Federal Register

The **FEDERAL REGISTER** (ISSN 0097–6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402 is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see *www.federalregister.gov.*

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge as one of the databases on GPO Access, a service of the U.S. Government Printing Office.

The online edition of the **Federal Register**, *www.gpoaccess.gov/nara,* available through GPO Access, is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 59, Number 1 (January 2, 1994) forward.

For more information about GPO Access, contact the GPO Access User Support Team, call toll free 1-888-293-6498; DC area 202-512-1530; fax at 202-512-1262; or via e-mail at *gpoaccess@gpo.gov.* The Support Team is available between 7:00 a.m. and 9:00 p.m. Eastern Time, Monday–Friday, except official holidays.

The annual subscription price for the **Federal Register** paper edition is $749 plus postage, or $808, plus postage, for a combined **Federal Register, Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is $165, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register,** including postage, is based on the number of pages: $11 for an issue containing less than 200 pages; $22 for an issue containing 200 to 400 pages; and $33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for $3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Printing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see *bookstore.gpo.gov.*

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 75 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Printing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

FEDERAL REGISTER WORKSHOP

THE FEDERAL REGISTER: WHAT IT IS AND HOW TO USE IT

FOR: Any person who uses the Federal Register and Code of Federal Regulations.

WHO: Sponsored by the Office of the Federal Register.

WHAT: Free public briefings (approximately 3 hours) to present:

1. The regulatory process, with a focus on the Federal Register system and the public's role in the development of regulations.
2. The relationship between the Federal Register and Code of Federal Regulations.
3. The important elements of typical Federal Register documents.
4. An introduction to the finding aids of the FR/CFR system.

WHY: To provide the public with access to information necessary to research Federal agency regulations which directly affect them. There will be no discussion of specific agency regulations.

WHEN: Tuesday, December 7, 2010
9 a.m.–12:30 p.m.

WHERE: Office of the Federal Register
Conference Room, Suite 700
800 North Capitol Street, NW.
Washington, DC 20002

RESERVATIONS: (202) 741–6008

Rules and Regulations

Federal Register
Vol. 75, No. 228
Monday, November 29, 2010

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each week.

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

7 CFR Part 922

[Doc. No. AMS–FV–10–0062; FV06–922–2 C]

Apricots Grown in Designated Counties in Washington; Temporary Relaxation of the Minimum Grade Requirement; Correction

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Correcting amendment.

SUMMARY: The Agricultural Marketing Service (AMS) is making a correction to the Code of Federal Regulations (CFR) by revising the administrative rules and regulations contained in part 922, Apricots Grown in Designated Counties in Washington. In an interim final rule published in the **Federal Register** on August 2, 2006 (71 FR 43641), and adopted as a final rule on November 13, 2006 (71 FR 66093), changes were made to section 922.321(a)(1) to relax the minimum grade requirements for Washington apricots for the 2006 season. The changes were in effect from August 3, 2006, through March 31, 2007. After the effective dates for the changes, the text of an entire paragraph was inadvertently omitted, by AMS, from subsequent issues of the Code of Federal Regulations (CFR) and the section was reserved. AMS did not intend for the entire paragraph to be removed. This document corrects that error by adding or reinserting the language that was omitted into Title 7 of the CFR, part 922.

DATES: *Effective Date:* November 30, 2010.

FOR FURTHER INFORMATION CONTACT: Robert J. Curry or Gary D. Olson, Northwest Marketing Field Office, Marketing Order Administration Branch, Fruit and Vegetable Programs, AMS, USDA; Telephone: (503) 326–2724, Fax: (503) 326–7440, or E-mail: *Robert.Curry@ams.usda.gov* or *GaryD.Olson@ams.usda.gov.*

Small businesses may request information on complying with this regulation by contacting Antoinette Carter, Marketing Order Administration Branch, Fruit and Vegetable Programs, AMS, USDA, 1400 Independence Avenue SW., STOP 0237, Washington, DC 20250–0237; Telephone: (202) 720–2491, Fax: (202) 720–8938, or E-mail: *Antoinette.Carter@ams.usda.gov.*

SUPPLEMENTARY INFORMATION: This document provides a correcting amendment to Marketing Order 922, found at 7 CFR part 922, so that handlers of fresh apricots from Washington shall continue to adhere to the minimum grade requirements (Washington No. 1) of the Order.

