual patient. There is at least moderate certainty that the net benefit is small.

The USPSTF recommends against the service. There is moderate or high certainty that the service has no net benefit or that the harms outweigh the benefits.

I -- The USPSTF concludes that the current evidence is insufficient to assess the balance of benefits and harms of the service. Evidence is lacking, of poor quality, or conflicting, and the balance of benefits and harms cannot be determined.

BILLING CODE 412–01–C

3. Extension of Waiver of Deductible to Services Furnished in Connection With or in Relation to a Colorectal Cancer Screening Test That Becomes Diagnostic or Therapeutic

Section 4104(c) of the ACA amended section 1833(b) of the Act to waive the Part B deductible for colorectal cancer screening tests that become diagnostic. Specifically, section 1833(b)(1) of the Act (as amended by section 4104(c)(2) of the ACA) waived the deductible with respect to a colorectal cancer screening test regardless of the code that is billed for the establishment of a diagnosis as a result of the test, or for the removal of tissue or other matter or other procedure that is furnished in connection with, as a result of, and in the same clinical encounter as a screening test. We proposed that all surgical services furnished on the same date as a planned screening colonoscopy, planned flexible sigmoidoscopy, or barium enema be considered to be furnished in connection with, as a result of, and in the same clinical encounter as the screening test. In the event of a legislative change to this policy (for example, a statutory change that would waive the coinsurance for these related services in addition to the deductible), we would reassess the appropriateness of this proposed definition of services that are furnished in connection with, as a result of, and in the same clinical encounter as the colorectal cancer screening test that becomes diagnostic. We also noted that the beneficiary's annual deductible would likely be met when any surgical procedure (related or not) is furnished on the same day as the scheduled screening test.

We proposed to implement this provision by creating a HCPCS modifier that providers and practitioners would append to the diagnostic procedure code that is reported instead of the screening colonoscopy or screening flexible sigmoidoscopy HCPCS code or as a result of the barium enema when the screening test becomes a diagnostic service. The claims processing system would respond to the modifier by waiving the deductible for all surgical services on the same date as the diagnostic test. We proposed that coinsurance would continue to apply to the diagnostic test and to other services furnished in connection with, as a result of, and in the same clinical encounter as the screening test.

Comment: Many commenters expressed support for CMS' proposal to waive the deductible in cases where a screening colonoscopy for colorectal cancer becomes diagnostic. The commenters believe that the proposal to waive the Medicare deductible for any surgical service performed on the same day and in the same clinical encounter as a screening colonoscopy if the service is appended with a modifier is a sound approach to implementing the policy.

However, a few commenters requested that CMS also waive the coinsurance for a procedure that was a planned colorectal cancer screening test, regardless of the code that is billed for the establishment of a diagnosis as a result of the test, or for the removal of tissue or other matter or other procedure that is furnished in connection with, or as a result of, and in the same clinical encounter as a screening test. The commenters were concerned that beneficiaries may refrain from undergoing a covered colorectal cancer screening test if coinsurance could apply to a resulting diagnostic test and other services furnished in the same encounter as the planned colorectal cancer screening test. As an alternative, several commenters recommend that CMS not apply a coinsurance requirement to the part of the procedure that is screening in nature.

Response: We appreciate the commenters' support for our proposal, including the proposed administrative requirements for practitioners and providers to identify the circumstances under which the waiver of the deducible would apply. As stated above, section 1833(b)(1) of the Act (as amended by section 4104(c)(2) of the ACA) waived the Part B deductible for colorectal cancer screening tests that become diagnostic. The statute does not currently permit waiver of coinsurance for these circumstances as the 20 percent coinsurance applies to all service furnished under the PFS unless there is a specific statutory exception. We believe that a statutory change would be necessary in order to waive the coinsurance for these related services, in addition to the waiver of the deductible.

In response to those commenters who suggested, as an alternative, that we identify the screening portion of the diagnostic test in order to waive the coinsurance for only that portion, we are unable to identify a portion of a diagnostic test that is "screening" because a HCPCS code for a diagnostic test would be reported and, therefore, we would consider the whole test to be diagnostic in nature.

After consideration of the public comments we received, we are finalizing our CY 2011 proposal to waive the deductible for colorectal cancer screening tests that become diagnostic. Providers and practitioners would append new HCPCS modifier -PT (Colorectal cancer screening test, converted to diagnostic test or other procedure) to the diagnostic procedure code that is reported instead of the screening colonoscopy or screening flexible sigmoidoscopy HCPCS code or as a result of the barium enema when the screening test becomes a diagnostic service. The claims processing system would respond to the modifier by waiving the deductible for all surgical services on the same date as the diagnostic test. Coinsurance would continue to apply to the diagnostic test and to other services furnished in connection with, as a result of, and in the same clinical encounter as the screening test.

S. Section 5501: Expanding Access to Primary Care Services and General Surgery Services

1. Section 5501(a): Incentive Payment Program for Primary Care Services

a. Background

Section 5501(a) of the ACA revised section 1833 of the Act by adding a new paragraph (x), "Incentive Payments for Primary Care Services." Section 1833(x) of the Act states that in the case of primary care services, furnished on or after January 1, 2011 and before January 1, 2016 by a primary care practitioner, there shall also be paid on a monthly or quarterly basis an amount equal to 10 percent of the payment amount for such services under Part B.

Section 1833(x)(2)(A) of the Act (as added by section 5501(a) of the ACA) defines a primary care practitioner as: (1) A physician, as described in section 1861(r)(1) of the Act, who has a primary specialty designation of family medicine, internal medicine, geriatric medicine, or pediatric medicine; or (2) a nurse practitioner, clinical nurse specialist, or physician assistant as defined in section 1861(aa)(5) of the Act, and in all cases, for whom primary care services accounted for at least 60 percent of the allowed charges under Part B for the practitioner in a prior period as determined appropriate by the Secretary.

Section 1833(x)(2)(B) of the Act (as added by section 5501(a)(2)(B) of the ACA) defines primary care services as those services identified by the following HCPCS codes as of January 1, 2009 (and as subsequently modified by the Secretary, as applicable):

- 99201 through 99215 for new and established patient office or other outpatient E/M visits;
- 99304 through 99340 for initial, subsequent, discharge, and other nursing facility E/M services; new and

established patient domiciliary, rest home (eg, boarding home), or custodial care E/M services; and domiciliary, rest home (eg, assisted living facility), or home care plan oversight services; and

• 99341 through 99350 for new and established patient home E/M visits.

These codes are displayed in Table 66. All of these codes remain active in CY 2011 and there are no other codes used to describe these services.

TABLE 66—PRIMARY CARE SERVICES ELIGIBLE FOR PRIMARY CARE INCENTIVE PAYMENTS IN CY 2011

CPT Code	Description
99201	Level 1 new patient office or other outpatient visit.
99202	Level 2 new patient office or other outpatient visit.
99203	Level 3 new patient office or other outpatient visit.
99204	Level 4 new patient office or other outpatient visit.
99205	Level 5 new patient office or other outpatient visit.
99211	Level 1 established patient office or other outpatient visit.
99212	Level 2 established patient office or other outpatient visit.
99213	Level 3 established patient office or other outpatient visit.
99214	Level 4 established patient office or other outpatient visit.
99215	Level 5 established patient office or other outpatient visit.
99304	Level 1 initial nursing facility care.
99305	Level 2 initial nursing facility care.
99306	Level 3 initial nursing facility care.
99307	Level 1 subsequent nursing facility care.
99308	Level 2 subsequent nursing facility care.
99309	Level 3 subsequent nursing facility care.
99310	Level 4 subsequent nursing facility care.
99315	Nursing facility discharge day management; 30 minutes.
99316	Nursing facility discharge day management; more than 30 minutes.
99318	Other nursing facility services; evaluation and management of a patient involving an annual nursing facility assessment.
99324	Level 1 new patient domiciliary, rest home, or custodial care visit.
99325	Level 2 new patient domiciliary, rest home, or custodial care visit.
99326	Level 3 new patient domiciliary, rest home, or custodial care visit.
99327	Level 4 new patient domiciliary, rest home, or custodial care visit.
99328	Level 5 new patient domiciliary, rest home, or custodial care visit.
99334	Level 1 established patient domiciliary, rest home, or custodial care visit.
99335	Level 2 established patient domiciliary, rest home, or custodial care visit.
99336	Level 3 established patient domiciliary, rest home, or custodial care visit.
99337	Level 4 established patient domiciliary, rest home, or custodial care visit.
99339	Individual physician supervision of a patient in home, domiciliary or rest home recurring complex and multidisciplinary care modalities; 30 minutes.
99340	Individual physician supervision of a patient in home, domiciliary or rest home recurring complex and multidisciplinary care modalities; 30 minutes or more.
99341	Level 1 new patient home visit.
99342	Level 2 new patient home visit.
99343	Level 3 new patient home visit.
99344	Level 4 new patient home visit.
99345	Level 5 new patient home visit.
99347	Level 1 established patient home visit.
99348	Level 2 established patient home visit.
99349	Level 3 established patient home visit.
99350	Level 4 established patient home visit.

b. Primary Care Incentive Payment Program (PCIP)

(1) Primary Specialty Designation

For primary care services furnished on or after January 1, 2011 and before January 1, 2016, we proposed to provide a 10 percent incentive payment to primary care practitioners, identified as the following: (1) In the case of physicians, enrolled in Medicare with a primary specialty designation of 08-family practice, 11-internal medicine, 37-pediatrics, or 38-geriatrics; or (2) in the case of nonphysician practitioners (NPPs), enrolled in Medicare with a primary care specialty designation of 50-nurse practitioner, 89-certified clinical nurse specialist, or 97-physician assistant; and (3) for whom the primary care services displayed in Table 66 accounted for at least 60 percent of the allowed charges under Part B for such practitioner during the time period that is specified by the Secretary, and proposed in this section. Hereinafter, we refer to practitioners with these primary Medicare specialty designations as potential primary care practitioners and the potential primary care practitioner's ratio of primary care allowed charges to allowed charges under Part B (multiplied by 100) as the primary care percentage.

Comment: Many commenters expressed support for the PCIP and general appreciation for the increased payment for primary care services. Some commenters approved of the

proposed inclusion of nonphysician practitioners (NPPs) in the program, but asked for clarification on the practice settings where these practitioners may furnish PCIP-eligible services. However, several commenters disagreed with the proposed specialty limitations for the PCIP. The commenters recommended that several additional specialties be eligible for the PCIP including, but not limited to, neurology, chiropractics, infectious disease, endocrinology, and certified nurse-midwives. The commenters contended that many practitioners in these other specialties provide primary care services and have the requisite education and training, similar to the potential primary care practitioners in the designated specialties to which payment under the PCIP was proposed.

Response: We appreciate the commenters' support of the PCIP. We recognize that a variety of specialties may provide primary care services as defined broadly under the statute by the E/M codes displayed in Table 66 and, in some cases, these specialist practitioners may truly function as "primary care practitioners" in the common use of the term (providing first contact, coordinated, continuous care for certain patients under their care). However, section 1833(x) of the Act (as added by section 5501(a) of the ACA) specifies in the definition of primary care practitioner the physician specialties that are considered as primary care for purposes of the PCIP. Under section 1833(x)(2)(A)(i)(I) of the Act, only physicians with a primary specialty designation of family medicine, internal medicine, geriatric medicine, or pediatric medicine are considered potential primary care physicians. The provision does not authorize us to add other Medicare specialty designations to the definition of a primary care practitioner for purposes of the PCIP. Therefore, as proposed, we will identify physicians that have a primary specialty designation of family medicine, internal medicine, geriatric medicine, or pediatric medicine (along with nurse practitioners, clinical nurse specialists, and physician assistants) for further evaluation as potential primary care practitioners for purposes of the PCIP.

We note that the PCIP does not place limitations on the setting of the primary care services for which a primary care practitioner may be paid an incentive payment. However, as a practical matter, the statutorily defined primary care services to which the PCIP applies may limit the setting of the services on which a PCIP payment is based. For example, there are no inpatient hospital care E/M services on the list of primary care services for purposes of the PCIP. The PCIP payment is an amount equal to 10 percent of the payment for primary care services furnished by the primary care practitioner.

Comment: Several commenters commended CMS for proposing that the PCIP payment would be in addition to payments under other incentive programs under Medicare, arguing that this policy is particularly important to encourage the delivery of primary care services to underserved Medicare populations. However, some commenters recommended that CMS increase the amount of PCIP payments because the commenters believe that 10 percent is an insufficient financial incentive to encourage primary care practice over specialty practice as a career path for medical and other health professional students.

Response: We appreciate the commenters' suggestions that primary care should continue to be a Medicare priority and acknowledge that payment incentives are one of many factors that may influence health professional student career choice. While we recognize the importance of encouraging primary care practice and ensuring the accessibility of primary care services, section 1833(x) of the Act (as added by section 5501(a) of the ACA) explicitly states the incentive payment amount, and does not grant authority to the Secretary to adjust the payment amount. According to this provision, primary care practitioners (those who meet the specialty designation and primary care percentage criteria) qualify for an incentive payment equaling 10 percent of the payment amount under Part B for the primary care services they furnish. Therefore, we are maintaining the PCIP incentive payment amount at 10 percent, as we proposed. The statute also specifies that the PCIP payment is to be determined without regard to any payment for the primary care service under section 1833(m) of the statute (currently, the HPSA physician bonus payment program). Therefore, we are also adopting as final our proposal to make any PCIP payment in addition to, but determined without regard to, any HPSA physician bonus payment.

(2) Primary Care Percentage Calculation

In the CY 2011 PFS proposed rule (74 FR 10137), we proposed to use the most current full year of claims data to identify primary care practitioners eligible for the PCIP for a CY based on the practitioner's primary specialty (as identified on claims) and the practitioner's primary care percentage calculated based on the primary care services displayed in Table 66. We commonly use the most recent full year of claims data for purposes of establishing annual payment amounts under a number of Medicare's fee-for-service programs. A potential primary care practitioner would be eligible for the PCIP in a CY if the practitioner's primary care percentage, calculated as the practitioner's allowed charges for primary care services (identified in Table 66) (the numerator) divided by his or total allowed charges under Part B (the denominator) and multiplied by 100, meets or exceeds the 60 percent threshold. We note that the practitioner's specialty is applied to the claim by the claims processing system and reflects the practitioner's primary specialty designation for purposes of Medicare enrollment on the date the claim is processed, which would usually be close to the date on which the service was actually furnished to the beneficiary. We would identify primary care practitioners eligible for the PCIP for a year by the individual physician/practitioner national provider identifier (NPI) number using the most current full year of claims data available.

Comment: Many commenters described problems potential primary care practitioners would likely encounter in meeting the 60 percent eligibility threshold requirement for the PCIP. The commenters pointed to a few reasons why a potential primary care practitioner's primary care percentage may not meet the 60 percent threshold. Most commenters believe that the denominator in the primary care percentage calculation, or "allowed charges under Part B" as CMS proposed, was too broad, and would limit the number of potential primary care practitioners who would qualify for the PCIP. For example, the commenters speculated that under the proposed threshold calculation, more than one-third of family practitioners and more than 60 percent of general internists would not qualify for the PCIP. Generally, the commenters requested that CMS interpret the phrase "allowed charges under this part" in section 1833(x) of the Act (as added by section 5501(a)(2)(A)(ii) of the ACA) more narrowly to decrease the denominator in the primary care percentage calculation and thereby increase the number of potential primary care practitioners who would qualify for the PCIP.

Several commenters, including MedPAC, recommended that CMS use only the total allowed charges under the PFS, rather than all charges under Part B, as the denominator in the potential primary care practitioner's primary care percentage calculation. The commenters

argued that a potential primary care practitioner's billings under his or her NPI for Part B services not paid under the PFS (including laboratory services, drugs, and durable medical equipment (DME)) would depend upon the organizational structure of the potential primary care practitioner's practice and, therefore, would be unrelated to whether the practitioner was serving as a "true primary care practitioner" for Medicare beneficiaries under his or her care. The commenters asserted that under other sections of the Act, "allowed charges under this part" has been interpreted by CMS to mean "allowed charges under the PFS." The commenters did not believe that potential primary care practitioners serving as "true primary care practitioners" should be penalized with respect to PCIP eligibility because they furnish non-PFS Part B services to their patients.

In addition, other commenters argued that "true primary care practitioners" caring for their patients across all settings in accordance with a traditional primary care model commonly furnish other types of services to their patients that are paid under the PFS but that are not defined as primary care services under the PCIP, such as inpatient hospital care and emergency department visits. The commenters were concerned that providing hospital care to their patients consistent with the goal of improved continuity of care would disadvantage "true primary care practitioners" with respect to the primary care percentage calculation and, ultimately, eligibility for the PCIP. Several commenters emphasized that potential primary care practitioners in rural areas would be more likely to provide a wider variety of services to their patients due to the lack of other more specialized providers in their area, which could make them less likely to qualify for the PCIP. Many commenters contended that the amount of these specific non-primary care PFS allowed charges would be sufficiently large to prevent "true primary care practitioners" from meeting the 60 percent primary care percentage threshold. MedPAC and several other commenters recommended that CMS remove hospital E/M visits from the denominator of the primary care percentage calculation, explaining that this approach would neither penalize nor reward potential primary care practitioners who provide hospital care to their patients with respect to eligibility for the PCIP.

Response: We understand commenters' concerns regarding the criteria for the PCIP eligibility determination, and in particular the total amount of allowed charges used in the denominator for calculation of the potential primary care practitioner's primary care percentage. We also believe that it is important that the eligibility determination be based on a fair representation of potential primary practitioners' services so that "true primary care practitioners" may meet or exceed the qualifying primary care percentage threshold for the PCIP, regardless of how they may have chosen to organize their medical practice.

We agree with some commenters who suggested that section 1833(x)(2)(A)(ii) of the Act (as added by section 5501(a) of the ACA) allows some flexibility in implementing the PCIP primary care percentage calculation, based on the phrase in the 60 percent threshold specification that states, "at least 60 percent of the allowed charges under this part for such physician or practitioner in a prior period as determined appropriate by the Secretary."

We considered several refinements to determine a potential primary care practitioner's allowed charges consistent with the goal of eliminating potential biases that could affect "true primary care practitioners" who practice under certain conditions and structural constraints. We reviewed recent Medicare claims data by specialty designation to determine which Part B services accounted for the highest allowed charges for primary care practitioners, focusing on those services that are not defined as primary care services and, therefore, contribute to increasing the magnitude of the denominator in the primary care percentage. We found that many potential primary care practitioners had significant allowed charges for hospital inpatient care and emergency department visits, which are not considered primary care services for purposes of the PCIP, consistent with the observations of some commenters. Due to the high allowed charges for these hospital visits compared to other primary care services, "true primary care practitioners" providing hospital inpatient and emergency department care for their patients would be less likely to qualify for the PCIP. We also found that rural practitioners, specifically family physicians, may be disproportionately unlikely to qualify for the PCIP because they typically provide a wider variety of services, including hospital inpatient care and emergency department visits, than their urban counterparts. This difference in the profile of potential primary care practitioners' services was even greater for family physicians in frontier states.

Our review of non-PFS Part B services furnished by potential primary care practitioners, including laboratory services, drugs, and DME, showed that allowed charges for these services were typically only a small percentage of the total amount of a potential primary care practitioner's allowed charges under Part B. However, while less influential than the inclusion of hospital visits in the denominator of the primary care percentage for purposes of determining whether a potential primary care practitioner meets the PCIP eligibility threshold, we believe that the inclusion of the non-PFS services in the denominator could also lead to bias against "true primary care practitioners" who provide a full spectrum of care to their patients.

Therefore, in an effort to eliminate potential bias against potential primary care practitioners who are "true primary care practitioners" with certain primary care practice patterns, we are modifying our proposal and will remove certain services from the total allowed charges that is the denominator of the primary care percentage calculation. In the CY 2011 PFS proposed rule (74 FR 40136), we proposed to use all allowed charges under Part B as the denominator in the calculation to determine whether a potential primary care practitioner meets the 60 percent eligibility threshold requirement. Following our analysis of Medicare claims data, we will remove all non-PFS allowed charges and allowed charges for evaluation and management (E/M) services furnished to hospital inpatients and outpatients by potential primary care practitioners from the total allowed charges under Part B. The specific E/M services that we are removing from the denominator for purposes of the primary care percentage calculation are displayed in Table 67. We note that we are not removing hospital inpatient consultation E/M services from the denominator, either face-to-face or via telehealth, because we believe these E/M services do not reflect the types of services that would be furnished by "true primary care practitioners" serving a primary care function for their patients as reflected in their primary care practice patterns.

In other words, PFS charges excluding allowed charges for hospital E/M services will be the denominator in the final primary care percentage calculation for PCIP eligibility determination: [primary care services/(PFS charges—hospital E/M charges)] multiplied by 100. The potential primary care practitioner primary care percentage calculation is subject to traditional rounding rules with respect

to the 60 percent eligibility threshold, meaning 59.5 percent and above will be rounded to 60 percent.

These refinements remove the largest categories of non-primary care allowed charges furnished by "true primary care practitioners" from the primary care percentage calculation used for determination of PCIP eligibility, typically decreasing the magnitude of the denominator and resulting in a higher proportion of primary care to non-primary care services for a given potential primary care practitioner. Limiting the allowed charges to the PFS also removes drugs, laboratory services, and DME from the denominator calculation. While these non-PFS allowed charges are not a large percentage of most potential primary care practitioners' allowed charges under Part B, we acknowledge the commenters' assertions that many potential primary care practitioners who are "true primary care practitioners" furnish these services to their patients under certain primary care practice models. Therefore, we also believe it is appropriate to remove the non-PFS allowed charges from the denominator of the primary care percentage calculation. In effect, removing allowed charges for hospital E/M and non-PFS services from the total allowed charges in the denominator of the primary care percentage calculation allows significantly more potential primary care practitioners to qualify for the PCIP, while still limiting the payment incentive to "true primary care practitioners" who predominantly serve a primary care function for their patients. With use of this revised denominator in the primary care percentage calculation, we estimate that over 80 percent of physicians who currently are enrolled in Medicare with a primary specialty designation of family medicine and almost 60 percent of physicians with a designation of internal medicine would qualify for the PCIP based on CY 2009 claims data. This revised calculation removes bias with respect to eligibility of "true primary care practitioners" for the PCIP based on the specific primary care practice characteristics and model they utilize in caring for their patients.

TABLE 67—EXCLUDED HOSPITAL EVALUATION AND MANAGEMENT SERVICES FROM THE DENOMINATOR FOR THE PCIP PRIMARY CARE PERCENTAGE CALCULATION

CPT Code	Description
99217	Observation care discharge day management.
99218	Level 1 initial observation care, per day.
99219	Level 2 initial observation care, per day.
99220	Level 3 initial observation care, per day.
99221	Level 1 initial hospital care, per day.
99222	Level 2 initial hospital care, per day.
99223	Level 3 initial hospital care, per day.
99231	Level 1 subsequent hospital care, per day.
99232	Level 2 subsequent hospital care, per day.
99233	Level 3 subsequent hospital care.
99234	Level 1 observation or inpatient hospital care.
99235	Level 2 observation or inpatient hospital care.
99236	Level 3 observation or inpatient hospital care.
99238	Hospital discharge day management; 30 minutes or less.
99239	Hospital discharge day management; more than 30 minutes.
99281	Level 1 emergency department visit.
99282	Level 2 emergency department visit.
99283	Level 3 emergency department visit.
99284	Level 4 emergency department visit.
99285	Level 5 emergency department visit.

Comment: A number of commenters recommended that CMS add additional services commonly furnished by "true primary care practitioners" to the list of primary care services for purposes of calculation of the primary care percentage and payment of the incentive payments themselves, which are made at 10 percent of the Medicare payment for primary care services. Among the numerous services recommended as additions by the commenters are hospital E/M visits, preventive services such as immunizations, certain diagnostic tests, and services related to home health. The commenters argued that, by increasing the numerator of the primary care percentage calculation used for determining PCIP eligibility, more potential primary care practitioners would qualify for the PCIP. Moreover, several commenters argued that, when furnished by "true primary care practitioners," these additional services are, in fact, primary care services and therefore should be subject to the incentive payment. The commenters suggested the phrase, "and as subsequently modified by the Secretary" in section 1833(x)(2)(B) of the Act (as added by section 5501(a) of the ACA) following the HCPCS codes defined as primary care services, could be read to provide CMS authority to add services to the list of primary care services. However, some commenters expressed concern that adding services, such as hospital E/M visits, to the list primary care services would qualify many hospitalists for the PCIP with the result that the PCIP would be applied inappropriately to practitioners predominantly furnishing hospital services. If CMS were to contemplate adding hospital E/M services to the list of primary care services, the commenters argued that CMS should exclude clinicians with hospitalists' claim patterns, even when those practitioners have a potential primary care specialty designation.

Response: While we appreciate commenters' interest in increasing the number of practitioners qualifying for the PCIP, we do not believe that section 1833(x)(2)(B) of the Act (as added by section 5501(a) of the ACA) authorizes us to add services to the list of primary care services specified in the Act. Section 1833(x)(2)(B) of the Act (as

added by section 5501(a) of the ACA) clearly specifies the HCPCS codes that are considered primary care services for purposes of the PCIP, stating "The term 'primary care services' means services identified, as of January 1, 2009, by the following HCPCS codes (and as subsequently modified by the Secretary) * * *." This phrase appears in other sections of the Act, and we have consistently interpreted it to refer to the same services that may be reported under different HCPCS codes when those codes change over time. We do not believe the phrase "and as subsequently modified by the Secretary" authorizes us to add codes (additional services) to the definition of primary care services.

Comment: Several commenters expressed concern regarding the reduced likelihood that "true primary care practitioners" in rural areas would qualify for the PCIP because primary care practitioners in remote areas commonly furnish a greater variety of services than those on the list of specific primary care services. The commenters recommended that rural practitioners be qualified for the PCIP based on another primary care percentage threshold that better suits the practice patterns of rural practitioners, including accounting for hospital E/M visits without penalizing the practitioners. Some commenters asserted that the PCIP would only benefit those practitioners furnishing services in health professional shortage areas (HPSAs) based on their belief that the PCIP was limited to primary care practitioners furnishing primary care services in HPSAs or that primary care practitioners would benefit at the cost of other specialty practitioners because of considerations of budget neutrality under the PFS.

Response: We appreciate the concerns of the commenters regarding rural practitioners and their special practice patterns. As discussed earlier in this section, we have modified our primary care percentage calculation for purposes of comparison with the 60 percent PCIP eligibility threshold so that all potential primary care practitioners, including potential primary care practitioners in rural areas, will not miss the PCIP eligibility threshold as a result of furnishing hospital visits to their patients. With regard to applying special criteria for the primary care percentage calculation for rural practitioners, we note that section 1833(x) of the Act does not include any provision that would make the location of the primary care services or the primary care practitioner a factor for PCIP eligibility; the same eligibility determination is applicable to all potential primary care practitioners.

In contrast to the HPSA physician bonus payment program and the HPSA Surgical Incentive Program (HSIP), the PCIP does not consider geographic location in determining practitioner eligibility or the primary care services for which the incentive payments will be made. Although practitioners in rural areas will benefit from the PCIP in the same way as practitioners in other regions, as we note above, PCIP payments will be made in addition to the regular Part B payments for primary care services furnished by eligible primary care practitioners and, if applicable, the HPSA physician bonus payment will also be made. Finally, we note that primary care incentive payments are not subject to the budget neutrality adjustment under the PFS, so PCIP payments will not affect payment for other services for which payment is made under the PFS.

After consideration of the public comments we received, we are finalizing our policy for calculation of the primary care percentage, with certain modifications from the proposed policy. The numerator of the primary care percentage for each NPI is the sum of the allowed charges for the primary care services listed in Table 66, as we proposed. However, the denominator is the allowed charges under the PFS minus the allowed charges for the hospital E/M services listed in Table 67, which is a change from our proposal. We will calculate the primary care percentage for each NPI of a potential primary care practitioner and, if the calculation rounds to 60 percent or greater, the potential primary care practitioner with that NPI will qualify to receive PCIP payments for the applicable year.

(3) Period of Claims Data for Primary Care Percentage Calculation

As we discussed in the CY 2011 PFS proposed rule (74 FR 40137), we proposed to use CY 2009 PFS claims data, processed through June 30, 2010, for determining PCIP practitioner eligibility for CY 2011. This would ensure analysis of about 99 percent of CY 2009 claims to determine practitioner eligibility for PCIP payment beginning January 2011. We note that the MMA changed the requirements for critical access hospital (CAH) billing for practitioners' professional services and, therefore, modifications were made to the Medicare claims processing system to require CAHs to identify the practitioner furnishing a service on the CAH claim for that professional service. However, because the rendering practitioner has only been identified on CAH claims since July 1, 2009, for the first year of the PCIP we are proposing to identify eligible practitioners using only 6 months of CAH data for those CAHs paid under the optional method. Thereafter, we would update the list of practitioners eligible for the PCIP annually based on the most recent available full year of PFS and CAH claims data.

To the extent practitioners were paid under the PFS during the historical claims data year for some primary services, and CAHs were paid under the optional method for those same practitioners' other professional services, we would aggregate the historical claims data from all settings by the practitioner's NPI in order to determine whether the practitioner is eligible for PCIP payments. We proposed that for all potentially eligible primary care practitioners (both practitioners paid under the PFS and practitioners for whose professional services CAHs are paid under the optional method), the period of claims data used for the annual determination of the practitioner's primary care percentage would lag the PCIP payment year by 2 years (for example, CY 2010 claims data would be used for the CY 2012 PCIP). This 2-year lag is consistent with other areas of the Medicare program where we rely on information from claims data to inform payment in a future year, such as the use of CY 2009 PFS utilization data in the establishment of certain aspects of CY 2011 PFS payment rates.

Under the proposed PCIP eligibility determination method, it would be necessary to revise the list of PCIP-eligible primary care practitioners based on updated claims data regarding primary specialty designation and primary care percentage each year. The revised list of primary care practitioners developed prior to the beginning of the next CY would establish a practitioner's eligibility for PCIP payments for the full next CY. That is, once eligible for the PCIP for a given CY, the practitioner would receive PCIP payments for primary care services furnished throughout that full CY. We would then reassess the practitioner's PCIP eligibility for the next year's payments. As a result, under our proposal, a practitioner newly enrolling in Medicare during a CY would not be eligible for the PCIP until Medicare claims data reflecting the practitioner's primary care specialty and primary care percentage that equals or exceeds the 60 percent threshold were available to establish the practitioner's eligibility for the next PCIP year. Similarly, an enrolled practitioner's change in primary specialty designation (either to

or from a primary care specialty) would not affect that practitioner's eligibility for the PCIP until the practitioner's claims reflecting the change were available for analysis in preparation for the next applicable CY PCIP. In the CY 2011 PFS proposed rule (74 FR 40138), we indicated that, given the statutory requirement for PCIP eligibility that a potential primary care practitioner's primary care services account for at least 60 percent of the allowed charges under Part B for the practitioner in a prior period as determined by the Secretary, we saw no clear alternative methodologies that would allow PCIP payments to be made to those practitioners newly enrolling in Medicare without the 2-year lag in eligibility determination that was described previously. However, given our general interest in supporting primary care practitioners and entry into primary care practice by new physicians and nonphysician practitioners in order to ensure that Medicare beneficiaries have access to these important services, we asked for public comments on alternative approaches for establishing PCIP eligibility for newly enrolled practitioners that would be consistent with the statutory requirement.

Comment: Several commenters opposed the proposed 2-year lag in the data used for PCIP eligibility determination (for example, CY 2009 claims data for CY 2011 PCIP payment). The commenters contended that the 2-year lag would not accurately represent changes in practice or changes in specialty designation, and requested that CMS exercise flexibility in determining the prior period in order to more closely align the eligibility and payment periods. Some commenters recommended that CMS decrease the timeframe of claims data used for eligibility determination to less than a year in order to use claims data from the year immediately prior to the incentive payment year. Other commenters suggested that CMS repeat the eligibility determination for potential primary care practitioners more frequently than annually, allowing multiple opportunities for potential primary care practitioners to meet the primary care percentage threshold because the commenters believe that practitioners may experience seasonal variations in their practice patterns.

The commenters were especially concerned about the eligibility determination for practitioners who newly enroll in Medicare because there would be no Medicare claims data for these practitioners from the 2 years prior to the PCIP payment year. The commenters were concerned that all newly enrolled potential primary care practitioners would, therefore, be ineligible for the PCIP for up to 2 years during their initial period of practice. The commenters contended that the 2-year interval would discourage, or at a minimum not encourage, primary care practice as a career choice. A few commenters also raised concerns about the corresponding 2-year lag time in PCIP eligibility for practitioners who change their Medicare-enrolled specialty to one that would make them potential primary care practitioners.

The commenters recommended a variety of approaches for CMS to consider in addressing PCIP eligibility for newly enrolled potential primary care practitioners. The commenters' recommendations included using claims data for a 6-month prior period in order to limit the lag time; making a lump sum PCIP payment after the conclusion of the PCIP payment year once eligibility could be confirmed; placing PCIP payments into escrow accounts to be paid after the potential primary care practitioner's first year of practice if the primary care percentage threshold was met; or presuming the eligibility of all practitioners with the designated enrolled specialties until claims data demonstrated that they did not qualify for the PCIP.

Response: We appreciate the commenters' interest in closely aligning the period of claims data used to determine PCIP eligibility with the time period where the primary care services subject to the incentive payment would be furnished in order to identify those primary care practitioners with the most current primary care practice patterns for the PCIP. For practitioners who were enrolled in Medicare 2 years prior to the PCIP payment year, as we proposed, we believe it is important to consider a full year of claims data rather than a shorter period, in order to account for seasonal variations in care patterns and more accurately represent the totality of PFS services provided by the potential primary care practitioner. Medical practices often experience fluctuations in the services that they provide over a year. A longer data period helps to smooth the variation and, therefore, better represents the totality of the potential primary care practitioner's practice. Due to the time necessary to receive and process claims data, using the claims data from the full year prior to the PCIP payment year for calculating the primary care percentage would delay incentive payments until after the third quarter of the PCIP payment year for all eligible primary care practitioners, a delay which we believe is not desirable because the statute indicates that we should make quarterly or monthly PCIP payments. Therefore, we believe that the 2-year lag method, as described in the CY 2011 PFS proposed rule (74 FR 40137), is the most appropriate approach to determining eligibility for most potential primary care practitioners because it allows for a review of a full year of claims data without delaying incentive payments for most eligible primary care practitioners.

However, we recognize the special circumstances of newly enrolled potential primary care practitioners, in that they do not have the claims history from 2 years prior to the PCIP payment year to determine their eligibility. We believe it is important to give potential primary care practitioners newly enrolling in Medicare in the year immediately preceding the PCIP payment year the opportunity to qualify for the PCIP with minimal delay. Therefore, for these practitioners, we will determine PCIP eligibility based on a different prior period than for those practitioners who are already enrolled in Medicare and who have Medicare claims data from 2 years prior to the PCIP payment year available for analysis. Section 1833(x) of the Act (as added by Section 5501(a) of the ACA) gives the Secretary the authority to establish the period of allowed charges used to assess the potential primary care practitioner's primary care percentage with regard to the minimum 60 percent threshold required for PCIP eligibility. For newly enrolled potential primary care practitioners only, we will use the available claims data from the year immediately preceding the PCIP payment year (for example, CY 2010 claims data for CY 2011 PCIP payment) to determine PCIP eligibility. We will use all claims data available for the newly enrolled potential primary care practitioner from that prior year to determine PCIP eligibility, with no minimum time period that the potential primary care practitioner must have been enrolled in Medicare in that prior year. Therefore, a newly enrolled potential primary care practitioner would need to wait no more than one year and potentially significantly less than one year following enrollment and first billing in order for the primary care services furnished by that eligible primary care practitioner to be subject to the PCIP in the year following the practitioner's initial enrollment.

Due to the processing lag for claims data from the previous CY, PCIP payments for newly enrolled primary care practitioners will be delayed until after the end of the third quarter of the PCIP payment year, although the PCIP

payments will ultimately be made for all primary care services the eligible practitioners furnished throughout the full PCIP payment year. Following that first PCIP eligibility determination in the year immediately following the potential primary care practitioner's enrollment in Medicare, PCIP eligibility will be determined as specified previously for a practitioner who was enrolled in Medicare 2 years prior to the PCIP payment year.

For example, if a practitioner newly enrolled in Medicare any time during CY 2010 with a primary specialty designation of family medicine and furnished services that were billed to Medicare, in CY 2011 we will evaluate the family physician's CY 2010 claims data to determine whether the physician meets the 60 percent primary care percentage eligibility threshold for CY 2011 payment under the PCIP. We would not be able to make this assessment until the CY 2010 claims data are substantially complete and, therefore, would anticipate making a determination regarding the physician's eligibility some time after the midpoint of CY 2011. If the family physician is eligible for the PCIP, we would make a lump sum payment for those primary care services furnished earlier in CY 2011 prior to the determination of eligibility and then we would begin making quarterly PCIP payments following the third quarter of CY 2011. For the same physician for the CY 2012 PCIP payment year, we would again refer to CY 2010 claims data to assess whether the physician is eligible for the PCIP and, if applicable (eligibility could potentially change with more complete CY 2010 data than were available for the CY 2011 determination), make quarterly PCIP payments to that physician in CY 2012.

The use of a different prior period in the case of newly enrolled potential primary care practitioners will allow us more quickly to assess whether the practitioner qualifies for the PCIP and make any applicable PCIP payment, while allowing PCIP payments for established primary care practitioners to be made timely for each quarter of the PCIP payment year based on the use of a different prior period to determine the eligibility of previously enrolled potential primary care practitioners. The use of the more recent prior period for PCIP eligibility determination will not apply to practitioners who are already enrolled in Medicare 2 years prior to the PCIP payment year, but switch their specialty designation to a potential primary care specialty in the year immediately preceding the PCIP payment year. As we explained in the CY 2011 PFS proposed rule (74 FR 40138) and discuss further below, we do not want to encourage practitioners to change their specialty designation merely for the purpose of garnering PCIP payments. Moreover, if we were to make an accommodation for practitioners enrolled in Medicare who change their specialty to a potential primary care practitioner specialty after the data year used for PCIP eligibility determination, we would also need to devise a process to remove practitioners from PCIP eligibility if they changed to a non-primary care specialty during that same period. We believe the incentives and the practice challenges experienced by newly enrolling practitioners are not the same as those for established practitioners and, on balance, we continue to believe it is appropriate to establish PCIP eligibility based upon claims data for a full CY. This policy will also ensure greater predictability of payment, which is an important objective of the PCIP and Medicare payment policy in general.

We do not agree with commenters who recommended that we make PCIP payments to newly enrolled potential primary care practitioners based on a self-certification process or presumptions about eligibility. Making incentive payments prior to review of a practitioner's eligibility based on claims data would inevitably result in inappropriate PCIP payments to potential primary care practitioners. Any such payments would constitute overpayments subject to recoupment, which would place a burden on our claims processing systems and on the practitioners themselves.

After consideration of the public comments we received, we are finalizing our CY 2011 proposal to use Medicare claims data for the year 2 years prior to the PCIP payment year to determine PCIP eligibility for those potential primary care practitioners who were enrolled in Medicare in that year. However, we are modifying the proposed policy to use claims data from the year immediately preceding the PCIP payment year in order to determine PCIP eligibility for potential primary care practitioners who newly enroll in Medicare in the year immediately preceding the PCIP payment year. The PCIP payments to newly enrolled potential primary care practitioners, if applicable, will be made as a lump sum for those primary care services furnished earlier in the PCIP payment year by the eligible primary care practitioner as a soon as an eligibility determination can be made in the PCIP payment year. Quarterly PCIP payments for these eligible primary care practitioners will begin following the third quarter of the PCIP payment year.

In the CY 2011 PFS proposed rule (74 FR 40138), we stated that we plan to monitor changes in the primary specialty designations of enrolled practitioners over time and would expect not to see significant changes in the specialties of currently enrolled practitioners as a result of the PCIP payments. We would expect that physicians changing their primary specialty to one of the primary care specialties of family medicine, internal medicine, geriatric medicine, or pediatric medicine and who would be newly eligible for the PCIP are furnishing primary care services to the patients in their practices. Consistent with our past policies, we would expect that physicians changing their primary specialty designation under Medicare would make such changes only so that their primary specialty designation is fully consistent with the specific or unique type of medicine they practice. If we find that physicians are changing their specialty designations (for example, cardiologists who designate their primary specialty as internal medicine, although they practice cardiology) in order to take advantage of the PCIP payments, we would considering making future revisions to eliminate such an outcome.

Comment: Several commenters agreed that CMS should review the specialty designations of physicians and nonphysician practitioners to ensure there is no gaming of the system in order for practitioners to qualify for the PCIP.

Response: We appreciate the commenters' support and plan to follow closely the changes in the Medicare primary specialty designations of physicians and nonphysician practitioners. As we stated previously, if we find that practitioners are changing their specialty designations in order to become eligible for PCIP payments rather than to reflect their actual practice, we may consider making future revisions to address this problem.

(4) PCIP Payment

We proposed in the CY 2011 PFS proposed rule (74 FR 40138) that PCIP payments would be calculated by the Medicare contractors and made quarterly on behalf of the eligible primary care practitioner for the primary care services furnished by the practitioner in that quarter, consistent with the established Medicare HPSA physician bonus program (Medicare Claims Processing Manual, Pub. 100–04, Chapter 12, Section 90.4.4) and the proposed HSIP described in section

III.S.2. of this final rule with comment period. The primary care practitioners' professional services may be paid under the PFS based on a claim for professional services or, where the practitioner has reassigned his or her benefits to a CAH paid under the optional method, to the CAH based on an institutional claim.

Comment: Several commenters supported CMS' proposal to make incentive payments quarterly. These commenters agreed that quarterly payments would mitigate the administrative burden and better account for the practice patterns of the various types of primary care practitioners submitting claims for primary care services.

Response: We appreciate the commenters' support of the quarterly PCIP payments. We agree that the quarterly payments would work well with the billing cycles of many practitioners and would be consistent with Medicare payment policies for other incentive programs.

As discussed in CY 2011 PFS proposed rule (74 FR 40138), eligible primary care practitioners would be identified on a claim based on the NPI of the rendering practitioner. If the claim is submitted by a practitioner's group practice or a CAH, the rendering practitioner's NPI must be included on the line-item for the primary care service (identified in Table 66) in order for a determination to be made regarding whether or not the service is eligible for payment of the PCIP. We note that, in order to be eligible for the PCIP, physician assistants, clinical nurse specialists, and nurse practitioners must be billing for their services under their own NPI and not furnishing services incident to physicians' services. Regardless of the specialty area in which they may be practicing, these specific NPPs would be eligible for the PCIP based on their enrolled potential primary care practitioner specialty if their historical primary care percentage equals or exceeds the 60 percent threshold.

In the CY 2011 PFS proposed rule (75 FR 41038), we indicated that section 1833(x)(4) of the Act (as added by section 5501(a) of the ACA) specifies that "there shall be no administrative or judicial review under section 1869, or section 1878, or otherwise, respecting the identification of primary care practitioners." We believe that the inclusion of this language is intended to provide a means for the practical implementation of this provision. We explained that we must develop a process and identify primary care practitioners before we can make payments under the PCIP to the eligible primary care practitioners. The statute gives CMS the authority to make final determinations of eligible primary care practitioners that are not subject to appeal through the various channels normally available to practitioners, in order for the timely payments under the PCIP to occur. In contrast, if the eligibility determinations that we must make under this provision were subject to appeal, the timely implementation of this program could be jeopardized and payments under the PCIP could be significantly delayed. However, we stated that we did not believe that the "no administrative or judicial review" clause precludes CMS from correcting errors resulting from clerical or mathematical mistakes. Therefore, we indicated that practitioners would have the opportunity to notify CMS of clerical or mathematical errors that may have occurred during the process of identifying eligible primary care practitioners for PCIP payment and that may have resulted in a mistaken eligibility determination for the PCIP.

Comment: Several commenters supported the review of the PCIP eligibility determinations for clerical or mathematical mistakes. The commenters agreed that a review of the data calculations may be necessary when errors are suspected. Some commenters further asked for clarification and transparency regarding the formula and data that are used for eligibility determinations. Finally, several commenters requested that CMS provide notification to individual qualifying primary care practitioners even if the PCIP payment is made to the group practice under a reassignment arrangement.

Response: We appreciate the support of the commenters for a review when suspected clerical or mathematical mistakes are identified. As described earlier in this section, the formula used to determine the primary care percentage for a potential primary care practitioner is the practitioner's allowed charges from the applicable data year (the prior period) for primary care services (listed in Table 66) divided by the total allowed charges under the PFS, excluding hospital E/M visits (listed in Table 67), and multiplied by 100. The specialty designation and allowed charges used to identify a potential primary care practitioner and calculate the primary care percentage are based on the claims data that are submitted by the practitioner during the applicable prior year for eligibility determination for the PCIP payment year, which depends on whether the potential primary care practitioner was newly enrolled in Medicare in the year immediately prior to the PCIP payment year or previously enrolled in Medicare. Those data will be reviewed when we are assessing a suspected mistake.

We note that Medicare contractors will post a list of individual primary care practitioners eligible for the PCIP for a year, along with their NPIs, on their web sites. We do not anticipate providing individual notices to PCIP-eligible primary care practitioners for each year. Rather, primary care practitioners, including those who have reassigned their benefits, can confirm their eligibility for the PCIP for a year without direct individual notification.

In the CY 2011 PFS proposed rule (75 FR 41038), we further noted that section 1833(x)(3) of the Act (as added by section 5501(a) of the ACA) authorizes payment under the PCIP as an additional payment amount for specified primary care services without regard to any additional payment for the service under section 1833(m) of the Act. Therefore, an eligible primary care physician furnishing a primary care service in a HPSA may receive both a HPSA physician bonus payment under the established program and a PCIP payment under the new program beginning in CY 2011, but the PCIP payment is made without regard to the HPSA physician bonus payment amount. In addition, payments for outpatient CAH services under section 1834(g)(2)(B) of the Act (as amended by section 5501(a) of the ACA) would not be affected by the PCIP payment amounts made to the CAH on behalf of the primary care practitioner.

(5) Summary of Final PCIP Policies

In summary, after consideration of the public comments we received, we are finalizing our CY 2011 proposals for the PCIP, with modification. Practitioners with a designated primary Medicare-enrolled specialty of family medicine, internal medicine, geriatric medicine, pediatric medicine, nurse practitioner, clinical nurse specialist, or physician assistant and whose primary care percentage, calculated as primary care allowed charges divided by PFS allowed charges excluding hospital E/M visits, and then multiplied by 100, exceeds 60 percent will be eligible for the PCIP. The primary care percentage will be calculated based on claims data from 2 years prior to the PCIP payment year for practitioners enrolled in Medicare in that year, and from the year immediately prior to the PCIP payment year for practitioners newly enrolling in that year. Beginning immediately following the first quarter of CY 2011, incentive payments for primary care

services furnished by eligible practitioners will be paid quarterly after the conclusion of the calendar quarter, in addition to payments by Medicare for the primary care services and other incentive program payments. The list of eligible primary care practitioners will be updated annually based upon our analysis of claims data from the subsequent reference period.

Accordingly, we are finalizing our regulation at new § 414.80 to specify the requirements of the PCIP. While we are finalizing our proposed definition of primary care services in § 414.80(a), we are revising our proposed definition of eligible primary care practitioners in § 414.80(a)(i)(B) and (ii)(B) to specify that at least 60 percent of the physician's or practitioner's allowed charges under the PFS (excluding hospital evaluation and management visits) during a reference period specified by the Secretary are for primary care services. We are finalizing § 414.80(b) as proposed to provide eligible primary care practitioners a 10 percent incentive payment for primary care services, in addition to the amount that would otherwise be paid for their professional services under Part B. Quarterly PCIP payments will be made to eligible practitioners or to CAHs paid under the optional method that are billing on behalf of practitioners for their professional services for identified primary care services.

2. Section 5501(b): Incentive Payment Program for Major Surgical Procedures Furnished in Health Professional Shortage Areas

a. Background

Section 1833(m) of the Act provides for an additional 10 percent incentive payment when physicians' services are furnished to a covered individual in an area designated as a geographic Health Professional Shortage Area (HPSA) as identified by the Secretary prior to the beginning of such year. Section 5501(b) of the ACA revises section 1833 of the Act by adding new subparagraph (y), "Incentive Payments for Major Surgical Procedures Furnished in Health Professional Shortage Areas."

In the case of major surgical procedures furnished by a general surgeon on or after January 1, 2011 and before January 1, 2016, in an area designated under section 332(a)(1)(A) of the Act as a geographic HPSA, they would be paid on a monthly or quarterly basis an amount equal to 10 percent of the payment amount for eligible services under Part B. Section 1833(y)(2)(A) of the Act (as added by section 5501(b) of the ACA) defines a general surgeon as a physician who is described in section 1861(r)(1) of the Act and who has designated a CMS specialty code of 02-general surgery as his or her primary specialty code in the physician's enrollment in Medicare under section 1866(j) of the Act.

Section 1833(y)(2)(B) of the Act (as added by section 5501(b) of the ACA) defines major surgical procedures as surgical procedures for which a 10-day or 90-day global period is used for payment under the PFS under section 1848(b) of the Act. In Addendum B to the CY 2010 PFS final rule with comment period (74 FR 62017 through 62143), as corrected in the correction notice (74 FR 65455 through 65457), we identified 489 10-day global procedure codes and 3,796 90-day global procedure codes for a total of 4,285 surgical procedure codes that would have met the surgical procedure criteria for the incentive payment if it were applicable in CY 2010.

b. HPSA Surgical Incentive Payment Program (HSIP)

For services furnished on or after January 1, 2011 and before January 1, 2016, in the CY 2011 PFS proposed rule (75 FR 40139) we proposed to provide a 10 percent incentive payment to general surgeons, identified by their enrollment in Medicare with a primary specialty code of 02-general surgery, in addition to the amount they would otherwise be paid for their professional services under Part B, when they furnish a major surgical procedure in a location defined by the Secretary as of December 31 of the prior year as a geographic HPSA. As with the PCIP described above, we stated in the CY 2011 PFS proposed rule (75 FR 40139) that we did not believe surgeons would change their Medicare specialty designation in order to take advantage of the HSIP payments. However, we described our plan to monitor the specialty designations of enrolled physicians, and if we were to find that surgeons were changing their primary specialty designation to general surgery in order to take advantage of the HSIP payments, we would consider making future revisions to eliminate such an outcome.

Consistent with the established Medicare HPSA physician bonus program, we proposed that HSIP payments be calculated by Medicare contractors based on the criteria for payment discussed earlier in this section, and payments would be made quarterly on behalf of the qualifying general surgeon for the qualifying major surgical procedures. The surgeons' professional services would be paid under the PFS based on a claim for professional services or, when a physician has reassigned his or her benefits to a CAH paid under the optional method, to the CAH based on an institutional claim.

Qualifying general surgeons would be identified on a claim for a major surgical procedure based on the primary specialty of the rendering physician, identified by his or her NPI, of 02-general surgery. If the claim is submitted by a physician's group practice or a CAH, the rendering physician's NPI must be included on the line-item for the major surgical procedure in order for a determination to be made regarding whether or not the procedure is eligible for payment under the HSIP.

For HSIP payment to be applicable, the major surgical procedure must be furnished in an area designated by the Secretary as of December 31 of the prior year as a geographic HPSA. We stated that we would provide HSIP payments for major surgical procedures furnished by general surgeons in the same HPSAs as we currently recognize for purposes of payment of all physicians under the established Medicare HPSA physician bonus program under section 1833(m) of the Act.

Each year, we publish a list of zip codes eligible for automatic payment of the HPSA physician bonus payment at: *http://www.cms.gov/hpsapsaphysicianbonuses/01_overview.asp.* We proposed to use the same list of zip codes for automatic payment of the incentive payment for qualifying surgical procedures furnished by general surgeons. We also proposed to create a new HCPCS code modifier to identify circumstances when general surgeons furnish qualifying surgical procedures in areas that are designated as HPSAs as of December 31 of the prior year, but that are not on the list of zip codes eligible for automatic payment. The new modifier would be appended to the major surgical procedure on claims submitted for payment, similar to the current process for payment of the Medicare HPSA physician bonus when the geographic HPSA is not a HPSA identified for automatic payment.

Consistent with the statutory requirement, we would define major surgical procedures as those for which a 10-day or 90-day global period is used for payment under the PFS. For CY 2011, approximately 4,300 10-day and 90-day global surgical procedures codes were identified in Addendum B to the CY 2011 PFS rule (75 FR 40262 through 40641) under the far right column labeled "Global" and designated with "010" or "090," respectively.

We further noted that section 1833(y)(3) of the Act (as added by section 5501(b)(1) of the ACA) authorizes payment under the HSIP as an additional payment amount for specified surgical services without regard to any additional payment for the service under section 1833(m) of the Act. Therefore, a general surgeon may receive both a HPSA physician bonus payment under the established Medicare HPSA physician bonus program and a HSIP payment under the new program beginning in CY 2011, but the HSIP payment would be made without regard to the HPSA physician bonus payment amount. In addition, payments for outpatient CAH services under section 1834(g)(2)(B) of the Act (as amended by section 5501(b) of the ACA) would not be affected by the HSIP payment amounts made to the CAH on behalf of the general surgeon.

Accordingly, for CY 2011, we proposed to revise § 414.2 and add the definitions of "HPSA" and "major surgical procedure." We also proposed to revise § 414.67 to move the existing provisions to paragraph (a) to be grouped as the "Health Professional Shortage Area (HPSA) physician bonus program" and adding a new paragraph (b) for the "HPSA surgical incentive payment program" provisions. Section 414.67(b) would state that general surgeons who furnish identified 10-day and 90-day global period surgical procedures in an area designated by the Secretary as of December 31 of the prior year as a geographic HPSA that is recognized by Medicare for the HPSA physician bonus program as specified under renumbered § 414.67(a)(1) would receive a 10 percent incentive payment in addition to the amount that would otherwise be paid for their professional services under Part B. Physicians furnishing services in areas that are designated as geographic HPSAs prior to the beginning of the year but not included on the published list of zip codes for which automated HPSA surgical incentive payments are made would report a specified HCPCS code modifier to receive the HSIP payment. Quarterly incentive payments would be made to physicians or to CAHs paid under the optional method when billing on behalf of physicians for their professional services.

Comment: A number of commenters supported CMS' proposal to implement the HSIP. A few commenters recommended expanding the geographic eligibility criteria for the HSIP to increase the number of qualifying procedures furnished by general surgeons for which the incentive payment would be made. These commenters suggested that CMS introduce three modifications to the proposed criteria in order to provide the incentive payment for major surgical procedures furnished by general surgeons to Medicare beneficiaries who have limited access to general surgical care. Specifically, the commenters recommended that CMS additionally provide the incentive payment for: (1) Qualifying surgical procedures performed by a general surgeon in a hospital adjacent to a recognized HPSA; (2) qualifying surgical procedures performed by a general surgeon who resides in a recognized HPSA; and (3) qualifying surgical procedures performed by a general surgeon who has an office in a recognized HPSA. The commenters argued that the proposed policy would narrowly limit the availability of the general surgery incentive payments by linking payments only to surgical procedures furnished in established HPSAs. The commenters concluded that the proposed policy would result in relatively fewer general surgeons receiving the incentive payments and would not capture surgical procedures furnished in all of the nation's geographic areas in which there is a shortage of general surgeons.

Response: We appreciate the commenters' support for our proposal. Regarding commenters' requests for expansion of the locations for surgery when we would provide the incentive payment for major surgical procedures furnished by general surgeons, we do not believe that we have the authority to expand the care settings beyond the statutorily prescribed location, that is, "major surgical procedures * * * by a general surgeon in an area that is designated (under section 332(a)(1)(A) of the Public Health Service Act) as a health professional shortage area." Section 1833(y) of the Act (as added by section 5501(b) of the ACA) relies solely on section 332(a)(1)(A) of the Public Health Service Act to identify qualifying HPSAs and expressly notes that the HPSA must be identified by the Secretary prior to the beginning of the HSIP payment year.

Comment: One commenter requested that CMS extend HSIP payment to physician assistants who are trained as first assistants at surgery. The commenter encouraged CMS to provide the 10 percent incentive payment to physician assistants, trained in surgical specialties, who ensure both that beneficiaries in rural areas have access to appropriate surgical care and that general surgeons furnishing surgical procedures in these locations are appropriately supported by physician assistants trained in surgical specialties.

Response: Section 1833(y)(2) of the Act (as added by section 5501(b) of the ACA) specifically limits HSIP eligibility to those physicians (a doctor of medicine or osteopathy legally authorized to practice medicine and surgery by the State in which he performs such function or action according to the definition in section 1861(r)(1)) of the Act who have designated 02-general surgery as their primary specialty code in Medicare's physician enrollment. On the other hand, physician assistants are not doctors of medicine or osteopathy and these practitioners are identified in Medicare enrollment with the specialty code 97-physician assistant. Therefore, we do not believe we have the statutory authority to extend HSIP payment to physician assistants who provide surgical support for major surgeries furnished by general surgeons in recognized HPSAs.

After consideration of the public comments we received, we are finalizing our CY 2011 HSIP proposal, with modification regarding the proposal to create a new HCPCS code modifier to identify circumstances when general surgeons furnish services in areas that are designated as HPSAs as of December 31 of the prior year, but that are not on the list of zip codes eligible for automatic payment. Under our final policy, under these circumstances practitioners would report the existing modifier-AQ (Physician providing a service in a HPSA) that is used for the established Medicare HPSA physician bonus program because we would make incentive payments under the HSIP for surgical procedures furnished by general surgeons in the same HPSAs that are recognized for the Medicare HPSA physician bonus program.

In summary, the HSIP provides a 10 percent incentive payment quarterly to qualifying physicians enrolled as general surgeons in Medicare (or to the CAHs to which they have reassigned their benefits) for qualifying 10-day and 90-day global surgical procedures furnished on or after January 1, 2011 and before January 1, 2016 by those general surgeons in recognized geographic HPSAs. CMS will make automatic payments when the zip code for the location of service is found in the applicable file for the payment year on the CMS web site for the HPSA physician bonus program at: *http://www.cms.gov/hpsapsaphysicianbonuses/01_overview.asp.* Existing HCPCS modifier-AQ should be appended to the major surgical procedure on claims submitted for payment to identify circumstances when general surgeons

furnish services in areas that are designated as HPSAs as of December 31 of the prior year, but that are not on the list of zip codes eligible for automatic payment.

We are also finalizing our proposed revisions to the Code of Federal regulations related to the HSIP, with minor modification. We are revising § 414.2 as we proposed to add the definitions of "HPSA" and "major surgical procedure." We also are revising § 414.67 as we proposed to move the existing provisions to paragraph (a) to be grouped as the "Health Professional Shortage Area (HPSA) physician bonus program" and adding new paragraph (b) for the "HPSA surgical incentive payment program" provisions. We are finalizing our proposal for § 414.67(b) to state that general surgeons who furnish identified 10-day and 90-day global period surgical procedures in an area designated by the Secretary as of December 31 of the prior year as a geographic HPSA that is recognized by Medicare for the HPSA physician bonus program as specified under renumbered § 414.67(a)(1) would receive a 10 percent incentive payment in addition to the amount that would otherwise be paid for their professional services under Part B. We are modifying the proposal to specify in § 414.67(b)(3) that physicians furnishing services in areas that are designated as geographic HPSAs prior to the beginning of the year but not included on the published list of zip codes for which automated HPSA surgical incentive payments are made would report HCPCS modifier-AQ to receive the HSIP payment and to change the term "bonus" to "incentive" when referring to the HSIP. Quarterly incentive payments will be made to physicians or to CAHs paid under the optional method when billing on behalf of physicians for their professional services.

3. Sections 5501(a) and (b) of the ACA and Payment for Critical Access Hospital Professional Services Under the Optional Method

Section 1834(g) of the Act established the payment rules for outpatient services furnished by a CAH. In 1999, section 403(d) of the Balanced Budget Refinement Act of 1999 (Pub. L. 106–113) (BBRA) amended section 1834(g) of the Act to provide for two methods of payment for outpatient services furnished by a CAH. Specifically, section 1834(g)(1) of the Act, as amended by the BBRA, specifies that the amount of payment for outpatient services furnished by a CAH is equal to the reasonable costs of the CAH in furnishing such services. (The physician or other practitioner furnishing the professional service receives payment under the PFS.) In the alternative, the CAH may make an election, under section 1834(g)(2) of the Act, to receive amounts that are equal to "the reasonable costs" of the CAH for facility services plus, with respect to the professional services, the amount otherwise paid for professional services under Medicare, less the applicable Medicare deductible and coinsurance amount. The election made under section 1834(g)(2) of the Act is sometimes referred to as "method II" or "the optional method." Throughout this section we refer to this election as "the optional method."

In 2000, section 202 of the Medicare, Medicaid and SCHIP Benefits Improvement and Protection Act of 2000 (Pub. L. 106–554) (BIPA) amended section 1834(g)(2)(B) of the Act to increase the payment for professional services under the optional method to 115 percent of the amount otherwise paid for professional services under Medicare. In addition, in 2003 section 405(a)(1) of the MMA amended section 1834(g)(1) of the Act by inserting the phrase "equal to 101 percent of" before the phrase "the reasonable costs." However, section 405 of the MMA did not make a corresponding change to section 1834(g)(2)(A) of the Act regarding the amount of payment for facility services under the optional method. In 2010, section 3128 of the ACA amended section 1834(g)(2)(A) of the Act by inserting the phrase "101 percent of" before "the reasonable costs."

Section 5501(a) of the ACA amends section 1833 of the Act by adding a new paragraph (x), "Incentive Payments for Primary Care Services," that authorizes additional Part B payments to primary care practitioners for primary care services. Section 5501(b) of the ACA further amends section 1833 of the Act by adding new paragraph (y), "Incentive Payments for Major Surgical Procedures Furnished in Health Professional Shortage Areas," that authorizes additional Part B payments for major surgical procedures furnished by general surgeons in HPSAs. Sections 5501(a)(3) and 5501(b)(3) of the ACA make conforming amendments to section 1834(g)(2)(B) of the Act, which refers to payment to the CAH for professional services under the optional method, by adding at the end of section 1834(g)(2)(B) of the Act the following phrase, "Subsections (x) and (y) of 1833 of the Act shall not be taken into account in determining the amounts that would otherwise be paid pursuant to the preceding sentence." As such, section 1834(g)(2)(B) of the Act (as amended by sections 5501(a)(2) and 5501(b)(2) of the ACA) requires that under the optional method, the 115 percent adjustment payment to the CAH for professional services is calculated without considering the incentive payments for primary care services furnished by primary care practitioners and major surgical procedures furnished by general surgeons in HPSAs as these terms are defined under sections 1833(x) and (y) of the Act.

The regulations implementing section 1834(g)(2)(B) of the Act, payment to the CAH for professional services under the optional method, are in § 413.70(b)(3)(ii)(B). In order to implement the amendments to section 1834(g)(2)(B) of the Act as specified by sections 5501(a)(2) and 5501(b)(2) of the ACA, we are proposing to amend the regulations in § 413.70(b)(3)(ii)(B) to state that, effective for primary care services furnished by primary care practitioners and major surgical procedures furnished by general surgeons in HPSAs on or after January 1, 2011 and before January 1, 2016, the additional incentive payment amounts as specified in § 414.67 and § 414.80 are not included in the determination of the payment for professional services made to the CAH under the optional method. Accordingly, we are proposing that payment for professional services to the CAH at 115 percent of the PFS amount under the optional method would not take into account the additional Part B incentive payments for primary services furnished by primary care practitioners and major surgical procedures furnished by general surgeons in HPSAs as provided in § 414.67 and § 414.80.

Comment: Several commenters supported CMS' proposal to make HSIP and PCIP payments to CAHs paid under the optional method for qualifying services furnished by eligible practitioners who have reassigned their billing rights to the CAHs. No commenters addressed CMS' proposal to calculate the 115 percent adjustment payment to the CAH for professional services without considering the incentive payments for primary care services furnished by primary care practitioners and major surgical procedures furnished by general surgeons in HPSAs.

Response: We appreciate the commenters' support for our proposal to include qualifying professional services billed by CAHs paid under the optional method furnished by eligible practitioners in the PCIP and HSIP.

After considering the public comments we received, we are finalizing our CY 2011 proposal to

include CAHs paid under the optional method in the PCIP and HSIP. Payment to a CAH paid under the optional method, will be made quarterly, for eligible professional services furnished by qualifying physicians and nonphysician practitioners who have reassigned their billing rights to the CAH. Furthermore, we are finalizing our CY 2011 proposal to specify that payment for professional services to the CAH at 115 percent of the PFS amount under the optional method would not take into account the additional Part B incentive payments for primary services furnished by primary care practitioners and major surgical procedures furnished by general surgeons in HPSAs. We are amending § 413.70(b)(3)(ii)(B) as we proposed to reflect this final policy.

T. Section 6003: Disclosure Requirements for In-Office Ancillary Services Exception to the Prohibition on Physician Self-Referral for Certain Imaging Services

1. Background

Section 1877 of the Act (also known as the physician self-referral law): (1) Prohibits a physician from making referrals for certain "designated health services" (DHS) payable by Medicare to an entity with which he or she (or an immediate family member) has a financial relationship (ownership or compensation), unless an exception applies; and (2) prohibits the entity from submitting claims to Medicare (or billing another individual, entity, or third party payer) for those DHS rendered as a result of a prohibited referral. The statute establishes a number of exceptions and grants the Secretary the authority to create regulatory exceptions that pose no risk of program or patient abuse.

Section 1877(b)(2) of the Act, entitled "In-office Ancillary Services" sets forth the exception that permits a physician in a solo or group practice to order and provide designated health services (DHS), other than most durable medical equipment and parenteral and enteral nutrients, in the office of the physician or group practice, provided that certain criteria are met. The requirements of the in-office ancillary services exception are described at § 411.355(b).

Section 6003 of the ACA amended section 1877(b)(2) of the Act by creating a new disclosure requirement for the in-office ancillary services exception to the prohibition on physician self-referral. Specifically, section 6003 of the ACA provided that, with respect to referrals for magnetic resonance imaging (MRI), computed tomography (CT), positron emission tomography (PET), and any other DHS specified under section 1877(h)(6)(D) of the Act that the Secretary determines appropriate, the referring physician inform a patient in writing at the time of the referral that the patient may obtain the service from a person other than the referring physician or someone in the physician's group practice and provide the patient with a list of suppliers who furnish the service in the area in which the patient resides.

In the CY 2011 PFS proposed rule, we proposed regulations related to section 6003 of the ACA. We are finalizing that proposal with modification. We received approximately 45 comments related to this section. Most commenters offered support for the proposed rule and some stated that it was consistent with the intent of the legislation, which was to provide choice for patients, as well as a degree of protection against conflicts of interest. Others stated that disclosure might be a first step towards ending abuses in self referral, but questioned the overall effectiveness of the disclosure requirement in reducing overutilization. These commenters were nonetheless supportive of the reasonable mechanisms used to implement the requirement.

We are finalizing some elements of the proposal without modification. Elements that remain unchanged from the proposed rule include: application of the disclosure requirement to advanced imaging services only; the general disclosure requirements that the notice should be written in a manner sufficient to be reasonably understood by all patients and be given to the patient at the time of the referral; the list must include the requisite number of suppliers; the information about these suppliers must include name, address, and phone number; these suppliers are to be located within a 25-mile radius of the physician's office location at the time of the referral; and the effective date of January 1, 2011.

Elements that we are finalizing with changes include: reducing the number of suppliers that must be included from 10 to 5; removing the requirement that the supplier's distance from the physician's office be listed on the disclosure; clarifying that as long as the requisite number of suppliers are included in the alternate list, the physician may also list providers on the notice; and removing the requirement that the physician obtain the patient's signature on the notice and retain a copy of the disclosure in the patient's medical record.

2. Disclosure Requirement

Based upon the comments received, we have finalized § 411.355(b)(7) in a manner that addresses concerns of the industry while also maintaining the intended purpose of the provision. The comments received during the public comment period are discussed more fully below.

a. Services That Trigger the Disclosure Requirement

We proposed that the disclosure requirement should apply to only the advanced imaging services listed in section 6003 of the ACA (MRI, CT, and PET). We solicited comments regarding whether other radiology or imaging services under section 1877(h)(6)(D) of the Act should be included in the requirement. We are finalizing this element as proposed.

Comment: Most commenters were supportive of our proposal to apply the disclosure requirement only to those advanced imaging services listed in section 6003 of the ACA. A commenter stated that expanding application of the provision beyond the named services would add to confusion and increase negative effects on physician practices. The commenter noted that creating lists of alternate suppliers for the named services will be less burdensome than adding any other radiology services. Multiple commenters who were opposed to expanding the disclosure requirement stated that a disclosure requirement for diagnostic services such as x-rays or ultrasound services would place significant burden on physician groups and could interrupt continuity of care for patients, as these tests are often performed in the office immediately after the physician has ordered the test.

Only one commenter urged CMS to fully exercise the authority granted by the Affordable Care Act and apply the disclosure requirement to all radiology services covered by section 1877(h)(6)(D) of the Act. The commenter stated that the disclosure requirement benefits Medicare beneficiaries through greater transparency regarding their freedom to choose a supplier of medical services and that there is no reason to draw a distinction between MRI, CT, and PET referrals and referrals for other radiology services. This commenter also did not believe that the burden on the referring physicians would be materially different if the list of affected imaging services is expanded to cover all radiology services, as it would only entail expanding the list that will serve as the notice to patients.

Response: We are finalizing this requirement as proposed and applying

the disclosure requirement to only the advanced imaging services specified in section 6003 of the ACA, which are MRI, CT, and PET services. We decline to expand the disclosure requirement to any of the other radiology or imaging services that fall under section 1877(h)(6)(D) of the Act. X-ray and ultrasound services in particular are much more likely to be performed on the same day as the original visit compared to many advanced imaging services. Therefore, disclosures related to these additional services would not be as useful to the patient. We do not find that the benefit of expanding this disclosure requirement to other radiology services would outweigh the additional burden that would be placed on physicians.

Comment: One commenter requested that CMS clarify that any CT imaging service that is furnished integral to a procedure defined as a radiation therapy service for purposes of the physician self-referral law is exempt from this disclosure requirement. The commenter provided the example of CT guidance used to localize tumors and focus the beam during the delivery of external beam radiation therapy treatments. Such imaging, although involving CT, is integral to the performance of radiation therapy treatments that are included in the DHS category of radiation therapy services and supplies.

Response: The disclosure requirement applies to all in-office referrals for CT imaging services that are categorized as "radiology and certain other imaging services" by the list of CPT/HCPCS Codes (as defined in § 411.351). We note, however, that the request by a radiation oncologist for radiation therapy or ancillary services necessary for, and integral to, the provision of radiation therapy does not constitute a "referral," as defined in § 411.351, if certain criteria are satisfied. The disclosure requirement would not apply to any request that is not a "referral" as defined in § 411.351.

Comment: A commenter requested that CMS remove CPT code 77014 (computed tomography guidance for placement of radiation therapy fields) from the DHS category of "radiology and certain other imaging services," and add it to the category of "radiation therapy services and supplies," as such categories are set forth in the list of CPT/HCPCS Codes. The commenter asserts that this would be appropriate because while the code is for a service that involves imaging, the service is distinct from the other radiology codes and integral to the delivery of radiation therapy. The commenter noted that when a radiation oncologist performs radiation therapy services, it is not considered a referral under the law. However, if CPT code 77014 is included in the list of radiology services, it could be considered a referral and therefore radiation oncologists could be required to fulfill the disclosure requirements for this service if it remains on the list of radiology services codes subject to the new disclosure requirements. According to the commenter, because CPT code 77014 is so integral to the delivery of certain radiation therapy treatments, it would be completely impractical, if not impossible, for a radiation oncologist to fulfill the disclosure requirements for this service.

Response: As noted in section X.B.3 of this preamble, we are removing CPT code 77014 from the list of CPT/HCPCS Codes because the service is always integral to, and performed during, a nonradiological medical procedure. Therefore, under § 411.351, this service is excluded from the definition of "radiology and certain other imaging services" and is not subject to the disclosure requirement. We are not adding this code to the radiation therapy services category on the list of CPT/HCPCS Codes because it does not satisfy the definition of "radiation therapy services and supplies" as set forth in § 411.351. As a practical matter, in many cases the service would not constitute a "referral" (as defined in § 411.351) if requested by a radiation oncologist pursuant to a consultation.

Comment: A commenter requested that CMS stipulate that CPT code 77011, currently defined as "computed tomography guidance for stereotactic localization," is not subject to this disclosure requirement whenever it is furnished as part of a therapeutic or palliative radiation therapy service. This commenter stated that this clarification is essential since CPT code 77011 is not listed in Addendum I to the 2010 PFS final rule with comment period either as a radiology service or as a radiation therapy service.

Response: This code is for a service that is integral to the performance of a nonradiological medical procedure and is performed either during the nonradiological procedure or immediately after the procedure to confirm placement of an item. Therefore, the service is excluded from the DHS category of "radiology and certain other imaging services" and is not subject to the disclosure requirement. The disclosure requirement applies only to MRI, CT, and PET services identified as "radiology and certain other imaging services" on the list of CPT/HCPCS Codes; MRI, CT, and PET services not identified as such on that list are not subject to the disclosure requirement.

Comment: Other commenters urged CMS to expand the disclosure requirement to other DHS that they perceive to be subject to abuse under the in-office ancillary services exception. These DHS included: physical therapy, anatomic pathology and radiation therapy services.

Response: Section 6003 of the ACA does not grant the Secretary the authority to expand application of this disclosure requirement to DHS other than those in section 1877(h)(6)(D) of the Act. We did not propose expansion beyond these services and did not solicit comments regarding other DHS categories that should have this requirement. The requested expansion to other DHS is beyond the Secretary's authority under this provision and cannot be accomplished in this rulemaking.

Comment: One commenter suggested that CMS expand the disclosure requirement to radiology practices and IDTFs so that they are also required to provide a list of alternate suppliers when self-referring for imaging studies in order to offer a more level playing field. Two commenters suggested that we require the same disclosure for hospitals to avoid the perception of conflict of interest in all settings.

Response: The first comment appears to incorrectly assume that section 6003 of the ACA would never apply to radiology practices and IDTFs. Section 6003 of the ACA applies to physicians who make a "referral" (as defined in section 1877(h)(5) of the Act and § 411.351 of our regulations) for certain advanced imaging services and rely on the in-office ancillary services exception to ensure their compliance with the physician self-referral prohibition. While many requests by radiologists for diagnostic imaging services will not constitute a "referral" as defined in the statute and our regulations, some requests by radiologists for advanced imaging services could implicate the self-referral prohibition, and such referrals would be subject to the disclosure requirement if the referring physician relies on the in-office ancillary services exception to ensure compliance with the physician self-referral prohibition. Similarly, the disclosure requirement would also apply when a physician relies on the in-office ancillary services exception to protect referrals for advanced imaging services furnished and billed by an IDTF that is wholly owned by the physician or his or her group practice.

We have no statutory authority to make the disclosure requirement apply

to requests for advanced imaging services that are not "referrals." Mandating a similar disclosure requirement for hospitals would have to be accomplished under separate rulemaking and authority.

b. General Disclosure Requirements

We proposed that the disclosure notice should be written in a manner sufficient to be reasonably understood by all patients and must, as the ACA requires, be given to the patient at the time of the referral. The notice must indicate to the patient that the services may be obtained from a person other than the referring physician or his or her group practice and include a list of other suppliers who provide the service being referred (MRI, CT, or PET). We are finalizing this proposal without modification.

Comment: One commenter requested CMS to clarify how often the disclosure notice needs to be provided. The commenter asked if a physician can meet the requirement by giving patients the list of suppliers upon initiation of the physician-patient relationship and annually thereafter to ensure updated information is given, or if the information must be disclosed each time a patient is referred for MRI, CT or PET. Another commenter expressed concern regarding informing a patient in person at the time of the referral. This commenter described the situation where diagnostic tests are ordered after the patient has a previous abnormal diagnostic test; often they communicate this to the patient via phone call and do not want to require the patient to come into the office to receive the disclosure. The commenter asked if the disclosure could be mailed to the patient after the verbal notification via phone call.

Response: The statute requires the disclosure to be made "in writing at the time of the referral." In order to satisfy this element of the statute, we believe the disclosure must be presented to the patient each time one of the listed advanced imaging services is referred. Patients should receive the disclosure each time these services are needed, not just for the initial service. The patient should be made aware that he or she may obtain the services from another supplier any time advanced imaging is ordered. For subsequent referrals made via phone call, the written disclosure must still be provided to the patient and adequately documented as further described in the Documentation of Disclosure subsection below. Mailing or e-mailing the disclosure to the patient would be acceptable if verbal notification has also occurred.

Comment: Some commenters requested that CMS post a draft disclosure document that physicians can use as a model to ensure that all notices are drafted in a neutral, comprehensive, and consistent manner.

Response: We do not plan to post standard disclosure language to be used for this requirement. Each physician office will be responsible for drafting the language employed in the notice. Because we are not setting out specific language that must be included in the disclosure, physicians will have more flexibility in drafting the notice.

Comment: Several commenters requested that CMS allow physicians to make it clear on the disclosure that there is no intended endorsement or recommendation of the facilities named on the list furnished by the referring physician.

Response: If the physician chooses to include language informing patients that inclusion of other suppliers is not intended as an endorsement or recommendation of those suppliers, there is nothing in section 6003 of the ACA or this final rule with comment that would preclude him or her from doing so.

c. List of Alternate Suppliers

We proposed that the notice list 10 alternate suppliers (as defined in section 1861(d) of the Act) located within a 25-mile radius of the physician's office at the time of the referral, unless there are fewer than 10 suppliers in the 25-mile radius, in which case the physician must list all suppliers up to ten in that area. In the proposed rule, we required the notice to include the name, address, phone number, and distance from the physician's office at the time of the referral. In this final rule with comment, we are decreasing the number of suppliers that must be listed to 5; and removing the distance from the physician's office from the information about the suppliers that must be listed in the disclosure notice. The final rule does not expand the list of alternate suppliers to include providers as part of the 5 required suppliers but is discussed further below. We are finalizing our proposal that the suppliers be located within a 25-mile radius of the physician's location at the time of the referral.

We solicited comments related to whether there are procedures or circumstances in which it may be difficult or impractical to provide the written disclosure prior to the provision of advanced imaging services. We are finalizing this rule without creating such an exception.

We also solicited comments regarding an alternative notice that includes a "reasonable" list of other suppliers with general requirements for the disclosure to patients, while providing that if the physician meets the more specific requirements set forth in the proposed rule he or she will be deemed to have a "reasonable" disclosure. We are not finalizing this in the final rule as we did not receive comments in support of this alternative.

Comment: A number of commenters asked that the list of alternate suppliers include hospitals. Two commenters stated CMS has taken an overly literal interpretation of "suppliers" and has incorrectly excluded hospitals from the list of alternate sites. The commenters also noted that in many areas, especially rural, the community hospital is the largest or only remaining independent provider of imaging services. Another pair of commenters stated that providing a partial list of options is inconsistent with transparency, inconsistent with collaborative alignment between providers and suppliers, and that including both providers and suppliers would be more consistent with "informing a patient's decision-making regarding his or her own care."

Several commenters urged CMS to allow, and even to require, that physicians include hospitals and CAHs in the written list of alternate suppliers who provide imaging services. The commenters stated that hospitals are often the only provider of this service within the 25-mile radius of the physician's office and allowing physicians to include hospitals and CAHs would provide patients with more options.

Finally, one commenter pointed out that including hospitals in the list of alternate suppliers would be consistent with the integrated and coordinated care models that are of interest to the Federal government, health plans, members of Congress and healthcare delivery reformers. The commenter also believes that this would increase convenience for its patients while preserving their ability to make decisions about their care.

One commenter supported CMS' proposal to limit the required disclosure list to suppliers of services. The commenter stated that this would protect the Medicare program from the higher imaging costs and Part B co-pays for beneficiaries associated with imaging services provided by hospital outpatient departments. The commenter encouraged CMS to finalize the proposed supplier only list.

Response: Section 6003 of the ACA requires physicians to provide patients with a written list of alternate "suppliers" (as defined in section 1861(d) of the Act). The ACA does not afford the flexibility requested by commenters to allow physicians to satisfy the disclosure requirement by furnishing a list that includes hospitals and other providers. However, physicians are not precluded from listing hospitals in the disclosure notice as long as the required number of suppliers is also included. For example, in rural areas where no other suppliers exist in the 25-mile radius, we encourage physicians to list a hospital on the disclosure notice as an alternate location for the patient to receive the referred imaging service if the hospital is the closest option.

Comment: Many of the commenters supported our proposal that the disclosure notice include suppliers located within a 25-mile radius of the physician's location at the time of the referral, rather than in the area in which the patient resides.

Two commenters suggested that CMS set different radii requirements for rural versus urban areas. One of the two commenters stated that in an urban setting, there could be many more than 10 suppliers within a 25-mile setting placing making it difficult for the referring physician to make a decision regarding which providers to include in the written notification. The commenter noted that in a rural setting with fewer than 10 suppliers, the burden of identifying and providing all of the suppliers in the 25-mile radius is excessive for the physician.

Finally, a commenter objected to our concern in the proposed rule preamble that "physicians located in large metropolitan areas will draft a list that includes suppliers located mostly at the edges of the 25-mile radius, thereby increasing the chances that the patient will choose to receive imaging services from the referring physician's practice." The commenter asserted that physicians will strive to create lists that include the highest quality suppliers in the area.

Response: We are finalizing this requirement as proposed. We believe a list of suppliers located within a 25-mile radius of the physician's office is reasonable and large enough to generate a list that will be useful for patients. This same distance has also been used in other physician self-referral exceptions including the intra-family rural referrals exception (§ 411.355(j)) and the physician recruitment exception (§ 411.357(e)). In addition, we are reducing the number of required suppliers on the disclosure notice and believe this will help address the issue in some rural area settings where there may only be a few suppliers within a 25-mile radius.

Comment: One commenter indicated that requiring a list of 10 suppliers was excessive. Several commenters requested that we decrease the required number of alternate suppliers from 10 to 5 and one commenter suggested we reduce it to 3 in order to meet patient choice and reduce the compliance burden for medical groups and smaller practices. The commenters stated that listing 10 suppliers would be too burdensome on physicians and might be confusing for beneficiaries if too many choices are presented.

Response: We agree with the commenters and are decreasing the required number of alternate suppliers from 10 to 5. We believe a list of 5 suppliers is reasonable, not burdensome, and supports patient choice.

Comment: A commenter supported the inclusion of the proposed information of the disclosure notice because it is easily understood and contains useful information. One commenter recommended that the referring physician provide the name and telephone number for the alternate suppliers and that other information, such as the address and distance, should be included at the referring physician's discretion. A different commenter stated that the distance from the referring physician's office location at the time of the referral should not be included in the notice because it can be measured in a variety of ways and may vary greatly depending on the route taken between the listed supplier and the physician's offices. The commenter believes patients may get upset if the distance noted on the supplier list is different from what they actually encountered and recommends that the list simply state that all of the suppliers are within a 25-mile radius of the referring physician's office.

Response: We are modifying the proposal in the final rule to remove the requirement that the distance from the referring physician's office at the time of the referral be included on the list provided to the patient. All alternate suppliers listed must be located within the 25-mile radius of the physician's office location at the time of the referral. Any reasonable method for measuring distance will be acceptable.

We are finalizing the other information required in the notice as proposed so that it must include the name, address and phone number of each supplier. This provides patients with the most useful information in making a decision about receiving the service from the referring physician or from another supplier.

Comment: Two commenters requested that CMS provide an exception to providing the disclosure notice to the patient at the time of referral, especially for services furnished on an emergency or time-sensitive basis as the commenters believe it is impractical to think that the list will be given and signed by the patient in an emergency or other time-sensitive case.

Response: We do not believe it is necessary to grant an exception to the disclosure requirement in cases of an emergency or time-sensitive nature. In those situations, physicians should make a reasonable attempt to provide the notice to the patient and document that the attempt was made. We believe the occurrence of emergencies in physician offices that require a referral for advanced imaging under the in-office ancillary services exception is rare enough that it does not warrant granting an exception. We believe having the physician make a reasonable attempt would not prevent or impede beneficiaries from receiving the necessary services. In most emergencies that arise in a physician's office, patients will be transferred to the emergency department of the nearest hospital rather than referred for imaging at the physician's office.

Comment: A commenter asked about compilation of the list of alternate suppliers and how physicians should go about this task. The commenter asked if a search of the internet or a telephone directory would be adequate. Also the commenter asked if Medicare contractors will have a list of entities providing such services. Another commenter recommended that CMS create a publicly available database of providers of the specified services and maintain this information online and in the Medicare provider directory that is published annually because, according to the commenter, it should be less work for CMS to create this list than it is for practices, since much of this information can be gleaned from information already furnished by practitioners to Medicare.

Response: We are not prescribing any one method for physicians to craft the list of alternate suppliers. A physician is able to use any reasonable means that he or she chooses in order to compile the list of five alternate suppliers. We do not plan to create a standard form or a publicly available database for this disclosure requirement nor will we require Medicare contractors to furnish lists of all entities providing such services. Some physicians may choose

to compile the list of suppliers from an internet search, others may know suppliers in the 25-mile radius who provide quality imaging and list these. We are not limiting a physician's methods of creating the list so long as the other requirements of this disclosure requirement are satisfied.

Comment: A commenter requested that CMS emphasize that the list of alternate suppliers must provide the same service for which the patient has been referred, for example a 64-slice CT as opposed to a 16-slice CT.

Response: The disclosure is meant to inform patients that they "may obtain the services for which the individual is being referred" from another supplier who furnishes such services in the area. The referring physician should list suppliers that are able to perform the services for which the patient is being referred. Listing suppliers that are unable to perform the needed test does not provide the patient with meaningful choices about his or her care.

Comment: Several commenters suggested that the quality of alternate suppliers should be indicated on the information provided to patients. Other commenters recommended that only credentialed facilities are listed on the notice, or that credentialed facilities be given special designation on the disclosure notice.

Response: We are not requiring any quality indication on the list of alternate suppliers at this time. Because the referring physician will most likely be reviewing the results of the advanced imaging service that the patient receives, it is reasonable to think that the physician will include quality suppliers on the list. We are not convinced to limit the list of suppliers to those who receive accreditation. Nothing in the statute or this final rule with comment prevents physicians from furnishing a list that designates a supplier's credentialing status.

Comment: Two commenters requested that CMS provide clarification on the frequency with which the physician must review and update the list of suppliers. For example, commenters asked if the notice should be reviewed for accuracy if a supplier relocates or any contact information changes. In addition, one of the commenters asked about the obligation of the referring physician to ensure that the suppliers listed are accepting new Medicare patients.

Response: We suggest that the list of suppliers should be reviewed annually for accuracy and updated at that time, if necessary. We do not believe an annual update would be overly burdensome for physicians. We believe an inaccurate list of alternate facilities would lead to beneficiary confusion and that annually reviewing and modifying the notice as needed would ensure that patients receive complete and accurate information in accordance with this disclosure requirement.

In addition, referring physicians are not obligated to list only suppliers that are accepting new Medicare patients; however, as the disclosure notice is intended to allow patients to make informed choices, referring physicians should make a reasonable effort to ensure that the suppliers listed in the disclosure are viable options for all of their patients for the services being referred.

d. Documentation of Disclosure

We proposed that, in order to document that this disclosure notice was satisfied, a record of the patient's signature on the disclosure notification must be maintained as an element of the patient's medical record. We are modifying this proposal in this final rule with comment to remove the patient signature requirement.