List of Subjects in 7 CFR Part 922

Apricots, Marketing Agreements, Reporting and recordkeeping requirements.

■ Accordingly, 7 CFR part 922 is corrected by making the following correcting amendment:

■ 1. The authority citation for 7 CFR part 922 continues to read as follows:

Authority: 7 U.S.C. 601–674.

PART 922—APRICOTS GROWN IN DESIGNATED COUNTIES IN WASHINGTON

■ 2. In § 922.321, add paragraph (a)(1) to read as follows:

§ 922.321 Apricot Regulation 21.

(a) * * *

(1) *Minimum grade and maturity requirements.* Such apricots that grade not less than Washington No. 1 and are at least reasonably uniform in color: *Provided,* That such apricots of the Moorpark variety in open containers shall be generally well matured.

* * * * *

Dated: November 10, 2010.

David R. Shipman,

Acting Administrator, Agricultural Marketing Service.

RIN 2120–AJ50

Revisions to the Civil Penalty Inflation Adjustment Tables

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This final rule adjusts for inflation the minimum and maximum civil monetary penalty amounts the FAA may impose for violations of the statutes and regulations it enforces in order to continue the deterrent effect of these penalties. The adjustments are made following a formula provided by Congress.

DATES: This amendment becomes effective December 29, 2010.

FOR FURTHER INFORMATION CONTACT: Cole Milliard, Office of the Chief Counsel, Enforcement Division, AGC–300, Federal Aviation Administration, 800 Independence Avenue, SW., Washington, DC 20591. Telephone (202) 267–3452. Facsimile (202) 267–5106. E-mail *cole.milliard@faa.gov.*

SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA's authority to issue rules on aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106, describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority.

This rulemaking is issued under the Federal Civil Penalties Inflation Adjustment Act of 1990, Public Law (Pub. L.) 101–410, as amended by the Debt Collection Improvement Act of 1996, Public Law 104–134, codified at 28 U.S.C. 2461 note. These laws authorize the FAA to adjust the minimum and maximum amounts of civil monetary penalties for violations of the statues it enforces to preserve their deterrent effect.

Good Cause for Immediate Adoption of This Final Rule

The FAA finds that good cause exists under 5 U.S.C. 553(b)(B) for adopting

this final rule without notice and comment. This rule effectuates the intent of the Federal Civil Penalties Inflation Adjustment Act to allow for regular adjustment, for inflation, of civil monetary penalties to preserve the deterrent effect of civil monetary penalties and promote compliance with the law. The inflation adjustments to penalties under this rule apply a formula mandated by Congress. Thus, it is unnecessary to delay these adjustments to receive public comment. Such comments would not allow the FAA to develop any basis to change the method or application of the mandatory inflation adjustments.

Discussion

Background

Under the Debt Collection Improvement Act of 1996, the FAA must adjust all applicable civil monetary penalties at least once every 4 years. In doing so, the FAA must also apply a formula Congress included in the Debt Collection Improvement Act of 1996 to determine the amount of increase to each of its civil monetary penalties. Both of these requirements are included in 28 U.S.C. 2461 note.

Prior FAA Rulemakings

In 1996 (61 FR 67445; December 20, 1996), we added subpart H, Civil Monetary Penalty Inflation Adjustment, to 14 CFR part 13. Subpart H implements the terms of 28 U.S.C. 2461 note. We also made our initial adjustment to the civil monetary penalties applicable to the FAA's enforcement program in that rulemaking. The current rulemaking is the FAA's third adjustment of its civil monetary penalties since the regulation was adopted. Previous adjustments were made in 2002 (Amendment No. 13–31; 67 FR 6364; February 11, 2002) and 2006 (Amendment No. 13–33; 71 FR 47 28518; May 16, 2006). The 2006 adjustment also incorporated in Subpart H several statutory changes to our authority to impose civil penalties.

This Rulemaking

In this rulemaking, we adjust the civil penalty amounts listed in Tables 2 and 3 of 14 CFR part 13, subpart H, for inflation in accordance with the formula set forth in Subpart H. Under subpart H, we determine the inflation adjustment for each applicable civil penalty by increasing the maximum civil penalty or the range of minimum and maximum civil penalties by the "cost-of-living adjustment" (COLA). The COLA is "the percentage (if any) for each civil monetary penalty by which the Consumer Price Index (CPI) for the month of June of the calendar year preceding the adjustment exceeds the CPI for the month of June of the calendar year in which the amount of such civil penalty was last set or adjusted pursuant to law." Each increase is rounded off as described in 14 CFR 13.305(a) and the rounded-off increase is added to the existing civil penalty amount. For the initial adjustment of a civil penalty under Subpart H, the increase is limited to ten percent of the civil penalty amount, as stated in 14 CFR 13.305(c).

For this rulemaking, we looked at the increase of the CPI for June 2009 over the CPIs for the years in which each civil penalty amount was last set, reset, or adjusted. The words "set" and "reset" in this context indicate that Congress has added to or changed the FAA's statutory authority to impose civil monetary penalties. The word "adjusted" indicates a change we made under Subpart H.

Civil Penalty Inflation Adjustment

Relevant CPI's

The CPI for June 2009 was 215.693. The CPI for the month of June of the calendar years in which civil monetary penalty amounts were last set, reset, or adjusted are:

(1) 160.3 for June 1997;
(2) 183.7 for June 2003;
(3) 194.5 for June 2005; and
(4) 202.9 for June 2006.

COLAs

Year	COLA calculation	COLA amount
1997	215.693/160.3	1.346 (134.6%)
2003	215.693/183.7	1.174 (117.4%)
2005	215.693/194.5	1.109 (110.9%)
2006	215.693/202.9	1.063 (106.3%)

Round-off Formula

(1) Multiple of $10, in the case of penalties less than or equal to $100;

(2) Multiple of $100, in the case of penalties greater than $100 but less than or equal to $1,000;

(3) Multiple of $1,000, in the case of penalties greater than $1,000 but less than or equal to $10,000;

(4) Multiple of $5,000, in the case of penalties greater than $10,000 but less than $100,000;

(5) Multiple of $10,000, in the case of penalties greater than $100,000 but less than or equal to $200,000;

(6) Multiple of $25,000, in the case of penalties greater than $200,000.

Results of Calculations for Inflation Adjustment

Using the methodology outlined in 28 U.S.C. 2461 note and implemented in 14 CFR part 13 subpart H, we have determined that several of our civil monetary penalties should be adjusted. The adjusted civil monetary penalty amounts are set forth in "Table of Minimum and Maximum Civil Monetary Penalty Amounts for Certain Violations Occurring on or After December 29, 2010", which will be located in 14 CFR 13.305(d).

Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. 3507(d)) requires that the FAA consider the impact of paperwork and other information collection burdens imposed on the public. The FAA has determined that there is no new requirement for information collection associated with this final rule.

International Compatibility

In keeping with U.S. obligations under the Convention on International Civil Aviation, it is FAA policy to conform to International Civil Aviation Organization (ICAO) Standards and Recommended Practices to the maximum extent practicable. The FAA has determined that there are no ICAO Standards and Recommended Practices that correspond to these regulations.