Comment: Many commenters stated that the burden of obtaining and retaining the patient's signature in the medical record is burdensome. Other commenters noted that, as suppliers move toward maintaining electronic health records, an additional paperwork requirement seems counter to these goals and recommended that CMS include an electronic alternative to the maintenance of a signed copy of the disclosure notice in patients' medical records. Another commenter noted that because the notification of alternate suppliers is not a clinical document, it might not belong in a patient's medical record. A commenter asked if the disclosure document must be maintained in the patient's main medical record or if it could be maintained instead with the patient's radiological documentation, which can be maintained electronically in a PACS system with the physician's orders for the study.

A commenter recommended that CMS accept as sufficient documentation, a note in the patient's chart that a member of the staff provided the letter and explained it to the patient. Another suggestion from a commenter was that physicians maintain a dated notification log at the front desk that patients will sign once they have received and reviewed their disclosure lists. These logs will then be retained and filed by the office for potential review by regulators or accreditors.

One commenter supported the requirement to maintain a copy of the disclosure in the patient's medical record.

Response: We acknowledge that obtaining the patient's signature and maintaining a copy of such in the medical record may be burdensome. In this final rule with comment we are removing the requirement to obtain the patient's signature on the disclosure and to maintain this documentation in the medical record. Nevertheless, as a matter of prudent business practices, physicians should be able to document or otherwise establish that they have complied with the disclosure requirement. For example, the physician could document in the patient's chart that the notice was given to the patient.

e. Effective Date

We proposed that the new disclosure requirement shall apply only to services furnished on or after the effective date of these final regulations, January 1, 2011. We did not receive any comments suggesting any alternate effective date. We are finalizing the effective date as proposed.

f. Other Comments

Comment: Some commenters submitted comments addressing topics beyond the scope of this proposal. These comments included detailed discussions of the in-office ancillary services exception, services that should be excluded from that exception, MedPAC's analysis on the issue, as well as questions about the anti-markup payment limitation (§ 414.50) and a request that we respond to comments we requested regarding incentive payment or shared savings arrangements.

Response: These comments are beyond the scope of this rulemaking and are not addressed in this final rule with comment. If these issues are addressed in the future, we will publish a notice of proposed rulemaking that will be open to public comment at that time.

U. Section 6404: Maximum Period for Submission of Medicare Claims Reduced to Not More Than 12 Months

1. Background

Sections 1814(a)(1), 1835(a), and 1842(b)(3)(B) of the Act establish time limits for filing Medicare Part A and B claims. Prior to the enactment of the ACA, under sections 1814(a)(1) and 1835(a) of the Act, providers could file for Part A and Part B claims, respectively, "* * * no later than the close of the period of 3 calendar years following the year in which such services are furnished (deeming any services furnished in the last 3 calendar

months of any calendar year to have been furnished in the succeeding calendar year) except that, where the Secretary deems that efficient administration so requires, such period may be reduced to not less than 1 calendar year* * *". Prior to the enactment of the ACA, CMS was authorized to establish a minimum time limit for provider-submitted Part A and Part B claims of at least 1 calendar year from the date of service, and a maximum time limit not to exceed 4 years and 3 months after the date of service.

Additionally, prior to the enactment of the ACA, under section 1842(b)(3)(B) of the Act, Part B claims for physician and other supplier services could be filed with Medicare "* * * no later than the close of the calendar year following the year in which such service is furnished (deeming any service furnished in the last 3 months of any calendar year to have been furnished in the succeeding calendar year) * * *". Therefore, prior to the enactment of the ACA, we were authorized to establish a minimum time limit for filing Part B claims of 15 months and a potential maximum of 27 months after the service was furnished, depending on what month of the year the service was furnished.

Section 424.44 of the regulations implements sections 1814(a)(1), 1835(a), and 1842(b)(3)(B) of the Act. In order to effectively administer the Medicare Program, we, through regulations, modified the potential minimum and maximum time periods for filing Part A claims. At § 424.44(a), we adopted the minimum time limit of 15 months and potential maximum of 27 months after the service was furnished that was permitted under section 1842(b)(3)(B) of the Act for Part B claims and uniformly applied that 15 to 27 month time limit to both Part A and B claims. Also, under § 424.44(b), we allowed providers and suppliers the opportunity to file claims after the 15 to 27 month deadline for filing claims expired when the failure to file "* * * was caused by error or misrepresentation of an employee, intermediary, carrier, or agent of the Department that was performing Medicare functions and acting within the scope of its authority."

2. Provisions of the ACA

Section 6404 of the ACA amended sections 1814(a)(1), 1835(a), and 1842(b)(3)(B) of the Act regarding Medicare fee-for-service (FFS) claims for services furnished on or after January 1, 2010. Under section 6404(b)(1) of the ACA, all claims for services furnished on or after January 1, 2010 must be filed within 1 calendar year after the date of service. Section 6404 of the ACA did not amend sections 1814(a)(1), 1835(a), and 1842(b)(3)(B) of the Act for services furnished before January 1, 2010. However, section 6404(b)(2) of the ACA created a new requirement that claims for services furnished before January 1, 2010 must be filed on or before December 31, 2010. Thus, the statutory provisions prior to the enactment of the ACA remain in effect for pre-2010 services, subject to this new requirement. The practical effect of this change is that any claims for services furnished before October 1, 2009 will follow the existing regulations. But for services furnished during the last 3 months of 2009, providers and suppliers must file claims no later than December 31, 2010. For services furnished between October 1, 2009 and December 31, 2009, providers and suppliers will only have 12 to 15 months to file a claim, whereas before the ACA amendments, they would have had an additional year to file their claims, or 24 to 27 months.

The majority of the comments that we received for the proposed rule were supportive of our proposed exceptions at § 424.44(b)(2) and (3) concerning retroactive entitlement situations and dual-eligible beneficiary situations. However, some commenters encouraged us to either expand those proposed exceptions or suggested other new exceptions.

Comment: One commenter stated that CMS should instruct Medicare Intermediaries to process claims where provider representatives are submitting retroactive claims within 6 months from the Social Security Administration's (SSA) notification date due to SSA's delay in processing beneficiaries' retroactive Medicare entitlement. Moreover, the commenter cited to an OIG evaluation report dated January 2006 (A–13–05–15028), which stated that the average number of years where beneficiaries are awarded retroactive Medicare benefits is about 8 years. Therefore, the commenter asserted that when SSA corrects the error and sends a notification letter to beneficiaries, providers should be allowed to submit claims to Medicare Intermediaries as long as the claims are submitted within 6 months from the notification letter from SSA and as long as supporting documentation is attached to the claims.

Response: As stated in the CY 2011 PFS proposed rule, if CMS or one of its contractors determines that one of the exceptions to the time limits for filing claims applies, then the time to file a claim will be extended. We will update its internet only manual instructions to its contractors so that Medicare's contractors are aware of the new timely filing requirements, the exceptions to those requirements, and process claims in accordance with these new requirements.

Comment: Two commenters disagreed that services furnished between October 1, 2009 through December 31, 2009 must be billed by December 31, 2010 and asserted that our proposed language at § 424.44(a) is in contravention of explicit statutory language.

Response: We disagree with the commenter because section 6404(b)(2) of the ACA clearly states that—"In the case of services furnished before January 1, 2010, a bill or request for payment under section 1814(a)(1), 1842(b)(3)(B), or 1835(a) of the Act shall be filed not later than December 31, 2010". Therefore, because the statute specifically addresses this issue, we must require that services furnished between October 1, 2009 through December 31, 2009 be filed by December 31, 2010.

Comment: Two commenters suggested that CMS create an additional exception to the timely filing rules to permit providers to submit claims for services at the request of a Medicaid State Agency or its agent under the terms of the regulation prior to these current revisions; that is, by the end of the calendar year following the year in which the services were delivered (with services delivered in the last quarter of a calendar year being treated as though they were delivered in the next calendar year). The commenters believe that this type of additional exception would permit Medicaid State Agencies to assure proper billing of services to Medicare, as an appropriate third party payer, without overtaxing providers or Medicare contractors by requiring them to submit multiple claims at varying times. Additionally, a third commenter stated that the third condition of the exception at § 424.44(b)(3) could be interpreted to mean that the Medicaid agency must recover their payment from a provider or supplier prior to the provider or supplier billing Medicare. The commenter believes that it would be a better practice to notify providers of the Medicaid agency's intention to recover prior to performing the actual recovery.

Response: We were not persuaded to modify the rule in order to create an additional exception to permit providers and suppliers to submit claims for services at the request of a Medicaid State Agency prior to the State Medicaid Agency actually recovering the payment. Providers and suppliers do not necessarily have to wait for

Medicaid to recover its payment (*see* § 424.44(b)(3)) in order to utilize an exception to the timely filing rules in retroactive entitlement situations because the proposed exception at § 424.44(b)(2) may be used by providers and suppliers in order to file claims prior to a State Medicaid Agency recovering its payments. As we stated in § 424.44(b)(2), if CMS or one of its contractors determines that at the time the service was furnished the beneficiary was not entitled to Medicare and the beneficiary subsequently received notification of Medicare entitlement effective retroactively to the date of the furnished service, then the time limit to file a claim may be extended.

Comment: Three commenters suggested that an exception to the timely filing rules should be created for Medicare beneficiaries who are retroactively disenrolled from a Medicare Advantage plan so that all claims for services provided to the beneficiary while enrolled in the Medicare Advantage plan (upon retroactive disenrollment) can be submitted for coverage and payment to original Medicare. The commenters stated that a beneficiary may be retroactively disenrolled from that plan under a variety of circumstances. Moreover the commenters asserted that if a retroactively disenrolled beneficiary is unable to have claims for services submitted to original Medicare because some of those services were delivered more than a year prior to the date of actual disenrollment, then the beneficiary will be unable to be made whole and the ability to disenroll from a Medicare Advantage plan will be rendered pyrrhic at best.

Response: We modified the final rule based on these comments and created an additional exception for retroactive disenrollment from Medicare Advantage plans at § 424.44(b)(4). Although we did not receive a comment requesting an exception for retroactive disenrollment from Program of All-inclusive Care for the Elderly (PACE) provider organizations, we included retroactive disenrollment from PACE in the exception at § 424.44(b)(4) because beneficiaries, providers, and suppliers could also be disadvantaged in retroactive disenrollment PACE situations.

Comment: Two commenters suggested that an exception to the timely filing rules should be created when a private payer recovers its payment from the provider 11 months or more after the date of service. The commenters stated that hospitals routinely experience payment retractions from private payers that are outside the hospitals' control and that may prevent a Medicare claim from being filed within one year of the date of service.

Response: We were not persuaded to modify the rule by these comments because providers are already required "to maintain a system that, during the admission process, identifies any primary payers other than Medicare, so that incorrect billing and Medicare overpayments can be prevented". *See* § 489.20(f). Also, section 1862(b)(6) of the Act states—"* * * no payment may be made for any item or service furnished under part B unless the entity furnishing such item or service completes (to the best of its knowledge and on the basis of information obtained from the individual to whom the item or service is furnished) the portion of the claim form relating to the availability of other health benefit plans". Therefore, we are not modifying the rule based on this comment because creating an exception to the timely filing limitations for these situations would allow providers and suppliers to circumvent the statutory and regulatory requirements stated above.

Comment: Two commenters suggested that CMS create an exception to the timely filing rules for Medicare Secondary Payer (MSP) claims when the initial payment determination by the primary payer is not received by the hospital in sufficient time to permit timely filing of the MSP claim. A third commenter recommended that in cases where Medicare is not the primary payer, the filing deadline be extended to 12 months from the date the payment is made for the products or services by the payer immediately primary to Medicare (that is, the primary payer when Medicare is the secondary payer, and the secondary payer when Medicare is tertiary).

Response: We were not persuaded to modify the rule by these comments because Medicare may make conditional payments for services when a payer that is primary to Medicare does not pay promptly. "Prompt" or "promptly", when used in connection with primary payments, except as provided in § 411.50, for payments by liability insurers, means payment within 120 days after receipt of the claim. *See* 42 CFR part 411 subparts B through H and 411.21 and 411.24 for the definitions of conditional payment and promptly. Moreover, because providers are already required "to maintain a system that, during the admission process, identifies any primary payers other than Medicare, so that incorrect billing and Medicare overpayments can be prevented" (*See* § 489.20(f)) we do not believe a provider's ability to meet the new 1 calendar year timely filing requirement will be compromised by the commenter's concerns.

Comment: Three commenters suggested that CMS create an exception to the timely filing rules so that hospitals are permitted to file inpatient Part B only claims for any inpatient cases that are retrospectively reviewed by a Medicare Recovery Audit Contractor (RAC) or other review entity and determined not to be medically necessary in an inpatient setting. The commenters pointed out that with the reduction of the timely filing period to one year from the date of service, legitimate rebilling opportunities are limited since Medicare RAC's may audit Medicare claims that were paid up to 3 years ago.

Response: We were not persuaded to modify the rule by these comments because Medicare's billing guidelines instruct providers regarding what types of inpatient services may be billed to Part A and to Part B. Therefore, it is the responsibility of a provider to correctly submit claims to Medicare by coding the services appropriately.

Comment: In the CY 2011 PFS proposed rule, CMS solicited comments regarding whether CMS should provide a regulatory definition of "date of service" and, if so, how should it define this term. One commenter suggests that the "date of service" be defined through administrative instructions as the "through date" on the Medicare claim (UB–04 form locator 6, statement covers period). A second commenter stated that CMS should adopt as a final rule the guidance on "Date of Service" provided in MLN Matters Number 7080 and Transmittal 734, Change Request 7080. CMS Manual System, Pub 100–20 One-Time Notification, July 30, 2010. This guidance provides that for institutional claims that include span dates, the "Through" date on the claim will be used to determine the date of service for claims filing timeliness; for professional claims (CMS–1500 Form and 837P) submitted by physicians and other suppliers that include span dates of service, the guidance states that the line item "From" date will be used to determine the date of service and filing.

Response: We decided not to define "date of service" in the final rule because, as we stated in the CY 2011 PFS proposed rule, we recognize that for many Part A and B services it is difficult to craft a uniform rule that will apply a consistent date of service standard. Therefore, we decided to address the "date of service" issue via sub-regulatory guidance. We issued sub regulatory guidance on what constitutes the "date

of service" for some items and services on May 7, 2010 via Change Request 6960 and on July 30, 2010 via Change Request 7080 to our Medicare contractors and it is our intention to provide additional sub-regulatory guidance as the need arises for different Part A and B services.

Comment: One commenter believed an exception should be created for claims for consumers who retroactively enroll in original Medicare Part B, such as consumers who successfully apply for equitable relief. For example, a person may choose to take Part A (because it is premium free) but may mistakenly choose not to enroll in Medicare Part B due to cost or because they believe that other insurance for which they already pay a premium, such as retiree coverage or coverage through a group health plan provided by a small employer, will pay medical costs. As a result, insurance that is supposed to pay secondary to Medicare incorrectly pays primary. The commenter goes on to assert that if the insurance plan discovers that a person was eligible for Medicare Part B but did not enroll and therefore the plan was supposed to pay secondary, the insurer can recoup payments made back to the date the enrollee became Medicare Part B eligible. In some instances, a person may obtain a retroactive Medicare Part B start date back to the original date of Medicare eligibility. This retroactive start date can be a few months to a few years and is not limited by statute. As a result, providers from which secondary insurer's recouped payment would need the ability to submit claims to Medicare for services provided over one year in the past. In these cases, because the consumer is already enrolled in Medicare Part A and not Part B, the commenter is concerned that claims would not fall under the language of § 424.44(2)(ii) as the consumer is already entitled to Medicare.

Response: Although this comment was unclear, we believe the commenter wants CMS to create an exception to the time limits for filing claims specifically for Part B services. We were not persuaded to modify the rule by these comments because if a beneficiary is granted equitable relief under section 1837(h) of Act, the beneficiary may still be able to use the exception at § 424.44(b)(2). Of course, all of the conditions for § 424.44(b)(2) will need to be satisfied in order for an exception to be granted in a particular case. It is important to note that all of the exceptions in § 424.44(b) (including the exception for § 424.44(b)(2)) are not limited to just Part A services; the exceptions may also be granted for Part B services when applicable.

Comment: One commenter asked whether the 4 years from date of service limitation specified in § 424.44(b)(1) applies when the SSA makes an administrative error in determining a beneficiary's retroactive entitlement decision since the SSA is not considered an agent or contractor to CMS. Or, would this be covered under § 424.44(b)(2) or § 424.44(b)(3) without the 4 year limitation? The commenter recommended that CMS clarify in the final rule that the 4 year limitation does not apply when the result of a retroactive Medicare decision was due to SSA's administrative error in incorrectly and untimely processing of beneficiaries eligibility determinations.

Response: Section 424.44(b)(1) only applies to errors or misrepresentations that are made by an employee, Medicare contractor (including Medicare Administrative Contractor, intermediary, or carrier), or agent of the Department that was performing Medicare functions and acting within the scope of its authority. It does not apply to errors or misrepresentations made by the SSA; therefore, the 4 year restriction for § 424.44(b)(1) would not apply because § 424.44(b)(2) and (3) could be used in situations where the SSA makes an error. However, it is important to note that errors or misrepresentations by the SSA are not one of the conditions that must be met in order for an extension of time to be granted under § 424.44(b)(2) and (3).

Comment: Two commenters recommended that if the SSA cannot locate a copy of the original retroactive notification letter that was sent to the beneficiary, then CMS should allow providers or beneficiaries to submit the notification letter that they received from SSA that clearly indicates the beneficiary's retroactive entitlement date and the date in which the notification of SSA's retroactive decision was made. Therefore, the regulations and guidelines should address alternate proof of coverage in the event a copy of the actual Notice of Award is unavailable.

Response: We were not persuaded to modify the rule by these comments because we believe these types of documentation or proof of retroactive entitlement issues should be addressed via sub-regulatory guidance. Therefore, we will consider these comments when we update our internet only manual instructions to our contractors.

Comment: One commenter suggested that there should be an exception to account for claims filed for beneficiaries granted Medicare entitlement retroactively because of the 30+ years of systemic errors of SSA's Special Disability Workload (SDW). The commenter stated that this issue is currently in bill form before both houses of Congress and that failing a legislative solution this proposed rule would bar States from perfecting rightful claims for services provided over the years under Medicaid that should have been provided by Medicare. The commenter goes on to state that States will have great difficulty in reaching out to providers over 30 years of services to recoup third party liability from Medicare. Despite such difficulty, States should retain the right to file claims and they should not be barred by this proposed rule. The proposed rule states that "we believe that limiting this exception to 4 years after the dates of service strikes an appropriate balance between fairness and equity for providers, suppliers, and beneficiaries and administrative finality for the Medicare program". The commenter asserts that the proposed rule does not show any consideration of States' interests in pursuing third party liability against Medicare based on systemic failures by SSA, the agency responsible for determining Medicare eligibility.

Response: The commenter's statement that States should retain the right to file claims is outside the scope of this rule; therefore, we will not address that particular comment. We were not persuaded to modify the rule by the other comments because § 424.44(b)(1) only applies to errors or misrepresentations that are made by an employee, Medicare contractor (including Medicare Administrative Contractor, intermediary, or carrier), or agent of the Department that was performing Medicare functions and acting within the scope of its authority. It does not apply to errors or misrepresentations made by the SSA; therefore, the 4 year restriction for § 424.44(b)(1) would not apply in the situation described by the commenter, but § 424.44(b)(2) and (3) could be used in situations where the SSA makes an error. However, it is important to note that errors or misrepresentations by the SSA are not one of the conditions that must be met in order for an extension of time to be granted under § 424.44(b)(2) and (3).

Comment: One commenter suggested that CMS consider allowing the exception for dually-eligible beneficiaries at § 424.44(b)(3) to apply if any one of the three conditions are met as opposed to all of the conditions.

Response: We were not persuaded to modify the rule by this comment because it would make the dual-eligible

exception meaningless. The first condition of § 424.44(b)(3) states—"At the time the service was furnished the beneficiary was not entitled to Medicare". That first condition could apply to every service a person has ever received during his or her lifetime prior to becoming a Medicare beneficiary. Therefore, under the commenter's suggestion the exception would be meaningless.

Comment: One commenter suggested that the first condition of the exception at § 424.44(b)(3) include cases in which Medicare coverage is unknown to the Medicaid agency at the time of service instead of using the condition that at the time the service was furnished the beneficiary was not entitled to Medicare.

Response: We were not persuaded to modify the rule by this comment because if the beneficiary was already entitled to Medicare at the time the service was furnished, then the provider or supplier could have taken the necessary actions to find out that the individual was a Medicare beneficiary. For example, the provider could have asked the beneficiary prior to admission, checked with CMS, etc.

Comment: One commenter stated that the second condition of the exception at § 424.44(b)(3) assumes that because the beneficiary is notified about retroactive Medicare coverage that the provider of service and the State Medicaid Agency is concurrently notified, which may not always be the case. Because this is a direct communication between the Medicare program and its beneficiary, CMS should address how providers and the Medicaid agency will evidence dual eligibility to Medicare's contractors in an effort to meet this condition.

Response: We were not persuaded to modify the rule by these comments even though we agree that it is possible that providers, suppliers, and State Medicaid Agencies may not be notified concurrently about a beneficiary's retroactive Medicare entitlement. However, the exception at § 424.44(b)(3) does not prevent providers and suppliers from requesting an exception to the time limits for filing a claim because the provider or supplier will always be notified about a beneficiary's retroactive entitlement whenever a State Medicaid Agency recovers its payment.

Pursuant to § 424.44(b)(5)(iii), the date when the State Medicaid Agency actually recovers its payment from the provider or supplier is when the extension of time to file the claim through the last day of the 6th calendar month is triggered. In other words, assuming that all three of the conditions for § 424.44(b)(3) are met, providers and suppliers will possess the ability to file a claim through the last day of the 6th calendar month after the date the State Medicaid Agency recovers its payment. Unlike the 4 year restriction (§ 424.44(b)(5)(i)) placed on the exception at § 424.44(b)(1), which is commonly referred to as the exception for "administrative error," there is no similar time restriction regarding when a provider or supplier may request an exception under § 424.44(b)(3). Therefore, providers and suppliers should note that once the State Medicaid Agency recovers its payment for the services, providers and suppliers will only have through the last day of the 6th calendar month after that recovery date to file a claim (assuming that all three of the conditions for § 424.44(b)(3) are met).

Comment: One commenter recommends that CMS define "retroactive Medicare" for the purpose of these proposed exceptions. The commenter stated that they understand retroactive Medicare to be the extension of benefits to a date in the past but believe that confirmation or clarification of this definition should be issued by CMS.

Response: Although this comment was unclear, we believe the commenter wants CMS to clarify what Medicare entitlement effective retroactively to or before the date of the furnished service means. We were not persuaded to modify the rule by this comment because we did not use the term "retroactive Medicare" in the regulation text. Instead, the regulation text used the following language—"the beneficiary subsequently received notification of Medicare entitlement effective retroactively to or before the date of the furnished service"— which we believe makes it clear that a beneficiary is receiving his or her Medicare entitlement beginning at some date in the past.

Comment: One commenter recommends that in States which have a contract with the SSA to determine eligibility for Medicaid at the same time a determination is made for receipt of Social Security Income (SSI) benefits (*see* section 1634(a) of the Act), that CMS should clarify if Medicare retroactivity will include requests for prior month premium payments.

Response: Although this comment was unclear, we believe the commenter wants to know whether the exceptions to the time limits for filing claims is limited to just Part A services. Because the commenter refers to requests for prior month premium payments, we believe that the commenter is concerned about what happens when State Medicaid Agencies pay Part B premiums on behalf of dual-eligible beneficiaries. If a beneficiary receives notification of Medicare entitlement (Part A) effective retroactively to or before the date of a furnished service and a State Medicaid Agency (or the beneficiary or anyone else) pays for that beneficiary's Part B monthly premium retroactively to or before the date of a Part B furnished service, then those "old" Part B services for that beneficiary may be granted an extension to the time limits for filing as long as the other conditions for that particular exception are also met. In other words, the exceptions for § 424.44(b)(2) and (3) are not limited to just Part A services; the exceptions may also be granted for Part B services when applicable.

Comment: One commenter stated that the ACA provision essentially provides providers with a 12 month period in which to file claims for services for which they have reason to believe Medicare may be responsible. However, in the exceptions proposed by CMS, a provider only has 6 months to file a claim. Consistency with the ACA would suggest that the time to file a claim under each exception should be extended through the last day of the 12th month following the month in which the exception applies. The commenter also stated that with regard to the proposed exceptions, the time limit should be based on the month in which the error or misrepresentation is corrected and the provider is notified of that fact. There may be some time between when the error or misrepresentation is corrected and when the provider is notified of that fact and the extended time limit should begin when the provider becomes aware of the correction. A second commenter stated that the timeframe for filing claims applicable to services provided to beneficiaries who become retroactively entitled to Medicare (regardless of whether they are dual-eligible beneficiaries) should be extended to the later of: (1) The date that is 12 months after the date that the beneficiary is notified of retroactive Medicare entitlement, or (2) the date that is 12 months after the provider or supplier becomes aware of retroactive Medicare entitlement.

Response: We are modifying § 424.44(b)(5)(ii) based on these comments because we agree that in retroactive entitlement situations there could be situations where a provider or supplier may not be notified of a beneficiary's retroactive entitlement in order to utilize the exception at § 424.44(b)(2). Therefore, we are modifying § 424.44(b)(5)(ii) so that

notification to either party (that is, the beneficiary or the provider/supplier) for the first time about a beneficiary's retroactive entitlement will trigger when the extension of time to file the claim through the last day of the 6th calendar month begins. We understand that this rule may result in two extension of time triggers if the beneficiary and the provider/supplier are not notified on the same day (one for when the beneficiary is first notified and one for when the provider or supplier is first notified); however, we agree with the commenter that it would be unfair to providers and suppliers to limit the exception based only on when the beneficiary receives notification.

We are also modifying § 424.44(b)(5)(i) based on these comments because we agree that there may be situations where a provider or supplier may be able to utilize the exception under § 424.44(b)(1) commonly referred to as the "administrative error" exception, but the provider or supplier is not notified about the correction until it is too late to utilize the exception. Therefore, we are modifying § 424.44(b)(5)(i) so that notification to either party (that is, the beneficiary or the provider/supplier) for the first time about the administrative error correction will trigger when the extension of time to file the claim through the last day of the 6th calendar month begins. We understand that this rule may result in two extension of time triggers if the beneficiary and the provider/supplier are not notified on the same day (one for when the beneficiary is first notified and one for when the provider or supplier is first notified); however, we agree with the commenter that it would be unfair to providers and suppliers to limit the exception based only on when the "administrative error" is actually corrected.

However, we were not persuaded to modify the rule for dual-eligible situations (*see* § 424.44(b)(3)) because the extension of time to file a claim through the last day of the 6th calendar month is triggered in dual-eligible situations when the State Medicaid Agency recovers its payment from the provider or supplier. Therefore, providers and suppliers will always receive sufficient notification in dual-eligible situations because the date that the State Medicaid Agency recovers its payment will be the provider's or supplier's notice that they have through the last day of the 6th calendar month in order to file a claim (assuming of course that CMS or its contractors determines that all the conditions in § 424.44(b)(3) are met and grants an extension).

Also, we were not persuaded to modify the rule based on the comment that the time to file a claim under each exception should be extended through the last day of the 12th month following the month in which the exception applies. Because the triggering events for the exceptions at § 424.44(b)(1), (2), and (3) cannot occur without the provider or supplier actually being notified, we believe that an extension of time to file a claim through the last day of the 6th calendar month after those triggering events gives providers and suppliers sufficient time to submit their claims.

Comment: Two commenters requested that CMS create an additional exception for those instances where the issuance of new Medicare provider numbers are delayed due to no fault of the provider. The commenter stated that numerous Medicare contractors are taking 60 to 120 days or longer to process and finalize CMS enrollment applications. Additionally, and more importantly, many State survey agencies are extremely behind on initial Medicare State surveys. In some cases, it is taking 2 years for the State to conduct the required survey for the providers. These delays significantly restrict a provider's ability to submit claims for services furnished prior to the effective date of the Medicare billing privileges and the commenter hopes that CMS would work with the provider community to process claims under these circumstances. Another commenter recommended that CMS should provide an exception for provider enrollment delays caused by the MAC or CMS Regional Office that are outside the control of the provider. The commenter recommended that CMS should extend the time to file a claim through the last day of the 6th calendar month following the month in which provider enrollment was completed with an additional 30 days allowed for each full or partial month between the effective date of the provider enrollment and the approval date of the provider enrollment. This additional time is necessary to accommodate Medicare's sequential billing requirement.

Response: We were not persuaded to modify the rule based on these comments because regulations at § 424.520, § 424.521, and § 489.13 already establish an effective billing date for providers and suppliers and those regulations have already established limitations on retroactive billing for providers and suppliers.

Comment: Two commenters stated that the Medicare Secondary Payer rules do allow a provider to file with Medicare if the otherwise primary payer is going to take awhile to pay. Notwithstanding, there have been situations which would warrant enumeration in an exceptions regulation. Providers have experienced situations where an insurance company has executed a retroactive denial of a previously paid claim after a year. When this happens, the timely filing clock should start with the denial date. Thus, the commenter recommends that:

- CMS should continue to allow for payment when a primary payer may take a substantial amount of time to pay;
- CMS should allow for a claim to be considered timely if it is filed within 1 year from the date that the primary payer has made its payment determination; and
- CMS should allow for a claim to be considered timely if it is filed within 1 year from the date that the primary payer retroactively denied a prior previously paid claim.

Response: We were not persuaded to modify the rule by these comments because Medicare may make conditional payments for services when a payer that is primary to Medicare does not pay promptly. "Prompt" or "promptly", when used in connection with primary payments, except as provided in § 411.50, for payments by liability insurers, means payment within 120 days after receipt of the claim. *See* 42 CFR part 411 subparts B through H and 411.21 for the definitions of conditional payment and promptly.

Also, section 1862(b)(6) of the Act states—"* * * no payment may be made for any item or service furnished under part B unless the entity furnishing such item or service completes (to the best of its knowledge and on the basis of information obtained from the individual to whom the item or service is furnished) the portion of the claim form relating to the availability of other health benefit plans". Moreover, because providers are already required "to maintain a system that, during the admission process, identifies any primary payers other than Medicare, so that incorrect billing and Medicare overpayments can be prevented" (*See* 489.20(f)) we do not believe a provider's ability to meet the new 1 calendar year timely filing requirement will be compromised by the commenter's concerns.

Comment: One commenter stated that providers have reported that they are experiencing a need to cancel previously processed Part B claims in order to submit benefits exhaust claims. Depending on the time frame for this, providers may be unable to resubmit the Part B charges. Providers need either a mechanism for submitting benefits exhaust claims for older dates of service

that does not require the cancelling of previously processed claims or they need an exception granted for resubmitting claims that had been processed timely but needed to be cancelled to submit benefits exhaust claims. The commenter recommends that CMS should provide a mechanism for submitting benefits exhaust claims for older dates of service that does not require the cancelling of previously processed claim.

Response: We are not aware of the specific scenario described by the commenter; however, we will monitor this issue and determine whether any additional sub-regulatory guidance is needed in this area.

Comment: One commenter stated that there have been cases in which a facility has been under a payment ban and the lifting of the remedy was not communicated to the facility in a timely manner, thus prohibiting the timely filing of claims. The commenter recommended that CMS should start the timely filing clock with the date that the lifting of a payment ban is communicated to the provider.

Response: We were not persuaded to modify the rule by this comment because if the failure to file a claim timely was the result of an error or misrepresentation that was made by an employee, Medicare contractor (including Medicare Administrative Contractor, intermediary, or carrier), or agent of the Department that was performing Medicare functions and acting within the scope of its authority, then the provider may be able to utilize the exception under § 424.44(b)(1) commonly referred to as the "administrative error" exception in order to file a claim.

Comment: One commenter stated that when a provider is trying to adjust a claim for the purpose of returning money to the Medicare program, timely filing should not apply. Conversely, when a provider finds an error that had caused an underpayment, the provider should be allowed to file an amended claim and receive the increased compensation. Therefore, the commenter recommends that CMS should provide that timely filing under amended § 424.44 not apply when a provider is trying to adjust a claim for the purpose of returning money to the Medicare program, or, conversely, when a provider finds an error that had caused an underpayment.

Response: We were not persuaded to modify the rule by these comments because the timely filing provision of section 6404 of the ACA and subsequent final rule amending § 424.44 is not intended to address requests for re-determinations of initial determinations by Medicare contractors such as those described by the commenter. The regulations for such requests are detailed in 42 CFR part 405, subparts G, H, and I.

Comment: One commenter stated that they regularly file claims within 1 calendar year after the date of service that are either rejected or denied and that are subsequently approved after being re-filed. In certain instances, the date of re-filing, because of the time period before the rejection or denial, is more than one year after the date of service. The commenter recommends that the timely filing rule should be and is satisfied when an original claim is timely filed within 1 calendar year after the date of service, regardless of the date of any resubmission.

Response: We were not persuaded to modify the rule by this comment because, for example, if a provider or supplier fails to include a particular item or service on its initial claim, fails to include all the necessary information in order for an initial determination to be made on that claim or fails to file the claim on a form prescribed by us, then a provider or supplier cannot attempt to re-file that claim more than 1 calendar year after the date that the service was furnished. An incomplete or rejected claim cannot act as a placeholder for a claim that has yet to be filed because that would clearly be a way for providers and suppliers to avoid the 1 calendar year requirement stated in section 6404 of the ACA. Moreover, it would create a multitude of problems for CMS to deal with operationally or administratively because CMS would need to have the ability to track all rejected claims or all claims that failed to receive an initial determination and be able to match those rejected or incomplete claims up with all of the complete or valid claims that would eventually be filed months or years later so that an initial determination could be made.

Comment: One commenter stated that it is unnecessary to impose an additional restriction to the exception for claims filed for services provided to dual-eligible individuals. The third condition for the exception at § 424.44(b)(3) that a State Medicaid Agency recovers the Medicaid payment for the furnished service from a provider or supplier 11 months or more after the date of service is too restrictive and CMS should have used a different time period.

Response: We agreed with the commenter that the 11 months or more after the date of service requirement in § 424.44(b)(3)(iii) was too restrictive and therefore we modified the final rule based on these comments by changing the time period from 11 months to 6 months or more after the service was furnished.

Comment: One commenter suggests that CMS amend the third condition of § 424.44(b)(3) to read as follows— "A State Medicaid agency or Provider recovered the Medicaid payment for the furnished service from the provider or supplier 11 months or more after the date of service." The commenter stated that occasionally providers identify retroactive Medicare coverage after Medicaid has paid without receiving notification from the State Medicaid agency. The provider needs to have the ability to correct the payer order when necessary before their existing payment is recouped.

Response: We were not persuaded to modify the rule by these comments because when a provider refunds a payment that is made to it by a State Medicaid Agency, the provider is not recovering a State Medicaid payment. Instead, when the State Medicaid Agency accepts that refunded payment from the provider, we consider the State Medicaid Agency to actually be recovering that Medicaid payment. Therefore, when a State Medicaid Agency accepts a provider's refunded payment 6 months or more after the service was furnished, then the third condition of § 424.44(b)(3) will be met. Of course, the first two conditions of § 424.44(b)(3) will also need to be met in order for an extension to be granted under § 424.44(b)(3).

Comment: One commenter stated that due to the limited home infusion benefit under Medicare Part B, home infusion suppliers often bill Medicare for the purpose of obtaining Medicare denial billing remittance advices, which are required by other payers. It would be unreasonably costly and confusing for home infusion suppliers to receive timely filing limit denials for services provided to individuals for whom the supplier is unaware of retroactive Medicare entitlement during the allowable filing period. The commenter urged CMS to ensure that infusion suppliers do not have to face this situation.

Response: Although this comment was unclear, we believe the commenter is concerned that home infusion suppliers will be disadvantaged by the exception at § 424.44(b)(2). If the conditions for § 424.44(b)(2) are met, then home infusion suppliers will be able to utilize that exception the same as any other provider or supplier and therefore will not be adversely impacted by this rule.

Comment: One commenter urges CMS to make communication about this new deadline a priority for the Agency. This should include a prominent banner on the CMS Web site home page as well as clear and concise written communications with Medicare providers. It is important that providers not have claims rejected due to lack of awareness of new claims submission deadlines.

Response: Although this comment is outside the scope of this rule, we issued sub-regulatory guidance regarding section 6404 of the ACA on May 7, 2010 via Change Request 6960 and on July 30, 2010 via Change Request 7080. As a result of issuing that sub-regulatory guidance, two provider education articles were posted to CMS's Medlearn Matters Web site educating providers and suppliers about the new 1 calendar year timely filing requirement.

In order to effectuate the changes made by the ACA, we are finalizing our proposed changes to § 424.44, with four modifications. First, we are including another exception at § 424.44(b) by re-designating § 424.44(b)(4) of the proposed rule to § 424.44(b)(5) and designating the new exception for retroactive disenrollment from Medicare Advantage plans or Program of All-inclusive Care for the Elderly (PACE) provider organizations as § 424.44(b)(4). We are adding this new exception so that beneficiaries, providers, and suppliers may be granted an extension to file claims in Medicare Advantage situations when the following conditions are met:

- At the time the service was furnished the beneficiary was enrolled in a Medicare Advantage plan or PACE provider organization.
- The beneficiary was subsequently disenrolled from the Medicare Advantage plan or Program of All-inclusive Care for the Elderly (PACE) provider organization effective retroactively to or before the date of the furnished service.
- The Medicare Advantage plan or Program of All-inclusive Care for the Elderly (PACE) provider organization recovered its payment for the furnished service from a provider or supplier 6 months or more after the service was furnished.

In these situations, if we or one of our contractors determines that all of the conditions are met, then the time to file a claim will be extended through the last day of the 6th calendar month following the month in which the Medicare Advantage plan or Program of All-inclusive Care for the Elderly (PACE) provider organization recovered its payment for the furnished service from the provider or supplier.

The second modification changes § 424.44(b)(5)(ii) because in retroactive entitlement situations there could be situations where a provider or supplier may not be notified of a beneficiary's retroactive entitlement in order to utilize the exception at § 424.44(b)(2). Therefore, we are modifying § 424.44(b)(5)(ii) so that notification to either party (that is, the beneficiary or the provider/supplier) for the first time about a beneficiary's retroactive entitlement will trigger when the extension of time to file the claim through the last day of the 6th calendar month begins.

The third modification changes § 424.44(b)(5)(i) because there may be situations where a provider or supplier may be able to utilize the exception under § 424.44(b)(1) commonly referred to as the "administrative error" exception, but the provider or supplier is not notified about the correction until it is too late to utilize the exception. Therefore, we are modifying § 424.44(b)(5)(i) so that notification to either party (that is, the beneficiary or the provider/supplier) for the first time about the administrative error correction will trigger the beginning of the extension of time to file the claim through the last day of the 6th calendar month.

The fourth modification changes the 11 months or more after the date of service requirement in § 424.44(b)(3)(iii) to 6 months or more after the date of service because the 11 months or more requirement was too restrictive.

V. Section 6410 of the Affordable Care Act and Section 154 of MIPPA: Adjustments to the Metropolitan Statistical Areas (MSA) for Medicare Durable Medical Equipment, Prosthetics, Orthotics, and Supplies Competitive Acquisition Program

In the July 13, 2010 proposed rule we proposed a number of revisions to the DMEPOS CBP as a result of changes to the statute made by both the Medicare Improvements for Patients and Provider Act of 2008 (MIPPA) and the ACA of 2010. Since both MIPPA and the ACA specify requirements for Metropolitan Statistical Area (MSA) selection for Round 2 and subsequent rounds, we outlined our proposals for implementing the statutory requirements related to MSA selection and the phase in of competitive bidding areas under the DMEPOS CBP. First, we proposed to use the authority provided by the statute at section 1847(a)(1)(D)(ii) of the Act, as amended by MIPPA, to subdivide MSAs with populations of greater than 8,000,000 under Round 2 of the DMEPOS CBP. Second, we proposed to exclude certain areas from competitive bidding after Round 2 as mandated by section 1847(a)(1)(D)(iii) of the Act, as amended by MIPPA. Third, we proposed to implement the requirement of section 6410 of the ACA to expand Round 2 of the program by adding 21 of the largest MSAs based on total population to the original 70 already selected for Round 2.

1. Background

Section VII.H of this final rule provides background on the DMEPOS CBP, including a description of many of the changes made to the program by section 154 of the MIPPA. In this section, we provide additional information regarding changes made by both section 154(a) of the MIPPA and section 6410 of the ACA. In addition to the changes discussed previously in this final rule, MIPPA also added subparagraph (D) to section 1847(a)(1) of the Act. Section 1847(a)(1)(D)(ii) of the Act, as added by MIPPA, addresses Round 2 of the DMEPOS CBP, and section 1847(a)(1)(D)(iii) of the Act addresses subsequent rounds of the Program.

Section 1847(a)(1)(D)(ii)(II) of the Act specifies that the Secretary shall implement DMEPOS competitive bidding in the areas previously selected for Round 2 of the program and also allows the Secretary, in implementing Round 2 of the program, to subdivide MSAs with populations of greater than 8,000,000 into separate CBAs. Section 1847(a)(1)(D)(iii) of the Act imposes new requirements on the Secretary for competitions occurring before 2015 in subsequent rounds of the program. For such competitions (other than national mail order), the following areas are to be excluded from the program: (I) rural areas; (II) MSAs not selected under Round 1 or 2 with a population of less than 250,000; and (III) certain areas with low population density within a selected MSA. These requirements do not apply to a national mail order program.

Finally, MIPPA required that we implement Round 2 of the DMEPOS CBP in the same MSAs that were designated as of June 1, 2008. In 2010, section 6410(a) of the ACA amended sections 1847(a)(1)(B)(i)(II) and (D)(ii) of the Act to expand Round 2 of the program from 70 MSAs to 91 MSAs by adding the next 21 largest MSAs by total population not already selected for Rounds 1 or 2.

2. Subdividing Large MSAs Under Round 2

We have selected MSAs for Round 1 and for Round 2 consistent with MIPPA's requirement. For Round 1, CBAs generally were comparable to MSAs, however, for Round 2 we proposed to subdivide MSAs of 8,000,000 or more in population. The authority to subdivide MSAs into separate areas for competitive bidding purposes is set forth in section 1847(a)(1)(D)(ii)(II) of the Act which states, "[t]he Secretary may subdivide metropolitan statistical areas with populations (based upon the most recent data from the Census Bureau) of at least 8,000,000 into separate areas for competitive acquisition purposes." We have identified three MSAs which, based on the 2009 estimate from the Census Bureau data, we subdivided under section 1847(a)(1)(D)(ii)(II) of the Act: (1) Chicago-Naperville-Joliet, Illinois-Indiana-Wisconsin (IL–IN–WI) MSA with a population of 9,569,624; (2) Los Angeles-Long Beach-Santa Ana, California (CA) MSA with a population of 12,872,808; and (3) New York-Northern New Jersey-Long Island, New York-New Jersey-Pennsylvania (NY–NJ–PA) MSA with a population of 19,006,798. We proposed to divide these MSAs into separate CBAs because we believe this approach would create more manageable CBAs for contract suppliers to serve and allow more small suppliers to be considered for participation in the program.

We considered certain factors when deciding whether to subdivide the MSAs with populations of at least 8,000,000. We considered the geographic, social, and economic integration of each of the MSAs. We applied all of these factors when grouping counties into CBAs and we believe it is also appropriate to use these factors to determine: (1) Whether or not to subdivide an MSA into separate CBAs, and (2) if the decision is made to subdivide the MSA, how to subdivide the MSA. We considered the following factors, generally in the order in which they are listed:

- Geographic size of the MSA and the location of the counties within each MSA compared to neighboring counties.
- The driving distances from north to south and east to west within each MSA and county.
- The total population and the population of FFS Medicare beneficiaries using DMEPOS items subject to competitive bidding.
- The DMEPOS allowed charges for items subject to competitive bidding.
- Comparably sized Round 1 and Round 2 MSAs based on beneficiary counts and allowed charges for competitive bid items.
- The interstate highway infrastructures of the MSAs.
- The current service patterns of suppliers in each county of the MSA.

We used each of the factors to the extent practical to develop initial proposals for reasonable and workable subdivisions of these highly and densely populated MSAs. We believe consideration of these factors will help us meet our goal of subdividing large and densely populated MSAs and creating CBAs that are attractive to suppliers and incentivize them to bid competitively for a contract. With this goal in mind, we proposed to establish CBAs that provide for a good volume of DMEPOS business for winning bidders, avoid obvious geographic obstacles, mimic existing supplier service patterns, and, to the extent possible, do not cross State lines. We stated that we believed the factors we have selected will achieve those objectives.

We found that counties clearly delineate areas within a MSA, and as we have done for Round 1 by identifying CBAs by counties and zip codes, we proposed to subdivide the MSAs at a county level. Since the Office of Management and Budget (OMB) defines the MSAs by counties and county-based subdivisions are stable, we use counties to subdivide CBAs. When subdividing an MSA into counties, we consider counties that share social, economic, and geographic integration. We have first summarized the proposed subdivisions, then summarized the comments and finalized the CBAs.

The Chicago-Naperville-Joliet, IL–IN–WI MSA comprises 14 counties within 3 States: Illinois, Indiana, and Wisconsin. This MSA has 207,106 beneficiaries and $218,161,562 of DMEPOS allowed charges subject to the DMEPOS CBP. Using the factors that we indentified, we proposed to subdivide the Chicago-Naperville-Joliet, IL–IN–WI MSA into four separate CBAs: Indiana-Chicago Metro CBA; South-West-Chicago-Metro CBA; Central-Chicago Metro CBA; and Northern-Chicago Metro CBA.

The Los Angeles-Long Beach-Santa Ana, CA MSA comprises two counties: Los Angeles County and Orange County. The MSA has 173,631 fee-for-service beneficiaries receiving DMEPOS subject to competitive bidding and $244,523,957 in DMEPOS allowed charges subject to the DMEPOS CBP. As mentioned previously, we proposed to subdivide MSAs using counties, and since the Los Angeles-Long Beach-Santa Ana, CA MSA only has two counties, it offers only one subdivision along the county lines. Hence, we proposed to divide the MSA by the two counties creating two CBAs: Los Angeles County CBA and Orange County CBA. We also proposed to use the authority in section 1847(a)(3)(A) of the Act to exclude certain areas within the Los Angeles-Long Beach-Santa Ana, CA MSA. We believe these areas meet the requirement of section 1847(a)(3)(A) of the Act; they are rural areas with a low population density within an urban area that are not competitive. In the April 10, 2007 DMEPOS CBP final rule (72 FR 17992), we finalized our regulations at § 414.410(c) that defined the factors we consider when determining an area is considered a low population density area or an area that would not be competitive. Based on our review of the County Subdivision Population from the 2000 Census from the U.S. Census Bureau, and using the factors set forth in the April 10, 2007 final rule, we proposed to exclude the area of Los Angeles County north of the San Gabriel Mountains. This large geographic area has a population of about 357,000, which is only 4 percent of the total population of Los Angeles County, and is separated from the rest of the county by the San Gabriel Mountains. The area north of the San Gabriel Mountains has one major road and many terrains which make this area remote. The majority of the population in Los Angeles County lives south of the San Gabriel Mountains. We believe that excluding this area will create a more manageable CBA that still provides sufficient volume of DMEPOS items while avoiding the geographic obstacle of the mountains. We believe including this area in the DMEPOS CBP would result in fewer small suppliers being considered for participation under the program, because we would not expect small suppliers to have the resources to serve these more remote areas. As a result, we expect that it will increase the number of bids submitted for the CBAs within the Los Angeles-Long Beach-Santa Ana, CA MSA.

The Los Angeles County includes the two islands of Santa Catalina and San Clemente off the west coast. We proposed that the two islands be included as a part of the Los Angeles County CBA in order to ensure that beneficiaries presently residing on these islands or who move to these islands in the future are ensured access to competitively bid items by contract suppliers. San Clemente Island is a military base with a current population of zero; and therefore, the inclusion of

this area in the CBA would not result in this island being a part of the supplier service area at this time.

The New York-Northern New Jersey-Long Island, NY–NJ–PA MSA comprises 23 counties in three States: New York, New Jersey and Pennsylvania. The MSA has 344,879 FFS beneficiaries receiving DMEPOS subject to the DMEPOS CBP and $350,449,795 in allowed charges for DMEPOS items subject to competitive bidding. We proposed to subdivide the New York-Northern New Jersey-Long Island, NY–NJ–PA MSA into five CBAs. The proposed Nassau-Brooklyn-Queens CBA would be contiguous to Suffolk County and would consist of the western part of Long Island and extend to the eastern part of New York City. The proposed Suffolk County CBA would consist of the eastern part of Long Island and would encompass most of Long Island. The proposed Bronx-Manhattan NY CBA would include the entire area of Manhattan and the Bronx. The proposed North-West NY Metro CBA would be situated north and west of New York City and would extend into New Jersey and Pennsylvania. The proposed Southern NY Metro CBA included Staten Island and would extend south to Ocean County, New Jersey.

At the March 17, 2010 meeting of the Program Advisory and Oversight Committee (PAOC), we presented these proposals for subdividing these three large MSAs. Various members of the PAOC had the following suggestions for subdividing these MSAs:

- Draw the boundaries of CBAs using the interstate highways rather than the divisions by County.
- Determine the current servicing areas of suppliers by MSA and product category by using a scatter plot.
- Use the Hudson River to divide the CBAs for the New York MSA.
- Carve out Pike and Putnam Counties from the New York MSA due to their location and their low population density.
- Include Manhattan as a separate CBA, due to its unique nature as a self contained area.
- Consider State licensure requirements when we divide the MSAs into CBAs.
- In the LA County CBA, exclude the area north of the San Gabriel Mountains from the CBA.
- Consider traffic patterns when dividing the Los Angeles MSAs into CBAs.

In the July 13, 2010 proposed rule, we stated that we would consider the PAOC's advice and recommendations and further invited comments on the proposed subdivision of the three MSAs.

Comment: One commenter suggested that CMS use main travel arteries to subdivide MSAs. The commenter further explained that using zip codes or county boundaries may be unworkable across a large MSA if the travel arteries do not correspond to the physical boundary lines for counties and zip codes.

Response: We examined travel arteries used by suppliers and supplier service and traffic patterns closely in developing the proposed CBAs. The commenter provided no rationale for use of travel arteries alone to establish CBA boundaries, nor did the commenter provide a specific methodology or information to use in making selections regarding which of the various highways to use as boundaries. We believe it is appropriate to consider travel arteries as one factor when designing CBAs. However, using this factor alone would result in unworkable CBAs. For example, if the interstate highway system in the Chicago-Naperville-Joliet, IL–IN–WI MSA, consisting of 11 different interstate highways (I–55, I–57, I–65, I–80, I–88, I–90, I–94, I–190, I–290, I–294, and I–355), were used as boundaries for CBAs, this would result in approximately 30 different, very small CBAs. As noted above, the numerous highway systems that cut through the MSAs were considered in determining which counties to include in each proposed CBA; therefore, travel arteries were considered and used to develop the CBAs.

In phasing in the competitive bidding program, we adopted the definition of the term "Metropolitan Statistical Area" consistent with that issued by the OMB. The MSA comprises the central county or counties containing the core, plus adjacent outlying counties having a high degree of social and economic integration with the central county as measured through commuting. Using OMB's standards for MSAs, we have found that counties clearly delineate areas within a MSA. Therefore, as we have done for Round 1, we will continue to identify CBAs by counties and zip codes. For the large MSAs, although we used the counties as the basis for determining the CBAs, we considered various factors when determining how to subdivide and group each county within the MSA, including which major travel arteries serve which counties or group of counties in a geographic location.

Comment: One commenter suggested that CMS should not finalize regulations expanding the DMEPOS CBP to implement Round 2 until the impact of implementation of Round 1 of the program on Medicare beneficiaries, suppliers and providers is fully evaluated and understood.

Response: Section 1847(a)(1)(B)(i)(II) of the Act mandates that competitions occur in 2011 for Round 2 of the CBP.

We did not receive comments on the specific CBAs proposed for the Chicago-Naperville-Joliet, IL–IN–WI MSA and are finalizing the CBAs in that MSA as proposed. The counties that comprise each of the final CBAs for this MSA are shown in Table 68. The DMEPOS allowed amount, beneficiary count subject to competitive bidding, and the general population that comprise these four final CBAs are shown in this table.

TABLE 68—CHICAGO-NAPERVILLE-JOLIET, IL–IN–WI

CBA name/county	DMEPOS allowed Charles *	DMEPOS beneficiary count subject to competitive bidding *	General population **
Indiana-Chicago Metro CBA:			
Lake, IN	$18,600,917	16,637	493,800
Jasper, IN	1,238,119	1,191	32,544
Newton, IN	580,842	393	13,933
Porter, IN	4,856,838	4,526	162,181
CBA Total	25,276,716	22,747	702,458
South-West-Chicago-Metro CBA:			
Will, IL	13,523,185	12,522	681,097

We did not receive comments on the specific CBAs proposed for the Los Angeles-Long Beach-Santa Ana, CA MSA and are finalizing the CBAs in that MSA as proposed, with one exception, based on further consideration of issues raised by the PAOC. We will not include Santa Catalina Island and San Clemente Island in the Los Angeles County CBA as initially proposed. We discussed the factors to consider when excluding low population density areas from a CBA in the April 10, 2007 DMEPOS CBP final rule (72 FR 17992). Exclusion of low population density areas results in smaller CBAs that may reduce supplier costs in servicing the CBAs. Lower supplier costs may result in lower bids, which would increase savings under the program. Although an area may be a low population density area, in accordance with existing regulations at § 414.410(c), it cannot be excluded from a CBA unless a determination is made that the area is non-competitive based on one or more of the following factors: Low utilization of DMEPOS items by Medicare beneficiaries receiving fee-for-service benefits relative to similar geographic areas; low number of DMEPOS suppliers relative to similar geographic areas; or low number of Medicare fee-for-service beneficiaries relative to similar geographic areas. The island of San Clemente has a population of zero and including the island in the program would therefore result in no savings. Approximately 70 Medicare beneficiaries receiving $57,000 in DMEPOS items and services reside on the island of Santa Catalina. This area can therefore be considered a non-competitive area given the low number of Medicare beneficiaries and low level of DMEPOS utilization, especially considering that the total allowed charges for DMEPOS for Los Angeles County as a whole is over $200 million. We took into consideration, when deciding whether to finalize this proposal, comments from the March 17, 2010, meeting of the PAOC, during which a supplier of DMEPOS highlighted the high costs of furnishing items to Santa Catalina Island, 20 miles off the coast of mainland California and accessible only by boat, helicopter, or amphibious aircraft. Contract suppliers, and in particular small suppliers, that do not have a location near the ferry ports for this island would be burdened by having to serve this area in accordance with their contract, and we expect that this may have an impact on the bids submitted for this CBA. Medicare beneficiaries who are residents of Santa Catalina Island and require delivery of DMEPOS items must currently make special arrangement with suppliers for delivery of those DMEPOS items. Suppliers are not currently obligated to serve this island, so it is the beneficiary and not the supplier that bears the cost of any additional expense associated with delivery of items. Under the DEMPOS CBP, the supplier would be obligated to serve this island, if it were included in the CBA, and the additional expense of delivering items to this remote island are therefore transferred from the beneficiary to the supplier. Although we originally proposed to include Santa Catalina Island in the Los Angeles CBA to ensure access to DMEPOS items for these beneficiaries, we have further examined this issue and believe that beneficiaries will continue to have the ability to make special arrangements for delivery of these items if this area is not included in the CBA. We therefore believe that excluding the islands of San Clemente and Santa Catalina from the Los Angeles CBA is consistent with existing regulations at § 414.410(c).

The counties that comprise each of the final CBAs for this MSA are shown in Table 69. The DMEPOS allowed amount, beneficiary count subject to competitive bidding, and the general population that comprise these two final CBAs are shown in this table.

*** The counts and amounts are not adjusted for the area excluded north of the San Gabriel Mountains.

We did not receive comments on the specific CBAs proposed for the New York-Northern New Jersey-Long Island, NY–NJ–PA MSA. However, we have decided to make three changes based on further consideration of issues raised by the PAOC. We carefully considered the PAOC suggestion noted in the proposed rule to exclude Pike and Putnam counties from the New York-Northern New Jersey-Long Island, NY–NJ–PA MSA in order to result in a smaller and more manageable CBA than the proposed North-West NY Metro CBA. This proposed North-West NY Metro CBA is a large area situated north and west of New York City and covering the three states of New York, New Jersey, and Pennsylvania. Pike County, Pennsylvania is a low population density area and makes up only 0.3 percent of the total DMEPOS utilization for the New York-Northern New Jersey-Long Island, NY–NJ–PA MSA. Therefore, we believe that excluding Pike County from the North-West NY Metro CBA is consistent with existing regulations at § 414.410(c). In addition, the PAOC pointed out that excluding Pike County, PA, would help reduce the burden of suppliers having to comply with different state licensure requirements. As noted in the proposed rule, the PAOC also suggested that CMS consider state licensure requirements when dividing the MSAs into CBAs. To eliminate the complexity of complying with different state licensure requirements, we have decided to split the proposed North-West NY Metro CBA into two CBAs: One containing the New Jersey counties of Bergen, Essex, Hudson, Morris, Passaic, and Sussex; and one containing the New York counties of Putnam, Rockland, and Westchester. To summarize, with regard to the proposed North-West NY Metro CBA, the PAOC suggested excluding Pike and Putnam counties to reduce the size of this large CBA we proposed for the area in the north and west of the MSA. It was noted by the PAOC that removing Pike County would also reduce complications of multi-state licensing as Pennsylvania licensing rules and requirements would no longer be an issue. Based on the advice to reduce the size of the proposed North-West NY Metro CBA and reduce multi-state licensure complexities, we are removing Pike County from the CBA and are splitting the CBA into two new CBAs: A fairly large CBA containing the New Jersey counties from the proposed North-West NY Metro CBA; and a smaller CBA containing the New York counties from the proposed North-West NY Metro CBA. As a result of this change, there is now no need to remove Putnam County from the CBA as the three county area of Putnam, Rockland, and Westchester counties in New York will be served by suppliers contracted to furnish items in this area, which is now significantly smaller than the proposed North-West NY Metro CBA.

In further response to the PAOC's advice to consider State licensure requirements when subdividing the MSAs into separate CBAs, we have decided to remove Richmond County, NY from the proposed South New York Metro, leaving this CBA to be comprised of six counties in New Jersey. We are therefore moving Richmond County, NY to the Nassau-Brooklyn-Queens-County Metro CBA and have changed the name of the CBA to Nassau-Brooklyn-Queens-Richmond County Metro CBA. We note that Hudson River is in between Richmond County and the other counties in the Nassau-Brooklyn-Queens-Richmond County Metro CBA but we took into consideration the social integration of this area in that there is a major bridge/highway connecting Richmond County to Long Island. Also, we believe that for each final CBA set forth in this rule, the supplier servicing patterns supports our decision. We determined that both large and small suppliers in the MSA generally furnish items within the CBAs we proposed. The counties, DMEPOS allowed amount and beneficiary count subject to competitive bidding and the general populations that comprise each CBAs based on our final provisions are shown in Table 70.

In summary, we are finalizing our proposal to divide the Chicago-Naperville-Joliet, IL–IN–WI MSA into four CBAs. We are finalizing, with the modification discussed above, two CBAs in the Los Angeles-Long Beach-Santa Ana, CA MSA. Lastly, we are finalizing, with modifications discussed above, six CBAs in the New York-Northern New Jersey-Long Island, NY–NJ–PA MSA.

3. Exclusions of Certain Areas after Round 2 and Prior to 2015

Section 154(a) of MIPPA amended the statute by requiring that competition under Round 2 takes place in 2011 and by adding section 1847(a)(1)(D)(iii) of the Act that requires us to exclude the following areas from the competitive bid program for competitions after Round 2 of the program and before 2015:

- Rural Areas.
- Metropolitan Statistical Areas not selected under Round 1 or Round 2 with a population of less than 250,000.
- Areas with a low population density within a MSA that is otherwise selected consistent with section 1847(a)(3)(A) of the Act.

We proposed to incorporate these requirements and timeframes in proposed § 414.410(c).

We received no comments on this proposal and therefore are finalizing this provision without modification.

4. Expansion of Round 2

Section 6410(a) of the ACA expanded the areas to be included in Round 2 of the program. As amended by section 6410(a) of the ACA, section 1847(a)(1)(B)(i)(II) of the Act requires that the competition for Round 2 of the program occur in 91 of the largest MSAs in 2011. Prior to this change, Round 2 was to include 70 MSAs. Section 1847(a)(1)(D)(ii)(II) of the Act, as added by section 6410(a) of the ACA, specifies that the additional 21 MSAs to be included in Round 2 "include the next 21 largest metropolitan statistical areas by total population" (after those already selected Round 2). The 2009 annual population estimates from the U.S. Census Bureau are the most recent estimates of population that will be available prior to the Round 2 competition mandated to take place in 2011. Therefore, we proposed to use these estimates to determine the additional 21 MSAs to be included in Round 2 of the program. Table 71 is a list of the additional 21 MSAs added to Round 2.

Stockton, CA	674,860
Boise City-Nampa, ID	606,376

We received no comments on this proposal and therefore are finalizing this provision without modification.

W. Section 10501(i)(3): Collection of HCPCS Data for Development and Implementation of a Prospective Payment System for the Medicare Federally Qualified Health Center Program

The Omnibus Budget Reconciliation Act (OBRA) of 1989 amended the Act by creating new FQHC benefit programs under both Medicare and Medicaid. The Medicare FQHC benefit provides coverage for a full range of primary care services, including physician and certain nonphysician services (PAs, NPs), clinical social worker, psychologist services, and preventive services. FQHCs are "safety net" providers (for example, community health centers and programs serving migrants, the homeless, public housing centers, and tribal groups). The main purpose of the FQHC program is to enhance the provision of primary care services in underserved urban and rural communities. FQHCs typically enhance the availability of care to vulnerable populations, including Medicare, Medicaid, SCHIP, and the uninsured. Most of these health centers receive HRSA grants for services to the uninsured.

Medicare pays FQHCs on the basis of reasonable cost, subject to an upper payment limit on the reasonableness of incurred cost. Actual Medicare reasonable cost is determined based upon a Medicare cost report filed by the FQHC after the end of its fiscal year. Prior to the start of the year, an interim all-inclusive per-visit payment amount, based upon an estimate of Medicare reasonable costs, is calculated for each Medicare FQHC. During the year, this interim all-inclusive per-visit payment amount is paid for each covered visit between a Medicare beneficiary and an FQHC health professional. After the end of the Medicare FQHC's cost reporting year, interim per-visit payments are reconciled to actual Medicare reasonable costs based upon the Medicare cost report filed by the FQHC. Section 10501(i)(3) of the ACA now amends this current Medicare FQHC payment policy with an entirely different payment system, effective with cost reporting periods beginning on or after October 1, 2014.

Section 10501(i)(3)(A) of the ACA amended section 1834 of the Act by adding a new subsection (o), Development and Implementation of Prospective Payment System. This subsection provides the statutory framework for development and implementation of a prospective payment system for Medicare FQHCs. Section 1834(o)(1)(B) of the Act, as established by the ACA, addresses collection of data necessary to develop and implement the new Medicare FQHC prospective payment system. Specifically, section 1834(o)(1)(B) of the Act, Collection of Data and Evaluation, grants the Secretary of HHS the authority to require FQHCs to submit such information as may be required in order to develop and implement the Medicare FQHC prospective payment system, including the reporting of services using HCPCS codes. Section 1834(o)(1)(B) of the Act requires that the Secretary impose this data collection submission requirement no later than January 1, 2011. Accordingly, we proposed to add a new paragraph (d) to § 405.2470 to require Medicare FQHCs to begin reporting all services furnished using HCPCS codes for these services starting January 1, 2011. Beginning January 1, 2011, we proposed that the Medicare FQHC would be required to report on Medicare FQHC claims all pertinent service(s) provided for each Medicare FQHC visit (defined in § 405.2463). This additional reporting would include the information needed to develop and implement a PPS for FQHCs. For example, corresponding HCPCS code(s) would be required to be reported along with the presently required Medicare revenue code(s) for the Medicare FQHC visit(s). We noted in our proposal that our Medicare FQHC claims processing system would be revised to accept the addition of the new reporting requirements effective January 1, 2011. In our proposal, we also noted that the proposed new data collection effort would be for informational and data gathering purposes only, and would not be utilized to determine Medicare payment to the FQHC. Until the FQHC prospective payment system is implemented in 2014 and the Medicare claims processing system is revised to reflect such a system, we noted that Medicare FQHC payment would continue in the current manner (utilizing revenue codes and the interim per-visit payment rate methodology).

In our proposed rule, we further noted that Medicare FQHCs would be required to adhere to the information collection requirements in accordance with the content and terms of their Medicare agreement as stipulated at § 405.2434. We indicated in the proposed rule that failure to do so could result in the termination of the FQHC's Medicare agreement in accordance with § 405.2436 of the Medicare FQHC regulations.

At the time of publication of the proposed rule, we noted that we did not foresee additional claims or other information collection needs beyond collection of HCPCS codes. Accordingly, we did not propose additional information collection requirements at that time. However, we solicited public comment on any additional information FQHCs believe may be necessary in order to develop and implement a prospective payment system for Medicare FQHCs.

We received a number of comments on the proposed information collection requirements. We address these comments as follows:

Comment: One commenter requested that CMS ensure that its systems are appropriately updated to be able to accept HCPCS codes from Medicare FQHCs.

Response: CMS will work to assure that its contracts are provided with adequate notice allowing for claims processing systems to accept these new reporting requirements.

Comment: One commenter requested that health centers be given adequate time to learn the new reporting requirements, and to work with health centers that might need additional assistance.

Response: CMS, through its Contractors, presently works to assist and train all providers in Medicare reporting requirements, particularly new requirements such as the collection of HCPCS information from Medicare FQHCs. Medicare contractors have a variety of assistance measures at their disposal to train Medicare FQHCs in HCPCS coding. Assistance measures include seminars, web learning portals, and telephone information lines. We note that there are numerous private sector training and educational opportunities in HCPCS coding as well. With the specific language regarding HCPCS data collection from Medicare FQHCs included in the ACA itself, and the resultant lead time prior to January 1, 2011 implementation of the reporting requirements, we believe health centers have had sufficient time to prepare themselves to meet these requirements.

Comment: One commenter suggested that data collection begin with a representative sample of health centers, and that it generally be phased in across the nation, in order to ensure that CMS not penalize health centers that might need additional assistance.

Response: With the tight ACA implementation time frames for implementation of a Medicare FQHC prospective payment system, as well as the limited total number of FQHCs, we believe both provider sampling and phase-in approaches to information collection requirements would jeopardize CMS' ability to meet statutory requirements for the Medicare FQHC PPS. Accordingly, we cannot accept comments to delay or limit collection of Medicare FQHC data we believe necessary to meet the statutory requirements.

Comment: One commenter suggested that HHS estimate the additional administrative burden placed on FQHCs and, if that is significant, increase reimbursement proportionately during the proposed collection period.

Response: Medicare FQHCs are paid on the basis of reasonable cost. Administrative costs attributable to added information collection requirements that might be incurred by Medicare FQHCs are already to be reported by the Medicare FQHC on its Medicare costs report and included as part of its Medicare FQHC all-inclusive rate.

Comment: One commenter suggested that HHS use the quality measures reported to CMS as part of its meaningful use of electronic health record requirements, instead of coding additional information into the claims.

Response: We do not believe that quality measures reported to CMS as part of meaningful use requirements would be sufficient in scope or representative in breadth in order to establish a National Medicare PPS sample which would be representative of the entire population of Medicare FQHCs. Accordingly, we cannot accept this comment.

As a result of these comments, we are making no changes to our proposal to require FQHCs to begin the reporting of services using HCPCS codes. Accordingly, we are finalizing this provision without modification. We will add a new paragraph (d) to § 405.2470 to require Medicare FQHCs to begin reporting all services furnished using HCPCS codes for these services starting January 1, 2011.

We received no public comment suggesting collection of additional information collection requirements beyond HCPCS codes. Therefore we add no additional Medicare FQHC information collection requirements, beyond the collection of the aforementioned HCPCS data requirements, in this final rule.

VII. Other Provisions of the Proposed Regulation

A. Part B Drug Payment: Average Sales Price (ASP) Issues

1. "Carry Over" ASP

The *average sales price (*ASP) payment methodology is authorized under section 303(c) of the MMA, which amends Title XVIII of the Act by adding section 1847A. This section establishes the use of the ASP methodology for payment for Medicare Part B drugs and biologicals described in section 1842(o)(1)(C) of the Act furnished on or after January 1, 2005. For purposes of this part, unless otherwise specified, the term "drugs" will hereafter refer to both drugs and biologicals. The ASP methodology applies to most drugs furnished incident to a physician's service, drugs furnished under the DME benefit, certain oral anti-cancer drugs, and oral immunosuppressive drugs.

Sections 1847A and 1927(b) of the Act specify quarterly ASP data reporting requirements for manufacturers. Specific ASP reporting requirements are set forth in section 1927(b) of the Act. Although delays in reporting have been uncommon, they create a risk that: (1) Could result in the publication of payment limits that do not reflect prices for drug products, and (2) could result in inaccurate payments, the need for correction of files and unintentional ASP payment limit variability.

As a result of these concerns, we sought to establish a process for addressing situations where manufacturers fail to report manufacturer ASP data in a timely fashion, that is within 30 days after the end of a quarter. The proposal in CY 2011 PFS proposed rule was intended to allow us to calculate and report ASP payment limits for a given quarter within the existing timelines and would not affect CMS or the OIG's authority to assess civil monetary penalties associated with untimely or false ASP reporting. Manufacturers who misrepresent or fail to report manufacturer ASP data will remain subject to civil monetary penalties, as applicable and described in sections 1847A and 1927(b) of the Act.

For the purposes of reporting under section 1847A of the Act, the term "manufacturer" is defined in section 1927(k)(5) of the Act and means any entity engaged in the following: production, preparation, propagation, compounding, conversion, or processing of prescription drug product, either directly or indirectly by extraction from substances of natural origin, or independently by means of chemical

synthesis, or by a combination of extraction and chemical synthesis; or packaging, repackaging, labeling, relabeling, or distribution of prescription drug products. The term manufacturer does not include a wholesale distributor of drugs or a retail pharmacy licensed under State law. However, manufacturers that also engage in certain wholesaler activities are required to report ASP data for those drugs that they manufacture. Note that the definition of manufacturers for the purposes of ASP data reporting includes repackagers.

In accordance with section 1847A of the Act, manufacturers are required to report data on the National Drug Code (NDC) level, which include the following elements: the manufacturer ASP for drugs; the Wholesale Acquisition Cost (WAC) in effect on the last day of the reporting period; the number of units sold; and the NDC. Currently, when manufacturer ASP data or specific data elements are not available, we calculate an ASP price for a billing code based on other applicable and available pricing data from manufacturers for that drug. This alternative method used when manufacturer data are not available for a billing code includes WAC prices from compendia. WAC prices tend to be higher than manufacturer ASP prices.

Although problems with reporting have been uncommon, we have recently encountered situations where delays in manufacturer ASP reporting could have led to significant ASP payment limit fluctuations for highly used HCPCS codes. The greatest potential impact occurs when data for high volume drug products within a HCPCS code that is represented by a limited number of NDCs have not been reported and cannot be included in the ASP volume weighted calculations described in section 1847A(b) of the Act. For multisource drugs, such a situation is likely to artificially increase or decrease Medicare ASP payment limits, which in turn would affect beneficiary cost sharing amounts. Such artificial fluctuations of the ASP payment limit could provide the appearance of instability unrelated to market forces and could also create access issues for providers and beneficiaries and confusion that could ultimately affect product demand in the marketplace.

In order to minimize the possibility of ASP payment limit fluctuations due to missing data, we proposed a process, consistent with our authority in section 1847A(c)(5)(B) of the Act, to update ASPs based on the manufacturer's ASP calculated for the most recent quarter for which data is available. Specifically, we proposed to carry over the previously reported manufacturer ASP for an NDC(s) when missing manufacturer ASP and/or WAC data could cause significant changes or fluctuations in ASP payment limits for a billing code, and efforts by CMS to obtain manufacturer-reported ASP before Medicare ASP payment limits publication deadlines are not successful. For example, the most recently reported manufacturer ASP prices for products on the market would be carried over to the next quarter if a manufacturer's entire submission were not received, manufacturer ASP price data for specific NDCs have not been reported, or when only WAC data has been reported; however, NDCs that have zero sales or are no longer being manufactured will not be subjected to this process. Also, we proposed to apply the carryover process only in cases where missing data results in a 10 percent or greater change in the ASP payment limit compared to the previous quarter. Based on experience with ASP methodology since 2004, we believe that this percentage threshold constitutes significant change. We specifically sought comments on our use of 10 percent as the threshold amount. In order to better represent actual market trends, that is, actual increases or decreases in manufacturer reported ASP for the group of NDCs that represent the HCPCS code, we also proposed that the manufacturer ASP payment amounts for the individual NDCs that are carried over will be adjusted by the weighted average of the change in the manufacturer ASP for the NDCs that were reported during both the most recently available quarter and the current quarter. We requested comments about whether other methods to account for marketplace price trends could be a better substitute for applying the weighted average change. The previous quarter's sales volumes will be carried over. An example of the proposed process appears in Table 72.

We proposed to apply this process to both single source drugs and multiple source drugs. However, we are concerned that including single source drugs in the carry over process could create an incentive for nonreporting in situations where ASPs for a single source drug are falling and the manufacturer stops reporting ASPs in an effort to preserve a higher payment amount despite the risk of significant statutory penalties for such an action. Therefore, we specifically requested comments on this option and the effect of limiting this proposal to multiple source drugs only. We noted that we would consider these comments carefully before including both single source and multisource drugs in the process.

TABLE 72—ASP CARRYOVER EXAMPLE FOR NDCS IN A SPECIFIC HCPCS CODE

Previous quarter reported NDCs	Previous quarter reported volume	Previous quarter ASP	Current quarter reported NDCs	Current quarter reported volume	Current quarter ASP	Current quarter NDCs for calculation	Current quarter volume for calculation	Current quarter price for calculation
12345–6789–10	2000	$1.000	12345–6789–10	2500	$0.980	12345–6789–10	2500	$0.980
12345–6789–11	3000	1.000	12345–6789–11	1700	0.980	12345–6789–11	1700	0.980
12345–6789–12	5000	1.000	12345–6789–12	5500	0.980	12345–6789–12	5500	0.980
45678–1234–90	9000	1.100	(2)	(2)	(2)	45678–1234–90	9000	[1] 1.078
45678–1234–99	27000	1.100	(2)	(2)	(2)	45678–1234–99	27000	[1] 1.078

[1] This result is obtained by calculating the weighted average price change in NDCs available (that is, 12345–6789–10 thru 12345–6789–12) in both the previous and current quarters, which is −2% [(0.98–1.00)*100], and applying that change to the previous quarter's manufacturer ASP for the missing NDCs (that is, 45678–1234–90 and 45678–1234–99). The last two columns on the right would be used to calculate the weighted ASP and payment limits for the 5 NDCs as a HCPCS code and accounts for missing prices for two high volume NDCs that represent most of the units sold within the HCPCS code and therefore heavily influence the price calculation for the HCPCS code.

[2] Missing.

Our proposed approach was intended to establish a straightforward and transparent solution that minimizes the effect of missing manufacturer ASP data on Medicare ASP payment limits. We believe that the availability of a

mechanism to minimize non-market-related price fluctuations is desirable when efforts to obtain manufacturer's ASP data by deadlines have not been successful. Our proposed mechanism was not intended to alter or adjust reported prices and will not be used to do so, but instead is intended to more accurately represent prices in the marketplace in the rare circumstance where manufacturer ASP data for particular drug product(s) is missing. Based on our experience with ASP reporting since 2004, we do not believe that this process will be used frequently. However, as we stated previously, recent concerns about delays in reporting of manufacturer ASP data have led to this proposal.

We also remind manufacturers that significant civil monetary penalties (CMP) for not reporting or misrepresenting manufacturer ASP data are authorized under sections 1847A(d)(4) and 1927(b)(3)(C) of the Act and codified in regulations at § 414.806. This proposal should not be interpreted to mean that CMS and the OIG will refrain from collecting such penalties for ASP reporting violations. Late or missing reports will not be tolerated. This proposed policy would be implemented regardless of any efforts by the OIG to impose CMPs for nonreporting.

We would also like to remind manufacturers that additional specific information about reporting ASP data to us is available. (For examples, see the following: 69 FR 17936, 69 FR 66299, 70 FR 70215, 71 FR 69665, 72 FR 66256, 73 FR 69751, and 74 FR 61904.) Also, Frequently Asked Questions are posted in the related links inside CMS section of the ASP Overview Web page at *http://www.cms.hhs.gov/McrPartBDrugAvgSalesPrice/01_overview.asp#TopOfPage,* and the downloads section of the same Web page contains a link to the ASP Data Form (Addendum A), which includes examples of how ASP data must be reported and formatted for submission. In particular, we would like to remind manufacturers to report sales volume in quantities of NDC units sold (not vials or other units of sale), and to use a zero (that is, the character "0") instead of a blank when reporting items that did not have any sales in a particular quarter. In addition, manufacturers should report both the ASP and the WAC for each NDC, the expiration date for the last lot sold, if applicable, and the date of first sale for an NDC.

We received several comments about our proposals. In general, comments supported our proposal, including the use of a weighted average when calculating the carry over amounts, but the comments also requested clarification about certain details. We did not receive any comments that would lead us to reconsider the 10 percent threshold that we proposed.

Comment: Several commenters specifically requested that CMS clarify what will be done to obtain a manufacturer's ASP information before carrying over previous manufacturer ASP information. The comments recommended that CMS establish contact with manufacturers using contact information from the manufacturer's submission before applying the carryover policy.

Response: We follow a routine internal quality check process that prompts communication with contacts listed on manufacturers' ASP submissions when we believe that ASP data may be late, missing, or incomplete. The process includes contacting the manufacturer as recommended above. Our experience with using the reported contact information to reach the manufacturer generally has been satisfactory, and we plan to continue using it to manage and track submissions and to coordinate follow-up action by CMS or other agencies. However, we also believe that the carryover policy will serve as a backup in the event information cannot be obtained in a timely manner. Again, we reiterate that sections 1847A and 1927 of the Act require manufacturers to report ASP quarterly, and that that section 1847A(d)(5) of the Act provides for significant CMPs in situations when misreporting of ASP data occurs.

Comment: A few commenters requested that we clarify how we determine whether products are no longer being sold. The comments agreed with our approach to exclude from the carryover process products with no sales or those products that are no longer manufactured.

Response: In most cases, the manufacturers' ASP reports clearly establish whether a product is still being sold because manufacturers are required to report NDCs with zero sales. As noted above, CMS also contacts the manufacturers, as needed, in order to clarify information. If a situation arises where the product's sales status is not clear and we are unable to get clarification from the manufacturer, we use multiple sources of information, including but not limited to internal quality checks, compendia data, and public information about drug products to determine the product's status. Our experience has shown that this approach is effective, and we would use this approach to determine whether to apply the carryover policy if information supplied by the manufacturer was not available or not clear. Based on our experience, we believe that this approach will be sufficient to prevent the use of carryover data from products that are not sold during a quarter. We also would like to reiterate that manufacturers have a reporting obligation for NDCs with zero sales (71 FR 69676). In other words, the reporting obligation for an NDC ends only after the expiration date of the last lot sold. As mentioned above, a zero (the character "0") should be used to report the number of units of a drug product sold if that product had no reportable sales for a quarter.

Comment: A commenter requested that CMS announce the exact deadline for the application of the carryover policy each quarter.

Response: The ASP reporting deadline is specified in regulation text at § 414.804, which states that data must be submitted to CMS within 30 days after the close of a quarter. We decline to provide an additional "grace period" beyond the stated statutory and regulatory deadline—not only have we not proposed such a grace period, but also we believe such a policy could be misconstrued as permitting late submission of manufacturer data. As we stated earlier, our proposal was not intended (nor should it be construed) to affect manufacturers' obligations to submit ASP data timely, and penalties for noncompliance with the timely reporting requirement continue to apply. For these reasons, we decline to adopt the commenter's suggestion.

Comment: A commenter recommended that the carryover policy not be used for more than one quarter due to a concern about the accuracy of payment amounts based on data that is more than 2 quarters old.

Response: We will not specify the duration for the carryover policy at this time in order to prevent a situation where prolonged nonreporting of ASP data could influence ASP payment limit calculations. Based on our experience, reporting problems and delays with a duration of 2 or more quarters would be unlikely.

Comment: Commenters recommended that CMS carry over prices only if there is a manufacturer rebate agreement in place and a "track record" of four or more quarters of data have been reported.

Response: We disagree with these comments. First of all, the carryover process is unrelated to the manufacturer's reporting obligations under sections 1847A and 1927 and the

ASP regulations—in other words, our proposal does not serve to relieve manufacturers of any reporting obligations. Rather, our proposal is intended to solve the problem of how to accurately calculate ASP in instances where we do not have complete information. Thus, applying the carryover process only to certain manufacturers as the commenter suggests is not only unnecessary, but also, in our view, not appropriate. In addition, although we appreciate the commenter's desire to establish a baseline, for the reasons stated above, we do not believe that implementing a standard whereby we apply the carryover process only after a manufacturer has submitted four or more quarters of data is advisable. Such a policy would be contrary to our intent in making this proposal, which is to provide us with a standard procedure for addressing missing data. Further, we have no information indicating that manufacturers with four or more quarters of reporting are any more or less likely to fail to submit data for a particular product in future reporting periods. Therefore, we will not be modifying our policy based on these comments.

Comment: One commenter agreed with carrying over a weighted average price, but suggested that the carryover weighting calculation be based on the manufacturer's own NDCs within the given HCPCS code rather than the NDCs for all manufacturers within a given HCPCS code instead of weighting based on all manufacturers NDCs in the HCPCS code. The commenter believes that price changes for the manufacturer's own NDCs in the same HCPCS code will better represent price changes for the manufacturer's missing NDCs.

The commenter also recommended that CMS only use all other manufacturers' NDCs in the carryover weighting calculation as proposed if a manufacturer has not reported any data for any NDCs in the code.

Response: We disagree with these comments. We believe that basing weighting calculations on all of the reported NDCs in the code is the best approach because it permits us to maintain ASP stability without potentially providing manufacturers with an incentive not to report their ASP data. We are concerned that basing the carryover weighting calculation solely on the manufacturer's own NDCs in the applicable code could incentivize manufacturer non-reporting, particularly in situations where a manufacturer has multiple NDCs that comprise a large share of sales for a HCPCS code. Indeed, we are aware of situations where a very wide variety of price changes have been reported for a single manufacturer's multisource products for a single code. If we were to calculate the weight for the carryover data using only the NDCs that the manufacturer reported, then a manufacturer might decide to risk sanction and purposefully report only a subset of NDCs for the quarter in order to increase the ASP payment limit for the HCPCS code, and this would result in inaccurate payment limits. For example, if a manufacturer omitted data for a single NDC in a code that had a price decrease and only reported one or two NDCs in that code that had price increases, the carryover weighting calculations could be skewed toward overpayment if only the manufacturer's own price changes were used in the carryover calculation. Again, we reiterate that that Section 1847A of the statute requires manufacturers to report ASP quarterly, and that that section 1847A(d)(5) of the Act provides for significant CMPs in situations when misreporting of ASP data occurs.

Comment: Two commenters recommended that CMS expand our proposed regulation text at § 414.904(i) to include more detail such as the 10 percent threshold, a requirement that we make contact with a manufacturer before applying the carryover policy, and that the policy not be applied to products with zero sales or products that are no longer being manufactured.

Response: Based on these comments, we will update the regulation text at § 414.904(i) to state that the carryover policy will apply only if the ASP payment limit change due to missing data is significant. Our threshold for a "significant" change is 10 percent up or down. We do not believe that adding further detail to the regulation text is necessary at this time because the preamble language and the clarifications sufficiently detail our approach.

Comment: In the proposed rule, we specifically requested comments about the applicability of our proposals to single source and multiple source drugs. One commenter agreed with our concerns that despite the potential for civil monetary penalties, single source drug manufacturers still could perceive an incentive not to report ASPs in order to maximize the margin between the ASP payment and the actual price for which providers acquire drugs. The commenter stated that the carryover process, if applied to single source drugs, could provide purchasers with an incentive to buy increased quantities of the product because of the widening gap between their purchase price and Medicare payments. Further, because of the potential for increased sales volume, manufacturers of single source drugs may determine that the gains in volume outweigh the statutory penalties. The commenter recommended applying the carryover policy only to multiple source drugs because the absence of data for one product within a multiple source code could result in payment rate instability from quarter to quarter unrelated to market forces.

Response: We are persuaded by the comment to finalize our proposal with limitation that the carryover policy applies to multiple source drugs only because we agree that including single source drugs in the policy could result in inappropriate ASP payment limits for a HCPCS code and may unintentionally provide an incentive for nonreporting of single source drugs despite the likelihood of CMPs. In contrast, we believe that for multiple source drugs the carryover process can improve payment stability and keep the payment calculation more in line with market forces. Moreover, multiple source drugs present less risk for nonreporting because data from more than one manufacturer is used in pricing calculations and thus, the impact of one manufacturer's missing data is decreased. For these reasons and based on the comment we received, we will limit our carryover policy to multisource drugs. However, we will continue to monitor manufacturers' reporting practices for single source drugs, biologicals, and multiple source drugs.

In summary, we are finalizing our proposal as follows: When a manufacturer's reported data for a multiple source drug product with sales during a quarter is missing, and efforts by us to obtain manufacturer reported ASP data before Medicare ASP payment limits publication deadlines have not been successful, we will use the following process to calculate the payment limit for that drug product's billing code: First, we will determine whether calculating the payment limit without accounting for the missing data would result in a 10 percent or greater change in the ASP payment limit compared to the previous quarter. In that event, we will use (that is, carry forward) the most recent data available for that multiple source drug product(s) (that is, the individual NDCs), adjusted by the weighted average of the change in the manufacturer ASP for the NDCs that were reported during both the most recently available quarter and the current quarter. The previous quarter's sales volumes also will be carried over for the NDCs with missing data. The

carryover process as described above applies, for example, if a manufacturer's entire submission was not received, manufacturer ASP price data for specific multiple source NDCs has not been reported, or when WAC data only has been reported. However, single source drugs and biologicals, and multiple source drug NDCs that have zero sales or that have been permanently discontinued by the manufacturer will not be subject to this process. We are also finalizing § 414.804(i) with minor modifications as described elsewhere in this section.

Our process is intended to more accurately represent prices in the marketplace if manufacturer ASP data for particular drug product(s) is missing. Based on our experience with ASP reporting since 2004, we do not believe that this process will be used frequently.

2. Partial Quarter ASP Data

Section 1847A(c)(4) of the Act states that, "In the case of a drug or biological during an initial period (not to exceed a full calendar quarter) in which data on the prices for sales for the drug or biological is not sufficiently available from the manufacturer to compute an average sales price for the drug or biological, the Secretary may determine the amount payable under this section for the drug or biological based on—(A) the wholesale acquisition cost; or (B) the methodologies in effect under this part on November 1, 2003, to determine payment amounts for drugs or biologicals."

When a new drug product enters the market, the first date of sale rarely coincides with the beginning of a calendar quarter. Therefore, the ASP data for many new drug products falls into partial quarter status during the first quarter of sales. We are taking this opportunity to describe our policy regarding how we use data from the first quarter of sales in the calculation of ASP payment limits.

In accordance with section 1847A(c)(4)(A) of the Act, our policy has been to price new single source drugs and biologicals at WAC for the first quarter (unless the date of first sale is on the first day of the quarter), and to add new NDCs for multisource drugs and product line expansions of single source drugs and biologicals to the ASP calculation for a quarter as soon as these products are reported.