Regulatory Notices and Analyses

Changes to Federal regulations must undergo several economic analyses. First, Executive Order 12866 directs that each Federal agency must propose or adopt a regulation only upon a reasoned determination that the benefits of the intended regulation justify its costs. Second, the Regulatory Flexibility Act of 1980 (Pub. L. 96–354) requires

agencies to analyze the economic impact of regulatory changes on small entities. Third, the Trade Agreements Act (Pub. L. 96–39) forbids agencies from setting standards that create unnecessary obstacles to the foreign commerce of the United States. In developing U.S. standards, this Trade Act requires agencies to consider international standards and, where appropriate, that they be the basis of U.S. standards. Fourth, the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4) requires agencies to prepare a written assessment of the costs, benefits, and other effects of proposed or final rules that include a Federal mandate likely to result in the expenditure by State, local, or Tribal governments, in the aggregate, or by the private sector, of $100 million or more annually (adjusted for inflation with base year of 1995). This portion of the preamble summarizes the FAA's analysis of the economic impacts of this final rule.

Department of Transportation Order DOT 2100.5 prescribes policies and procedures for simplification, analysis, and review of regulations. If the expected cost impact is so minimal that a proposed or final rule does not warrant a full evaluation, this order permits that a statement to that effect and the basis for it is included in the preamble if a full regulatory evaluation of the cost and benefits is not prepared. Such a determination has been made for this final rule. The reasoning for this determination follows:

This final rule simply identifies the civil monetary penalties for violations of the statutory and regulatory provisions we enforce. The penalty amounts are those specified by statute or called for under the inflation adjustment statutes, and the information in this rule is required by the Debt Collection Improvement Act of 1996. Its economic impact is minimal.

Also, we determined that this final rule is not a "significant regulatory action" as defined in section 3(f) of Executive Order 12866, and is not "significant" as defined in DOT's Regulatory Policies and Procedures.

Regulatory Flexibility Determination

The Regulatory Flexibility Act of 1980 (Pub. L. 96–354) (RFA) establishes "as a principle of regulatory issuance that agencies shall endeavor, consistent with the objectives of the rule and of applicable statutes, to fit regulatory and informational requirements to the scale of the businesses, organizations, and governmental jurisdictions subject to regulation. To achieve this principle, agencies are required to solicit and consider flexible regulatory proposals and to explain the rationale for their actions to assure that such proposals are given serious consideration." The RFA covers a wide-range of small entities, including small businesses, not-for-profit organizations, and small governmental jurisdictions.

Agencies must perform a review to determine whether a rule will have a significant economic impact on a substantial number of small entities. If the agency determines that it will, the agency must prepare a regulatory flexibility analysis as described in the RFA.

However, if an agency determines that a rule is not expected to have a significant economic impact on a substantial number of small entities, section 605(b) of the RFA provides that the head of the agency may so certify and a regulatory flexibility analysis is not required. The certification must include a statement providing the factual basis for this determination, and the reasoning should be clear.

This final rule simply identifies the civil monetary penalties for violations of the statutory and regulatory provisions we enforce. The penalty amounts are those specified by statute or called for under the inflation adjustment statutes, and the information in this rule is required by the Debt Collection Improvement Act of 1996. Its economic impact is minimal.

Therefore, as the FAA Administrator, I certify that this rule will not have a significant economic impact on a substantial number of small entities.

International Trade Impact Assessment

The Trade Agreements Act of 1979 (Pub. L. 96–39), as amended by the Uruguay Round Agreements Act (Pub. L. 103–465), prohibits Federal agencies from establishing any standards or engaging in related activities that create unnecessary obstacles to the foreign commerce of the United States. Pursuant to these Acts, the establishment of standards is not considered an unnecessary obstacle to the foreign commerce of the United States, so long as the standards have a legitimate domestic objective, such as the protection of safety, and do not operate in a manner that excludes imports that meet this objective. The statute also requires consideration of international standards and, where appropriate, that they be the basis for U.S. standards.

This rule only summarizes civil monetary penalties, established by legislation, for violations of statutory and regulatory provisions that apply equally to domestic and foreign entities; therefore, we have determined that this rule will not result in an impact on international trade by companies doing business in or with the United States.