We believe that the approaches for single source drugs, biologicals, and multisource drugs are consistent with the statute, particularly section 1847A(c)(4) of the Act, and we intend to continue this policy.

Although this section of the rule did not contain any proposals, we received several comments about our description of current policy.

Comment: Several commenters asked that CMS clarify how our policy coincides with previously published preamble language from the CY 2005 PFS rule (69 FR 66302) that states that the initial period "start[s] on the date that sales of the drug begin and end[s] at the beginning of the quarter after we receive information from the manufacturer regarding ASP for the first full quarter of sales."

Response: We believe our clarification is consistent with previously published materials referenced by the commenters, and we appreciate the opportunity to better explain our approach. The CY 2011 PFS proposed rule discussion pertains to our determination of the ASP-based payment limits under section 1847A of the Act using data from the drug's first quarter of sales—in other words, how we calculate payment once we have received ASP data from the manufacturer for a drug. These payment limits become effective two quarters after the drug's first quarter of sales. In contrast, our preamble discussion in the CY2005 PFS rule pertained to payment under section 1847A of the Act in quarters before sufficient ASP data that is needed to calculate payment limits has been reported to CMS—that is, the CY2005 preamble discusses payment for drugs that are administered on dates of service during their first or second quarter of sales.

The ASP reporting and publishing time table has a two quarter lag, so payment limits calculated using data reported from the first quarter of sales become effective two quarters later. By way of example only, a manufacturer's prices for a new single source drug first sold on January 10 would be reflected in the ASP data that a manufacturer reports to CMS no later than April 30, and that data would be considered partial quarter data because sales began after the first day of the quarter. If CMS determines that the drug should be added to the national price files (that is, the drug is not priced by a contractor/MAC), payment limits using the data from January 10 to March 31 would then be calculated and become effective for the first quarter of sales from July 1 to September 30 of that year. In this example, the first full quarter of sales of the new drug would take place between April 1 and June 30. ASP data from the new drug's first full quarter of sales would be reported to CMS no later than July 30, and payment limits calculated using this data would become effective for the period October 1 to December 31. Our approach is consistent with the initial period for ASP based payment limit calculations described in the CY 2005 PFS final rule (69 FR 66302), which states that the "time period will start on the date that sales of the drug begin and end at the beginning of the quarter after we receive information from the manufacturer regarding ASP for the first full quarter of sales."

Comment: Commenters also requested that CMS clarify whether we use 100 percent or 106 percent of WAC to set payment limits after new drugs are introduced.

Response: As we mentioned above, our discussion of partial quarter data in the 2011 PFS proposed rule is limited to situations where national payment limit determinations under section 1847A of the Act are being made using reported data from the first quarter of a drug's sales.

The national payment limits for single source drugs that are calculated from partial quarter data and are published in CMS's quarterly ASP price files use 106 percent of WAC. This percentage is consistent with sections 1847A(c)(4)(A) and 1847A(b) of the Act and is also described in Chapter 17 Section 20.1.3 of the Medicare Claims Processing Manual.

Comment: Commenters requested that CMS make regulation text changes to clarify that 106 percent of WAC is applied as a payment limit for the period that starts on the date that sales of the drug begin and ends at the beginning of the quarter after we receive information from the manufacturer regarding ASP for the first full quarter of sales.

Response: Our policy is consistent with existing regulation text language at § 414.904, the manual, and preamble language. Therefore, we are not making any regulation text changes.

Comment: One commenter asked that CMS clarify what "product line expansions of single source drugs" means.

Response: For the purpose of the discussion of partial quarter ASP data above, the term "line expansion" refers to an additional package size or sizes of a single source drug or biological; by way of example only, a new larger vial size of a new antibiotic that is introduced for sale nine months after the drug's initial sales begin would represent a line expansion. Sales data for such new, additional NDCs is incorporated into the weighted ASP payment limit calculation for single source drugs beginning with the first quarter of sales that is reported to CMS. In other words, data for NDCs added to

a single source drug code that is already priced using the weighted average calculations is not considered partial quarter data.

Comment: CMS received several comments that request other changes to the regulations in connection with the first quarter of sales. These comments included recommendations that CMS—

- Develop regulation text changes that describes an apparent expansion of the initial period described in section 1847A(c)(4)(A) of the Act;
- Define when invoice pricing may be used if payments are made under section 1847A;
- Discuss the determination of payment amounts made under section 1847A for dates of service during the first or second quarter of a drug's sales;
- Add additional information requirements to ASP reporting templates used by manufacturers; and
- Clarify how payments are calculated when a drug leaves the market.

Response: As noted previously, our discussion of partial quarter data is limited to and pertains to the use of less than a full quarter's worth of data to calculate an ASP-based payment limit, not to other issues such as the payment limit for drugs administered during the first quarter of sales, or reporting procedures. Thus, these comments are outside the scope of this rule.

We will continue to apply the policy as previously clarified in this section and described in the proposed rule.

3. Determining the Payment Amount for Drugs and Biologicals Which Include Intentional Overfill

The methodology for developing Medicare drug payment allowances based on the manufacturers' submitted ASP data is specified in 42 CFR part 414, subpart K. We initially established this regulatory text in the CY 2005 PFS final rule with comment period (69 FR 66424). We further described the formula used to calculate the payment amount for each HCPCS billing code in the CY 2006 PFS proposed rule (70 FR 45844) and final rule with comment period (70 FR 70217). With enactment of the Medicare, Medicaid and SCHIP Extension Act (MMSEA) (Pub. L. 110–173), the formula we use changed beginning April 1, 2008. Section 112(a) of the MMSEA amended section 1847A(b) of the Act to require CMS to calculate payment amounts using a specified volume-weighting methodology. In addition, section 112(b) of the MMSEA sets forth a special rule for determining the payment amount for certain drugs and biologicals. We addressed these changes in the CY 2009 PFS proposed and final rules (73 FR 38520 and 69571, respectively).

For each billing code, we calculate a volume weighted, ASP based payment amount using the ASP data submitted by manufacturers. Manufacturers submit ASP data to CMS at the 11-digit National Drug Code (NDC) level, including the number of units of the 11-digit NDC sold and the manufacturer's ASP for those units. We determine the number of billing units in an NDC based on the amount of drug in the package. For example: A manufacturer sells a box of 4 vials of a drug. Each vial contains 20 milligrams (mg); the billing code is per 10 MG. The number of billing units in this NDC for this billing code is (4 vials $\times$ 20mg)/10mg = 8 billable units.

Beginning April 1, 2008, we use a two step formula to calculate the payment amount for each billing code. We sum the product of the manufacturer's ASP and the number of units of the 11 digit NDC sold for each NDC assigned to the billing and payment code, and then divide this total by the sum of the product of the number of units of the 11 digit NDC sold and the number of billing units in that NDC for each NDC assigned to the billing and payment code. This process is discussed further in the CY2009 Physician Fee Schedule rule at 73 FR 69752.

The provisions in section 112 of the MMSEA were self implementing for services on and after April 1, 2008. Because of the limited time between enactment and the implementation date, it was not feasible to undertake and complete rulemaking on this issue prior to implementing the required changes. As a result of the legislation, we revised § 414.904 to codify the changes to the determination of payment amounts consistent with section 112 of the MMSEA.

Since that time, we have become aware of situations where manufacturers, by design, include a small amount of "intentional overfill" in containers of drugs. We understand that this "intentional overfill" is intended to compensate for loss of product when a dose is prepared and administered properly. For instance, a hypothetical drug is intended to be delivered at a 0.5 mg dose that must be drawn into a syringe from a vial labeled for single use only. The vial is labeled to contain 0.5 mg of product but actually contains 1.5mg of product. The additional 1.0 mg of product is included, by design, and is intended to be available to the provider so as to ensure a full 0.5 mg dose is administered to the patient.

Our ASP payment calculations are based on data reported to us by manufacturers. This data includes the "volume per item". In our "Appendix A—Average Sales Price Reporting Data Elements" available on our Web site at *http://www.cms.gov/McrPartBDrugAvgSalesPrice/,* we define "volume per item" as, "The amount in one item (ex., 10 ml in one vial, or 500 tablets in one bottle). Enter "1" for certain forms of drugs (for example, powders and sheets) when "Strength of the Product" indicates the amount of the product per item." In order to accurately calculate Medicare ASP payment limits under section 1847A of the Act, we interpret "the amount in one item" to be the amount of product in the vial or other container as indicated on the FDA approved label.

It has been longstanding Medicare policy that in order to meet the general requirements for coverage under the "incident to" provision, services or supplies should represent an expense incurred by the physician or entity billing for the services or supplies (*See* Medicare Benefit Policy Manual (Publication # 100–02), Chapter 15, Sections 50.3, 60.1.A). Such physicians' services and supplies include drugs and biologicals under section 1861(s)(2)(A) of the Act. In accordance with this policy, providers may only bill for the amount of drug product actually purchased and that the cost of the product must represent an expense to the physician.

We further understand that when a provider purchases a vial or container of product, the provider is purchasing an amount of drug defined by the product packaging or label. Any excess product (that is, overfill) is provided without charge to the provider. In accordance with our current policy as explained above, providers may not bill Medicare for overfill harvested from single use containers, including overfill amounts pooled from more than one container, because that overfill does not represent a cost to the provider. Claims for drugs and biologicals that do not represent a cost to the provider are not reimbursable, and providers who submit such claims may be subject to scrutiny and follow up action by CMS, its contractors, and OIG.

Because such overfill is currently not included in the calculation of payment limits under the methodology in section 1847A of the Act and does not represent an incurred cost to a provider, we proposed to update our regulations at 42 CFR part 414 Subpart K to clearly state that Medicare ASP payment limits are based on the amount of product in the vial or container as reflected on the FDA-approved label. We also proposed to update our regulations at Subpart J to clearly state that payment for amounts

of free product, or product in excess of the amount reflected on the FDA-approved label, will not be made under Medicare.

We received several comments supporting our proposal. Several other comments raised concerns about whether our proposal attempts to regulate or even prohibit the use of overfill. Our policy is not intended to limit the use of intentional overfill during the care of beneficiaries or in medical practice; such measures are beyond CMS' authority. Rather, we are clarifying our ASP pricing and payment policies, describing how we utilize manufacturer reported data, and updating our regulations at 42 CFR part 414. The following is a summary of the comments we received and our responses.

Comments: Several commenters supported our proposal, agreeing that a provider does not incur a cost in obtaining the intentional overfill amount. One commenter noted that statute, regulations, and policies effective since CY 1965 regarding the "incident to" provision have required the provider to incur costs in order to receive Medicare payment. Another commenter supported the proposal because it protects the Medicare Trust Fund and the taxpayer, reduces fraud and abuse, and ensures quality patient care by reducing the influence of profit rather than clinical efficacy on medical decisions for the patient. One commenter agreed with the CMS proposal because of the variations in the amount of overfill that could be found in each vial or packaging. This commenter also noted previous OIG reports that expressly excluded intentional overfill in the calculation of acquisition costs because of variability in the amount of and different practices for the use of overfill. Some commenters, in support of the proposal, mentioned ongoing litigation which alleges that some manufacturers provided kickbacks to providers by marketing and furnishing intentional overfill and encouraging providers to bill federal health care programs to increase the providers' profits and sales volumes for the drugs.

Response: We appreciate the comments in support of our proposal. We believe these comments help to illustrate the variety of perspectives regarding overfill.

Comments: Several commenters expressed concern that our proposed regulation changes are, in effect, a restriction on providers' ability to use intentional overfill. Comments emphasized that intentional overfill is provided to account for loss of drug during dosage preparation, and some comments noted that the FDA allows for intentional overfill to be included in the packaging to account for this loss of drug. Similarly, comments noted that current United States Pharmacopeia (USP) 797 standards for compounding sterile injections also allow for the use of overfill during drug preparation. Some comments suggested we work closely with the FDA and the USP to address the issue of intentional overfill in the manufacturing and packaging of the drugs. One comment suggested that we require providers to comply with USP 797 standards regarding the use of overfill. Commenters asserted that any regulation of intentional overfill should be imposed upon manufacturers rather than providers.

Response: We disagree with the commenters that believe our proposal would restrict the clinical use of intentional overfill. The comments that suggest that we impose requirements or implement standards regarding the amount or clinical use of overfill are beyond the scope of this rulemaking. In response to the commenters' concerns, however, we believe it is necessary to reiterate the distinction between the amount of drug product that is contained in a vial or other packaging for use in the care of a beneficiary and the amount of drug product that manufacturers report to CMS for pricing purposes and used to calculate payment limits under section 1847A of the Act. Our policy discussion is limited to the latter issue. Our policy is not intended to allow, prohibit, or otherwise regulate the amount of overfill that manufacturers include in a container, or how that overfill is used in clinical practice. Indeed, we do not have the authority to regulate the manufacturing of drugs or biologicals or the practice of medicine. The appropriate use of drug products, including sterile products, depends on numerous factors, including, but not limited to: approved labeling, State law, the setting in which the product is prepared and used, how the product is stored, sterility, and chemical stability. For many drugs, overfill quantities are small and are not completely used. In many settings, harvesting small amounts of overfill, when appropriate, can make up for doses that are lost or are discarded because of an error, short stability, or accidental contamination, for example. Our proposal does not pertain to, or apply to, any of these issues. The intent of this proposal is merely to clarify that the Medicare ASP payment limit is based on the amount of drug conspicuously indicated on the FDA label, and that no payment will be made for any intentional overfill included as free drug for the proper preparation of a single therapeutic dose.

Comments: Some commenters estimated significant increases in Medicare costs if the proposal is finalized. These estimates were based on concerns that our policy would prohibit the use of overfill. These commenters emphasized that providers would be required to use additional vials and drugs if the use of intentional overfill were prohibited. They stated that the proposal will not reduce Medicare costs, but will transfer the costs associated with intentional overfill from the pharmaceutical companies to the providers and, in turn, to the Medicare and its beneficiaries. Several commenters stated that providers minimize wastage and cost through the use of intentional overfill and efforts to schedule patients efficiently.

Response: Because we disagree that our proposal limits utilization of overfill, we accordingly disagree that our proposal will increase costs. We are not prohibiting the use of overfill, thus we do not anticipate providers or other entities buying additional amounts of drug as a result of this policy. Further, we do not believe that our policy will require significant changes in procedures or practices for most providers and suppliers because most providers and suppliers use overfill in clinically appropriate circumstances, and we therefore do not believe that our policy will cause them to incur significant costs on that basis.

However, as we stated in our proposal, we believe it is inappropriate for a provider or supplier to bill Medicare for any amount of intentional overfill beyond the labeled amount in a single-use vial or package, and we agree with the commenters that such inappropriate billing does not occur routinely.

Comments: Several commenters expressed concern that the proposed intentional overfill policy may cause lower reimbursement rates for overhead costs relating to procurement, preparation, and dispensing of affected drugs. Several comments expressed concern about the burden of tracking doses that are prepared as a service for providers who bill under Medicare Part B. Some commenters stated that the intentional overfill proposal is impossible to apply to multi-dose vials or packages, and will cause unnecessary administrative burden to maintain accurate inventory and medical records regarding overfill and drug wastage from single-dose vials.

Response: We disagree with these comments. As we stated previously, our policy on intentional overfill pertains to payment under section 1847A of the Act—it is not an attempt to mandate or direct how the contents of a drug product package are used. Our policy relates to the providers and suppliers who furnish drugs or biologicals under Part B and who bill for such services. We have no authority under section 1847A of the Act to dictate how entities that prepare and sell doses of drugs for use in various clinical settings set their rates. We would expect that providers and suppliers who purchase prepared doses from these entities have incurred a cost for them. For these reasons, we do not anticipate that our policy will affect entities that do not bill separately for Part B drugs, such as entities that prepare doses of sterile products for sale to providers or suppliers who bill Medicare for the drug.

This proposal also is not intended to affect the current cost or waste-saving batch processes in place when using multiple-dose vials or packages. Instead, the intent of this proposal is to clarify that the ASP payment limit is currently based on the amount of drug indicated on the FDA label, and that no payment will be made for any intentional overfill.

We expect that providers will continue to maintain accurate medical records for all beneficiaries as well as accurate inventory records of all drugs that were actually purchased and appropriately billed to Medicare.

Comment: One commenter noted an increased burden upon CMS to examine the beneficiaries' records to verify that no intentional overfill was billed to Medicare.

Response: For the reasons stated above, we do not believe that our proposal will significantly affect procedures used in most clinical settings. We therefore do not expect an additional burden for the agency to track and monitor this policy beyond the procedures that are in place right now.

Comment: One commenter noted that the proposal is contrary to our current policy regarding discarded drugs and specifically stated that billing Medicare for discarded drug is only appropriate for single-use vials, and that the provider must make good faith efforts to schedule patients to efficiently deliver the drugs to patients in a clinically appropriate manner, and that any discarded drug amount billed to Medicare must not be used on any other patient.

Response: We disagree with this comment. Although our policy on discarded drugs may appear to be similar to our proposed policy for overfill (in that they both pertain to how providers and suppliers deal with drug product that remains in a package after a dose has been administered), there is a key distinction. Our policy on discarded drugs acknowledges that providers and suppliers acting in good faith to minimize wastage should not be financially burdened when, for clinical reasons, it is not possible or advisable to use the full labeled amount of drug product in a single-use vial—in other words, we permit, in limited circumstances, billing for drugs for which the provider or supplier incurred a cost, but that the provider or supplier did not administer. In contrast, our policy on intentional overfill applies to drug product for which the provider or supplier did not incur a cost, that is, amounts of drug that are beyond the labeled amount. Thus, in addition to complying with the overfill policy, we expect providers to continue to make good faith efforts to efficiently minimize the amount of discarded drug by facilitating clinically appropriate methods of administering the required dose to each beneficiary and is consistent with the discarded drug policy in Chapter 17 Section 40 of the Medicare Claims Processing Manual (*http://www.cms.gov/manuals/downloads/clm104c17.pdf*).

Comments: Several commenters agreed with our position that intentional overfill is considered free product for which the provider did not incur a cost. However, other commenters stated that the purchase of a drug includes not only the amount of drug identified on the FDA label, but also encompasses the entire package including accompanying items such as syringes, diluents, and intentional overfill that is required to assure the drug is prepared and administered properly. One commenter suggested that it is more appropriate to see any excessive overfill as an in-kind discount that reduces the per-unit price of a drug. This commenter believes that manufacturers have factored overfill into the pricing of their products and that providers indirectly pay for overfill regardless of its use. Some commenters also that intentional overfill is within the Discount Exception and Safe Harbor under the Anti-Kickback statute. These commenters believe that CMS should similarly interpret intentional overfill as a discount and require accurate reporting of the price of the item (taking into consideration the discount) by the manufacturer, but not should not require the provider to reduce the amount billed or refrain from billing for the overfill.

Response: We acknowledge that drugs and biologicals are supplied in various containers or kits that include accessories and diluents, as well as a variable amount of intentional overfill to ensure that the single dose is prepared and administered appropriately. Sections 1847A(b)(2) and (b)(5) of the Act require that payment limit calculations be carried out without regard to any diluents or special packaging for the drug. We believe these statutory provisions support our position that overfill is not an in-kind discount. Further, we have authority under section 1847A(c)(3) of the Act to identify price concessions that must be included in the ASP calculation. However, we have a practical reason for declining to consider overfill to be a discount for purposes of the ASP calculation—namely, operational feasibility. The amount of overfill in vials varies from drug to drug and often is not easily or consistently quantifiable because actual fill amounts may also vary slightly due to the manufacturing process. In contrast, manufacturer sales data, ASP calculations, and ASP payment limits use exact quantities of drug that are represented by exact monetary values. Payment limits are currently calculated using the amount of drug that is reported by manufacturers to CMS each quarter. We base our price, in part, on the quantity indicated on the drug package, which does not indicate an overfill amount. The calculation of the Medicare payment limit is based on the reported data from the manufacturer. We do not have access to information that would permit us to account for overfill in the ASP calculation. Further, we are concerned that attempting to account for a variable amount of overfill could result in price instability or inaccuracy.

The application of safe harbor provisions to this proposal is outside the scope of this rule.

Comments: Some commenters suggested the issue of intentional overfill should be addressed in the ASP calculations. One commenter specifically suggested that the ASP calculation methodology be changed to consider intentional overfill when defining the units relevant to the calculation of the Medicare payment limit per billing code.

Response: Manufacturers are currently reporting ASP and sales data based on the labeled amount of the drug product. The intent of this proposal is to clarify that the ASP payment limit is based on the amount of drug clearly identified as the amount on the FDA label and packaging. We do not intend to change the ASP calculation

methodology to include intentional overfill because of the operational difficulty in accurately identifying the amount of overfill.

Comments: Many commenters suggested CMS clarify the applicability of the proposal to specific providers. Other commenters suggested that the proposal be applied and enforced prospectively only in the physician office setting and not in hospitals or other provider settings. Another commenter noted that drugs furnished in the outpatient department are reimbursed based on ASP when separately payable, and requests clarification regarding whether this proposal must be required of hospital outpatient clinics paid under the Hospital Outpatient Prospective Payment System (OPPS). This commenter also requested that CMS clarify whether this proposal applies to acute care hospitals, skilled nursing facilities, dialysis facilities and other providers or suppliers of services under bundled payment methodologies. Another commenter requested the proposal not be applied to dialysis facilities. The commenter stated that intentional overfill is included in their costs reports, that the "incident-to" provision does not apply to dialysis facilities, and that the policy may cause confusion during the transition into the new End Stage Renal Disease payment bundle.

Response: Section 1847A(a)(1) of the Act specifies that the ASP methodology applies to drugs or biologicals described in section 1842(o)(1)(C) of the Act, which indicates that the ASP-based payment limit in 1847A of the Act affects a physician, supplier or any other person that bills for Part B covered drugs that are not paid under a cost or prospective payment system. We did not propose to change the manner in which we calculate ASP-based payment limits to reflect the setting in which the drug was provided, and we believe that not only would such a policy be unduly complicated, but also would likely be beyond our authority under the ASP statute. We note that regardless of the benefit category for a drug or biological, if it is paid under section 1847A of the Act, we calculate the payment limit without regard to overfill—thus, the fact that certain providers or suppliers do not furnish drugs on an "incident to" basis is irrelevant to our policy for the ASP calculation. This rule's scope is limited to the payment of overfill under section 1847A of the Act.

Comment: One comment suggested that we encourage providers to the use intentional overfill and bill Medicare only for the amount administered to the patient, but not the wasted amount. The commenter also suggested that drug billing code increments be reduced for those drugs that are dosed in smaller amounts than what is currently on the billing code. For example, if a patient dose is 710mg but the billing increment is 100mg, then the provider must bill Medicare for 800mg and waste the left over 90mg.

Response: We are continuing to work closely to review all billing codes to assure that such codes describe drugs at the most clinically appropriate dosage descriptors. As stated in the discarded drug policy (Chapter 17 Section 40 of the Medicare Claims Processing Manual; *http://www.cms.gov/manuals/downloads/clm104c17.pdf*), Medicare will continue to make payment for the administered amount of drug plus any appropriately discarded drug that sums to the labeled amount on a single-use vial or package.

Comments: Some commenters disagree that Medicare has a longstanding policy that an expense must be incurred by the provider in order for payment to be made by Medicare. One commenter stated that there is no existing law or regulation that prohibits a provider from billing for intentional overfill or for any free product. This commenter further discussed previous OIG reports that identified providers were using intentional overfill which would alter their costs, and added that CMS did not express any concerns about these overfill utilization practices. Another commenter recommended that CMS determine overfill amounts for all injectable drugs and validate whether excess product pooled from more than one container and billed to Medicare does not represent a cost to the provider.

Response: We believe our preamble adequately describes the longstanding Medicare policy based upon section 1861(s)(2)(A) of the Act. We maintain that services or supplies reimbursed by Medicare under the "incident-to" provision should represent an expense incurred by the physician or entity billing for the drugs, services or supplies. Our policy clarifies that we will not pay for intentional overfill. For reasons described elsewhere in this preamble, we do not intend to track overfill amounts for injectable drugs.

Comments: Some commenters requested that CMS define what is meant by "intentional" overfill since many injectable drugs include a variable amount of overfill to allow the labeled dose to be appropriately prepared and administered to the patient. One comment cited that the USP recommends a 10 percent overfill by volume for liquid medicines, and stated that the example in the proposal describing a 100 percent overfill is inconsistent with USP guidelines.

Response: We described "intentional" overfill in the proposed rule (75 FR 40155) and we agree that the amount of intentional overfill may vary from product to product; however, we are not aware of an absolute limit on the amount of overfill. In summary, the preamble describes intentional overfill as any amount of drug greater than the amount identified on the conspicuous FDA approved label on the outside of the package, and characterizes overfill as excess or free product that does not represent a cost to the provider.

After reviewing the public comments, we are finalizing our proposal to update our regulations at 42 CFR part 414 Subpart J to clearly state that Medicare ASP payment limits are based on the amount of product in the vial or container as reflected on the FDA-approved label, and Subpart K to clearly state that payment for amounts of product in excess of the amount reflected on the FDA-approved label, will not be made under Medicare. We are finalizing the regulations as proposed. These provisions will be effective January 1, 2011.

4. Widely Available Market Price (WAMP)/Average Manufacturer Price (AMP)

Section 1847A(d)(1) of the Act states that "The Inspector General of HHS shall conduct studies, which may include surveys to determine the widely available market prices (WAMP) of drugs and biologicals to which this section applies, as the Inspector General, in consultation with the Secretary, determines to be appropriate." Section 1847A (d)(2) of the Act states, "Based upon such studies and other data for drugs and biologicals, the Inspector General shall compare the ASP under this section for drugs and biologicals with—

- The widely available market price (WAMP) for these drugs and biologicals (if any); and
- The average manufacturer price (AMP) (as determined under section 1927(k) (1) of the Act) for such drugs and biologicals."

Section 1847A(d)(3)(A) of The Act states, "The Secretary may disregard the ASP for a drug or biological that exceeds the WAMP or the AMP for such drug or biological by the applicable threshold percentage (as defined in subparagraph (B))." Section 1847A(d)(3)(C) of the Act states that if the Inspector General (OIG) finds that the ASP for a drug or

biological is found to have exceeded the WAMP or AMP by this threshold percentage, the OIG "shall inform the Secretary (at such times as the Secretary may specify to carry out this subparagraph) and the Secretary shall, effective as of the next quarter, substitute for the amount of payment otherwise determined under this section for such drug or biological, the lesser of—(i) the widely available market price for the drug or biological (if any); or (ii) 103 percent of the average manufacturer price.* * *"

The applicable threshold percentage is specified in section 1847A(d)(3)(B)(i) of the Act as 5 percent for CY 2005. For CY 2006 and subsequent years, section 1847A(d)(3)(B)(ii) of the Act establishes that the applicable threshold percentage is "the percentage applied under this subparagraph subject to such adjustment as the Secretary may specify for the WAMP or the AMP, or both." In the CY 2006 (70 FR 70222), CY 2007 (71 FR 69680), CY 2008 (72 FR 66258), CY 2009 (73 FR 69752), and CY 2010 (74 FR 61904) PFS final rules with comment period, we specified an applicable threshold percentage of 5 percent for both the WAMP and AMP. We based this decision on the fact that data was too limited to support an adjustment to the current applicable threshold percentage.

For CY 2011, we proposed to specify two separate adjustments to the applicable threshold percentages. When making comparisons to the WAMP, we proposed the applicable threshold percentage to remain at 5 percent. The applicable threshold percentage for the AMP is addressed below in this section of the preamble. Although the latest WAMP comparison was published in 2008, the OIG is continuing to perform studies comparing ASP to WAMP. Based on available OIG reports that have been published comparing WAMP to ASP, we do not have sufficient information to determine that the 5 percent threshold percentage is inappropriate. As a result, we believe that continuing the 5 percent applicable threshold percentage for the WAMP is appropriate for CY 2011. Therefore, we proposed to revise § 414.904(d)(3) to include the CY 2011 date.

As we noted in the CY 2010 PFS final rule with comment period (74 FR 61904), we understand that there are complicated operational issues associated with this policy. We continue to proceed cautiously in this area. We remain committed to providing stakeholders, including providers and manufacturers of drugs impacted by potential price substitutions with adequate notice of our intentions regarding such, including the opportunity to provide input with regard to the processes for substituting the WAMP for the ASP.

We solicited comments on our proposal to continue the applicable threshold percentage at 5 percent for the WAMP for 2011.

The following is a summary of the comments we received and our responses:

Comment: Several commenters supported maintaining the threshold at 5 percent. Other commenters commended CMS for the cautious approach toward determining price substitutions based on WAMP to ASP comparisons, and supported the exclusion of WAMP from the price substitution proposal discussed elsewhere in this rule. One comment suggested the AMP threshold be increased to reflect recent changes to the definition of AMP but did not provide a specific percentage. One commenter suggested that OIG also review whether existing discrepancies in the various reporting rules for bundled arrangements and price concessions have impacted the reported pricing for the same products under AMP and ASP.

Response: We appreciate the comments supporting the continuation of the 5 percent threshold. As we noted in the CY 2010 PFS rule (74 FR 61904), we understand there are complex operational issues associated with potential payment substitutions. We will continue to proceed cautiously in this area and provide stakeholders, particularly manufacturers of drugs impacted by potential price substitutions, with adequate notice of our intentions regarding such, include the opportunity to provide input with regard to the processes for substituting the WAMP or the AMP for the ASP. As part of our approach we intend to continue to work closely with the OIG to develop a better understanding of the issues that may be related to certain drugs for which the WAMP and AMP may be lower than the ASP over time.

After reviewing the public comments, we are finalizing our proposal to continue the 5 percent WAMP threshold for CY2011.

5. AMP Threshold and Price Substitutions

As mentioned elsewhere in this final rule with comment period, when making comparisons of ASP to AMP, the applicable threshold percentage for CY 2005 was specified in statute as 5 percent. Section 1847A(d)(3) of the Act allows the Secretary to specify adjustments to this threshold percentage for years subsequent to 2005, and to specify the timing for any price substitution. For CY 2006 (70 FR 70222) CY 2007 (71 FR 69680), CY 2008 (72 FR 66258), CY 2009 (73 FR 69752), and CY 2010 (74 FR 61904), the Secretary made no adjustments to the threshold percentage; it remained at 5 percent.

For CY 2011, we proposed with respect to AMP substitution to apply the applicable percentage subject to certain adjustment such that comparisons of ASP to AMP will only be made when the ASP exceeds the AMP by 5 percent in two consecutive quarters immediately prior to the current pricing quarter, or three of the previous four quarters immediately prior to the current quarter. We further proposed to apply the applicable AMP threshold percentage only for those situations where AMP and ASP comparisons are based on the same set of NDCs for a billing code (that is, "complete" AMP data).

Furthermore, we proposed a price substitution policy to substitute 103 percent of AMP for 106 percent of ASP for both multiple and single source drugs and biologicals as defined respectively at section 1847(A)(c)(6)(C) and (D) of the Act. Specifically, we proposed that this substitution:

- Would occur when the applicable percentage has been satisfied for a number of calendar quarters as discussed elsewhere in this rule (that is, for two consecutive quarters immediately prior to the current pricing quarter, or three of the previous four quarters immediately prior to the current quarter);
- Would permit for a final comparison between the OIG's volume-weighted 103 percent of AMP for a billing code (calculated from the prior quarter's data) and the billing code's volume weighted 106 percent ASP, as calculated by CMS, for the current quarter to avoid a situation in which the Secretary would inadvertently raise the Medicare payment limit through this price substitution policy; and
- That the duration of the price substitution would last for only one quarter.

We also sought comment on other issues related to the comparison between ASP and AMP, such as:

- Any effect of definitional differences between AMP and ASP, particularly in light of the revised definition of AMP per the ACA;
- The impact of any differences in AMP and ASP reporting by manufacturers on price substitution comparisons; and,
- Whether and/or how general differences and similarities between

AMP and manufacturer's ASP would affect comparisons between these two.

Comment: CMS received a number of comments pertaining to its proposals regarding the AMP threshold. Some commenters generally agreed that any proposal should be transparent, cautious, and should account for inter-quarter price fluctuations. Some commenters also supported our proposal to limit the price substitution to those HCPCS codes for which ASP and AMP comparisons are based on the same set of NDCs. One commenter requested that CMS specifically note that the volume used to calculate the volume-weighted AMP is identical to that used in the calculation of the volume-weighted ASP. Other commenters supported maintaining the applicable threshold at 5 percent for CY 2011.

Response: We appreciate the comments regarding our proposed AMP threshold policies. Since the publication of the PFS proposed rule, the preliminary injunction issued by the United States District Court for the District of Columbia in *National Association of Chain Drug Stores et al.* v. *Health and Human Services,* Civil Action No. 1:07-cv-02017 (RCL) is still in effect. Additionally, CMS continues to expect to develop regulations that will implement the provisions of section 2503 of the ACA, which amended the definition of AMP. Moreover, section 202 of the Federal Aviation Administration Air Transportation Modernization and Safety Improvement Act (Pub. L. 111–226), (enacted on August 10, 2010) has further amended section 1927(k) of the Act. Finally, on September 3, 2010, we proposed to withdraw certain provisions of the AMP final rule published on July 17, 2007 (75 FR 54073).

In light of these factors and comments received, we are finalizing our proposal that the AMP applicable threshold be 5 percent for CY 2011. However, we are not finalizing our proposed adjustments to the 5 percent AMP threshold that would specifically apply the applicable percentage such that comparisons of ASP to AMP will only be made when—

- The ASP exceeds the AMP by 5 percent in two consecutive quarters immediately prior to the current pricing quarter, or three of the previous four quarters immediately prior to the current quarter; and
- For those situations where AMP and ASP comparisons are based on the same set of NDCs for a billing code (that is, "complete" AMP data).

We appreciate the submitted comments and will take them into account when we revisit the price substitution and AMP threshold issues in future rulemaking.

Comment: We received a number of comments regarding our price substitution proposed policies. Some commenters supported our proposal that any substitution would last only for a single quarter. The majority of commenters requested that any proposal should not be implemented until after CMS published regulations on the revised definition of AMP. A few commenters also recommended that CMS provide adequate notice to manufacturers prior to making a price substitution. One commenter suggested that additional OIG comparison studies are needed to examine the impact of the new definition of AMP. Several commenters requested clarification on and suggested changes to our proposed regulatory language. Another commenter requested clarification on the timing of price substitutions and suggested that any price substitution policies should not be implemented until the lag time between when the comparison is made and when the substitution would be implemented was decreased. One commenter noted that the OIG studies are not a reliable indicator of predicted savings since the substitution timeframes within the studies differed from that in our proposal. All commenters agreed that any price substitution policy should not be implemented until after the preliminary injunction is vacated.

Moreover, several commenters provided additional information related to the comparison between ASP and AMP, including:

- How ASP and AMP each encompass different sales and rebate data and are calculated based on differing statutory definitions;
- The impact of restated AMP data on comparisons; and
- The effect of price substitutions on physician acquisition of drugs.

Response: We appreciate the comments submitted regarding our price substitution proposal. As discussed above, recent legislative and regulatory changes have further affected this issue.

After careful review and consideration of the comments received, we will not be finalizing our price substitution proposal at this time and thus we will not be finalizing the proposed regulation text at section 414.904(d). Specifically, we are not finalizing our proposal for a policy to substitute 103 percent of AMP for 106 percent of ASP for both multiple and single source drugs and biologicals as defined respectively at section 1847(A)(c)(6)(C) and (D) of the Act. This proposal specifically would have—

- Occurred when the applicable percentage had been satisfied for a number of calendar quarters as discussed elsewhere in this rule;
- Permitted for a final comparison between the OIG's volume-weighted 103 percent of AMP for a billing code (calculated from the prior quarter's data) and the billing code's volume weighted 106 percent ASP, as calculated by CMS, for the current quarter to avoid a situation in which the Secretary would inadvertently raise the Medicare payment limit through this price substitution policy; and
- Had the duration of the price substitution lasting for only one quarter.

We are finalizing the portion of our proposal that sets the AMP threshold at 5 percent CY2011 and have revised the regulations text accordingly. We remain committed to proceeding cautiously as we continue to evaluate the impact of any future policy developments in this area.

6. Out of Scope Comments

We received comments pertaining to: (1) Part B payment for insulin; (2) bona fide service fees; (3) price concessions and bundled arrangements in the calculation of manufacturer ASP data; (4) updating supplying and dispensing fees for Part B drugs; (5) developing standards for manufacturers to not submit related ASP data; (6) low reimbursement in a HCPCS-based claims systems for pharmacies; (7) claims processing, claims rejection, and payment delays in Medicare Part B as compared to Part D; and (8) publishing reimbursement rates for radiopharmaceuticals on contractor Web sites. These comments are outside the scope of this rule, and therefore are not addressed in this final rule with comment period.

B. Ambulance Fee Schedule Issue: Policy for Reporting Units When Billing for Ambulance Fractional Mileage

Under the ambulance fee schedule, the Medicare program pays for transportation services for Medicare beneficiaries when other means of transportation are contraindicated and all other applicable medical necessity requirements are met. Ambulance services are classified into different levels of ground (including water) and air ambulance services based on the medically necessary treatment provided during transport. These services include the following levels of service:

- For Ground—

++ Basic Life Support (BLS) (emergency and nonemergency).

++ Advanced Life Support, Level 1 (ALS1) (emergency and nonemergency).

++ Advanced Life Support, Level 2 (ALS2).
++ Specialty Care Transport (SCT).
++ Paramedic ALS Intercept (PI).
• For Air—
++ Fixed Wing Air Ambulance (FW).
++ Rotary Wing Air Ambulance (RW).

1. History of Medicare Ambulance Services

a. Statutory Coverage of Ambulance Services

Under sections 1834(l) and 1861(s)(7) of the Act, Medicare Part B (Supplementary Medical Insurance) covers and pays for ambulance services, to the extent prescribed in regulations, when the use of other methods of transportation would be contraindicated by the beneficiary's medical condition. The House Ways and Means Committee and Senate Finance Committee Reports that accompanied the 1965 Social Security Amendments suggest that the Congress intended that—

• The ambulance benefit cover transportation services only if other means of transportation are contraindicated by the beneficiary's medical condition; and

• Only ambulance service to local facilities be covered unless necessary services are not available locally, in which case, transportation to the nearest facility furnishing those services is covered (H.R. Rep. No. 213, 89th Cong., 1st Sess. 37 and Rep. No. 404, 89th Cong., 1st Sess. Pt 1, 43 (1965)).

The reports indicate that transportation may also be provided from one hospital to another, to the beneficiary's home, or to an extended care facility.

b. Medicare Regulations for Ambulance Services

Our regulations relating to ambulance services are set forth at 42 CFR part 410, subpart B, and 42 CFR part 414, subpart H. Section 410.10(i) lists ambulance services as one of the covered medical and other health services under Medicare Part B. Therefore, ambulance services are subject to basic conditions and limitations set forth at § 410.12 and to specific conditions and limitations as specified in § 410.40 and § 410.41. Part 414, subpart H, describes how payment is made for ambulance services covered by Medicare.

2. Mileage Reporting—Provisions of the CY 2011 Proposed Rule

In the CY 2011 PFS proposed rule (75 FR 40159–40161, issued July 13, 2010), we proposed that, effective for claims with dates of service on and after January 1, 2011, ambulance providers and suppliers would be required to report mileage rounded up to the nearest tenth of a mile on all claims for mileage totaling up to 100 covered miles, as further discussed below. We stated that we would revise the instructions set forth in our Claims Processing Manual to reflect the revised billing procedures. In this section, we describe our proposals in the CY 2011 PFS proposed rule, including the background and current process for reporting ambulance mileage, the proposed fractional mileage billing policy, and our reasons for proposing revisions to the current mileage reporting policy.

a. Background and Current Process for Reporting Ambulance Mileage

Historically, the Medicare FFS claims processing system lacked the capability to accept and process fractional unit amounts reported in any claim format. Therefore, the standard for reporting units for ambulance mileage was to bill in whole number increments. Thus, if the total units of service for ambulance mileage included a fractional amount, providers and suppliers of ambulance services (hereafter referred to collectively as "providers and suppliers") were instructed to round the fraction up to the next whole number. Claims billed with fractional units of service were, at that time, returned as unprocessable as CMS' claims processing systems could not accept nor adjudicate fractional unit amounts properly.

Consequently, in Change Request (CR) 1281 (Transmittal AB–00–88, issued on September 18, 2000), we instituted an operational procedure requiring whole-unit reporting of mileage on ambulance claims. Specifically, we instructed providers and suppliers that "If mileage is billed, the miles must be whole numbers. If a trip has a fraction of a mile, round up to the nearest whole number." Our instructions also stated that "1" should be reported for trips totaling less than a single mile. This was an operational instruction based on Medicare's FFS system limitations and capabilities at the time, as our claims processing systems were not capable of accepting and processing claims submitted with fractional units of service. Since then, our claims processing system functionality has evolved to the point where this rounding process is no longer necessary for ambulance transports, as it is now possible for our FFS systems to capture and accurately process fractional units on both paper and electronic forms.

Based on our prior instructions, providers and suppliers continue to report loaded mileage as whole-number units on both paper and electronic claims. Providers and suppliers utilize the appropriate HCPCS code for ambulance mileage to report the number of miles traveled during a Medicare-covered trip rounded up to the nearest whole mile at a minimum of 1 unit for the purpose of determining payment for mileage. Transmittal AB–00–88 established a list of HCPCS codes accepted by Medicare for the purpose of billing mileage. Providers and suppliers were instructed to use these specific HCPCS codes and enter the total number of covered miles in the "units" field of the claim form. For example, if a covered trip from the point of pickup (POP) to the Medicare-approved destination (see § 414.40 for a list of approved destinations) totaled 9.1 miles, the provider would enter the appropriate HCPCS code for covered mileage and a "10" in the units field. Providers and suppliers billing for trips totaling, for example, 0.5 covered miles, would enter "1" in the units field along with the appropriate HCPCS code for mileage.

b. Concerns Regarding the Potential for Inaccuracies in Reporting Units and Associated Considerations

Often an ambulance provider will transport a distance that is either not an exact whole number of miles or less than one whole mile during a covered trip. Based on our current instructions, providers and suppliers billing for ambulance services must round up the total billable mileage to the nearest whole mile for trips that include a fraction of a mile or less than one whole mile. Because of those instructions, a provider or supplier is required to bill as much as 0.9 of a mile more than what was actually traveled.

We have been contacted by suppliers on several occasions with concerns regarding our current instructions for reporting ambulance mileage. Certain suppliers believe that our instructions require them to bill inaccurately. One company in particular stated that they routinely need to bill for trips totaling less than 1 mile. The beneficiaries that are being transported by this company live in the immediate vicinity of the facility to which they are being transported, and therefore, the number of loaded miles for each trip totals approximately one half of a mile. The company was concerned that since Medicare requires that they enter a "1" in the units field of their claims for mileage, they are being overpaid by Medicare for mileage based on the service they actually provided.

However, the company's main concern revolved around the risk of creating an appearance of impropriety. Although our instructions clearly state that providers and suppliers should, as a matter of procedure, round up fractional mileage amounts to the nearest whole mile, some providers and suppliers indicated that they wanted to bill as accurately as possible and that they only wanted to be paid for the service they actually provided. We thoroughly considered these concerns while reevaluating the procedure for reporting units for fractional mileage amounts.

As we stated in the CY 2011 PFS proposed rule (75 FR 40160), our first priority in considering the issues raised by ambulance providers and suppliers was to ascertain the basis for the current mileage reporting instructions. As previously discussed, the original instructions for reporting fractional mileage were published in Transmittal AB–00–88, issued on September 18, 2000. We instructed providers and suppliers to round fractional mileage amounts "up to the nearest whole mile" and to enter "1" for fractional mileage totaling less than one mile. This particular process had also been in place prior to issuance of the transmittal. The reason for the procedure was that our claims processing systems were not capable of accepting and processing claims submitted with fractional units of service—even if the service was commonly measured in fractional amounts, as with ambulance mileage.

In the CY 2011 PFS proposed rule (75 FR 40160), we then explored whether a change in our procedure would be: (1) Appropriate; (2) possible considering our current system capabilities and industry standards of measurement; and (3) applicable to any service other than ambulance mileage. As to the appropriateness of changing the procedure for reporting units of service on provider claims for fractional ambulance mileage, we stated in the proposed rule (75 FR 40160) that we believe that we should make every effort to create and implement policies and processes that create the best opportunity for accuracy in billing. It is not our intention to put providers and suppliers in a position where they are required to bill inaccurately for the service they provide. We continue to strive toward ensuring that providers and suppliers bill and are paid only for services actually provided. In the CY 2011 PFS proposed rule (75 FR 40160), we stated that we believe that changing our current procedure for reporting units of service to require reporting of fractional mileage will help to ensure that providers and suppliers can submit claims that more precisely reflect actual mileage, and are reimbursed more accurately for the services they actually provided. We originally instituted a policy of accepting and processing only whole units because at that time system limitations prevented us from accepting and processing fractional ambulance mileage.

Second, we considered in the CY 2011 PFS proposed rule (75 FR 40160) whether it is currently possible for our claims processing systems to accept and process fractional unit amounts on both paper and electronic claims. Upon reevaluating our system capabilities, we found that technological advancements in Optical Character Recognition (OCR) and electronic claim submission have made it possible for our FFS systems to capture and accurately process fractional units on both paper and electronic claims. We note that our systems currently have the capability to accept fractional units with accuracy up to as much as one thousandth of a unit (that is, to 3 decimal places).

We also considered in the CY 2011 PFS proposed rule (75 FR 40160) whether ambulance providers and suppliers have the capability to measure fractional mileage. This was an important point because if providers and suppliers are not able to measure mileage with any more specificity than the nearest whole number mile, then there would be no need to modify the current procedure for billing fractional mileage. In that case, providers and suppliers would continue to report mileage as whole numbers since they could measure no more accurately than that. We stated in the proposed rule that both analog and digital motor vehicle odometers are designed to measure mileage accurately to within a minimum of a tenth of a mile. While we found that some vehicle odometers measure mileage more accurately than a tenth of a mile, most odometers are accurate to the nearest tenth of a mile. Additionally, aircraft geographic positioning system (GPS) technology provides the means to accurately determine billable mileage to the tenth of a mile.

Third, we considered whether a policy of billing fractional units would be applicable to any other service besides ambulance mileage. The units of service field on both the electronic and paper claim is used to report the quantity of services or supplies provided to Medicare beneficiaries and is used to report a wide range of services and supplies including, but not limited to: number of office visits; anesthesia minutes; quantity of drugs administered; covered miles. Although Medicare currently makes payment based on fractional units for some services (for example, calculation of payment after conversion of anesthesia time reported in minutes to time units), there is currently no requirement that providers bill fractional units on the claim. We stated that if we were to implement a policy of requiring reporting of fractional units for other types of services or supplies, we would first need to evaluate whether it is possible to do so considering industry standards of measurement. As discussed in the CY 2011 PFS proposed rule (75 FR 40160), we found that providers and suppliers of ambulance services have the capability to determine fractional mileage using standard onboard equipment, that is, an odometer, GPS, and/or other similar equipment used to measure distance traveled. We stated that this would enable us to readily implement a fractional unit billing policy for ambulance mileage; whereas applicability to other areas (such as anesthesia, drugs, etc.) would require more analysis to determine whether a fractional unit billing policy is feasible, efficacious, and cost effective. Additionally, this issue was first raised by ambulance suppliers who were concerned about overbilling and being overpaid by Medicare. Therefore, we stated in the proposed rule (75 FR 40160) that we believe it is most reasonable to first address the area where concerns have been raised (that is, ambulance mileage) and consider applicability of this procedure to other types of services and items in the future.

Finally, and perhaps most importantly, we considered that our claims processing system should be configured to process claims as accurately as possible so as to provide for more accurate payments and to safeguard Medicare dollars. As previously discussed, we found that ambulance providers and suppliers currently have the capability to measure mileage accurately to within a minimum of a tenth of a mile using devices (for example, odometers, and GPS technology, etc.) already equipped onboard their vehicles. We stated in the CY 2011 PFS proposed rule (75 FR 40160) that we believe that requiring ambulance providers and suppliers to round (and report) fractional ambulance mileage up to the next tenth of a mile strikes a proper balance between ensuring that the claims processing system adjudicates a claim as accurately as the system will permit without unduly burdening the ambulance community.

Based on all of the considerations noted previously, we proposed that our claims processing instructions for submission of claims for ambulance mileage should be revised to reflect the current functionality of our claims processing systems so as to maximize the accuracy of claims payment, as further discussed in this section (75 FR 40160).

c. Billing of Fractional Units for Mileage

It is both reasonable and prudent that, in order to ensure accuracy of payment, we facilitate and allow submission of the most accurate information on all Medicare ambulance claims. Furthermore, since our claims processing systems are currently capable of accepting and processing fractional units of service, we believe that ambulance mileage should be billed to and paid by Medicare in fractional amounts to enhance payment accuracy. Based on all the considerations discussed previously, in the CY 2011 PFS proposed rule (75 FR 40161), we proposed to require that claims for mileage submitted by ambulance providers and suppliers for an ambulance transport (ground and air) be billed in fractional units, by rounding up to the nearest tenth of a mile (with the exception discussed below). As previously discussed, we believe that requiring ambulance providers and suppliers to round (and report) fractional mileage up to the next tenth of a mile would allow us to provide for more accurate claims payment without unduly burdening the ambulance community.

Therefore, in the CY 2011 PFS proposed rule (75 FR 40161), we proposed that, effective for claims with dates of service on and after January 1, 2011, ambulance providers and suppliers would be required to report mileage rounded up to the nearest tenth of a mile for all claims for mileage totaling up to 100 covered miles. Providers and suppliers would submit fractional mileage using a decimal in the appropriate place (for example, 99.9). Since standard vehicle mileage (analog, digital, and GPS) is or can be calculated accurately to the nearest tenth of a mile, we proposed that the mileage billed to Medicare by ambulance providers and suppliers be reported by rounding up to the next tenth of a mile.

We also stated in the proposed rule (75 FR 40161) that although the electronic claim formats can accommodate fractional mileage when mileage is equal to or greater than 100 covered miles (for example, 100.0), the paper claim cannot. Because the Form CMS–1500 paper claim currently only supports four characters (including the decimal point) in the units field (Item 24G), we also proposed that mileage equal to or greater than 100 covered miles continue to be reported in whole number miles on both paper and electronic claims. We proposed that providers and suppliers would round up fractional mileage to the next whole number for mileage that exceeds 100 covered miles and report the resulting whole number in the units' field. We stated that we would revise the instructions set forth in our Claims Processing Manual to reflect the revised procedures for submitting and paying claims for fractional ambulance mileage.

3. Analysis of and Responses to Public Comments

We received approximately 131 comments in response to the proposed rule. We received comments from, among others, public and private ambulance companies, national ambulance organizations, local fire and EMS departments as well as other interested parties such as attorneys and consultants. The responses we received pertained primarily to the proposed rule's financial and administrative impact, the impact on patient care, and the overall impact on the ambulance services industry. A summary of the comments and our responses are included below.

a. Basis for Reconsideration of the Ambulance Mileage Reporting Requirements

Comment: A few commenters believed that the concerns discussed in the proposed rule regarding certain suppliers' belief that the current mileage reporting requirement forced them to bill inaccurately, were an attempt by CMS to achieve budgetary savings by using the concerns of a few companies as justification. These commenters stated that CMS should have addressed the suppliers' concerns by educating providers and suppliers about its current policy of rounding up to the next whole mile so that they would be aware that this billing practice is appropriate, and suggested that CMS include the current whole mile billing policy in the regulations to further reinforce this, rather than implement the new fractional mileage policy. They stated that any change to the ambulance mileage reporting requirement would be unreasonable and unfounded. The commenters believed that if accuracy was a priority, then CMS should have implemented the fractional mileage billing policy in Transmittal AB–00–88, issued September 18, 2000.

Response: While the impetus for reconsidering our policy on ambulance mileage billing was the concerns raised by ambulance suppliers wishing to bill accurately, our basis for moving forward with the proposed policy was that the conditions that dictated the original mileage billing policy have now changed. As we stated in the proposed rule (75 FR 40160), technological advancements in our system capabilities enabled us to reconsider our policy for reporting ambulance mileage. We were originally not capable of receiving or processing fractional unit amounts on electronic or paper claims, and thus, initially, it was necessary to implement a policy that required providers and suppliers to round mileage up to the nearest whole mile—even though that amount exceeded the miles actually traveled. As discussed in the CY 2011 PFS proposed rule (75 FR 40159), under the current policy, the result could be overpayment for mileage of up to 0.9 of a mile.

Therefore, this change to our policy regarding ambulance mileage billing represents a reasonable and appropriate change to improve payment accuracy. The fact that we did not implement such a policy in the Transmittal cited by commenters does not negate the fact that the change is both needed and appropriate. Again, the original policy for rounding mileage up to the nearest whole number mile was based on the fact that we could not capture and process fractional mileage on a Medicare claim. To ignore the current systems' capability to more accurately process claims than what was possible 10 years ago would unnecessarily perpetuate a less accurate method of processing claims and would result in less accurate payments than is possible with current system capabilities.

For the reasons discussed previously and in the CY 2011 PFS proposed rule, we continue to believe that it is reasonable and appropriate to revise our claims processing instructions as discussed in the proposed rule to require that ambulance mileage be reported in fractional amounts by rounding up to the next tenth of a mile.

b. Appropriateness of Fractional Mileage Reporting Policy

As we discussed in the CY 2011 PFS proposed rule (75 FR 40160), we believe that reporting of and payment based on fractional ambulance mileage is appropriate because it permits ambulance providers and suppliers to submit claims that more precisely reflect actual mileage and to be reimbursed more accurately for the services they provide. Although many

commenters agreed that billing and payment accuracy are important, commenters cited various concerns regarding the appropriateness of the policy.

(1) Statutory Compliance and Financial Impact of Fractional Mileage Policy

Comment: Many commenters believed that the fractional mileage reporting policy does not adhere to the "budget neutrality principles" set forth in 42 U.S.C. 1395m(l)(3)(B). These commenters interpreted 42 U.S.C.1395m(l)(3)(B) as requiring that CMS pay the same amount for ambulance services after implementation of the fee schedule as it did prior to the fee schedule with an inflation adjustment, and stated that in order to comply with this statute, the fractional mileage policy must be implemented in a manner such that any savings generated by this policy are reinvested in the ambulance fee schedule.

Furthermore, commenters asked that CMS comply with the "requirement and commitment made during negotiated rulemaking to ensure that no money is taken out of the system." Commenters cited to the February 27, 2002 final rule implementing the ambulance fee schedule, in which we stated that we would monitor payment data and make adjustments to the conversion factor (CF) if the actual experience under the fee schedule is significantly different from the assumptions used to establish the original CF. (67 FR 9102 and 9102). Several commenters stated that the fractional mileage policy alters the fee schedule and therefore requires reconsideration of the conversion factor (CF) used to set the ambulance fee schedule payment amounts so that no money is removed from the system. Some commenters believed that the policy will have a greater effect on ground ambulance services and recommended a greater proportional increase to the CF for ground ambulance transports versus air ambulance rates.

Response: Section 1834(l)(3)(B) of the Act (42 U.S.C. 1395m(l)(3)(B)) does not require that we pay the same aggregate amount for ambulance services after implementation of the fee schedule as we did before implementation of the ambulance fee schedule, or that we ensure that any savings generated by the fractional mileage policy be put back into the ambulance fee schedule. Rather, this statutory section sets forth the ambulance inflation factor to be used to update the ambulance fee schedule rates each year. Section 1834(l)(3)(B) of the Act requires that we set the ambulance fee schedule rates each year at the same level as the previous year increased by the percentage increase in the CPI–U (U.S. city average) for the 12-month period ending in June of the previous year (as discussed in section VI.P. of this final rule with comment period, effective January 1, 2011, the annual update to the fee schedule rates is subject to a productivity adjustment). We have interpreted this provision at § 414.610(f) as requiring that the CF, the air ambulance rates and the mileage rates be updated annually by the ambulance inflation factor set forth in the statute. The fractional mileage billing policy does not alter the payment rates set under the ambulance fee schedule; rather, it is a change to our operational instructions for reporting ambulance mileage intended to improve billing and payment accuracy. After implementation of the fractional mileage billing policy, we will continue to update the rates each year as required by section 1834(l)(3)(B) of the Act, and thus we believe this policy is consistent with section 1834(l)(3)(B) of the Act. Furthermore, we note that while section 1834(l)(3)(A) of the Act required the Secretary to ensure that the aggregate amount of payments made for ambulance services during 2000 (originally expected to be the first year of the ambulance fee schedule) did not exceed the aggregate amount of payments that would have been made for such services during such year absent the fee schedule, it did not set forth a budget neutrality requirement for subsequent years.

While some commenters stated that the fractional mileage billing policy alters the fee schedule and therefore requires reconsideration of the conversion factor (CF) used to set the ambulance fee schedule payment amounts so that no money is removed from the system (citing to the February 27, 2002 final rule implementing the ambulance fee schedule), we believe that commenters have misunderstood our statements in the February 27, 2002 final rule. In the February 27, 2002 final rule, we stated that we would monitor payment data and make adjustments to the conversion factor (CF) if the actual experience under the fee schedule is significantly different from the assumptions used to establish the original CF as discussed in the February 27, 2002 final rule (67 FR 9102 and 9103).

As stated previously, the fractional ambulance mileage billing policy does not change the rates under the ambulance fee schedule. Rather, it is a change to our operational procedures for reporting ambulance mileage intended to improve billing and payment accuracy. We do not believe that it is appropriate to adjust the CF or air ambulance rates as a result of this policy, as further discussed below.

In the February 27, 2002 final rule implementing the ambulance fee schedule (67 FR 9102–9103, 9127, 9134), we stated that we would monitor the payment data and adjust the CF and the air ambulance rates if actual experience under the fee schedule proved to be significantly different from the assumptions used to determine the initial CF and air ambulance rates (for example, the relative volumes of the different levels of service (service mix) and the extent to which providers and suppliers charge below the fee schedule (low billers)). Thus, in the February 27, 2002 final rule, we finalized § 414.610(g), which at that time stated, in part, that the "Secretary will annually review rates and will adjust the CF and air ambulance rates if actual experience under the fee schedule is significantly different from the assumptions used to determine the initial CF and air ambulance rates."

In each of the 4 years following implementation of the ambulance fee schedule, we reevaluated the effects of the relative volume of different levels of ambulance service (service mix) and the extent to which ambulance providers and suppliers bill less than the ambulance fee schedule (low billers) to determine whether the assumptions used to set the CF were accurate when compared to actual billing data. We found only insignificant differences in the observed data versus our assumptions. The differences observed in any single year were not significant enough to warrant a change to the CF in any of the years we monitored. (*See* 71 FR 69624, 69717, and 69718). Consequently, in the December 1, 2006 final rule (71 FR 69717–69718), we discontinued our annual review of the original CF assumptions and the air ambulance rates, and revised § 410.610(g) to state, in part, that the "Secretary monitors payment and billing data on an ongoing basis and adjusts the CF and air ambulance rates *as appropriate* to reflect actual practices under the fee schedule."

We do not believe that adjustments to the CF or the air ambulance rates are appropriate as a result of the fractional mileage billing policy. First, as discussed previously, the fractional mileage billing policy has no effect on the fee schedule rates; rather, it is an operational procedure for reporting ambulance mileage. Second, the purpose of this policy is to improve billing and payment accuracy for ambulance mileage. As discussed

previously, under the current whole mile reporting policy, ambulance providers and suppliers are billing as much as 0.9 of a mile more than what is actually traveled. Commenters suggest that adjustments to the CF and the air ambulance rates are necessary to make up for the fact that ambulance providers and suppliers will be permitted to round up only to the nearest tenth of a mile rather than the nearest whole mile, resulting in lower mileage reimbursement on some claims compared to under the current policy. The purpose of the fractional mileage billing policy is to provide for more accurate billing and payment for ambulance transports, which we do not believe can be achieved if we were to make the adjustments suggested by commenters. Furthermore, we note that the current regulation at § 410.610(g) requires us to monitor billing and payment data and adjust the CF and air ambulance rates "as appropriate" to reflect actual practices under the fee schedule. This regulation does not require that we adjust the fee schedule rates prospectively each time we adopt operational procedures that differ from those in place prior to implementation of the fee schedule.

Furthermore, we believe that the policy does not have a significant bearing on the original CF assumptions that were discussed in the February 27, 2002 final rule (67 FR 9102–03, 9115–16), and for this reason too, we do not believe that adjustments to the CF and air ambulance rates would be appropriate. Having reevaluated the CF during the 4 years after implementation of the ambulance fee schedule and finding no significant differences in the observed data versus our original assumptions, we believe that we will continue to find insignificant differences, if any at all, after implementation of the fractional mileage billing policy, such that changing the CF or air ambulance rates would be unnecessary.

However, as required by § 410.610(g), we will continue to monitor the billing and payment data on an ongoing basis, and will consider adjusting the CF and air ambulance rates in the future if (and to the extent) we determine appropriate to reflect actual experience under the fee schedule after the policy is implemented.

Comment: The commenters believed that the proposed rule would lower ambulance reimbursement that is already too low and noted that the fee schedule rates have not been increased in the last 2 years. Most of the same commenters cited a May 2007 Government Accountability Office (GAO) report detailing GAO's research findings which indicated that Medicare's reimbursement for ambulance services averages between 6 percent and 17 percent less than the cost to ambulance companies for the services they provide.

Response: We reiterate that the fractional ambulance mileage billing policy does not change the ambulance fee schedule rates. The base payment rate and mileage reimbursement rate will not be changed by the fractional mileage billing policy. The fractional mileage billing policy is strictly an effort to improve billing and payment accuracy, and as such, we believe that it is both reasonable and appropriate to implement this policy.

In response to the comment that the fee schedule rates have not been increased in the past 2 years, we note that the ambulance inflation factor for CY 2008 was 2.7 percent and in CY 2009 it was increased to 5 percent, and thus the CF, air ambulance rates and mileage rates were increased by 2.3 percent over the previous calendar year in accordance with the section 1834(l)(3)(B) of the Act. However, we recognize that the fee schedule rates were not increased in CY 2010 because the CPI–U for the 12 month period ending with June 2009 was negative, resulting in no increase to the rates under the statutory formula set forth in section 1834(l)(3)(B) of the Act.

The 2007 GAO report cited by commenters estimated that between 39 percent and 56 percent of ambulance providers and suppliers will realize a profit under the ambulance fee schedule after expiration of the temporary payment provisions in the MMA. The GAO also noted in the same report that providers' expected Medicare margins will vary greatly depending on their ability to keep their operating cost low, and because of that variance, they were not able to conclude with any certainty whether providers and suppliers would see a decrease, increase, or no change in their profitability as it relates to the Medicare reimbursement rates after expiration of the temporary payment provisions in the MMA.

We seriously considered the findings in the May 2007 GAO report and, although we were not bound to the GAO findings, we agreed with their recommendation that CMS monitor utilization of ambulance transports to ensure that Medicare payments are adequate to provide for beneficiary access to ambulance services, particularly in "super rural" areas. We note that in the years since the May 2007 GAO report, certain temporary payment provisions originally set forth in § 414 of the MMA have been increased and extended in subsequent legislation to address these issues. Specifically, § 414(d) of the MMA added section 1834(l)(13) of the Act which set forth payment increases of 1 percent and 2 percent for urban and rural ground transports, respectively. Section 146(a) of the MIPPA modified section 1834(l)(13) of the Act to increase these percentages to 2 percent and 3 percent for urban and rural transports, respectively, and to extend these increases through December 31, 2009. Subsequently, sections 3105(a) and 10311(a) of the ACA extended these increases through December 31, 2010. Furthermore, section 414(c) of the MMA added section 1834(l)(12) of the Act which provided a "super rural" bonus for certain ground transports that originate in qualified rural areas effective through December 31, 2009. Sections 3105(c) and 10311(c) of the ACA extended this super rural bonus through December 31, 2010. Finally, we note that section 146(b)(1) of the MIPPA, as amended by sections 3105(b) and 10311(b) of the ACA, provides that any area that was designated as a rural area for purposes of making payment for air ambulance services furnished on December 31, 2006, shall continue to be treated as a rural area for purposes of making payment for air ambulance services furnished during the period July 1, 2008 through December 31, 2010. We have implemented these payment add-ons in § 414.610(c)(1), (c)(5)(ii) and (h), respectively.

Comment: Several commenters stated that cutting already low reimbursement rates for ambulance providers and suppliers would result in cutbacks that would make it difficult to stay in business and would, therefore, have a negative impact on patient care. Many commenters also noted that smaller companies would be impacted the most by lowered reimbursement rates, stating that small companies need the extra revenue to stay in business. Some commenters suggested that mileage charges are the only means ambulance providers and suppliers have of recovering increasing, variable costs for ancillaries—such as oxygen supplies, disposable supplies, etc.—that are not separately payable under the fee schedule. Other commenters believed that reporting mileage more accurately will be too costly and would increase the cost of doing business. Another commenter responded that the payment made for mileage represents payment for the variable cost of transporting patients and that even short trips have a cost associated with them. The same

commenter pointed out that lowering the mileage reimbursement would not adequately reimburse ambulance providers and suppliers for the cost of transporting their patients.

Response: As previously stated, the fractional mileage billing policy is an effort to improve billing and payment accuracy. The policy does not modify the reimbursement rates under the ambulance fee schedule. While we remain cognizant of the need for ambulance providers and suppliers to remain financially solvent, we must also ensure that providers and suppliers bill accurately and that we pay accurately. We believe the payment implications of the fractional mileage billing policy are modest when considering the difference in reimbursement on a claim by claim basis, and should not have a significant impact on the overall financial viability of individual ambulance providers and suppliers or on patient care. We recognize that there is a cost of doing business. However, as discussed previously, we believe that it is both reasonable and appropriate to implement the policy to provide for more accurate billing and payment for ambulance mileage under Medicare. We do not believe that it is appropriate to continue the current whole mileage reporting procedure, which results in less accurate billing and payment, in order to provide extra revenue for providers and suppliers.

Comment: One commenter responded that the lower reimbursement would "trickle down" to other payers. In other words, the commenter believes that other payers would follow CMS' lead by adopting similar mileage reporting requirements, thereby potentially lowering reimbursement from other payers as well.

Response: While other payers may choose to adopt similar requirements for reporting ambulance mileage, we would not have any involvement in that decision. As previously discussed, we believe that it is reasonable and appropriate to implement the fractional mileage billing policy under Medicare to provide for more accurate billing and payment for Medicare ambulance services.

c. Administrative Impact

Comment: Many commenters stated that the fractional mileage policy would be administratively burdensome for medical and billing staff and would distract their medical staff from their first priority which is caring for the patient. The same commenters also suggested that the policy would be particularly burdensome for small ambulance companies. One commenter stated that imposing a requirement to capture fractional mileage would complicate the already overwhelming documentation requirements that they face. Another commenter believed that the fractional mileage billing policy creates undue hardship on an ambulance industry which is already overburdened and underfunded.

Response: We believe that capturing fractional mileage amounts in trip documentation and on claims will not create any undue burden on the ambulance industry. Proper documentation of trip details, including mileage traveled, is already a longstanding Medicare requirement that remains unchanged and, we believe, uncompromised by the requirement to capture the additional digit beyond the decimal point. As we stated in the proposed rule, we believe that implementation of the policy is a reasonable and appropriate measure to ensure that claims are adjudicated and paid as accurately as possible.

Comment: Many commenters responded that the fractional mileage billing policy would make it difficult for ambulance providers and suppliers to comply with State and local laws which prohibit billing fractional mileage. Several commenters cited the City of Los Angeles as an example of a locality requiring that mileage be rounded to a whole number.

Response: We are not aware of any State or local law(s) that regulate how claims must be submitted to Medicare. We did not find any language in the City of Los Angeles or the Los Angeles County ordinances that governs claims submission to other payers, including Medicare. Further, even if there were a State or local law that specified a billing requirement that differed from Medicare's requirement, the Medicare requirement would, nevertheless, be controlling for claims submitted for Medicare payment. We note that the fractional mileage billing policy applies only to claims submitted to Medicare and does not dictate how a provider or supplier reports mileage to other payers. Thus, while we recognize the possibility that the requirements for billing ambulance mileage to State-funded or other payers may differ, we believe that the fractional mileage billing policy is reasonable and appropriate to ensure that claims submitted to Medicare more accurately reflect the service(s) rendered and that our payments to providers and suppliers are as accurate as possible.

Comment: Several commenters stated that, if the fractional mileage billing policy is implemented, the requirements for billing ambulance mileage to Medicare will be different than for other payers, and it would make it difficult for ambulance providers and suppliers to maintain compliance with the differing billing requirements. One commenter stated that since other payers allow whole number reporting of mileage, their ambulance company would be forced to manually change claims in order to submit fractional mileage to Medicare.

Response: We understand that payer requirements may, and often do, vary, and that providers and suppliers may need to comply with different payer billing requirements. Each payer sets its own requirements for billing and payment. We believe that most billing systems are capable of accommodating the reality of varying billing requirements amongst different payers. While additional changes to billing systems or procedures may be necessary in some cases to enable mileage to be reported differently for different payers, as we stated previously, we continue to believe that implementation of the fractional mileage billing policy is reasonable and appropriate to ensure more accurate reporting and payment of ambulance mileage under Medicare.

After considering the comments, for the reasons discussed previously and in the CY 2011 PFS proposed rule, we continue to believe that it is reasonable and appropriate to revise our claims processing instructions to require reporting of and payment based on fractional mileage, as further discussed below.

(2) Technical and Other Considerations

(A) Ability To Measure Fractional Miles

Comment: Many commenters responded that most ambulance companies do not have the ability to measure fractional mileage because their odometer does not show tenths of a mile. These commenters stated that 67 percent of all new ambulances are Ford models which do not have a tenths display on the odometer. One commenter stated that digital odometers, in particular, only show whole miles. Another commenter asked that CMS prove its assertion that most vehicle odometers display tenths of a mile. Yet another commenter suggested that we provide guidance for ambulances that do not display tenths of a mile on the odometer. We also received a response from a commenter who believed that GPS can sometimes be unreliable.

Response: Based on the statement from many commenters that most new ambulances are Ford models, we reviewed owner's manuals for the Ford E250, E350, E450 as well as the F350

and F450 vehicles. Our research revealed that Ford E series and F series vehicle (typically trucks or vans) chassis typically provide the base for the Ford ambulance prep package. We reviewed Ford's gauge specifications for model years 1996 through 2010. In model years prior to 2004, the standard analog odometer reflected tenths of a mile. Model years 2004 and later include standard digital odometers that show fractional miles as well as a separate trip odometer that also displays mileage to the tenth of a mile. Additionally, the ambulance prep package includes an optional onboard trip computer and navigation system.

We also researched other vehicle chassis models that may provide the base for other ambulance prep packages and may currently be in use by some providers or suppliers. We reviewed owner's manuals for the Dodge Ram 3500 and 4500 for model years 2008 and 2009 and we also researched GM/Chevrolet G4500 and 3500 for model years 2009 and 2010. We found that both Dodge and Chevrolet model vehicle gauges include odometers and/or trip odometers that display fractional mileage. Chevrolet models also include a retroactive reset feature on the trip odometer that will calculate the distance traveled since the engine was last started in the event the trip odometer is not reset at the beginning of the trip.

We found through our research that in many cases, trip odometers are mentioned as separate devices from the basic odometer, particularly in newer model cars that utilize both digital gauges. We also found that in some cases, the basic digital odometer does not, in fact, have a tenths display. In those cases, we found that the tenths display appears only on the trip odometer. In the proposed rule, we did not specify the types of odometers that that may be used to measure fractional mileage, and thus we are clarifying in this final rule with comment period that mileage may be measured using a separate trip odometer as well.

In light of our review of Ford vehicle chassis and the assertion that most new ambulances are Ford vehicles as well as our review of the other vehicle chassis models as discussed above, we believe that most ambulance companies have the ability to measure fractional mileage to the tenth of a mile. However, we recognize that there may be some ambulance companies that have a small number of vehicles wherein the gauges are damaged, missing, or otherwise unusable, or that may be using non-standard vehicles that do not have a fractional mileage display on the odometer, trip odometer, GPS navigation, trip computer, or other onboard device that measures distance traveled. We believe that tools used to measure distance traveled (such as GPS navigation equipment) are readily available to the average consumer at a low cost. As such, ambulance providers and suppliers are responsible for ensuring that they have the necessary equipment to measure fractional mileage to the tenth of a mile, and ensuring that onboard vehicle gauges measuring trip mileage are in working order. If they are not able to repair said gauges, they are responsible for ensuring that they have the necessary equipment to measure mileage accurately to the tenth of a mile. Additionally, for those ambulance providers and suppliers who have vehicles that include a separate trip odometer, ambulance providers and suppliers are still responsible for ensuring that trip mileage is measured and reported accurately—even if they fail to reset the trip odometer at the beginning of a trip. For example, if the driver fails to reset the trip odometer at the beginning of the trip, he or she would simply document the mileage at the end of the trip and subtract the mileage for the previous trip from the total which would leave a remaining balance that should correspond to the distance of the current trip.

With regard to the statement that GPS can sometimes be unreliable, CMS is not aware of data that confirms or refutes this statement. However, in order to continue to provide ambulance providers and suppliers with flexibility in how they can measure fractional mileage, use of GPS devices will continue to be acceptable for the purpose of measuring fractional mileage.

(B) Ambulance Provider Versus Supplier Billing

Comment: We received responses from several commenters who believe that the fractional mileage billing policy establishes different requirements for Part A versus Part B ambulance providers and suppliers. These commenters stated that neither electronic nor paper institutional claims can accommodate fractional unit amounts. They cited 42 U.S.C. 1395m(l)(1) which requires that all ambulance services be paid under the same fee schedule. Many commenters believed that Part A providers and Part B suppliers, respectively, will be treated differently under the fractional mileage billing policy and will, therefore, be paid differently.

Response: Per the version 4010A1 Implementation Guide and the version 5010 TR3 specifications, the ANSI 837I (institutional) electronic claim format has the capability to accept fractional unit amounts up to 3 decimal places, and thus both ambulance providers and suppliers will be able to bill fractional mileage on electronic claims. The commenters are correct that the Form UB–04 paper institutional claim does not currently support fractional unit amounts. However, the National Uniform Billing Committee (NUBC) has recently approved a change to the Form UB–04 that will allow fractional unit billing, and this change is scheduled to take effect in July 2011. Currently, less than 0.5 percent of all institutional providers bill Medicare using the paper Form UB–04. Based on the low number of providers billing ambulance services on the Form UB–04 and the fact that the form is expected to be capable of accepting fractional unit amounts in July 2011, we are delaying the implementation date for ambulance providers billing on the paper Form UB–04. If the Form UB–04 is capable of accepting fractional mileage unit amounts by the end of July 2011 as scheduled, ambulance providers billing on the paper Form UB–04 will be required to submit fractional mileage in accordance with this final rule with comment period for dates of service on and after August 1, 2011. If paper Form UB–04 is not capable of accepting fractional mileage by July 31, 2011, then implementation of the fractional mileage policy for these ambulance providers will be further delayed until January 1, 2012 to allow ample time for any changes to the UB–04 to be implemented. As with other claim types, ambulance providers billing on the paper Form UB–04 will report fractional mileage on all claims for mileage totaling up to 100 miles.

We note that delayed implementation of the fractional mileage billing policy for the small number of providers using Form UB–04 does not result in suppliers and providers receiving different rates under the ambulance fee schedule. As discussed previously, the fractional mileage billing policy does not change the rates under the ambulance fee schedule for providers or suppliers. It is strictly a change to our operational instructions for reporting ambulance mileage intended to improve billing and payment accuracy. Thus, after implementation of the fractional mileage billing policy, providers and suppliers will continue to be paid under the same fee schedule and there will be no differentiation in rates between providers and suppliers.

(C) Billing Software

Comment: We received a few comments stating that billing systems will need to be modified to accommodate the fractional mileage billing policy. Three commenters stated that modification of billing software would be too costly, with one commenter further stating that the change would create a hardship for the billing software developer. Another commenter believed that changing their billing system would mean that they would have to report fractional mileage to all payers, not just Medicare.

Response: While minor changes to billing software may be required, any billing software that is compliant with ANSI 837 electronic claim standards should have the capability to accept and submit fractional unit amounts in the appropriate field. For providers and suppliers using paper claim forms to submit claims to Medicare, again, we believe that only minor changes to the units field will be required in order to submit fractional mileage amounts.

As discussed previously, we understand that payer requirements may—and often do—vary, and that providers and suppliers may need to comply with different payer billing requirements. However, the requirement to bill fractional mileage to Medicare does not necessarily mean that providers and suppliers will have to also submit fractional mileage to other payers. Each payer sets its own requirements for billing and payment. We believe that most billing systems are capable of accommodating the reality of varying billing requirements amongst different payers. While additional changes to billing systems or procedures may be necessary in some cases to enable mileage to be reported differently for different payers, as we stated previously, we continue to believe that implementation of the fractional mileage billing policy is reasonable and appropriate to ensure more accurate reporting of and payment for ambulance mileage under Medicare.

(D) Enforcement and Compliance

Comment: One commenter stated that the fractional mileage billing policy would be impossible to verify and/or enforce.

Response: Upon implementation of the fractional mileage billing policy, ambulance providers and suppliers will still be subject to the same statutory and regulatory requirements regarding documentation, fraudulent billing, and pre- and post-payment review.

Comment: One commenter requested guidance for providers and suppliers who cannot comply with the fractional mileage billing policy.

Response: We believe that providers and suppliers are capable of complying with the new policy. As discussed above, we believe that most ambulance companies have the ability to measure fractional mileage using standard onboard devices. Furthermore, we believe that tools used to measure distance traveled (such as GPS navigation) are readily available to the average consumer at a low cost. Thus, in those instances where gauges are damaged, missing or otherwise unusable, or where companies are using non-standard vehicles that do not include a device to measure fractional mileage, ambulance providers and suppliers are responsible for ensuring that they have the necessary equipment to measure fractional mileage to the tenth of a mile. Furthermore, billing software that is compliant with the ANSI 837 electronic claim format is capable of capturing and submitting fractional unit amounts, and fractional mileage units can be captured on paper claims (with the exception of paper Form UB04 claims as discussed previously). We believe that implementing the fractional mileage policy is a reasonable and appropriate measure to ensure more accurate billing and payment of Medicare ambulance transports and thus, ambulance providers and suppliers (except for providers billing on Form UB–04 as discussed previously) are expected to comply effective January 1, 2011 with the fractional mileage billing policy finalized in this final rule with comment period.

(E) Air Ambulance

Comment: One commenter responded that the air ambulance segment of the ambulance industry is overpaid by Medicare and suggested that we look to generate savings by changing the reimbursement for air ambulance mileage to be based on nautical miles instead of statutory miles.

Response: As we stated in the proposed rule, our claims processing system should be configured to process claims as accurately as possible so as to provide more accurate Medicare payments. Thus, we believe that the fractional mileage billing policy is a reasonable and appropriate measure to enhance billing and payment accuracy for both air and ground transports. The issue of basing air ambulance reimbursement on nautical miles versus statutory miles was not discussed or proposed in the CY 2011 PFS proposed rule, and thus we are not addressing this issue in this final rule with comment period.

Comment: A few commenters suggested that the fractional mileage billing policy will affect ground ambulance transports but not air ambulance transports.

Response: The fractional mileage billing policy will be applied in the same manner to, and will affect, both ground and air ambulance transports. However, since the fractional mileage billing policy does not apply to mileage exceeding 100 miles, we recognize that it may impact a greater percentage of ground transports than air transports, as a larger percentage of air transports may exceed 100 miles. We analyzed claim payment data for all Part B ambulance claims paid in 2008. If the fractional mileage billing policy had been implemented in 2008, approximately 92 percent of all claims for air ambulance mileage would have been impacted versus 99 percent of all claims for ground ambulance mileage. However, since air ambulance companies receive higher mileage reimbursement rates, we found that the average financial impact per claim would have been greater for air ambulance versus ground ambulance transports. Thus, when we consider both factors together, it is not clear whether the overall impact will be greater for ground ambulance companies than for air ambulance companies. Regardless of any potential differential impact, we believe that implementation of the fractional mileage billing policy is a reasonable and appropriate measure to ensure more accurate reporting of mileage and more accurate payments under Medicare for both ground and air transports.

(F) Miscellaneous Comments

Comment: One commenter questioned whether the new rounding rule would create no reimbursement for 0.49 miles.

Response: No. The correct rounding, based on the fractional mileage billing policy, would be to always round up the hundredths place. Therefore, the provider or supplier in the commenter's example would bill 0.5 miles. Likewise, if the provider or supplier traveled 0.43 miles, they would bill 0.5 miles on their claim. CMS would apply the normal calculations for determining the payment amount using the fractional mileage units reported.

4. Applicability of the Fractional Billing Policy to Other Services

We received no comments regarding the applicability of the fractional unit billing policy to other services. Therefore, for the reasons discussed in the CY 2011 PFS proposed rule (75 FR

40160), we are applying the fractional unit billing policy only to ambulance mileage.

5. Final Fractional Mileage Billing Policy

For the reasons discussed above and in the CY 2011 PFS proposed rule (75 FR 40159), we believe that it is reasonable and appropriate to implement the fractional mileage billing policy as proposed in the CY 2011 PFS proposed rule effective for claims with dates of service on and after January 1, 2011 (with the exception discussed below relating to providers billing on paper Form UB–04).

Therefore, effective for claims with dates of service on and after January 1, 2011, ambulance providers and suppliers (except for providers billing on paper Form UB–04) are required to report mileage rounded up to the nearest tenth of a mile on all claims for mileage totaling up to 100 covered miles. Providers and suppliers must submit fractional mileage using a decimal in the appropriate place (for example, 99.9). For example, if the total miles traveled equals 1.59 miles, then the provider or supplier must report "1.6" on the claim for mileage. Likewise, if the total mileage equals 1.53 miles, the provider or supplier must report "1.6" on the claim.

Although the electronic claim formats can accommodate fractional mileage when mileage is equal to or greater than 100 covered miles (for example, 100.0), as discussed in the proposed rule, the paper claim cannot. The Form CMS–1500 paper claim currently only supports four characters (including the decimal point) in the units field (Item 24G). Therefore, we are finalizing our proposal that mileage equal to or greater than 100 covered miles must continue to be reported in whole number miles on both paper and electronic claims. Providers and suppliers must round up fractional mileage to the next whole number for mileage that exceeds 100 covered miles and report the resulting whole number in the unit field. The instructions set forth in our Claims Processing Manual will be updated to reflect the revised procedures for submitting and paying claims for fractional ambulance mileage.

Because the changes to the paper Form UB–04 necessary to accommodate fractional units are scheduled to be completed in July 2011, implementation of this policy for ambulance providers that are permitted to bill using the Form UB–04 is delayed until August 1, 2011 (that is, ambulance providers permitted to bill on paper form UB–04 will be required to report fractional mileage in accordance with this final rule with comment period for dates of service on and after August 1, 2011). If the paper Form UB–04 is not capable of accepting fractional mileage by July 31, 2011, then implementation of this policy for these ambulance providers will be further delayed until January 1, 2012. As with other claim types, upon implementation of the fractional mileage policy for providers billing on the paper Form UB–04, these providers will report fractional mileage on all claims for mileage totaling up to 100 miles.

As discussed previously, providers and suppliers are responsible for ensuring that they have the necessary equipment to measure fractional mileage to the tenth of a mile, and ensuring that onboard vehicle gauges measuring trip mileage are in working order. If they are not able to repair said gauges, they are responsible for ensuring that they have the necessary equipment to measure mileage accurate to the tenth of a mile. Tools that may be used to measure trip mileage include, but are not limited to: Digital or analog odometers, trip odometers, GPS navigation, onboard trip computers or navigation systems.

C. Clinical Laboratory Fee Schedule: Signature on Requisition

In the March 10, 2000 **Federal Register**, we published the "Medicare Program; Negotiated Rulemaking: Coverage and Administrative Policies for Clinical Diagnostic Laboratory Services" proposed rule (65 FR 13082) announcing and soliciting comments on the results of our negotiated rulemaking committee tasked to establish national coverage and administrative policies for clinical diagnostic laboratory tests under Part B of Medicare. In our final rule published in the November 23, 2001 **Federal Register** (66 FR 58788), we explained our policy on ordering clinical diagnostic laboratory services and amended § 410.32 to make our policy more explicit. Our regulation at § 410.32(a) states the requirement that "[a]ll diagnostic x-ray tests, diagnostic laboratory tests, and other diagnostic tests must be ordered by the physician who is treating the beneficiary." In the November 23, 2001 final rule, we added paragraph (d)(2) to § 410.32 to require that the physician or qualified nonphysician practitioner (NPP) (that is, clinical nurse specialists, clinical psychologists, clinical social workers, nurse-midwives, nurse practitioners (NPs), and physician assistants (PAs)) who order the service must maintain documentation of medical necessity in the beneficiary's medical record (66 FR 58809). In the preamble discussions to the March 10, 2000 proposed rule and November 23, 2001 final rule (65 FR 13089 and 66 FR 58802, respectively), we noted that "[w]hile the signature of a physician on a requisition is one way of documenting that the treating physician ordered the test, it is not the only permissible way of documenting that the test has been ordered." In those preambles, we described the policy of not requiring physician signatures on requisitions for clinical diagnostic laboratory tests, but implicitly left in place the existing requirements for a written order to be signed by the ordering physician or NPP for clinical diagnostic laboratory tests, as well as other types of diagnostic tests. We further stated in the preambles of the proposed and final rules that we would publish an instruction to Medicare contractors clarifying that the signature of the ordering physician is not required for Medicare purposes on a requisition for a clinical diagnostic laboratory test (65 FR 13089 and 66 FR 58802).

On March 5, 2002, we published a program transmittal implementing the administrative policies set forth in the final rule, including the following instruction: "Medicare does not require the signature of the ordering physician on a laboratory service requisition. While the signature of a physician on a requisition is one way of documenting that the treating physician ordered the service, it is not the only permissible way of documenting that the service has been ordered. For example, the physician may document the ordering of specific services in the patient's medical record." (Transmittal AB–02–030, Change Request 1998, dated March 5, 2002).

On January 24, 2003, we published a program transmittal in order to manualize the March 5, 2002 Transmittal. (Transmittal 1787, Change Request 2410, dated January 24, 2003). The cover note to the transmittal states, "Section 15021, Ordering Diagnostic Tests, manualizes Transmittal AB–02–030, dated March 5, 2002. In accordance with negotiated rulemaking for outpatient clinical diagnostic laboratory services, no signature is required for the ordering of such services or for physician pathology services." In the manual instructions in that transmittal in a note, we stated: "No signature is required on orders for clinical diagnostic services paid on the basis of the physician fee schedule or for physician pathology services." The manual instructions did not explicitly reference clinical diagnostic laboratory tests as the cover note did. Rather, the transmittal seemed to extend the policy set forth in the **Federal Register** (that no

signature is required on requisitions for clinical diagnostic laboratory tests paid under the CLFS) to also apply to clinical diagnostic tests paid on the basis of the PFS and physician pathology services. In addition, the manual instructions used the term "order" instead of "requisition," which some members of the industry have asserted caused confusion.

When we transitioned from paper manuals to the current electronic Internet Only Manual system, these manual instructions were inadvertently omitted from the new Benefit Policy Manual (BPM).

In August 2008, we issued a program transmittal (Transmittal 94, Change Request 6100, dated August 29, 2008) to update the BPM to incorporate language that was previously contained in section 15021 of the Medicare Carriers Manual. The reissued language states, "No signature is required on orders for clinical diagnostic tests paid on the basis of the CLFS, the physician fee schedule, or for physician pathology services." Based on further review, we determined that there are no clinical diagnostic laboratory tests paid under the PFS. After Transmittal 94 was published, we received numerous inquiries from laboratory, diagnostic testing, and hospital representatives who had questions about whether the provision applied to all diagnostic services, including x-rays, MRIs, and other nonclinical laboratory fee schedule diagnostic services.

To resolve any existing confusion surrounding the implementation of the policy in 2001 and subsequent transmittals, we restated and solicited public comments on our policy in the CY 2010 PFS proposed rule (74 FR 33641). Our current policy is that a physician's signature is not required on a requisition for clinical diagnostic laboratory tests paid on the basis of the CLFS. However, it must be evident, in accordance with our regulations at § 410.32(d)(2) and (3), that the physician ordered the services.

We note that we solicited and received comments on this signature requirement during the notice and comment period for the March 10, 2000 proposed rule in the context of our proposal to add paragraph (d)(2)(i) to § 410.32 to require that the practitioner who orders a diagnostic laboratory test must maintain documentation of medical necessity in the beneficiary's medical record. The majority of comments supported the adoption of a policy that the signature of the practitioner on a requisition for a clinical diagnostic laboratory test paid under the CLFS is not the only way of documenting that the test has been ordered and, thus, should not be required provided such documentation exists in an alternate form.

This policy regarding requisitions for clinical diagnostic laboratory tests does not supersede other applicable Medicare requirements (such as those related to hospital Conditions of Participation (CoPs)) which require the medical record to include an order signed by the physician who is treating the beneficiary. Nor do we believe that anything in our policy regarding signatures on requisitions for clinical diagnostic laboratory tests supersedes other requirements mandated by professional standards of practice or obligations regarding orders and medical records promulgated by Medicare, the Joint Commission (TJC), or State law; nor do we believe the policy would require providers to change their business practices.

We also restated and solicited public comment on our longstanding policy consistent with the principle in § 410.32(a) that a written order for diagnostic tests including those paid under the CLFS and those that are not paid under the CLFS (for example, that are paid under the PFS or under the OPPS), such as X-rays, MRIs, and the TC of physician pathology services, must be signed by the ordering physician or NPP. That is, the policy that signatures are not required on requisitions for clinical diagnostic laboratory tests paid based on the CLFS applies only to requisitions (as opposed to written orders) (74 FR 33642).

Additionally, we solicited public comments about the distinction between an order and a requisition (74 FR 33642). We note that an "order" as defined in our IOM, 100–02, Chapter 15, Section 80.6.1, is a communication from the treating physician/practitioner requesting that a diagnostic test be performed for a beneficiary. The order may conditionally request an additional diagnostic test for a particular beneficiary if the result of the initial diagnostic test ordered yields to a certain value determined by the treating physician/practitioner (for example, if test X is negative, then perform test Y). As set forth in the CY 2010 PFS final rule (FR 74 61930), an order may be delivered via any of the following forms of communication:

- A written document signed by the treating physician/practitioner, which is hand-delivered, mailed, or faxed to the testing facility.
- A telephone call by the treating physician/practitioner or his or her office to the testing facility.
- An electronic mail, or other electronic means, by the treating physician/practitioner or his or her office to the testing facility.

If the order is communicated via telephone, both the treating physician/practitioner, or his or her office, and the testing facility must document the telephone call in their respective copies of the beneficiary's medical records.

In the CY 2010 PFS proposed rule (74 FR 33642), we defined a "requisition" as the actual paperwork, such as a form, which is provided to a clinical diagnostic laboratory that identifies the test or tests to be performed for a patient. It may contain patient information, ordering physician information, referring institution information, information about where to send reports, billing information, specimen information, shipping addresses for specimens or tissue samples, and checkboxes for test selection. We believe it is ministerial in nature, assisting laboratories with billing and handling of results, and serves as an administrative convenience to providers and patients. We believe that a written order, which may be part of the medical record, and the requisition, are two different documents, although a requisition that is signed may serve as an order. We welcomed comments from the public about the distinction between requisitions and orders.

During the proposed and final rulemaking process for CY 2010, we received numerous comments on these issues, including, among others: Expressions of continued confusion over the difference between an "order" and a "requisition"; requests that we develop a single policy for all outpatient laboratory services, without the distinction for those paid under the CLFS or the PFS; and concerns about reference laboratory technicians who believed compelled to perform a test in order to protect the viability of the specimen although they did not have the proper documentation. (See 74 FR 61929 through 61931 for a complete discussion of the comments received and responses to these issues.) In the CY 2010 PFS final rule with comment period (74 FR 61931), we stated that, in light of the issues and concerns raised during the comment period, and our desire to create policy that will address the concerns in a meaningful, clear and thoughtful way, we would continue to carefully consider the issues of physician signatures on requisitions and orders and that we plan to revisit these issues in the future paying particular attention to the definitions of order and requisition.

Since the publication of the CY 2010 PFS final rule with comment period, we have considered an approach that would address the concerns raised. Therefore, in the CY 2011 PFS proposed rule (75 FR 40162), we proposed to require a physician's or NPP's signature on requisitions for clinical diagnostic laboratory tests paid on the basis of the CLFS. We stated that we believe that this policy would result in a less confusing process because a physician's signature would then be required for all requisitions and orders, eliminating uncertainty over whether the documentation is a requisition or an order, whether the type of test being ordered requires a signature, or which payment system does or does not require a physician or NPP signature. We also stated that we believe that it would not increase the burden on physicians because it is our understanding that, in most instances, physicians are annotating the patient's medical record with either a signature or an initial (the "order"), as well as providing a signature on the paperwork that is provided to the clinical diagnostic laboratory that identifies the test or tests to be performed for a patient (the "requisition") as a matter of course. Further, we stated that this policy would make it easier for the reference laboratory technicians to know whether a test is appropriately requested, and potential compliance problems would be minimized for laboratories during the course of a subsequent Medicare audit because a signature would be consistently required. We stated in the CY 2011 OPPS/ASC proposed rule that this minimizes confusion and provides a straightforward directive for laboratories to meet.

Comment: Some commenters stated that physicians continue to be unfamiliar with when a signature is required and when it is not required on requisitions for physician pathology services, x-ray services, and services other than clinical diagnostic laboratory tests paid under the CLFS. The commenters also asked for consistency in signature requirements between services required under the CLFS and the Physician Fee Schedule (PFS).

Response: We proposed to require a physician's or NPP's signature on requisitions for clinical diagnostic laboratory tests paid under the CLFS. We did not propose to change, and we are not changing, the signature requirements for other services. One of the reasons we made this proposal is because we believed that it would be less confusing for a physician's signature to be required for all requisitions and orders, eliminating uncertainty over whether the documentation is a requisition or an order, whether the type of test being ordered requires a signature, or which payment system does or does not require a physician or NPP signature.

Comment: Some commenters were supportive of our proposal.

Response: We appreciate the commenters' support of our proposed policy, which we are finalizing in this rule.

Comment: The commenters seemed to interpret the proposed policy to mean that clinical diagnostic laboratory tests requested by telephone or electronic means would not be acceptable because they would not contain a signature. The commenters stated that there must be a way to validate electronic requests for services by the physician or NPP and that, as the medical world moves toward electronic records, everything must be annotated (that is, "signed") in some way to authenticate that the service is ordered by the physician.

Response: Our proposed policy does not concern electronic or telephonic requests, because we do not consider these types of requests to be requisitions. As we discussed previously, a requisition is the actual paperwork, such as a form, that is provided to a clinical diagnostic laboratory that identifies the test or tests to be performed for a patient. It may contain patient information, ordering physician information, referring institution information, information about where to send reports, billing information, specimen information, shipping addresses for specimens or tissue samples, and checkboxes for test selection. We believe it is ministerial in nature, assisting laboratories with the billing and handling of results, and serves as an administrative convenience to providers and patients. When a physician or NPP chooses to use a requisition to request a clinical diagnostic laboratory test paid under the CLFS, under the policy we are adopting in this rule, the physician or NPP must sign the requisition.

Comment: The commenters pointed out that it should be evident from the medical record that the physician actually ordered the service.

Response: We did not propose to change any requirements with respect to orders. As discussed above, a requisition is the actual paperwork, such as a form, which is provided to a clinical diagnostic laboratory that identifies the test or tests to be performed for a patient. Our proposal only applies to signatures on requisitions for clinical diagnostic laboratory tests paid under the CLFS. A signature on a requisition should be sufficient for a clinical diagnostic laboratory to verify that a physician or NPP is requesting a clinical diagnostic laboratory test.

Comment: The commenters stated that the patient rarely takes the requisition to the laboratory himself/herself because the patient does not go to the laboratory. These commenters seemed to believe that, in those cases, a paper request for clinical diagnostic laboratory services would have to be created where there may not have been a need for one to exist. The commenters suggested that only the medical record, and not any other paper materials, should be signed or initialed by the physician.

Response: As stated previously, a requisition is the actual paperwork, such as a form, which is provided to a clinical diagnostic laboratory that identifies the test or tests to be performed for a patient. Under our proposed policy, which we are finalizing in this rule, if a physician or NPP chooses to use a requisition to request a clinical diagnostic laboratory test paid under the CLFS, the physician or NPP must sign the form. However, this policy does not require a physician or NPP to use a requisition to request a clinical diagnostic laboratory test paid under the CLFS. Many physicians and NPPs currently request clinical diagnostic laboratory tests using an order, such as an annotated medical record or documented telephonic request, and they may continue to do so without being impacted by our new policy for requisitions.

Comment: The commenters suggested that physicians would need to be educated about the new signature requirement on requisitions for clinical diagnostic laboratory tests paid under the CLFS to alleviate problems such as physician non-compliance with this policy because they are unaware of it or do not understand it. Some commenters stated that they firmly believe that the physician will neglect to sign any document that directs the clinical diagnostic laboratory to perform a service. In order to incentivize physicians to provide a signature, some commenters suggested tying the physician's ability to bill for a service to the requirement to provide a signature.

Response: We understand the need to educate physicians and NPPs. As such, in addition to updating our manuals, we will direct the Medicare contractors to educate physicians and NPPs concerning this issue. We did not propose to adopt a policy linking the physician's ability to bill for a service to the requirement to provide a signature

and we are not adopting such policy in this final rule.

Comment: The commenters believe that medical personnel are already required to provide an extensive amount of identifying information on the requisition. The commenters stated that either the physician or NPP is completing the paperwork but then, in most cases, not signing it or initialing it to confirm that the required service was documented by a medical practitioner.

Response: If physicians and NPPs are completing extensive written documentation concerning each beneficiary on requisitions, the addition of a signature should not be an issue.

Comment: The commenters expressed continued confusion over the terms "requisition" and "order." The commenters stated that CMS should define "requisition" and "order" in the CMS Internet Only Manual (IOM) system.

Response: We recognize that there is confusion around the definition of these terms. However, as we stated above, we define an "order" (IOM, 100–02, Chapter 15, Section 80.6.1) as a communication from the treating physician/practitioner requesting that a diagnostic test be performed for a beneficiary. We further provided that an order may be delivered via any of the following forms of communication: (1) A written document signed by the treating physician/practitioner, which is hand-delivered, mailed, or faxed to the testing facility; (2) a telephone call by the treating physician/practitioner or his or her office to the testing facility; or (3) an electronic mail, or other electronic means, by the treating physician/practitioner or his or her office to the testing facility. If the order is communicated via telephone, both the treating physician/practitioner, or his or her office, and the testing facility must document the telephone call in their respective copies of the beneficiary's medical records. We define a "requisition" as the actual paperwork, such as a form, which is provided to a clinical diagnostic laboratory that identifies the test or tests to be performed for a patient. It may contain patient information, ordering physician information, referring institution information, information about where to send reports, billing information, specimen information, shipping addresses for specimens or tissue samples, and checkboxes for test selection. We believe it is ministerial in nature, assisting laboratories with billing and handling of results, and serves as an administrative convenience to providers and patients. We believe that a written order, which may be part of the medical record, and the requisition, are two different documents, although a requisition that is signed may serve as an order. We are revising our manuals to reflect our new requirement for physicians' and NPPs' signatures on requisitions for clinical diagnostic laboratory tests paid under the CLFS.

Comment: The commenters note that there is no corresponding suggested change in the language of the Code of Federal Regulations (CFR) concerning the physician signature issue.

Response: We have determined that a change to § 410.32(d)(2) is not necessary with respect to this issue because this provision involves orders not requisitions. We articulated our policy regarding requisitions for clinical diagnostic laboratory tests in our manuals and in preamble language. Therefore, we are changing our manuals to reflect our new policy.

Comment: The commenters suggested that the requirement to provide some type of signature represents an undue burden on the clinical diagnostic laboratory, especially in the long term care world where standing orders in the form of a "plan of care" are maintained in the beneficiary's records onsite and tests are ordered by the long term care staff as required based on directions provided by the physician. The commenters asserted that the physician rarely appears onsite at the facility to sign requests for medical services and, as a result, an exception for these types of facilities is warranted. However, commenters also pointed to a Drug Enforcement Administration (DEA) requirement for long term care facilities which states that, "The facility must provide or obtain laboratory services only when ordered by the attending physician."

Response: Again, the change in policy discussed in this final rule only affects requisitions and does not affect orders. The policy that we proposed and are adopting as final in this rule is that a physician's or NPP's signature is required on requisitions for clinical diagnostic laboratory tests paid under the CLFS.

Comment: The commenters suggested that the following language was clear and should stand as the entire policy here: "A physician's signature is not required on a requisition for clinical diagnostic laboratory tests paid on the basis of the Clinical Laboratory Fee Schedule (CLFS); however, it must be evident, in accordance with regulations at § 410.32(d)(2) and (3), that the physician ordered the services."

Response: We appreciate the commenters' viewpoint. However, for the reasons discussed previously, we are finalizing our proposal, without modification, to require a physician's or NPP's signature on requisitions for clinical diagnostic laboratory tests paid under the CLFS.

Comment: The commenters suggested that a pre-printed physician signature or letterhead showing the physician's name should serve in the place of a "signature."

Response: A pre-printed signature or letterhead cannot be construed as a document, the contents of which a physician or NPP has affirmed. In order to discourage fraud and abuse, and to affirm that a medical service was ordered by a medical practitioner who currently works in the practice, a signature is required.

Comment: The commenters stated that the services are transcribed from the medical record onto the requisition by office staff, not written and signed by the physician. The commenters seemed to indicate that the medical record that would be maintained in the physician's office, but not necessarily the requisition, would be signed or annotated in some way.

Response: It seems that the commenters believe that a physician or his/her representative has no problem providing a signature or annotation for the medical record. In addition, some commenters consider the "requisition" to be the medical record and use it for a dual purpose—as the beneficiary's file and as the request for services.

After careful consideration of all the comments received, we are finalizing our proposed policy without modification to require a physician's or NPP's signature on requisitions for clinical diagnostic laboratory tests paid under the CLFS. This policy does not affect physicians or NPPs who choose not to use requisitions to request clinical diagnostic laboratory tests paid under the CLFS. Such physicians or NPPs can continue to request such tests by other means, such as by using the annotated medical records, documented telephonic requests, or electronically. We will make changes to our manuals to reflect this final policy.

D. Discussion of Budget Neutrality for the Chiropractic Services Demonstration

Section 651 of MMA requires the Secretary to conduct a demonstration for up to 2-years to evaluate the feasibility and advisability of expanding coverage for chiropractic services under Medicare. Current Medicare coverage for chiropractic services is limited to manual manipulation of the spine to correct a subluxation described in section 1861(r)(5) of the Act. The

demonstration expanded Medicare coverage to include "A) care for neuromusculoskeletal conditions typical among eligible beneficiaries; B) and diagnostic and other services that a chiropractor is legally authorized to perform by the State or jurisdiction in which such treatment is provided" and was conducted in four geographically diverse sites, two rural and two urban regions, with each type including a Health Professional Shortage Area (HPSA). The two urban sites were 26 counties in Illinois and Scott County, Iowa, and 17 counties in Virginia. The two rural sites were the States of Maine and New Mexico. The demonstration, which ended on March 31, 2007, was required to be budget neutral as section 651(f)(1)(B) of MMA mandates the Secretary to ensure that "the aggregate payments made by the Secretary under the Medicare program do not exceed the amount which the Secretary would have paid under the Medicare program if the demonstration projects under this section were not implemented."

In the CY 2006, 2007, and 2008 PFS final rules with comment period (70 FR 70266, 71 FR 69707, 72 FR 66325, respectively), we included a discussion of the strategy that would be used to assess budget neutrality (BN) and the method for adjusting chiropractor fees in the event the demonstration resulted in costs higher than those that would occur in the absence of the demonstration. We stated BN would be assessed by determining the change in costs based on a pre-post comparison of total Medicare costs for beneficiaries in the demonstration and their counterparts in the control groups and the rate of change for specific diagnoses that are treated by chiropractors and physicians in the demonstration sites and control sites. We also stated that our analysis would not be limited to only review of chiropractor claims because the costs of the expanded chiropractor services may have an impact on other Medicare costs for other services.

In the CY 2010 PFS final rule with comment period (74 FR 61926), we discussed the evaluation of this demonstration conducted by Brandeis University and the two sets of analyses used to evaluate budget neutrality. In the "All Neuromusculoskeletal Analysis," which compared the *total* Medicare costs of *all* beneficiaries who received services for a neuromusculoskeletal condition in the demonstration areas with those of beneficiaries with similar characteristics from similar geographic areas that did not participate in the demonstration, the total effect of the demonstration to Medicare was a $114 million increase in costs. In the "Chiropractic User Analysis," which compared the Medicare costs of beneficiaries who used expanded chiropractic services to treat a neuromusculoskeletal condition in the demonstration areas, with those of beneficiaries with similar characteristics who used chiropractic services as currently covered by Medicare to treat a neuromusculoskeletal condition from similar geographic areas that did not participate in the demonstration, the total effect of the demonstration to Medicare was a $50 million increase in costs.

As explained in the CY 2010 PFS final rule, we based the BN estimate on the "Chiropractic User Analysis" because of its focus on users of chiropractic services rather than all Medicare beneficiaries with neuromusculoskeletal conditions, including those who did not use chiropractic services and who may not have become users of chiropractic services even with expanded coverage for them (74 FR 61926 through 61927). Users of chiropractic services are most likely to have been affected bythe expanded coverage provided by this demonstration. Cost increases and offsets, such as reductions in hospitalizations or other types of ambulatory care, are more likely to be observed in this group.

As explained in the CY 2010 PFS final rule (74 FR 61927), because the costs of this demonstration were higher than expected and we did not anticipate a reduction to the PFS of greater than 2 percent per year, we finalized a policy to recoup $50 million in expenditures from this demonstration over a 5-year period, from CYs 2010 through 2014 (74 FR 61927). Specifically, we are recouping $10 million for each such year through adjustments to the chiropractic CPT codes. Payment under the PFS for these codes will be reduced by approximately 2 percent. We believe that spreading this adjustment over a longer period of time will minimize its potential negative impact on chiropractic practices.

We are continuing the implementation of the required budget neutrality adjustment by recouping $10 million in CY 2011. Our Office of the Actuary estimates chiropractic expenditures in CY 2011 to be approximately $524 million based on actual Medicare spending for chiropractic services for the most recent available year. To recoup $10 million in CY 2011, the payment amount under the PFS for the chiropractic CPT codes (that is, CPT codes 98940, 98941, and 98942) will be reduced by approximately 2 percent. We are reflecting this reduction only in the payment files used by the Medicare contractors to process Medicare claims rather than through adjusting the relative value units (RVUs). Avoiding an adjustment to the RVUs would preserve the integrity of the PFS, particularly since many private payers also base payment on the RVUs.

We received no comments on this policy and we will continue the implementation of the required budget neutrality adjustment in CY 2011 by reducing the payment amount under the PFS for chiropractic codes (that is, CPT codes 98940, 98941, and 98942) by approximately 2 percent resulting in a $10 million recoupment. This is the second year of an adjustment which is required in order to satisfy the budget neutrality requirement in section 651 of MMA and that is being made over a 5-year period to recoup the costs of a demonstration that expanded Medicare coverage for chiropractic services. This reduction will only be reflected in the payment files used by Medicare contractors to process Medicare claims and not through an adjustment to the RVUs.

E. Provisions Related to Payment for Renal Dialysis Services Furnished by End-Stage Renal Disease (ESRD) Facilities

Subsequent to the July 13, 2010 publication of the CY 2011 PFS proposed rule (75 FR 40040) we published in the **Federal Register**, on August 12, 2010 a final rule entitled "End-Stage Renal Disease Prospective Payment System" (75 FR 49030). In that rule, we established a case-mix adjusted bundled PPS for renal dialysis services furnished beginning January 1, 2011, in accordance with the statutory provisions set forth in section 153(b) of MIPPA. The ESRD PPS is mandated to replace the current basic case-mix adjusted composite payment system and the methodologies for the reimbursement of separately billable outpatient ESRD services.

As explained in the ESRD PPS final rule (75 FR 49162), section 1881(b)(14)(E)(i) of the Act requires a 4-year transition (phase-in) from the current composite payment system to the ESRD PPS, and section 1881(b)(14)(E)(ii) of the Act allows ESRD facilities to make a one-time election to be excluded from the transition. Electing to be excluded from the 4-year transition means that the ESRD facility receives payment for renal dialysis services based on 100 percent of the payment rate established under the ESRD PPS, rather than a blended rate for each year of the transition based in part on the payment rate under the current

payment system and in part on the payment rate under the ESRD PPS.

For renal dialysis services furnished during CY 2011, ESRD facilities that elect to go through the ESRD PPS the transition would be paid a blended amount that will consist of 75 percent of the basic case-mix adjusted composite payment system and the remaining 25 percent would be based on the ESRD PPS payment. Thus, we must continue to update the basic case-mix adjusted composite payment system during the ESRD PPS 4-year transition (CYs 2011 through 2013).

For a historical perspective of the basic case-mix adjusted composite rate payment system for ESRD facilities that furnish outpatient dialysis services, see the following PFS final rules with comment period:

- CY 2005 (69 FR 66319 through 66334).
- CY 2006 (70 FR 70161 through 70171).
- CY 2007 (71 FR 69681 through 69688).
- CY 2008 (72 FR 66280 through 66285).
- CY 2009 (73 FR 69754 through 69761).
- CY 2010 (74 FR 61921 through 61926).

In the CY 2011 PFS proposed rule (75 FR 40165 through 40168), we outlined the proposed updates to the basic case-mix adjusted composite payment system established under section 1881(b)(12) of the Act, which included updates to the drug add-on, as well as the wage index values used to adjust the labor component of the composite rate. Specifically, as described in more detail below in this section, we proposed the following:

- A zero growth update to the drug add-on, resulting in a proposed 14.7 percent add-on adjustment to the composite rate for 2011 required by section 1881(b)(12)(F) of the Act to maintain a $20.33 per treatment drug add-on amount.
- An update to the wage index adjustment to reflect the latest available wage data, including a revised budget neutrality (BN) adjustment factor of 1.056929.
- A reduction to the ESRD wage index floor from 0.6500 to 0.6000.

We received very few comments on our proposals. The ESRD payment related comments are discussed below in this section.

1. Update to the Drug Add-on Adjustment to the Composite Rate

In the CY 2011 PFS proposed rule (75 FR 40165), we described the drug payment methodology used to update the drug add-on adjustment to the composite rate. Since we now have 4 years of drug expenditure data based on ASP pricing, we proposed to continue estimating growth in drug expenditures based on the trends in available data.

We did not receive any comments objecting to the drug add-on update methodology, and therefore, we used the proposed update methodology to compute the drug add-on adjustment for CY 2011. We used trend analysis from drug expenditure data to update the per treatment drug add-on adjustment. We then removed growth in enrollment for the same time period from the expenditure growth, so that the residual reflects per patient expenditure growth (which includes price and utilization combined).

To estimate drug expenditure growth using trend analysis, we looked at the average annual growth in total drug expenditures between 2006 and 2009. First, we estimated the total drug expenditures for all ESRD facilities in CY 2009. For this final rule, we used the final CY 2006 through CY 2009 ESRD claims data with dates of service for the same timeframe updated through June 30, 2010 (that is, claims with dates of service from January 1 through December 31, 2009, that were received, processed, paid, and passed to the National Claims History File as of June 30, 2010).

Using the full-year 2009 drug expenditure figure, we calculated the average annual change in drug expenditures from 2006 through 2009. This average annual change showed an increase of 1.9 percent for this timeframe. We used this 1.9 percent increase to project drug expenditures for both CY 2010 and CY 2011.

2. Estimating Per Patient Growth

Once we had the projected growth in drug expenditures from 2010 to 2011 (1.9 percent), to calculate the per patient expenditure growth between CYs 2010 and 2011, we removed the enrollment component by using the estimated growth in enrollment data between CY 2010 and CY 2011, which was approximately 3.6 percent. Specifically, we divided the total drug expenditure factor between 2010 and 2011 (1.019) by enrollment growth of 3.6 percent (1.036) for the same timeframe. The result is a per patient growth factor equal to 0.984 (1.019/1.036=0.984). Thus, we are projecting a 1.6 percent decrease in per patient growth in drug expenditures between 2010 and 2011.

3. Update to the Drug Add-on Adjustment

As previously discussed, we estimate a 1.9 percent increase in drug expenditures between CY 2010 and CY 2011. Combining this reduction with a 3.6 percent increase in enrollment, as described above, we are projecting a 1.6 percent decrease in per patient growth of drug expenditures between CY 2010 and CY 2011. A 1.6 percent decrease in the per patient drug add-on of $20.33 would result in a decrease of 33 cents (.016*20.33=.33). Hence a decrease of 33 cents in the drug add-on would result in negative update equal to 0.2 percent (.33/138.53, 138.53 is the 2011 base composite rate). Therefore, we are projecting that the combined growth in per patient utilization and pricing for CY 2011 would result in a negative update equal to 0.2 percent. However, as we have done previously, we proposed a zero update to the drug add-on adjustment. We believe this approach is consistent with the language under section 1881(b)(12)(F) of the Act which states in part that "the Secretary shall annually increase" the drug add-on amount based on the growth in expenditures for separately billed ESRD drugs. Our understanding of the statute contemplates "annually increase" to mean a positive or zero update to the drug add-on.

Also, as required by section 1881(b)(14)(F), as amended by section 3401(h) of the Affordable Care Act, a 2.5 percent ESRD market basket increase, as established in the ESRD PPS final rule (75 FR 49161), is applied to the current basic case-mix adjusted composite rate portion of the blended payment amount, resulting in a CY 2011 composite rate of $138.53 ($135.15*1.025). This 2.5 percent market basket increase does not apply to the drug add-on adjustment to the composite rate. Since the drug add-on is calculated as a percentage of the composite rate, we note that the drug add-on percentage would be reduced from 15.0 to 14.7 as a result of the increase to the composite rate in CY 2011.

Comment: Several commenters agreed with CMS' decision to apply a zero update to the drug add-on adjustment.

Response: We appreciate the commenters' support that we continue with a zero update to the drug add-on adjustment.

Accordingly, after a review of the public comments, we are finalizing the proposed policy decisions to apply a zero update to the drug add-on, maintain a $20.33 per treatment drug add-on amount, as well as apply a 14.7 percent add-on adjustment to the

composite rate for CY 2011. Also, as previously discussed a 2.5 percent ESRD market basket increase is applied to the current basic case-mix adjusted composite rate portion of the blended payment amount, resulting in a CY 2011 composite rate of $138.53 ($135.15*1.025).

Comment: One commenter agreed with our decision to continue to use the ASP+6 percent methodology for separately billable drugs.

Response: This comment is out of the scope of the proposed ESRD provisions, however, we appreciate the commenters' support of our use of the ASP+6 percent methodology.

4. Update to the Geographic Adjustments to the Composite Rate

In the CY 2011 PFS proposed rule (75 FR 40165), we proposed to update the wage index adjustment to reflect the latest available wage data. The purpose of the wage index is to adjust the composite rates for differing wage levels covering the areas in which ESRD facilities are located. The wage indexes are calculated for each urban and rural area. In addition, we generally have followed wage index policies used under the inpatient hospital prospective payment system (IPPS), but without regard to any approved geographic reclassification authorized under sections 1886(d)(8) and (d)(10) of the Act or other provisions that only apply to hospitals paid under the IPPS (70 FR 70167). Therefore, for purposes of the ESRD wage index methodology, the hospital wage data we use is pre-classified, pre-floor hospital data and unadjusted for occupational mix.

5. Updates to Core-Based Statistical Area (CBSA) Definitions

In the CY 2006 PFS final rule with comment period (70 FR 70167), we announced our adoption of the OMB's CBSA-based geographic area designations to develop revised urban/rural definitions and corresponding wage index values for purposes of calculating ESRD composite rates. The CBSA-based geographic area designations are described in OMB Bulletin 03–04, originally issued June 6, 2003, and is available online at *http://www.whitehouse.gov/omb/bulletins/b03-04.html*. In addition, OMB has published subsequent bulletins regarding CBSA changes, including changes in CBSA numbers and titles. We note that this and all subsequent ESRD rules and notices are considered to incorporate the CBSA changes published in the most recent OMB bulletin that applies to the hospital wage index used to determine the current ESRD wage index. The OMB bulletins may be accessed online at *http://www.whitehouse.gov/omb/bulletins/index.html.*

6. Updated Wage Index Values

In the CY 2007 PFS proposed rule (71 FR 69685), we proposed to update the ESRD wage index values annually. The ESRD wage index values for CY 2011 were developed from FY 2007 wage and employment data obtained from the Medicare hospital cost reports. As we indicated, the ESRD wage index values are calculated without regard to geographic classifications authorized under sections 1886(d)(8) and (d)(10) of the Act and utilize pre-floor hospital data that is unadjusted for occupational mix.

Comment: One commenter wanted CMS to consider the wage index policies that are adopted under the IPPS and that similar wage index policies should be developed for ESRD facilities.

Response: We appreciate the commenters concern as to how ESRD are geographically classified and although we did not propose a change in the geographic reclassification for ESRD facilities at this time, we will take the commenters suggestions into consideration in future rulemaking.

Comment: MedPAC commented that the statutory update to the composite rate for CY 2011 will benefit both rural and urban facilities, and they urge CMS to monitor access to dialysis care especially in rural areas.

Response: We agree with MedPAC's recommendation and we plan to continue to monitor access to dialysis care in rural areas and the impact or influence these effects may have for the ESRD basic case-mix adjusted composite payment rate system wage index.

7. Wage Index Values for Areas With No Hospital Data

In the CY 2011 PFS proposed rule (75 FR 40167), we proposed to use the methodology established in CY 2006 for wage index values for areas with no hospital data. While adopting the CBSA designations, we identified a small number of ESRD facilities in both urban and rural geographic areas where there are no hospital wage data from which to calculate ESRD wage index values. The affected areas were rural Puerto Rico, rural Massachusetts (Barnstable Town, MA (CBSA 12700), and Providence-New Bedford-Fall River, RI–MA (CBSA 39300)), and the urban area of Hinesville, GA (CBSA 25980). As with prior years, for CY 2011, we calculated the ESRD wage index values for those areas as follows:

- For the urban area of Hinesville-Fort Stewart, GA (CBSA 25980), which is an urban area without specific hospital wage data, we applied the same methodology used to impute a wage index value that we used in CY 2010. Specifically, we used the average wage index value for all urban areas within the State of Georgia.
- For rural Massachusetts, we adopted an alternative methodology we used for CY's 2008, 2009 and 2010, which we proposed to use to determine the wage index value for rural Massachusetts for CY 2011. Specifically, for rural areas without hospital wage data, we proposed to use the average wage index values from all contiguous CBSAs as a reasonable proxy for that rural area. In determining the imputed rural wage index, we interpreted the term "contiguous" to mean sharing a border. In the case of Massachusetts, the entire rural area consists of Dukes and Nantucket Counties. We determined that the borders of Dukes and Nantucket counties are contiguous with CBSA 12700, Barnstable Town, MA, and Providence-New Bedford-Fall River, RI–MA. For purposes of rural Massachusetts, we proposed to use the same methodology for CY 2011.
- For rural Puerto Rico, because all geographic areas in Puerto Rico were subject to the wage index floor in CY 2011, we proposed to apply the ESRD wage index floor to rural Puerto Rico as well. For CY 2011, the ESRD wage index floor is 0.60. Therefore, we proposed to apply the ESRD wage index floor to 0.60 to facilities that are located in rural Puerto Rico. We note, however, that there are currently no ESRD facilities located in rural Puerto Rico.

We received no comments on our proposals for the wage areas as previously discussed with no hospital data. Therefore, we are finalizing our policies for wage areas with no hospital data. Also, we will continue to evaluate existing hospital wage data and possibly wage data from other sources such as the Bureau of Labor Statistics, to determine if other methodologies might be appropriate for imputing wage index values for areas without hospital wage data for CY 2010 and subsequent years. To date, no data from other sources, superior to that currently used in connection with the IPPS wage index has emerged. Therefore, for ESRD purposes, we continue to believe this is an appropriate policy. Also, the wage index values associated with these areas are located in the addenda section of this final rule.

Also, in the CY 2011 PFS proposed rule (75 FR 40167), we reported an additional urban area—Anderson, SC

(CBSA 11340)—with no hospital data. For this urban area, we proposed to use the same methodology we have used for the other urban area with no hospital data, that is, Hinesville-Fort Stewart, GA (CBSA 25980). However, since the publication of the CY 2011 PFS proposed rule, we have received hospital wage data for this area, and therefore, the methodology we proposed no longer applies.

8. Reduction to the ESRD Wage Index Floor

In the PFS proposed rule (75 FR 40167), we proposed to continue to reduce the wage index floor to the composite rate portion of the blend during the transition. For CY 2011, we proposed that the ESRD wage index floor would be reduced from 0.65 to 0.60. We believe maintaining the wage index floor provides some relief for ESRD facilities going through the transition that have low wage index values.

For CY 2011, all urban areas in Puerto Rico that have a wage index are eligible for the ESRD wage index floor of 0.60. Currently there are no ESRD facilities located in rural Puerto Rico, however, should any facilities open in rural Puerto Rico, as previously discussed, we intend to apply the CY 2011 wage index floor of 0.60 to these rural facilities.

We received no comments on our proposal regarding the reduction to the ESRD wage index floor with regard to the composite rate portion of the blend during the transition. Therefore, we are finalizing our policy to reduce the wage index floor as proposed.

9. Budget Neutrality Adjustment

We have previously interpreted the statute as requiring that the geographic adjustment be made in a budget neutral manner. Given our application of the ESRD wage index, this means that aggregate payments to ESRD facilities in CY 2011 would be the same as aggregate payments that would have been made if we had not made any changes to the geographic adjustments. We note that this BN adjustment only addresses the impact of changes in the geographic adjustments. A separate BN adjustment was developed for the case-mix adjustments required by the MMA.

Since we did not propose any changes to the case-mix measures for basic case-mix adjusted payment system for CY 2011, the current case-mix BN adjustment of 0.9116 would remain in effect for CY 2011. Consistent with prior rulemaking, for CY 2011, we will apply the wage-index BN adjustment factor of 1.056929 directly to the ESRD wage index values to the composite rate portion of the blend. Because the ESRD wage index is only applied to the labor-related portion of the composite rate, we computed the BN adjustment factor based on that proportion (53.711 percent).

To compute the CY 2011 wage index BN adjustment factor, we used the FY 2007 pre-floor, pre-reclassified, non-occupational mix-adjusted hospital data to compute the wage index values, 2009 outpatient claims (paid and processed as of June 30, 2010), and geographic location information for each facility which may be found through Dialysis Facility Compare Web page on the CMS Web site at *http://www.cms.hhs.gov/DialysisFacilityCompare/*. The FY 2011 hospital wage index data for each urban and rural locale by CBSA may also be accessed on the CMS Web site at *http://www.cms.hhs.gov/AcuteInpatientPPS/WIFN/list.asp*. The wage index data are located in the section entitled, "FY 2011 Occupational Mix Adjusted and Unadjusted Average Hourly Wage and Pre-Reclassified Wage Index by CBSA."

Using treatment counts from the 2009 claims and facility-specific CY 2010 composite rates, we computed the estimated total dollar amount each ESRD provider would have received in CY 2010. The total of these payments became the target amount of expenditures for all ESRD facilities for CY 2011. Next, we computed the estimated dollar amount that would have been paid for the same ESRD facilities using the ESRD wage index for CY 2011. The total of these payments becomes the new CY 2011 amount of wage-adjusted composite rate expenditures for all ESRD facilities.

After comparing these two dollar amounts (target amount divided by the new CY 2011 amount), we calculated an adjustment factor that, when multiplied by the applicable CY 2011 ESRD wage index value, would result in aggregate payments to ESRD facilities that would remain within the target amount of composite rate expenditures. When making this calculation, the ESRD wage index floor value of 0.60 is applied whenever appropriate. The wage BN adjustment factor for CY 2011 is 1.056929.

To ensure BN, we also must apply the BN adjustment factor to the wage index floor 0.60, which results in an adjusted wage index floor of 0.6342 (0.6000 x 1.056929) for CY 2011. This budget neutrality factor is not applied to the wage index values for the ESRD PPS portion of the blend.

10. ESRD Wage Index Tables

The CY 2011 ESRD final wage index tables are located in Addenda K and L of this final rule with comment period. Also, we indicated in the ESRD PPS final rule (75 FR 49117), we would finalize the CY 2011 ESRD PPS wage index tables in this final rule. The wage index tables lists two separate columns of wage index values. The first column lists the wage index values will be applied under the composite rate portion and includes the budget neutrality adjustment of 1.056929. The second column lists the wage index values that will be applied under the ESRD PPS beginning January 1, 2011.

F. Issues Related to the Medicare Improvements for Patients and Providers Act of 2008 (MIPPA)

1. Section 131: Physician Payment, Efficiency, and Quality Improvements—Physician Quality Reporting System

a. Program Background and Statutory Authority

Section 101 of Division B of the Tax Relief and Health Care Act of 2006—the Medicare Improvements and Extension Act of 2006 (Pub. L. 109–432) (MIEA–TRHCA), which was enacted on December 20, 2006, required us to implement a physician quality reporting system in 2007, which we named the Physician Quality Reporting Initiative (PQRI). The Physician Quality Reporting System is a quality reporting program that provides an incentive payment to identified eligible professionals who satisfactorily report data on quality measures for covered professional services furnished during a specified reporting period. Under section 1848(k)(3)(B) of the Act, the term "eligible professional" means any of the following: (1) A physician; (2) a practitioner described in section 1842(b)(18)(C); (3) a physical or occupational therapist or a qualified speech-language pathologist; or (4) a qualified audiologist.

The PQRI was extended and further enhanced as a result of the MMSEA, which was enacted on December 29, 2007, and the MIPPA, which was enacted on July 15, 2008. Changes to the PQRI as a result of these laws, as well as information about the PQRI in 2007, 2008, 2009, and 2010, are discussed in detail in the CY 2008 PFS proposed and final rules (72 FR 38196 through 38204 and 72 FR 66336 through 66353, respectively), CY 2009 PFS proposed and final rules (73 FR 38558 through 38575 and 73 FR 69817 through 69847, respectively), and CY 2010 PFS proposed and final rules (74 FR 33559 through 33600 and 74 FR 61788 through 61861, respectively). Further detailed information, about the PQRI program, related laws, and help desk resources, is

available on the CMS Web site at *http://www.cms.gov/PQRI*.

The ACA makes a number of changes to the PQRI, including the following: Authorizing incentive payments through 2014; requiring a payment adjustment beginning in 2015 for eligible professionals who do not satisfactorily report data on quality measures in the applicable reporting period for the year; requiring timely feedback to participating eligible professionals; requiring the establishment of an informal appeals process whereby eligible professionals may seek a review of the determination that an eligible professional did not satisfactorily submit data on quality measures for purposes of qualifying for a PQRI incentive payment; making available an additional incentive payment for those eligible professionals satisfactorily reporting data on quality measures for a year and having such data submitted on their behalf through a Maintenance of Certification Program and participating in a Maintenance of Certification Program practice assessment more frequently than is required to qualify for or maintain board certification status; requiring the establishment of a Physician Compare Web site; and requiring the development of a plan to integrate reporting on quality measures relating to the meaningful use of electronic health records (EHRs). Whereas in the past we only had the authority to continue the PQRI incentive payments for a specified period of time, we believe the changes authorized by the ACA (particularly the fact that the payment adjustments are authorized for 2015 and each subsequent year) lend permanency to the PQRI. To reflect this transition from the PQRI being a temporary initiative to a permanent quality reporting program, we are hereafter referring to the PQRI as the "Physician Quality Reporting System." We will be updating our documents and the relevant Web sites to reflect this name change over time.

In the CY 2011 PFS proposed rule (75 FR 40162) we proposed to add § 414.90 to title 42 of the Code of Federal Regulations to implement the provisions of the Physician Quality Reporting System.

We received several comments from the public on the CY 2011 PFS proposed rule related to the Physician Quality Reporting System. General comments about the Physician Quality Reporting System are addressed as follows.

Comment: We received positive feedback supporting the Physician Quality Reporting System program as a whole, particularly efforts that encourage eligible professional reporting through registries, Maintenance of Certification Programs, and EHRs. We also received positive feedback regarding our proposals for providing timely feedback and the establishment of an informal appeals process.

Response: We appreciate the commenters' positive feedback. We believe that these options provide eligible professionals with greater flexibility.

Comment: We received one comment expressing dissatisfaction with the Physician Quality Reporting System program as a whole. The commenter stated that while they have been reporting Physician Quality Reporting System data for the past few years, they have not received the incentive payment. As a result, the commenter feels that their clinical professionalism and patient service is not improved by the program and that it diminishes the time they spend on direct patient care.

Response: We are sorry that the commenter has not received a Physician Quality Reporting System incentive. We are hopeful that the improvements that we are making to the Physician Quality Reporting System will make it easier for eligible professionals to participate satisfactorily. We recommend that all participating eligible professionals review their Physician Quality Reporting System feedback report. In addition to providing performance information, eligible professionals who are not incentive eligible will be able to use their feedback report to determine why they did not qualify for an incentive payment. We encourage any eligible professional who has questions about the information contained in their feedback report to contact the QualityNet Help Desk at 866–288–8912 or *qnetsupport@sdps.org*. The Help Desk is available from 7 a.m. to 7 p.m. Central Time to answer a variety of questions about the Physician Quality Reporting System from general program questions to feedback report availability and access. The help desk can provide detailed information about the reasons that an eligible professional failed to earn an incentive as well.

Comment: Some commenters urged us to aggressively provide additional Physician Quality Reporting System education and training opportunities. One commenter requested we provide more "hands-on" Physician Quality Reporting System education and training opportunities at the local level by the state/regional contractors.

Response: We appreciate the commenters' valuable input. We will continue to work with national and regional stakeholder organizations to educate their members on Physician Quality Reporting System program requirements. We also expect to continue to host monthly national provider calls in which we would provide guidance on specific topics and provide updated educational materials and resources. To augment our portfolio of educational materials and resources, we also anticipate providing a series of educational videos to help educate eligible professionals on Physician Quality Reporting System program requirements.

Comment: One commenter expressed disappointment with the exclusion of eligible professionals in institutional settings. Other commenters urged us to identify and adopt a Physician Quality Reporting System reporting mechanism that could apply to all eligible professionals in all settings, including eligible therapists providing services in CORFs, SNFs Part B, and outpatient departments of a hospital.

Response: As we stated in the CY 2010 PFS final rule with comment period (74 FR 61791), for professionals who practice in an institutional setting where the provider of service is an institution and not a physician or other professional paid under the PFS or where claims submission does not identify the professional by his or her NPI, we are unable to make the determination of satisfactory reporting and calculate earned incentive payment amounts at the individual eligible professional level without extensive modifications to the claims processing systems of CMS and providers, which would represent a material administrative burden to us and to providers. It would also require modifications to the industry standard claims formats, which would require substantial time to effect through established processes and structures that we do not maintain or control. We have also found that most institutions that employ eligible professionals do not tie the individual professional to the service rendered to an individual patient. In this case, there are no individual provider identifiers available to use in processing these claims.

Comment: One commenter was concerned that one of the analytical changes that was made to facilitate satisfactory Physician Quality Reporting System reporting may have had an unintended consequence on radiologists by overly inflating their eligible cases, or reporting denominator. Specifically, the commenter is requesting that, for radiology, we look at the CPT/ICD–9 combinations only for the specific line item in which the CPT/ICD–9

combination is present rather than across any dates of service.

Response: We are aware of this issue and are currently analyzing the impact. We believe there are only a handful of measures where this is a concern because the measure specifications tie a procedure to a diagnosis. We are working with the appropriate measure developers/owners to analyze the specifications for these measures to see if they can be changed for 2011 to lessen the impact.

Comment: One commenter encouraged us to consider strategies to move the Physician Quality Reporting System toward a more robust role in quality improvement. Individual clinicians and smaller group practices' self-selection of measures, the small number of measures required to be reported, and variations in the required sample sizes make the measures less meaningful than they could be if the program was more structured and rigorous.

Response: The commenter brings up a number of valid points. As the program matures and we phase out the incentives for satisfactory reporting and phase in payment adjustments for failing to satisfactorily report, we envision continuing to make further refinements to the program to address the commenter's concerns. Any such changes would be described in notice and comment rulemaking prior to implementation.

Comment: Another commenter urged us to transition to rewarding performance, not just reporting. Changes made now should lay the groundwork for moving towards this goal.

Response: As we noted in the CY 2011 PFS proposed rule (75 FR 40114 through 40115), section 3007 of the ACA requires the Secretary to apply a separate, budget-neutral payment modifier to the FFS PFS payment formula. The payment modifier, which will be phased in beginning January 1, 2015 through January 1, 2017, will provide for differential payment under the fee schedule to a physician or groups of physicians, and later, possibly to other eligible professionals, based upon the relative quality and cost of care of their Medicare beneficiaries.

Comment: One commenter was concerned that eligible professionals would not decide to participate in the Physician Quality Reporting System. The commenter was concerned that given the current status of the industry in trying to meet 5010/ICD10 regulations and incentive requirements for achieving the meaningful use of EHR adoption, the additional reporting requirements will serve as a disincentive.

Response: We are unclear what additional reporting requirements the commenter is referring to nor are we clear on how they relate to the 5010/ICD10 regulations and the incentive requirements for achieving the meaningful use of EHR adoption. However, if the commenter is concerned that eligible professionals may not be motivated to participate in the Physician Quality Reporting System in light of other quality programs and/or requirements, we agree that this is a valid concern.

Upon consideration of the comments, we are finalizing our proposal to add § 414.90 to title 42 of the Code of Federal Regulations to implement the provisions of the Physician Quality Reporting System as discussed in this section. We made certain technical changes to § 414.90 as appropriate to reflect the change in the name of the PQRI to "Physician Quality Reporting System," to eliminate the unnecessary use of acronyms, and to add cross-references to relevant statutory or regulatory provisions where appropriate, to specify the particular program year addressed in this rulemaking, and to make other technical changes as noted.

b. Incentive Payments for the 2011 Physician Quality Reporting System

For years 2011 through 2014, section 3002(a) of the ACA extends the opportunity for eligible professionals to earn a Physician Quality Reporting System incentive payment for satisfactorily reporting Physician Quality Reporting System quality measures. For the 2011 Physician Quality Reporting System, section 1848(m)(2)(B) of the Act, as amended by section 3002(a) of the ACA, authorizes a 1.0 percent incentive, and for 2012 through 2014, a 0.5 percent incentive, for qualified eligible professionals who satisfactorily submit Physician Quality Reporting System quality measures data.

The following is a summary of the comments we received regarding the 2011 Physician Quality Reporting System incentive payment amount.

Comment: One commenter expressed support for the extension of the Physician Quality Reporting System incentives through 2014 for eligible professionals who satisfactorily report.

Response: We appreciate the commenters' positive feedback.

Comment: Some commenters expressed concern that the incentive payment is too small to motivate eligible professionals to report Physician Quality Reporting System measures, even if they are providing quality care in their practice, or to drive quality. The commenters stated that added administrative cost and time should be considered when setting the incentive and disincentive rates, in an effort to better reflect the financial incentive to begin utilizing the measures and financial disincentives to maintain such practice. Commenters were specifically concerned that the incentives are not commensurate with the burden of reporting.

Response: While we understand commenters' concerns with the costs and burdens associated with satisfactory reporting under the Physician Quality Reporting System, we have neither the authority to change the basis for calculation of the incentive payment nor the authority to change the incentive amount. We continue to seek ways to minimize impact on eligible professionals, such as by continuing to offer multiple reporting options in order to give eligible professionals the flexibility to choose the option that best fits their practice. Furthermore, we note that under section 1848(a)(8) of the Act, beginning 2015, eligible professionals who do not satisfactorily report Physician Quality Reporting System measures will be subject to a payment adjustment. Eligible professionals who participate in the Physician Quality Reporting System prior to 2015 receive the added benefit of familiarizing themselves with the Physician Quality Reporting System prior to the implementation of the payment adjustment. Moreover, beginning 2015, eligible professionals who satisfactorily report under the Physician Quality Reporting System will avoid the payment adjustment.

Comment: One commenter requested clarification and examples on how the incentive payment calculations are determined and an explanation of what is meant by "allowable."

Response: As stated in the CY 2011 PFS proposed rule (75 FR 40169), the Physician Quality Reporting System incentive payment amount is calculated using estimated Medicare Part B PFS allowed charges for all covered professional services, not just those charges associated with the reported quality measures. "Allowed charges" refers to total charges, including the beneficiary deductible and coinsurance, and is not limited to the 80 percent paid by Medicare or the portion covered by Medicare where Medicare is secondary payer. Amounts billed above the PFS amounts for assigned and non-assigned claims will not be included in the calculation of the incentive payment amount. In addition, since, by definition

under section 1848(k)(3)(A) of the Act, "covered professional services" are limited to services for which payment is made under, or is based on, the PFS and which are furnished by an eligible professional, other Part B services and items that may be billed by eligible professionals, but are not paid under or based upon the Medicare Part B PFS, are not included in the calculation of the incentive payment amount.

Therefore, eligible professionals and group practices that satisfactorily report quality data under the 2011 Physician Quality Reporting System will qualify for an incentive payment equal to 1.0 percent of their total estimated Medicare Part B PFS allowed charges for the all covered professional services furnished by the eligible professional during the applicable 2011 Physician Quality Reporting System reporting period. For satisfactory reporting at the individual level in 2011, 1.0 percent of allowed charges will be paid at the TIN/NPI level. For satisfactory reporting at the group practice level in 2011, 1.0 percent of allowed charges will be paid at the TIN level.

c. 2011 Reporting Periods for Individual Eligible Professionals

Under section 1848(m)(6)(C) of the Act, the "reporting period" for the 2008 Physician Quality Reporting System and subsequent years is defined to be the entire year, but the Secretary is authorized to revise the reporting period for years after 2009 if the Secretary determines such revision is appropriate, produces valid results on measures reported, and is consistent with the goals of maximizing scientific validity and reducing administrative burden. For the 2011 Physician Quality Reporting System, we proposed the following reporting periods: (1) 12-Month reporting period for claims-based reporting and registry-based reporting (that is, January 1, 2011 through December 31, 2011); (2) 12-month reporting period for EHR-based reporting (that is, January 1, 2011 through December 31, 2011; and (3) 6-month reporting period for claims-based reporting and registry-based reporting (that is, July 1, 2011 through December 31, 2011). Additionally, we proposed the 12-month reporting period for the group practice reporting option (GPRO) for both the Physician Quality Reporting System and the Electronic Prescribing (eRx) Incentive Program Prescribing Incentive Program (January 1, 2011 through December 31, 2011).

The following is a summary of the comments we received regarding the proposed reporting periods.

Comment: We received comments generally supporting the proposed reporting periods as well as comments specifically supporting the 6-month reporting period for registry-based reporting.

Response: We appreciate the commenters' positive feedback. As these comments support our proposed reporting periods and for the reasons discussed, we are finalizing the reporting periods, as proposed.

Comment: One commenter was opposed to the elimination of the 6-month reporting period for claims-based reporting as this would create an unnecessary obstacle for the reporting mechanism that is available to nearly all eligible professionals.

Response: We agree with the commenter's urging of the preservation of the 6-month reporting period for 2011, and, as such, we did not propose to eliminate the 6-month reporting period for claims-based reporting. In an effort to encourage participation by eligible professionals who may not be ready to do so at the beginning of the year, for the 2011 Physician Quality Reporting System, there will continue to be both a 12-month and 6-month reporting period for all reporting options except for EHR reporting and the group practice reporting option.

Comment: Another commenter requested that we consider a 6-month reporting period for registry-based reporting.

Response: We proposed a 6-month reporting period for registry-based reporting in the CY 2011 PFS proposed rule (75 FR 40169). As previously stated, for the 2011 Physician Quality Reporting System, there will continue to be a 12-month and 6-month reporting period for all reporting options except for EHR reporting and the group practice reporting option.

Comment: One commenter requested that we consider providing both 6-month and 12-month EHR-based reporting options, consistent with the 6-month reporting period options available for the claims-based and registry-based reporting mechanisms.

Response: As we stated in the CY 2010 PFS final rule with comment period (74 FR 61794), we may consider including a 6-month reporting period for EHR reporting in future years once we have additional experience with EHR reporting in the Physician Quality Reporting System. At this time, no data has yet been collected from EHRs for the Physician Quality Reporting System. EHR data submission for the 2010 Physician Quality Reporting System will not occur until early 2011. Therefore, we are not adding a 6-month reporting period for EHR-based reporting at this time.

Comment: One commenter opposed tying the incentive amount to the reporting period in which the eligible professional satisfactorily reports.

Response: Section 1848(m)(1)(A) of the Act specifies that the incentive payment is based on the covered professional services furnished during the reporting period for which the eligible professional or group practice satisfactorily reports. Therefore, we are obligated to tie the incentive amount to the reporting period in which the eligible professional satisfactorily reports. We note, however, the incentive is not limited to the charges for the services associated with the measures being reported. Rather the incentive is calculated based on all of covered professional services furnished during the applicable reporting period.

Upon consideration of the comments received, we will finalize the 2011 reporting periods as proposed. As discussed previously, if an eligible professional only satisfactorily reports for the 6-month reporting period, then the professional's incentive payment will be calculated based on the eligible professional's charges for covered professional services furnished between July 1, 2011 and December 31, 2011 only. Services furnished prior to July 1, 2011 would not be included in the professional's incentive payment calculation.

We are also deleting the definition for the term "quality reporting period" proposed at § 414.90(b) since the reporting period is defined at § 414.90(g)(1).

d. 2011 Physician Quality Reporting System Reporting Mechanisms for Individual Eligible Professionals

For the 2011 Physician Quality Reporting System, we proposed to retain the claims-based, registry-based, and EHR-based reporting mechanism from 2010 and invited comments on other options that could be included in the 2011 Physician Quality Reporting System. We also discussed in the CY 2011 PFS proposed rule that we continue to consider significantly limiting the claims-based mechanism of reporting clinical quality measures in future program years (75 FR 40170).

The following is a summary of the comments received with regard to the proposed 2011 Physician Quality Reporting System reporting mechanisms and our intent to lessen reliance on the claims-based reporting mechanism beyond 2011.

Comment: Several commenters supported the proposed reporting

mechanisms for the 2011 Physician Quality Reporting System, including strong support for the continuation of claims-based reporting and continued availability of multiple reporting mechanisms. Many commenters noted that claims-based reporting is the only reporting mechanism available to all eligible professionals. One commenter believes claims-based reporting may be a more accurate reporting method overall and that it would be unduly burdensome and costly to force practitioners into changing their established reporting methods. Another commenter thought CMS should not totally discontinue claims-based reporting as some practitioners, such as radiologists, work at several different locations where they may not consistently have access to a registry or EHR. One commenter noted that many small practices may not yet be linked to EHR systems. Commenters also noted that registry reporting frequently requires additional costs, which adds another burden on eligible professionals who wish to participate in the Physician Quality Reporting System. Another commenter stated that in the transition to payment adjustments beginning in 2015, where it is crucial to encourage greater participation, it would be premature to eliminate claims-based reporting. Other commenters urged us to delay eliminating or lessening our reliance on claims-based reporting until eligible professionals can demonstrate that they understand how to use and capture quality data via EHRs or registers and can consistently and successfully do so. Finally, another commenter encouraged us to provide a one or two year transition period if we want to proceed with eliminating claims-based reporting in future years.

Response: We appreciate the commenters' positive feedback. We agree with some of the reasons cited by commenters for retaining claims-based reporting and/or retaining multiple reporting mechanisms. For these reasons and in the discussion that follows, we are retaining, for 2011, the three 2010 Physician Quality Reporting System reporting mechanisms for individual eligible professionals, including claims-based reporting.

Comment: While a majority of commenters requested that we delay or reconsider lessening our reliance on claims-based reporting after 2011, some commenters recommended that the claims-based reporting option be phased out with the expectation that registry-based and EHR-based reporting will become the mainstay of the program, especially as EHR adoption increases. Commenters noted that claims-based reporting has been problematic for eligible professionals and that transitioning the Physician Quality Reporting System away from claims-based reporting would maximize the potential of registries and EHRs for quality measurement reporting. One commenter requested clarification around the timing for phasing out claims-based reporting in order to assist eligible professionals' decision-making around how and when to implement various parts of an EHR or registry.

Response: In addition to the reasons offered by commenters, our ability to lessen our reliance on the claims-based reporting mechanism is dependent on there being an adequate number and variety of registries available and/or EHR reporting options. We believe that it would be premature to eliminate the claims-based reporting mechanism for 2011 and doing so would create a barrier to participation. For 2009, approximately 75 percent of eligible professionals used claims-based reporting. We do not anticipate phasing out claims-based reporting while it continues to be actively used by eligible professionals.

Comment: One commenter requested that we allow certified registered nurse anesthetists (CRNAs) to submit Physician Quality Reporting System data through an EHR-based reporting mechanism.

Response: CRNAs are not precluded from reporting via a qualified Physician Quality Reporting System EHR. However, CRNAs may find the current measures available for Physician Quality Reporting System EHR reporting to be beyond their scope of practice. Additionally, CRNAs tend to collect the majority of their data in operating rooms and may require specific EHR products which, due to their specialization, may have Physician Quality Reporting System qualification later on their timeline.

Comment: One commenter expressed support for the use of registries as a recognized instrument to leverage existing clinical data collection efforts.

Response: We appreciate the supportive comment and agree that registries may be able to augment data collection efforts, particularly for measures that are more difficult to collect and require longer time horizons to get complete data information.

Comment: One commenter expressed concern about the discrepancy between claims-based reporting and registry reporting. Physician Quality Reporting System analysis for 2007 and 2008 showed that providers who did registry reporting had a 90 percent success rate for earning a Physician Quality Reporting System bonus and claims-based reporting had a 50 percent success rate. Due to this large discrepancy, the commenter believed that it will be very important to know which reporting method results in actual performance improvement based on patient outcomes and whether methods are subject to manipulation. The commenter encouraged us to ensure the processes and resulting data of the reporting methods are reliable and not susceptible to manipulation.

Response: We understand the commenter's concerns about the differences in the registry results compared to the claims results. We are continually assessing the accuracy and reliability of all data submitted under the Physician Quality Reporting System. We compare the data that is submitted to us from registries against claims data and are exploring reasons for any discrepancies found.

Comment: Some commenters, in the spirit of harmonization, noted that several aspects of the Physician Quality Reporting System are different from the Hospital Inpatient Quality Reporting Program, formerly known as the Reporting Hospital Quality Data Annual Payment Update Program (RHQDAPU). One commenter stated that while we are moving away from claims-based quality measures for eligible professionals, they are moving toward claims-based quality measures for hospitals. The commenter strongly encouraged us to harmonize their programs and make this same conclusion for the Hospital Inpatient Quality Reporting Program.

Response: We understand the commenters' desire for harmonization of our various quality reporting programs and we attempt to do so when practical and feasible. We note, however, that the Physician Quality Reporting System and the Hospital Inpatient Quality Reporting Program are separate and distinct programs. The two programs apply to two different types of providers, have different goals, and are governed by different laws and requirements.

Claims-based submission for the Physician Quality Reporting System provides a means to submit additional data, using QDCs, beyond what is required for billing. Claims as used for hospital quality reporting does not require the submission of additional QDCs to be added to applicable patient claims.

Based upon consideration of the comments received and for the reasons previously explained, we are retaining the claims, registry, and EHR reporting mechanisms for use by individual eligible professionals for the 2011 Physician Quality Reporting System. As

in previous years, depending on which Physician Quality Reporting System individual quality measures or measures groups an eligible professional selects, one or more of the 2011 reporting mechanisms may not be available for reporting a particular 2011 Physician Quality Reporting System individual quality measure or measures group. In addition, while eligible professionals can attempt to qualify for a Physician Quality Reporting System incentive under multiple reporting mechanisms, an eligible professional must satisfy the 2011 criteria for satisfactory reporting with respect to a single reporting mechanism to qualify for a 2011 incentive. For example, an eligible professional who starts submitting individual Physician Quality Reporting System measures via claims in January 2011 and then switches to registry-based reporting for services furnished after April 2011 would be able to qualify for a 2011 Physician Quality Reporting System incentive based on a 12-month reporting period only if he or she satisfies the appropriate reporting criteria for either claims-based reporting or registry-based reporting for this reporting period. We will not combine data submitted via multiple reporting mechanisms to determine incentive eligibility.

(1) Final Requirements for Individual Eligible Professionals Who Choose the Claims-Based Reporting Mechanism

For eligible professionals who choose to participate in the 2011 Physician Quality Reporting System by submitting data on individual quality measures or measures groups through the claims-based reporting mechanism, we proposed the eligible professional would be required to submit the appropriate Physician Quality Reporting System quality data codes (QDCs) on the professionals' Medicare Part B claims. QDCs for the eligible professional's selected individual Physician Quality Reporting System quality measures or measures group may be submitted to CMS at any time during 2011. However, as required by section 1848(m)(1)(A) of the Act, all claims for services furnished between January 1, 2011 and December 31, 2011, would need to be processed by no later than February 28, 2012, to be included in the 2011 Physician Quality Reporting System analysis.

We did not receive any comments specific to the requirements for individual eligible professionals who choose claims-based reporting. Therefore, we are finalizing the requirements as proposed (75 FR 40171) and previously discussed. Eligible professionals should refer to the "2011 Physician Quality Reporting System Implementation Guide" to facilitate satisfactory reporting of QDCs for 2011 Physician Quality Reporting System individual measures on claims and to the "Getting Started with 2011 Physician Quality Reporting System Reporting of Measures Groups" to facilitate satisfactory reporting of QDCs for 2011 Physician Quality Reporting System measures groups on claims. By no later than December 31, 2010, both of these documents will be posted on the Physician Quality Reporting System section of the CMS Web site at *http://www.cms.gov/pqri*.

(2) Final Requirements for Individual Eligible Professionals Who Choose the Registry-Based Reporting Mechanism

We proposed that in order to report quality data on the 2011 Physician Quality Reporting System individual quality measures or measures groups through a qualified clinical registry, an eligible professional must enter into and maintain an appropriate legal arrangement with a qualified 2011 Physician Quality Reporting System registry. Such arrangements would provide for the registry's receipt of patient-specific data from the eligible professional and the registry's disclosure of quality measures results and numerator and denominator data on Physician Quality Reporting System quality measures or measures groups on behalf of the eligible professional to CMS. Thus, the registry would act as a Health Insurance Portability and Accountability Act of 1996 (Pub. L. 104–191) (HIPAA) Business Associate and agent of the eligible professional. Such agents are referred to as "data submission vendors." The "data submission vendors" would have the requisite legal authority to provide clinical quality measures results and numerator and denominator data on individual quality measures or measures groups on behalf of the eligible professional for the Physician Quality Reporting System.

We proposed that the registry, acting as a data submission vendor, would submit CMS-defined registry-derived measures information to our designated database for the Physician Quality Reporting System, using a CMS-specified record layout, which would be provided to the registry by CMS. Similarly, we proposed that eligible professionals choosing to participate in the Physician Quality Reporting System through the registry-based reporting mechanism for 2011 would need to select a qualified Physician Quality Reporting System registry and submit information on Physician Quality Reporting System individual quality measures or measures groups to the selected registry in the form and manner and by the deadline specified by the registry.

In addition to meeting the proposed requirements specific to registry-based reporting, we proposed that eligible professionals who choose to participate in the Physician Quality Reporting System through the registry-based reporting mechanism would need to meet the relevant criteria proposed for satisfactory reporting of individual measures or measures groups that all eligible professionals must meet in order to satisfactorily report for the Physician Quality Reporting System 2011.

We did not receive any comments specific to the requirements for individual eligible professionals who choose registry-based reporting. Therefore, we are finalizing the requirements for individual eligible professionals who choose the registry-based reporting mechanism as proposed (75 FR 40171 through 40173) and previously discussed.

We will post a list of qualified registries for the 2011 Physician Quality Reporting System on the Physician Quality Reporting System section of the CMS Web site at *http://www.cms.gov/pqri*, which will include the registry name, contact information, and the 2011 measures and/or measures group and eRx reporting (if qualified) for which the registry is qualified and intends to report. However, we do not anticipate making this list available prior to the start of the 2011 program year as we had proposed. We proposed to post the names of the 2011 Physician Quality Reporting System qualified registries in 3 phases starting with a list of those registries qualified for the 2011 Physician Quality Reporting System based on: (1) Being a qualified registry for a prior Physician Quality Reporting System program year that successfully submitted 2008 and/or 2009 Physician Quality Reporting System quality measures results and numerator and denominator data on the quality measures; (2) having received a letter indicating their continued interest in being a Physician Quality Reporting System registry for 2011 by October 31, 2010; and (3) the registry's compliance with the 2011 Physician Quality Reporting System registry requirements. As discussed further in section VII.F.1.j. of this final rule with comment period, we proposed and are finalizing new requirements for the 2011 Physician Quality Reporting System registries. Since there are new requirements that did not apply to previously qualified

registries, we will need to ensure that the previously qualified registries meet the new requirements for 2011. While we fully expect all of the previously qualified registries to meet the new registry requirements for the 2011 Physician Quality Reporting System, we do not expect to be able to determine previously qualified registries' compliance with these new registry requirements for 2011 until the middle of 2011. Thus, by Summer 2011, we expect to post a list of registries (this list will include both registries that were previously qualified and those that self-nominate to be newly qualified for 2011) that are conditionally qualified to submit numerator and denominator data on 2011 Physician Quality Reporting System measures and measures groups and Physician Quality Reporting System measure results. After we receive a test file from the registries, we will finalize the list of 2011 Physician Quality Reporting System registries. We anticipate finalizing the list of 2011 Physician Quality Reporting System registries by Fall 2011.

An eligible professional's ability to report Physician Quality Reporting System quality measures results and numerator and denominator data on Physician Quality Reporting System quality measures or measures groups using the registry-based reporting mechanism should not be impacted by the list of qualified registries for the 2011 Physician Quality Reporting System being made available after the start of the reporting period. First, registries will not begin submitting eligible professionals' Physician Quality Reporting System quality measures results and numerator and denominator data on the quality measures or measures groups to CMS until 2012. Second, if an eligible professional decides that he or she is no longer interested in submitting quality measures results and numerator and denominator data on Physician Quality Reporting System individual quality measures or measures groups through the registry-based reporting mechanism after the complete list of qualified registries becomes available, this does not preclude the eligible professional from attempting to meet the criteria for satisfactory reporting through another 2011 Physician Quality Reporting System reporting mechanism.

In any event, even though a registry is listed as "qualified," we cannot guarantee or assume responsibility for the registry's successful submission of the required Physician Quality Reporting System quality measures results or measures group results or required data elements submitted on behalf of a given eligible professional.

(3) Final Requirements for Individual Eligible Professionals Who Choose the EHR-Based Reporting Mechanism

For 2011, in addition to meeting the criteria for satisfactory reporting of at least 3 individual measures, we proposed the following requirements associated with EHR-based reporting: (1) Selection of a Physician Quality Reporting System qualified EHR product; and (2) submission of clinical quality data extracted from the EHR to a CMS clinical data warehouse in the CMS-specified manner and format (75 FR 40172). Similar to the 2010 Physician Quality Reporting System, a test of quality data submission from eligible professionals who wish to report 2011 quality measure data directly from their qualified EHR product will be required and is anticipated to occur in early 2012 immediately followed by the submission of the eligible professional's actual 2011 Physician Quality Reporting System data. This entire final test/production 2011 data submission timeframe is expected to be January 2012 through March 2012. As discussed in the CY 2010 PFS final rule with comment period (74 FR 61801 through 61802), we are currently vetting newly self-nominated EHR vendor products for possible qualification for the 2011 Physician Quality Reporting System program year. We expect to list any additional Physician Quality Reporting System qualified EHR products by January 2011. It is expected that these newly qualified products would be able to submit 2011 Physician Quality Reporting System data in early 2012.

The following is a summary of the comments we received regarding the proposed requirements for individual eligible professionals whose choose the EHR-based reporting mechanism for the 2011 Physician Quality Reporting System.

Comment: One commenter recommended that we consider accepting measure rates from EHRs rather than just numerator and denominator data. Rates generated within the system will be more readily available for local quality improvement purposes and timely feedback to eligible professionals and office staff. Timely feedback has been and will continue to be a problem for this program. System characteristics that promote and facilitate local improvement efforts should be designed in from the outset.

Response: We agree that an EHR's ability to calculate measure results locally will provide useful and timely information to eligible professionals who are participating in the Physician Quality Reporting System. However, receiving individual data elements allows us to ensure that measure results are calculated in a more standardized fashion across eligible professionals. Individual data elements can also more readily be combined with other data from other sources. Additionally, if measure specifications change, there would be no need to recode the EHR to account for these specification changes. Rather we can make one change to the measures engine to obviate the need for a change to the EHR itself.

Comment: One commenter finds problematic the definition of a qualified EHR as one incorporating eRx functionality. Such functionality is unnecessary and costly for eligible professionals who do not prescribe. As a result, the current proposed definition of EHR could disenfranchise practitioners lacking prescriptive authority by automatically denying them the opportunity to use EHRs for reporting performance measures. Another commenter requested clarification on whether the electronic prescription function is E-Prescribing, which requires the patient's pharmacy benefits information, or E-Prescription Writing, which does not.

Response: We believe the commenters are referring to the eRx functionality required of a certified EHR for the EHR Incentive Program, which is beyond the scope of this final rule with comment period. This final rule is limited to the use of EHRs in the Physician Quality Reporting System and eRx Incentive Programs as one of multiple reporting mechanisms available to eligible professionals to report on Physician Quality Reporting System measures and/or the electronic prescribing quality measure.

Upon consideration of the comments and for the reasons we highlighted based on our experience thus far with EHR-based reporting, eligible professionals who choose the EHR-based reporting mechanism for the 2011 Physician Quality Reporting System will be required to (in addition to meeting the appropriate criteria for satisfactory reporting of individual measures):

- Have a Physician Quality Reporting System qualified EHR product;
- Have access to the identity management system specified by CMS (such as, but not limited to, the Individuals Authorized Access to CMS Computer Systems, or IACS) to submit clinical quality data extracted from the EHR to a CMS clinical data warehouse;

• Submit a test file containing real or dummy clinical quality data extracted from the EHR to a CMS clinical data warehouse via an identity management system specified by CMS during a timeframe specified by CMS;

• Submit a file containing the eligible professional's 2011 Physician Quality Reporting System clinical quality data extracted from the EHR for the entire reporting period (that is, January 1, 2011 through December 31, 2011) via the CMS-specified identify management system during the timeframe specified by CMS in early 2012.

Measures groups reporting continues to not be an option for EHR-based reporting of quality measures for the 2011 Physician Quality Reporting System.

We also cannot assume responsibility for the successful submission of data from eligible professionals' EHRs. Any eligible professional who chooses to submit Physician Quality Reporting System data extracted from an EHR should contact the EHR product's vendor to determine if the product is qualified and has been updated to facilitate 2011 Physician Quality Reporting System quality measures data submission. Such professionals also should begin attempting submission soon after the opening of the clinical data warehouse in order to assure the professional has a reasonable period of time to work with his or her EHR and/or its vendors to correct any problems that may complicate or preclude successful quality measures data submission through that EHR.

The specifications for the electronic transmission of the 2011 Physician Quality Reporting System measures identified in Tables 81 and 82 of this final rule with comment period as being available for EHR-based reporting in 2011 are posted in the Alternative Reporting Mechanisms page of the Physician Quality Reporting System section of the CMS Web site. The requirements that an EHR vendor must meet in order for one or more of its products to be considered qualified for purposes of an eligible professional submitting 2011 Physician Quality Reporting System data extracted from the EHR product(s) were described in the CY 2010 PFS final rule with comment period (74 FR 61800 through 61802) and are posted on the Alternative Reporting Mechanisms page of the Physician Quality Reporting System section of the CMS Web site. We expect to post the names of the EHR vendors and the specific product(s) and version(s) that are qualified for the 2011 Physician Quality Reporting System on the Alternative Reporting Mechanisms page of the Physician Quality Reporting System section of the CMS Web site by January 2011.

(4) Final Qualification Requirements for Registries

For the 2011 Physician Quality Reporting System, we proposed to require a self-nomination process for registries wishing to submit 2011 Physician Quality Reporting System quality measures or measures groups on behalf of eligible professionals for services furnished during the applicable reporting periods in 2011 (75 FR 40173). To be considered a qualified registry for purposes of submitting individual quality measures and measures groups on behalf of eligible professionals who choose this reporting mechanism, we proposed that both registries new to the Physician Quality Reporting System and those previously qualified must:

• Be in existence as of January 1, 2011;

• Have at least 25 participants by January 1, 2011;

• Provide at least 1 feedback report per year to participating eligible professionals;

• Not be owned and managed by an individual locally-owned single-specialty group (in other words, single-specialty practices with only 1 practice location or solo practitioner practices would be prohibited from self-nominating to become a qualified Physician Quality Reporting System registry);

• Participate in ongoing 2011 Physician Quality Reporting System mandatory support conference calls hosted by CMS (approximately 1 call per month), including an in-person registry kick-off meeting to be held at CMS headquarters in Baltimore, MD. Registries that miss more than one meeting will be precluded from submitting Physician Quality Reporting System data for the reporting year (2011);

• Be able to collect all needed data elements and transmit to CMS the data at the TIN/NPI level for at least 3 measures in the 2011 Physician Quality Reporting System (according to the posted 2011 Physician Quality Reporting System Measure Specifications);

• Be able to calculate and submit measure-level reporting rates or the data elements needed to calculate the reporting rates by TIN/NPI;

• Be able to calculate and submit, by TIN/NPI, a performance rate (that is, the percentage of a defined population who receive a particular process of care or achieve a particular outcome) for each measure on which the TIN/NPI reports or the data elements needed to calculate the reporting rates;

• Be able to separate out and report on Medicare Part B FFS patients;

• Provide the name of the registry;

• Provide the reporting period start date the registry will cover;

• Provide the reporting period end date the registry will cover;

• Provide the measure numbers for the Physician Quality Reporting System quality measures on which the registry is reporting;

• Provide the measure title for the Physician Quality Reporting System quality measures on which the registry is reporting;

• Report the number of eligible instances (reporting denominator);

• Report the number of instances of quality service performed (numerator);

• Report the number of performance exclusions;

• Report the number of reported instances, performance not met (eligible professional receives credit for reporting, not for performance);

• Be able to transmit this data in a CMS-approved XML format.

• Comply with a CMS-specified secure method for data submission, such as submitting the registry's data in an XML file through an identity management system specified by CMS or another approved method such as over the NHIN (national health information network) if technically feasible;

• Submit an acceptable "validation strategy" to CMS by March 31, 2011. A validation strategy ascertains whether eligible professionals have submitted accurately and on at least the minimum number (80 percent) of their eligible patients, visits, procedures, or episodes for a given measure. Acceptable validation strategies often include such provisions as the registry being able to conduct random sampling of their participant's data, but may also be based on other credible means of verifying the accuracy of data content and completeness of reporting or adherence to a required sampling method;

• Perform the validation outlined in the strategy and send the results to CMS by June 30, 2012 for the 2011 reporting year's data;

• Enter into and maintain with its participating professionals an appropriate Business Associate agreement that provides for the registry's receipt of patient-specific data from the eligible professionals, as well as the registry's disclosure of quality measure results and numerator and denominator data on behalf of eligible professionals who wish to participate in

the Physician Quality Reporting System program;

• Obtain and keep on file signed documentation that each holder of an NPI whose data are submitted to the registry has authorized the registry to submit quality measures and numerator and denominator data to CMS for the purpose of Physician Quality Reporting System participation. This documentation must be obtained at the time the eligible professional signs up with the registry to submit Physician Quality Reporting System quality measures data to the registry and must meet any applicable laws, regulations, and contractual business associate agreements;

• Provide CMS access (if requested for validation purposes) to review the Medicare beneficiary data on which 2011 Physician Quality Reporting System registry-based submissions are founded or provide to CMS a copy of the actual data (if requested);

• Provide the reporting option (reporting period and reporting criteria) that the eligible professional has satisfied or chosen; and

• Provide CMS a signed, written attestation statement via mail or e-mail which states that the quality measure results and any and all data including numerator and denominator data provided to CMS are accurate and complete.

For registries that intend to report on 2011 Physician Quality Reporting System measures groups, we proposed that both registries new to the Physician Quality Reporting System and those previously qualified must:

• Indicate the reporting period chosen for each eligible professional who chooses to submit data on measures groups;

• Base reported information on measures groups only on patients to whom services were furnished during the 12-month reporting period of January through December 2011 or the 6-month reporting period of July 1, 2011 through December 31, 2011;

• Agree that the registry's data may be inspected or a copy requested by CMS and provided to CMS under our oversight authority;

• Be able to report data on all applicable measures in a given measures group on either 30 or more Medicare Part B FFS patients from January 1, 2011 through December 31, 2011, or on 80 percent of applicable Medicare Part B FFS patients for each eligible professional (with a minimum of 15 patients during the January 1, 2011, through December 31, 2011, reporting period or a minimum of 8 patients during the July 1, 2011, through December 31, 2011, reporting period).

Although these proposed qualification requirements for 2011 registries are similar to those in previous years, we noted that registries would no longer be permitted to include non-Medicare patients for measures group reporting. Additionally, in an effort to reduce the variation in measures results across registries and better allow eligible professional comparisons, we also proposed that all current and future registries would have to meet the following new requirements:

• Use Physician Quality Reporting System measure specifications and the CMS provided measure calculation algorithm, or logic, to calculate reporting rates or performance rates unless otherwise stated. CMS will provide registries a standard set of logic to calculate each measure and/or measures group they intend to report in 2011.

• Provide a calculated result using the CMS supplied measure calculation logic and XML file for each measure that the registry intends to calculate. The registries will be required to show that they can calculate the proper measure results (that is, reporting and performance rates) using the CMS-supplied logic and send the calculated data back to CMS in the specified format.

• Provide us the individual data elements used to calculate the measures if so requested by CMS for validation purposes, if aggregated data submission is still the selected method of data collection. Registries that are subject to validation will be asked to send discrete data elements for a measure (determined by CMS) in the required data format for us to recalculate the registries' reported results. Validation will be conducted for several measures at a randomly selected sample of registries in order to validate their data submissions.

We also invited comments on an alternative considered in which registries would be required to send CMS beneficiary-level data provided to the registry by the eligible professional and CMS would use the data to calculate the eligible professional's measure results (that is, reporting and performance rates).

The following is a summary of the comments we received regarding the proposed qualification requirements and self-nomination process for registries for the 2011 Physician Quality Reporting System.

Comment: One commenter supported the CMS proposal to limit registries based on size and sophistication. The intent of allowing registry reporting was to allow physicians to benefit from an infrastructure that could enable real time reporting and comparison with other groups. A registry from a single physician practice does not meet the intent of why registry reporting was allowed and should not be allowed for registry reporting.

Response: We believe that the costs (time and money) associated with creating and testing a registry for Physician Quality Reporting System qualification are not insignificant. This and the increased potential for individual practices to "game" Physician Quality Reporting System has influenced our decision to require registries to report on larger numbers of eligible professionals or be third party vendors.

Comment: One commenter indicated that it is not clear if reporting needs to be at both the TIN and NPI level or the TIN or NPI level and recommended that all quality reporting be required to include NPI information and feedback at that level.

Response: Reporting from registries is to be submitted at the individual TIN/NPI level. Feedback is available at the individual NPI level as well as a TIN's rolled-up NPI report, that is, all NPIs under a particular TIN. For reporting 2011 measures groups via a registry, we will no longer accept data from non-Medicare beneficiaries. This will allow a better comparison of registry-submitted data and measure calculations to ensure accurate reporting and meaningful feedback reports to eligible professionals.

Comment: Some commenters supported the proposal that registries would no longer use their own measure calculation logic or measure flows to calculate measure results but instead use a CMS-specified standard set of logic for calculating measures. Some commenters supported the proposal based on the fact that registry data results have been inconsistent in the past, and the results do not yield reliable information for eligible professionals to analyze their performance results for practice improvement.

Response: We agree with the commenter and plan to provide registries with a calculation flow diagram for each measure they intend to report and also provide the registry with a use case. As part of their qualification process, registries will need to calculate the measure reporting and performance rates and send this information to CMS or our contractor in the specified XML format.

Comment: One commenter, while supporting the use of a CMS-specified

measure calculation logic, suggested that at least three months be provided to account for the development time necessary to convert measures to use CMS's algorithms. The actual development effort for a registry, however, would be proportionate to the quantity of measures supported by a registry.

Response: We respect and appreciate the time requirements of registries as they attempt qualification. We try to balance the needs of the registries with the importance of letting eligible professionals know which registries are qualified so they can begin selecting and reporting to their registry of choice.

Comment: Another commenter who supported the use of a CMS-specified measure calculation logic, suggested that we make the logic public prior to implementation in order to determine the best logic and calculations for measure results.

Response: We do not believe that public input for measure logic calculation beyond what is already allowed for measure development and endorsement is prudent. We attempt to use the measures as the developer intended and only make changes when necessary for implementation purposes or as required by Medicare policy.

Comment: Some commenters opposed the proposal for registries to use a CMS-specified logic to calculate measures results. One commenter stated they do not believe requiring registries to use a CMS-specified measure calculation logic will lessen the observed variation in measure results. The commenter believes the rate calculation from the numerator and denominator data involves simple arithmetic and is unlikely to be the cause of the observed variation. The more likely cause is a variation in how the data is collected or defined within the system. Another commenter was concerned that a CMS-developed logic might not accurately calculate measure reporting or performance rates in all instances for all eligible professionals since it will likely be based on claims and may not be appropriate to examine the data that is submitted to registries.

Response: We appreciate these comments and agree that a CMS-specified logic may not eliminate all of the data variations or inconsistencies but believe providing a specific logic calculation will help reduce these data differences.

Comment: One commenter believes that registries should have reasonable latitude in interpreting the measure flows or logic provided by us to account for variability in the ways that data are collected by the registries.

Response: While this may seem like a good idea on the surface, this proposal would allow too much data variation and prevent us and outside stakeholders from comparing an eligible professional's performance. This is contrary to our desire to increase standardization in the way registries calculate measure reporting and performance rates.

Comment: A few commenters did not support the alternative approach in which registries would be required to send us discrete data elements and we would calculate the results for eligible professionals.

Response: We do not intend to adopt this method of registry data submission for the 2011 Physician Quality Reporting System.

Comment: One commenter requested that we publish the list of registries and EHR products qualified for purposes of submitting Physician Quality Reporting System data prior to the beginning of the reporting year.

Response: We strive to qualify registries and EHRs in as timely a manner as is possible, however while we do not guarantee successful submission of data by an EHR or a given registry, we want to be as thorough as possible in vetting these systems to increase the likelihood of successful data submission. To date, we have not had any qualified registries who have not successfully reported data to us. We do try to post a partial list of qualified registries (based on successful participation in a prior year) prior to the start of the next reporting period.

Comment: One commenter urged us to include additional information related to the registries such as the physician participants' success rate, the number of participants and the cost.

Response: We agree that providing cost information may be helpful to eligible professionals as they choose a qualified registry. There has been considerable objection by the registries to listing this information on our Web site as the registries report that comparison of their fees is misleading since some of the registries solely report Physician Quality Reporting System information on behalf of eligible professionals to us while others provide additional information and tools to their participants.

Upon considering the comments received, we are finalizing the 2011 qualification requirements as proposed (75 FR 40173 through 40175), including the new requirements for registries to:

- Use Physician Quality Reporting System measure specifications and a standard set of measure calculation logic provided by CMS to calculate reporting rates or performance rates unless otherwise stated;
- Provide a calculated result using the CMS-supplied logic and XML file for each measure that the registry intends to calculate; and
- Provide us the individual data elements used to calculate the measures if so requested by CMS for validation purposes.

We intend to post the final 2011 Physician Quality Reporting System registry requirements on the Physician Quality Reporting System section of the CMS Web site at *http://www.cms.gov/PQRI* by November 15, 2010 or shortly thereafter. We anticipate that new registries that wish to self-nominate for 2011 would be required to do so by January 31, 2011.

Similar to the 2010 Physician Quality Reporting System, registries that were "qualified" for 2010 and wish to continue to participate in 2011 will not need to be "re-qualified" for 2011 but instead demonstrate that they can meet the new 2011 data submission requirements. For technical reasons, however, we do not expect to be able to complete this vetting process for the new 2011 data submission requirements until mid-2011. Therefore, we will not be able to post the names of registries that are qualified for the 2011 Physician Quality Reporting System until we have determined the previously qualified registries that wish to be qualified for the 2011 Physician Quality Reporting System are in compliance with the new registry requirements.

Nevertheless, registries "qualified" for 2010, who were successful in submitting 2010 Physician Quality Reporting System data, and wish to continue to participate in 2011 will need to indicate their desire to continue participation for 2011 by submitting a letter to CMS indicating their continued interest in being a Physician Quality Reporting System registry for 2011 and their compliance with the 2011 Physician Quality Reporting System registry requirements by no later than October 31, 2010. Additionally, registries that are unsuccessful submitting 2010 Physician Quality Reporting System data (that is, fail to submit 2010 Physician Quality Reporting System data per the 2010 Physician Quality Reporting System registry requirements) will need to go through a full self-nomination vetting process for 2011.

Similar to the 2010 Physician Quality Reporting System, if a qualified 2010 Physician Quality Reporting System registry fails to submit 2010 Physician Quality Reporting System data per the 2010 Physician Quality Reporting

System registry requirements, the registry will be considered unsuccessful at submitting 2010 Physician Quality Reporting System data and will need to go through the full self-nomination process again to participate in the 2011 Physician Quality Reporting System. By March 31, 2011, registries that are unsuccessful at submitting quality measures results and numerator and denominator data for 2010 will need to be able to meet the 2011 Physician Quality Reporting System registry requirements and go through the full vetting process again. This would include CMS receiving the registry's self-nomination by March 31, 2011. As discussed in another section of this final rule with comment period, the aforementioned registry requirements will also apply for the purpose of a registry qualifying to submit the electronic prescribing measure for the 2011 Electronic Prescribing Incentive Program.

(5) Final Qualification Requirements for EHR Vendors and Their Products

The EHR vendor qualification process for the 2011 Physician Quality Reporting System was finalized in the 2010 PFS final rule with comment period (74 FR 61800 through 61802) and is currently underway. We anticipate the 2011 EHR vendor vetting process will be complete in early 2011, at which point those EHR products meeting all of the 2011 vendor requirements will be listed on the Physician Quality Reporting System section of the CMS Web site as a "qualified" Physician Quality Reporting System EHR product.

During 2011, we proposed to use the same self-nomination process described in the "Requirements for Electronic Health Record (EHR) Vendors to Participate in the 2011 Physician Quality Reporting System EHR Testing Program" posted on the Physician Quality Reporting System section of the CMS Web site at *http://www.cms.gov/PQRI/20_AlternativeReportingMechanisms.asp#TopOfPage,* to qualify additional EHR vendors and their EHR products to submit quality data extracted from their EHR products to the CMS clinical quality data warehouse for the 2012 Physician Quality Reporting System. Specifically, we proposed that the 2011 Physician Quality Reporting System EHR test vendors, who, if their testing is successful, may report 2012 Physician Quality Reporting System data to CMS, must meet the following requirements:

- Be able to collect and transmit all required data elements according to the 2012 EHR Specifications.
- Be able to separate out and report on Medicare Part B FFS patients only.
- Be able to include TIN/NPI information submitted with an eligible professional's quality data.
- Be able to transmit this data in the CMS-approved format.
- Comply with a secure method for data submission.
- Not be in a beta test form.
- Have at least 25 active users.