Unfunded Mandates Reform Assessment

Title II of the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4) requires each Federal agency to prepare a written statement assessing the effects of any Federal mandate in a proposed or final agency rule that may result in an expenditure of $100 million or more (adjusted annually for inflation with the base year 1995) in any one year by State, local, and Tribal governments, in the aggregate, or by the private sector; such a mandate is deemed to be a "significant regulatory action." The level equivalent of $100 million in CY 1995, adjusted for inflation to CY 2007 levels by the Consumer Price Index for all Urban Consumers (CPI–U) as published by the Bureau of Labor Statistics, is $143.1 million.

This final rule does not contain such a mandate since it only identifies the increase in penalties as required by the Debt Collection Improvement Act of 1996. Therefore, the requirements of Title II of the Act do not apply.

Executive Order 13132, Federalism

The FAA has analyzed this final rule under the principles and criteria of Executive Order 13132, Federalism. We determined that this action will not have a substantial direct effect on the States, or the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, the FAA has determined that this final rule does not have federalism implications.

Environmental Analysis

FAA Order 1050.1E identifies FAA actions that are categorically excluded from preparation of an environmental assessment or environmental impact statement under the National Environmental Policy Act in the absence of extraordinary circumstances. The FAA has determined this rulemaking action qualifies for the categorical exclusion and involves no extraordinary circumstances.

Regulations That Significantly Affect Energy Supply, Distribution, or Use

The FAA analyzed this final rule under Executive Order 13211, Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use (May 18, 2001). The agency has determined that it is not a "significant energy action" under the executive order and it is not likely to

have a significant adverse effect on the supply, distribution, or use of energy.

Availability of Rulemaking Documents

You can get an electronic copy using the Internet by:

(1) Searching the Federal eRulemaking Portal at *http://www.regulations.gov;*

(2) Visiting the FAA's Regulations and Policies Web page at *http://www.faa.gov/regulations_policies/;* or

(3) Accessing the Government Printing Office's Web page at *http://www.gpoaccess.gov/fr/index.html.*

You can also get a copy by sending a request to the Federal Aviation Administration, Office of Rulemaking, ARM–1, 800 Independence Avenue, SW., Washington, DC 20591, or by calling (202) 267–9680. Make sure to identify the amendment number or docket number of this rulemaking.

Anyone is able to search the electronic form of all comments received into any of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, etc.). You may review DOT's complete Privacy Act statement in the **Federal Register** published on April 11, 2000 (Volume 65, Number 70; Pages 19477–78) or you may visit *http://www.regulations.gov.*

Small Business Regulatory Enforcement Fairness Act

The Small Business Regulatory Enforcement Fairness Act (SBREFA) of 1996 requires FAA to comply with small entity requests for information or advice about compliance with statutes and regulations within its jurisdiction. If you are a small entity and you have a question regarding this document, you may contact your local FAA official, or the person listed under the **FOR FURTHER INFORMATION CONTACT** heading at the beginning of the preamble. You can find out more about SBREFA on the Internet at *http://www.faa.gov/regulations_policies/rulemaking/sbre_act/.*

List of Subjects in CFR 14 Part 13

Administrative practice and procedure, Air transportation, Hazardous materials transportation, Investigations, Law enforcement, Penalties.

The Amendment

■ In consideration of the foregoing, the Federal Aviation Administration amends Chapter I of title 14, Code of Federal Regulations as follows:

PART 13—INVESTIGATIVE AND ENFORCEMENT PROCEDURES

■ 1. The authority citation for part 13 continues to read as follows:

Authority: 18 U.S.C. 6002, 28 U.S.C. 2461 (note); 49 U.S.C. 106(g), 5121–5124, 40113–40114, 44103–44106, 44702–44703, 44709–44710, 44713, 44718, 44725, 46101–46110, 46301–46316, 46318, 46501–46502, 46504–46507, 47106, 47111, 47122, 47306, 47531–47532.

■ 2. Amend § 13.305(d) by removing Tables 1 through 3 and adding a new table in their place to read as follows:

§ 13.305 Cost of living adjustments of civil monetary penalties.