Additionally, we proposed that previously qualified Physician Quality Reporting System EHR vendors and 2012 EHR test vendors must participate in ongoing Physician Quality Reporting System mandatory support conference calls hosted by CMS (approximately one call per month). These requirements would apply not only for the purpose of a vendor's EHR product being qualified so that the product's users may submit data extracted from the EHR for the 2012 Physician Quality Reporting System in 2013, but also for the purpose of a vendor's EHR product being qualified so that the product's users may electronically submit data extracted from the EHR for the electronic prescribing measure for the 2012 eRx Incentive Program in 2013. We proposed that if a vendor misses more than one mandatory support call or meeting, the vendor and their product would be disqualified for the Physician Quality Reporting System reporting year, which is covered by the call.

We proposed that previously qualified vendors and new vendors will need to incorporate any new EHR measures (that is, electronically-specified measures) added to the Physician Quality Reporting System for the reporting year they wish to maintain their Physician Quality Reporting System qualification, as well as update their electronic measure specifications and data transmission schema should either or both change.

The following is a summary of the comments received regarding the proposed 2012 EHR vendor qualification requirements and/or process.

Comment: We received a comment disagreeing that an EHR should be required to support all new measures. The commenter noted that an EHR might not collect all the necessary data points for all measures and that this is not required for the EHR Incentive Program.

Response: While the commenter makes a valid point, selecting an appropriate EHR can be challenging for eligible professionals. As such, we are requiring qualified EHRs to be able to report all Physician Quality Reporting System measures with electronic specifications. We believe that this will lessen the burden on eligible professionals in deciding which system to purchase. That is, either the EHR is qualified for the Physician Quality Reporting System (completely) or not at all.

Upon consideration of these comments, we are finalizing the 2012 EHR vendor qualification requirements that will be used to vet EHR vendors in 2011 for 2012 Physician Quality Reporting System data submission in 2013 as proposed in the CY 2011 PFS proposed rule (75 FR 40175 through 40176). Any EHR vendor interested in having one or more of their EHR products "qualified" to submit quality data extracted from their EHR products to the CMS clinical quality data warehouse for the 2012 Physician Quality Reporting System will be required to submit their self-nomination letter by January 31, 2011. Instructions for submitting the self-nomination letter will be provided in the 2012 EHR vendor requirements, which we expect to post in the 4th quarter of CY 2010. Specifically, for the 2012 Physician Quality Reporting System, only EHR vendors that self-nominate to participate in the 2012 EHR Test Program will be considered qualified EHR vendors for the 2012 Physician Quality Reporting System.

e. Criteria for Satisfactory Reporting of Individual Quality Measures for Individual Eligible Professionals

Section 1848(m)(3)(A) of the Act established the criteria for satisfactorily submitting data on individual quality measures as at least 3 measures in at least 80 percent of the cases in which the measure is applicable. If fewer than 3 measures are applicable to the services of the professional, the professional may meet the criteria by submitting data on 1 or 2 measures for at least 80 percent of applicable cases where the measures are reportable. For years after 2009, section 1848(m)(3)(D) of the Act provides additional authority to the Secretary, in consultation with stakeholders and experts, to revise the criteria for satisfactorily reporting data on quality measures. Based on this authority and the input we have previously received from stakeholders, we proposed (75 FR 40176), for 2011, the following 2 criteria for claims-based reporting of individual measures by individual eligible professionals:

- Report on at least 3 measures that apply to the services furnished by the professional; and
- Report each measure for at least 50 percent of the eligible professional's Medicare Part B FFS patients for whom

services were furnished during the reporting period to which the measure applies.

To the extent that an eligible professional has fewer than 3 Physician Quality Reporting System measures that apply to the eligible professional's services, we proposed the eligible professional would be able to meet the criteria for satisfactorily reporting data on individual quality measures by meeting the following 2 criteria:

- Report on all measures that apply to the services furnished by the professional (that is 1 to 2 measures); and
- Report each measure for at least 50 percent of the eligible professional's Medicare Part B FFS patients for whom services were furnished during the reporting period to which the measure applies.

We also proposed for 2011 the requirement that an eligible professional who reports on fewer than 3 measures through the claims-based reporting mechanism may be subject to the Measure Applicability Validation (MAV) process, which would allow us to determine whether an eligible professional should have reported quality data codes for additional measures. This process was applied in prior years. Under the proposed MAV process, when an eligible professional reports on fewer than 3 measures, we propose to review whether there are other closely related measures (such as those that share a common diagnosis or those that are representative of services typically provided by a particular type of eligible professional). We further proposed that if an eligible professional who reports on fewer than 3 measures in 2011 reports on a measure that is part of an identified cluster of closely related measures and did not report on any other measure that is part of that identified cluster of closely related measures, then the eligible professional would not qualify as a satisfactory reporter in the 2011 Physician Quality Reporting System or earn an incentive payment. In 2011, we proposed that these criteria for satisfactorily reporting data on fewer than 3 individual quality measures would apply for the claims-based reporting mechanism only.

For the 2011 Physician Quality Reporting System, we proposed the following 2 criteria for satisfactory reporting of data on individual Physician Quality Reporting System quality measures for registry-based and EHR-based reporting:

- Report on at least 3 measures that apply to the services furnished by the professional; and
- Report each measure for at least 80 percent of the eligible professional's Medicare Part B FFS patients for whom services were furnished during the reporting period to which the measure applies.

We also proposed, in 2011, not to count measures that are reported through a registry or EHR that have a zero percent performance rate. That is, if the recommended clinical quality action is not performed on at least 1 patient for a particular measure or measures group reported by the eligible professional via a registry or EHR, we will not count the measure (or measures groups) as a measure (or measures group) reported by an eligible professional. We proposed to disregard measures (or measures groups) that are reported through a registry or EHR that have a zero percent performance rate in the 2011 Physician Quality Reporting System because we are assuming that the measure was not applicable to the eligible professional and was likely reported from EHR-derived data (or from data mining) and was unintentionally submitted from the registry or EHR to CMS. We also seek to avoid the possibility of intentional submission of spurious data solely for the purpose of receiving an incentive payment for reporting.

The following is a summary of the comments received regarding the criteria for satisfactory reporting of individual quality measures for individual eligible professionals.

Comment: We received several comments in support of the proposal to decrease the reporting sample from 80 percent to 50 percent of applicable cases where the measures are reportable as this would encourage greater Physician Quality Reporting System participation. One commenter expressed support for the lower percentage due to the errors and complexity seen to date with claims-based reporting in the Physician Quality Reporting System. Other commenters noted that a less restrictive requirement is a step forward in decreasing the costs and burdens associated with Physician Quality Reporting System participation.

Response: We appreciate the commenters' positive feedback. In lowering the reporting threshold for claims-based reporting from 80 percent to 50 percent, we are, as indicated by a commenter, acknowledging the complexity of claims-based reporting. As stated in the CY 2011 PFS proposed rule (75 FR 40176), a major reason that eligible professionals who participate in the Physician Quality Reporting System via claims-based reporting fail to do so satisfactorily is that they fail to report at the required 80 percent. As shown in the quarterly QDC Error Reports that we post on the CMS Physician Quality Reporting System Web site at *http://www.cms.gov/PQRI,* eligible professionals often do not report QDCs on claims that are eligible for inclusion in a measure's denominator or report QDCs on claims that are not eligible for inclusion in a measure's denominator. When an eligible professional fails to report QDCs on eligible cases, it negatively impacts their reporting rate for that measure or measures group. When an eligible professional reports QDCs on ineligible cases, it neither improves nor negatively impacts their reporting rate for that measure or measures group. Thus, while lowering the reporting threshold may decrease the number of cases on which an eligible professional is required to report, it is still crucial that eligible professionals carefully review and understand the measure specifications for each measure or measures group they intend to report in order to be able to properly identify eligible cases.

Comment: A few commenters supportive of the proposal to reduce the reporting sample requirement from 80 percent to 50 percent recommended we also use our existing authority to apply the new 50 percent threshold retrospectively to the 2010 Physician Quality Reporting System.

Response: We finalized the 2010 Physician Quality Reporting System criteria for satisfactory reporting by individual eligible professionals in the CY 2010 PFS final rule with comment (74 FR 61802 through 61807). Therefore, we are not applying the 50 percent threshold retrospectively to the 2010 Physician Quality Reporting System. Any eligible professional who would have participated in the 2010 Physician Quality Reporting System had they known that we were lowering the reporting threshold for claims-based reporting to 50 percent would be disadvantaged. Such eligible professionals are not likely to be able to start participating in the 2010 Physician Quality Reporting System and meet the 2010 criteria for satisfactory reporting in the time between publication of this final rule with comment period and December 31, 2010.

Comment: A couple of commenters requested that the threshold for registry-based and EHR-based reporting also be reduced to 50 percent in order to facilitate overall participation via an EHR or registry.

Response: As we stated in the CY 2011 PFS proposed rule (75 FR 40177), we do not believe that reducing the reporting sample to 50 percent for

registry-based reporting and EHR-based reporting would substantially impact the portion of participating eligible professionals who qualify for the Physician Quality Reporting System incentive. Over 90 percent of eligible professionals submitting data through registries were incentive eligible. The level of effort for EHR-reporting should be the same regardless of whether the reporting threshold is 50 percent, 80 percent, or 100 percent since the EHR could theoretically be programmed to submit data on all eligible cases to CMS.

Comment: A few commenters opposed the proposal to weaken the standard for claims-based reporting from 80 percent to 50 percent. The commenters stated it was unclear why we would suggest that we want to move toward more meaningful reporting mechanisms such as registries and EHRs, while at the same time lowering the bar for claims-based reporting. Another commenter suggested that we strengthen the reporting requirements.

Response: In light of the Physician Quality Reporting System payment adjustments that are required by section 1848(a)(8) of the Act beginning in 2015 for eligible professionals who do not satisfactorily report and the fact that claims-based reporting still remains the only reporting mechanism that is available to all eligible professionals, we believe that it is important to take steps to facilitate Physician Quality Reporting System reporting where feasible. As we have seen from Physician Quality Reporting System results from prior years, meeting the 80 percent reporting threshold for claims-based reporting is challenging because of the multiple billing codes as specified by the measure developer, that can place patients in the denominator of a measure combined with the inability to resubmit claims solely for the purpose of adding a QDC. Thus far, we have not experienced the same issues with other reporting mechanisms. As we stated in the CY 2011 PFS proposed rule (75 FR 40176), we believe that lowering the reporting threshold for claims-based reporting will encourage greater participation in the Physician Quality Reporting System without increasing the likelihood that professionals will selectively report based on whether the performance expectation of a measure is met for that particular patient. Once a substantial proportion of eligible professionals begin participating in the Physician Quality Reporting System, we envision that we will gradually strengthen the reporting requirements.

Comment: A few commenters recommended we remove the restriction on registry reporting for those eligible professionals that cannot report 3 measures, especially given that our results show that those who report via a registry are roughly twice as successful as those who report via claims.

Response: We have received similar comments to this effect in the past. We continue to maintain that permitting an eligible professional to report fewer than 3 measures through the registry-based reporting mechanism (if fewer than 3 measures apply to him or her) would be inefficient. It would be analytically difficult in that if an eligible professional submits fewer than 3 measures via registries, we would not know whether the eligible professional did so because only 2 measures applied to him or her or because the registry only accepts data for 2 of the professional's measures and he or she is reporting the third measure via claims. We also look for the most favorable method of reporting (that is, did the eligible professional report via a different method for a longer reporting period as well as whether an eligible professional satisfactorily reported under a different reporting option if he or she did not satisfactorily report for a particular reporting period. Accepting fewer than 3 measures from registries would increase the amount of cross-checking already required, which would impact the timeline for paying incentives.

Comment: Some commenters recommended we change the reporting requirements for individual eligible professionals with respect to increasing the number of required measures and/or requiring reporting on a standard cluster of measures. One commenter recommended that we create a standard risk-adjusted list of Physician Quality Reporting System quality measures for all eligible professionals that we would update annually. Similarly, another commenter suggested that we assign a core set of measures that applies across eligible professions. The commenter also suggested that we assign sets of measures for individual and small group practice participants for high-volume conditions, based on services provided to their patient population. Additional recommendations for strengthening the reporting requirements include, requiring eligible professionals to stratify measures by patient race, ethnicity, preferred language and gender, constructing composites for the current measures groups, using a reliability threshold of 0.70 in lieu of, or in conjunction with, a minimum sample size, increasing the sample size for larger group practices, and maintaining the reporting threshold of 80 percent for claims-based reporting.

Response: We appreciate the constructive feedback and agree with the potential benefit of core measures, moving to more sets or groups of measures, and being more specific as to which measures eligible professionals should report in order to achieve more consistency of reporting across eligible professionals in the future.

After consideration of the comments and for the reasons we previously explained, the final 2011 criteria for satisfactory reporting of data on individual Physician Quality Reporting System quality measures for individual eligible professionals are summarized in Table 73 and are arranged by reporting mechanism and reporting period.

TABLE 73—2011 CRITERIA FOR SATISFACTORY REPORTING OF DATA ON INDIVIDUAL PHYSICIAN QUALITY REPORTING SYSTEM QUALITY MEASURES, BY REPORTING MECHANISM AND REPORTING PERIOD

Reporting mechanism	Reporting criteria	Reporting period
Claims-based reporting	• Report at least 3 PQRI measures, or 1–2 measures if less than 3 measures apply to the eligible professional; and • Report each measure for at least 50% of the eligible professional's Medicare Part B FFS patients seen during the reporting period to which the measure applies.	January 1, 2011–December 31, 2011.
Claims-based reporting	• Report at least 3 PQRI measures, or 1–2 measures if less than 3 measures apply to the eligible professional; and • Report each measure for at least 50% of the eligible professional's Medicare Part B FFS patients seen during the reporting period to which the measure applies.	July 1, 2011–December 31, 2011.

TABLE 73—2011 CRITERIA FOR SATISFACTORY REPORTING OF DATA ON INDIVIDUAL PHYSICIAN QUALITY REPORTING SYSTEM QUALITY MEASURES, BY REPORTING MECHANISM AND REPORTING PERIOD—Continued

Reporting mechanism	Reporting criteria	Reporting period
Registry-based reporting	• Report at least 3 PQRI measures (measures with a 0% performance rate will not be counted); and • Report each measure for at least 80% of the eligible professional's Medicare Part B FFS patients seen during the reporting period to which the measure applies.	January 1, 2011–December 31, 2011.
Registry-based reporting	• Report at least 3 PQRI measures (measures with a 0% performance rate will not be counted); and • Report each measure for at least 80% of the eligible professional's Medicare Part B FFS patients seen during the reporting period to which the measure applies.	July 1, 2011–December 31, 2011.
EHR-based reporting	• Report at least 3 PQRI measures (measures with a 0% performance rate will not be counted); and • Report each measure for at least 80% of the eligible professional's Medicare Part B FFS patients seen during the reporting period to which the measure applies.	January 1, 2011–December 31, 2011.

For the 2011 Physician Quality Reporting System, we are finalizing a total of 5 reporting options, or ways, in which an eligible professional may meet the criteria for satisfactory reporting on individual measures. Each reporting option consists of the criteria for satisfactory reporting such data and results on individual quality measures relevant to a given reporting mechanism and reporting period. Eligible professionals must meet the requirements for at least 1 of these 5 reporting options using a single reporting mechanism in order to qualify for a 2011 Physician Quality Reporting System incentive for satisfactorily reporting individual measures. CMS will not combine data received via different reporting mechanisms to determine whether the reporting criteria are met. It is possible, however, for eligible professionals to potentially qualify as satisfactorily reporting individual quality measures under more than one of the reporting criteria, reporting mechanisms, and/or for more than one reporting period. In this case, only one incentive payment will be made to an eligible professional based on the longest reporting period for which the eligible professional satisfactorily reports.

f. Criteria for Satisfactory Reporting Measures Groups for Individual Eligible Professionals

For the 2011 Physician Quality Reporting System, we proposed that individual eligible professionals have the option to report measures groups instead of individual quality measures to qualify for the 2011 Physician Quality Reporting System incentive, using claims or registries. The criteria that we proposed for 2011 for satisfactory reporting of measures groups through claims-based or registry-based reporting for either the 12-month or 6-month reporting period are as follows: (1) For claims-based reporting, the reporting of at least 1 measures group for at least 50 percent of patients to whom the measures group applies, during the reporting period; or (2) for registry-based reporting, the reporting of at least 1 measures group for at least 80 percent of patients to whom the measures group applies during the reporting period. Eligible professionals, for both claims-based and registry-based reporting under these criteria, would be required to submit data on a minimum of 15 unique Medicare Part B FFS patients for the 12-month reporting period and a minimum of 8 Medicare Part B FFS patients for the 6-month reporting period.

Additionally for 2011, we proposed to retain the criteria, available only for the 12-month reporting period, based on reporting on at least 1 measures group for at least 30 unique patients for whom services were furnished between January 1, 2011, and December 31, 2011, to whom the measures group applies. As in previous years, we proposed that for 2011, the patients, for claims-based reporting, would be limited to Medicare Part B FFS patients. Finally, for registry-based reporting in 2011, in contrast to prior program years, we proposed to require that the minimum patient numbers or percentages must be met by Medicare Part B FFS patients exclusively and not non-Medicare Part B FFS patients.

The following is a summary of the comments received regarding the proposed criteria for reporting measures groups for individual eligible professionals.

Comment: One commenter strongly supported the proposed Physician Quality Reporting System measures group reporting option for claims-based and registry reporting, especially the change in the reporting threshold for claims-based reporting from 80 percent to 50 percent .

Response: We appreciate the commenter's positive feedback.

Comment: A few commenters supported the proposal that for registry reporting of measures groups for 2011 that the minimum patient numbers or percentages must be met by Medicare Part B FFS patients exclusively and exclude data on non-Medicare Part B FFS patients. It is thought that this will reduce the difficulty of analyzing the data we received from registries where patients other than Medicare Part B FFS patients are included. Another commenter was concerned that this change eliminates any benefit that eligible professionals had for using the registry more broadly than just for Medicare patients. The commenter also noted that registries are most useful for improved patient care when all patients in the practice with a particular condition are included in the system.

Response: We appreciate the supportive comment. We believe that limiting the reporting sample for registry-based reporting of measures groups to Medicare Part B FFS patients will facilitate validation of registry-submitted data against the Medicare claims data.

Comment: One commenter supported our proposal to eliminate the requirement for reporting on consecutive patients for registry-based reporting of measures groups.

Response: We appreciate the commenter's support. We assume that the commenter is referring to a requirement in the 2008 and 2009 Physician Quality Reporting System where eligible professionals were required to report on patients seen consecutively by date of service. We

note that we removed the requirement for reporting on consecutive patients for registry-based reporting of measures groups for the 2010 Physician Quality Reporting System. We did not propose nor are we requiring eligible professionals to report on consecutive patients when reporting measures groups for the 2011 Physician Quality Reporting System.

Based on the comments, the final 2011 criteria for satisfactory reporting of data on measures groups are summarized in Table 74 and are arranged by reporting mechanism and reporting period.

TABLE 74—2011 CRITERIA FOR SATISFACTORY REPORTING ON MEASURES GROUPS, BY REPORTING MECHANISM AND REPORTING PERIOD

Reporting mechanism	Reporting criteria	Reporting period
Claims-based reporting	• Report at least 1 PQRI measures group; • Report each measures group for at least 30 Medicare Part B FFS patients.	January 1, 2011–December 31, 2011.
Claims-based reporting	• Report at least 1 PQRI measures group; • Report each measures group for at least 50% of the eligible professional's Medicare Part B FFS patients seen during the reporting period to whom the measures group applies; and • Report each measures group on at least 15 Medicare Part B FFS patients seen during the reporting period to which the measures group applies.	January 1, 2011–December 31, 2011.
Claims-based reporting	• Report at least 1 PQRI measures group; • Report each measures group for at least 50% of the eligible professional's Medicare Part B FFS patients seen during the reporting period to whom the measures group applies; and • Report each measures group on at least 8 Medicare Part B FFS patients seen during the reporting period to which the measures group applies.	July 1, 2011–December 31, 2011.
Registry-based reporting	• Report at least 1 PQRI measures group (measures groups with a 0% performance rate will not be counted); • Report each measures group for at least 30 Medicare Part B FFS patients.	January 1, 2011–December 31, 2011.
Registry-based reporting	• Report at least 1 PQRI measures group (measures groups with a 0% performance rate will not be counted); • Report each measures group for at least 80% of the eligible professional's Medicare Part B FFS patients seen during the reporting period to whom the measures group applies; and • Report each measures group on at least 15 Medicare Part B FFS patients seen during the reporting period to which the measures group applies.	January 1, 2011–December 31, 2011.
Registry-based reporting	• Report at least 1 PQRI measures group (measures groups with a 0% performance rate will not be counted); • Report each measures group for at least 80% of the EP's Medicare Part B FFS patients seen during the reporting period to whom the measures group applies; and • Report each measures group on at least 8 Medicare Part B FFS patients seen during the reporting period to which the measures group applies.	July 1, 2011–December 31, 2011.

As illustrated in Table 74, there are a total of 6 reporting options, or ways in which eligible professionals may meet the criteria for satisfactory reporting of measures groups for the 2011 Physician Quality Reporting System. As we stated previously, eligible professionals may potentially qualify as satisfactorily reporting for the 2011 Physician Quality Reporting System on measures groups under more than one of the reporting criteria, reporting mechanisms, and/or for more than one reporting period; however, only one incentive payment will be made to an eligible professional based on the longest reporting period for which the eligible professional satisfactorily reports. In addition, although an eligible professional could submit data under multiple reporting mechanisms, CMS will not combine data received from different reporting mechanisms to determine whether the eligible professional satisfactorily reported. Similarly, an eligible professional could also potentially qualify for the Physician Quality Reporting System incentive payment by satisfactorily reporting both individual measures and measures groups. However, only one incentive payment will be made to the eligible professional based on the longest reporting period for which the eligible professional satisfactorily reports.

g. Reporting Option for Satisfactory Reporting on Quality Measures by Group Practices

(1) Background and Authority

Section 1848(m)(3)(C)(i) of the Act required the Secretary to establish and have in place a process by January 1, 2010 under which eligible professionals in a group practice (as defined by the Secretary) shall be treated as satisfactorily submitting data on quality measures under the Physician Quality Reporting System if, in lieu of reporting measures under the Physician Quality Reporting System, the group practice reports measures determined appropriate by the Secretary, such as

measures that target high-cost chronic conditions and preventive care, in a form and manner, and at a time specified by the Secretary. Section 1848(m)(3)(C)(ii) of the Act requires that this process provide for the use of a statistical sampling model to submit data on measures, such as the model used under the Medicare Physician Group Practice (PGP) demonstration project under section 1866A of the Act. A group practice reporting option (GPRO) was established for the 2010 Physician Quality Reporting System in the CY 2010 PFS final rule with comment period (74 FR 61807 through 61811).

For the 2011 Physician Quality Reporting System, we proposed to continue to allow a group practice, as a whole (that is, for the TIN(s)), to participate in the 2011 Physician Quality Reporting System and to submit Physician Quality Reporting System quality measures for 2011 and qualify to earn an incentive (75 FR 40178–40183). If, however, an individual eligible professional is affiliated with a group practice participating in the GPRO and the group practice satisfactorily reports under the GPRO, the eligible professional will be considered as satisfactorily reporting Physician Quality Reporting System quality measures data at the individual level under that same TIN (that is, for the same TIN/NPI combination).

(2) Definition of "Group Practice"

As stated previously, section 1848(m)(3)(C)(i) of the Act authorized the Secretary to define "group practice." For purposes of determining whether a group practice satisfactorily submits Physician Quality Reporting System quality measures data, we proposed that for the 2011 Physician Quality Reporting System a "group practice" would consist of a physician group practice, as defined by a TIN, with 2 or more individual eligible professionals (or, as identified by NPIs) who have reassigned their billing rights to the TIN. This proposed definition for group practice is different from the 2010 Physician Quality Reporting System definition of group practice in that we proposed to change the minimum group size from 200 to 2 to enable more group practices to participate in the Physician Quality Reporting System GPRO in 2011.

As our intent is to build on an existing quality reporting program with which group practices may already be familiar, we proposed to be consistent with the PGP demonstration and use one GPRO process, which we refer to as "GPRO I" that would be available only to similar large group practices. For group practices that have fewer than 200 members, we proposed, if technically feasible, an alternative GPRO process which we refer to as "GPRO II".

In order to participate in the 2011 Physician Quality Reporting System through the GPRO, we proposed to require group practices to complete a self-nomination process and to meet certain technical and other requirements. For 2011, we proposed that group practices must participate in the Physician Quality Reporting System group practice reporting option in order to be eligible to participate in the eRx group practice reporting option for the 2011 Physician Quality Reporting System. As this is the current requirement under the 2010 Physician Quality Reporting System and eRx Incentive Program, we proposed that a group practice wishing to participate in both the Physician Quality Reporting System group practice reporting option and the electronic prescribing group practice reporting option must notify CMS of its desire to do so at the time that it self-nominates to participate in the Physician Quality Reporting System group practice reporting option.

In addition, we proposed that group practices that are participating in Medicare demonstration projects, as approved by the Secretary, would also be considered group practices for purposes of the 2011 Physician Quality Reporting System GPRO. Specifically, for the 2011 Physician Quality Reporting System we proposed to deem group practices participating in the PGP, Medicare Care Management Performance (MCMP), and EHR demonstrations to be participating in the Physician Quality Reporting System GPRO since many of the measures being reported under these demonstration programs are similar to Physician Quality Reporting System measures. As a result, such practices do not need to separately self-nominate to participate in the Physician Quality Reporting System GPRO, although it would be necessary for such groups to meet the requirements for incentive qualification under their respective approved demonstration project. For example, the MCMP demonstration sites would be required to meet the requirements for earning a Physician Quality Reporting System incentive specified under the MCMP demonstration.

For purposes of the 2011 eRx Incentive Program, however, we proposed that group practices participating in CMS-approved demonstration projects previously discussed would be required to meet the proposed 2011 eRx Incentive Program GPRO requirements or the proposed 2011 eRx Incentive Program requirements for individual eligible professionals in order to qualify for a 2011 eRx incentive. Such group practices would not be able to qualify for a 2011 eRx incentive via participation in an approved demonstration project since there is no eRx requirement under these demonstrations.

We also sought comment on alternatives for expanding GPRO in 2011. One option that we considered was to expand GPRO I to include smaller group practices. Specifically, we considered allowing groups of 100 or more eligible professionals to participate in the Physician Quality Reporting System under GPRO using the same reporting mechanism and reporting criteria required under the 2010 Physician Quality Reporting System GPRO and proposed for the 2011 Physician Quality Reporting System GPRO I. We also considered modifying the definition of "group practice" to include groups that have and use multiple TINs.

The following is a summary of the comments received regarding the proposed definition of "group practice" and the alternatives that were considered.

Comment: Several commenters expressed support for the proposed 2011 definition of a group practice as 2 or more individual eligible professionals who have reassigned their billing rights to the appropriate TIN, as opposed to a group practice with 200 or more individual eligible professionals as was the case in 2010. Commenters believed that this will greatly expand the opportunities for participation in the group practice reporting option and aligns with the current environment.

Response: We agree that our proposed definition of "group practice" will expand opportunities to participate in the group practice reporting option. To allow for expanded use of the group practice reporting option, we are finalizing our proposal to define "group practice" as 2 or more individual eligible professionals. However, as noted in the discussed that follows, we are modifying the definition of "group practice" with respect to group practices participating in Medicare demonstration projects approved by the Secretary." Rather than including such group practices in the definition of "group practice" at § 414.90(b), we are indicating that such practices are deemed to be participating in the Physician Quality Reporting System at § 414.90(g)(1).

Part II—Continued

Department of Health and Human Services

Center for Medicare & Medicaid Services

42 CFR Parts 405, 409, 410 et al.
Medicare Program; Payment Policies Under the Physician Fee Schedule and Other Revisions to Part B for CY 2011; Final Rule

Comment: One commenter believes that the GPRO requirement that physicians reassign their billing rights to the taxpayer identification number (TIN) could be problematic for some practices where individual physicians continue billing Medicare on their behalf rather than reassigning to the group practice. Yet, these practices still function as a group and use the same data systems. It was recommended that we reconsider the reassignment requirement, as well as continue to add more specialty-specific measures groups in an effort to make the GPRO a more viable and attractive option.

Response: We understand that there are various scenarios that may occur that would result in an individual eligible professional not reassigning his or her billing rights to a group TIN as required for inclusion in the GPRO I group. However, Physician Quality Reporting System GPRO I patient assignment, sample selection and incentive calculations are based at the TIN/NPI level. We believe it would be burdensome on the GPRO as well as the individual eligible professionals to track all individual NPIs who may practice periodically with their group while accounting for the instances when the NPI is not providing services to beneficiaries assigned to the group.

Comment: One commenter requested that we expand the definition of "group practice" to include non-physician providers.

Response: We are finalizing our proposal to define "group practice" as a single TIN with 2 or more eligible professionals, as identified by their individual NPI, who have reassigned their billing rights to the TIN, but as noted in the following discussion, we are modifying our definition with respect to group practices participating in Medicare demonstration projects approved by the Secretary. Therefore, although the term "physician group" may sometimes be used when referring to group practices, it is not intended to infer that group practices are only physicians.

Comment: A couple of commenters commended us for taking positive steps to reduce the reporting burden for eligible professionals. The commenters were specifically referring to our proposal to deem group practices participating in the PGP, MCMP, and EHR demonstrations to be participating in the Physician Quality Reporting System such that all eligible professionals participating in these demonstrations automatically will receive Physician Quality Reporting System bonus payments. The commenters requested that we extend this same waiver to all types of providers who participate in demonstrations. One commenter noted that the majority of participants in the PGP demonstration are hospitals and, like the Physician Quality Reporting System program, many of the measures that hospitals report to the RHQDAPU program overlap with the measures required for participation in the demonstration.

Response: We agree with trying to lessen the burden on eligible professionals who are participating in demonstrations when practical and feasible. We specifically focused on these three demonstrations because their participants are required to report on measures that are very similar to the Physician Quality Reporting System GPRO I measures and to do so using a process very similar to the Physician Quality Reporting System GPRO I process for their demonstrations. At this time, we are not aware of other demonstrations that require the same measures and reporting processes. Therefore, we are not granting waivers with regard to the group practice reporting option to providers who are participating in demonstrations other than the PGP, MCMP, and EHR demonstrations. In addition, this waiver does not apply to any quality reporting program other than the Physician Quality Reporting System. We also further note that demonstration participants will not automatically receive Physician Quality Reporting System incentive payments. Rather, they must meet the requirements for Physician Quality Reporting System incentive qualification under their respective approved demonstration project.

Comment: One commenter noted that practices participating in either the MCMP or EHR demonstrations could consist of solo practitioner practices. In addition, practices participating in the PGP, MCMP, or EHR demonstrations could consist of multiple TINs. The commenter requested clarification on whether such practices would still be considered a "group practice" for purposes of the Physician Quality Reporting System GPRO.

Response: Our intent, in proposing to include practices that are participating in these demonstrations in the definition of "group practice" was to reduce the burden on eligible professionals who are already reporting using a process similar to the Physician Quality Reporting System GPRO I method and on similar measures, regardless of the composition of the actual group. Therefore, we are modifying the definition of "group practice" with respect to group practices participating in Medicare demonstration projects approved by the Secretary." Rather than including such group practices in the definition of "group practice" at § 414.90(b), we are indicating that such practices are deemed to be participating in the Physician Quality Reporting System at § 414.90(g)(1). In addition, we are clarifying at § 414.90(g)(1) that such practices are "group practices of any size (including solo practitioners) or comprised of multiple TINs participating in a Medicare demonstration project approved by the Secretary."

Based on these comments, we are finalizing the proposed definition of "group practice" with the changes discussed previously for purposes of the 2011 Physician Quality Reporting System group practice reporting option. We recognize that a group's size can fluctuate throughout the year as professionals move from practice to practice. Therefore, a group practice's size, for purposes of determining which reporting criteria the group must satisfy, will be the size of the group at the time the group's participation in one of the 2011 GPRO options is approved by CMS.

We also recognize that, for various reasons, there potentially could be a discrepancy between the number of eligible professionals (that is, NPIs) submitted by the practice during the self-nomination process and the number of eligible professionals billing Medicare under the practice's TIN. Therefore, if we find more NPIs in the Medicare claims than the number of NPIs submitted by the practice during the self-nomination process and this would result in the practice being subject to different criteria for satisfactory reporting, then we will notify the practice of this finding as part of the self-nomination process. At this point, the practice will have the option of either agreeing to being subject to the different criteria for satisfactory reporting, justifying why they should not be subject to the different criteria for satisfactory reporting, or opting out of participation in the Physician Quality Reporting System as a group practice. For example, if we determine that a group practice that self-nominates for GPRO II has more than 199 eligible professionals billing Medicare under the practice's TIN, the practice would have the option of agreeing to participate in the Physician Quality Reporting System under GPRO I, explaining why the

practice actually has fewer than 200 eligible professionals (for example, some of the eligible professionals who billed Medicare have since retired), or opting out of participation in the Physician Quality Reporting System GPRO for 2011. If a group practice that self-nominates for GPRO I has fewer than 200 NPIs billing Medicare under the practice's TIN, then we will give the practice the opportunity to participate in GPRO II.

(3) Process for Physician Group Practices To Participate as Group Practices and Criteria for Satisfactory Reporting

(A) Group Practice Reporting Option for Physician Group Practices With 200 or More NPIs—GPRO I

As stated previously, we proposed that group practices interested in participating in GPRO I must self-nominate to do so. For group practices selected to participate in the Physician Quality Reporting System GPRO I for 2011, we proposed to retain the existing 12-month reporting period beginning January 1, 2011. We proposed that group practices participating in GPRO I submit information on a proposed common set of 26 NQF-endorsed quality measures using a data collection tool based on the GPRO Tool used in the 2010 Physician Quality Reporting System GPRO by 36 participating group practices to report quality measures under the Physician Quality Reporting System. As part of the data submission process for 2011 GPRO I, we proposed that during 2012, each group practice would be required to report quality measures with respect to services furnished during the 2011 reporting period (that is, January 1, 2011, through December 31, 2011) on an assigned sample of Medicare beneficiaries.

Once the beneficiary assignment has been made for each group practice, which we anticipate will be done during the fourth quarter of 2011, we proposed to provide each group practice selected to participate in the Physician Quality Reporting System GPRO I with access to a database (that is, a data collection tool) that will include the group's assigned beneficiary samples and the final GPRO I quality measures. We proposed to pre-populate the data collection tool with the assigned beneficiaries' demographic and utilization information based on all of their Medicare claims data. The group practice will be required to populate the remaining data fields necessary for capturing quality measure information on each of the assigned beneficiaries. Identical to the sampling method used in the PGP demonstration, we proposed that the random sample must consist of at least 411 assigned beneficiaries. If the pool of eligible assigned beneficiaries is less than 411, then the group practice must report on 100 percent, or all, of the assigned beneficiaries to satisfactorily participate in the group practice reporting option. For each disease module or preventive care measure, the group practice would be required to report information on the assigned patients in the order in which they appear in the group's sample (that is, consecutively). These proposed reporting criteria are identical to the reporting criteria used in the PGP demonstration and in the 2010 Physician Quality Reporting System GPRO.

For 2011, we proposed an exclusive reporting mechanism for eligible professionals identified as part of the group practice with respect to the group as identified by the TIN. However, eligible professionals who are part of the group practice, and who separately practice with respect to another TIN to which the eligible professional has reassigned benefits, could separately qualify as individual eligible professionals with respect to the other practice (TIN).

We invited comments on our proposal for 2011 to retain 200 as the number of NPIs for a TIN required for each group practice under the GPRO I. We also invited comment on our proposal to allow those "qualified" for 2010 GPRO to be rolled over for automatic qualification for 2011 GPRO I.

The following is a summary of the comments received regarding the proposed process for physician group practices with 200 or more NPIs (that is, GPRO I).

Comment: A commenter expressed support for continuation of GPRO I.

Response: We appreciate the commenter's support. We are finalizing the GPRO I as proposed. We believe that this process provides an effective means of collecting quality data from large group practices.

Comment: A commenter expressed support for our proposal that 2010 GPRO participants would not need to go through the self-nomination process to participate in 2011.

Response: We appreciate the time and effort taken by the commenter to state support of our proposal to not have 2010 GPRO participants go through self nomination process for GPRO I participation for 2011. We will not require 2010 GPRO participants to go through the self-nomination process for 2011 but they will need to inform us of their desire to participate in the 2011 GPRO I.

Comment: To encourage group reporting for large practices, and to reduce the risk to individual eligible professionals if the practices do not qualify for an incentive, one commenter requested that we allow the individual eligible professionals within GPRO I to continue reporting through traditional methods. Thus, those participants might be eligible for incentives if the group practice does not satisfactorily submit data.

Response: We considered the feasibility of analyzing Physician Quality Report System data submissions for GPRO I participants at the individual NPI level, but we decided against this option. Analyzing Physician Quality Reporting System data submissions for GPRO I participants at the individual NPI level would require individual eligible professionals who are part of a group practice participating in GPRO I to collect and report quality data in multiple ways, which would be inefficient. In addition, doing so would require additional CMS resources and potentially delay availability of the incentive payments for all participants. Furthermore, we believe that a group practice should have little difficulty in satisfactorily reporting under GPRO I since they will receive feedback prior to submission of the data to CMS.

Comment: We received a few comments on the proposed reporting criteria for GPRO I. One commenter suggested that the GPRO reporting requirements be limited to 411 patients in total, rather than 411 patients per measure, in order to reduce the associated resource burdens to participation. Another commenter was concerned with the considerable resources required to complete the data collection tool for this sample in such a short time frame. Given the methodology used, the commenter believes a smaller sample size would provide an accurate representation of a group's performance and urges us to reevaluate the sample sizes required.

Response: The sample size for GPRO I is based on research done through the PGP demonstration. Since 2010 is the first year that GPRO was used for the Physician Quality Reporting System, there is insufficient data to warrant changing the sample size at this time. We note, however, that the GPRO I is for group practices with 200 or more eligible professionals. On average, these group practices typically have 20,000 patients assigned to each group practice. Thus, the number of measures and the required sample size is considered to be equitable for practices with this volume of patients and eligible professionals. We will continue to evaluate the

number and types of measures and modules for future program years.

Comment: One commenter recommended that group practices with 50 or more eligible professionals be eligible to participate in GPRO I.

Response: The GPRO I is based on the methodology researched through the PGP demonstration project. We would like to further explore the impact of a smaller patient sample size before implementing GPRO I for group practices less than 200 NPI's. We are, however, finalizing a group practice option for groups with less than 200 eligible professionals (GPRO II) that group practices with 2–199 eligible professionals can participate in for 2011. With the implementation of GPRO II for 2011 it would be a potential drain on resources to also implement GPRO I for smaller practice at the same time.

For the reasons discussed previously and after taking into consideration the comments, we are finalizing the process group practices will be required to use to report data on quality measures for the 2011 as a group practice under GPRO I and the associated criteria for satisfactory reporting of data on quality measures by GPRO I practices, which are summarized in Table 75. Group practices participating in the Physician Quality Reporting System GPRO I as a group practice will be required to report on all of the measures listed in Table 75 of this final rule with comment period. These quality measures are grouped into preventive care measures and four disease modules: heart failure, diabetes, coronary artery disease, and hypertension.

TABLE 75—2011 PROCESS FOR PHYSICIAN GROUP PRACTICES TO PARTICIPATE AS GROUP PRACTICES AND CRITERIA FOR SATISFACTORY REPORTING OF DATA ON QUALITY MEASURES BY GROUP PRACTICES FOR GPRO I

Reporting mechanism	Reporting criteria	Reporting period
A pre-populated data collection tool provided by CMS.	• Report on all measures included in the data collection tool (26 measures); and. • Complete the tool for the first 411 consecutively ranked and assigned beneficiaries in the order in which they appear in the group's sample for each disease module or preventive care measure. If the pool of eligible assigned beneficiaries is less than 411, then report on 100% of assigned beneficiaries.	January 1, 2011–December 31, 2011.

As stated in the CY 2011 PFS proposed rule (75 FR 40179), group practices interested in participating in GPRO I must submit a self-nomination letter accompanied by an electronic file submitted in a format specified by CMS (such as, a Microsoft Excel file) that includes the group practice's TIN(s) and name of the group practice, the name and e-mail address of a single point of contact for handling administrative issues, as well as the name and e-mail address of a single point of contact for technical support purposes. We will validate that the group practice consists of a minimum of 200 NPIs and will supply group practices with this list. The self-nomination letter must also indicate the group practice's compliance with the following requirements:

- Agree to attend and participate in all mandatory GPRO training sessions; and
- Have billed Medicare Part B on or after January 1, 2010 and prior to October 29, 2010.

We are not finalizing our proposal requiring group practices to indicate in their self-nomination letter that they have an active IACS user account. This was a requirement that we proposed to retain from the 2010 Physician Quality Reporting System GPRO self-nomination process. However, since an active IACS user account will not be needed to submit 2010 Physician Quality Reporting System GPRO data to us, we have decided not to require an IACS user account for the 2011 Physician Quality Reporting System GPRO I. Although access to a CMS identity management system will not be required for submitting 2011 PQRI GPRO I data to us, a group practice will need to have access to a CMS identity management system in order to access their 2011 PQRI feedback report.

We intend to post the final 2011 Physician Quality Reporting System GPRO I participation requirements for group practices, including instructions for submitting the self-nomination letter and other requested information, on the Physician Quality Reporting System section of the CMS Web site at *http://www.cms.gov/PQRI* by November 15, 2010 or shortly thereafter. Group practices that wish to self-nominate for 2011 will be required to do so by January 31, 2011. Upon receipt of the self-nomination letters we will assess whether the participation requirements were met by each self-nominated group practice using 2010 Medicare claims data. We will not preclude a group practice from participating in the GPRO I if we discover, from analysis of the 2010 Medicare claims data, that there are some eligible professionals (identified by NPIs) that are not established Medicare providers (that is, have not billed Medicare Part B on or after January 1, 2010 and prior to or on October 29, 2010) as long as the group has at least 200 established Medicare providers. NPIs who are not established Medicare providers, however, would not be included in our incentive payment calculations. Group practices that were selected to participate in the 2010 Physician Quality Reporting System GPRO will automatically be qualified to participate in the 2011 Physician Quality Reporting System GPRO I and will not need to complete the 2011 Physician Quality Reporting System GPRO I self-nomination process.

The 2010 Physician Quality Reporting System GPRO Tool will be updated as needed to include the 2011 Physician Quality Reporting System GPRO I measures. We believe that use of the GPRO data collection tool allows group practices the opportunity to calculate their own performance rates for reporting quality measures.

As stated in the CY 2011 PFS proposed rule (75 FR 40180 through 40181), we intend to provide the selected physician groups with access to this pre-populated database by no later than the first quarter of 2012. For purposes of pre-populating this GPRO I tool, we will assign beneficiaries to each group practice using a patient assessment methodology modeled after the patient assignment methodology used in the PGP demonstration. Based on our desire to model the Physician Quality Reporting System GPRO I after the PGP demonstration, we will also consider applying any refinements made to the methodology used in the PGP demonstration prior to January 1, 2011 to the 2011 Physician Quality Reporting System. We anticipate using Medicare claims data for dates of service

on or after January 1, 2011 and submitted and processed by approximately October 31, 2011 (that is, the last business day of October 2011) to assign Medicare beneficiaries to each group practice. Assigned beneficiaries will be limited to those Medicare Part B FFs beneficiaries with Medicare Parts A and B for whom Medicare is the primary payer. Assigned beneficiaries will not include Medicare Advantage enrollees. A beneficiary will be assigned to the group practice that provides the plurality of a beneficiary's office or other outpatient office evaluation and management allowed charges. Beneficiaries with only 1 office visit to the group practice will be eliminated from the group practice's assigned patient sample for purposes of the 2011 Physician Quality Reporting System GPRO I. We will pre-populate the GPRO I tool with the assigned beneficiaries' demographic and utilization information based on their Medicare claims data.

Upon receipt of the pre-populated data collection tool, the group practice will need to populate the remaining data fields necessary for capturing quality measure information on each of the assigned beneficiaries up to 411 beneficiaries for each disease module and preventive care measure. If the pool of eligible assigned beneficiaries for any disease module or preventive care measure is less than 411, then the group practice must populate the remaining data files for 100 percent of eligible assigned beneficiaries for that disease module or preventive care measure. For each disease module or preventive care measure, the group practice must report information on the assigned patients in the order in which they appear in the group's sample (that is, consecutively).

(B) Group Practice Reporting Option for Group Practices of 2–199 NPIs—GPRO–II

As discussed previously, section 1848(m)(3)(C) of the Act authorized us to define the term "group practice" and required us to establish a process under which eligible professionals in group practices shall be treated as satisfactorily submitting data on Physician Quality Reporting System quality measures, but was not prescriptive with regard to the characteristics of this process. Although for 2010 we did not provide a process for groups of less than 200 NPIs to report under the GPRO, we believe that there are significant potential benefits to allowing reporting at the group level generally. Thus, based on this authority we proposed a new group practice reporting option (GPRO II) for groups of 2–199 NPIs in a TIN for 2011 (75 FR 40181). For GPRO II in 2011, we proposed to require groups of eligible professionals who decide to report as a group to self-nominate. We did not propose to preclude a group practice from participating in the GPRO II if we discover, from analysis of the 2010 Medicare claims data, that there are some eligible professionals (identified by NPIs) that are not established Medicare providers (that is, have not billed Medicare Part B on or after January 1, 2010 and prior to or on) as long as the group has at least 2 established Medicare providers. October 29, 2010 NPIs who are not established Medicare providers, however, would not be included in our incentive payment calculations.

We also proposed that self-nominating groups would need to indicate in this letter if the group intends to report as a group for the eRx Incentive Program and the reporting mechanism the group intends to use to report as a group for the eRx Incentive Program.

Since GPRO II would be a new process available to groups in 2011, we proposed to initially pilot the GPRO II process with a limited number of groups. We proposed to select the first 500 groups that meet the proposed eligibility requirements to participate in the 2011 GPRO II. We proposed to use the postmark to determine the order in which groups self-nominated for GPRO II. We proposed to consider only self-nomination letters postmarked between January 3, 2011 and January 31, 2011. We did not propose to consider letters postmarked prior to January 3, 2011 to prevent groups from self-nominating before the GPRO II requirements are finalized and to discourage groups from self-nominating for GPRO II prior to reviewing the final GPRO II requirements.

For purposes of quality data submission, we proposed, for the GPRO II, to allow eligible professionals to submit their data through claims or through a qualified GPRO registry to the extent registries are technically capable of collecting, calculating and transmitting the required data to CMS and that we are able to accept such data from registries.

For GPRO II, we proposed that in addition to reporting a specific number of individual measures, the group would have to report one or more proposed 2011 Physician Quality Reporting System measures groups depending on the size of the group practice.

For purposes of satisfying the requirements under section 1848(m)(3)(C)(i) of the Act for groups of 2–199 NPIs, we proposed that in order to be treated as satisfactorily reporting under GPRO II, the group practice would be required to report on 50 percent or more (if submitting through claims) of all Medicare Part B patients who fit into the measures group denominator or 80 percent or more of Medicare patients if using a registry to report.

Additionally, to earn a Physician Quality Reporting System incentive payment for all allowed Medicare Part B services that are provided by the TIN, we proposed that a group practice must report on three to six individual 2011 Physician Quality Reporting System measures, depending on the size of the group. We proposed that the group practice may select from among any of the 2011 Physician Quality Reporting System measures on which to submit data, provided the measures selected are not duplicated in the measures group(s) reported.

We proposed that, to satisfactorily report individual Physician Quality Reporting System measures, a group must report each measure at the same rate (percentage) as determined by the method of submission as individual eligible professionals. For example, if reporting via claims, to satisfactorily report individual measures, each measure would need to be reported on at least 50 percent of eligible Medicare Part B FFS patients.

An alternative which we considered and sought comment on was to require that the individual measures be selected from a more limited set of measures, such as measures closely linked to improved population health, or other measures perceived to address the greatest potential benefit from improved performance. A second alternative that we considered and sought comment on was to require group practices, as part of the self-nomination process, to designate whether they were a multispecialty group with primary care, a multispecialty group without primary care, or a single specialty group, and if so, the specialty. Depending on what type of specialty the group is, we would identify a set of Physician Quality Reporting System measures pertaining to the group's specialty and require the group practice to report on the identified set of specialty-specific Physician Quality Reporting System measures.

If a group practice participating in the 2011 Physician Quality Reporting System GPRO II wants to also participate in the 2011 eRx Incentive Program as a small group, we proposed that the group would need to indicate

that preference in their self-nomination letter and would need to report on a specified number of unique encounters based on their group size. For GPRO II reporting in the 2011 eRx Incentive Program, we proposed the following reporting mechanisms: claims, a GPRO eRx qualified registry or a GPRO qualified EHR. As with the 2011 eRx Incentive Program for individual eligible professionals and the 2011 eRx Incentive Program GPRO I, at least 10 percent of a GPRO II group's charges would need to be comprised of codes in the denominator of the electronic prescribing measure and the group would need to use an electronic prescribing system that meets the requirements of the 2011 electronic prescribing measure. Similar to proposed GPRO I, if a GPRO II group self-nominates to report the electronic prescribing measure as a group, we proposed that all members of the group practicing under the group's TIN would be ineligible to report as an individual electronic prescriber.

The following is a summary of the comments received regarding our proposal on the GPRO II option and process for group practices to report Physician Quality Reporting System quality data measures.

Comment: We received favorable support for the proposed addition of GPRO II as a group reporting option, including the requirement to self-nominate and report a measures group along with 3 individual relevant performance measures. One commenter stated that GPRO II will help spur more eligible professionals, specifically those with 2–199 member practices, to participate in the Physician Quality Reporting System.

Response: We appreciate the commenters' support and are finalizing our proposal to add GPRO II as a group reporting option. We note, however, that the number of measures groups and individual measures on which a group practice will be required to report will vary by the group practice's sizes. The specific requirements are described in Table 76 of this final rule with comment period.

Comment: Some commenters opposed the proposed cap of the first 500 groups that self-nominate for GPRO II. Commenters were primarily concerned that this would be too limiting. Another commenter noted that this reporting option has the advantage of mid-year interim feedback reports to assist participating groups in determining whether their Physician Quality Reporting System data is being captured appropriately. One commenter recommended that all self-nominations postmarked in the month of January 2011 be accepted for this reporting option. Another commenter urged us to expand GPRO II quickly beyond the initial cap of 500 practices.

Response: We appreciate the commenters' enthusiasm for this new reporting option and would like to be able to make it available to as many groups as possible, but will need to initially limit the number of groups participating in GPRO II for operational reasons. We will accept at least 500 groups, but could potentially accept more depending on our ability to handle a higher volume of groups participating in this option. We expect that we will be able to expand this option further in future years to make it available to more groups. In addition, we would like to clarify that we did not propose to provide interim feedback reports for group practices participating in GPRO II. Rather, we proposed to provide interim feedback reports for individual eligible professionals who submitted measures group data via claims during the first 2 months of 2011. However, as noted in this section, we are not finalizing this proposal.

Comment: Since we proposed to limit participation in GPRO II to 500 groups in 2011, it was recommended that we strive for diversity of specialty representation rather than just a first-come, first-served approach.

Response: We appreciate the commenter's suggestions. As stated previously, we will accept as many groups as resources allow and select a minimum of 500 GPRO II practices for 2011.

Comment: One commenter requested that GPRO II be made available to groups of any size. The commenter believed this would allow group practices to decide whether to participate in GPRO I or GPRO II depending on which option works best for their practice.

Response: We appreciate the commenter's valuable input. As we explore ways to further expand the GPRO II in future years we may consider making it available to groups of any size.

Comment: One commenter suggested that we reduce the number of individual and group measures required to report for GPRO II. Other commenters stated that the requirement to report at least 1 measures group would disadvantage those group practices for which none of the existing measures groups applies or there are a limited number of applicable measures groups.

Response: We understand the commenters' concerns and are revising the criteria for satisfactory reporting. Whereas we proposed to require group practices to report on a specified percentage of patients for both individual measures and measures groups, we are requiring, for 2011, that group practices report on a specified percentage of patients for the individual measures only. For measures groups, group practices will need to report on only the specified minimum number of patients (see Table 76 of this final rule with comment period). In addition, we believe that, on average, the total reporting burden per eligible professional in a group practice is less than the reporting burden for eligible professionals reporting individually. For example, for a group of 5 eligible professionals that is required to report on 1 measures group and 3 individual measures, this means that the group is required to report on less than 2 measures per eligible professionals compared to 3 measures or 1 measures group per individual eligible professional.

With respect to the commenter's concerns that groups with a limited number of applicable measures groups could be disadvantaged, we believe that as we increase the numbers of measures groups available, this would be less of a concern over time. In the meantime, eligible professionals in group practices that do not have any applicable measures groups are still able to report individual measures as individual eligible professionals and meet the criteria for satisfactory reporting individually.

Comment: One commenter requested that we not restrict the selection of Physician Quality Reporting System measures (for example, only population health measures) for GPRO II, given that multi-specialty groups with primary care, multi-specialty groups without primary care, and single specialty groups will be participating in this reporting option. Restrictions to select Physician Quality Reporting System measures may limit the diversity of practices that elect to report through this option. Similarly, another commenter was concerned that requiring so many primary care measures will make it difficult for specialists, such as psychiatrists, to participate in large numbers.

Response: The commenters appear to be suggesting that we are placing restrictions on the selection of measures for the GPRO II, which is not correct. While GPRO I groups are required to report on a standard set of 26 measures, the GPRO II groups can select any 2011 Physician Quality Reporting System individual measures and measures groups that are relevant to their practice

as long as they report the required number of individual measures and measures groups for their group size (see Table 76 of this final rule with comment period). However, in future years and in future rulemaking we expect to reconsider alternative reporting requirements, including the alternatives of identifying a core set of measures for which broad reporting may be required.

Comment: One commenter requested that we clearly indicate how we derived the performance results for each individual professional if we post performance information derived from the GPRO II on the Physician Compare Web site. The commenter was concerned that the reported performance that will be attributed to an individual eligible professional through GPRO II will not necessarily reflect individual performance.

Response: We appreciate the commenter's feedback. To date, we have not made any Physician Quality Reporting System performance rates publicly available. We value input from external stakeholders. Opinions and alternatives that are provided will assist us in future policy decisions as we develop our plans for the Physician Compare Web site. With respect to the commenter's concern that performance information derived from GPRO II will be attributed to an individual eligible professional, group practice reporting is attributed to the entire group, not to the individual. Additionally, we do not intend to publicly report Physician Quality Reporting System performance results for 2011.

Upon consideration of the comments received, group practices that wish to participate in the GPRO II will need to self-nominate. The self-nomination process will consist of sending a letter with the name of the group, the TIN, an e-mail address of the contact person, and the names and NPIs of all of the eligible professionals practicing under that group's TIN. The self-nomination letter must also be accompanied by an electronic file submitted in a format specified by CMS (such as Microsoft Excel) with the group practice's TIN and NPIs. Self-nomination letters should be sent to: GPRO II, c/o CMS, 7500 Security Blvd., Mail Stop S3–02–01, Baltimore, MD 21244, and must be postmarked by January 31, 2011, for consideration in the program. We are also finalizing our proposal to initially limit the number of groups participating in GPRO II. We seek to make this option available to as many groups as possible but have limited resources. Therefore, as stated previously, we will accept at least 500 groups, but could potentially accept more depending on our ability to handle a higher volume of groups participating in this option. We expect that we will be able to expand this option further in future years to make it available to more groups.

Table 76 sets forth the final criteria for satisfactory reporting under the 2011 Physician Quality Reporting System GPRO II and requirements for each group based on their respective group size (number of eligible professionals). As stated previously, GPRO II groups will be required to report on a specified percentage of patients for reporting the individual measures only. To satisfactorily report measures groups for the 2011 Physician Quality Reporting System GPRO II, the group practice need only report on the minimum number of patients specified in Table 76 for their group size. In addition, since we will not have the ability to determine whether the registries can ensure that only unique patients are counted, GPRO II groups must report the 2011 Physician Quality Reporting System data via claims unless the only measures groups that apply to the practice are one of the four registry-only measures groups listed in section VII.F.2.(i).(5). of this final rule with comment period. Group practices that must report on one of the four registry-only measures groups in order to meet the criteria for satisfactory reporting will be able to use the registry-reporting mechanism to submit their 2011 Physician Quality Reporting System data and must submit all of their 2011 Physician Quality Reporting System GPRO II data via the registry reporting mechanism. However, we anticipate that the list of registries qualified to submit 2011 Physician Quality Reporting System GPRO II data will not be available until summer 2011. Group practices will need to indicate the reporting mechanism they intend to use for the 2011 Physician Quality Reporting System GPRO II in their self-nomination letter.

TABLE 76—2011 PROCESS FOR PHYSICIAN GROUP PRACTICES TO PARTICIPATE AS GROUP PRACTICES AND CRITERIA FOR SATISFACTORY REPORTING OF DATA ON QUALITY MEASURES BY GROUP PRACTICES FOR GPRO II

Group size (number of eligible professionals)	Number of measures groups required to be reported	Minimum number of medicare part b patients in denominator for satisfactory reporting of measures groups	Number of individual measures required to be reported	Percent of medicare part b patients in denominator for satisfactory reporting of individual measures via claims (%)	Percent of medicare part b patients in denominator for satisfactory reporting of individual measures via registries (%)	Required number of unique visits where an e-prescription was generated to be a successful electronic prescriber
2–10	1	35	3	50	80	75
11–25	1	50	3	50	80	225
26–50	2	50	4	50	80	475
51–100	3	60	5	50	80	925
101–199	4	100	6	50	80	1875

We are not finalizing our proposal to analyze the individual professional's data to see if they satisfactorily reported at the individual TIN/NPI level if the group does not satisfactorily report as a GPRO II group. We have determined that this is neither practical nor feasible for us. This should have no impact on how groups will report Physician Quality Reporting System data under GPRO since claims will identify both the TIN and the individual eligible professional rendering the service regardless of whether we analyze the claims at the group or individual level. Although there will be some risk to eligible professionals who are part of a GPRO II group if the group fails to satisfactorily report, we believe this risk is outweighed by the additional resources that would be required to process a group's data at both the group and individual levels and the fact that

all participants' incentive payments could potentially be delayed.

h. Statutory Requirements and Other Considerations for 2011 Physician Quality Reporting System Measures

(1) Statutory Requirements for 2011 Physician Quality Reporting System Measures

Under section 1848(k)(2)(C)(i) of the Act, the Physician Quality Reporting System quality measures shall be such measures selected by the Secretary from measures that have been endorsed by the entity with a contract with the Secretary under subsection 1890(a) of the Act (currently, that is the National Quality Forum, or NQF). However, in the case of a specified area or medical topic determined appropriate by the Secretary for which a feasible and practical measure has not been endorsed by the NQF, section 1848(k)(2)(C)(ii) of the Act authorizes the Secretary to specify a measure that is not so endorsed as long as due consideration is given to measures that have been endorsed or adopted by a consensus organization identified by the Secretary, such as the AQA alliance. In light of these statutory requirements, we believe that, except in the circumstances specified in the statute, each proposed 2011 Physician Quality Reporting System quality measure would need to be endorsed by the NQF. Additionally, section 1848(k)(2)(D) of the Act requires that for each 2011 Physician Quality Reporting System quality measure, "the Secretary shall ensure that eligible professionals have the opportunity to provide input during the development, endorsement, or selection of measures applicable to services they furnish."

The statutory requirements under section 1848(k)(2)(C) of the Act, subject to the exception noted previously, require only that the measures be selected from measures that have been endorsed by the entity with a contract with the Secretary under section 1890(a) (that is, the NQF) and are silent with respect to how the measures that are submitted to the NQF for endorsement were developed. The basic steps for developing measures applicable to physicians and other eligible professionals prior to submission of the measures for endorsement may be carried out by a variety of different organizations. We do not believe there needs to be any special restrictions on the type or make up of the organizations carrying out this basic development of physician measures, such as restricting the initial development to physician-controlled organizations. Any such restriction would unduly limit the basic development of quality measures and the scope and utility of measures that may be considered for endorsement as voluntary consensus standards.

(2) Other Considerations for 2011 Physician Quality Reporting System Measures

As stated previously, in addition to reviewing the 2010 Physician Quality Reporting System measures for purposes of developing the proposed 2011 Physician Quality Reporting System measures, we reviewed and considered measure suggestions including comments received in response to the CY 2010 PFS proposed and final rules with comment period. Additionally, suggestions and input received through other venues, such as an invitation for measures suggestions via the Listening Session held February 2, 2010, were also reviewed and considered for purposes of our development of the list of proposed 2011 Physician Quality Reporting System quality measures.

With respect to the selection of new measures, we applied the following considerations, which include many of the same considerations applied to the selection of 2009 and 2010 Physician Quality Reporting System quality measures for inclusion in the 2011 Physician Quality Reporting System quality measure set previously described:

- High Impact on Healthcare.

++ Measures that are high impact and support CMS and HHS priorities for improved quality and efficiency of care for Medicare beneficiaries. These current and long term priority topics include the following: Prevention; chronic conditions; high cost and high volume conditions; elimination of health disparities; healthcare-associated infections and other conditions; improved care coordination; improved outcomes; improved efficiency; improved patient and family experience of care; improved end-of-life/palliative care; effective management of acute and chronic episodes of care; reduced unwarranted geographic variation in quality and efficiency; and adoption and use of interoperable HIT.

- Measures that are included in, or facilitate alignment with, other Medicare, Medicaid, and CHIP programs in furtherance of overarching healthcare goals.
- NQF Endorsement.

++ Measures must be NQF-endorsed by June 1, 2010, in order to be considered for inclusion in the 2011 Physician Quality Reporting System quality measure set except as provided under section 1848(k)(2)(C)(ii) of the Act.

++ Section 1848(k)(2)(C)(ii) of the Act provides an exception to the requirement that the Secretary select measures that have been endorsed by the entity with a contract under section 1890(a) of the Act (that is, the NQF).

++ The statutory requirements under section 1848(k)(2)(C) of the Act, subject to the exception noted previously, require only that the measures be selected from measures that have been endorsed by the entity with a contract with the Secretary under section 1890(a) (that is, the NQF) and are silent with respect to how the measures that are submitted to the NQF for endorsement are developed. The basic steps for developing measures applicable to physicians and other eligible professionals prior to submission of the measures for endorsement may be carried out by a variety of different organizations. We do not believe there needs to be any special restrictions on the type or make up of the organizations carrying out this basic development of physician measures, such as restricting the initial development to physician-controlled organizations. Any such restriction would unduly limit the basic development of quality measures and the scope and utility of measures that may be considered for endorsement as voluntary consensus standards. The requirements under section 1848(k)(2)(C) of the Act pertain only to the selection of measures and not to the development of measures.

- Address Gaps in the Physician Quality Reporting System Measure Set.

++ Measures that increase the scope of applicability of the Physician Quality Reporting System measures to services furnished to Medicare beneficiaries and expand opportunities for eligible professionals to participate in the Physician Quality Reporting System.

- Measures of various aspects of clinical quality including outcome measures, where appropriate and feasible, process measures, structural measures, efficiency measures, and measures of patient experience of care.

Other considerations that we applied to the selection of measures for 2011, regardless of whether the measure was a 2010 Physician Quality Reporting System measure or not, were—

- Measures that are functional, which is to say measures that can be technically implemented within the capacity of the CMS infrastructure for data collection, analysis, and calculation of reporting and performance rates. For example, we proposed to replace existing 2010 Physician Quality Reporting System measures #114 and #115 with updated and improved measure #TBD

(Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention), which is less technically challenging to report.

• In the 2011 Physician Quality Reporting System, as in the 2010 Physician Quality Reporting System, for some measures that are useful, but where data submission is not feasible through all otherwise available Physician Quality Reporting System reporting mechanisms, a measure may be included for reporting solely through specific reporting mechanism(s) in which its submission is feasible.

In the proposed rule, we invited comments on the implication of including or excluding any given measure or measures for our proposed 2011 Physician Quality Reporting System quality measure set, as well as feedback relative to our proposed approach in selecting measures (75 FR 40185). We indicated that while we welcome all constructive comments and suggestions, and may consider such recommended measures for inclusion in future measure sets for the Physician Quality Reporting System and other programs to which such measures may be relevant, we were not able to consider such additional measures for inclusion in the final 2011 measure set.

As discussed previously, section 1848(k)(2)(D) of the Act requires that the public have the opportunity to provide input during the selection of measures. We also are required by other applicable statutes to provide opportunity for public comment on provisions of policy or regulation that are established via notice and comment rulemaking. Measures that were not included in the proposed rule for inclusion in the 2011 Physician Quality Reporting System that are recommended to CMS via comments on the proposed rule have not been placed before the public to comment on the selection of those measures within the rulemaking process. Even when measures have been published in the **Federal Register**, but in other contexts and not specifically proposed as Physician Quality Reporting System measures, such publication does not provide true opportunity for public comment on those measures' potential inclusion in the Physician Quality Reporting System. Thus, such additional measures recommended for selection for the 2011 Physician Quality Reporting System via comments on the CY 2011 PFS proposed rule cannot be included in the 2011 measure set. However, as discussed previously, we will consider comments and recommendations for measures, which may not be applicable to the final set of 2011 Physician Quality Reporting System measures, for purposes of identifying measures for possible use in the Physician Quality Reporting System in future years or other initiatives to which those measures may be pertinent.

In addition, as in prior years, we again note that we do not use notice and comment rulemaking as a means to update or modify measure specifications. Quality measures that have completed the consensus process have a designated party (usually, the measure developer/owner) who has accepted responsibility for maintaining the measure. In general, it is the role of the measure owner, developer, or maintainer to make changes to a measure. Therefore, comments requesting changes to a specific proposed Physician Quality Reporting System measure's title, definition, and detailed specifications or coding should be directed to the measure developer identified in Tables 78 through 96. Contact information for the 2010 Physician Quality Reporting System measure developers is listed in the "2010 PQRI Quality Measures List," which is available on the Physician Quality Reporting System section of the CMS Web site at *http://www.cms.gov/PQRI.*

However, we stress that inclusion of measures that are not NQF endorsed or AQA adopted is an exception to the requirement under section 1848(k)(2)(C)(i) of the Act that measures be endorsed by the NQF. We may exercise this exception authority in a specified area or medical topic for which a feasible and practical measure has not been endorsed by NQF, so long as due consideration is given to measures that have been endorsed by the NQF.

(3) Summary of Comments and Responses

The following is summary of the comments we received regarding the statutory requirements and other considerations for the selection of 2011 Physician Quality Reporting System measures.

Comment: Some commenters strongly support the adoption of NQF-endorsed measures only. One commenter stated that the AQA is no longer doing measure evaluation work and should not be allowed to approve measures for the Physician Quality Reporting System as a way to sidestep the well-designed and well-executed process of the NQF.

Response: We agree that endorsement of measures by the NQF is an important criteria for inclusion in the Physician Quality Reporting System. However, section 1848(k)(2)(C)(i) of the Act provides an exception to the requirement that measures be endorsed by the NQF. We may exercise this exception authority in a specified area or medical topic for which a feasible and practical measure has not been endorsed by NQF, so long as due consideration is given to measures that have been endorsed by the NQF. For this reason, we retain the ability to include non-NQF endorsed measures in the Physician Quality Reporting System. Once those measures work through the NQF process, we may remove those that were not endorsed by the NQF from the program.

Comment: A few commenters opposed our conclusion that any organization can develop quality measures. The AMA-specialty society quality consortium, the PCPI, should be recognized by us to specify the quality measures and adequately test them for inclusion in the Meaningful Use program.

Response: We do not believe there needs to be any special restrictions on the type or make up of the organizations carrying out the basic development of measures for physicians and other eligible professionals, such as restricting the initial development to physician-controlled organizations. While we agree that expertise in measure development is important in the measure development and consensus processes, any such restriction would unduly limit the basic development of quality measures and the scope and utility of measures that may be considered for endorsement as voluntary consensus standards. In addition, physicians are not the only types of professionals eligible to participate in the Physician Quality Reporting System.

Comment: Another commenter encouraged us to allow for other means for measure endorsement due to NQF's lack of timeliness and consistency issues.

Response: As stated previously, section 1848(k)(2)(C)(i) of the Act provides an exception to the requirement that measures be endorsed by the NQF. We may exercise this exception authority in a specified area or medical topic for which a feasible and practical measure has not been endorsed by NQF, so long as due consideration is given to measures that have been endorsed by the NQF. In certain circumstance, we have exercised this exception authority to include measures that have not yet gone through the NQF endorsement process to address measure gaps.

Comment: Many commenters requested that we encourage the development and use of measures in

specific areas or topics. The specific areas or topics that commenters recommended as priorities included sub-specialty specific measures, measures that reflect the day-to-day treatment of cancer patients, risk-adjusted outcome measures (as opposed to process measures), measures that better reflect patient preferences, patient experience, functional status, and care coordination, measures that capture demographic data in ways that enable measures to be stratified and used to identify and address health disparities, measures that address high-burden disease areas especially prevalent in the Medicare beneficiary population, broader measures to enhance accurate identification and treatment of atrial fibrillation, measures that will be retooled for future use in EHR reporting, measures that must be retooled for the impending ICD–10–CM/PCS compliance date, and measures to capture whether patients have received preventive vaccinations.

Response: We appreciate the commenters' recommendations for expanding criteria for measure selection and prioritization. We note, however, that we largely depend on the development of measures by professional organizations and other measure developers and encourage professional organizations and other measure developers to fund and develop measures that address the priority areas identified by the commenters. In addition, if there are specific measures that commenters would like us to consider for future years to address these areas, we urge them to submit the specific measure suggestions via the 2012 Call for Measures. Information on the 2012 Call for Measures will be posted on the Physician Quality Reporting System section of the CMS Web site when it becomes available. We anticipate conducting the 2012 Call for Measures in late 2010 or early 2011.

Comment: One commenter suggested the proposed addition of Physician Quality Reporting System measures for 2011 be re-visited in context with the August 2010 publication of 69 NQF-endorsed® ambulatory performance measures.

Response: We appreciate the commenter's valuable input. As stated previously and in the proposed rule (75 FR 40185), we are not able to consider additional measures for inclusion in the final 2011 Physician Quality Reporting System measure set beyond what we proposed. However, we may consider them for inclusion in future measure sets for the Physician Quality Reporting System.

Comment: A few commenters recommended that we implement more meaningful and impactful measures. Some of the actions specifically recommended by the commenters include:

- Require the collection of patient experience surveys, if there is an NQF-endorsed survey available for that professional;
- Remove measures that "document" the presence of evaluation, assessment, and counseling as there is no relationship between such measures and patient outcome;
- Consider adding measures from NQF's Ambulatory Care Measures Using Clinically Enriched Administrative Data that are appropriate for the Medicare population; and
- Develop measures that will fill gaps in the Physician Quality Reporting System measure set and that adhere to key criteria for robust measures.

Response: We appreciate the commenter's feedback regarding the use of more meaningful and impactful measures in the Physician Quality Reporting System. We appreciate the time and effort taken in providing your recommendation and, as stated previously, we urge the commenter to work with professional organizations and other measure developers to fund and develop measures that address the priority areas identified by the commenter and/or submit recommendations for specific measures that the commenter would like us to consider for future years via the 2012 Call for Measures.

Comment: One commenter urged us to be mindful of the resources required to translate quality data into improved provider performance. Therefore, we should ensure appropriate phasing-in of new measures into our current quality reporting programs.

Response: We appreciate the commenter's valuable input. While we strive to identify gaps of care and ensure that specialties have measures to report, we also recognize that there is a level of effort associated with translating the quality data reported into better care. As such, we are adding a limited set of new measures that focuses on identified gaps and ensures specialties have measures to report.

Comment: One commenter requested that we further explore and discuss the phase-in dates in context with the ICD–10–CM/PCS transition date.

Response: We are planning for implementation of ICD–10 and are working in collaboration with the Physician Quality Reporting System measure developers/owners towards the coding transition. More information on the phase-in dates for this transition will be provided once it becomes available.

i. The Final 2011 Physician Quality Reporting System Quality Measures for Individual Eligible Professionals

For 2011, we proposed to include a total of 200 measures (this includes both individual measures and measures that are part of a proposed 2011 measures group) on which individual eligible professionals can report for the 2011 Physician Quality Reporting System (75 FR 40185 through 40198).

The following is a summary of the comments received on the proposed 2011 Physician Quality Reporting System measures in general and comments on the measures from the 2010 Physician Quality Reporting System not proposed for inclusion in the 2011 Physician Quality Reporting System.

Comment: One commenter suggested that we consider publishing a list of reportable measures for each eligible profession. This would make the reporting process more clear and accessible to professionals trying to participate in the program by helping them quickly determine which measures are relevant to their practices.

Response: In August 2010, we posted on the Analysis and Payment page of the Physician Quality Reporting System section of the CMS Web site *http://www.cms.gov/pqri,* a 1st quarter 2010 aggregate QDC error report by specialty. For each 2010 Physician Quality Reporting System measure, this report lists the specialties that submitted valid QDCs for the measure during the 1st quarter of 2010. Thus, an eligible professional could use this report to ascertain whether a measure is reportable by his or her profession.

Comment: One commenter suggested that it would be useful for participating eligible professionals, as well as other stakeholders, if we developed a table that clearly summarizes the status of a measure's NQF endorsement, AQA endorsement, owner, and how the measure aligns with meaningful use clinical quality measure requirements.

Response: Tables 78 through 97 of this final rule with comment period includes the status of each measure's NQF endorsement, as well as AQA endorsement if applicable and the measure is not NQF endorsed. In addition, Tables 55 and 56 of the CY 2011 PFS proposed rule (75 FR 40193), which lists the measures available for EHR reporting in 2011, includes information as to whether a measure is included in the EHR Incentive Program for program years 2011 and 2012. We

note, however, that the electronic specifications for measures that are included in the Physician Quality Reporting System and Electronic Health Record Incentive Program may be different. Eligible professionals should refer to the measure specifications for the appropriate program.

Comment: We received numerous comments in support of the 2010 Physician Quality Reporting System quality measures proposed for inclusion in the 2011 Physician Quality Reporting System. Specific measures or measures topics on which we received favorable support include the measures on osteoporosis, audiology, speech-language pathology, and measures 9, 106, 107, 124, 126, 127, 128, 130, 131, 134, 148, 149, 150, 151, 154, 155, 173, 181, 188, 189, 190, and 200. Commenters often cited the applicability of a specific measure to their specialty and/or profession.

Response: We appreciate the feedback and are finalizing our proposals to include these measures in the 2011 Physician Quality Reporting System measure set. These measures address one or more of the considerations for measures selected for inclusion in the 2011 Physician Quality Reporting System previously discussed.

Comment: A couple of commenters asked us to reconsider the proposal to retire Measure #135, Chronic Kidney Disease (CKD): Influenza Immunization. Although the measure was considered for endorsement by NQF but was ultimately not endorsed, the measure is adopted by the AQA.

Response: On August 26, 2010, we published a correction notice in the **Federal Register** (75 FR 52487) indicating we inadvertently included this measure in the table that lists the 2010 Physician Quality Reporting System measures not proposed to be included in the 2011 Physician Quality Reporting System. As such, we are including Measure #135 in the 2011 Physician Quality Reporting System individual measures set only. We are not, however, finalizing our proposal to include Measure #135 from the CKD Measures Group. The reporting requirements for Measure #135 are different from the other measures in the CKD measures group.

Comment: A couple of commenters recommended keeping Measure #136, Melanoma: Follow-Up Aspects of Care, for purposes of reporting to the 2011 Physician Quality Reporting System. The commenters believe that although the measure is no longer endorsed by the National Quality Forum, it is still a valuable tool in clinician quality improvement. The commenters also noted that this measure is most effective as part of a set with Measures #137: Melanoma: Continuity of Care—Recall System and #138: Melanoma: Coordination of Care, which are maintained in the list of measures available for 2011 Physician Quality Reporting System.

Response: We are finalizing our proposal to not include Measure #136 in the 2011 Physician Quality Reporting System measure set. As stated in the proposed rule, (75 FR 40186) and by the commenter, Measure #136 was considered by NQF for possible endorsement but ultimately was not NQF-endorsed. We note, also, that we proposed and are finalizing a new melanoma measure, Melanoma: Overutilization of Imaging Studies in Stage 0–1A Melanoma, for the 2011 Physician Quality Reporting System. This measure meets one or more of the considerations for measures selected for inclusion in the 2011 Physician Quality Reporting System.

Comment: We received one comment in support of our proposal to retire Measure #139 Cataracts: Comprehensive Preoperative Assessment for Cataract Surgery with Intraocular Lens (IOL) Placement. Another commenter, however, requested that this measure be retained because it evaluates safe and appropriate use of cataract surgery.

Response: We appreciate the commenters' feedback. Based on the fact that the measure was reviewed for endorsement by the NQF and ultimately not endorsed, we are finalizing our proposal to not include this measure in the 2011 Physician Quality Reporting System measure set.

Comment: In addition to the quality measures and measures groups for individual eligible professionals we had proposed in Tables 52 through 54 of the CY 2011 PFS proposed rule (75 FR 40186 through 40192), several commenters suggested quality measures, measures groups, and/or topics for which additional measures or measures groups should be added for the 2011 Physician Quality Reporting System. Specifically, commenters recommended that we adopt—

- A measure for AAA ultrasound screening;
- A COPD measures group;
- A stroke measures group comprised of the following 5 measures: (1) Deep vein thrombosis (DVT) prophylaxis; (2) Discharged on antithrombotic therapy; (3) Patients with atrial fibrillation/flutter receiving anticoagulant therapy; (4) Thrombolytic therapy; and (5) Discharged on statin medication;
- A measures group that focuses on quality measures common to every long-term care resident, which could include Physician Quality Reporting System measures #47, 110, 111, 130, 154, and 155;
- Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients; and
- Comprehensive Colonoscopy Documentation.

Response: As stated previously, we have not included in this final rule with comment period for the 2011 Physician Quality Reporting System any individual and measures groups that were not identified in the CY 2011 PFS proposed rule as proposed 2011 Physician Quality Reporting System measures. We are obligated by section 1848(k)(2)(D) of the Act to give eligible professionals an opportunity to provide input on measures recommended for selection, which we do via the proposed rule. Thus, such additional measures recommended via comments on the proposed rule cannot be included in the 2011 Physician Quality Reporting System quality measure set. However, we have captured these recommendations and will have them available for consideration in identifying measure sets/groups for the Physician Quality Reporting System for future years and other initiatives to which those measures or measures groups may apply.

Comment: Some commenters asked that we reconsider measures or measures groups that had been previously submitted to us as suggestions for 2011 Physician Quality Reporting System measures but were not proposed for inclusion in the 2011 Physician Quality Reporting System measure set. Specifically, commenters requested that we reconsider inclusion of the Parkinson's disease and epilepsy measurement sets in the Physician Quality Reporting System program, a diabetic retinopathy measures group with 2 measures, and a cataracts measures group with 2 measures.

Response: All measures or measures groups that were previously submitted to us as suggestions for 2011 Physician Quality Reporting System measures were reviewed for possible inclusion in the 2011 Physician Quality Reporting System measure set. Upon review, however, some measures either failed to meet the threshold criteria for inclusion in the 2011 Physician Quality Reporting system measure set (as described previously) or did not meet the definition of "measures group" proposed and finalized at 42 CFR 414.90. These measures that did not pass the review process were not proposed for inclusion in the 2011 Physician Quality Reporting System measure set.

Comment: Several commenters recommended changes to the detailed specifications or coding for one or more of the proposed measures or measures groups. Many of the requests were specifically concerned that measures be expanded to include additional professionals to whom the measure(s) may apply.

Specifically, one commenter requested that any measure used by primary care physicians be expanded to include not just the office, but home and domiciliary codes as well. One commenter requested that the denominator codes for the CAP measures group be expanded to include other infectious pneumonia ICD–9–CM diagnostic codes than "acute" pneumonia diagnosis codes so pulmonologists can have sufficient numbers of patients to report this measures group. A few commenters requested that the age range for the proposed asthma measures group be expanded, instead of being restricted to 5 to 50 years of age. One commenter requested that the Initial Hospital Admit Evaluation and Management codes (99221, 99222, and 99223) be removed from the denominators of measures #32, #33 and #36 and added to measures #56–59 for 2011. The commenter also requested that an exemption be given to eligible professionals penalized for not reaching an 80 percent reporting threshold on measures #32, #33, and #36 because of the unintended effect of substituting the 99221, 99222, and 99223 series codes for the consultation 99251–99255 series that had been eliminated from the Medicare program. Lastly, another commenter requested that allowable performance exclusion codes be created for measures #201 and #202.

Response: Although the Secretary is required to provide opportunities for public comment on selected measures and do so through notice and comment rulemaking, we do not use notice and comment rulemaking as a means to update or modify measure specifications. In general, it is the role of the measure owner, developer, or maintainer to make substantive changes to the measures, such as the changes suggested by the commenters. The measure maintainer and/or the developer/owner of a measure included in the final set of 2011 Physician Quality Reporting System measures is identified in the "Measure developer" column of Tables M6 through M24. In addition, for those measures which are NQF-endorsed, the NQF has an established maintenance process that could be accessed to recommend the changes suggested by the commenters.

Comment: One commenter supported our proposal to replace Physician Quality Reporting System Measures #114 and #115 with the Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention measure (NQF Measure Number 0028). Another commenter, however, requested that Physician Quality Reporting System Measures #114 and #115 be included in the 2011 Physician Quality Reporting System as these measures are included in the EHR Incentive Program clinical quality measures and thus will be of great interest for eligible professionals to report on.

Response: Although Physician Quality Reporting System Measures #114 and #115 are included as clinical quality measures under the EHR Incentive Program, we have decided, for the Physician Quality Reporting System, to replace Physician Quality Reporting System Measures #114 Preventive Care and Screening: Inquiry Regarding Tobacco Use and #115 Preventive Care and Screening: Advising Smokers and Tobacco Users to Quit with an NQF-endorsed measure, Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention. We believe this measure is more comprehensive and less technically challenging than Physician Quality Reporting System Measures #114 and #115. We may consider aligning the preventive care and screening measures related to tobacco use and smoking under these 2 programs in future years.

Comment: One commenter stressed the importance of publishing the detailed Physician Quality Reporting System specifications for individual measures and measures groups by November 15, 2010.

Response: We will make every attempt to post the detailed specifications and specific instruction for reporting 2011 individual and measures groups on the Physician Quality Reporting System section of the CMS Web site at *http://www.cms.hhs.gov/PQRI* as close to November 15, 2010 as possible. In any event, the detailed specifications will be posted by no later than December 31, 2010.

Based on the criteria previously discussed and our review of these comments, we are including the individual measures listed in Tables M6 through M10 in the final 2011 Physician Quality Reporting System individual quality measure set. We are also including 14 measures groups in the final 2011 Physician Quality Reporting System quality measure set, which are listed in Tables M11 through M24. The individual measures selected for the 2011 Physician Quality Reporting System can be categorized as follows:

- 2011 Individual Quality Measures Selected From the 2010 Physician Quality Reporting System Quality Measures Set Available for Claims-based Reporting and Registry-based Reporting;
- 2011 Individual Quality Measures Selected From the 2010 Physician Quality Reporting System Quality Measures Set Available for Registry-based Reporting Only;
- New Individual Quality Measures for 2011; and
- 2011 Measures Available for EHR-based Reporting.

In addition, we are retiring the 5 measures in Table 77 because they did not meet one or more of the considerations for selection of 2011 measures. Specifically, we retired Physician Quality Reporting System Measures #136, #139, and #174 for 2011 because they were considered by NQF for possible endorsement but ultimately were not NQF-endorsed. In addition, we are replacing 2010 Physician Quality Reporting System Measures #114 and #115 with an updated and improved measure (#TBD "Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention"), which is less technically challenging to report.

TABLE 77—2011 PHYSICIAN QUALITY REPORTING SYSTEM QUALITY MEASURES NOT INCLUDED IN THE 2011 PHYSICIAN QUALITY REPORTING SYSTEM

Physician Quality Reporting System Measure No.	Measure title
114	Preventive Care and Screening: Inquiry Regarding Tobacco Use.
115	Preventive Care and Screening: Advising Smokers and Tobacco Users to Quit.
136	Melanoma: Follow-Up Aspects of Care.
139	Cataracts: Comprehensive Preoperative Assessment for Cataract Surgery with Intraocular Lens (IOL) Placement.

TABLE 77—2011 PHYSICIAN QUALITY REPORTING SYSTEM QUALITY MEASURES NOT INCLUDED IN THE 2011 PHYSICIAN QUALITY REPORTING SYSTEM—Continued

Physician Quality Reporting System Measure No.	Measure title
174	Pediatric End-Stage Renal Disease (ESRD): Plan of Care for Inadequate Hemodialysis.

(1) 2011 Individual Quality Measures Selected From the 2010 Physician Quality Reporting System Quality Measures Set Available for Claims-Based Reporting and Registry-Based Reporting

For 2011, we proposed to retain 171 measures currently used in the 2010 Physician Quality Reporting System. These 171 proposed measures include 45 registry-only measures currently used in the 2010 Physician Quality Reporting System, and 126 individual quality measures for either claims-based reporting or registry-based reporting (75 FR 40186 through 40190 and 52489 through 52490). These 171 proposed measures did not include any measures that are proposed to be included as part of the 2011 Back Pain measures group. Similar to the 2010 Physician Quality Reporting System, for 2011, we proposed that any 2011 Physician Quality Reporting System measures that are included in the Back Pain measures group would not be reportable as individual measures through claims-based reporting or registry-based reporting.

Although they were ultimately not NQF-endorsed, we proposed to exercise our exception authority under section 1848(k)(2)(C)(ii) of the Act and include measures #188, #189, and #190, since we are not aware of any other NQF-endorsed measures that are available to audiologists.

The following is a summary of the comments received on the proposed 2011 individual quality measures selected from the 2010 Physician Quality Reporting System quality measures set available for claims-based reporting and registry-based reporting.

Comment: A commenter urged us to continue to allow reporting of measure #175, Plan of Care for Inadequate Hemodialysis in 2011, regardless of NQF endorsement since this was approved by the AQA in 2008.

Response: We are unclear whether the commenter is referring to measure #174, which is the Pediatric ESRD: Plan of Care for Inadequate Hemodialysis measure or measure #175, which is the Pediatric ESRD: Influenza Immunization measure since both of these are AQA adopted measures. For the reasons described previously, we are not retaining measure #174 for the 2011 Physician Quality Reporting System. We are, however, retaining measure #175 for the 2011 Physician Quality Reporting System.

Comment: A commenter supported the 2011 proposed measures selected from the 2010 Physician Quality Reporting System measure set available for either claims-based reporting or registry-based reporting but noted there have been inquiries about how the process component of Measure #193: Perioperative Temperature Management is defined. As a result, the commenter pointed out that this measure is undergoing revision.

Response: We appreciate the commenter's valuable input and will continue to monitor the status of this measure.

For the reasons discussed previously and based on the comments received, we are finalizing in the 2011 Physician Quality Reporting System quality measure set the 171 2010 Physician Quality Reporting System measures that were proposed to be available in the 2010 Physician Quality Reporting System for claims and registry reporting identified in Table 78. The 171 individual 2010 Physician Quality Reporting System measures selected for inclusion in the 2011 Physician Quality Reporting System quality measure set as individual quality measures for either claims-based reporting or registry-based reporting are listed by their Physician Quality Reporting System Measure Number and Title in Table 78, along with the name of the measure's developer/owner and NQF measure number, if applicable. The Physician Quality Reporting System Measure Number is a unique identifier assigned by CMS to all measures in the Physician Quality Reporting System measure set. Once a Physician Quality Reporting System Measure Number is assigned to a measure, it will not be used again to identify a different measure, even if the original measure to which the number was assigned is subsequently retired from the Physician Quality Reporting System measure set. A description of the measures listed in Table 78 can be found in the "2010 PQRI Quality Measures List," which is available on the Measures and Codes page of the Physician Quality Reporting System section of the CMS Web site at *http://www.cms.hhs.gov/PQRI.*

BILLING CODE 4120–01–P

TABLE 78: 2011 Individual Measures Selected From the 2010 Physician Quality Reporting System Quality Measure Set Available for Either Claims-based Reporting or Registry-based Reporting

Physician Quality Reporting System Measure Number	Measure Title	Measure Developer	NQF Measure Number
1	Diabetes Mellitus: Hemoglobin A1c Poor Control in Diabetes Mellitus	NCQA	0059
2	Diabetes Mellitus: Low Density Lipoprotein (LDL-C) Control in Diabetes Mellitus	NCQA	0064
3	Diabetes Mellitus: High Blood Pressure Control in Diabetes Mellitus	NCQA	0061
6	Coronary Artery Disease (CAD): Oral Antiplatelet Therapy Prescribed for Patients with CAD	AMA-PCPI	0067
9	Major Depressive Disorder (MDD): Antidepressant Medication During Acute Phase for Patients with MDD	NCQA	0105
10	Stroke and Stroke Rehabilitation: Computed Tomography (CT) or Magnetic Resonance Imaging (MRI) Reports	AMA-PCPI/NCQA	0246
12	Primary Open Angle Glaucoma (POAG): Optic Nerve Evaluation	AMA-PCPI/NCQA	0086
14	Age-Related Macular Degeneration (AMD): Dilated Macular Examination	AMA-PCPI/NCQA	0087
18	Diabetic Retinopathy: Documentation of Presence or Absence of Macular Edema and Level of Severity of Retinopathy	AMA-PCPI/NCQA	0088
19	Diabetic Retinopathy: Communication with the Physician Managing On-going Diabetes Care	AMA-PCPI/NCQA	0089
20	Perioperative Care: Timing of Antibiotic Prophylaxis – Ordering Physician	AMA-PCPI/NCQA	0270
21	Perioperative Care: Selection of Prophylactic Antibiotic – First OR Second Generation Cephalosporin	AMA-PCPI/NCQA	0268
22	Perioperative Care: Discontinuation of Prophylactic Antibiotics (Non-Cardiac Procedures)	AMA-PCPI/NCQA	0271
23	Perioperative Care: Venous Thromboembolism (VTE) Prophylaxis (When Indicated in ALL Patients)	AMA-PCPI/NCQA	0239
24	Osteoporosis: Communication with the Physician Managing On-going Care Post-Fracture of Hip, Spine or Distal Radius for Men and Women Aged 50 Years and Older	AMA-PCPI/NCQA	0045
28	Aspirin at Arrival for Acute Myocardial Infarction (AMI)	AMA-PCPI/NCQA	0092
30	Perioperative Care: Timely Administration of Prophylactic Parenteral Antibiotics	AMA-PCPI/NCQA	0270
31	Stroke and Stroke Rehabilitation: Deep Vein Thrombosis Prophylaxis (DVT) for Ischemic Stroke or Intracranial Hemorrhage	AMA-PCPI/NCQA	0240

Physician Quality Reporting System Measure Number	Measure Title	Measure Developer	NQF Measure Number
32	Stroke and Stroke Rehabilitation: Discharged on Antiplatelet Therapy	AMA-PCPI/NCQA	0325
35	Stroke and Stroke Rehabilitation: Screening for Dysphagia	AMA-PCPI/NCQA	0243
36	Stroke and Stroke Rehabilitation: Consideration of Rehabilitation Services	AMA-PCPI/NCQA	0244
39	Screening or Therapy for Osteoporosis for Women Aged 65 Years and Older	AMA-PCPI/NCQA	0046
40	Osteoporosis: Management Following Fracture of Hip, Spine or Distal Radius for Men and Women Aged 50 Years and Older	AMA-PCPI/NCQA	0045
41	Osteoporosis: Pharmacologic Therapy for Men and Women Aged 50 Years and Older	AMA-PCPI/NCQA	0049
43	Coronary Artery Bypass Graft (CABG): Use of Internal Mammary Artery (IMA) in Patients with Isolated CABG Surgery	Society of Thoracic Surgeons (STS)	0516
44	Coronary Artery Bypass Graft (CABG): Preoperative Beta-Blocker in Patients with Isolated CABG Surgery	STS	0235
45	Perioperative Care: Discontinuation of Prophylactic Antibiotics (Cardiac Procedures)	AMA-PCPI/NCQA	0637
46	Medication Reconciliation: Reconciliation After Discharge from an Inpatient Facility	AMA-PCPI/NCQA	0097
47	Advance Care Plan	AMA-PCPI/NCQA	0326
48	Urinary Incontinence: Assessment of Presence or Absence of Urinary Incontinence in Women Aged 65 Years and Older	AMA-PCPI/NCQA	0098
49	Urinary Incontinence: Characterization of Urinary Incontinence in Women Aged 65 Years and Older	AMA-PCPI/NCQA	0099
50	Urinary Incontinence: Plan of Care for Urinary Incontinence in Women Aged 65 Years and Older	AMA-PCPI/NCQA	0100
51	Chronic Obstructive Pulmonary Disease (COPD): Spirometry Evaluation	AMA-PCPI	0091
52	Chronic Obstructive Pulmonary Disease (COPD): Bronchodilator Therapy	AMA-PCPI	0102
53	Asthma: Pharmacologic Therapy	AMA-PCPI	0047
54	12-Lead Electrocardiogram (ECG) Performed for Non-Traumatic Chest Pain	AMA-PCPI/NCQA	0090
55	12-Lead Electrocardiogram (ECG) Performed for Syncope	AMA-PCPI/NCQA	0093
56	Community-Acquired Pneumonia (CAP): Vital Signs	AMA-PCPI/NCQA	0232
57	Community-Acquired Pneumonia (CAP): Assessment of Oxygen Saturation	AMA-PCPI/NCQA	0094
58	Community-Acquired Pneumonia (CAP): Assessment of Mental Status	AMA-PCPI/NCQA	0234
59	Community-Acquired Pneumonia (CAP): Empiric Antibiotic	AMA-PCPI/NCQA	0096
64	Asthma: Asthma Assessment	AMA-PCPI	0001

Physician Quality Reporting System Measure Number	Measure Title	Measure Developer	NQF Measure Number
65	Treatment for Children with Upper Respiratory Infection (URI): Avoidance of Inappropriate Use	NCQA	0069
66	Appropriate Testing for Children with Pharyngitis	NCQA	0002
67	Myelodysplastic Syndrome (MDS) and Acute Leukemias: Baseline Cytogenetic Testing Performed on Bone Marrow	AMA-PCPI/American Society of Hematology (ASH)	0377
68	Myelodysplastic Syndrome (MDS): Documentation of Iron Stores in Patients Receiving Erythropoietin Therapy	AMA-PCPI/ASH	0378
69	Multiple Myeloma: Treatment with Bisphosphonates	AMA-PCPI/ASH	0380
70	Chronic Lymphocytic Leukemia (CLL): Baseline Flow Cytometry	AMA-PCPI/ASH	0379
71	Breast Cancer: Hormonal Therapy for Stage IC-IIIC Estrogen Receptor/Progesterone Receptor (ER/PR) Positive Breast Cancer	AMA-PCPI/American Society of Clinical Oncology (ASCO)/National Comprehensive Cancer Network (NCCN)	0387

204	Ischemic Vascular Disease (IVD): Use of Aspirin or Another Antithrombotic	NCQA	0068

BILLING CODE 4120–01–C

Please note that detailed measure specifications, including the measure's title, for 2010 individual Physician Quality Reporting System quality measures may have been updated or modified during the NQF endorsement process or for other reasons prior to 2011. The 2011 Physician Quality Reporting System quality measure specifications for any given individual quality measure may, therefore, be different from specifications for the same quality measure used in prior years. Specifications for all 2011 individual Physician Quality Reporting System quality measures, whether or not included in the 2010 Physician Quality Reporting System program, must be obtained from the specifications document for 2011 individual Physician Quality Reporting System quality measures, which will be available on the Physician Quality Reporting System section of the CMS Web site on or before December 31, 2010.

(2) 2011 Individual Quality Measures Selected From the 2010 Physician Quality Reporting System Quality Measures Set Available for Registry-Based Reporting Only

We proposed to include 45 registry-only individual measures from the 2010 Physician Quality Reporting System (75 FR 40191). As in the 2010 Physician Quality Reporting System, we proposed to designate these measures as registry-only measures for 2011 to relieve ongoing analytical difficulties encountered with claims-based reporting of these measures in prior program years. The following is a summary of the comments received on the proposed registry-only measures.

Comment: One commenter expressed concern over our proposal to limit measure #174, Pediatric End-Stage Renal Disease (ESRD): Plan of Care for Inadequate Hemodialysis, to registry-based reporting for 2011. The commenter stated that since there are only two pediatric ESRD measures included in the Physician Quality Reporting System for 2010 and we require eligible professionals who report via a registry to report 3 measures, it is difficult for pediatric nephrologists to participate in this valuable program. Further, the commenter indicated that even if participation could be based on the reporting of two measures, the registry process itself is not available to the vast majority of pediatric nephrologists who practice in small, academic departments, none of whose other members care for Medicare beneficiaries. Thus, the commenter suggested that similar to the provision that allows one of the pediatric ESRD measures (influenza immunization) to be reported in this individual manner, a mechanism be made available allowing pediatric dialysis centers to report adequacy results separately. In the absence of changes in the requirement to report at least three measures, separate reporting of individual measures would allow more pediatric nephrologists to participate in the Physician Quality Reporting System and advance the ultimate goal of quality improvement.

Response: We appreciate the comment and interest expressed on behalf of the pediatric nephrology community. For the 2011 Physician Quality Reporting System, we have decided not to include Physician Quality Reporting System Measure #174, since this measure was recently reviewed by NQF but not endorsed. As a result, only 1 of the 2 individual measures identified by the commenter as being relevant to pediatric nephrologists, #175, Pediatric End-Stage Renal Disease (ESRD): Influenza Immunization, is included in the final 2011 Physician Quality Reporting System measure set. This measure is available for claims-based reporting. Eligible professionals who have fewer than 3 applicable measures can still participate in the 2011 Physician Quality Reporting System via claims. Such eligible professionals would need to report on the applicable measure available for claims-based reporting via claims and meet the appropriate criteria for satisfactory reporting of individual measures in order to qualify for a 2011 Physician Quality Reporting System incentive payment.

For the reasons discussed previously and based on the comments received, we are finalizing in the 2011 Physician Quality Reporting System quality measure set 44 of the 45 proposed 2010 Physician Quality Reporting System measures identified in Table 78 of the proposed rule for registry reporting only. As stated previously, we are not finalizing Physician Quality Reporting System Measure #174 because the measure was reviewed for endorsement by NQF but not ultimately endorsed.

The 44 2010 Physician Quality Reporting System measures selected for the 2011 Physician Quality Reporting System that are available for registry reporting only are listed in Table 79 of this final rule with comment period. These measures are listed by their Physician Quality Reporting System Measure Number and Title, along with the name of the measure's developer/owner and NQF endorsement status, if applicable. A description of the measures listed in Table 79 can be found in the "2010 PQRI Quality Measures List," which is available on the Measures and Codes page of the Physician Quality Reporting System section of the CMS Web site at *http://www.cms.hhs.gov/PQRI*.

BILLING CODE 4120–01–P

TABLE 79: 2011 Individual Measures Selected From the 2010 Physician Quality Reporting System Quality Measure Set Available for Registry-based Reporting Only

Physician Quality Reporting System Measure Number	Measure Title	Measure Developer	NQF Measure Number
5	Heart Failure: Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy for Left Ventricular Systolic Dysfunction (LVSD)	AMA-PCPI	0081
7	Coronary Artery Disease (CAD): Beta-Blocker Therapy for CAD Patients with Prior Myocardial Infarction (MI)	AMA-PCPI	0070
8	Heart Failure: Beta-Blocker Therapy for Left Ventricular Systolic Dysfunction (LVSD)	AMA-PCPI	0083
33	Stroke and Stroke Rehabilitation: Anticoagulant Therapy Prescribed for Atrial Fibrillation at Discharge	AMA-PCPI/NCQA	0241
81	End Stage Renal Disease (ESRD): Plan of Care for Inadequate Hemodialysis in ESRD Patients	AMA-PCPI	0323
82	End Stage Renal Disease (ESRD): Plan of Care for Inadequate Peritoneal Dialysis	AMA-PCPI	0321
83	Hepatitis C: Testing for Chronic Hepatitis C – Confirmation of Hepatitis C Viremia	AMA-PCPI	0393
118	Coronary Artery Disease (CAD): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy for Patients with CAD and Diabetes and/or Left Ventricular Systolic Dysfunction (LVSD)	AMA-PCPI	0066
137	Melanoma: Continuity of Care – Recall System	AMA-PCPI/NCQA	0650
138	Melanoma: Coordination of Care	AMA-PCPI/NCQA	0561
143	Oncology: Medical and Radiation – Pain Intensity Quantified	AMA-PCPI	0384
144	Oncology: Medical and Radiation – Plan of Care for Pain	AMA-PCPI	0383
159	HIV/AIDS: CD4+ Cell Count or CD4+ Percentage	AMA-PCPI/NCQA	0404
160	HIV/AIDS: Pneumocystis Jiroveci Pneumonia (PCP) Prophylaxis	AMA-PCPI/NCQA	0405
161	HIV/AIDS: Adolescent and Adult Patients with HIV/AIDS Who Are Prescribed Potent Antiretroviral Therapy	AMA-PCPI/NCQA	0406
162	HIV/AIDS: HIV RNA Control After Six Months of Potent Antiretroviral Therapy	AMA-PCPI/NCQA	0407
164	Coronary Artery Bypass Graft (CABG): Prolonged Intubation (Ventilation)	STS	0129
165	Coronary Artery Bypass Graft (CABG): Deep Sternal Wound Infection Rate	STS	0130
166	Coronary Artery Bypass Graft (CABG): Stroke/Cerebrovascular Accident (CVA)	STS	0131
167	Coronary Artery Bypass Graft (CABG): Postoperative Renal Insufficiency	STS	0114
168	Coronary Artery Bypass Graft (CABG): Surgical Re-exploration	STS	0115

Physician Quality Reporting System Measure Number	Measure Title	Measure Developer	NQF Measure Number
169	Coronary Artery Bypass Graft (CABG): Antiplatelet Medications at Discharge	STS	0237
170	Coronary Artery Bypass Graft (CABG): Beta-Blockers Administered at Discharge	STS	0238
171	Coronary Artery Bypass Graft (CABG): Lipid Management and Counseling	STS	0118
187	Stroke and Stroke Rehabilitation: Thrombolytic Therapy	AHA/ASA/ TJC	0437
191	Cataracts: 20/40 or Better Visual Acuity Within 90 Days Following Cataract Surgery	AMA-PCPI/NCQA	0565
192	Cataracts: Complications within 30 Days Following Cataract Surgery Requiring Additional Surgical Procedures	AMA-PCPI/NCQA	0564
196	Coronary Artery Disease (CAD): Symptom and Activity Assessment	AMA-PCPI	0065
197	Coronary Artery Disease (CAD): Drug Therapy for Lowering LDL-Cholesterol	AMA-PCPI	0074
198	Heart Failure: Left Ventricular Function (LVF) Assessment	AMA-PCPI	0079
199	Heart Failure: Patient Education	AMA-PCPI	0082
200	Heart Failure: Warfarin Therapy for Patients with Atrial Fibrillation	AMA-PCPI	0084
205	HIV/AIDS: Sexually Transmitted Disease Screening for Chlamydia and Gonorrhea	AMA-PCPI/NCQA	0409
206	HIV/AIDS: Screening for High Risk Sexual Behaviors	AMA-PCPI/NCQA	0413
207	HIV/AIDS: Screening for Injection Drug Use	AMA-PCPI/NCQA	0415
208	HIV/AIDS: Sexually Transmitted Disease Screening for Syphilis	AMA-PCPI/NCQA	0410
209	Functional Communication Measure - Spoken Language Comprehension	American Speech Language Haring Association (ASHA)	0445
210	Functional Communication Measure - Attention	ASHA	0449
211	Functional Communication Measure - Memory	ASHA	0448
212	Functional Communication Measure - Motor Speech	ASHA	0447
213	Functional Communication Measure - Reading	ASHA	0446
214	Functional Communication Measure - Spoken Language Expression	ASHA	0444
215	Functional Communication Measure - Writing	ASHA	0442
216	Functional Communication Measure - Swallowing	ASHA	0443

BILLING CODE 4120–01–C

Although we are designating certain measures as registry-only measures, we cannot guarantee that there will be a registry qualified to submit each registry-only measure for 2011. We rely on registries to self-nominate and identify the measures for which they would like to be qualified to submit quality measures results and numerator and denominator data on quality measures. If no registry self-nominates to submit measure results and numerator and denominator data on a particular measure for 2011, then an eligible professional would not be able to report that particular measure.

We note also that detailed measure specifications, including a measure's title, for 2010 Physician Quality Reporting System quality measures may have been updated or modified during the NQF endorsement process or for other reasons prior to 2011. Therefore, the 2011 Physician Quality Reporting System quality measure specifications for any given quality measure may be different from specifications for the same quality measure used for 2010. Specifications for all 2011 individual

Physician Quality Reporting System quality measures, whether or not included in the 2010 Physician Quality Reporting System, must be obtained from the specifications document for 2011 individual Physician Quality Reporting System quality measures, which will be available on the Physician Quality Reporting System section of the CMS Web site on or before December 31, 2010.

(3) New Individual Quality Measures for 2011

We proposed to include in the 2011 Physician Quality Reporting System quality measure set 20 measures that were not included in the 2010 Physician Quality Reporting System quality measures set provided that each measure obtains NQF endorsement by June 1, 2010 and its detailed specifications are completed and ready for implementation in the Physician Quality Reporting System by August 15, 2010 (75 FR 40192). Besides having NQF endorsement, we proposed that the development of a measure is considered complete for the purposes of the 2011 Physician Quality Reporting System if by August 15, 2010: (1) The final, detailed specifications for use in data collection for the Physician Quality Reporting System have been completed and are ready for implementation, and (2) all of the Category II Current Procedural Terminology (CPT II) codes required for the measure have been established and will be effective for CMS claims data submission on or before January 1, 2011.

Due to the complexity of their measure specifications, we proposed that 8 of these 20 measures would be available as registry-only measures for the 2011 Physician Quality Reporting System. The remaining 15 measures were proposed to be available for reporting through either claims-based reporting or registry-based reporting.

The following is a summary of the comments received on the 20 new individual quality measures proposed for 2011.

Comment: We received numerous comments in support of the proposed additional quality measures for the 2011 Physician Quality Reporting System. One commenter stated that the new Physician Quality Reporting System measures will help to spur additional eligible professional participation in the Physician Quality Reporting System. Several comments were received specifically in support of the following 'Change in Risk-Adjusted Functional Status' measures, developed by FOTO:

- Change in Risk-Adjusted Functional Status for Patients with Knee Impairments
- Change in Risk-Adjusted Functional Status for Patients with Hip Impairments
- Change in Risk-Adjusted Functional Status for Patients with Lower Leg, Foot or Ankle Impairments
- Change in Risk-Adjusted Functional Status for Patients with Lumbar Spine Impairments
- Change in Risk-Adjusted Functional Status for Patients with Shoulder Impairments
- Change in Risk-Adjusted Functional Status for Patients with Elbow, Wrist or Hand Impairments
- Change in Risk-Adjusted Functional Status for Patients with a Functional Deficit of the Neck, Cranium, Mandible, Thoracic Spine, Ribs or other General Orthopedic Impairment

Commenters stated these measures support "improved quality and efficiency of care for Medicare beneficiaries including: High cost and high volume conditions; improved outcomes; improved efficiency; improved patient and family experience of care; reduced unwarranted variation in quality and efficiency." We also received support for the inclusion of the following measures:

- Hypertension (HTN): Plan of Care;
- Heart Failure (HF): Left Ventricular Function (LVF) Testing;
- Reminder System for Mammograms measure;
- Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention;
- Recording of Performance Status Prior to Lung or Esophageal Cancer Resection; and
- Pulmonary Function Tests Before Major Anatomic Lung Resection.

Response: We appreciated the commenters' support of the proposed measures and agree with the reasons stated by the commenters. We are finalizing all of the proposed new measures supported by the commenters. The new individual quality measures for the 2011 Physician Quality Reporting System are identified in Table 80 of this final rule with comment period.

Comment: Several commenters expressed support for the inclusion of the new care transitions measures developed by the AMA–PCPI as these measures are based on evidence-based processes that have been shown to reduce readmissions, limit medication errors, and improve the patient perspective of their care. The measures' developer, however, commented that the measures were not designed for individual physician level measurement. The measures are specified at the facility (hospital) level, using the UB04 administrative data to identify the denominator population.

Response: We appreciate the commenters' support for the new care transitions measures. Based on the measure developer's comments, however, we are not finalizing our proposal to include the following measures in the final 2011 Physician Quality Reporting System measure set:

- Care Transitions: Reconciled Medication List Received by Discharged Patients (Inpatient Discharges to Home/Self Care or Any Other Site of Care);
- Care Transitions: Transition Record with Specified Elements Received by Discharged Patients (Inpatient Discharges to Home/Self Care or Any Other Site of Care);
- Care Transitions: Timely Transmission of Transition Record (Inpatient Discharges to Home/Self Care or Any Other Site of Care); and
- Care Transitions: Transition Record with Specified Elements Received by Discharged Patients (Emergency Department Discharges to Ambulatory Care [Home/Self Care] or Home Health Care.

Comment: One commenter recommended that the proposed Hypertension (HTN): Plan of Care measure not be included in the final set of 2011 Physician Quality Reporting System measures, claiming that this measure was developed as a "test measure" and was not designed for individual physician accountability, but rather internal quality improvement.

Response: We appreciate the commenter's input but are finalizing our proposal to include this measure in the 2011 Physician Quality Reporting System measure set. This measure meets the considerations for the selection of 2011 Physician Quality Reporting System measures and is also a clinical quality measure under the EHR Incentive Program.

Based on the reasons discussed previously and upon consideration of the comments received, we are finalizing in the 2011 Physician Quality Reporting System quality measure set 16 of the 20 proposed 2011 Physician Quality Reporting System measures identified in Table 80 of the proposed rule. In addition to not finalizing our proposal to include the 4 new care transitions measures previously listed, we note that 3 measures—Thoracic Surgery: Recording of Performance Status Prior to Lung or Esophageal Cancer Resection; Thoracic Surgery: Pulmonary Function Test Before Major Anatomic Lung Resection

(Pneumonectomy, Lobectomy, or Formal Segmentectomy); and Melanoma: Overutilization of Imaging Studies in Stage 0–1A Melanoma—that were proposed to be available for either registry or claims reporting will be made available for registry reporting only for the 2011 Physician Quality Reporting System. Upon further analysis of these measures, we have determined that these measures would be analytically challenging to collect via claims and, therefore, are not finalizing such measures for the claims-based reporting option for the 2011 Physician Quality Reporting System.

The titles of the 16 additional, or new, Physician Quality Reporting System measures for 2011 are listed in Table 80 along with the name of the measure developer, the reporting mechanism(s) available (that is, whether the measure will be reportable using claims, registries, or both), and the NQF Measure Number, if applicable.

TABLE 80—NEW INDIVIDUAL QUALITY MEASURES FOR 2011

Measure title	NQF measure number	Measure developer	Reporting mechanism(s)
Functional Deficit: Change in Risk-Adjusted Functional Status for Patients with Knee Impairments.	0422	FOTO	Registry.
Functional Deficit: Change in Risk-Adjusted Functional Status for Patients with Hip Impairments.	0423	FOTO	Registry.
Functional Deficit: Change in Risk-Adjusted Functional Status for Patients with Lower Leg, Foot or Ankle Impairments.	0424	FOTO	Registry.
Functional Deficit: Change in Risk-Adjusted Functional Status for Patients with Lumbar Spine Impairments.	0425	FOTO	Registry.
Functional Deficit: Change in Risk-Adjusted Functional Status for Patients with Shoulder Impairments.	0426	FOTO	Registry.
Functional Deficit: Change in Risk-Adjusted Functional Status for Patients with Elbow, Wrist or Hand Impairments.	0427	FOTO	Registry.
Functional Deficit: Change in Risk-Adjusted Functional Status for Patients with Neck, Cranium, Mandible, Thoracic Spine, Ribs, or Other General Orthopedic Impairment.	0428	FOTO	Registry.
Hypertension (HTN): Plan of Care	0017	AMA–PCPI	Claims, Registry.
Heart Failure (HF): Left Ventricular Function (LVF) Testing	0079	CMS	Registry.
Melanoma: Overutilization of Imaging Studies in Stage 0–IA Melanoma	0562	AMA–PCPI	Registry.
Radiology: Reminder System for Mammograms	0509	AMA–PCPI	Claims, Registry.
Asthma: Tobacco Use: Screening—Ambulatory Care Setting	Not applicable	AMA–PCPI	Claims, Registry.
Asthma: Tobacco Use: Intervention—Ambulatory Care Screening	Not applicable	AMA–PCPI	Claims, Registry.
Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention	0028	AMA–PCPI	Claims, Registry.
Thoracic Surgery: Recording of Performance Status Prior to Lung or Esophageal Cancer Resection.	0457	Society of Thoracic Surgery (STS)	Registry.
Thoracic Surgery: Pulmonary Function Tests Before Major Anatomic Lung Resection	0458	Society of Thoracic Surgery (STS)	Registry.

(4) 2011 Measures Available for EHR-Based Reporting

For 2011, we proposed to again accept Physician Quality Reporting System data from EHRs for a limited subset (22) of the proposed 2011 Physician Quality Reporting System quality measures, contingent upon the successful completion of our 2010 EHR data submission process and a determination that accepting data from EHRs on quality measures for the 2011 Physician Quality Reporting System continues to be practical and feasible. The 22 measures we proposed to be available for EHR-based reporting in the 2011 Physician Quality Reporting System include the 10 measures available for EHR-based reporting in the 2010 Physician Quality Reporting System and 12 additional measures that overlap with the clinical quality measures used in the EHR incentive program established by the American Recovery and Reinvestment Act (ARRA) (75 FR 40193).

The following is a summary of the comments received on the proposed electronic submission of these 22 measures.

Comment: Commenters were pleased that we proposed the addition of new measures for EHR-based reporting as this will permit additional physician specialties to participate using this reporting mechanism. We specifically received support for the following proposed measures for EHR-based reporting:

- Measure #1: Diabetes Mellitus: Hemoglobin A1c Poor Control in Diabetes Mellitus;
- Measure #2: Diabetes Mellitus: Low Density Lipoprotein (LDL–C) Control in Diabetes Mellitus;
- Measure #3: Diabetes Mellitus: High Blood Pressure Control in Diabetes Mellitus;
- Measure #5: Heart Failure: Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy for Left Ventricular Systolic Dysfunction (LVSD);
- Measure #7: Coronary Artery Disease (CAD): Beta-Blocker Therapy for CAD Patients with Prior Myocardial Infarction (MI);
- Measure #110: Preventive Care and Screening: Influenza Immunization for Patients ≥50 Years Old;
- Measure #111: Preventive Care and Screening: Pneumonia Vaccination for Patients 65 Years and Older;
- Measure #128: Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up;

• Measure #173: Preventive Care & Screening: Unhealthy Alcohol Use—Screening;
• Measure #TBD: Hypertension (HTN): Blood Pressure Measurement;
• Measure #TBD: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention;
• Measure #TBD: Body Mass Index (BMI) 2 Through 18 Years of Age.

Response: We appreciate the commenters' support of our proposal to expand the number of measures available for EHR reporting and for the measures previously listed. We are finalizing our proposal to have all of the measures previously listed available for 2011 Physician Quality Reporting System EHR reporting.

Comment: One commenter was concerned by the limited number of quality measures available for EHR reporting. The commenter stated that the current list of quality measures for reporting via EHR does not facilitate widespread participation because the 22 measures proposed for EHR reporting will restrict the number and type of eligible professionals able to report with their EHR system. This commenter believed the future requirements to align the Physician Quality Reporting System and EHR incentive programs highlight the importance of expanding this list.

Response: We agree with the commenter and are working to expand the list of electronically specified measures for future years. However, EHR-derived measures data will be accepted for the Physician Quality Reporting System directly from a qualified EHR for the first time in early 2011 (with 2010 Physician Quality Reporting System data). For this reason, we believe that a limited set of measures this early in the process will increase the program's chance of being successful in accepting this quality data.

Comment: A few commenters noted that many current measures are not specified for electronic reporting and that additional resources are needed to work with measure developers to re-specify or "retool" measures to be effectively collected via EHRs. One commenter noted that a hybrid approach of data collected via EHR and manual abstraction may potentially be needed.

Response: As noted previously, we are planning to continue to electronically specify measures to add to the list of those measures that are currently electronically specified for future years.

Comment: Because the following measures were not included in the Final Rule for Stage 1 of the EHR Incentive Program, one commenter suggested that they be removed from the list of 2011 EHR-based measures in favor of measures that are included in the EHR Incentive Program: Measures #39, 41, 47, 48, 142, 173, and Drugs to Be Avoided in the Elderly.

Response: While we are required to develop a plan to integrate the reporting of quality measures under the Physician Quality Reporting System with reporting under the EHR Incentive Program, they are two distinct programs. Therefore, we believe that it may be appropriate to have different measures in each of them and are retaining such measures in the Physician Quality Reporting System for 2011. However, we note that we are not finalizing our proposal to have Physician Quality Reporting System Measures #41 and #142 available for 2011 Physician Quality Reporting System EHR reporting. The electronic specifications and Quality Reporting Document Architecture (QRDA) for submitting these measures electronically were not fully developed.

Based on the reasons discussed previously and upon consideration of the comments received, we are finalizing the option of accepting clinical quality data extracted from qualified EHRs on 20 of the 22 proposed 2011 Physician Quality Reporting System quality measures identified in Tables 81 and 82 of the proposed rule. We are not finalizing our proposal to have Physician Quality Reporting System Measures #41 and #142 available for 2011 Physician Quality Reporting System EHR reporting because the specifications for submitting these measures electronically are not ready. The final 2011 measures available for EHR-based reporting are identified in Tables 81 and 82 of this final rule with comment period.

TABLE 81—2011 MEASURES AVAILABLE FOR EHR-BASED REPORTING FROM 2010 PHYSICIAN QUALITY REPORTING SYSTEM

Physician Quality Reporting System	Measure title	Measure developer	NQF Measure No.
1	*** Diabetes Mellitus: Hemoglobin A1c Poor Control in Diabetes Mellitus.	NCQA	0059
2	*** Diabetes Mellitus: Low Density Lipoprotein (LDL–C) Control in Diabetes Mellitus.	NCQA	0064
3	*** Diabetes Mellitus: High Blood Pressure Control in Diabetes Mellitus	NCQA	0061
5	*** Heart Failure: Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy for Left Ventricular Systolic Dysfunction (LVSD).	AMA–PCPI	0081
7	*** Coronary Artery Disease (CAD): Beta-Blocker Therapy for CAD Patients with Prior Myocardial Infarction (MI).	AMA–PCPI	0070
110	** Preventive Care and Screening: Influenza Immunization for Patients ≥ 50 Years Old.	AMA–PCPI	0041
111	*** Preventive Care and Screening: Pneumonia Vaccination for Patients 65 Years and Older.	NCQA	0043
112	*** Preventive Care and Screening: Screening Mammography	NCQA	0031
113	*** Preventive Care and Screening: Colorectal Cancer Screening	NCQA	0034
124	Health Information Technology (HIT): Adoption/Use of Electronic Health Records (EHR).	CMS/QIP	0488

* This measure is a Core clinical quality measure for the Electronic Health Record Incentive Program under the ARRA HITECH regulation for program years 2011–2012. The electronic specifications for measures that are included in the PQRI and Electronic Health Record Incentive Program may be different. Eligible professionals should refer to the measure specifications for the appropriate program.

** This measure is an Alternate Core clinical quality measure for the Electronic Health Record Incentive Program under the ARRA HITECH regulation for program years 2011–2012. The electronic specifications for measures that are included in the PQRI and Electronic Health Record Incentive Program may be different. Eligible professionals should refer to the measure specifications for the appropriate program.

*** This measure is included in the Electronic Health Record Incentive Program under the ARRA HITECH regulation for program years 2011–2012. The electronic specifications for measures that are included in the PQRI and Electronic Health Record Incentive Program may be different. Eligible professionals should refer to the measure specifications for the appropriate program.

TABLE 82—ADDITIONAL MEASURES AVAILABLE FOR EHR-BASED REPORTING IN 2011

Physician Quality Reporting System	Measure title	Measure developer	NQF Measure No.
39	Screening or Therapy for Osteoporosis for Women Aged 65 Years and Older.	AMA–PCPI/NCQA	0046
47	Advance Care Plan	AMA–PCPI/NCQA	0326
48	Urinary Incontinence: Assessment of Presence or Absence of Urinary Incontinence in Women Aged 65 Years and Older.	AMA–PCPI/NCQA	0098
128	* Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-up.	CMS/Quality Insights of Pennsylvania.	0421
173	Preventive Care and Screening: Unhealthy Alcohol Use—Screening	AMA–PCPI	AQA Adopted
TBD	* Hypertension (HTN): Blood Pressure Measurement	AMA–PCPI	0013
TBD	Drugs to be Avoided in the Elderly	NCQA	0022
TBD	** Weight Assessment and Counseling for Children and Adolescents	NCQA	0024
TBD	* Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention.	AMA–PCPI	0028
TBD	** Childhood Immunization Status	NCQA	0038

* This measure is a Core clinical quality measure for the Electronic Health Record Incentive Program under the ARRA HITECH regulation for program years 2011–2012. The electronic specifications for measures that are included in the PQRI and Electronic Health Record Incentive Program may be different. Eligible professionals should refer to the measure specifications for the appropriate program.

** This measure is an Alternate Core clinical quality measure for the Electronic Health Record Incentive Program under the ARRA HITECH regulation for program years 2011–2012. The electronic specifications for measures that are included in the PQRI and Electronic Health Record Incentive Program may be different. Eligible professionals should refer to the measure specifications for the appropriate program.

*** This measure is included in the Electronic Health Record Incentive Program under the ARRA HITECH regulation for program years 2011–2012. The electronic specifications for measures that are included in the PQRI and Electronic Health Record Incentive Program may be different. Eligible professionals should refer to the measure specifications for the appropriate program.

(5) Measures Proposed for Inclusion in 2011 Measures Groups

We proposed to retain the following 13 2010 Physician Quality Reporting System measures groups for the 2011 Physician Quality Reporting System: (1) Diabetes Mellitus; (2) CKD; (3) Preventive Care; (4) CABG; (5) Rheumatoid Arthritis; (6) Perioperative Care; (7) Back Pain; (8) CAD; (9) Heart Failure; (10) IVD; (11) Hepatitis C; (12) HIV/AIDS; and (13) CAP. For 2011, we proposed that the CABG, CAD, Heart Failure, and HIV/AIDS measures groups continue to be reportable through the registry-based reporting mechanism only, while the remaining Diabetes Mellitus, CKD, Preventive Care, Rheumatoid Arthritis, Perioperative Care, Back Pain, IVD, Hepatitis C, and CAP measures groups will continue to be reportable through either claims-based reporting or registry-based reporting for the 2011 Physician Quality Reporting System (75 FR 40193).

In addition to the 13 measures groups that we proposed to retain from the 2010 Physician Quality Reporting System, we proposed 1 new Asthma Measures Group, which could be reported through either claims-based reporting or registry-based reporting.

Finally, as in previous program years, for 2011, we proposed that the measures included in any proposed 2011 measures group be reportable either as individual measures or as part of a measures group, except for the Back Pain measures group, which will continue to be reportable only as part of a measures group and not as individual measures in 2011 (75 FR 40193 through 40197).

As with measures group reporting in the 2008, 2009, and 2010 Physician Quality Reporting System, we proposed that each eligible professional electing to report a group of measures for 2011 must report all measures in the group that are applicable to each patient or encounter to which the measures group applies at least up to the minimum number of patients required by the applicable reporting criteria. The following is a summary of the comments received on the proposed 2011 measures groups.

Comment: One commenter expressed support for the movement to greater use of measures groups as a method of Physician Quality Reporting System participation, as they are easier to manage and monitor.

Response: We appreciate the commenter's positive feedback and continue to encourage eligible professionals to report on measures groups. As we have stated in prior years, we believe that measures groups can present a more complete picture of the quality of care provided clinical condition or clinical focus than individual measures reporting.

Comment: We received favorable support for the proposed inclusion of the following measures groups:

- Asthma.
- Back Pain.
- CAD.
- CAP.
- CABG.
- Diabetes Mellitus.
- Heart failure.

Some of the reasons stated by commenters include that these are important chronic conditions and collecting information on the treatment of these conditions could lead to improved care and treatment, which would result in reduced costs.

Response: We agree. For these reasons, we are finalizing our proposal to include all of these measures groups in the 2011 Physician Quality Reporting System.

Comment: One commenter proposed the removal of Measure #135, Chronic Kidney Disease (CKD): Influenza Immunization, from the CKD Measures Group to ensure maximum satisfactory reporting. The commenter noted that Measure #135 differs from other measures in the CKD Measures Group in its method of reporting. Whereas measures in the CKD Measures Group are Patient Process (where the measures are reported once per reporting period), Measure #135 is now Patient Periodic (where the measure is reported during certain periods of time). The commenter is concerned that this difference in reporting methods may be too confusing for satisfactory reporting.

Response: We agree with the commenter's recommendation and are

removing Measure #135, Influenza, from the CKD Measures Group for the reasons cited by the commenter. However, the CKD Influenza Measure #135 will still be reportable as an individual measure.

Comment: One commenter supported the proposed retention of the 2010 HIV/AIDS Physician Quality Reporting System measures group for the 2011 Physician Quality Reporting System, but encouraged, to the extent feasible, HIV/AIDS quality measures that can be reported through the claims-based method in addition to the registry-based method.

Response: We are pleased with the commenter's support for the HIV/AIDS measures group. Based on the current processing of claims data, it was determined that the claims system will not accurately capture these measures. Registry reporting provides an intricate process to capture these measures accurately.

Comment: For the 2011 Physician Quality Reporting System measures group on preventive care, the addition of a process measure for HIV screening of "high-risk" patients, as endorsed by the National Quality Forum and USPSTF previously (level "A" recommendation), be added. The commenter urged that this measure be modified if and when coverage is expanded to include routine HIV screening, consistent with the recommendations of the Centers for Disease Control and Prevention (CDC).

Response: We appreciate the commenter's suggestion to add HIV screening of "high risk" patients into the Preventive Care Measures Group. Measure groups are created based on measures with a particular clinical condition or focus. The current Preventive Care Measures Group is intended for a more general patient population and would not be appropriate for the addition of the HIV measure(s) suggested by the commenter. The commenter should consider utilizing the 2012 Call for Measures as an avenue for submitting suggestions for possibly creating a new measure group for screening "high risk" patients. We also urge the commenter to direct such suggestions to the appropriate measure developer/owner(s) for consideration.

Based on the reasons discussed previously and upon consideration of the comments received, we are finalizing the following proposed 2011 measures groups: (1) Diabetes Mellitus; (2) Preventive Care; (3) CABG; (4) Rheumatoid Arthritis; (5) Perioperative Care; (6) Back Pain; (7) CAD; (8) Heart Failure; (9) IVD; (10) Hepatitis C; (11) HIV/AIDS; (12) CAP; and (13) Asthma. We are also finalizing the proposed CKD measures group for 2011 with one modification. As stated previously, we are removing Measure #135: Chronic Kidney Disease (CKD): Influenza Immunization from the CKD measures group for 2011 because the reporting requirements for this measure are different from the reporting requirements for the other measures in this measures group. The following 4 measures groups are reportable through the registry-based reporting mechanism only: (1) CABG; (2) CAD; (3) Heart Failure; and (4) HIV/AIDS.

The measures selected for inclusion in each of the 2011 measures groups are identified in Tables 83 through 96 of this final rule with comment period. Some measures selected for inclusion in these 14 measures groups are current 2010 individual Physician Quality Reporting System measures. The title of each such measure is preceded with its Physician Quality Reporting System Measure Number in Tables 83 through 96. As stated previously, the Physician Quality Reporting System Measure Number is a unique identifier assigned by CMS to all measures in the Physician Quality Reporting System measure set. Once a Physician Quality Reporting System Measure Number is assigned to a measure, it will not be used again, even if the measure is subsequently retired from the Physician Quality Reporting System measure set. Measures that are not preceded by a number (in other words, those preceded by "TBD") in Tables 83 through 96 were never part of a Physician Quality Reporting System measure set prior to 2011. A number will be assigned to such measures for 2011.

BILLING CODE 4120–01–C

As with measures group reporting in the 2008, 2009, and 2010 Physician Quality Reporting System, each eligible professional electing to report a group of measures for 2011 must report all measures in the group that are applicable to each patient or encounter to which the measures group applies at least up to the minimum number of patients required by the applicable reporting criteria. The measures selected for the Back Pain Measures Group continue to be reportable only as part of a measures group and not as individual measures for the 2011 Physician Quality Reporting System. Measures selected for inclusion in all other 2011 Physician Quality Reporting System measures groups are reportable either as individual measures or as part of a measures group.

We note that the specifications for measures groups do not necessarily contain all the specification elements of each individual measure making up the measures group. This is based on the need for a common set of denominator specifications for all the measures making up a measures group in order to define the applicability of the measures group. Therefore, the specifications and instructions for measures groups will be provided separately from the specifications and instructions for the individual 2011 Physician Quality Reporting System measures. We will post the detailed specifications and specific instructions for reporting measures groups on the Physician Quality Reporting System section of the CMS Web site at *http://www.cms.hhs.gov/PQRI* by no later than December 31, 2010.

Additionally, the detailed measure specifications and instructions for submitting data on those 2011 measures groups that were also included as 2010 Physician Quality Reporting System measures groups may be updated or modified prior to 2011.

Therefore, the 2011 Physician Quality Reporting System measure specifications for any given measures group could be different from specifications and submission instructions for the same measures group used for 2010. These measure specification changes do not materially impact the intended meaning of the measures or the strength of the measures.

j. 2011 Physician Quality Reporting System Quality Measures for Group Practices Selected To Participate in the Group Practice Reporting Option (GPRO I)

For 2011, we proposed that group practices selected to participate in the 2011 Physician Quality Reporting System GPRO I would be required to report on 26 proposed measures listed in Table 97 of the proposed rule (75 FR 40197 through 40198). We proposed these measures because they are NQF-endorsed measures currently collected as part of the PGP and/or MCMP demonstrations and in the 2010 Physician Quality Reporting System GPRO.

The following is a summary of the comments received on the proposed 2011 Physician Quality Reporting System quality measures for group practices selected to participate in the group practice reporting option (GPRO I).

Comment: We received a comment noting general support for the 26 proposed GPRO I measures. Another commenter expressed specific support for the diabetes measures proposed for the Group Practice Reporting Option (GPRO), "Diabetes Mellitus: Hemoglobin A1c Testing" and "Diabetes Mellitus: Lipid Profile."

Response: We appreciate the positive feedback and are finalizing the 26 GPRO I measures as proposed. We believe these measures target high-cost chronic conditions and preventive care.

Comment: A couple of commenters encouraged us to expand the list of GPRO I measures and/or develop different measure sets to address the care delivered in different group practices. One commenter encouraged us to adopt additional diabetes measures into the GPRO to ensure the

most comprehensive evidence-based assessment of diabetes care.

Response: We agree that in order to make GPRO I more broadly applicable we would need to expand the list of GPRO I measures and/or develop different measures to address the care delivered in different group practices. As we stated in the proposed rule (75 FR 40180), we hosted a listening session on February 2, 2010, to solicit input on a number of aspects of the Physician Quality Reporting System, including the measures for the 2011 Physician Quality Reporting System GPRO. We did not, however, receive any suggestions for additional disease modules for GPRO I. Therefore, we encourage commenters to use the 2012 Call for Measures as an avenue to submit specific measures for us to consider for future expansion of the GPRO I measure set. As stated previously, additional measures recommended for selection for the 2011 Physician Quality Reporting System via comments to the proposed rule cannot be included in the 2011 Physician Quality Reporting System measure set.

Comment: With regard to the 26 GPRO measures, one commenter asked us to consider whether some of the testing and patient education measures are sufficiently proximate to the desired clinical outcome to justify the effort of data collection, analysis, and comparative reporting.

Response: We value the commenter's thoughtful input and agree that as we expand the Physician Quality Reporting System measure set, including the GPRO I measure set, in future years we may want to consider whether the measures lead to the desired outcomes.

Based on the reasons discussed previously and after considering the comments, for the 2011 Physician Quality Reporting System, group practices selected to participate in the Physician Quality Reporting System GPRO I will be required to report on all measures listed in Table 97.

BILLING CODE 4120–01–P

TABLE 97: Measures for Physician Groups Participating in the 2011 Physician Quality Reporting System Group Practice Reporting Option (GPRO I)

BILLING CODE 4120–01–C

A separate measures specifications manual and other supporting documents will be available for group practices participating in the 2011 Physician Quality Reporting System GPRO I. We anticipate that the group practice measures specifications manual will be available by November 15, 2010 or shortly thereafter on the Physician Quality Reporting System section of the CMS Web site at *http://www.cms.hhs.gov/PQRI.*

k. Public Reporting of Physician Quality Reporting System Data

Section 1848(m)(5)(G) of the Act requires the Secretary to post on the CMS Web site, in an easily understandable format, a list of the names of eligible professionals (or group practices) who satisfactorily submitted data on quality measures for the Physician Quality Reporting System and the names of the eligible professionals (or group practices) who are successful electronic prescribers. In addition, section 10331(a)(1) of the ACA, requires the Secretary to develop a Physician Compare Internet Web site by January 1, 2011, on which information on physicians enrolled in the Medicare program and other eligible professionals who participate in the Physician Quality Reporting System would be posted.

In accordance with section 1848(m)(5)(G) of the Act, we proposed to continue to make public the names of eligible professionals and group practices that satisfactorily submit quality data for the 2011 Physician Quality Reporting System. Previously, we intended to post such information on the Healthcare Provider Directory. To meet the ACA deadline of January 1, 2011, we proposed to use the current Healthcare Provider Directory (previously known as the Physician and Other Health Care Professional Directory) as a foundation for the Physician Compare Web site. Therefore, we proposed to post the names of the 2011 Physician Quality Reporting System satisfactory reporters on the Physician Compare Web site that must be developed by January 1, 2011.

Specifically, we proposed to post the names of eligible professionals who: (1) Submit data on the 2011 Physician Quality Reporting System quality measures through one of the reporting mechanisms available for the 2011 Physician Quality Reporting System; (2) meet one of the proposed satisfactory reporting criteria of individual measures or measures groups for the 2011 Physician Quality Reporting System as previously described; and (3) qualify to earn a Physician Quality Reporting System incentive payment for covered professional services furnished during the applicable 2011 Physician Quality Reporting System reporting period, for purposes of satisfying the requirements under section 1848(m)(5)(G)(i) of the Act, on the Physician Compare Web site (75 FR 40198). Similarly, for purposes of publicly reporting the names of group practices, on the Physician Compare Web site, for 2011, we proposed to post the names of group practices that: (1) Submit data on the 2011 Physician Quality Reporting System quality measures through one of the proposed group practice reporting options; (2) meet the proposed criteria for satisfactory reporting under the respective group practice reporting option; and (3) qualify to earn a Physician Quality Reporting System incentive payment for covered professional services furnished during the applicable 2011 Physician Quality Reporting System reporting period for purposes of satisfying the requirements under section 1848(m)(5)(G)(i) of the Act.

We did not propose to make performance information publicly available at either the group practice or individual level for 2011 Physician Quality Reporting System. However, we note that section 10331 of the ACA requires that not later than January 1, 2013, and with respect to reporting periods that begin no earlier than January 1, 2012, we implement a plan for making publicly available through Physician Compare, information on physician performance, including measures collected under the Physician Quality Reporting System. Consistent with section 10331 of the ACA, we expect, in the future, to publicly report performance information based on the Physician Quality Reporting System.

The following is a summary of the comments we received regarding the public reporting of Physician Quality Reporting System data required under section 1848(m)(5)(G)(i) of the Act and Physician Compare Web site required under section 10331 of the ACA.

Comment: Many commenters supported the development of a Physician Compare Web site. Some commenters supported public reporting of the names of eligible professionals who satisfactorily report Physician Quality Reporting System measures and/or who are successful e-prescribers, noting that this is an appropriate first step in CMS' efforts to further transparency. Another commenter supported public reporting of the names of eligible professionals who participate in the Physician Quality Reporting System or Maintenance of Certification Programs as a way to enhance informed consumer choice based on quality and outcomes.

Response: We appreciate the commenters' support. We note, however, that we did not propose to publicly report the names of eligible professionals who participate in the Physician Quality Reporting System or Maintenance of Certification Programs. Instead, we proposed to publicly report the names of eligible professionals who satisfactorily report 2011 Physician Quality Reporting System measures and are finalizing our proposal to post the names of eligible professionals who satisfactorily report 2011 Physician Quality Reporting System measures on the Physician Compare Web site.

Comment: Some commenters agreed with CMS' decision to not publicly report individual or group level Physician Quality Reporting System performance results at this time. Many

of the commenters believe that it would be premature to do so. One commenter believed that CMS' decision to not post 2011 Physician Quality Reporting System performance data will allow eligible professionals to analyze their 2010 data and resolve any identified concerns with the GPRO reporting and analysis process. Another commenter noted that a different level of scrutiny is required to report performance rates. A commenter generally opposes the use of quality data for the purpose of physician profiling because it could exacerbate gaps in quality and access through risk avoidance and by inhibiting collaborative efforts by the profession to improve care for all patients.

Response: Although we are not planning to post 2011 Physician Quality Reporting System performance results, we note that section 10331 of the ACA requires that not later than January 1, 2013, and with respect to reporting periods that begin no earlier than January 1, 2012, we implement a plan for making publicly available through Physician Compare, information on physician performance, including measures collected under the Physician Quality Reporting System. Therefore, consistent with section 10331 of the ACA, we expect, in the future, to publicly report performance information based on the Physician Quality Reporting System. It is conceivable that we could begin publicly reporting performance information based on the Physician Quality Reporting System starting with 2012 Physician Quality Reporting System performance results. If and when we move towards public reporting of physician performance information, as contemplated under section 10331 of the ACA, we will need to consider and address the commenters' concerns.

Comment: As we move towards posting performance information, one commenter urged us to start with posting measure results on group practices only until there is sufficient experience and data to determine which, if any, measures can be reported at the individual practitioner level with relative certainty that the information portrayed is accurate. Specifically, we should monitor the group practice level reporting for unintended consequences before reporting performance information at the individual practitioner level.

Response: We appreciate the commenter's valuable input. We are committed to taking steps to ensure that the information portrayed is accurate. As we develop our plans for posting performance information on the Physician Compare Web site, we may consider initially limiting the performance information to measure results at the group practice level as suggested by the commenter. As stated previously, we will discuss our plans for posting performance information in more detail in future notice and comment rulemaking.

Comment: Some commenters suggested that we work with stakeholders to—

- Identify how best to relay this information in a user-friendly manner to the public;
- Develop reliable, comparable benchmarks, with a sufficient sample size to ensure validity;
- Ensure that specific reporting and performance results are indeed quality indicators;
- Ensure that the site accurately represents physician performance and facilitates consumer decision-making;
- Provide an opportunity for physicians, other eligible professionals, and group practices to review their data before it is made public. As with Hospital Compare, eligible professionals should have the right to suppress any data that are inaccurate; and
- Establish a method for ensuring that any publicly reported information is—

++ Correctly attributed to those involved in the care;

++ Appropriately risk-adjusted; and

++ Accurate, user-friendly, relevant and helpful to the consumer/patient. CMS must educate consumers/patients about the publicly reported performance measures and corresponding benchmarks.

Response: We agree with commenters on the importance of receiving stakeholder input on the Physician Compare Web site. We are required, by section 10331(d) of the ACA to take into consideration input provided by multi-stakeholder groups, consistent with section 1890(b)(7) and 1890(A) of the Act, as added by section 3014 of the ACA, in selecting quality measures for the Physician Compare Web site. In addition, on October 27, 2010, we held a Town Hall Meeting to solicit input from stakeholders on the further expansion of the Physician Compare Web site (75 FR 58411 and 58412). Finally, as we stated in the CY 2011 PFS proposed rule, we will be working on a plan to expand the information that is publicly reported on the Physician Compare in future years, which will be described in future rulemaking. Stakeholders would have an opportunity to comment on any plans described in future rulemaking as well.

Comment: One commenter voiced concerns about various issues and challenges that need to be resolved before any performance information is made public. Specific issues include measure gaps, challenges associated with risk adjustment and attribution, accuracy of the data, and eligible professionals' ability to control the factors that influence their performance.

Response: We agree that these issues will need to be addressed as we move towards public reporting of performance information on individual eligible professionals. We look forward to receiving input from stakeholders on these and other important methodological considerations as we develop our plans for the expansion of the Physician Compare Web site to include performance information.

Comment: A few commenters suggested that physicians be given an opportunity to review and appeal any data that will be made public prior to the data being made public. Commenters stated that physicians also should be given an opportunity to comment and make changes to the data on the Physician Compare Web site should the information be incorrect.

Response: With respect to the development and implementation of a plan for making physician performance information publicly available on the Physician Compare Web site, section 10331(b) of the ACA specifically requires the Secretary, to the extent practicable, to include processes by which a physician or other eligible professional whose performance measures is being publicly reported has a reasonable opportunity, as determined by the Secretary, to review his or her individual results before they are made public. Thus, as we describe our plans for making physician performance information publicly available on the Physician Compare Web site in future notice and comment rulemaking, we anticipate addressing the commenter's suggestions in further detail.

Comment: Some commenters had concerns about the posting of the names of eligible professionals and group practices who satisfactorily report Physician Quality Reporting System measures. Some commenters requested that CMS delay posting this information until problems with the Physician Quality Reporting System are addressed and both success rates and participation rates improve significantly. Commenters were concerned that this information could be misinterpreted or misperceived by the public. Some commenters noted that successful reporting of the mostly process measures that comprise the Physician Quality Reporting System would not be a valid surrogate for patients to evaluate the actual quality of

care or quality of service provided by an individual practitioner. Furthermore, consumers already face a challenge when attempting to evaluate providers. The commenter thinks it will be even more confusing for consumers to understand the difference between claims-based or registry reporting and which is more accurate or reflects actual quality of care. Commenters stressed the importance of educating consumers about why eligible professionals may choose not to participate in the Physician Quality Reporting System. Another commenter noted that consumers must be made aware that non-participation in the Physician Quality Reporting System is not an indication that an eligible professional or group practice provides low quality care. Finally, a commenter also suggested that this information be accompanied with explanatory language regarding the limitations of posting this data.

Response: While we understand the commenters' concerns, section 1848(m)(5)(G)(i) of the Act requires us to post on a CMS Web site the names of eligible professionals and group practices that satisfactorily submit data on quality measures under the Physician Quality Reporting System. We intend to provide explanatory language on the Web site that would address many of the commenters' concerns, including information about the intended uses and/or limitations of the information being presented in the form of a disclaimer.

Comment: One commenter urged CMS to consider how the appeals process will be connected to the Physician Compare Web site. The commenter questioned whether the Web site would be updated if professionals are successful during the appeals process.

Response: We are assuming that the commenter is referring to the informal appeals process required under section 1848(m)(5)(I) of the Act and discussed in section VII.F.1.e. of this final rule with comment period. To the extent that an eligible professional seeks a review of our determination that he or she did not satisfactorily report and our review results in a determination that the professional did satisfactorily report, we anticipate that we would update the Physician Compare Web site to indicate that the professional satisfactorily reported Physician Quality Reporting System quality measures.

Comment: We received a few comments related to public reporting and maintenance of certification. One commenter offered to work with us to provide information on Maintenance of Certification Program status for posting on the Physician Compare Web site and the value as it relates to quality, safety, efficiency, and patient experiences of physician care. The commenter would also like the Physician Compare Web site to include a link to ABMS. Another commenter urged us to make available information on whether a physician received an additional bonus for successfully meeting Maintenance of Certification Program requirements. A third commenter was concerned that public reporting of physicians who satisfy the Physician Quality Reporting System requirements through the Maintenance of Certification Program Part IV pathway could inadvertently lead to confusion about whether those same physicians have satisfied all of the requirements of the Boards' Maintenance of Certification Program programs.

Response: We agree that it may be valuable to consumers to have information on an eligible professional's Maintenance of Certification Program status and would be interested in exploring the feasibility of posting this information on the Physician Compare Web site in the future. We could also explore posting information on whether a physician or other eligible professional received the additional 0.5 percent incentive associated with participation in a Maintenance of Certification Program. However, as noted by one of the commenters, we feel that this information could be misinterpreted and would not be as valuable as information on an eligible professional's Maintenance of Certification Program status. As we describe in section VII.F.1.l.(1) of this final rule with comment period, in order for an eligible professional to qualify for this additional 0.5 percent incentive, not only does he or she have to satisfactorily participate in the Physician Quality Reporting System, participate in a qualified Maintenance of Certification Program, and successfully complete a Maintenance of Certification Program practice assessment, but he or she must participate in the qualified Maintenance of Certification Program and successfully complete a Maintenance of Certification Program practice assessment more frequently than is required to qualify for or maintain board certification status.

After considering the comments, we intend to post the names of eligible professionals who: (1) Submit data on the 2011 Physician Quality Reporting System quality measures through one of the reporting mechanisms available for the 2011 Physician Quality Reporting System; (2) meet one of the satisfactory reporting criteria of individual measures or measures groups for the 2011 Physician Quality Reporting System; and (3) qualify to earn a Physician Quality Reporting System incentive payment for covered professional services furnished during the applicable 2011 Physician Quality Reporting System reporting period for purposes of satisfying the requirements under section 1848(m)(5)(G)(i) of the Act, on the Physician Compare Web site that will be developed by January 1, 2011.

Similarly, for purposes of satisfying the requirements under section 1848(m)(5)(G)(i) of the Act with respect to group practices, on the Physician Compare Web site, we intend to post the names of group practices that: (1) Submit data on the 2011 Physician Quality Reporting System quality measures through GPRO I or GPRO II; (2) meet the criteria for satisfactory reporting under the GPRO I or GPRO II; and (3) qualify to earn a Physician Quality Reporting System incentive payment for covered professional services furnished during the applicable 2011 Physician Quality Reporting System reporting period for group practices.

We will discuss our plans for further expansion of the Physician Compare Web site in future notice and comment rulemaking.

l. Other Relevant ACA Provisions

(1) Section 3002(b)—Incentive Payment Adjustment for Quality Reporting

Beginning 2015, a payment adjustment will apply under the Physician Quality Reporting System. Specifically, under section 1848(a)(8) of the Act, as added by section 3002(b) of the ACA, with respect to covered professional services furnished by an eligible professional during 2015 or any subsequent year, if the eligible professional does not satisfactorily submit data on quality measures for covered professional services for the quality reporting period for the year, the fee schedule amount for services furnished by such professionals during the year shall be equal to the applicable percent of the fee schedule amount that would otherwise apply to such services. The applicable percent for 2015 is 98.5 percent and for 2016 and each subsequent year it is 98.0 percent. In the proposed rule, we stated that we will address this provision of the ACA in future notice and comment rulemaking (75 FR 40199).

The following is a summary of comments received regarding the incentive payment adjustment for

quality reporting required under section 3002(b) of the ACA.

Comment: Some commenters expressed opposition to the use of payment adjustments under the Physician Quality Reporting System program. One commenter believes participation should remain voluntary as the Physician Quality Reporting System has not yet been shown to improve patient outcomes and therefore does not warrant penalties for nonparticipating eligible professionals. Other commenters stated that, to be successful, performance measurement should be nonpunitive and transparent.

Response: While we acknowledge the commenters' concerns, we note that section 1848(a)(8) of the Act, as added by the ACA, requires us to implement a payment adjustment for eligible professionals who do not satisfactorily report Physician Quality Reporting System measures beginning in 2015. In the meantime, we will continue to assess whether we can make additional improvements to the Physician Quality Reporting System to facilitate satisfactory reporting and to encourage greater participation prior to implementation of the payment adjustments required under section 1848(a)(8) of the Act beginning for 2015. We will address our plans for implementing the payment adjustment that begins in 2015 in future notice and comment rulemaking.

(2) Section 3002(c)—Maintenance of Certification Programs and Section 10327 Improvements to the Physician Quality Reporting System

Section 3002(c) of the ACA amends section 1848(k)(4) of the Act to require a mechanism whereby an eligible professional may provide data on quality measures through a maintenance of certification program (Maintenance of Certification Program) operated by a specialty body of the American Board of Medical Specialties (ABMS). In addition, section 1848(m)(7) of the Act ("Additional Incentive Payment"), as added by section 10327(a) of the ACA, provides for an additional 0.5 percent incentive payment for years 2011 through 2014 if certain requirements are met. In accordance with section 1848(m)(7)(B) of the Act, in order to qualify for the additional incentive payment, an eligible professional must—

- Satisfactorily submit data on quality measures under the Physician Quality Reporting System for a year and have such data submitted—

++ On their behalf through a Maintenance of Certification Program that meets the criteria for a registry under the Physician Quality Reporting System; or

++ In an alternative form and manner determined appropriate by the Secretary; and

- More frequently than is required to qualify for or maintain board certification status:

++ Participate in such a Maintenance of Certification Program for a year and

++ Successfully completes a qualified Maintenance of Certification Program practice assessment for such year.

Section 1848(m)(7)(C)(i) of the Act defines "Maintenance of Certification Program" as a continuous assessment program, such as a qualified ABMS Maintenance of Certification Program, or an equivalent program (as determined by the Secretary), that advances quality and the lifelong learning and self-assessment of board certified specialty physicians by focusing on the competencies of patient care, medical knowledge, practice-based learning, interpersonal and communications skills and professionalism. Such a program shall require a physician to do the following:

(1) Maintain a valid, unrestricted medical license in the United States;

(2) Participate in educational and self-assessment programs that require an assessment of what was learned;

(3) Demonstrate, through a formalized, secure examination, that the physician has the fundamental diagnostic skills, medical knowledge, and clinical judgment to provide quality care in their respective specialty;

(4) Successful completion of a qualified Maintenance of Certification Program practice assessment.

As defined in section 1848(m)(7)(C)(ii) of the Act, a "qualified Maintenance of Certification Program practice assessment" means an assessment of a physician's practice that—

(1) Includes an initial assessment of an eligible professional's practice that is designed to demonstrate the physician's use of evidence-based medicine;

(2) Includes a survey of patient experience with care; and

(3) Requires a physician to implement a quality improvement intervention to address a practice weakness identified in the initial assessment and then to remeasure to assess performance after such intervention.

To qualify for the additional incentive payment, section 1848(m)(7)(B)(iii) of the Act also requires the Maintenance of Certification Program to submit to CMS, on behalf of the eligible professional, information:

(1) In a form and manner specified by the Secretary, that the eligible professional more frequently than is required to qualify for or maintain board certification status, participates in the Maintenance of Certification Program for a year and successfully completes a qualified Maintenance of Certification Program practice assessment for such year;

(2) If requested by the Secretary, information on the survey of patient experience with care; and

(3) As the Secretary may require, on the methods, measures, and data used under the Maintenance of Certification Program and the qualified Maintenance of Certification Program practice assessment.

Section 1848(m)(7) of the Act ("Additional Incentive Payment") further specifies that the additional 0.5 percent incentive payment is available only for years 2011, 2012, 2013, and 2014. For years after 2014, if the Secretary determines it to be appropriate, the Secretary may incorporate participation in a Maintenance of Certification Program and successful completion of a qualified Maintenance of Certification Program practice assessment into the composite of measures of quality for care furnished pursuant to the physician fee schedule payment modifier.

To implement the provisions under sections 1848(k)(4) and 1848(m)(7) of the Act ("Additional Incentive Payment"), we proposed for 2011 to require the following (75 FR 40199 and 40200):

- An eligible professional wishing to be eligible for the additional Physician Quality Reporting System incentive payment of 0.5 percent must meet the proposed requirements for satisfactory Physician Quality Reporting System reporting, for program year 2011, based on the 12-month reporting period, due to the statutory language that the eligible professional must satisfactorily report "for a year." For purposes of satisfactory reporting under the Physician Quality Reporting System, we proposed that the eligible professional may participate as an individual eligible professional using either individual Physician Quality Reporting System measures or measures groups and submitting the Physician Quality Reporting System data via claims, a registry, or an EHR or participate under one of the GPRO options (I or II). Alternatively, eligible professionals may satisfactorily report under the Physician Quality Reporting System based on submission of Physician Quality Reporting System data by a Maintenance of Certification Program, provided that the Maintenance of Certification Program has qualified as a

Physician Quality Reporting System registry for 2011. As indicated previously, an eligible professional would not necessarily have to qualify for the Physician Quality Reporting System through a Maintenance of Certification Program serving as a registry. Rather, we proposed that an eligible professional may qualify for the additional incentive, without regard to the method by which the eligible professional has met the basic requirement of satisfactory reporting under the Physician Quality Reporting System.

• In addition to meeting the proposed requirements for satisfactory reporting for the Physician Quality Reporting System for program year 2011, the eligible professional must have data submitted on his or her behalf through a Maintenance of Certification Program, for the Maintenance of Certification Program in which the eligible professional participates. Although the Maintenance of Certification Program need not become a qualified registry for data submission for Physician Quality Reporting System purposes, the Maintenance of Certification Program must meet the criteria for a registry for submission of the Maintenance of Certification Program data as specified below.

• An eligible professional must, more frequently than is required to qualify for or maintain board certification, participate in a Maintenance of Certification Program for a year and successfully complete a qualified Maintenance of Certification Program practice assessment for such year. We believe that the "more frequently" requirement applies both to the elements of the Maintenance of Certification Program itself and the requirement to successfully complete a qualified Maintenance of Certification Program practice assessment. With regard to the elements other than completing a qualified Maintenance of Certification Program practice assessment, we proposed to require that the Maintenance of Certification Program certify that the eligible professional has "more frequently" than is required to qualify for or maintain board certification "participated in a Maintenance of Certification Program for a year" as required by section 10327 of the ACA. We did not propose to specify with respect to participation how an eligible professional must meet the "more frequently" requirement, but rather that the Maintenance of Certification Program so certify that the eligible professional has met this requirement. We noted that we did not believe that the "more frequently" requirement is applicable to the licensure requirement, given that one cannot be licensed "more frequently" than is required. However, we stated that the eligible professional must "more frequently" than is required to qualify for or maintain board certification, participate in educational and self-assessment programs that require an assessment of what was learned; demonstrate, through a formalized, secure examination, that the physician has the fundamental diagnostic skills, medical knowledge, and clinical judgment to provide quality care in their respective specialty; and successfully complete a qualified Maintenance of Certification Program practice assessment.

With respect to the Maintenance of Certification Program practice assessment, which is specifically delineated in section 1848(m)(7)(B)(ii) of the Act as being required more often than is necessary to qualify for or maintain board certification, we stated that we believe we needed to be more specific regarding our interpretation of the phrase "more frequently" (75 FR 40200). Additionally, we stated that we were aware that some specialty boards have varying Maintenance of Certification Program requirements for physicians to maintain board certification, based on the date of original certification. Some, we believe, may not be required to participate in a Maintenance of Certification Program at all in order to maintain board certification. Accordingly, we recognize that "more often" may vary among physicians certified by the same specialty board. We interpreted the statutory provisions as requiring participation in and successful completion of at least one Maintenance of Certification Program practice assessment. Therefore, we proposed, as a basic requirement, participation in and successful completion in at least one Maintenance of Certification Program practice assessment. For physicians who are not required to participate in a Maintenance of Certification Program to maintain board certification, "more often" would be more than 0, and therefore only once. For physicians, however, who are otherwise required by the specialty board to participate in a Maintenance of Certification Program to maintain board certification status, these physicians would need to complete the Maintenance of Certification Program practice assessment a second time in order to qualify for the additional incentive payment. If a Maintenance of Certification Program practice assessment were required more than once during a particular cycle, the eligible professional would be required to complete the Maintenance of Certification Program practice assessment a third time in order to qualify for the additional incentive.

We are also aware that ABMS boards are at various stages in implementing the practice assessment modules, and some may not have such assessment modules in place. However, inasmuch as we interpret the statute to require a Maintenance of Certification Program practice assessment at least once as part of the Maintenance of Certification Program, eligible professionals who do not have available, through their boards or otherwise, a Maintenance of Certification Program practice assessment are not eligible for the 0.5 percent incentive.

We believe that the experience of care survey provides particularly valuable information and proposed that a qualified Maintenance of Certification Program practice assessment must include a survey of patient experience with care. The Secretary may request information on the survey of patient experience with care, under section 1848(m)(7)(B)(iii) of the Act. In view of the importance of this information, and the lack of readily available alternative sources, we proposed to require that Maintenance of Certification Programs submit information as to the survey of patient experience with care for the eligible professional regarding whom information is being submitted by the Maintenance of Certification Program.

We proposed that Maintenance of Certification Programs wishing to enable their members to be eligible for an additional Physician Quality Reporting System incentive payment for the 2011 Physician Quality Reporting System will need to go through a self-nomination process by January 31, 2011. We proposed the board will need to include all of the following information in their self-nomination letter to CMS:

• Provide detailed information regarding the Maintenance of Certification Program with reference to the statutory requirements for such program.

• Indicate the organization sponsoring the Maintenance of Certification Program, and whether the Maintenance of Certification Program is sponsored by an ABMS board. If not an ABMS board, indicate whether the program is substantially equivalent to the ABMS Maintenance of Certification Program process.

• The frequency of a cycle of Maintenance of Certification Program for the specific Maintenance of

Certification Program of the sponsoring organization; including what constitutes "more frequently" for the Maintenance of Certification Program practice assessment for the specific Maintenance of Certification Program of the sponsoring organization.

- What was, is, or will be the first year of availability of the Maintenance of Certification Program practice assessment for completion by an eligible professional.
- What data is collected under the patient experience of care survey and how this information would be provided to CMS.
- How the Maintenance of Certification Program monitors that an eligible professional has implemented a quality improvement process for their practice.
- Describe the methods, and data used under the Maintenance of Certification Program, and provide a list of all measures used in the Maintenance of Certification Program for 2010 and to be used for 2011, including the title and descriptions of each measure, the owner of the measure, whether the measure is NQF endorsed, and a link to a Web site containing the detailed specifications of the measures, or an electronic file containing the detailed specifications of the measures.

We proposed that sponsoring organizations who desire to participate as a Maintenance of Certification Program will need to be able to provide CMS the following information in a CMS-specified file format by no later than the end of the first quarter of 2012:

- The name, NPI and applicable TIN(s) of the eligible professional who would like to participate in this process;
- Attestation from the board that the information provided to CMS is accurate and complete;
- The board has signed documentation from the eligible professional that the eligible professional wishes to have the information released to CMS;
- Information from the experience of care survey;
- Information certifying that the eligible professional has participated in a Maintenance of Certification Program for a year, more frequently than is required to qualify for or maintain board certification status, including the year that the physician met the board certification requirements for the Maintenance of Certification Program, and the year the eligible professional participated in a Maintenance of Certification Program "more frequently" than is required to maintain or qualify for board certification; and
- Information certifying that the eligible professional has completed the Maintenance of Certification Program practice assessment one additional time more than is required to qualify for or maintain board certification, including the year of the original Maintenance of Certification Program practice assessment or that a Maintenance of Certification Program practice assessment is not required for the eligible professional, and the year of the additional Maintenance of Certification Program practice assessment completion.

We proposed that specialty boards that also desire to send Physician Quality Reporting System information to CMS on behalf of eligible professionals should be able to meet the proposed requirements for registry data submission and should follow the directions for self-nomination to become a qualified registry. Boards may also participate as registries for Physician Quality Reporting System data provided that they meet the registry requirements. As an alternative to requiring boards to either operate a qualified Physician Quality Reporting System registry or to self-nominate to submit Maintenance of Certification Program data to CMS on behalf of their members, we also considered having the various boards submit the Maintenance of Certification Program data to the ABMS and having ABMS channel the information from the various boards to CMS (75 FR 40200).

The following is a summary of the comments received on the proposed requirements for qualifying for the additional 0.5 percent incentive for 2011, the proposed mechanism for receiving Maintenance of Certification Program data from the specialty boards, as well as on the alternative mechanism that we considered.

Comment: Commenters raised concerns as to whether the CY 2011 PFS proposed rule uses the term "Maintenance of Certification Program" in a manner that may be confusing to the public and unnecessarily raises trademark concerns. Specifically, the commenter recommended changes related to the use of the acronym "MOCP," such as referring to "maintenance of certification program" (all lower-case letters) or using different letters for the acronym.

Response: We appreciate the commenter's input. We will not use any acronym, including "MOCP." Instead, we will spell out the term "Maintenance of Certification Program" using capital letters as it is done in section 1848(m)(7) of the Act ("Additional Incentive Payment").

Comment: Several commenters provided positive feedback regarding the availability of an additional 0.5 percent incentive payment for meeting specific maintenance of certification requirements, including support for the inclusion of patient experience of care surveys as a required element of the Maintenance of Certification Program practice assessment component.

Response: We appreciate the commenter's support of the additional Maintenance of Certification Program incentive for eligible professionals participating in the 2011 Physician Quality Reporting System, authorized by the ACA.

Comment: One commenter believes that the "maintenance of certification" reporting option is premature. The commenter noted that the state of New Jersey may not currently have operational and tested "practice assessment" capability and funding for this program may not be available.

Response: While we recognize that this option may not be a feasible option for all eligible professionals, we are required to have this option available for the 2011 Physician Quality Reporting System under section 1848(m)(7) of the Act ("Additional Incentive Payment"). We note that participation in this option is voluntary and is not required to participate in the Physician Quality Reporting System or earn the Physician Quality Reporting System incentive. Therefore, eligible professionals who do not have the ability to participate in a maintenance of certification program can still participate in the Physician Quality Reporting System for 2011 and potentially qualify for a 1 percent incentive payment by satisfactorily reporting 2011 Physician Quality Reporting System measures. Participation in a maintenance of certification program provides eligible professionals an opportunity to earn an additional 0.5 percent incentive above and beyond what they could earn by satisfactorily reporting Physician Quality Reporting System measures.

Comment: One commenter urged us to implement regulations that would ensure that all eligible professionals have access to the additional 0.5 percent incentive.

Response: While we appreciate the commenter's support for the additional 0.5 percent incentive, we note that section 1848(m)(7) of the Act ("Additional Incentive Payment") explicitly ties the additional 0.5 percent incentive to participation in a Maintenance of Certification Program. Section 1848(m)(7)(C)(i) of the Act specifies that the term "Maintenance of

Certification Program" means "a continuous assessment program * * * that advances quality and the lifelong learning and self-assessment of board certified specialty physicians * * *." This suggests that Maintenance of Certification Programs apply only to physicians and only physicians can participate in a Maintenance of Certification Program and qualify for this additional 0.5 percent incentive payment. We do not believe we have the authority to broaden the applicability of this additional 0.5 percent incentive payment.

Comment: One commenter recommended that we allow eligible professionals who complete a Part IV Maintenance of Certification practice assessment be eligible for an additional 0.5 percent bonus if they are also satisfactorily report Physician Quality Reporting System measures, regardless of whether they satisfactorily reported through claims or another registry method. In contrast, other commenters believe the requirements for receiving a Maintenance of Certification Program payment are too onerous for both eligible professionals and Maintenance of Certification Program boards and should not be tied to satisfactorily reporting Physician Quality Reporting System measures.

Response: Section 1848(m)(7)(B)(i)(I) of the Act specifically requires that "* * * in order to qualify for the additional incentive payment* * *, an eligible professional shall* * *satisfactorily submit data on quality measures for [the Physician Quality Reporting System] for a year." As stated in the proposed rule (75 FR 40199), we proposed that an eligible professional "* * * may participate as an individual eligible professional using either individual Physician Quality Reporting System measures or measures groups and submitting the Physician Quality Reporting System data via claims, a registry, or an EHR or participate under one of the GPRO options (I or II)." We also proposed that an eligible professional "may qualify for the additional incentive, without regard to the method by which the [eligible professional] has met the basic requirement of satisfactorily reporting under the PQRI [that is, the Physician Quality Reporting System]." Therefore, eligible professionals wishing to qualify for the additional 0.5 percent incentive payment can satisfactorily report Physician Quality Reporting System measures using any available Physician Quality Reporting System method and are not limited to a specific one.

Comment: Although the ABMS has issued guidelines for Maintenance of Certification Program, one commenter believes that the individual boards have a fair amount of latitude in how they implement those guidelines. As a result, the commenter favors the plan to have individual specialty boards meet the CMS criteria if they wish to be deemed to verify individual eligible professional qualification for Physician Quality Reporting System incentives.

Response: We recognize the variability in the boards' maintenance of certification program requirements and appreciate the commenter's support of our proposal to allow individual boards to verify that their eligible professionals have met the appropriate maintenance of certification program requirements for the additional 0.5 percent incentive. Accordingly, we are finalizing the requirement to have the various boards submit information to us on eligible professionals' behalf attesting that an eligible professional has more frequently than is required to qualify for or maintain board certification status, participated in a maintenance of certification program for a year and successfully completed a qualified Maintenance of Certification Program practice assessment for such year.

Comment: Some commenters requested additional clarification on the requirements for qualifying for the additional 0.5 percent incentive so that eligible professionals can understand the necessary processes needed to qualify. One commenter requested more information on how Maintenance of Certification Program would work for specialty boards, such as the American Board of Internal Medicine (ABIM), that oversee the maintenance of certification processes for multiple subspecialties.

Response: As discussed previously, we recognize that there is variability in the boards' maintenance of certification program requirements. Therefore, eligible professionals will need to work with their specific Maintenance of Certification Program for information as to the processes of that program as it relates to qualifying for the additional 0.5 percent incentive.

We did not propose any requirements for self-nomination of each subspecialty of a board. Rather the board would have to provide information to CMS on each Maintenance of Certification Program that the board sponsors, where it sponsors more than one.

Comment: In response to the request in the proposed rule for input on an alternative to requiring Boards to either operate a qualified Physician Quality Reporting System registry or to self-nominate to submit Maintenance of Certification Program data to CMS on behalf of their members (75 FR 40201), one commenter noted that many of the ABMS member boards do not have the capacity to develop and implement CMS-approved registries to support their diplomates' participation in the Maintenance of Certification Program pathway for Physician Quality Reporting System reporting. The commenter suggested that developing a registry that can be shared across multiple Boards will allow for an efficient and cost-effective approach to facilitate participation in Physician Quality Reporting System reporting for their diplomates. Such a registry could collect and submit physician quality improvement data, provide attestation that the quality improvement data was collected as part of a qualified ABMS MOC® Part IV activity, and also serve as an intermediary in transmitting successful maintenance of certification participation in the Physician Quality Reporting System to CMS. Depending upon the vendor(s) identified to support the registry function, the commenter felt that this may also provide a mechanism for submission of patient experience of care surveys.

Response: We note that we did not propose to require boards to implement Physician Quality Reporting System qualified registries to support their diplomates' participation in the Maintenance of Certification Program pathway for Physician Quality Reporting System reporting. We merely highlighted that boards may wish to self-nominate to become a qualified Physician Quality Reporting System registry to facilitate eligible professionals' reporting of Physician Quality Reporting System data, as well as participation in the Maintenance of Certification Pathway. To the extent that a board or other entity wishes to become a qualified registry for the purposes of Physician Quality Reporting System data submission, the board or other entity must self-nominate to do so and meet all of the registry qualification requirements described in section VII.F.1.(4). of this final rule with comment period. In addition, to the extent an entity wishes to submit Physician Quality Reporting System data and/or data regarding participation in Maintenance of Certification Program(s) on behalf multiple boards, the entity will need to comply with the appropriate registry and/or Maintenance of Certification Program qualification requirements. More specifically, in order to submit data on participation in the Maintenance of Certification Pathway for multiple boards, the entity, must include the following information for each Maintenance of Certification

Program that it wishes to submit data on in their self-nomination letter to CMS:

- Provide detailed information regarding the Maintenance of Certification Program with reference to the statutory requirements for such program.
- Indicate the organization sponsoring the Maintenance of Certification Program, and whether the Maintenance of Certification Program is sponsored by an ABMS board. If not an ABMS board, indicate whether the program is substantially equivalent to the ABMS Maintenance of Certification Program process.
- The frequency and cycle of Maintenance of Certification for the specific Maintenance of Certification Program of the sponsoring organization; including what constitutes "more frequently" for the Maintenance of Certification Program practice assessment for the specific Maintenance of Certification Program of the organization.
- What was, is, or will be the first year of availability of the Maintenance of Certification Program practice assessment for completion by an eligible professional.
- What data is collected under the patient experience of care survey and how information on the survey would be provided to CMS.
- How the Maintenance of Certification Program monitors that an eligible professional has implemented a quality improvement process for their practice.
- Describe the methods, and data used under the Maintenance of Certification Program, and provide a list of all measures used in the Maintenance of Certification Program for 2010 and to be used in 2011, including the title and descriptions of each measure, the owner of the measure, whether the measure is NQF-endorsed, and a link to a Web site containing the detailed specifications of the measures, or an electronic file containing the detailed specifications of the measures.

With respect to submitting data on Maintenance of Certification Program participation, the qualified entity must submit:

- The name, NPI, and applicable TIN(s) of the eligible professional who would like to participate in this process;
- Attestation from each board that the information provided to CMS is accurate and complete;
- Signed documentation from the eligible professional that the eligible professional wishes to have their information released to CMS;
- Information on the patient experience of care survey;
- Information from the appropriate board attesting that the eligible professional has participated in a Maintenance of Certification Program for a year, more frequently than is required to qualify for or maintain board certification status, including the year that the physician met the board certification requirements for the Maintenance of Certification Program and the year the eligible professional participated in a Maintenance of Certification Program "more frequently" than is required to qualify for board certification; and
- Information from the appropriate board certifying that the eligible professional has completed the Maintenance of Certification Program practice assessment one additional time more than is required to qualify or maintain board certification, including the year of the original Maintenance of Certification Program practice assessment or that a Maintenance of Certification Program practice assessment is not required for the eligible professional, and the year of the additional Maintenance of Certification Program practice assessment completion.

Comment: Several comments indicated that we misinterpreted the intent of the "more frequently" requirement under section 1848(m)(7)(B)(ii) of the Act. Specifically, some commenters believe the intent of the "more frequently" requirement applies specifically to the Maintenance of Certification Program Part IV, practice assessment, requirement only and not to Parts II or III of the Maintenance of Certification Program (that is, the educational and self-assessment programs and the formalized, secure examination portion of the Maintenance of Certification Program). To that end, commenters requested the final rule provide additional clarification regarding the implementation of the "more frequently" requirement. One commenter also requested that we work closely with the ABMS to determine a means for implementing this provision which would be the least disruptive to existing maintenance of certification programs. One commenter noted that adding a requirement to participate in a maintenance of certification program "more frequently" than is required by the specialty board undermines the boards' standards and their expertise.

Response: As discussed in the proposed rule (75 FR 40199 through 40201), we believe that, as constructed, sections 1848(m)(7)(C)(i)(II) and 1848(m)(7)(C)(i)(III) of the Act applies the "more frequently" requirement to both the Maintenance of Certification Program itself and the successful completion of a Maintenance of Certification Program practice assessment. While we understand the commenter's question of this interpretation, we do not interpret the legislation as applying the "more frequently" requirement simply to the practice assessment activity. Rather we interpret the legislation as providing an additional incentive for eligible professionals who are actively pursuing activities involved in a continuous assessment program, such as a qualified ABMS Maintenance of Certification Program or an equivalent program. However, with respect to the "more frequently" requirement as it relates to the Maintenance of Certification Program itself, as opposed to the "more frequently" requirement for the practice assessment, we do not specify how an eligible professional must meet the more frequently requirement. Rather, we require only that the Maintenance of Certification Program indicate that the eligible professional has met the requirement.

Comment: A few comments opposed linking payers to the Maintenance of Certification Program.

Response: We are unclear what the commenters mean with respect to linking Medicare to the Maintenance of Certification Program. As we noted previously, participation in a Maintenance of Certification Program is not required for an eligible professional to earn a Physician Quality Reporting System incentive. Rather, participation in a Maintenance of Certification Program provides eligible professionals an opportunity to earn an additional 0.5 percent incentive above and beyond what they could earn under the Physician Quality Reporting System.

Comment: Several commenters suggested the "more frequently" requirement be based on the March 2009 ABMS MOC® Standards adopted by the ABMS, which applies to the 24 ABMS member boards. Under these standards, "more frequently" would mean that a Part IV activity must be completed every 1 to 4 years, by physicians who voluntarily decide to participate in the Maintenance of Certification Program Physician Quality Reporting System pathway. One of the commenters believes that diplomates should not be expected to participate more frequently than once a year in a process of collecting and reporting performance data and then acting on those results.

Response: With regard to the commenters' suggestion to adopt the standards adopted by ABMS in 2009,

we believe that by requiring the Maintenance of Certification Program to confirm that their eligible professionals meet the requirements "more frequently" than required will allow flexibility for the Maintenance of Certification Programs that have differing cycles of completion. Since we are looking to see that both the Maintenance of Certification Program itself and the practice assessment completed once more than required, we feel that a broader interpretation rather than an exact instance provides a greater opportunity for participation. For example, if an eligible professional's cycle states that they must complete one practice assessment activity every two to five years, more frequently would be completion of an additional activity within that cycle. If an eligible professional's cycle states they must complete two practice assessment activities during a cycle (for example, every two to five years), they would have to complete an additional activity (total of three) within their cycle.

Comment: Although several commenters favor measuring patients' experience with care, some suggested that we waive the requirement for reporting patient experience until 2012, once a definitive ABMS standard has been adopted. One commenter suggested that we work with the Boards to monitor the adoption of accurate and applicable patient experience methodologies. Another commenter requested clarification on why the patient experience is required for the Physician Quality Reporting System Maintenance of Certification Program practice assessment when many specialty boards do not require a survey of patient experience to satisfy practice assessment or maintenance of certification requirements.

Response: We agree that the survey of patient experience is an important mechanism for improving quality of care. While we appreciate the intent of the comments of ensuring a standard is available under ABMS Maintenance of Certification Programs, this additional 0.5 percent incentive is also available to non-ABMS boards as long as the process is substantially similar to the ABMS Maintenance of Certification Program process. The survey of patient experience with care is a required part of the practice assessment as defined under section 1848(m)(7)(B)(iii) of the Act. Therefore, we will finalize this requirement of a survey of patient experience with care as a required element of the practice assessment.

Comment: One commenter requested that we provide CRNAs with the opportunity to report quality measures through a nursing maintenance of certification program mechanism. Conversely, other commenters expressed that the rule should clearly state that physicians who are not participating in the ABMS MOC® are not eligible for the additional 0.5 percent incentive via the Maintenance of Certification pathway. One commenter specifically objected to the proposed rule language that, if not an ABMS Board, a program that is "substantially equivalent" to the ABMS Maintenance of Certification Program process may participate. The commenter noted that to be "substantially equivalent" to the ABMS Maintenance of Certification Program, any other program would have to first assure that its physicians had (1) successfully completed an Accreditation Council for Graduate Medical Education (ACGME)-approved training in their specialty, (2) successfully completed all the requirements of the ABMS Member Board to be certified, and (3) engaged in the ABMS Maintenance of Certification® program that is sponsored by the relevant Member Board. Items one and two are essential and should be included in any reference to the concept of "substantially equivalent."

Response: Under section 1848(m)(7)(C)(i) of the Act, a Maintenance of Certification Program is "a continuous assessment program such as a qualified American Board of Medical Specialties Maintenance of Certification Program or an equivalent program (as determined by the Secretary)." Therefore, eligible professionals participating in an equivalent program (that is, one that satisfies the definition of "Maintenance of Certification Program" under section 1848(m)(7)(C)(i) of the Act and § 414.90(b), that has a "qualified Maintenance of Certification Program practice assessment" as defined under section 1848(m)(7)(ii) of the Act and § 414.90(b), and meets the self-nomination process as proposed and previously described) will be able to submit Maintenance of Certification Program data on behalf of eligible professionals for purposes of the eligible professional qualifying for the additional 0.5 percent incentive. This additional 0.5 percent incentive payment is not limited to only those eligible professionals who participate in an ABMS MOC®. However, as previously stated, we believe that the definition of the term "Maintenance of Certification Program" under section 1848(m)(7)(C)(i) of the Act limits applicability of Maintenance of Certification Programs to physicians. Therefore, this additional 0.5 percent incentive would not apply to other eligible professionals, such as CRNAs.

Comment: One commenter supports creation of a mechanism whereby an eligible professional may provide data on quality measures through a Maintenance of Certification Program operated by a member specialty body of the American Board of Medical Specialties or American Osteopathic Association. Specifically, the commenter expressed support for the American Board of Radiology (ABR) and American Osteopathic Board of Radiology (AOBR) Maintenance of Certification Programs.

Response: We appreciate the commenter's support of the additional 0.5 incentive for eligible professionals participating in the 2011 Physician Quality Reporting System, authorized by the ACA. With respect to the specific Maintenance of Certification Programs that the commenter is in support of, these entities must follow the self-nomination process finalized in this final rule with comment period.

After considering the comments received and for the reasons we previously articulated, we are implementing the requirements that an eligible professional must meet to qualify for the additional 0.5 percent incentive authorized by section 1848(m)(7) of the Act ("Additional Incentive Payment"), previously described. We are also implementing the requirements for entities to self-nominate to submit Maintenance of Certification Program data on behalf of eligible professionals as proposed and previously described. We do not anticipate completing the qualification process until mid-2011. We will conditionally qualify entities until we complete testing of the entities' ability to submit Maintenance of Certification Program data to us in the specified manner. We anticipate posting the names of these conditionally qualified entities on the Physician Quality Reporting System section of the CMS Web site in Spring 2011 and we will update this list with the entities qualified for 2011 as soon as we finish testing the entities' ability to submit Maintenance of Certification Program data to us in the specified manner.

To the extent an eligible professional participates in multiple Maintenance of Certification Programs and meets the requirements under section 1848(m)(7) of the Act (Additional Incentive Payment) under multiple programs, the eligible professional can qualify for only one additional 0.5 percent incentive per year.

(3) Section 3002(d)—Integration of Physician Quality Reporting and EHR Reporting

Section 1848(m)(7) of the Act ("Integration of Physician Quality Reporting and EHR Reporting"), as added by section 3002(d) of the ACA requires us to move towards the integration of EHR measures with respect to the Physician Quality Reporting System. Section 1848(m)(7) of the Act specifies that by no later than January 1, 2012, the Secretary shall develop a plan to integrate reporting on quality measures under the Physician Quality Reporting System with reporting requirements under subsection (o) relating to the meaningful use of EHRs. Such integration shall consist of the following:

(A) The selection of measures, the reporting of which would both demonstrate—

(i) Meaningful use of an EHR for purposes of the EHR incentive program; and

(ii) Quality of care furnished to an individual; and

(B) Such other activities as specified by the Secretary.

In an effort to align the Physician Quality Reporting System with the EHR Incentive Program, we proposed and finalized many ARRA core clinical quality measures for inclusion in the 2011 Physician Quality Reporting System (see section VII.F.1.i.(4)) of this final rule with comment period), to demonstrate meaningful use of EHR and quality of care furnished to individuals. We are working towards a plan to integrate reporting on quality measures to make available by January 1, 2012.

The following is a summary of comments received regarding the integration of Physician Quality Reporting System and EHR reporting.

Comment: With respect to the integration of the Physician Quality Reporting System and the EHR Incentive Program, one commenter requested clarification on how we will deal with eligible professionals excluded from one program or the other in the alignment process. The commenter noted that we have not provided a feasible way for physicians excluded from the EHR Incentive Program to be able to participate in a program that combines these two initiatives. For example, pathologists employed at independent laboratories may be eligible for the EHR incentive but cannot participate in the Physician Quality Reporting System because of the billing mechanism they use.

Response: While we appreciate the commenter's interest in participating in both the Physician Quality Reporting System and the EHR Incentive Program, we note that these are two different, distinct programs. In addition, the term "eligible professional" is defined differently under these programs. We understand that, as a consequence, professionals may be eligible for one program but not the other. While we encourage participation in both the Physician Quality Reporting System and the EHR Incentive Program, we are not able to change the criteria for participation eligibility in each program in order to accommodate professionals who would like to participate in both programs, but do not meet the eligibility requirements for both.

Regarding the specific concern that pathologists who bill through independent laboratories are unable to participate in the Physician Quality Reporting System, independent laboratories are suppliers and do not fit into the Physician Quality Reporting System definition of "eligible professional" under section 1848(k)(3)(B) of the Act. Pathologists who bill directly to Medicare, however, are eligible to participate in the Physician Quality Reporting System.

Comment: Many commenters expressed support for linking the Physician Quality Reporting System with the EHR Incentive Program as it will reduce the burden and variability of reporting and streamline administrative processes for health care providers and for CMS and offered suggestions for us to consider as we develop our plan to integrate quality measures reporting under the two programs. One commenter, while favoring alignment of measures between the Physician Quality Reporting System and EHR Incentive Program, points out that the purpose of each is different, which will make it difficult to achieve this integration. The commenter stated that quality reporting is only one of the meaningful use features, so Physician Quality Reporting System measures should qualify for that objective. Commenters stated that Physician Quality Reporting System incentives should not require participation in meaningful use, and meaningful use incentives should not specifically require participation in the Physician Quality Reporting System. Commenters particularly supported alignment of the quality measures, noting that the degree to which any of the measures could share a dual purpose would be an added advantage for those who are trying to implement these programs. Another commenter suggested that we consult with specialty societies on a phased-in approach for integrating Physician Quality Reporting System and meaningful use measures that allow attestation in 2012 followed by incremental targeted percentage requirements would promote a smooth transition to full integration of Physician Quality Reporting System and meaningful use measures. Another commenter requested that we make it clear how we plan to update the outpatient measures required for meaningful use based on any changes implemented in the Physician Quality Reporting System.

Response: We appreciate the commenters' valuable input and will take the opinion offered by the commenters into consideration as we work towards making a plan to integrate reporting on quality measures available by January 1, 2012.

Comment: One commenter expressed concern that if we use the same proposed methodology for excluding measures with a zero percent performance rate in the Physician Quality Reporting System program that it does for assessing compliance with HITECH Meaningful Use measures then many physicians will be deemed "not capable" when attempting to demonstrate reporting capability of quality data. This is because eligible professionals are allowed the flexibility to demonstrate compliance with meaningful use capability when reporting clinical quality measures by reporting a zero denominator.

Response: A zero percent performance rate indicates that the eligible professional is reporting on a measure that is not clinically relevant to their practice. We do not preclude practices from doing this. However, since the Physician Quality Reporting System does not mandate a certain core set of measures and eligible professionals can select which measures apply to them, eligible professionals should be able to find 3 measures which pertain to their practice. We do recognize that eligible professionals may be somewhat limited for 2011 as there are only 20 measures available for Physician Quality Reporting System EHR reporting and those eligible professionals who wish to report measures without electronic specifications for the Physician Quality Reporting System will need to do so using a qualified registry or through claims (if claims-based reporting is permitted for the selected measure). We intend to discuss our plan to integrate reporting on quality measures under the Physician Quality Reporting System with reporting requirements under the EHR Incentive Program in future notice and comment rulemaking prior to implementation of the plan.

(4) Section 3002(e)—Feedback

Section 3002(e) of the ACA amends section 1848(m)(5) of the Act by adding subparagraph (H), which requires the Secretary to provide timely feedback to eligible professionals on the performance of the eligible professional with respect to satisfactorily submitting data on quality measures. Since the inception of the program in 2007, the Physician Quality Reporting System has provided eligible professionals who have reported Physician Quality Reporting System data on quality measures feedback reports at the TIN/NPI level detailing participation in the Physician Quality Reporting System, including reporting rate and performance rate information. For 2008, we improved the format and content of feedback reports based on stakeholder input. We also developed an alternate report distribution method whereby each eligible professional can directly request and receive a feedback report. We will continue to provide feedback reports to individuals and group practices that satisfactorily submit Physician Quality Reporting System quality measure and thus qualify to earn a Physician Quality Reporting System incentive.

We believe that the requirements under section 1848(m)(5)(H) of the Act, as added by section 3002(e) of the ACA, for "timely" feedback reports is met by providing the feedback reports on or about the time of issuance of the incentive payments. Thus, we proposed to provide 2011 feedback reports on or about the time of issuance of the 2011 incentive payments in 2012, consistent with our current practice. In addition, we proposed to provide interim feedback reports for eligible professionals reporting 2011 measures groups through the claims-based reporting mechanism. These reports would be similar in content and format to the reports that we currently provide for such eligible professionals using claims for dates of service between January 1, 2011 and February 28, 2011. We indicated that we expected that we would be able to make these interim feedback reports available to eligible professionals in June 2011. We stated that we believe interim feedback reports would be particularly valuable to eligible professionals reporting measures groups, because it would let an eligible professional know how many more cases he or she needs to report to satisfy the criteria for satisfactory reporting for claims-based reporting of measures groups. We also indicated that we intend to continue to explore methods to facilitate Physician Quality Reporting System feedback report distribution, as discussed in the proposed rule (75 FR 40201).

The following is a summary of comments received regarding our proposal to provide timely feedback reports for the Physician Quality Reporting System.

Comment: We received some positive comments regarding our proposal to provide timely feedback. One commenter stated that eligible professionals will benefit from timely feedback reports on whether they are satisfactorily submitting data on quality measures. While some commenters supported our proposal to provide interim feedback reports for those who are reporting measures groups via claims, other commenters urged us to focus our efforts on providing other options for interim feedback. One commenter stated that the timeframe for feedback should be revised to a point during the reporting period so that eligible providers can act on the information they receive and that this was the legislation's intention. Commenters indicated that providing feedback after the close of the reporting period or just ahead of incentive payments is of minimal value since eligible professionals are not able to assess their reporting status and revise their reporting practices as needed. Commenters specifically recommended receiving quarterly or monthly feedback reports or upon request.

Response: We appreciate the commenters' suggestions to provide more interim feedback reports in a timely manner. Although section 1848(m)(5) of the Act requires us to provide "timely feedback" to eligible professionals on satisfactorily submitting data on quality measures, it is not a requirement to distribute "interim" feedback reports. While we agree that eligible professionals would benefit from timely, interim feedback, we have determined that we will not be able to complete the programming and development work necessary to provide the proposed interim feedback reports for eligible professionals who report 2011 measures groups using the claims-based reporting mechanism in the time frame that we proposed for the 2011 Physician Quality Reporting System. If we were to provide these interim feedback reports for 2011, they would more than likely not be available until late 2011. Since receiving interim feedback this late in the reporting period would be of little utility to eligible professionals, we are not finalizing our proposal to provide eligible professionals who report measures groups using the claims-based reporting mechanism with interim feedback reports for 2011. We intend, instead, to provide these interim feedback reports for 2012. In addition, as discussed further in section VII.F.2 of this final rule, we plan to provide an interim eRx report in the fall of 2011, which will include 2012 eRx payment adjustment information. We also will continue to provide timely annual feedback reports and anticipate providing additional interim reports for 2012. Furthermore, we are working internally to improve eligible professionals' electronic access to Physician Quality Reporting System and eRx reports by report type, program, and year for 2011.

Comment: Several commenters were disappointed by our proposal and suggested that it does not meet the statutory requirements and requested that we revise our proposal to increase the timeliness and frequency of the reports. One commenter suggested we revise the feedback report proposal to expedite the reports and ensure that the process improves successful participation in the Physician Quality Reporting System. Several comments specifically recommended that interim feedback reports be provided to all Physician Quality Reporting System participants, regardless of reporting mechanism used, rather than only to those reporting measures groups via claims-based reporting, as proposed. Other commenters specifically requested that interim feedback reports be provided to those reporting individual quality measures. Other commenters recommended we provide more frequent, or real-time, feedback reports to ensure that this process improves successful participation in the Physician Quality Reporting System. One commenter specifically encouraged CMS to provide feedback reports throughout the process, so that participants are aware of their progress in the program. Another commenter recommended that the system be redesigned to automatically generate a report as soon as the requirements for an individual eligible professional have been satisfied, much like what most of the registry systems do and why they have such a high level of successful completion. Another commenter suggested including the most recent Physician Quality Reporting System data available in the confidential feedback reports. Issuing the reports at the time of the incentive payment, as proposed, may discourage many from participating in the program the following year given that they are not certain whether or not they were

successful the previous year and renders the reports not useful for quality improvement. The commenters believe the lack of timeliness of feedback reports is one of the major reasons for dissatisfaction with the Physician Quality Reporting System.

Response: Section 1848(m)(5)(HH) of the Act requires that we provide timely feedback to eligible professionals on the performance of the eligible professional with respect to satisfactorily submitting data on Physician Quality Reporting System measures but does not define the term "timely" or specify a deadline for providing feedback. As we stated in the proposed rule (75 FR 40201), we believe that this requirement is met by providing a timely, annual feedback report at or about the time of issuance of the incentive payments. In addition to providing an annual feedback report, we also proposed to provide an interim feedback report for eligible professionals who submit measures groups via claims. Although, for the reasons discussed previously, we are not finalizing our proposal to provide this interim feedback report for 2011, we intend to do so for 2012. The processing of claims data from the NCH file, along with the necessary programming required to produce reports and subsequently distribute to eligible professionals is time intensive. We are actively working to facilitate this process so that the interim feedback reports for claims-based reporting of measures groups and other interim feedback reports can be available for the 2012 Physician Quality Reporting System. We are continuing to work on ways to provide eligible professionals with timely and accurate feedback reports while working with the limitations of the claims-based reporting method. We also intend to work with registries and EHR vendors to explore ways in which we can leverage these alternative reporting mechanisms to provide interim feedback reports.

Comment: One commenter suggested that the interim feedback reports be provided for the first quarter of data instead of 2 months of data as proposed.

Response: While we agree that interim feedback reports for the first quarter of data would be valuable, we do not, for the reasons stated previously, have the technical ability to make interim feedback reports based on just the first 2 months of data available before July 1, 2011. We agree with commenters that interim feedback reports need to be issued at a point during the reporting period that eligible professionals can act upon the information to increase their chances of reporting satisfactorily, especially when they are required to report on percentage of applicable cases or patients. As stated previously, since the utility of receiving feedback reports in late 2011, (at the earliest) is minimal, we are not finalizing our proposal to provide eligible professionals who report measures groups using the claims-based reporting mechanism with interim feedback reports for 2011.

Comment: While we received favorable comments regarding our efforts to streamline and simplify distribution of Physician Quality Reporting System feedback reports, some commenters suggested that we continue to improve access to the feedback reports. Commenters noted that many individual eligible professionals and small practices still have difficulty obtaining their feedback reports. Commenters noted the numerous problems and issues using the Physician Quality Reporting System portal to download these reports. One commenter suggested that the feedback reports should be published for all eligible professionals without requiring them to submit a request.

Response: We are preparing, in the near future, to launch tools to provide eligible professionals access to all reporting years and report types via the CMS portal. We anticipate this level of access to be ready in mid- to late 2011. CMS security system access requirements are mandated by the information systems and security component of CMS and unfortunately cannot be changed by the Physician Quality Reporting System or eRx program requirements. A quick reference guide on IACS accounts, which is the current identity management system required for accessing feedback reports, is currently under development to assist eligible professionals with accessing their feedback reports.

Comment: One commenter recommended providing aggregate data to specialty societies so that they can assist in educating members on the program and potential issues. Another commenter suggested that we improve upon the aggregate quality data error reports by individual measures, currently distributed 4 times per year, by increasing their frequency to monthly.

Response: We appreciate the commenter's valuable input. As we explore ways to provide more timely feedback, we will also evaluate commenter's suggestion and explore its feasibility.

Comment: One commenter requested clarification as to whether eligible professionals could utilize the informal appeals process to dispute data contained in the interim feedback reports.

Response: We would expect that initial questions arising from the interim reports would be addressed by the QualityNet Help Desk, as is done today with the annual feedback reports. As discussed below, the main difference between the current inquiry process via the QualityNet Help Desk and the informal appeals process is that we have established timeframes around when requests for an informal review must be submitted and when a response must be provided.

Upon consideration of the comments and for the reasons we discussed previously, we are finalizing our proposal to provide feedback reports to all Physician Quality Reporting System participants on or about the time of issuance of the incentive payments. We also finalize our proposal to provide interim feedback reports for eligible professionals reporting measures groups through the claims-based reporting mechanism. For the 2011 Physician Quality Reporting System, however, we do not believe that we will have the technical capability needed to issue these interim feedback reports until the second half of the year. Since we do not believe that these interim feedback reports would be of much value at that point, we do not anticipate generating interim feedback reports for eligible professionals reporting measures groups until the 2012 Physician Quality Reporting System. For 2012, we also anticipate being able to provide additional interim feedback reports.

(5) Section 3002(f)—Appeals

Section 1848(m)(5)(I) of the Act, as amended and added by section 3002(f)(2) of the ACA, requires that the Secretary establish and have in place, no later than January 1, 2011, an informal process for eligible professionals to seek a review of the determination that an eligible professional did not satisfactorily submit data on quality measures under the Physician Quality Reporting System. We note that except as provided under the informal process under section 1848(m)(5)(I) of the Act, section 1848(m)(5)(E) of the Act, as amended by section 3002(f) of the ACA, specifies that, with respect to the Physician Quality Reporting System, there shall be no administrative or judicial review under section 1869, section 1878, or otherwise, of—

(1) The determination of measures applicable to services furnished by eligible professionals under the Physician Quality Reporting System;

(2) The determination of satisfactory reporting under the Physician Quality Reporting System; and

(3) The determination of any Physician Quality Reporting System incentive payment and Physician Quality Reporting System payment adjustment.

We proposed to base the informal process on our current inquiry process whereby an eligible professional can contact the Quality Net Help Desk (via phone or e-mail) for general Physician Quality Reporting System and eRx Incentive Program information, information on Physician Quality Reporting System feedback report availability and access, and/or information on Physician Quality Reporting System Portal password issues (75 FR 40201). For purposes of the informal process required under section 1848(m)(5)(E) of the Act, we proposed the following inquiry process:

- An eligible professional electing to utilize the informal process must request an informal review within 90 days of the release of his or her feedback report.
- An eligible professional can request the informal review by notifying the Quality Net Help Desk via e-mail at qnetsupport@sdps.org. The e-mail requesting the initiation of the informal review process should summarize the concern(s) of the eligible professional and the reason(s) for requesting an informal review.
- We proposed to provide the eligible professional with a response to his or her request for an informal review within 60 days of receiving the original request.
- As this process is informal and the statute does not require a formal appeals process, we will not include a hearing or evidence submission process, although the eligible professional may submit information to assist in the review.
- Based on our informal review, we will provide a written response. Where we find that the eligible professional did satisfactorily report, we proposed to provide the applicable incentive payment.
- Given that this is an informal review process and given the limitations on review under section 1848(m)(5)(E) of the Act, decisions based on the informal review will be final, and there will be no further review or appeal.

The following is a summary of comments received on the proposed informal appeals process and our responses.

Comment: Several comments expressed support for the establishment of an informal appeals process, believing that eligible professionals' ability to challenge the results of the program is a necessary step to encouraging participation in the program and in promoting transparency. One commenter specifically indicated that having 90 days to electronically file an "informal appeal" is a sufficient amount of time and that having the ability to electronically submit these requests will help to ensure a timely, streamlined process. Another commented that the current lack of recourse for eligible professionals has contributed to a lack of interest in, and even skepticism, about the Physician Quality Reporting System.

Response: We appreciate the commenters' support of the informal appeals process and are hopeful that providing eligible professionals with an avenue to request an informal review of the determination that they did not satisfactorily report will encourage greater participation in the Physician Quality Reporting System.

Comment: Some commenters felt the period for requesting an informal review should be extended. One commenter suggested extending the timeframe to file an appeal through the end of the following year. Another commenter recommended extending the timeframe to the end of the reporting year, as those in large practices may not see their Physician Quality Reporting System report for a month or two after CMS sends it. Some commenters suggested that any results that are successfully appealed should be incorporated in public reporting of physician performance.

Response: While we understand the commenters' desire to extend the timeframe for submitting a request for an informal review, doing so could potentially impact the timeliness of future years' Physician Quality Reporting System incentive payments, because we would not be able to start analyzing the next year's data until we have completed our analysis of the current year's data. Therefore, we are requiring eligible professionals to submit their requests for an informal review within 90 days of the feedback reports becoming available, as proposed.

Comment: One commenter indicated that eligible professionals who successfully obtain an incentive payment are unlikely to a request a review. The commenter believes the review for those who are unsuccessful is unlikely to overturn the initial adjudication, since it can only be based on data present in the CMS system as there is no opportunity for evidence submission. The commenter feels that eligible professionals submitting data could easily be given feedback immediately about whether the data set was complete or not, both in terms of the individual data points and the number of eligible patients.

Response: We agree with the commenter's assertion that eligible professionals who are successful in obtaining a Physician Quality Reporting System incentive are unlikely to request an informal review. With respect to the claim that the "review for those who are unsuccessful is unlikely to overturn the initial adjudication, since it can only be based on data present in the CMS system as there is no opportunity for evidence submission," we disagree. CMS strives to ensure the accuracy of our initial determinations. However, recognizing errors may arise, CMS implemented the informal review process whereby Physician Quality Reporting System participants may request via the Quality Net Help Desk a review of the determination that the eligible professional did not satisfactorily submit data. In prior program years, the informal review method has resulted in supplemental payments for some eligible professionals despite the restriction on submitting additional evidence. This informal process has proven to be successful in finding errors in prior years, and we believe it will continue to do so. While we agree that it would be ideal to be able to provide immediate feedback as to whether the data set was complete or not both in terms of the individual data points and the number of eligible patients, this would not be technically feasible under the current claims processing system. However, we do intend to provide interim feedback reports as previously described.

Comment: In support of implementing a successful informal review process, some commenters recommended that the Quality Net Help Desk be expanded with additional telephone lines and more trained, experienced, and qualified staff. Commenters reported that some eligible professionals have faced challenges getting through to a CMS staff person and/or accessing the information they need through the existing Quality Net Help Desk. Another commenter stated that they believe the Quality Net Help Desk should be able to help eligible professionals and their staff immediately.

Response: We agree that in implementing an informal review process that utilizes the existing inquiry support framework additional resources will be needed and anticipate putting additional resources towards the Quality Net Help Desk.

Comment: Some commenters felt the proposed process was too informal to provide a fair and appropriate appeal. One commenter suggested the agency consider basing the informal process on the current inquiry process as merely a starting point and plan to expand the process in the future. Similarly, other commenters indicated that the appeals process needs to be a structured, transparent, and user-friendly appeals process so that eligible professionals have an avenue to quickly remedy erroneous determinations.

Response: We note that section 1848(m)(5)(I) of the Act does not require a formal appeals process; rather, it only requires an informal process for eligible professionals to seek a review of the determination that an eligible professional did not satisfactorily submit data on quality measures under the Physician Quality Reporting System. We believe that the process that we proposed and are finalizing adequately allows an eligible professional to seek an informal review of the determination that the professional did not satisfactorily report. However, we agree that a timely response to eligible professionals who are questioning the outcome of their Physician Quality Reporting System reporting rate calculation will benefit the eligible professional. We plan to communicate the informal review process to eligible professionals through education and outreach. We also agree that the process needs to be user friendly and are using the lessons learned from inquiries received related to previous program years in determining the most timely and user-friendly method for the informal appeals process.

Comment: Another commenter suggested as payment adjustments begin to apply in 2015, we work with Congress to implement a more formal appeals process that includes standardized and transparent rules for submitting and reviewing evidence.

Response: For the 2011 Physician Quality Reporting System, we plan to implement the informal review process as described previously and required under section 1848(m)(5)(I) of the act. We plan to use any lessons learned from this process to make further enhancements to the process in future years.

Upon consideration of the comments, we are finalizing the informal review process as proposed and previously described. As stated in the proposed rule, we anticipate posting, by December 31, 2011 (75 FR 40202) on the CMS Physician Quality Reporting System Web site, further information regarding the operational aspects of the informal review process for the 2011 Physician Quality Reporting System. As we are implementing this informal review process beginning with the 2011 Physician Quality Reporting System and our expectation that we will be unable to generate 2011 Physician Quality Reporting System interim feedback reports prior to the start of the July 1, 2011 reporting period, we anticipate that eligible professionals will first have an opportunity to avail themselves of this informal process when the 2011 Physician Quality Reporting System feedback reports are made available in 2012.

2. Section 132: Incentives for Electronic Prescribing (eRx)—The Electronic Prescribing Incentive Program

a. Program Background and Statutory Authority

As described in the CY 2011 PFS proposed rule (75 FR 40202 through 40203), Electronic Prescribing (eRx) is the transmission using electronic media, of prescription or prescription-related information between prescriber, dispenser, pharmacy benefit manager (PBM), or health plan, either directly or through an intermediary, including an eRx network. The intention of the 2011 eRx Incentive Program, which is separate from, and in addition to, incentive payments that eligible professionals may earn through the Physician Quality Reporting System, is to continue to encourage significant expansion of the use of electronic prescribing by authorizing a combination of financial incentives and payment adjustments. Individual eligible professionals do not have to participate in the Physician Quality Reporting System in order to participate in the eRx Incentive Program (and vice versa). We proposed to add § 414.92 to title 42 of the Code of Federal Regulations to implement and codify the provisions of the eRx Incentive Program.

For 2011, which is the third year of the eRx Incentive Program, the Secretary is authorized to provide eligible professionals who are successful electronic prescribers an incentive payment equal to 1.0 percent of the total estimated Medicare Part B PFS allowed charges (based on claims submitted not later than 2 months after the end of the reporting period) for all covered professional services furnished by the eligible professional during the 2011 reporting period. The applicable electronic prescribing percent (1.0 percent) authorized for the 2011 eRx Incentive Program is different from that (2.0 percent) authorized for the 2009 and 2010 eRx Incentive Program. Under section 1848(m)(2)(C) of the Act, the incentive payments for successful electronic prescribers for future years are authorized as follows:

- 1.0 percent for 2012.
- 0.5 percent for 2013.

In addition, section 1848(m)(2)(D) of the Act, as added by section 4101(f)(2)(B) of Title IV of Division B of the American Recovery and Reinvestment Act of 2009 (Pub. L. 111–5) (ARRA–HITECH) which authorized the Medicare EHR Incentive Program, specifies that the eRx incentive does not apply to an eligible professional (or group practice), if, for the EHR reporting period, the eligible professional (or group practice) earns an incentive payment under the Medicare EHR Incentive Program beginning in 2011.

For the eRx Incentive Program, when reporting the G-codes for purposes of qualifying for the incentive payment for electronic prescribing in 2011, we proposed that the eligible professional must have and regularly use a "qualified" electronic prescribing system, as defined in the electronic prescribing measure specifications.

In addition, under section 1848(a)(5)(A) of the Act, a PFS payment adjustment applies beginning in 2012 to those professionals who are not successful electronic prescribers. Specifically, for 2012, 2013, and 2014, if the eligible professional is not a successful electronic prescriber for the reporting period for the year, the PFS amount for covered professional services furnished by such professionals during the year as previously referenced shall be less than the PFS amount that would otherwise apply over the next several years by—

- 1.0 percent for 2012.
- 1.5 percent for 2013.
- 2.0 percent for 2014.

We believe that the criteria for determination of successful electronic prescriber for the eRx incentive payment are not required to be identical to the criteria that will be used to determine the applicability of the payment adjustment that begins in 2012. In general, we believe that an incentive should be broadly available to encourage the widest possible adoption of eRx, even for low volume prescribers. On the other hand, we believe that a payment adjustment should be applied primarily to assure that those who have a large volume of prescribing do so electronically, without penalizing those for whom the adoption and use of an electronic prescribing system may be impractical given the low volume of prescribing. Under section 1848(m)(6)(A) of the Act, the definition

of "eligible professional" for purposes of eligibility for the eRx Incentive Program is identical to that for the Physician Quality Reporting System under section 1848(k)(3)(B) of the Act. Eligible professionals include physicians, other practitioners, physical and occupational therapists, qualified speech-language pathologists, and qualified audiologists. However, as we have noted in prior years, for purposes of the eRx Incentive Program, eligibility is further restricted by scope of practice to those professionals who have prescribing authority. Detailed information about the types of professionals that are eligible to participate in the eRx Incentive Program is available on the eRx Incentive Program section of the CMS Web site at *http://www.cms.gov/ERXIncentive.*

As in the 2010 eRx Incentive Program, we proposed for 2011 that the eRx Incentive Program continue to be an incentive program in which determination of whether an eligible professional is a successful electronic prescriber will be made at the individual professional level, based on the NPI. Inasmuch as some individuals (identified by NPIs) may be associated with more than one practice or TIN, the determination of whether an eligible professional is a successful electronic prescriber will be made to the holder of each unique TIN/NPI combination (75 FR 40202). Then, as in previous years, payment will be made to the applicable holder of the TIN. For 2011, the determination of whether an eligible professional is a successful electronic prescriber will continue to be made for each unique TIN/NPI combination. However, section 1848(m)(3)(C) of the Act required the Secretary by January 1, 2010 to establish and have in place a process under which eligible professionals in a group practice (as defined by the Secretary) would be treated as meeting the requirements for submitting data on electronic prescribing quality measures for covered professional services for a reporting period (or, for purposes of the payment adjustment under section 1848(a)(5) of the Act, for a reporting period for a year) if, in lieu of reporting the electronic prescribing measure, the group practice reports measures determined appropriate by the Secretary, such as measures that target high-cost chronic conditions and preventive care, in a form and manner, and at a time specified by the Secretary. Therefore, in addition to making incentive payments for 2011 to individual eligible professionals based on separately analyzing whether the individual eligible professionals are successful electronic prescribers, we proposed to also make incentive payments to group practices based on the determination that the group practice, as a whole, is a successful electronic prescriber in accordance with section 1848(m)(3)(C) of the Act (75 FR 40203).

The following is a summary of the general comments received on the CY 2011 PFS proposed rule related to the eRx Incentive Program and our responses.

Comment: Some commenters provided overall support for the eRx Incentive Program. Specific aspects of the program for which the commenters voiced support include the numerator and denominator codes, the reporting mechanisms, what constitutes a "qualified" electronic prescribing system, the criteria for being a successful electronic prescriber for purposes of the 2011 incentive payment, and the 10 percent limitation under section 1848(m)(2)(B) of the Act.

Response: We appreciate the commenters' positive feedback.

Comment: A couple of commenters highlighted the importance of providing eligible professionals feedback on whether they have successfully completed all requirements for this program and establishing an appeals process to allow eligible professionals to appeal decisions that affect their eligibility to take part in the eRx Incentive Program or that affect their ability to get eRx incentives.

Response: We agree with the commenters on the importance of feedback to eligible professionals. In addition to providing an annual feedback report, we anticipate making interim feedback reports for the program available to any eligible professional who bills for a denominator-eligible case during the first half of 2011. We anticipate that interim feedback reports will be available in the fall of 2011 and will include information related to the 2012 eRx payment adjustment. Although there is a required informal review process for the Physician Quality Reporting System, we are not establishing such a process for the eRx Incentive Program (nor are we required to do so). We expect that any questions arising from the interim feedback reports or the eligibility for an eRx incentive will be addressed by the Quality Net Help Desk as is currently done.

Comment: One commenter urged us to make available to individual eligible professionals the percentage of their prior year's Medicare charges that resulted from the outpatient CPT codes included in the electronic prescribing measure's specifications.

Response: Unfortunately, we do not have resources to calculate and provide feedback to eligible professionals regarding the composition of their charges. Most electronic billing systems, however, will have this functionality and should be able to provide eligible professional who use such billing systems with this information. In addition, eligible professionals who participate in the eRx Incentive Program will receive feedback reports with information on the percentage of an eligible professional's charges that resulted from the denominator codes included in the electronic prescribing's specifications.

Comment: One commenter sought guidance for physicians whose patients participate in the Medicaid PACE program and use a contracted pharmacy that may not be able to receive electronic prescriptions. The commenter asked whether these visits would be excluded from the requirements of the eRx Incentive Program.

Response: The eRx Incentive Program requires that an eligible professional use a qualified eRx system to electronically prescribe during the office visit. Hence, if the qualified system used by the eligible professional meets the requirements for a qualified eRx system, as described below and listed on the CMS eRx Incentive Web site at *http://www.cms.gov/erxincentive,* and the prescription is sent electronically, then the eligible professional will be able to report the electronic prescribing event even if the pharmacy was not able to receive the prescription electronically. The use of a pharmacy that cannot receive an electronic prescription does not invalidate the electronic prescribing event and the eligible professional would still get credit for electronically prescribing as long as he or she reports this event for a denominator-eligible visit.

Upon consideration of the comments, we are finalizing our proposal to add § 414.92 to title 42 of the Code of Federal Regulations to implement and codify the provisions of the eRx Incentive Program. Details regarding the specific aspects of the eRx Incentive Program that are being finalized, including our rationale, are described below. We have made some technical changes to the regulations at § 414.92, such as eliminating the unnecessary use of acronyms and inserting or revising cross-references as needed.

b. The 2011 eRx Incentive

(1) The 2011 Reporting Period for the eRx Incentive Program

Section 1848(m)(6)(C)(i)(II) of the Act defines "reporting period" for the 2011 eRx Incentive Program to be the entire year. Section 1848(m)(6)(C)(ii) of the Act, however, authorizes the Secretary to revise the reporting period if the Secretary determines such revision is appropriate, produces valid results on measures reported, and is consistent with the goals of maximizing scientific validity and reducing administrative burden. We proposed the 2011 eRx Incentive Program reporting period for purposes of the 2011 incentive payment to be the entire calendar year (January 1, 2011 through December 31, 2011) based on the definition of "reporting period" specified under section 1848(m)(6)(C)(i)(II) of the Act. We proposed that successful electronic prescribers would be eligible to receive an incentive payment equal to 1.0 percent of the total estimated allowed Medicare Part B charges (based on claims submitted by no later than February 28, 2012) for all covered professional services furnished January 1, 2011 through December 31, 2011.

We did not receive any comments related to the proposed reporting period for the 2011 eRx incentive. Therefore, the reporting period for the 2011 eRx incentive will be the entire 2011 calendar year, or January 1, 2011 through December 31, 2011.

(2) Criteria for Determination of Successful Electronic Prescriber for Eligible Professionals

Under section 1848(m)(3)(B) of the Act, in order to qualify for the incentive payment, an eligible professional must be a "successful electronic prescriber," which the Secretary is authorized to identify using 1 of 2 possible criteria. One criterion, under section 1848(m)(3)(B)(ii) of the Act, is based on the eligible professional's reporting, in at least 50 percent of the reportable cases, on any electronic prescribing quality measures that have been established under the physician reporting system, under subsection 1848(k) of the Act and are applicable to services furnished by the eligible professional during a reporting period. We applied this criterion in 2009. However, for years after 2009, section 1848(m)(3)(D) of the Act permits the Secretary in consultation with stakeholders and experts to revise the criteria for submitting data on electronic prescribing measures under section 1848(m)(3)(B)(ii) of the Act.

The second criterion, under section 1848(m)(3)(B)(iii) of the Act, is based on the electronic submission by the eligible professional of a sufficient number (as determined by the Secretary) of prescriptions under Part D during the reporting period. If the Secretary decides to use the latter standard, then, in accordance with section 1848(m)(3)(B)(iv) of the Act, the Secretary is authorized to use Part D drug claims data to assess whether a "sufficient" number of prescriptions have been submitted by eligible professionals. However, under section 1848(m)(3)(B)(i) of the Act, if the standard based on a sufficient number (as determined by the Secretary) of electronic Part D prescriptions is applied for a particular reporting period, then the standard based on the reporting on electronic prescribing measures would no longer apply.

For 2011, we proposed to continue to require eligible professionals to report on the electronic prescribing measure used in the 2009 and 2010 eRx Incentive Program to determine whether an eligible professional is a successful electronic prescriber, but we also proposed to again use modified measure specifications and to use modified reporting criteria based on the authority provided under section 1848(m)(3)(D) of Act, as discussed below (75 FR 40203).

(A) Reporting the Electronic Prescribing Measure

We proposed, for purposes of the 2011 incentive payment and 2012 and 2013 payment adjustments, to retain the 3 reporting mechanisms available to individual eligible professionals to report the electronic prescribing measure in 2010 to maintain program stability. First, we proposed to again retain the claims-based reporting mechanism that is used in the 2009 and 2010 eRx Incentive Program. In addition, similar to the Physician Quality Reporting System, for the eRx Incentive Program, we proposed to continue the registry-based reporting mechanism and, we also proposed that the EHR-based reporting mechanism be available for the electronic prescribing measure for 2011 (75 FR 40203).

We proposed that only registries qualified to submit quality measure results and numerator and denominator data on quality measures on behalf of eligible professionals for the 2011 Physician Quality Reporting System would be qualified to submit measure results and numerator and denominator data on the electronic prescribing measure on behalf of eligible professionals for the 2011 eRx Incentive Program (75 FR 40204).

We proposed that qualified registries would need to submit the electronic prescribing measure for the 2011 eRx Incentive Program to CMS in two separate transmissions. Such qualified registries would first need to submit 2011 data on the electronic prescribing measure between July 1, 2011 and August 19, 2011, following the end of the 2012 payment adjustment reporting period (which is the first 6 months of 2011), for purposes of the eRx payment adjustment described in section VII.F.2.c. of this final rule with comment period. The second submission for purposes of the 2011 incentive would occur following the end of the 2011 incentive payment reporting period (which is the whole calendar year of 2011).

Similarly, we proposed that only EHR products "qualified" to potentially be able to submit clinical quality data extracted from the EHR to CMS for the 2011 Physician Quality Reporting System would be considered "qualified" for the purpose of an eligible professional potentially being able to submit data on the electronic prescribing measure for the 2011 eRx Incentive Program (75 FR 40204). The self-nomination process and requirements for EHR vendors for the Physician Quality Reporting System would continue to apply to the EHR vendors for the 2011 eRx Incentive Program.

We proposed that eligible professionals who want to use a qualified EHR to submit the electronic prescribing measure for the 2011 eRx Incentive Program would be required to transmit 2011 electronic prescribing measure data to CMS in two separate transmissions. Such eligible professionals would first need to submit 2011 data on the electronic prescribing measure between July 1, 2011 and August 19, 2011, following the end of the 2012 payment adjustment reporting period, for purposes of the eRx payment adjustment described in section VII.F.2.c. of this final rule with comment period. The second submission for purposes of the 2011 incentive would occur following the end of the 2011 incentive payment reporting period.

The following is a summary of the comments received regarding the proposed mechanisms for reporting the electronic prescribing measure in 2011 for purposes of the 2011 incentive payment, and for purposes of the 2012 and 2013 payment adjustments described in sections VII.F.2.c. and d. of this final rule with comment period.

Comment: Some commenters agreed with retaining the same reporting

mechanisms for 2011 that were in place for 2010, particularly our decision to continue offering claims-based reporting and the inclusion of an EHR-based reporting mechanism.

Response: We appreciate the commenters' positive feedback and are finalizing our proposal to include a claims, registry, and EHR reporting for the 2011 eRx incentive.

Comment: One commenter thinks the requirement to submit electronic prescribing measure data in two submissions is burdensome for eligible professionals and suggests exploring alternatives where only one submission is required.

Response: We proposed two data submissions during 2011 for EHR-based reporting and registry-based reporting for different purposes. One was a submission between July 1, 2011 and August 19, 2011, that was intended to be solely for purposes of the 2012 payment adjustment. The second submission, which was to occur following the end of the 2011 incentive payment reporting period, was solely for purposes of the 2011 incentive payment. For purposes of the 2012 payment adjustment, we will not be able to finalize the registry and EHR-based reporting mechanisms because it will not be operationally feasible for us to accept the data submissions from the EHRs and registries in the timeframe needed for us to be able to have sufficient time to be analyze the data and make the determination whether an eligible professional is subject to the 2012 payment adjustment prior to January 1, 2012. Therefore, there will not be two submissions of electronic prescribing measure data from registries and EHRs during 2011.

Eligible professionals who intend to use the EHR-based reporting mechanism to submit data on the electronic prescribing measure for purposes of the 2011 incentive payment will need to submit the electronic prescribing measure data via their EHR following the end of the 2011 incentive payment reporting period. Similarly, registries that are submitting electronic prescribing data on behalf of eligible professionals or group practices for purposes of the 2011 incentive payment will need to do so following the end of the 2011 incentive reporting period. If an eligible professional chooses to use a qualified registry or qualified EHR for purposes of submitting electronic prescribing measure data for the 2011 incentive, we will not combine data from multiple reporting mechanisms. Therefore, an eligible professional must make sure that the required number of eRx events for purposes of the 2011 incentive payment is reported to us via a single reporting mechanism.

After considering the comments and for the reasons previously explained, we are finalizing our proposal to provide a claims, registry, and EHR reporting mechanism for the 2011 eRx incentive. As in 2010, not all registries qualified to submit quality measures on behalf of eligible professionals for the 2011 Physician Quality Reporting System will be qualified to submit quality measures results and numerator and denominator data on the electronic prescribing measure under the eRx Incentive Program. The electronic prescribing measure is reportable by an eligible professional any time he or she bills for one of the procedure codes for Part B services included in the measure's denominator. Some registries that self-nominate to become a qualified registry for the Physician Quality Reporting System may not choose to self-nominate to become a qualified registry for submitting electronic prescribing measures that require reporting at each eligible visit, such as the electronic prescribing measure. Registries need to indicate their desire to qualify to submit measure results and numerator and denominator data on the electronic prescribing measure for the 2011 eRx Incentive program at the time that they submit their self-nomination letter for the 2011 Physician Quality Reporting System. The self-nomination process and requirements for registries for the Physician Quality Reporting System, which also will apply to the registries for the 2011 eRx Incentive Program, are discussed in section VII.F.1. of this final rule with comment period. We will post a final list of qualified registries for the 2011 eRx Incentive Program on the eRx Incentive Program section of the CMS Web site at *http://www.cms.gov/ERXIncentive* when we post the final list of qualified registries for the 2011 Physician Quality Reporting System on the Physician Quality Reporting System section of the CMS Web site.

Similarly, EHR vendors are required to indicate their desire to have one or more of their EHR products qualified for the purpose of an eligible professional potentially being able to submit data on the electronic prescribing measure for the 2011 eRx Incentive Program at the time when they submit their self-nomination letter for the 2011 Physician Quality Reporting System. A list of qualified EHR vendors and their products (including the version that is qualified) for the 2011 eRx Incentive Program will be posted on the eRx Incentive Program section of the CMS Web site at *http://www.cms.gov/ERXIncentive* when we post the list of qualified EHR products for the 2011 Physician Quality Reporting System on the Physician Quality Reporting System section of the CMS Web site.

Although we are finalizing three reporting mechanisms for use by eligible professionals for the 2011 eRx incentive, for purposes of the 2012 eRx payment adjustment, we are finalizing only the claims-based reporting mechanism given that, for operational reasons, we will not have the ability to accept registry and EHR data in the timeframe that we need to be able to complete our analysis of the data and make the determination of whether an eligible professional is subject to the 2012 payment adjustment prior to January 1, 2012. As discussed in the proposed rule (75 FR 40208), all claims for services furnished between January 1, 2011 and June 30, 2011, must be processed by no later than one month after the reporting period to be included in our analysis for purposes of the 2012 payment adjustment. Accordingly, to the extent an eligible professional intends to use a registry or EHR to submit electronic prescribing measure data for purposes of qualifying for the 2011 incentive, the eligible professional would still need to submit electronic prescribing measure data on claims for services furnished between January 1, 2011 and June 30, 2011, in order to avoid the 2012 payment adjustment.

(B) The Reporting Denominator for the Electronic Prescribing Measure

The electronic prescribing measure, similar to the Physician Quality Reporting System measures, has two basic elements, which include: (1) a reporting denominator that defines the circumstances when the measure is reportable; and (2) a reporting numerator.

The denominator for the electronic prescribing measure consists of specific billing codes for covered professional services. The measure becomes reportable when any one of these procedure codes is billed by an eligible professional for Part B covered professional services. As initially required under section 1848(k)(2)(A)(ii) of the Act, and further established through rulemaking and under section 1848(m)(2)(B) of the Act, we may modify the codes making up the denominator of the electronic prescribing measure. As such, we expanded the scope of the denominator codes for 2010 to covered professional services outside the professional office and outpatient setting, such as professional services furnished in

skilled nursing facilities or the home care setting.

For 2011, we proposed to retain the 2010 electronic prescribing measure's denominator codes. The following is a summary of the comments received regarding the proposed denominator codes for the 2011 electronic prescribing measure.

Comment: A couple of commenters supported our proposal to retain the denominator codes from denominator of the 2010 electronic prescribing measure denominator. Conversely, other commenters opposed retaining the 2010 electronic prescribing denominator codes because they do not allow for surgeons to effectively participate in the eRx Incentive Program. The commenters did not suggest additional codes for inclusion in the electronic prescribing measure's denominator though.

Response: With respect to the commenters' suggestions to add other denominator codes that were not proposed, we are not able to do so since the public would not have had an opportunity to comment on these additional codes. We welcome, however, specific suggestions for additional codes for consideration for the 2012 electronic prescribing measure. We believe that the existing denominator codes are representative of the types of services in which prescriptions are most often generated.

Comment: Another commenter was concerned that we have unnecessarily restricted the electronic prescribing's denominator by associating a prescription with a patient visit. The commenter noted that a vast majority of prescriptions in an internal medicine or family practice office are generated outside of a patient visit through the prescription renewal workflow while new prescriptions—the minority—are often coincident with the patient visit. The commenter believes that this sets up a cascade of filters that may prevent many otherwise successful providers from meeting the denominator criteria. The commenter stated that pharmacies either have, or can easily acquire, the capability to report the manner in which the prescription was received and CMS should consider a determined number of pharmacy claims of electronic prescriptions for Medicare beneficiaries, where the prescriber and manner of prescription delivery are clearly defined, as acceptable minimum criteria to determine a successful electronic prescriber. The commenter believes that the infrastructure to support this is laid in the requirements that Medicare D claims be submitted electronically to CMS and would allow CMS to identify successful electronic prescribers independent of the office-generated claims.

Response: As we stated in the proposed rule (75 FR 40203), we believe that the completeness and accuracy of the Part D data with respect to whether a prescription was submitted electronically is unknown, which is why we are continuing to require reporting on an electronic prescribing measure. As stated previously, we welcome suggestions for additional denominator codes for use in future years but believe that the existing denominator codes are generally representative of the types of services in which prescriptions are often generated.

Comment: One commenter supported the proposal to "expand the scope of the denominator codes for 2010 to professional services outside the professional office and outpatient setting, such as professional services furnished in skilled nursing facilities or the home-care setting."

Response: We are unclear why the commenter is providing feedback on the 2010 denominator codes as the scope of the rule is limited to the 2011 electronic prescribing measure. The 2010 denominator codes were finalized in the 2010 PFS final rule with comment period (74 FR 61852). Since the 2010 denominator codes already reflected our desire to include some professional services outside the professional office and outpatient setting, for 2011, we did not propose any changes to the denominator codes. Therefore, for 2011, we are retaining the 2010 denominator codes for the reasons listed by the commenter. Accordingly, after considering the comments, we are finalizing the following CPT codes in the denominator of the electronic prescribing measure for 2011: 90801, 90802, 90804, 90805, 90806, 90807, 90808, 90809, 90862, 92002, 92004, 92012, 92014, 96150, 96151, 96152, 99201, 99202, 99203, 99204, 99205, 99211, 99212, 99213, 99214, 99215, 99304, 99305, 99306, 99307, 99308, 99309, 99310, 99315, 99316, 99324, 99325, 99326, 99327, 99328, 99334, 99335, 99336, 99337, 99341, 99342, 99343, 99344, 99345, 99347, 99348, 99349, 99350, G0101, G0108, G0109. We believe these codes represent the types of services for which prescriptions are likely to be generated.

There are no diagnosis codes in the measure's denominator and there are no age/gender requirements in order for a patient to be included in the measure's denominator (that is, reporting of the electronic prescribing measure is not further limited to certain ages or a specific gender). For purposes of both the incentive payment and payment adjustments discussed in sections VII.F.2.c. and d. of this final rule with comment period, eligible professionals who do not bill for one of the procedure codes for Part B covered professional services included in the measure's denominator will have no occasion to report the electronic prescribing measure. In other words, the measure is not applicable unless the professional bills for one of the codes included in the measure's denominator. In addition, in order to qualify for an incentive or avoid the payment adjustment, eligible professionals are not required to report this measure in all cases in which the measure is applicable. There are specific reporting thresholds, or reported electronic prescribing events, that an eligible professional must meet in order to be considered a "successful electronic prescriber" for purposes of the 2011 incentive payments, which are described in section VII.F.2.b.(2).(E). of this final rule with comment period. In addition, there are specific reporting thresholds that an eligible professional must meet in order to be considered a "successful electronic prescriber" for purposes of the 2012 and 2013 payment adjustments, which are described in sections VII.F.2.c. and d. of this final rule with comment period, respectively.

By no later than December 31, 2010, we will post the final specifications of the measure on the "eRx Measure" page of the eRx Incentive Program section of the CMS Web site at *http://www.cms.gov/ERXIncentive.*

(C) Qualified Electronic Prescribing System—Required Functionalities and Part D eRx Standards

To report the electronic prescribing measure in 2011, we again proposed that the eligible professional must report one of the measure's numerator G-codes, as discussed below. However, when reporting any of the G-codes in 2011, we proposed that the professional must have and regularly use a "qualified" electronic prescribing system, as defined in the electronic prescribing measure specifications. If the professional does not have general access to an eRx system in the practice setting, then the eligible professional does not have any data to report for purposes of the incentive payment. For 2011, we proposed to retain what constitutes a "qualified" electronic prescribing system as a system based upon certain required functionalities that the system can perform. We proposed to retain the same functionalities that were required in 2010.

In addition, section 1848(m)(3)(B)(v) of the Act specifies that to the extent

practicable, in determining whether an eligible professional is a successful electronic prescriber, "the Secretary shall ensure that eligible professionals utilize electronic prescribing systems in compliance with standards established for such systems pursuant to the Part D Electronic Prescribing Program under section 1860D–4(e)." The Part D standards for electronic prescribing systems establish which electronic standards Part D sponsors, providers, and dispensers must use when they electronically transmit prescriptions and certain prescription related information for Part D covered drugs that are prescribed for Part D eligible individuals. For 2011, we proposed that to be a qualified electronic prescribing system, electronic systems must convey the information for the required functionalities using the standards currently in effect for the Part D electronic prescribing program.

We did not receive any comments on the proposed required functionalities or Part D eRx standards. For this reason, we are finalizing the required functionalities and Part D eRx standards as described below.

Required Functionalities for a "Qualified" Electronic Prescriber System

For 2011, a "qualified" electronic prescribing system is one that can do the following:

(a) Generate a complete active medication list incorporating electronic data received from applicable pharmacies and PBMs, if available.

(b) Allow eligible professionals to select medications, print prescriptions, electronically transmit prescriptions, and conduct alerts (written or acoustic signals to warn the prescriber of possible undesirable or unsafe situations including potentially inappropriate dose or route of administration of a drug, drug-drug interactions, allergy concerns, or warnings and cautions). This functionality must be enabled.

(c) Provide information related to lower cost, therapeutically appropriate alternatives (if any). The ability of an electronic prescribing system to receive tiered formulary information, if available, would again suffice for this requirement for 2011 and until this function is more widely available in the marketplace.

(d) Provide information on formulary or tiered formulary medications, patient eligibility, and authorization requirements received electronically from the patient's drug plan (if available).

Part D Electronic Prescribing Standards.

To be a qualified electronic prescribing system under the 2011 eRx Incentive Program, electronic systems must convey the information listed previously under (a) through (d) using the standards currently in effect for the Part D electronic prescribing program. Additional Part D electronic prescribing standards were implemented April 1, 2009. These latest Part D electronic prescribing standards, and those that had previously been adopted, can be found on the CMS Web site at *http://www.cms.gov/eprescribing.*

To ensure that eligible professionals utilize electronic prescribing systems that meet these requirements, the electronic prescribing measure requires that those functionalities required for a "qualified" electronic prescribing system utilize the adopted Part D electronic prescribing standards. The Part D electronic prescribing standards relevant to the four functionalities for a "qualified" system in the electronic prescribing measure described previously and listed as (a), (b), (c), and (d), currently are as follows:

(a) Generate medication list—Use the National Council for Prescription Drug Programs (NCPDP) Prescriber/Pharmacist Interface SCRIPT Standard, Implementation Guide, Version 8, Release 1, October 2005 (hereinafter "NCPDP SCRIPT 8.1") Medication History Standard;

(b) Transmit prescriptions electronically—Use the NCPDP SCRIPT 8.1 for the transactions listed at § 423.160(b)(2);

(c) Provide information on lower cost alternatives—Use the NCPDP Formulary and Benefits Standard, Implementation Guide, Version 1, Release 0 (Version 1.0), October 2005 (hereinafter "NCPDP Formulary and Benefits 1.0");

(d) Provide information on formulary or tiered formulary medications, patient eligibility, and authorization requirements received electronically from the patient's drug plan—use—

(1) NCPDP Formulary and Benefits 1.0 for communicating formulary and benefits information between prescribers and plans;

(2) Accredited Standards Committee (ASC) X12N 270/271-Health Care Eligibility Benefit Inquiry and Response, Version 4010, May 2000, Washington Publishing Company, 004010X092 and Addenda to Health Care Eligibility Benefit Inquiry and Response, Version 4010A1, October 2002, Washington Publishing Company, 004010X092A1 for communicating eligibility information between the plan and prescribers; and

(3) NCPDP Telecommunication Standard Specification, Version 5, Release 1 (Version 5.1), September 1999, and equivalent NCPDP Batch Standard Batch Implementation Guide, Version 1, Release 1 (Version 1.1), January 2000 for communicating eligibility information between the plan and dispensers.

However, there are Part D electronic prescribing standards that are in effect for functionalities that are not commonly utilized at this time. One example is Rx Fill Notification, which is discussed in the Part D electronic prescribing final rule (73 FR 18926). For purposes of the 2011 Electronic Prescribing Program, we again are not requiring that an electronic prescribing system contain all functionalities for which there are available Part D electronic prescribing standards since many of these functionalities are not commonly available. For those required functionalities previously described, a "qualified" system must use the adopted Part D electronic prescribing standards for electronic messaging.

There are other aspects of the functionalities for a "qualified" system that are not dependent on electronic messaging and are part of the software of the electronic prescribing system, for which Part D standards for electronic prescribing do not pertain and are not required for purposes of the eRx Incentive Program. For example, the requirements in qualification (b) that require the system to allow professionals to select medications, print prescriptions, and conduct alerts are functions included in the particular software, for which Part D standards for electronic messaging do not apply.

We are aware that there are significant numbers of eligible professionals who are interested in participating in the eRx Incentive Program but currently do not have an electronic prescribing system. The electronic prescribing measure does not require the use of any particular system or transmission network; only that the system be a "qualified" system having the functionalities previously described based on Part D electronic prescribing standards. If the professional does not have general access to an electronic prescribing system in the practice setting, the eligible professional would not be able to report the 2011 electronic prescribing measure. In addition to not being eligible for a 2011 incentive payment, an eligible professional who does not report the electronic prescribing measure for 2011 may be subject to the 2012 eRx payment adjustment discussed in section VII.F.2.c. of this final rule with comment period.

(D) The Reporting Numerator for the Electronic Prescribing Measure

The proposed criteria for reporting for purposes of being a 2011 successful electronic prescriber are designed to reward those eligible professionals who demonstrate that they have adopted a qualified electronic prescribing system and used the system in a substantial way to electronically prescribe. Accordingly, for the 2011 electronic prescribing measure, we proposed to retain the following numerator G-code from the 2010 electronic prescribing measure's numerator: G8553 (At least 1 prescription created during the encounter was generated and transmitted electronically using a qualified electronic prescribing system) (75 FR 40206).

We did not receive any comments related to the proposed electronic prescribing measure numerator G-code for 2011. Therefore, we are finalizing G-code G8553 for the 2011 electronic prescribing measure's numerator.

We intend to post the final 2011 electronic prescribing measure specifications on the "eRx Measure" page of the eRx Incentive Program section of the CMS Web site at *http://www.cms.gov/ERXIncentive* by no later than December 31, 2010.

Because the electronic prescribing quality measure will apply only when an eligible professional furnishes services indicated by one of the codes included in the measure's denominator, for claims-based reporting, for example, it will not be necessary for an eligible professional to report G-codes for the electronic prescribing measure on claims not containing one of the denominator codes. However, if reporting a G-code, the G-code data submission will only be considered valid if it appears on the same Medicare Part B claim containing one of the electronic prescribing quality measure's denominator codes.

In addition, if the eligible professional submits a Medicare Part B claim containing one of the electronic prescribing measure's denominator codes, he or she can report the numerator G-code only when the eligible professional furnishes services indicated by the G-code included in the measure's numerator. That is, only when at least 1 prescription created during the encounter is generated and transmitted electronically using a qualified electronic prescribing system.

(E) Criteria for Successful Reporting of the Electronic Prescribing Measure

As discussed previously, section 1848(m)(3)(D) of the Act authorizes the Secretary to revise the criteria for submitting data on the electronic prescribing measure from the criteria specified under section 1848(m)(3)(B)(ii) of the Act, which requires the measure to be reported in at least 50 percent of the cases in which the measure is reportable. For the 2010 eRx incentive, we revised the criteria for successful electronic prescriber such that an eligible professional shall be treated as a successful electronic prescriber for a reporting period based on the eligible professional's reporting of the electronic prescribing measure which counts the generation and reporting of one or more prescriptions associated with a patient visit electronically for a minimum of 25 unique visits per year of applicable cases in the denominator of the electronic prescribing for 2010. For 2011, we again proposed to make the determination of whether an eligible professional is a successful electronic prescriber for purposes of the eRx incentive based on a count of the number of times (minimum threshold of 25) an eligible professional reports that at least one prescription created during the encounter is generated using a qualified electronic prescribing system (that is, reports the G8553 code).

The following is a summary of comments received regarding the criteria for the determination of a successful electronic prescriber for eligible professionals for the 2011 eRx incentive payment.

Comment: One commenter requested that we define and share for public comment the actual number of Part D prescriptions that would suffice to document successful electronic prescribing.

Response: We did not propose to use Part D prescriptions as the standard to determine whether an eligible professional is a successful e-prescriber for purposes of the 2011 eRx incentive payment. As stated in the proposed rule (75 FR 40203), we may consider doing so in the future. At such time, we would define the actual number of Part D prescriptions that would be required to be prescribed electronically via notice and comment rulemaking.

Comment: Several commenters supported the electronic prescribing measure reporting threshold of 25, while others stated that they support our plan to reduce the electronic prescribing measure reporting burden from 50 percent of all applicable services to reporting just 25 times.

Response: We appreciate the commenters' feedback regarding the proposed electronic prescribing measure reporting threshold for purposes of the 2011 eRx incentive payment. For 2011, we are finalizing our proposal to require that professionals report on 25 unique electronic prescribing events in order to be considered a successful e-prescriber for the purpose of qualifying for a 2011 eRx incentive payment. We believe that this reporting threshold simplifies the reporting burden and encourages participation.

Comment: Some commenters expressed concern that the reporting threshold of 25 unique visits is too low a standard for incentive payments as it is unclear how this threshold will drive improvements for all Medicare beneficiaries. A more robust standard was recommended. One commenter specifically recommended a reporting threshold of between 250–500 prescriptions per year per eligible professional and 25,000–50,000 per year per GPRO I group practice. Another commenter recommended that we require eligible professionals to transmit more than 40 percent of written prescriptions electronically, which is in line with the EHR Incentive Program.

Response: We appreciate the commenters' valuable input. We have reviewed several eRx Incentive Program management reports in order to determine the feasibility of using the "25" visit threshold and we believe that this threshold simplifies the eRx reporting burden. In establishing this threshold we also took into account the many valid circumstances that would prevent eligible professionals who have adopted a qualified electronic prescribing system from having 25 unique electronic prescribing events during the calendar year and variations in practice characteristics. Our goal is to increase participation in the eRx Incentive Program and, more importantly, to encourage the continued adoption and use of electronic prescribing systems.

After considering the comments received and for the reasons previously explained, we are finalizing our proposal to make the determination of whether an eligible professional is a successful electronic prescriber for purposes of the CY 2011 incentive payment based on a count of the number of times (minimum threshold of 25) an eligible professional reports that at least one prescription created during the encounter is generated using a qualified electronic prescribing system (that is, reports the G8553 code) during the 2011 reporting period (that is, January 1, 2011 through December 31, 2011).

(3) Determination of the 2011 Incentive Payment Amount for Individual Eligible Professionals Who Are Successful Electronic Prescribers

Section 1848(m)(2)(B) of the Act imposes a limitation on the electronic prescribing incentive payment. The Secretary is authorized to choose 1 of 2 possible criteria for determining whether or not the limitation applies to a successful electronic prescriber. The first criterion is based upon whether the Medicare Part B allowed charges for covered professional services to which the electronic prescribing quality measure applies are less than 10 percent of the total Medicare Part B PFS allowed charges for all covered professional services furnished by the eligible professional during the reporting period. The second criterion is based on whether the eligible professional submits (both electronically and non-electronically) a sufficient number (as determined by the Secretary) of prescriptions under Part D (which can, again, be assessed using Part D drug claims data). If the Secretary decides to use the latter criterion, then, in accordance with section 1848(m)(2)(B) of the Act, the criterion based on the reporting on electronic prescribing measures would no longer apply. The statutory limitation also applies with regard to the application of the payment adjustment. Based on our proposal to make the determination of whether an eligible professional is a "successful electronic prescriber" based on submission of the electronic prescribing measure, we proposed to apply the criterion under section 1848(m)(2)(B)(i) of the Act for the limitation for both the 2011 incentive payment and the 2012 payment adjustment (the application of the limitation with regard to the 2012 eRx payment adjustment is discussed in section VII.F.2.c.(3). of this final rule with comment period).

Since, as discussed previously, we proposed for 2011 to make the determination of whether an eligible professional is a "successful electronic prescriber" based on submission of the electronic prescribing measure, we also proposed to retain the requirement to analyze the claims submitted by the eligible professional at the TIN/NPI level to determine whether the 10 percent threshold is met in determining the receipt of an electronic prescribing incentive payment for 2011 by an eligible professional (75 FR 40206). For purposes of the 2011 eRx incentive payment, this calculation is expected to take place in the first quarter of 2012 and will be performed by dividing the eligible professional's total 2011 Medicare Part B PFS allowed charges for all such covered professional services submitted for the measure's denominator codes by the eligible professional's total Medicare Part B PFS allowed charges for all covered professional services (as assessed at the TIN/NPI level). If the result is 10 percent or more, then the statutory limitation will not apply and a successful electronic prescriber will qualify to earn the electronic prescribing incentive payment. If the result is less than 10 percent, then the statutory limitation will apply and the eligible professional will not earn an electronic prescribing incentive payment even if he or she electronically prescribes and reports a G-code indicating that he or she generated and transmitted a prescription electronically at least 25 times for those eligible cases that occur during the 2011 reporting period. Although an individual eligible professional may decide to conduct his or her own assessment of how likely this statutory limitation is expected to apply to him or her before deciding whether or not to report the electronic prescribing measure, an individual eligible professional may report the electronic prescribing measure without regard to the statutory limitation for the incentive payment.

The following is a summary of the comments received on the determination of the 2011 incentive payment amount for individual eligible professionals who are successful electronic prescribers.

Comment: Several commenters felt we should allow eligible professionals to earn an incentive both for the eRx Incentive Program as well as for the Medicare EHR Incentive Program. The commenters did not think these incentives should be mutually exclusive, claiming that the eRx payment adjustment applies even if the eligible professional is participating in both programs.

Response: We do not have the authority to allow eligible professionals to earn an incentive under the eRx Incentive Program and the Medicare EHR Incentive Program. Section 1848(m)(2)(D) of the Act specifies that the incentive under the eRx Incentive Program shall not apply to an eligible professional (or, in the case of a group practice) if, for the EHR reporting period the eligible professional (or group practice) receives an incentive payment under the EHR Incentive Program with respect to a certified EHR technology that has the capability of electronic prescribing.

We will, however, be developing a plan, as described under section 1848(m)(7) of the Act ("Integration of Physician Quality Reporting and EHR Reporting"), to integrate measure reporting requirements under the Physician Quality Reporting System, eRx Incentive Program, and the EHR Incentive Program, with respect to selection of measures to demonstrate meaningful use under the EHR Incentive Program, quality of care furnished to an individual, and such other activities as specified by the Secretary.

With regards to the commenters' statement that the eRx payment adjustment still applies even if an eligible professional participates in both programs, this is not accurate. The eRx payment adjustment applies only to the extent that the eligible professional is not a successful electronic prescriber. We would also like to clarify that the limitation under section 1848(m)(2)(D) of the Act with respect to EHR incentive payments does not preclude the 10 percent limitation under section 1848(m)(2)(B)(i) of the Act from applying with regard to the eRx payment adjustment to an eligible professional who earns an EHR incentive.

Comment: One commenter requested that we clarify the way in which we intend to calculate the group eRx incentives if individual members of the group have received Medicare EHR incentives.

Response: We will assess the group practice's data first to determine eRx incentive eligibility. If the group practice is eligible for an eRx incentive, then we will filter out the allowed charges for all NPIs who earn an EHR incentive before calculating the group's incentive amount.

Comment: We also received feedback pertaining to the eRx Incentive Program and EHR Incentive Program having different threshold criteria. Specifically, the commenter was concerned that the in order to qualify for the EHR incentive, eligible professionals must use a qualified EHR to generate and transmit 40 percent of all permissible prescriptions electronically but for the eRx Incentive Program, the threshold is 25 successful electronic prescriptions during the reporting period for purposes of the incentive payment. Since eligible professionals must still participate in the eRx Incentive Program to avoid the 2012 payment adjustment, a commenter stated that having different threshold criteria for the two programs causes confusion and recommended the establishment of a consistent threshold for electronic prescriptions. Another commenter felt that different thresholds are appropriate given that the EHR Incentive Program is voluntary and the

eRx Incentive Program is mandatory to maintain full payment.

Response: We note that the EHR Incentive Program and the eRx Incentive Program are two separate, distinct programs with different purposes and underlying statutory provisions. Professionals eligible for the eRx Incentive Program are encouraged to be successful electronic prescribers using qualified electronic prescribing systems. The Medicare EHR Incentive Program will provide incentive payments to eligible professionals (EPs), eligible hospitals, and critical access hospitals (CAHs) that are meaningful users of certified EHR technology. Electronic prescribing is merely one component of the EHR Incentive Program.

As such, we believe, at this time that it is appropriate to have different reporting thresholds. However, as noted previously, we will be developing a plan, as described under section 1848(m)(7) of the Act ("Integration of Physician Quality Reporting and EHR Reporting"), to integrate measure reporting requirements under the Physician Quality Reporting System, eRx Incentive Program, and the EHR Incentive Program. In the plan, we will study potential ways to address the commenters' concerns.

(4) Reporting Option for Satisfactory Reporting of the Electronic Prescribing Measure by Group Practices

Section 1848(m)(3)(C) of the Act required that we establish and have in place a process under which eligible professionals in a group practice shall be treated as a successful electronic prescriber. In addition, we are prohibited from making double payments under section 1848(m)(3)(C)(iii) of the Act, which requires that payments to a group practice shall be in lieu of the payments that would otherwise be made under the eRx Incentive Program to eligible professionals in the group practice for being a successful electronic prescriber. For 2011, we proposed to make incentive payments to group practices based on the determination that the group practice, as a whole, is a successful electronic prescriber for 2011 (75 FR 40207). An individual eligible professional who is affiliated with a group practice participating in the group practice reporting option that successfully meets the requirements for group practices would not be eligible to earn a separate eRx incentive payment for 2011 on the basis of his or her successfully reporting the electronic prescribing measure at the individual level.

The following is a summary of the comments received regarding the two group practice options for reporting the electronic prescribing measure in 2011.

Comment: One commenter supports the proposed eRx GPRO II, including the proposed reporting criteria for GPRO II groups.

Response: We appreciate the commenter's positive feedback and are finalizing the eRx GPRO II as proposed. We believe that the eRx GPRO II will expand opportunities for group practices to participate in the eRx Incentive Program.

Comment: One commenter appreciated that we have recognized the burden of claims-based reporting for the Physician Quality Reporting System and the eRx Incentive Program but the commenter was "disappointed that a GPRO-specific alternative for the eRx Incentive Program was not proposed. Most groups using [electronic prescribing technology] can readily obtain detailed information on physician utilization of the system." The commenter felt that this data could be easily reported, in detail, on the GPRO I data collection tool and urges CMS to consider this alternative for 2011 reporting.

Response: We assume that the "GPRO-specific alternative" that the commenter is referring to is the addition of the electronic prescribing measure to the GPRO I data collection tool so that the groups participating in GPRO I can use this data collection tool to submit quality measures data for both the Physician Quality Reporting System and the eRx Incentive Program. Similar suggestions have been considered in the past but were not implemented due to fiscal concerns and concerns about the timing of when an updated GPRO I data collection tool could be available. We will continue to explore the feasibility of adding the electronic prescribing measure to the GPRO I data collection tool so that practices can use the data collection tool to submit the electronic prescribing measure instead of claims, a qualified registry, or a qualified EHR.

Based on these comments, we are finalizing two group practice reporting options for the eRx Incentive Program for 2011—GPRO I and GPRO II. GPRO I is the reporting option for large group practices with 200 or more eligible professionals and GPRO II is the reporting option for group practices with fewer than 200 eligible professionals. The reporting criteria under these 2 options differ depending on the size of the group practice. Eligibility and reporting requirements for the 2011 eRx GPRO I and GPRO II are described below. We believe that these 2 options will encourage greater participation in the eRx Incentive Program by reducing overall reporting burden for eligible professionals who are part of a group practice.

(A) Definition of "Group Practice"

Section 1848(m)(3)(C)(i) of the Act authorizes the Secretary to define "group practice." For purposes of determining whether a group practice is a successful electronic prescriber for 2011, we proposed that consistent with the definition of group practice proposed for the Physician Quality Reporting System group practice reporting option (GPRO), a "group practice" would be defined as a single Taxpayer Identification Number (TIN) with 2 or more eligible professionals, as identified by their individual National Provider Identifier (NPI), who have reassigned their Medicare billing rights to the TIN. "Group practice" would also include group practices participating in Medicare demonstration projects approved by the Secretary (75 FR 40207).

In addition, we proposed to restrict participation in the 2011 eRx GPRO to group practices participating in the 2011 Physician Quality Reporting System GPRO (either through GPRO I or GPRO II) or group practices that are deemed to be participating in the 2011 Physician Quality Reporting System GPRO (that is, group practices participating in a CMS-approved Medicare demonstration) that have indicated their desire to participate in the 2011 eRx GPRO (75 FR 40207).

We also proposed that a group practice that wishes to participate in the 2011 eRx Incentive Program under the group practice reporting option will have to indicate how the group practice intends to report the electronic prescribing measure. That is, the group practice will need to indicate in its self-nomination letter which reporting mechanism (that is, claims, registries or EHRs) the group practice intends to use for purposes of participating in the 2011 eRx Incentive Program group practice reporting option.

We did not receive any comments related to the proposed definition of "group practice" for purposes of the eRx Incentive Program. For this reason, we are finalizing our proposal as previously described.

Unlike individual eligible professionals who may choose not to participate in the Physician Quality Reporting System, to be eligible to earn an electronic prescribing incentive in 2011, group practices that wish to participate in the electronic prescribing group practice reporting option will be required to participate in the Physician

Quality Reporting System group practice reporting option or be deemed to be participating in the Physician Quality Reporting System group practice reporting option based on the practice's participation in an approved Medicare demonstration project. Participation in the eRx Incentive Program, including participation in the electronic prescribing group practice reporting option is, however, optional for group practices that are participating in the Physician Quality Reporting System under the group practice reporting option. If a group practice wishes to participate in the 2011 eRx Incentive Program under the group practice reporting option, the group practice must indicate its desire to do so at the time that the group practice self-nominates to participate in the 2011 Physician Quality Reporting System group practice reporting option. However, group practices are not required to indicate their intent to participate in the 2011 eRx Incentive Program as individual eligible professionals, when the group practice self-nominates to participate in the 2011 Physician Quality Reporting System group practice reporting option.

As discussed in section VII.F.1.g. of this final rule with comment period, group practices interested in participating in the 2011 Physician Quality Reporting System through the group practice reporting option will be required to submit a self-nomination letter to CMS, requesting to participate in the 2011 Physician Quality Reporting System group practice reporting option. Instructions for submitting the self-nomination letter will be posted on the Physician Quality Reporting System section of the CMS Web site by November 15, 2010. A group practice that had indicated their desire to participate in the eRx Incentive Program group practice reporting option when they self-nominated to participate in the 2011 Physician Quality Reporting System group practice reporting option will be notified of the selection decision with respect to participation in the eRx Incentive Program at the same time that it is notified of the selection decision for the Physician Quality Reporting System group practice reporting option.

(B) Process for Group Practices To Participate as Group Practices and Criteria for Successful Reporting of the Electronic Prescribing Measure by Group Practices

For group practices selected to participate in the electronic prescribing group practice reporting option for purposes of the 2011 eRx incentive payment, we proposed that the reporting period would be January 1, 2011 to December 31, 2011 (75 FR 40207). We proposed that group practices selected to participate in the 2011 eRx Incentive Program and qualify for the eRx incentive payment through the group practice reporting option would be able to choose to report the electronic prescribing measure through the claims-based, the registry-based, or, the EHR-based reporting mechanism.

In order for a group practice participating in the Physician Quality Reporting System GPRO I to be considered a successful electronic prescriber for purposes of the 2011 eRx incentive, we proposed that the group practice would have to report that at least 1 prescription during an encounter was generated and transmitted electronically using a qualified electronic prescribing system in at least 2,500 instances during the reporting period. In order for a group practice participating in the Physician Quality Reporting System GPRO II to be considered a successful electronic prescriber, we proposed that the group practice would have to report that at least 1 prescription during an encounter was generated and transmitted electronically using a qualified electronic prescribing system for 75–1,875 instances, based on the group's size (75 FR 40208).

Section 1848(m)(2)(B) of the Act specifies that the 10 percent threshold limitation on the applicability of the electronic prescribing incentive applies to group practices as well as individual eligible professionals. Therefore, in determining whether a group practice will receive an electronic prescribing incentive payment for 2011 by meeting the proposed reporting criteria previously described, we would determine based on the claims, whether 10 percent of a group practice's charges comprised of codes in the denominator of the electronic prescribing measure.

We did not receive any comments related to the proposed process for group practices to participate as group practices and the proposed criteria for successful reporting of the electronic prescribing measure by group practices for purposes of the 2011 eRx Incentive. Therefore, for purposes of the 2011 eRx incentive, we are finalizing our proposal to require GPRO I practices to report the electronic prescribing measure for 2,500 instances during the January 1, 2011 through December 31, 2011. We are also finalizing our proposal to require GPRO II practices to report the electronic prescribing measure for the number of instances specified in Table 76 (see section VII.F.1.g.(3).(B). of this final rule with comment period) during the January 1, 2011 through December 31, 2011 reporting period. We believe these are reasonable thresholds to demonstrate use of electronic prescribing technology.

In addition, we are finalizing our proposal to allow group practices participating in the 2011 eRx Incentive Program under GPRO I and GPRO II to submit data on the electronic prescribing measure using claims, a qualified registry, or a qualified EHR for purposes of qualifying for the 2011 eRx incentive payment. In addition, for purposes of the 2011 eRx incentive, we will not combine data on the electronic prescribing submitted via multiple reporting mechanisms. That is, a group practice must meet the relevant 2011 GPRO reporting criteria for the 2011 incentive using a single reporting mechanism. Combining data received via multiple reporting mechanisms would add significant complexity to our analytics and potentially delay incentive payments.

c. The 2012 eRx Payment Adjustment

Section 1848(a)(5) of the Act requires that with respect to covered professional services furnished by an eligible professional in 2012, if the eligible professional is not a successful electronic prescriber for the reporting period for the year, the fee schedule amount for such services furnished by such professional during 2012 shall be equal to 99 percent of the fee schedule amount that would otherwise apply to such PFS services.

The following is a summary of general comments received regarding the eRx payment adjustment and our responses.

Comment: Some commenters were opposed to implementation of the eRx payment adjustment because of the eRx Incentive Program is relatively new. Commenters noted that we have not released any summary results regarding how many eligible professionals are reporting and how many are earning incentives, eligible professionals have not received feedback reports on their progress for 2009 or 2010, and there is no evidence that the program is working. As a result, commenters suggested that CMS should ensure that eligible professionals who attempt to report but are unsuccessful due to the data submission process are not penalized.

Response: Section 1848(a)(5) of the Act requires us to implement a payment adjustment beginning with covered professional services furnished by an eligible professional during 2012, if the eligible professional is not a successful electronic prescriber. We do not have

the authority to delay implementation of this payment adjustment.

Comment: One commenter suggested that we exercise additional flexibility in assigning payment adjustments carefully by reviewing each eligible professional's circumstances prior to assigning any payment adjustments.

Response: Although we value the commenter's input, this suggestion is not technically feasible. Given the short period of time between the end of the data submission period for the 2012 eRx payment adjustment and when we would have to begin adjusting eligible professional's 2012 payments, it would not be feasible for us to review every eligible professional's circumstances individually. In addition, section 1848(a)(5) (A)(i) of the Act requires us to apply the payment adjustment "if the eligible professional is not a successful electronic prescriber." We believe that the criteria for becoming a successful electronic prescriber for purposes of the payment adjustment that we have proposed and are finalizing below are reasonable in that we have limited the number of electronic prescribing events required to avoid the payment adjustment. Furthermore, as discussed further in section VII.F.2.c.(4). of this final rule with comment period we have provided a process whereby eligible professionals can request a significant hardship exception on a case-by-case basis under section 1848(a)(5)(B) of the Act.

Comment: Several commenters urged us to synchronize the eRx Incentive Program and EHR Incentive Program so that eligible professionals who receive Medicare EHR incentives will be exempt from the eRx payment adjustments. Commenters stated that the EHR Incentive Program provides an opportunity and payment adjustment that did not exist when the original eRx Incentive Program regulations were put in place, and adjustments should be made due to the amount of overlap between programs. As it is, the eRx Incentive Program and the EHR Incentive Program represent a form of "double jeopardy" for physicians. For instance, a physician who gets the first year "meaningful use" subsidy via Medicaid could also be penalized for not using electronic prescribing. Also, commenters claimed that in some cases, in order to avoid the eRx payment adjustment, a physician would have to purchase a stand-alone electronic prescribing program and then transition to a full EHR once the certification standards are determined. Furthermore, the list of "certified" EHRs for the EHR Incentive Program will not be available until January 2011. Another commenter stated that it is unfair to penalize eligible professionals who are working in good faith to adopt a comprehensive EHR under the EHR Incentive Program. Another commenter suggested that every effort be made to align the EHR Incentive Program and the eRx payment adjustment to remove the burden from eligible professionals of having to submit electronic prescribing measure data more than once.

Response: We agree with the desire to align the EHR Incentive Program and the eRx payment adjustment and understand the commenters' concerns. The EHR Incentive Program and the eRx Incentive Program are governed by different laws, and have different reporting requirements. While section 1848(m)(2)(D) explicitly limits eligible professionals or group practices that receive an EHR incentive from qualifying for an eRx incentive payment in the same year, there is not a similar statutory provision that explicitly limits an eligible professional or group practice that receives an EHR incentive from being subject to the eRx payment adjustment. At this time an eligible professional who wishes to participate in the EHR Incentive Program would also have to participate in the eRx Incentive Program during 2011 to avoid an eRx payment adjustment in 2012 since the two programs have different requirements with respect to electronic prescribing. Eligible professionals, however, are not penalized for participating in both programs. Rather, an eligible professional who qualifies for an eRx incentive and a Medicare EHR incentive cannot earn an eRx incentive for the same year. However, we are making the effort to study possible methods of aligning the two programs by developing a plan, as described under section 1848(m)(7) of the Act ("Integration of Physician Quality Reporting and EHR Reporting"), to integrate measure reporting requirements under Physician Quality Reporting System, eRx Incentive Program and the EHR Incentive Program.

We note that although section 1848(m)(2) precludes an eligible professional who has earned an incentive payment under the EHR Incentive Program from also earning an eRx incentive payment, the statute does not preclude the eligible professional from being subject to the eRx payment adjustment. In order to avoid the eRx payment adjustment, an eligible professional participating in the Medicare EHR Incentive Program still must meet the relevant eRx payment adjustment criteria for being a successful electronic prescriber.

(1) The eRx Payment Adjustment Reporting Period

For purposes of the 2012 eRx payment adjustment, we proposed to make a determination of whether an eligible professional or a group practice is a successful electronic prescriber based on the January 1, 2011 through June 30, 2011 reporting period (75 FR 40208). For eligible professionals and group practices using the claims-based reporting mechanism, we proposed that all claims for services furnished between January 1, 2011 and June 30, 2011 must be processed by no later than one month after the reporting period, for the claim to be included in our data analysis.

The following is a summary of comments received on the proposed reporting period for the 2012 eRx payment adjustment and our proposal to require claims to be submitted by no later than 1 month after the reporting period.

Comment: Several commenters expressed a desire for us to revise or delay the 2012 eRx payment adjustment reporting period, asserting that basing the 2012 eRx payment adjustment on electronic prescribing activity in 2011 conflicts with the law. Although some commenters acknowledged the need for time to complete a data analysis to determine if an eligible professional was a successful electronic prescriber prior to 2012, these commenters expressed opposition to the shorter reporting period. Other commenters believed that payment adjustments for 2012 should be based on a reporting period in 2012 rather than a reporting period in 2011. Commenters preferred that the reporting period for the 2012 and 2013 payment adjustments be the full 2012 and 2013 calendar years, respectively. One commenter requested an April 1 through September 30, 2011 for the 2012 payment adjustment. One commenter noted that some organizations might have planned an implementation of a qualified electronic prescribing system prior to January 1, 2012, to avoid the 2012 eRx payment adjustment. Such organizations would now have to complete that implementation more than six months in advance, potentially causing a significant financial burden for the organization. Another commenter stated that the 2012 eRx payment adjustment may cause some practices to reduce their Medicare patient roster (or refuse to accept new Medicare patients) in order to reduce the size of the payment adjustment, because they claim they would not have adequate time to meet

the proposed 2011 requirements to avoid the payment adjustment in 2012.

Response: With respect to commenters' claims that the proposed reporting period for purposes of applying the 2012 eRx payment adjustment conflicts with the law, section 1848(a)(5) of the Act requires that the PFS amount for covered professional services furnished by an eligible professional during 2012, be reduced by 1 percent during 2012, if the eligible professional is not a successful electronic prescriber for the reporting period for the year. Under section 1848(a)(5)(D) of the Act, we have the discretion to define the "reporting period" for purposes of the payment adjustment with respect to a year.

While we appreciate the commenters' suggestions to use data from the entire 2011 calendar year, a later part of 2011, or from 2012 for such an assessment for purposes of applying the 2012 eRx payment adjustment for services furnished in 2012, we believe it is necessary to reduce the PFS amount concurrently with claims submissions in 2012. The alternatives to reducing the PFS amount concurrently with claims submissions in 2012 would be having to recoup payments after the determination is made about whether the payment adjustment applies, providing added payments if the claims are paid at the reduced amount before the determination is made about whether the payment adjustment applies, or holding claims until the determination is made about whether the payment adjustment applies. As a result, we need to determine whether eligible professionals are successful electronic prescribers prior to 2012, based on a reporting period that also takes place prior to 2012. We believe that the proposed reporting period of the first six months of 2011 will allow sufficient time for eligible professionals to report the electronic prescribing measure, allow us to collect and analyze the data submitted by eligible professionals, and avoid retroactive adjustments of payments in 2012. Avoiding retroactive adjustments would not be possible if the determination of a successful electronic prescriber for purposes of the 2012 payment adjustment was based on reporting for the entire 2011 calendar year or a later portion of the 2011 calendar year. After the end of the reporting period, we must allow some time for claims for services furnished during the reporting period to be submitted and processed before it is available for analysis. Once we have completed our analysis we also need time to make the necessary system changes to begin applying the payment adjustments to the appropriate individuals. All of this must occur prior to January 1, 2012.

Comment: One commenter suggested we be consistent with EHR Incentive Program submission guidelines by allowing electronic prescribing measure data to be submitted for up to two months after the close of the reporting period, rather than the proposed one month.

Response: As we explained previously, we need sufficient time following the close of the 6-month reporting period to determine whether an eligible professional is a successful electronic prescriber and must do so prior to 2012, when the eRx payment adjustment would be assessed (if applicable). Accordingly, we cannot allow claims to be submitted for up to two months after the close of the reporting period.

After considering the comments and for the reasons we explained previously, we are finalizing a 6-month reporting period, from January 1, 2011 through June 30, 2011, for the 2012 eRx payment adjustment.

(2) Criteria for Determining Applicability of the 2012 eRx Payment Adjustment to Individual Eligible Professionals

As we explained previously, section 1848(a)(5) of the Act requires a payment adjustment be applied with respect to covered professional services furnished by an eligible professional in 2012, if the eligible professional is not a successful electronic prescriber for the reporting period for the year. Section 1848(m)(3)(B) of the Act sets forth the requirements for being a successful electronic prescriber. As we discussed in section VII.F.2.b.(2). of this final rule with comment period, for the 2011 eRx Incentive Program, we decided to continue to require eligible professionals to report on the electronic prescribing measure to determine whether an eligible professional is a successful electronic prescriber. Details about the electronic prescribing quality measure are discussed in section VII.F.2.b.(2).(C) and (D) of this final rule with comment period.

In addition, based on the authority under section 1848(m)(3)(D) of the Act to revise the criteria for submitting data on the electronic prescribing quality measure, we proposed that the 2012 eRx payment adjustment would *not* apply to the following:

(1) An eligible professional who is not a physician (includes MDs, DOs, and podiatrists), nurse practitioner, or physician assistant as of June 30, 2011.

(2) An eligible professional who does not have at least 100 cases (that is, claims for patient services) containing an encounter code that falls within the denominator of the electronic prescribing measure for dates of service between January 1, 2011 through June 30, 2011.

(3) An eligible professional who is a successful electronic prescriber for the January 1, 2011 through June 30, 2011 reporting period. Specifically, we proposed that to be a successful electronic prescriber for purposes of avoiding the 2012 eRx payment adjustment, the eligible professional must report that at least 1 prescription for Medicare Part B FFS patients created during an encounter that is represented by 1 of the codes in the denominator of the 2011 electronic prescribing measure was generated and transmitted electronically using a qualified eRx system at least 10 times during the 2012 eRx payment adjustment reporting period (that is, January 1, 2011 through June 30, 2011). (75 FR 40208).

The limitation with respect to the electronic prescribing measures required under section 1848(m)(2)(B)(i) of the Act also applies to the eRx payment adjustment. Therefore, we proposed that if less than 10 percent of the eligible professional's estimated total allowed charges for the January 1, 2011 through June 30, 2011 reporting period are comprised of services which appear in the denominator of the 2011 electronic prescribing measure, then the eligible professional would not be subject to the 2012 eRx payment adjustment (75 FR 40209). As with the 2011 eRx incentive payment, we proposed that the determination of whether an eligible professional is subject to the payment adjustment will be made at the individual professional level, based on the NPI and for each unique TIN/NPI combination.

The following is a summary of the comments received on the proposed criteria for determining the applicability of the 2012 eRx payment adjustment to individual eligible professionals and our responses.

Comment: A couple of commenters suggested that regardless of the payment adjustment exemption criteria, any eligible professional who qualifies for the incentive payment should be exempt from the payment adjustment. The commenters specifically requested an exemption for eligible professionals who are successful electronic prescribers for the 2011 eRx incentive.

Response: As discussed previously, section 1848(a)(5) of the Act requires that the PFS amount for covered professional services furnished by an

eligible professional, who is not a successful electronic prescriber, must be reduced by 1 percent for services furnished during 2012. With regard to applying the required 2012 eRx payment adjustment, we believe it is necessary to reduce the PFS amount concurrently with claims submissions in 2012, and so we need to determine if the 2012 eRx payment adjustment is applicable to eligible professionals prior to 2012. This assessment would not be possible if the successful electronic prescriber determination was based on eRx incentive payment eligibility criteria for 2011, given that we cannot determine successful electronic prescribers for purposes of the 2011 eRx incentive until 2012.

After considering the comments received, we are finalizing the criteria for determining applicability of the 2012 eRx payment adjustment to individual eligible professionals as proposed and previously described. As stated in the proposed rule (75 FR 40208 and 40209), we believe that that limiting the application of the payment adjustment to those professionals who generally have prescribing privileges and who have a sufficient number of denominator-eligible cases is appropriate. We also believe that the reporting threshold of 10 unique electronic prescribing events between January 1, 2011 and June 30, 2011 is achievable. As stated previously, although we proposed to allow reporting of the electronic prescribing measure via claims, a qualified registry, or a qualified EHR, we are finalizing only the claims-based reporting mechanism for purposes of the 2012 payment adjustment. It is not operationally feasible for us to accept the data submissions from the EHRs and registries in the timeframe needed for us to be able to have sufficient time to be analyze the data and make the determination whether an eligible professional is subject to the 2012 payment adjustment prior to January 1, 2012.

For purposes of determining whether an eligible professional is a physician (includes MDs, DOs, and podiatrists), nurse practitioner, or physician assistant we will use National Plan & Provider Enumeration System (NPPES) data. It is an eligible professional's responsibility to ensure that his or her primary taxonomy code in NPPES is accurate. Since there are concerns about the reliability of the specialty information contained in NPPES, we are also establishing a G-code that eligible professionals can use to report to us that they do not have prescribing privileges. Eligible professionals who do not have prescribing privileges must report this G-code on at least one claim with dates of service between January 1, 2011 and June 30, 2011, and processed by no later than one month after the reporting period.

(3) Criteria for Determining Applicability of the 2012 eRx Payment Adjustment to Group Practices

As required by section 1848(m)(3)(C) of the Act, we are also required to establish and have in place a process under which eligible professionals in a group practice shall be treated as a successful electronic prescriber for purposes of the eRx payment adjustment. Thus, we proposed that for purposes of the 2012 eRx payment adjustment, a payment adjustment would not be applied to a group practice participating in the 2011 eRx GPRO if the group practice is participating in either the 2011 Physician Quality Reporting System GPRO I or the 2011 Physician Quality Reporting System GPRO II and meets the proposed 2011 criteria for successful electronic prescribing for the 2011 eRx incentive (75 FR 40209). For purposes of the 2012 eRx payment adjustment, however, we proposed that the 2011 eRx incentive criteria for successful electronic prescribing would need to be satisfied during the 2012 eRx payment adjustment reporting period of January 1, 2011 through June 30, 2011, for the same operational reasons that we proposed a 6-month reporting period for the payment adjustment for individual eligible professionals.

For purposes of determining whether the eRx payment adjustment applies to a group practice, we proposed to analyze each unique TIN/NPI combination so as not to disadvantage eligible professionals who may have joined the group practice after January 1, 2011 (75 FR 40209).

In addition, in accordance with the limitation under section 1848(m)(2)(B)(i) of the Act, we proposed that the 2012 eRx payment adjustment would not apply to an eRx GPRO in which less than 10 percent of the group practice's estimated total allowed charges for the January 1, 2011 through June 30, 2011 reporting period are comprised of services which appear in the denominator of the 2011 electronic prescribing measure. To be consistent with how this limitation is applied to group practices for purposes of the incentive, we proposed to determine whether this limitation applies to a group practice for the payment adjustment at the TIN level.

For the same reasons that we proposed a 6-month reporting period for the 2012 eRx payment adjustment for group practices, we also proposed to use only claims processed by no later than 1 month after the reporting period in our analysis, consistent with our proposed approach for analyzing individual eligible professional claims. Similarly, we proposed that registries would need to submit eRx data for services furnished January 1, 2011 through June 30, 2011 to CMS between July 1, 2011 and August 19, 2011, so that we may include registry data in our analysis. We also proposed that group practices participating in the eRx group practice reporting option via EHR-based reporting would be required to submit eRx data for services furnished January 1, 2011 through June 30, 2011 to CMS between July 1, 2011 and August 19, 2011 (75 FR 40209).

The following is a summary of the comments received on the proposed criteria for determining applicability of the 2012 eRx payment adjustment to group practices, including the proposed criteria for successful reporting of the electronic prescribing measure for group practices, and our proposed analytical approach.

Comment: One commenter suggested that we lower the reporting criteria for group practices if we finalize our proposal to use the 6-month reporting period beginning January 1, 2011 to determine whether a group practice is subject to the 2012 payment adjustment. The commenter noted that in determining the volume for the group incentive payment, we assume that not all eligible professionals in the practice would be electronically prescribing. The commenter believes that the same assumption should be applied for purposes of the payment adjustment determination.

Response: As we stated in the proposed rule (75 FR 40209), we do not believe that group practices would be disadvantaged by having to satisfy the criteria for being a successful e-prescriber for the 2011 eRx incentive in 6 months to avoid the 2012 eRx payment adjustment. When compared to the criteria for individual eligible professionals reporting the electronic prescribing measure for purposes of the payment adjustment, the criteria for being a successful electronic prescriber for the 2011 eRx payment adjustment for group practices enable group practices, on average, to avoid the incentive by electronically prescribing a fewer number of prescriptions per eligible professionals than what individual eligible professionals are required to do. Therefore, we are not lowering the reporting criteria for successful electronic prescribers for

purposes of determining applicability of the 2012 eRx payment adjustment to group practices. By having the same reporting criteria for purposes of both the payment adjustment and incentive payment, group practices have the added advantage of knowing that they have successfully electronically prescribed for purposes of the 2011 incentive payment once they have successfully electronically prescribed for purposes of the 2012 payment adjustment, since the reporting periods for the 2011 incentive and 2012 payment adjustment overlap.

After consideration of the comments received and for the reasons we discussed previously, we are finalizing the criteria for determining applicability of the 2012 eRx payment adjustment to group practices. However, for the reasons discussed previously with regard to the reporting mechanisms for submitting data on the electronic prescribing measure during 2011 for purposes of the 2012 payment adjustment, we are finalizing only the claims-based reporting mechanism. Thus, for the 2012 eRx payment adjustment, we are not finalizing eRx data submission by group practices via a qualified registry or qualified EHR.

In addition, while we had proposed to analyze each unique TIN/NPI combination to see whether the payment adjustment applies on an individual basis if the group practice fails to satisfy the criteria that would exempt the group practice from being subject to the 2012 eRx payment adjustment, we are unable to finalize this proposal as this would add significant time to our data analyses and could delay our ability to determine applicability of the 2012 payment adjustment in a timely fashion.

(4) Significant Hardship Exemption

Section 1848(a)(5)(B) of the Act provides that the Secretary may, on a case-by-case basis, exempt an eligible professional from the application of the payment adjustment, if the Secretary determines, subject to annual renewal, that compliance with the requirement for being a successful electronic prescriber would result in a significant hardship, such in the case of an eligible professional who practices in a rural area without sufficient Internet access. Therefore, we proposed that in addition to meeting the criteria for a successful electronic prescriber, an eligible professional or group practice may also be exempt from application of the 2012 eRx payment adjustment, if, during the 2012 eRx payment adjustment reporting period (that is, January 1, 2011 through June 30, 2011), one of the following circumstances applies to the eligible professional or group practice:

- The eligible professional or group practice practices in a rural area with limited high speed internet access; or
- The eligible professional or group practice practices in an area with limited available pharmacies for electronic prescribing.

We proposed to add two additional "G" codes to the 2011 electronic prescribing measure's specifications describing these 2 circumstances. Eligible professionals or group practices to whom one or more of these circumstances apply would be required to report the appropriate G-code at least once between January 1, 2011 and June 30, 2011 using their selected 2011 eRx reporting mechanism. Reporting of one of these two G-codes prior to June 30, 2011 will indicate to us that the eligible professional or group practice would like to be considered for an exemption from the 2012 payment adjustment under the significant hardship exception (75 FR 40209).

The following is a summary on the comments we received regarding our proposal for the significant hardship exemption and our responses.

Comment: One commenter supported the proposed process for the significant hardship exemption and did not offer any other circumstances that should also be considered a significant hardship.

Response: We appreciate the commenter's supportive comments.

Comment: While our acknowledgement of hardship circumstances was appreciated, several commenters suggested we add more hardship exemption categories, or offered additional hardship circumstances for our consideration. Specifically, commenters requested that the following hardship circumstances be added to the payment adjustment exemption list: (1) Physicians who are nearing the end of their careers, (2) physicians who are currently eligible for Social Security benefits or will be eligible for Social Security benefits by 2014, (3) physicians who plan on participating in the EHR incentive program beginning in 2012, 2013, or 2014, (4) DEA e-prescribers, (5) small practices (that is, 1 to 2 physicians), (6) practices located in Health Professional Shortage Areas (HPSAs), (7) physicians who cannot meet the requirements due to patient preference, and (8) hospital-based eligible professionals. Commenters stated that physicians nearing retirement age or in small practices may find it difficult to justify the cost of implementing these systems. Several commenters noted that many physicians have postponed purchasing electronic prescribing software in order to take advantage of the EHR incentives. Finally, commenters argued that physicians who electronically prescribe controlled substances should have additional time to comply with the eRx Incentive Program requirements as the DEA compliant electronic prescribing applications are not yet available.

Response: We appreciate the commenters' feedback and are actively working on G-codes for eligible professionals to report the significant hardship categories we proposed for the 2012 eRx payment adjustment. We do not believe, however, that any of the suggested additional hardship categories constitute a circumstance that limits an eligible professional's access to electronic prescribing in the way that the two hardship exemptions we proposed do. We also believe that eligible professionals who are nearing retirement or are eligible for Social Security benefits still have the opportunity to purchase and use electronic prescribing technology even though they may not have a business case for doing so. With respect to the other hardship exemptions specifically requested by commenters (such as, hospital-based eligible professionals, DEA e-prescribers and physicians who cannot meet the requirements due to patient preferences), we believe that we have already taken these circumstances into account when we established the reporting threshold for the electronic prescribing and the other criteria that would subject an eligible professional to the eRx payment adjustment. Therefore, we are finalizing the two hardship exemption G-codes that we proposed.

Comment: A couple of commenters requested that we further define terms such as "rural areas," areas with "limited high speed internet access," and "limited availability of pharmacies."

Response: We are actively working to develop G-codes for eligible professionals to report the eRx hardship. Once we finalize the G-codes, we will provide additional guidance with regards to the hardship exemptions categories associated with the eRx payment adjustment along with education and outreach with regard to the 2012 payment adjustment under the eRx Incentive Program.

After considering the comments received, we are finalizing the following hardship exemptions for purposes of the 2012 eRx payment adjustment:

- Eligible professionals who practice in a rural area without sufficient high speed internet access; and

• Eligible professionals who practice in an area without sufficient available pharmacies for electronic prescribing.

We are creating G-codes to address these 2 situations. Since the hardship exception must be renewed on an annual basis, we have deleted the proposed language at § 414.92(c)(2)(ii) that listed specific circumstances that constitute a "significant hardship." For future years and in future rulemaking, we will address the circumstances that will constitute a significant hardship for each year.

Eligible professionals for whom one or more of these circumstances apply must report the appropriate G-code at least once between January 1, 2011 and June 30, 2011 using claims. Group practices who wish to participate in the 2011 eRx GPRO and for whom one or more of these circumstances apply must request a hardship exemption at the time they self-nominate by indicating the appropriate G-code in their self-nomination letter to CMS. Reporting of one of these G-codes prior to June 30, 2011 will indicate to us that the eligible professional or group practice would like to be considered for an exemption from the eRx 2012 payment adjustment under the significant hardship exception.

d. The 2013 eRx Payment Adjustment

Section 1848(a)(5) of the Act also requires that with respect to covered professional services furnished by an eligible professional in 2013, if the eligible professional is not a successful electronic prescriber for the reporting period for the year, the fee schedule amount for such services furnished by such professional during 2013 shall be equal to 98.5 percent of the fee schedule amount that would otherwise apply to such PFS services. Under section 1848(m)(3)(C) of the Act, we are also required to establish and have in place a process under which eligible professionals in a group practice shall be treated as a successful electronic prescriber for purposes of the eRx payment adjustment.

For purposes of the 2013 eRx payment adjustment, we proposed to use the proposed criteria for successful electronic prescriber for the proposed 2011 eRx incentive payment to determine whether an eligible professional or a group practice is a successful electronic prescriber for purposes of the 2013 eRx payment adjustment. In addition, we proposed that the reporting period for the 2013 eRx payment adjustment would be January 1, 2011 through December 31, 2011 (75 FR 40210). We believe that matching the criteria that will be applied for the 2013 eRx payment adjustment with the criteria that will be applied for the 2011 eRx incentive payment in an earlier year would be the most effective means of encouraging eligible professionals and group practices to adopt and use electronic prescribing systems since anyone who does not qualify for an incentive in 2011 would be subject to a payment adjustment in 2013.

The following is a summary of the comments received on our proposal for the 2013 eRx payment adjustment.

Comment: We received comments similar to the ones opposing the proposed 2012 eRx payment adjustment reporting period, with regard to the proposed 2013 eRx payment adjustment reporting period. One commenter suggested that the proposed reporting period for purposes of the 2013 eRx payment adjustment be changed so the 2012 and 2013 eRx payment adjustments do not overlap. Another commenter suggested that the 2013 payment adjustment be based on claims reported during the first half of 2012 to better reflect expected increases in eRx adoption, including increases due to the EHR Incentive Program.

Response: We understand the commenters' concerns that the reporting periods for purposes of the 2012 and 2013 eRx payment adjustments overlap. We note that section 1848(a)(5)(C)(D) gives us the authority to specify the reporting period with respect to a year. As such, we may consider revisiting in the 2012 PFS rulemaking process additional reporting periods in 2012 for purposes of the 2013 eRx payment adjustment since having multiple reporting periods for purposes of the payment adjustment will maximize opportunities for eligible professionals to avoid the 2013 payment adjustment.

After considering the comments received and for the reasons we previously explained, we are finalizing our proposal to use the 2011 eRx incentive payment criteria for successful electronic prescriber as described in section VII.F.2.b. of this final rule with comment period to determine whether an eligible professional or a group practice is a successful electronic prescriber for purposes of the 2013 eRx payment adjustment based on the January 1, 2011 through December 31, 2011 reporting period. However, we may consider revisiting the criteria for the 2013 payment adjustment in the context of 2012 reporting periods in the 2012 PFS proposed and final rules.

e. Public Reporting of Names of Successful Electronic Prescribers

Section 1848(m)(5)(G) of the Act requires the Secretary to post on the CMS Web site, in an easily understandable format, a list of the names of eligible professionals (or group practices) who satisfactorily submit data on quality measures for the Physician Quality Reporting System and the names of the eligible professionals (or group practices) who are successful electronic prescribers. As required by section 1848(m)(5)(G) of the Act, we proposed to make public the names of eligible professionals and group practices who are successful electronic prescribers for the 2011 eRx Incentive Program on the Physician Compare Web site that we are required to establish by January 1, 2011 under section 10331 of the ACA.

The following is a summary of the comments received regarding public reporting of successful electronic prescribers.

Comment: A few commenters expressed concerns about posting the names of successful e-prescribers. One commenter was concerned that the public would not be able to correctly identify a successful e-prescriber as a professional who has met the reporting requirements for the eRx Incentive Program. One commenter was concerned that individuals using this information to make health care decisions may do so without fully understanding the methodology and the program requirements. The commenters suggested that CMS take appropriate measures to ensure the accuracy of the list of successful e-prescribers and to provide the appropriate disclaimers for the Web site listing.

Response: We will make every effort to ensure that the list of successful e-prescribers that we will post on the Physician Compare Web site is accurate. We also intend to include explanatory language with information on the intended uses and/or limitations of this data.

Based on the comments received, we are finalizing our proposal to post the names of eligible professionals and group practices who are successful electronic prescribers for purposes of the 2011 eRx incentive on the Physician Compare Web site. We anticipate that the names of individual eligible professionals and group practices who are successful electronic prescribers for the 2011 eRx Incentive Program will be available in 2012 after the 2011 incentive payments are paid.

To comply with section 1848(m)(5)(G) of the Act, we specifically intend to post

the names of individual eligible professionals who report the electronic prescribing measure at least 25 times during the 2011 reporting period for patient encounters included in the measure's denominator, without regard to whether the limitation under section 1848(m)(2)(B) of the Act applies to the eligible professional and without regard to whether the eligible professional actually qualifies to earn an incentive payment. In addition, since the Physician Quality Reporting System and the eRx Incentive Program are two separate programs and individual eligible professionals are not required to participate in both programs to earn an incentive under either program, we point out that it is possible for an eligible professional who participates in both incentive programs to be listed both as an individual eligible professional who satisfactorily submits data on quality measures for the Physician Quality Reporting System and is a successful electronic prescriber under the eRx Incentive Program. Likewise, if an eligible professional participated in both incentive programs but did not meet the respective requirements for both programs, he or she may be listed as an individual eligible professional who satisfactorily submits data on quality measures for the Physician Quality Reporting System only or as a successful electronic prescriber under the eRx Incentive Program only.

Similarly, for purposes of publicly reporting the names of group practices, on the Physician Compare Web site, we intend to post the names of group practices that report the electronic prescribing measure the required number of times during the 2011 reporting period for patient encounters included in the measure's denominator without regard to whether the limitation under section 1848(m)(2)(B) of the Act applies to the group practice or whether the group practice actually qualifies to earn an incentive payment. Although any group practice participating in the eRx Incentive Program under the group practice reporting option would also have to participate in a Physician Quality Reporting System group practice reporting option, the criteria for satisfactory reporting of Physician Quality Reporting System measures for group practices are different from the criteria for successful reporting of the electronic prescribing measure by group practices. Therefore, it is possible for a group practice to be listed as a group practice that satisfactorily submits data on quality measures for the Physician Quality Reporting System but not as a successful electronic prescriber under the eRx Incentive Program, or vice versa.

G. DMEPOS Provisions

1. Medicare Durable Medical Equipment, Prosthetics, Orthotics, and Supplies (DMEPOS) Competitive Bidding Program (CBP)

a. Legislative and Regulatory History of DMEPOS CBP

Medicare pays for most DMEPOS furnished after January 1, 1989 pursuant to fee schedule methodologies set forth in section 1834 of the Act, as added by section 4062 of the Omnibus Budget Reconciliation Act of 1987 (OBRA '87) (Pub. L. 100–203). Specifically, sections 1834(a)(1)(A) and (B), and 1834 (h)(1)(A) of the Act provide that Medicare payment for these items is equal to 80 percent of the lesser of the actual charge for the item or the fee schedule amount for the item. We implemented this payment methodology at 42 CFR Part 414, Subpart D of our regulations. Sections 1834(a)(2) through (a)(5) and 1834(a)(7) of the Act, and implementing regulations at § 414.200 through § 414.232 (with the exception of § 414.228), set forth separate payment categories of durable medical equipment (DME) and describe how the fee schedule for each of the following categories is established:

- Inexpensive or other routinely purchased items (section 1834(a)(2) of the Act and § 414.220 of the regulations);
- Items requiring frequent and substantial servicing (sections 1834(a)(3) of the Act and § 414.222 of the regulations);
- Customized items (section 1834(a)(4) of the Act and § 414.224 of the regulations);
- Oxygen and oxygen equipment (section 1834(a)(5) of the Act and § 414.226 of the regulations);
- Other items of DME (section 1834(a)(7) of the Act and § 414.229 of the regulations).

For a detailed discussion of payment for DMEPOS under fee schedules, see the final rule published in the April 10, 2007 **Federal Register** (72 FR 17992).

Blood glucose testing strips or diabetic testing strips are covered under the Medicare DME benefit in accordance with section 1861(n) of the Act. Other supplies that are necessary for the effective use of DME are also covered under the Medicare DME benefit in accordance with longstanding program instructions at section 110.3 of chapter 15 of the Medicare Benefit Policy Manual.

Section 1847 of the Act, as amended by section 302(b)(1) of the MMA, requires the Secretary to establish and implement a DMEPOS CBP. Under the DMEPOS CBP, Medicare sets payment amounts for selected DMEPOS items and services furnished to beneficiaries in competitive bidding areas (CBAs) based on bids submitted by qualified suppliers and accepted by Medicare. For competitively bid items, these new payment amounts, referred to as "single payment amounts (SPA)," replace the fee schedule payment methodology. Section 1847(b)(5) of the Act provides that Medicare payment for these competitively bid items and services is made on an assignment-related basis equal to 80 percent of the applicable SPA, less any unmet Part B deductible described in section 1833(b) of the Act. Section 1847(b)(2)(A)(iii) of the Act prohibits the awarding of contracts to any entity unless the total amounts to be paid to contractors in a CBA are expected to be less than the total amounts that would otherwise be paid under the fee schedule methodologies set forth in section 1834(a) of the Act. This requirement guarantees savings to both the Medicare program and beneficiaries under the program. The fee schedule methodologies will continue to set payment amounts for noncompetitively bid DMEPOS items and services. The program also includes provisions to ensure beneficiary access to quality DMEPOS items and services. Section 1847(b)(2)(A) and 1847(b)(4)(B) of the Act, respectively, limits participation in the program to suppliers who have met applicable quality and financial standards and requires the Secretary to maintain beneficiary access to multiple suppliers.

When first enacted by the Congress, section 1847(a)(1)(B) of the Act required the Secretary to phase in the DMEPOS CBP in a manner so that the competition under the program occurred in 10 of the largest metropolitan statistical areas (MSAs) in 2007. The program was to be expanded into 70 additional MSAs in 2009, and then into additional areas after 2009.

In the May 1, 2006 **Federal Register** (72 FR 25654), we issued a proposed rule that would implement the DMEPOS CBP for certain DMEPOS items and services and solicited public comment on our proposals. In the April 10, 2007 **Federal Register** (72 FR 17992), we issued a final rule addressing the comments on the proposed rule and establishing the regulatory framework for the DMEPOS CBP in accordance with section 1847 of the Act.

Consistent with the requirements of section 1847 of the Act and the

competitive bidding regulations, we began implementation of the program by conducting the first round of competition in 10 of the largest MSAs in 2007. We limited competition during this first round of the program to DMEPOS items and services included in 10 selected product categories, including mail order diabetic supplies. The bidding window opened on May 15, 2007 and was extended to allow bidders adequate time to prepare and submit their bids. We then evaluated each submission and awarded contracts consistent with the requirements of section 1847(b)(2) of the Act and § 414.414. Following the bid evaluation process, we awarded over 329 contracts to qualified suppliers.

The DMEPOS CBP was effective on July 1, 2008. Beginning on that date, Medicare coverage for competitively bid DMEPOS items and services furnished in the first 10 CBAs was limited to items and services furnished by contract suppliers and/or grandfathered suppliers of oxygen and oxygen equipment and rented DME, unless an exemption applies as stated in the regulation. For further discussion of the DMEPOS CBP and the bid evaluation process, see the final rule published in the April 10, 2007 **Federal Register** (72 FR 17992).

On July 15, 2008, the MIPPA was enacted. Section 154 of the MIPPA amended section 1847 of the Act to make certain limited changes to the DMEPOS CBP. Section 154(a) of the MIPPA delayed competition under the program and amended section 1847(a)(1)(D)(i) of the Act to terminate the competitive bidding contracts effective June 30, 2008 and prohibit payment based on the contracts.

Section 154(a) of the MIPPA required the Secretary to conduct a second competition to select suppliers for Round 1 in 2009 ("Round 1 Rebid"). The Round 1 Rebid includes the "same items and services" and is to be conducted in the "same areas" as the 2007 Round 1 competition, with certain limited exceptions. Specifically, we were required to exclude the product category of negative pressure wound therapy (NPWT) items and services and the San Juan, Puerto Rico CBA from the Round 1 Rebid. In addition, section 154(a) of the MIPPA permanently excluded group 3 complex, rehabilitative wheelchairs from the DMEPOS CBP by amending the definition of "items and services" in section 1847(a)(2) of the Act. Section 154(a) of the MIPPA delayed competition for Round 2 of the DMEPOS CBP from 2009 to 2011, and subsequent competitions under the program to after 2011. Finally, section 154(a) of the MIPPA specifically addresses the phase in of a competition for national mail order items and services by specifying that such competitions may be phased in after 2010.

b. Implementation of a National Mail Order DMEPOS Competitive Bidding Program (CBP) for Diabetic Testing Supplies

Section 1847(a)(2)(A) of the Act mandates competitive bidding programs for supplies used in conjunction with durable medical equipment, such as blood glucose monitors used by beneficiaries with diabetes to test their blood glucose levels. Replacement of supplies used with these monitors are referred to under the DMEPOS CBP as diabetic supplies or diabetic testing supplies such as blood glucose test strips and lancets. In the April 10, 2007 final rule (72 FR 17992) implementing the DMEPOS CBP, we established regulations to implement competitions on a regional or national level for certain items such as diabetic testing supplies that are furnished on a mail order basis. We explained our rationale for establishing a national DMEPOS CBP for items furnished on a mail order basis in the May 1, 2006 proposed rule (71 FR 25669) and April 10, 2007 final rule (72 FR 18018). In the case of diabetic supplies and other items furnished by local neighborhood pharmacies, establishing a competition for items furnished on a mail order basis would exempt local pharmacies from competing with national mail order suppliers while preserving the choice of the beneficiary to go to any local pharmacy to pick up their diabetic supplies. Manufacturers and suppliers have stated to CMS at different meetings on numerous occasions that the choice for beneficiaries to obtain diabetic supplies from local pharmacies with licensed pharmacists in house who can provide instructions and guidance to beneficiaries related to their testing needs is important and needs to be preserved.

In the January 16, 2009 **Federal Register** (74 FR 2873), we published an interim final rule implementing certain changes to the DMEPOS CBP. Specifically, the rule implemented certain MIPPA provisions that delayed implementation of Round 1 of the program, required CMS to conduct a second Round 1 competition in 2009, and mandated certain changes for both the Round 1 Rebid and subsequent rounds of the program. In the January 16, 2009 interim final rule, we indicated that we would be considering alternatives for competition of diabetic testing supplies in future notice and comment rulemaking. We explained that we believed it was consistent with section 1847(a) to employ competitive bidding for diabetic suppliers in both the mail order and traditional retail markets, in part due to concerns raised about the bifurcation of the method of delivery of diabetic supplies and the difficulty in defining what constitutes "mail order" for purposes of competition.

In the July 13, 2010, proposed rule (75 FR 40211), we discussed alternatives for competition of diabetic testing supplies and proposed the implementation of a revised national mail order DMEPOS CBP for diabetic testing supplies. Under the proposed mail order DMEPOS CBP, we would award contracts to suppliers to furnish these items across the nation to beneficiaries who elect to have replacement diabetic testing supplies delivered to their residence. Suppliers wishing to furnish these items through mail order to Medicare beneficiaries would be required to submit bids to participate in the national mail order DMEPOS CBP for diabetic testing supplies. In addition, we proposed to revise the national mail order program for diabetic testing supplies DMEPOS CBP by implementing the following changes:

- Revision of § 414.402 to include definitions of: "National mail order DMEPOS CBP," "Mail order item," and "Non-mail order item." We proposed these new definitions to establish a clear distinction between mail order items and non-mail order items. These revised definitions would apply to all future competitions for mail order items and services.

- Addition of § 414.411 to implement the special rule mandated by section 1847(b)(10)(A) of the Act for competitions for diabetic testing strips following the Round 1 Rebid. Section 1847(b)(10)(A) requires suppliers bidding in competitions to furnish diabetic testing strips after the Round 1 Rebid to demonstrate that their bid covers at least 50 percent of all types of diabetic testing strips furnished by suppliers. If the supplier is not able to satisfy this requirement, the Secretary must reject that bid.

- Revision of § 414.422 to include an additional term in contracts of mail order suppliers of diabetic testing supplies following the Round 1 Rebid. The proposed term would prohibit suppliers from influencing or incentivizing beneficiaries to change their brand of glucose monitor and test strips.

(1) Future Competitions for Diabetic Testing Supplies

Section 1847(a)(1)(A) of the Act mandates the establishment of DMEPOS CBP for items described in section 1847(a)(2)(A) of the Act, including diabetic testing supplies. Section 1847(a)(1)(B)(ii) of the Act authorizes the phase in of items and services under these programs beginning with the highest cost and highest volume items and services or those items and services that are determined to have the largest savings potential. Current Medicare claims data from fiscal year 2009 shows that over 62 percent of beneficiaries currently receive their replacement diabetic testing supplies from mail order suppliers. Mail order diabetic testing supplies account for approximately one billion dollars in allowed charges per year and are therefore high volume items. We believe that a national mail order DMEPOS CBP for diabetic testing supplies would result in large savings as a result of competition between entities that would factor into their bids savings from volume discount purchasing of quantities of supplies needed on a national rather than local basis. Therefore, we believe that implementing a national mail order DMEPOS CBP for diabetic testing supplies is the best option for meeting the requirements of the statute referenced above as long as certain refinements discussed below are made to the program to address concerns about the mail order/non-mail order bifurcation.

We have heard from industry groups and suppliers that furnish diabetic testing supplies on a national mail order basis of their concerns that national chain pharmacies that furnish diabetic testing supplies through both a national mail order business and local retail pharmacies will encourage beneficiaries to obtain these items from local retail locations by offering certain incentives to Medicare beneficiaries for switching from mail order to local retail. Based on our experience from Round 1, we believe DMEPOS CBP for mail order diabetic testing supplies would be subject to manipulation without a clearer definition of what we mean by mail order. We agree with the industry groups and suppliers that have indicated that this practice will harm businesses that only furnish diabetic testing supplies on a mail order basis. In order to address these concerns, we are proposing to add to § 414.402 a definition of "National mail order DMEPOS CBP." We proposed to define that term as a program whereby contracts are awarded to suppliers for the furnishing of mail order items across the nation. We believe that implementing a national competitive bidding program for diabetic supplies would preserve beneficiary choice to purchase testing supplies in person from any local pharmacy that is an enrolled Medicare supplier that furnishes diabetic supplies, while clarifying the definition of mail order will provide significant savings potential for beneficiaries and the program. Savings would be generated in the near future from national SPAs for supplies furnished on a mail order or home delivery basis and on a long term basis for all diabetic supplies as a result of the requirement of section 1834(a)(1)(F) of the Act (as amended by section 6410(b) of the ACA) to either competitively bid in all areas or adjust prices in all areas by January 1, 2016. We believe that more beneficiaries will elect to choose the mail order/home delivery option, thereby further increasing short term savings under the program. Even if this is not the case, and the percentage of beneficiaries choosing the mail order/home delivery option remains at the current rate of 62 percent, savings for the remaining 38 percent must be achieved by no later than January 1, 2016, as a result of the requirements of section 1834(a)(1)(F) of the Act.

We considered other alternatives for establishing DMEPOS CBP for diabetic testing supplies that would eliminate the mail order/non-mail order bifurcation and associated concerns. These alternatives include the following:

- A national competition among all types of suppliers for all replacement diabetic supplies. Under this alternative, all beneficiaries would receive their replacement diabetic supplies from contract suppliers responsible for furnishing diabetic supplies throughout the nation using any method of delivery as long as the supplies are delivered on a timely basis.
- Competitions in regional CBAs among all types of suppliers for all replacement diabetic supplies. Under this alternative, all beneficiaries would receive their replacement diabetic supplies from contract suppliers responsible for furnishing diabetic supplies throughout a designated region of the country using any method of delivery to a beneficiary's home as long as the supplies are delivered on a timely basis.
- Competitions in local CBAs among all types of suppliers for all replacement diabetic supplies. Under this alternative, all beneficiaries would receive their replacement diabetic supplies from contract suppliers responsible for furnishing diabetic supplies throughout the local area using any method of delivery to a beneficiary's home as long as the supplies are delivered on a timely basis.

We believe that the first option to bid on a national basis for all diabetic supplies, would result in most beneficiaries using mail order and might generate more savings than a national competition for diabetic supplies furnished on a mail order basis only. However, this first option would likely eliminate the beneficiary choice to obtain replacement diabetic supplies on a non-mail order basis from any enrolled supplier that is a pharmacy or other local supplier storefront where a licensed pharmacist is on hand to offer guidance and consultation to the beneficiary. We believe the other two options would also diminish this choice. In addition, the alternatives of regional or local competitions are not likely to result in savings at or above the level that can be generated from a national competition for mail order supplies. Suppliers participating in a national program may be able to obtain volume purchasing discounts for the quantities of supplies needed nationwide. Therefore, we did not propose any of these alternatives but we solicited public comment on alternatives for establishing DMEPOS CBP for diabetic testing supplies.

In § 414.411, we proposed to establish a national mail order DMEPOS CBP with competitions taking place after 2010 for the purpose of awarding contracts to suppliers to furnish replacement diabetic testing supplies across the nation, with additional program refinements described below. We note that the decision to proceed with a national mail order competition after 2010 does not prevent us from phasing in competitions for non-mail order diabetic supplies or from conducting competitions for diabetic supplies in general in the future consistent with section 1847(a)(1) of the Act.

Comment: We received 31 comments in response to our proposed regulation to implement a national mail order DMEPOS CBP for diabetic testing supplies. There were several commenters that supported the proposal made by CMS and a few commenters that were opposed to our proposal. The commenters in favor of our proposal stated they wanted CMS to preserve the local storefront option for the beneficiary. A few commenters specifically stated that CMS should maintain retail pharmacies as a necessary safety valve, ensuring that beneficiaries will have immediate local

access to their specific diabetic testing supplies. In addition, several commenters who supported our conducting separate auctions stated that our proposal to conduct one competition between mail order companies and those with a local storefront would not be fair because these companies have different business models, different overhead costs and different operational structures. Numerous commenters stated that beneficiaries get better service from a local storefront than they would get from a mail order company because local storefronts preserve a face-to-face pharmacy/patient relationship.

We also received several comments opposed to our proposal to conduct separate competitions because they believed that gives the local storefronts an unfair advantage because they are paid more than mail order companies for the same product. They suggest that CMS should conduct a competition for both mail order and non mail order under one program.

Response: We agree with those commenters who stated that we need to preserve beneficiary choice and access to local storefronts to get their diabetic testing supplies. We believe that our proposal preserves the beneficiaries' choice to go to their local pharmacy to pick up their diabetic supplies or request that they be sent through the mail by a national mail order DMEPOS contract supplier. Also, we believe that both mail order suppliers and storefront suppliers are able to provide the necessary services and education to their beneficiaries. Therefore, we believe our proposal to bid diabetic testing supplies when provided through the mail will preserve beneficiaries' choice while ensuring they receive quality services. We also agree that to bid storefronts and mail order companies in the same auction may make it difficult for small storefronts to compete against large mail order suppliers. We also believe the difference in payment between mail order companies and retail stores will not harm mail order companies because we expect that more beneficiaries will choose to obtain their test strips from mail order companies to lower their co-insurance payment, generating more business for mail order suppliers. In addition, non-mail order diabetic supplies were not included the first round of the competitive bidding program and the issue with regard to payment for these items under the program will be addressed in the future as additional items subject to the program are phased in.

Comment: One commenter stated that CMS should phase in a regional program, rather than moving immediately into a national program, since CMS and mail order suppliers are without sufficient knowledge base or experience with the operation of a large-scale competitive bidding program and its impact on beneficiaries' access to quality care.

Response: We disagree with this comment. We believe that the option to bid on a national basis for all mail order diabetic supplies would result in large savings because of the volume purchase power of bidders providing these items on a national basis. Currently our data shows that over 62 percent of Medicare beneficiaries receive their testing supplies through the mail, we see no real benefit of bidding on a regional basis because most mail order suppliers operate nationally. We also believe that we have experience conducting the DMEPOS CBP since we have successfully completed the bidding and contract offers for Round 1 Rebid and the program will begin January 1, 2011. We have established a process and will evaluate and monitor contract suppliers to ensure beneficiaries' have access to quality products.

Comment: One commenter stated that diabetic testing supplies should be excluded from DMEPOS CBP because CMS does not have any experience with this product category with respect to competitive bidding, as diabetic supplies were not included in any prior demonstration project. Several commenters suggested that CMS should not initiate the bidding process for the national mail order DMEPOS CBP until it has had sufficient time to evaluate the rebid of Round 1.

Response: Section 1847(a)(1)(A) of the Act mandates the establishment of DMEPOS CBP for items described in section 1847(a)(2)(A) of the Act, including diabetic testing supplies. Section 1847(a)(1)(B)(ii) of the Act authorizes the phase in of items and services under these programs beginning with the highest cost and highest volume items and services or those items and services that are determined to have the largest savings potential. Current Medicare claims data identifies diabetic testing supplies as a high cost/high volume item. Mail order diabetic testing supplies account for approximately one billion dollars in allowed charges per year and the majority of these payments are for mail order diabetic testing supplies. In addition, CMS does have experience bidding these items as they were included in both Round 1 and the Round 1 rebid.

Comment: One commenter stated that section 1834(a)(1)(F) of the Act does not compel CMS to adjust prices for all items by January 1, 2016, or any other specific date. The commenter stated that CMS could elect to continue to exclude diabetic testing supplies provided through local retail storefronts.

Response: We are required by section 1834(a)(1)(F) of the Act to either competitively bid in all areas of the country or adjust prices for all phased in items in areas where competitive bidding programs are not implemented by January 1, 2016. We intend to address specific issues related to implementation of clauses (ii) and (iii) of section 1834(a)(1)(F) of the Act as part of separate rulemaking mandated by section 1834(a)(1)(G) of the Act.

After consideration of the public comments we received, we are not making any changes to this section of the proposed rule on the future competitions of diabetic testing supplies.

(2) Definition of Mail Order Item

We proposed to define "mail order item" in § 414.402 to mean any item (for example, diabetic testing supplies) shipped or delivered to the beneficiary's home, regardless of the method of delivery. We also proposed to define "non-mail order item" as any item (for example, diabetic testing supplies) that a beneficiary or caregiver purchases at a local pharmacy or supplier storefront rather than having the item delivered to the beneficiary's home. For round 1 of the program, this means that beneficiaries that do not obtain their testing supplies through mail order may purchase these items at a local pharmacy or local storefront. Therefore, the only items excluded from the mail order definition and mail order competition would be those that a beneficiary or caregiver purchases at a local pharmacy or local supplier storefront and are not delivered to the beneficiary's home. These revised definitions of mail order item and non-mail order item are intended to clearly identify which items is truly mail order. In addition, we believe this definition will preserve the choice of the beneficiary to obtain replacement diabetic supplies in person from a local pharmacy and eliminate the circumvention of the mail order program.

As previously discussed, for Round 1 and the Round 1 Rebid of the DMEPOS CBP, we defined mail order contract supplier in our regulations at § 414.402 to mean a contract supplier that furnishes items through the mail. We further defined mail order in program

instructions to mean "items ordered remotely (that is, by telephone, e-mail, internet or mail) and delivered to beneficiary's residence by common carriers (for example, U.S. Postal Service, Federal Express, United Parcel Service) and does not include items obtained by beneficiaries from local storefronts." The intent of the Round 1 definition was to distinguish between mail order supplies (items shipped or delivered directly to the beneficiary's home, regardless of the method of delivery) and non-mail order supplies (items that a beneficiary or caregiver picks up in person at a local pharmacy or storefront). Manufacturers and suppliers of blood glucose monitors and test strips have expressed on numerous occasions the importance of maintaining the patient option of obtaining diabetic testing supplies from a local pharmacy that provides full time access to a licensed pharmacist who can provide instructions and guidance to the beneficiary or caregiver related to the use of the diabetic supplies (the pharmacy pickup option). This is the "non-mail order" option we attempted to separate from the mail order option with the Round 1 definition of mail order.

During implementation of Round 1 of the program, we discovered that suppliers that did not successfully compete and win a contract under the program tried to adopt certain approaches to circumvent the mail order definition. In the first round of competitive bidding, suppliers that lost their bid to be a contract supplier for mail order diabetic testing supplies considered ways to change their delivery methods to circumvent the mail order DMEPOS CBP. For example, some mail order suppliers considered purchasing a fleet of cars to deliver these items to the beneficiary's home so as not to be considered a mail order supplier. Other suppliers attempted to enter into special "private" arrangements with well known delivery services and claimed that because of such arrangements they should not be considered mail order suppliers. These alternative home delivery methods do not provide any benefits to the patient beyond what the traditional mail order home delivery method offers. They are simply ways to continue furnishing diabetic supplies on a home delivery basis after submitting a bid for mail order that does not result in the award of a contract under the DMEPOS CBP. Without a clear distinction between mail order (home delivery option) and non-mail order (pharmacy pickup option), suppliers could continue to attempt to make arrangements as they did in the initial Round 1 competition to circumvent the DMEPOS CBP. We consider these practices to be inconsistent with the DMEPOS CBP statute and regulations currently in effect, and our proposal is intended to further clarify the existing definition of mail order. Such arrangements prevent beneficiaries and the Medicare program from realizing savings afforded by the mail order DMEPOS CBP and is unfair to winning suppliers who bid in good faith for a contract for furnishing supplies to the home delivery market.

This proposed definition of mail order item would not apply to the Round 1 Rebid competition because of the specific requirement of MIPPA to rebid Round 1 in 2009 for the same items and services included in the initial Round 1 competition. However, for a national competition, it is imperative that the new definition of mail order item be in place because of the implications such a program would have on the entire mail order delivery market in the United States. In these future competitions, we will continue to emphasize in our educational efforts the basic distinction between mail order (items shipped or delivered to the beneficiary's home, regardless of the method of delivery) and non-mail order (items that a beneficiary or caregiver picks up in person at a local pharmacy or storefront). In addition, we will continue to take appropriate and necessary action against suppliers that furnish mail order items and bill for them as if they were non-mail order items.

As previously mentioned, an alternative DMEPOS CBP for replacement diabetic supplies would be to hold a national competition among all types of suppliers for all replacement diabetic supplies. One benefit to this approach is that it would eliminate the need to differentiate between mail order and non-mail order supplies; however, it would likely eliminate the pharmacy pickup choice since most local pharmacies would not be able to service the entire CBA if they did not also operate a national mail order service.

We solicited comment on our proposed definition of "mail order" and its impact on future rounds of bidding. We received several comments regarding the proposed definition of mail order both in favor of and against the definition.

Comment: Several commenters agreed with the proposed definition because they believe it will result in a clear distinction between mail order and non-mail order and reduce the ability of suppliers to game the program. A few commenters opposed the proposed change in definition stating that the definition is too broad and therefore, could be applied to any DMEPOS item delivered to a patient's home.

Response: We agree that it is important to revise the definition of mail order to make a clear distinction between mail order and non mail order. We believe we cannot make the necessary distinction between mail order and non-mail order under our current definition. With the revised definition, beneficiaries will have a clear choice to make; they or their caregiver can either go to a retail store or get their items shipped or delivered to their home by any means. If they choose to get their items delivered to their home they would have their supplies delivered by a DMEPOS contract supplier who meets our qualifications to be a mail order supplier of diabetic testing supplies. We agree that the definition is broad with respect to DMEPOS items in general. However, for the reasons previously stated, we believe it is necessary to have this specific definition of mail order item for diabetic testing supplies that includes any item shipped or delivered to the beneficiary's home, regardless of the method of delivery. However, competitions for mail order items may not be necessary or appropriate for rented equipment or for items that require the presence of the supplier in the home for inspection, equipment set up, and other purposes. We believe that mail order competitions may be more appropriate for purchased items that do not require these in home services.

Comment: Several commenters advocated for exemption from bidding as a local storefront and from the program when providing diabetic testing supplies delivered to the patient's home. These commenters believe that this service is necessary for some beneficiaries who have difficulty getting to a pharmacy. The commenters stated that the proposed definition of mail order prevents them from continuing to service snow bird beneficiaries. The commenter supported the policy that independent pharmacies do not have to bid to continue to provide diabetic testing supplies to beneficiaries that come into their store, but they would also like to continue to provide supplies to these beneficiaries via mail when they temporarily relocate as a snowbird. Several commenters also stated that they would like CMS to exempt from competitive bidding companies that deliver diabetic testing supplies directly to a beneficiary's home using their specially trained employees.

Response: We disagree. We do not believe that such an exception is

warranted because contract suppliers will be able to deliver these items to the beneficiary's home in these situations. If the beneficiary or their caregiver would normally pick up the beneficiary's supplies in person at a local pharmacy they may switch for any reason or any period of time and obtain these items from a contract mail order supplier. Delivery of the supplies from a local store is no different than delivery thru the mail or some other means from a remote location. It would be unfair to exempt these companies from competitive bidding while still allowing them to provide these items when they deliver them to the patient's home. We believe that home delivery companies should have to bid in the DMEPOS CBP and be awarded a contract to continue to deliver these items to the home. We are not aware of what services are being provided by the specially trained employees that commenters refer to that are different than services that a mail order contract supplier would perform. The contract suppliers must meet all of the supplier and quality standards necessary for furnishing the items. The supplier of the glucose monitor is responsible for ensuring that the beneficiary is educated and trained on the use of their monitor. Since there are no in-home services necessary for furnishing replacement diabetic testing supplies, we do not understand the point these commenters are trying to make. We believe that mail order suppliers are qualified and capable of providing any education and services related to the furnishing of the replacement diabetic testing supplies. Finally, it is important to note that our current rules provide great flexibility in arranging for the furnishing of replacement diabetic testing supplies. The program allows beneficiaries to receive a 3-month supply of diabetic test strips and beneficiaries can order and obtain their supplies 5 days in advance of the start of the next 3-month period.

Comment: Several commenters stated that mail order companies provide the same type of instruction and guidance that local pharmacies provide by offering hotlines, working with patients to educate and coach them on the use of glucose monitors, and continued patient counseling and monitoring.

Response: As previously discussed, we believe that mail order suppliers are qualified and capable of providing any necessary services related to the furnishing of replacement diabetic testing supplies. The same supplier standards and quality standards that apply to local storefronts that furnish these items also apply to mail order suppliers. Local home delivery companies state that because they have local presence they can offer better service from specially trained employees to meet the needs of the beneficiaries. We believe that employees of mail order companies are also well trained and both companies train their employees to address beneficiaries' needs.

After consideration of the public comments received, we are finalizing our proposal without modification.

(3) Special Rule in Case of Competition for Diabetic Testing Strips

Following Round 1 Rebid of the program, any competition for diabetic testing strips, such as a national mail order program for diabetic testing supplies proposed in this rule, must include the special rule set forth in section 1847(b)(10)(A) of the Act. Under that section, a supplier must demonstrate that their bid to furnish diabetic testing strips covers the furnishing of a sufficient number of different types of diabetic testing strip products that, in the aggregate and taking into account volume for the different products, account for at least 50 percent of all such types of products on the market. Section 1847(a)(10)(A) of the Act also specifies that the volume for the different products may be determined in accordance with data (which may include market based data) recognized by the Secretary. When a beneficiary needs to obtain replacement test strips, they must obtain the specific brand of test strips products that work with their brand and model of blood glucose monitor. The test strips are not manufactured in a way that allows use of different brands of test strips in different brands of monitors. Therefore, when replacement test strips are furnished, the supplier must ensure that the specific brand and model of test strips that the patient requires for use with their purchased monitor is furnished.

Section 1847(b)(10)(B) of the Act mandates the DHHS OIG conduct a study before 2011 to generate volume data for the various products that could be used for this purpose.

Under the DMEPOS CBP, bidding suppliers are required to provide information on the products they plan to furnish if awarded a contract. We proposed to use this information and information on the market share (volume) of the various diabetic testing strip products to educate suppliers on meeting the requirements of this special rule. In addition, it may be necessary to obtain additional information from suppliers such as invoices or purchase orders to verify that the requirements in the statute have been met.

We proposed that suppliers be required to demonstrate that their bids cover the minimum 50-percent threshold provided in the statute, but we invited comments on whether a higher threshold should be used. We have proposed the 50-percent threshold in part because we believe that all suppliers have an inherent incentive to furnish a wide variety of types of diabetic testing products to generate a wider customer referral base. The 50-percent threshold would ensure that beneficiaries have access to mail order delivery of the top-selling diabetic test strip products. In addition, as explained below, we proposed an "anti-switching provision" that we believe should obviate the need to establish a threshold of greater than 50 percent for the purpose of implementing this special rule because the contract suppliers would not be able to carry a limited variety of products and switch beneficiaries to those products.

For purposes of implementing the special rule in section 1847(b)(10)(A) of the Act, we proposed to define "diabetic testing strip product" as a specific brand and model of test strip, as that is the best way to distinguish among different products. Therefore, we plan to use market based data for specific brands and models of diabetic test strips to determine the relative market share or volume of the various products on the market that are available to Medicare beneficiaries. We plan to review a variety of data, including but not limited to data furnished in the OIG report, to determine the market share of the various products. The special rule mandated by section 1847(b)(10)(A) of the Act applies to all competitions for diabetic testing strips after the Round 1 Rebid of the DMEPOS CBP. Therefore, we would apply this rule to non-mail order competitions and local competitions conducted for diabetic testing strips after the Round 1 Rebid of the DMEPOS CBP.

Comment: Several commenters supported the requirement for suppliers to demonstrate that their bids cover 50 percent of the diabetic testing strips on the market. Other commenters noted problems associated with implementing the 50-percent rule. A few commenters stated that this rule provides an advantage to large manufacturers by encouraging suppliers to carry more of their products and disadvantages small manufacturers with limited product lines.

Response: This special rule is mandated by the statute which stipulates a supplier must demonstrate

that its bid to furnish diabetic testing strips covers the furnishing of a sufficient number of different types of diabetic testing strip products that, in the aggregate and taking into account volume for the different products, to account for at least 50 percent of all such types of products on the market. Suppliers are able to decide from which manufacturers to obtain their diabetic testing supplies from, but we are required to ensure that suppliers are in compliance with the special rule before awarding a contract to them under the DMEPOS CBP.

Comment: Several commenters are concerned that products developed between bidding cycles will be frozen out of the program for up to 3 years and suppliers could be discouraged from offering new products until the next bidding cycle or up to 3 years after the product's release.

Response: We disagree that the 50-percent rule creates a disincentive for manufacturers and innovators to develop new and progressive technology. This rule does not prevent suppliers from offering new products to their customers. In fact, suppliers may choose to offer new products in order to gain market share under the DMEPOS CBP. In addition, we believe that the anti-switching rule would create a strong incentive for contract suppliers to carry a wide range of products well beyond the 50-percent threshold in order to increase their volume of business. Contract supplier would have to carry the brand test strips that work with new products that are successfully marketed to Medicare beneficiaries.

Comment: Several commenters stated that the minimum 50-percent threshold required by the statute may be insufficient to ensure that suppliers carry a wide array of available products. Other commenters recommended that CMS require suppliers to carry a more clinically diverse array of products. Without this change they believe suppliers could limit the range of diabetic testing supplies by only offering the lowest cost versions of those supplies.

Response: We disagree. We believe that the 50-percent threshold is sufficient to ensure that contract suppliers offer the products that physicians and beneficiaries prefer because it will be extremely difficult for suppliers to limit the number of products they offer to the lowest cost versions unless those are also the top selling products. We believe that the top selling products are widely used because physicians and beneficiaries prefer them rather than because they are the cheapest products available. We do not believe that physicians and pharmacists would continue to recommend products to beneficiaries if they did not meet the needs of the specific beneficiaries. Likewise, we do not believe that beneficiaries who choose certain products would continue to use those products and make them top-selling products if they did not adequately meet their needs. Due to widespread manufacturer rebates, trade-ins, and other discounts, beneficiaries and other consumers are able to purchase new glucose monitor products at little or no cost. Therefore, beneficiaries who are unhappy with their choice of glucose monitor product, can easily switch to another brand of monitor. It would be extremely difficult for suppliers who only elect to furnish products that are not top-selling products to reach the 50-percent threshold.

Comment: One commenter stated that the 50-percent rule is a strong beneficiary protection and that the 50-percent rule will not work without enforcement of the anti-switching rule.

Response: We agree that the 50-percent threshold would ensure that beneficiaries have access to mail order delivery of the top-selling diabetic test strip brands and models. We also agree that the 50-percent rule would be more effective with implementation of the anti-switching rule.

Comment: One commenter recommended that when CMS determines the product list they should identify the brands and products that have been furnished through the mail. This is important because market share data for mail order and retail medical supply establishments are not the same.

Response: We agree. The DHHS OIG is conducting a study to generate volume data for various diabetic testing strip products furnished on a mail order basis. We will use this data in providing guidance to implement this special rule for mail order contract suppliers to ensure that their bids cover at least 50 percent of the volume of testing strip products currently furnished to beneficiaries via mail order. The OIG is required to complete their study before 2011 and will make their data available to the public.

Comment: A few commenters believe that the proposed rule does not indicate how CMS will determine compliance with the percentage standard. The commenters urge CMS to do more than analyze a supplier's bid to determine compliance. They suggest CMS develop mechanisms to "look back" at a supplier's actual performance over a period of time, preferably on a monthly basis for the first year of the program's operation. Also, CMS could review supplier's records, such as invoices and purchase orders, to verify compliance with the requirement.

Response: We agree with this comment and the need for CMS to ensure compliance with the special rule. Suppliers will be required to submit information to document that their bid covers at least 50 percent of the products available to beneficiaries. In addition, contract suppliers will be required to submit quarterly reports that include information on the items that the contract supplier has furnished for the quarter. These quarterly reports will indicate the approximate number of items furnished, manufacturer, model and model number of the items furnished. The quarterly reports will enable us to monitor access to different products under the program.

Comment: One commenter stated that the 50-percent rule fails to meets the non-discrimination requirement.

Response: We disagree. The non-discrimination requirement does not conflict with the 50-percent rule. Contract suppliers must furnish the same products to Medicare patients that they furnish to their other customers and these products must make up at least 50 percent of the volume of items available. Neither requirement prevents the supplier from meeting the other requirement. The non-discrimination requirement will be fully enforced along with the special 50-percent rule.

Comment: A commenter recommended that CMS consult with patient advocates, providers, and industry experts to determine whether the methodology used by CMS for determining the different types and amounts of products on the market is consistent with what is actually available to Medicare beneficiaries today.

Response: We agree and will consider whether or not it is necessary to consult with patient advocates, providers, and industry experts to determine the types and volume products available to Medicare beneficiaries. The statute also mandates that the OIG conduct a study to generate volume data for various diabetic testing strip products that could be used to make this determination.

Comment: A commenter suggested that CMS should consider adopting a generic substitution requirement for diabetic testing supplies.

Response: This comment is outside the scope of this rulemaking.

After consideration of the public comments we received, we are finalizing our proposal without modification.

(4) Anti-Switching Rule in Case of Competition for Diabetic Test Strips

As previously noted, we believe that an anti-switching requirement will help ensure compliance with the 50-percent rule and creates an incentive for contract suppliers to offer a wide variety of testing strip products. Therefore, we proposed to prohibit suppliers awarded contracts for diabetic testing supplies from influencing or incentivizing the beneficiary by persuading, pressuring, or advising them to switch from their current brand or for new beneficiaries from their preferred brand of glucose monitor and testing supplies. The contract supplier may not furnish information about alternative brands to the beneficiary to influence the beneficiary's decision unless the beneficiary requests such information. We proposed that contract suppliers for diabetic testing supplies must furnish the brand of diabetic testing supplies that work with the home blood glucose monitor selected by the beneficiary. In the case where the beneficiary is receiving a monitor for the first time or a replacement monitor, the contract supplier would be subject to the requirements of § 414.420 in order to protect beneficiaries from feeling forced or incentivized to use a particular type or brand of monitor. We continue to believe the proper role of the contract supplier is to furnish diabetic testing strips and other supplies to beneficiaries, not to interfere with the beneficiary's selection of the type of monitor and supplies. This requires the supplier to furnish the brand of testing supplies that work with the blood glucose monitor product that the beneficiary, and not the supplier of the testing supplies, selects. If the beneficiary needs a blood glucose monitor for the first time, or needs to replace their existing blood glucose monitor, and neither the beneficiary nor their physician has determined which brand or type of monitor to obtain, the beneficiary may continue to ask for assistance from the supplier to select a monitor and the supplier should show them the full range of products. However, if the beneficiary has already selected a monitor and simply needs replacement diabetic testing supplies, the supplier must furnish the brands of testing supplies that work with the brand monitor that the beneficiary has selected. We believed that our proposal would preserve the integrity of the clinical decision regarding choice of glucose monitoring system and would result in contract suppliers offering a wide variety of diabetic testing supply products.

We proposed to amend § 414.422 to add the anti-switching requirement to the terms of the contract for a supplier of diabetic testing supplies. A supplier would be in breach of their contract and subject to the sanctions set forth under § 414.423(g), including termination, if they violate this term.

Comment: Numerous commenters stated that CMS should adopt a strong anti-switching rule and stated that this rule is an important improvement to the DMEPOS CBP and will protect beneficiaries' access to supplies.

Response: We agree that the anti-switching rule will help protect beneficiaries from being influenced or incentivized to use a particular type of brand of glucose monitor.

Comment: One commenter also recommended that the anti-switching rule should be actively monitored to ensure that beneficiaries are adequately protected.

Response: We agree. The anti-switching rule will be actively monitored by requiring contract suppliers to submit quarterly reports that include information of the items that the contract supplier has furnished for the quarter. We will be analyzing the quarterly reports to determine changes in the rates that various brands are provided. We will also be monitoring beneficiary complaints to determine if this is an issue.

Comment: One commenter stated suppliers should be required to submit evidence to CMS such as copies of agreements with manufactures to demonstrate how they will obtain adequate quantities of testing supplies in order to furnish the supplies sought by beneficiaries in a timely manner. This is to prevent suppliers from influencing a beneficiary's choice of products by not being able to fill certain orders.

Response: We disagree. The anti-switching rule does not require the supplier to increase their capacity for furnishing sufficient quantities of all of the various products available. It is intended to prevent the supplier from actively influencing or incentivizing the beneficiary to switch to a different glucose monitor product. If the contract supplier does not stock a specific product or is out of inventory of a specific product they carry and which the beneficiary needs, the beneficiary can go to any other contract supplier to see if they carry the product they need in stock.

Comment: A few commenters were concerned about the anti-switching rule because they believe that this rule will prevent suppliers from consulting with beneficiaries regarding the various features of the different products and the selection of diabetic supplies that best meet the patient's needs.

Response: The anti-switching policy impacts those beneficiaries who are already using a specific monitor or whose physician ordered a specific brand. The anti-switching policy prevents suppliers from influencing or incentivizing beneficiaries to switch monitors. This policy has no impact on situations where the beneficiary has not yet selected a monitor or initiates discussions with the supplier about changing to a new type of monitor.

Comment: One commenter stated that the anti-switching rule prevents beneficiaries from having access to lower cost glucose monitors and test strips, unless they specifically request information about less costly alternatives from their supplier. In addition, the commenter stated that the DMEPOS CBP should provide incentives to use lower cost alternatives and not prohibit their use.

Response: We disagree. The purpose of this policy is to prevent beneficiaries from being influenced to switch from their current brand to a lower cost brand to increase a supplier's profit. The beneficiary's choice should not be influenced by the supplier's ability to obtain the product at a lower cost, rather than the product that the beneficiary prefers. This policy does not prevent a beneficiary from initiating a discussion with suppliers or their physician to determine the most appropriate brand. The contract supplier can discuss the features or how to operate the glucose monitor selected by the beneficiary, even if information is not requested by the beneficiary.

Comment: One commenter stated that CMS should enforce the anti-switching rule by prohibiting mail order suppliers from counseling patients on blood glucose monitors and supplies, pre-approving suppliers' marketing materials and establishing a hotline for beneficiaries.

Response: We disagree. As previously stated, the contract supplier can discuss the features or how to operate the glucose monitor selected by the beneficiary even if this information is not requested by the beneficiary. We established a 1–800 Medicare number which is a beneficiary dedicated hotline that beneficiaries are to call when they have questions or concerns related to their Medicare needs. In addition, the presence of local ombudsman will be available for beneficiaries and suppliers for their Medicare related needs when the DMEPOS CBP is implemented.

Comment: One commenter recommended that CMS take steps to

appropriately inform and educate beneficiaries in advance about their rights under the anti-switching provisions. The commenter also recommended that a special education effort be implemented during the new Round 1 Rebid and any future rounds of bidding aimed at eliminating any confusion that beneficiaries have regarding their ability to continue receiving their replacement supplies at their retail pharmacies.

Response: We agree. We have designed and will conduct an extensive beneficiary educational campaign on the Round 1 Rebid. In addition, for future rounds of competition we will continue to conduct future educational campaigns to educate beneficiaries on all aspects of the program, including the anti-switching provisions and the 50-percent rule.

After consideration of the public comments we received, we are finalizing our proposal without modification

c. Off-the-Shelf (OTS) Orthotics Exemption

In the April 10, 2007 final rule (72 FR 17992), we established § 414.404(b)(1), which sets forth several exemptions to the DMEPOS CBP. These exceptions are applicable to providers, physicians, and treating practitioners that furnish certain DMEPOS items under Medicare Part B. The exempted items are limited to crutches, canes, walkers, folding manual wheelchairs, blood glucose monitors, and infusion pumps that are DME. For an explanation as to why these items were exempt see the DMEPOS Competitive Bidding final rule (CMS–1270–F) published April 10, 2007, (72 FR 17992). For the exemptions to apply, the items must be furnished by a physician or treating practitioner to his or her own patients as part of his or her professional service. The items are to be billed under a billing number assigned to the physician, the treating practitioner (if possible), or a group practice to which the physician or treating practitioner has reassigned the right to receive Medicare payment.

The April 10, 2007 final rule also established an exemption for a physical therapist in private practice (as defined in § 410.60(c)) or an occupational therapist in private practice (as defined in § 410.59(c)) to furnish competitively bid OTS orthotics without submitting a bid and being awarded a contract under the DMEPOS CBP, provided that the items are furnished only to the therapist's own patients as part of a physical or occupational therapy service.

Section 154(d) of MIPPA amended section 1847(a) of the Act by adding paragraph (7), which expands the exemptions from the DMEPOS CBP for certain OTS orthotics to physicians or other practitioners (as defined by the Secretary) if furnished to their own patients as part of their professional service. Section 1847(a)(7) of the Act, as added by MIPPA, also expanded the exemption from the program to hospitals for certain OTS orthotics, crutches, canes, walkers, folding manual wheelchairs, blood glucose monitors, and infusion pumps if these items are furnished to the hospital's own patients during an admission or on the date of discharge.

The DMEPOS CBP Round 1 Rebid interim final rule with comment period (IFC) included the expanded exemption for certain DMEPOS items as provided by MIPPA for hospitals. We noted in the IFC that we would address the expanded exemption of OTS orthotics for hospitals, physicians and other practitioners in future rulemaking.

We proposed to revise current provisions at § 414.404(b)(1)(i) to incorporate the provision of section 1847(a)(7)(A)(i) and (ii) of the Act that exempts from the program OTS orthotics furnished by physicians and other practitioners to their own patients as part of their professional service or by hospitals to the hospital's own patients during an admission or on the date of discharge.

Comment: One commenter submitted a question requesting clarification on whether a supplier owned by a hospital or provider affiliated with a hospital would qualify for the hospital exemption.

Response: The OTS orthotics exemption for hospitals is limited to hospitals that furnish OTS orthotics to their own patients during an admission or on the date of discharge. The exemption for a hospital does not apply to suppliers or providers owned by or affiliated with a hospital. This exemption applies only to entities that meet the definition at section 1861(e) of the Act.

Comment: One commenter suggested that CMS include small independent pharmacies in the definition of "other practitioners" and exempt OTS orthotics furnished by small independent pharmacies from bidding and contract requirements under the DMEPOS CBP.

Response: We disagree. There are several factors we consider in determining which suppliers qualify for an exemption. As discussed in the April 10, 2007, **Federal Register** (72 FR 18029) we exempted physical and occupational therapists, from bidding in the DMEPOS CBP and being awarded a contract so that they could continue to provide competitively bid OTS orthotics to their own patients when these items are furnished as part of their professional service. MIPPA has extended this exemption to include OTS orthotics furnished by physicians, certain other practitioners, and hospitals to their own patients. The MIPPA expanded exemption does not include OTS orthotics furnished to the general public by suppliers such as pharmacies. Therefore, we do not agree that this exemption should be applied to small independent pharmacies who sell these products to the general public and they are not furnished as an integral part of a treatment service furnished by the pharmacy. Also, the term treating practitioner is defined at § 414.402 of the regulations and includes physician assistants, nurse practitioners, and clinical nurse specialists in accordance with the definition of these terms as defined at section 1861(aa)(5) of the Act. We do not believe that the statutory language that extended the OTS orthotic exemption to physicians, certain other practitioners, and hospitals was intended to extend the exemption to small independent pharmacies that provide products to the general public.

Comment: One commenter supported the OTS orthotics exemption for physicians, practitioners, and hospitals.

Response: We agree.

After consideration of the public comments we received, we are finalizing our proposal without modification.

d. Grandfathering Rules Resulting in Additional Payments to Contract Suppliers Under the DMEPOS Competitive Bidding Program (CBP)

Section 1847(a)(4) of the Act requires that in the case of rented DME and oxygen and oxygen equipment, the Secretary shall establish a "grandfathering" process. This requirement was implemented through regulations at § 414.408(j) that were published in the April 10, 2007 **Federal Register** (72 FR 17992). The grandfathering process allows beneficiaries who were renting DME items or receiving oxygen and oxygen equipment prior to the start of a DMEPOS CBP from a supplier who did not win a contract to continue to rent the equipment from that noncontract supplier if that supplier chooses to become a grandfathered supplier. Under § 414.408(i)(2), when the beneficiary decides to use a contract supplier instead of a grandfathered supplier to receive their oxygen equipment and supplies, the contract supplier receives

a minimum of 10 monthly payments for taking over the furnishing of oxygen and oxygen equipment. When a beneficiary decides to use a contract supplier to furnish capped rental DME, section § 414.408(h)(2) restarts the 13-month capped rental period. These rules were established, in part, based on advice from the Program Advisory and Oversight Committee (PAOC) and are intended to give bidding suppliers an assurance that they would be compensated in these situations and would not have to factor into their bids the cost of receiving as few as one monthly payment for beneficiaries near the end of the 13-month cap for capped rental items and 36-month cap for oxygen equipment.

At the time these rules were developed, the supplier was mandated by the statute to transfer title to the equipment to the beneficiary after the both the 13-month cap for capped rental items and the 36-month cap for oxygen equipment. Section 144(b) of the MIPPA repealed the transfer of title requirement for oxygen equipment, as established by DRA, replacing that requirement with the 36-month rental cap. Under the revised oxygen payment provisions, suppliers now get the equipment back when the beneficiary no longer needs it. Also, at the time these rules were developed, the beneficiary had the option to acquire standard power wheelchairs on a lump sum purchase basis, an option which greater than 95 percent of the beneficiaries selected, based upon historic claims data. Therefore, those items generally would not be affected by the grandfathering rules. However, as discussed in section VI.V. of this final rule with comment period, section 3136 of the Affordable Care Act eliminates the lump sum purchase option for standard power wheelchairs. This new policy applies to items furnished under the DMEPOS CBP beginning with Round 2 of the program. Over 200,000 beneficiaries received standard power wheelchairs nationwide in 2009, and the Medicare allowed charges for these wheelchairs was over $650 million, including both rental and purchase options. Therefore, this large volume of capped rental items will be subject to the grandfathering rules effective with Round 2 of the DMEPOS CBP, thus increasing the overall magnitude of the effect these rules have on the program and beneficiaries.

In some cases, the grandfathering rules described above place a financial burden on beneficiaries who are near the end of the 13 or 36-month rental cap periods. If a beneficiary's existing supplier chooses not to be a grandfathered supplier, the beneficiary will be required to switch to a contract supplier in order for Medicare to continue to pay for the furnishing of the rental equipment. In such cases, the beneficiary will be responsible for additional co-insurance amounts. Based on experience from the initial Round 1 competition in 2008, we believe that most suppliers will choose to grandfather and therefore these rules will have no impact on these situations. However, in those limited situations in which the beneficiary does not use a grandfathered supplier and the beneficiary is near the end of the 13 or 36-month rental cap period, the impact on the beneficiary could be significant. As mentioned above, our current grandfathering rules will result in a limited number of beneficiaries facing additional co-insurance payments. To illustrate the impact some beneficiaries may face as a result of these rules, a beneficiary who has already made 12 coinsurance payments for a capped rental item could make as many as 12 additional copayments as a result of restarting the capped rental period when they transition from a noncontract supplier to a contract supplier at the beginning of a DMEPOS CBP. In another example, a beneficiary who has already made 35 coinsurance payments for oxygen and oxygen equipment could make as many as 9 additional copayments as a result of the rule that provides a minimum of 10 monthly payments when they transition from a noncontract supplier to a contract supplier at the beginning of a DMEPOS CBP. As stated above, we expect that most noncontract suppliers will choose to become grandfathered suppliers, therefore limiting the number of instances where these rules would apply. However, in light of the beneficiary impact in the those extreme cases illustrated above, and in light of the recent legislative changes by the MIPPA and the Affordable Care Act as explained above, we are reevaluating whether or not changes to these grandfathering rules are necessary. As discussed above, as a result of the MIPPA, suppliers of oxygen equipment no longer lose title to the equipment after receiving the 36th payment and this may warrant reconsideration of the minimum number of payments they should receive as contract suppliers when a beneficiary transitions to them from a noncontract supplier at the beginning of a DMEPOS CBP. In addition, we believe it is important to reevaluate the policy that restarts the 13-month capped rental period in situations where a beneficiary transitions from a noncontract supplier to a contract supplier at the beginning of a DMEPOS CBP.

We received nine public comments on the grandfathering rules resulting in additional payments to contract suppliers under the DMEPOS CBP. In the proposed rule we solicited public comments on whether or not the current rules should be changed to reduce the number of payments the contract supplier would receive in these situations above the 13 and 36-month limits set forth under the standard payment rules in section 1834(a) of the Act. We requested comments only and did not propose any regulation changes. Therefore, the comments received will be taken into consideration in future proposed rulemaking.

e. Appeals Process

The April 10, 2007 DMEPOS CBP final rule finalized § 414.422(g)(1), which states that "any deviation from contract requirements, including a failure to comply with governmental agency or licensing organization requirements, constitutes a breach of contract." In the event we determine that a contract supplier's actions constitute a breach of contract, § 414.422(g)(2) authorizes us to take one or more of the following actions:

- Require the contract supplier to submit a corrective action plan.
- Suspend the contract supplier's contract.
- Terminate the contract.
- Preclude the contract supplier from participating in the DMEPOS CBP.
- Revoke the supplier number of the contract supplier, or
- Avail itself of other remedies allowed by the statute.

We proposed to add a new § 414.423 to establish an appeals process for contracts terminated under section 1847(a) and (b) of the Act. Proposed § 414.423 would set forth policies and procedures relating to our determinations of a breach of contract and the appeals process for contract suppliers that are considered to be in breach of contract. In addition, we proposed to add new definitions to § 414.402 that are used in the proposed § 414.423.

Given the impact that termination has on a contract supplier, we believe it is appropriate for contract suppliers whose contract(s) may be terminated due to a breach of contract to have access to an appeals process that will reconsider that termination. In establishing this process we reviewed other appeals processes, such as the appeals process under Part D located at § 423.641 through § 423.668, Subpart N—Medicare

Contract Determinations and Appeals, to consider essential steps to ensure suppliers have access to an appropriate review of certain CMS decisions. We proposed a simplified process that would not result in disruption to the program by having suppliers going in and out of the program. For this reason, we proposed a process for review and reconsideration before the contract is actually terminated. This proposal would avoid the necessity to reinstate retroactively suppliers because the contracts would generally not be terminated before the full review process has occurred. This would protect the supplier because we generally would not terminate a supplier until a final decision is made. Another feature of this process that may be beneficial to some suppliers is allowing them to submit a corrective action plan (CAP) depending upon the nature of the breach. We believe our proposal would allow most suppliers to correct identified deficiencies.

(1) Purpose and Definitions: (§ 414.402)

We are proposed to amend § 414.402 to define the following terms:

- *Affected party* means a contract supplier that has been notified that their DMEPOS CBP contract will be terminated for a breach of contract.
- *Breach of contract* means any deviation from contract requirements, including a failure to comply with a governmental agency or licensing organization requirements.
- *Corrective Action Plan (CAP)* means a contract supplier's written document with supporting information that describes the actions the contract supplier would take within a specified timeframe to remedy the breach of contract.
- *Hearing Officer (HO)* means an individual, who was not involved with the CBIC recommendation to terminate a DMEPOS Competitive Bidding Program contract, who is designated by CMS to review and make an unbiased and independent recommendation when there is an appeal of CMS's initial determination to terminate a DMEPOS Competitive Bidding Program contract.
- *Parties to the hearing* means the DMEPOS contract supplier and CMS.

(2) Applicability

The appeals process proposed in this regulation would allow contract suppliers the opportunity for a review of the following:

- A CMS determination under § 414.422(g)(1) that the contract supplier breached its contract entered into as part of the DMEPOS CBP; and
- Certain agency actions taken under § 414.422(g)(2).

The proposed appeals process would not apply to any other actions made by CMS, nor would the existence of other appeals processes preclude us from terminating a DMEPOS CBP contract. In other words, the proposed appeals process would be in addition to—and would not replace—existing CMS regulations regarding other appeals mechanisms. For example, a contract may be terminated because a supplier's National Supplier Clearinghouse (NSC) number has been revoked or inactivated. In this case, the supplier would not appeal the decision to inactivate or revoke its number through this appeals process. Instead, the supplier would continue to appeal the inactivation or revocation of its supplier number through the NSC's appeals process. We would postpone the contract termination decision until the supplier completes the NSC appeals process unless there are multiple findings of breach of contract.

Under our proposal, when we issue a termination decision, it would be final and binding unless a postponement of the termination decision is allowed by proposed § 414.423.

(3) Contract Termination

We proposed that this appeals process applies in situations where the supplier has received a notice that we have determined that they are in breach of contract and that their contract is therefore subject to termination. A contract may be terminated for any violation of the terms of the contract. Examples of violations include, but are not limited to, situations where the contract supplier—

- Has committed or participated in false, fraudulent, or abusive activities affecting the Medicare program, including the submission of false or fraudulent data or claims;
- Experiences financial difficulties so that they are unable to effectively provide the necessary services to a Medicare beneficiary; or
- Fails to meet the non-discrimination policy and provides different items to beneficiaries located in a competitive bidding area (CBA) than it provides to its non-Medicare beneficiaries at § 414.422(c).

(4) Notice of Termination

We proposed that the CBIC would work with suppliers to informally resolve performance deficiencies under its DMEPOS CBP contract prior to sending a recommendation to CMS that the supplier's contract be terminated. If the CBIC cannot informally resolve the supplier's deficiencies and recommends that we terminate the supplier's contract, we will review the CBIC's recommendation to terminate the supplier's contract. If we find that a breach occurred, we would begin the contract termination process by sending out a notice of termination to the supplier.

We also proposed requirements for the notice of termination so that suppliers are informed of the basis for CMS's action as well as their options to respond to this action. The notice would explain all actions we plan to take in response to the supplier's breach, such as the ability to submit a CAP or our determination to preclude a supplier from participating in future rounds of competitive bidding if found in breach of contract. If the supplier decides to appeal any of these decisions the supplier would submit an appeal in response to the notice to terminate. If we consider a supplier to be in breach of its contract, either in part or in whole, we would notify the contract supplier of the termination by certified mail. The notice would indicate that the contract supplier has been found to be in breach of contract and that the supplier's contract will be terminated within 45 days of the date of the notification of termination. The notice would be sent by the CBIC using certified mail on the same date that the notification is signed. The notification will be mailed on the date that it is signed. This is the same date as indicated on the notification.

Our proposal required the notice to include, at a minimum, the following information:

- The reasons for the termination in sufficient detail to allow the contract supplier to understand the nature of its breach of contract;
- Depending on the nature of the breach, whether the supplier may be allowed to submit a CAP in lieu of requesting a hearing by the HO;
- The right to request a hearing by the HO;
- The address to which the written request for a hearing must be mailed;
- The address to which the CAP must be mailed; and
- The effective date of the termination of the contract, if a CAP is not submitted or if a request for a hearing has not been filed timely.

We believe that this information will be sufficient to provide the supplier with the basis for CMS's action, as well as their options in responding to our decision.

In addition, our proposal required the notice to indicate any additional penalties that may result from the termination, such as, not being eligible

to bid in future rounds of competitive bidding. An appeal of the termination would include the appeal of any other results from the termination that are permissible under § 414.423, such as preclusion from participation in future rounds of the DMEPOS CBP. We believe this information may help the supplier to decide whether to appeal the notice of termination.

(5) Corrective Action Plan

We proposed a process by which a contract supplier may be able to submit a CAP to address the breach of contract. Depending on the nature of the breach of contract, we proposed that the notice to the supplier would indicate whether a contract supplier would be allowed to provide the CBIC with a written CAP instead of submitting a request for a hearing by a HO. For example, under this proposal we would not allow a CAP if the supplier has been excluded from any federal program, debarred by any federal agency, or convicted of a healthcare-related crime. We may also not allow a CAP that would result in negative consequences to the beneficiaries or the program caused by delaying the termination of the contract.

We proposed the following timelines for situations where the contract supplier is allowed to provide a written CAP:

- If the supplier decides to submit a CAP, the CAP must be received by the CBIC within 30 days from the date on the notice of termination.
- If the supplier decides not to submit a CAP, the supplier retains the right to request a review by a HO within 30 days from the date of the notice of termination. While the CAP is being evaluated, the termination action would be postponed. We believe that 30 days is a sufficient amount of time for suppliers to prepare and submit a CAP and this would also ensure that there are no unnecessary delays in the appeals process.

We proposed to require the CAP to demonstrate that the contract supplier has a plan to remedy all of the deficiencies that were identified in its notice of termination and must specify the timeframes for correcting these deficiencies. The CBIC would review the CAP to ensure that the contract supplier would be taking the appropriate measures in a timely manner to remedy the breach of contract. What constitutes a timely manner is dependent on the type of deficiency that is being corrected. Once the nature of the deficiency is identified the CBIC and CMS would make a case-by-case determination concerning what constitutes a timely manner for correcting the deficiency. However, we expect most deficiencies to be corrected within 90 days or less. Further guidance of what constitutes a timely manner would be communicated to the contract supplier by the CBIC as part of the review process.

As part of the review process, the CBIC would provide guidance, in accordance with CMS instructions, regarding the type of documentation that the CAP and the follow up report must provide to substantiate that the deficiencies have been corrected. To make a determination if a CAP would be considered acceptable, we would discuss any deficiencies related to the CAP with the supplier, and as a result of these discussions, the CBIC may allow a supplier to make revisions to its CAP during the review process. Suppliers will only revise their CAP one-time during the review process. The timeframe for the review process would vary upon the circumstances for each case. If the supplier does not submit an acceptable CAP during the review process, the supplier would receive a new notice that their CAP is not acceptable or has not been implemented consistent with the supplier's original submission and its contract would be terminated within 45 days. Every supplier that submits a CAP will have a one-time opportunity to revise their CAP based upon deficiencies identified by the CBIC. Failure to develop and implement an approved CAP would result in a new notice to the supplier of the termination of the DMEPOS CBP contract and provide notice that the supplier may request a hearing on this termination. We proposed that once an acceptable CAP has been completed the contract supplier must provide a follow-up report within 5 days of the agreed upon date for the completion of the CAP to verify that all of the deficiencies identified in the CAP have been corrected consistent with the timeframes specified in the CAP, as approved by the CMS. We believe that 5 days is a sufficient time for a supplier to submit a report to the CBIC outlining all steps that have been completed to correct the identified deficiencies.

(6) Right To Request a Hearing by the CBIC Hearing Officer (HO)

We proposed that a contract supplier that has received a notice that we consider the supplier in breach of contract has the right to request a hearing before a HO who was not involved with the original breach of contract determination. We consider this process to be a reconsideration of the original decision, and, consistent with other Medicare appeals provisions, we believe it is important that an individual not involved in making the initial recommendation conduct the reconsideration of the initial decision. As mentioned previously, the HO would be an individual who is designated by CMS to review and to make an unbiased and independent recommendation of whether to terminate the supplier's DMEPOS CBP contract. The notice to the contract supplier would also identify the location to which a request for hearing must be sent.

We proposed that a contract supplier may appeal the notice of termination by submitting a written request to the CBIC for a hearing by a HO. The written request should include any evidence to support its appeal. The HO is not required to allow evidence submitted in addition to evidence beyond the evidence submitted along with the written request. The hearing request must be received by the CBIC within 30 days from the date of the termination letter. A request for a hearing must be sent to the address identified on the notice. Failure to request a hearing within the allotted 30 days would result in a termination of the supplier's contract, as of the effective date of termination identified in the notice to the supplier. There would be no extension to this 30-day timeframe. We believe suppliers have sufficient time to decide whether or not to request a hearing and the deficiencies identified in the notice may pose a risk to the DMEPOS CBP. The date the request is received by the CBIC determines if the hearing request was timely filed.

We would require that the request for hearing be filed by a supplier's authorized official, because an authorized official of the company signed the contract and this ensures the validity of the request. The authorized official must be an official of the company who is identified on the supplier's CMS 855-S form as an authorized official of the supplier. A supplier may appoint someone other than the authorized official to be a representative for them at the hearing. However, the representative may not be an individual who has been disqualified or suspended from acting as a representative by the Secretary or otherwise prohibited by law. The request for a hearing must be filed with the CBIC at the address identified on the notice of termination.

(7) Scheduling of the Hearing

We proposed that within 30 days from the receipt of a supplier's timely hearing request the HO would contact the parties to schedule a hearing. The request for a hearing would result in the

postponement of the date of the contract termination. The only exception to this rule is when a supplier has been excluded from any federal program, debarred by any federal agency, or convicted of a healthcare related crime; in that situation the supplier's contract would be terminated immediately. In the hearing request the contract supplier may ask for the hearing to be held in person or by telephone. The HO would send a notice to the parties to the hearing indicating the time and place for the hearing at least 30 days before the date of the hearing. The HO may, on his or her own motion, or at the request of a party, change the time and place for the hearing, but must give the parties to the hearing a 30 day notice of the change.

We proposed to require that the HO's notice scheduling the hearing must provide, at a minimum, the following information:

- Date, time, and location of the scheduled hearing;
- Description of the hearing procedure;
- Issues to be resolved;
- Requirement that the contract supplier bears the burden of proof to demonstrate that it is not in breach of contract; and
- Provide an opportunity for the supplier to submit additional evidence if requested by the HO.

We believe this information provides the supplier with sufficient information regarding the hearing date, time, and matters that would be addressed at that time. We solicited comment on the content of this notice and the procedures for scheduling a hearing.

(8) Burden of Proof

We proposed that the contract supplier would present to the HO the basis for its disagreement with the termination notice and would have the burden of proof to demonstrate to the HO with supporting evidence that it is not in breach of its contract and that the termination action is not appropriate. The supplier's supporting evidence must be submitted with its request for a hearing. The supporting evidence and the request for a hearing must be submitted together and received by the HO within 30 days from the date identified on the notice of termination. In the absence of good cause, the HO may not allow evidence to be submitted in addition to the evidence submitted along with the written request. We also have the opportunity to submit evidence to the HO within 30 days of receiving the notice announcing the hearing. The HO will share all evidence submitted, both from the supplier and CMS, in preparation for the hearing with all affected parties within 15 days prior to the scheduled date of the hearing.

(9) Role of the Hearing Officer (HO)

Our proposal requires that the HO conduct a thorough and independent review. Such a review requires the consideration of all information and documentation relevant to the hearing and submitted consistent with this proposal. Consistent with this goal, we propose that the HO is responsible for all of the following:

- Sharing all evidence submitted, from both the supplier and CMS, in preparation for the hearing with all affected parties within 15 days prior to the scheduled date of the hearing.
- Conducting the hearing and deciding the order in which the evidence and the arguments of the parties would be presented.
- Determining the rules on admissibility of the evidence.
- Examining the witnesses, in addition to the examinations conducted by CMS and the contract supplier.
- Determining the rules for requesting documents and other evidence from other parties.
- Ensuring a complete recording of the hearing is available and provided to all parties to the hearing and the CBIC.
- Preparing a file of the record of the hearing which includes all evidence submitted as well as any relevant documents identified by the HO and considered as part of the hearing.
- Complying with all applicable provisions of 42 USC Title 18 and related provisions of the Act, the applicable regulations issued by the Secretary, and manual instructions issued by CMS.

The HO would make a recommendation based on the information presented and submitted. The HO would issue a written recommendation to CMS within 30 days of the close of the hearing, unless the HO requests an extension from CMS and demonstrates to CMS that he or she needs an extension due to complexity of the matter or heavy work load. The HO's recommendation would include the rationale for his or her recommendation regarding the termination of the supplier's contract and the HO would submit this recommendation to CMS for its determination.

(10) CMS's Final Determination

We proposed that the HO's recommendation is submitted to CMS, and the agency would make the final determination regarding whether the supplier's contract would be terminated. Our determination would be based upon on the record of the hearing, evidence, and documents considered by the HO as part of the HO recommendation. Information submitted after the hearing would not be considered. Our decision would be made within 30 days of the receipt of the HO's recommendation. If our decision is to terminate the contract, the supplier would be notified of the effective date of termination by certified mail. Our decision regarding the termination of the contract is final and binding.

(11) Effective Date of the Contract Termination

We proposed that suppliers who submit a CAP or request a hearing would have the termination date identified on the notice delayed. The only exception to this rule is when a supplier has been excluded from any federal program, debarred by any federal agency, or convicted of a healthcare related crime; in that situation the contract would be terminated immediately. For terminations that do not meet these exceptions, the effective date of a final termination would be determined as follows:

- The termination of a supplier's DMEPOS CBP contract is effective on the date specified in the initial notice of termination, which will be 45 days from the date of the notice, unless the supplier requests a hearing with the HO or the supplier submits a CAP.
- After reviewing the HO recommendation, if we terminate a supplier's contract the effective date of the termination would be the date specified in the post-hearing notice sent to the supplier indicating CMS's final determination to terminate the contract.

(12) Effect of Contract Termination