* * * * *

(d) * * *

TABLE OF MINIMUM AND MAXIMUM CIVIL MONETARY PENALTY AMOUNTS FOR CERTAIN VIOLATIONS OCCURRING ON OR AFTER DECEMBER 29, 2010

United States Code cite	Civil monetary penalty description	Minimum penalty amount	New or adjusted minimum penalty amount	Maximum penalty amount when last set or adjusted pursuant to law	New or adjusted maximum penalty amount
49 U.S.C. 5123(a), subparagraph (1).	Violation of hazardous materials transportation law.	$250 per violation, reset 8/10/2005.	No change	$50,000 per violation, reset 8/10/2005.	$55,000 per violation.
49 U.S.C. 5123(a), subparagraph (2).	Violation of hazardous materials transportation law resulting in death, serious illness, severe injury, or substantial property destruction.	$250 per violation, reset 8/10/2005.	No change	$100,000 per violation, set 8/10/2005.	$110,000 per violation.
49 U.S.C. 5123(a), subparagraph (3).	Violation of hazardous materials transportation law relating to training.	$450 per violation, set 8/10/2005.	No change	$50,000 per violation, set 8/10/2005.	$55,000 per violation.
49 U.S.C. 46301(a)(1)	Violation by a person other than an individual or small business concern under 49 CFR 46301(a)(1)(A) or (B).	N/A	N/A	$25,000 per violation, reset 12/12/2003.	$27,500 per violation.
49 U.S.C. 46301(a)(1)	Violation by an airman serving as an airman under 49 U.S.C. 46301(a)(1)(A) or (B) (but not covered by 46301(a)(5)(A) or (B).	N/A	N/A	$1,100 per violation, reset 12/12/2003.	No change.
49 U.S.C. 46301(a)(1)	Violation by an individual or small business concern under 49 U.S.C. 46301(a)(1)(A) or (B) (but not covered in 49 U.S.C. 46301(a)(5)).	N/A	N/A	$1,100 per violation, reset 12/12/2003.	No change.
49 U.S.C. 46301(a)(3)	Violation of 49 U.S.C. 47107(b) (or any assurance made under such section) or 49 U.S.C. 47133.	N/A	N/A	Increase above otherwise applicable maximum amount not to exceed 3 times the amount of revenues that are used in violation of such section.	No change.

TABLE OF MINIMUM AND MAXIMUM CIVIL MONETARY PENALTY AMOUNTS FOR CERTAIN VIOLATIONS OCCURRING ON OR AFTER DECEMBER 29, 2010—Continued

United States Code cite	Civil monetary penalty description	Minimum penalty amount	New or adjusted minimum penalty amount	Maximum penalty amount when last set or adjusted pursuant to law	New or adjusted maximum penalty amount
49 U.S.C. 46301(a)(5)(A)	Violation by an individual or small business concern (except an airman serving as an airman) under 49 U.S.C. 46301(a)(5)(A)(i) or (ii).	N/A	N/A	$11,000 per violation, adjusted 6/15/2006.	No change.
49 U.S.C. 46301(a)(5)(B)(i).	Violation by an individual or small business concern related to the transportation of hazardous materials.	N/A	N/A	$11,000 per violation, adjusted 6/15/2006.	No change.
49 U.S.C. 46301(a)(5)(B)(ii).	Violation by an individual or small business concern related to the registration or recordation under 49 U.S.C. chapter 441, of an aircraft not used to provide air transportation.	N/A	N/A	$11,000 per violation, adjusted 6/16/2006.	No change.
49 U.S.C. 46301(a)(5)(B)(iii).	Violation by an individual or small business concern of 49 U.S.C. 44718(d), relating to limitation on construction or establishment of landfills.	N/A	N/A	$11,000 per violation, adjusted 6/15/2006.	No change.
49 U.S.C. 46301(a)(5)(B)(iv).	Violation by an individual or small business concern of 49 U.S.C. 44725, relating to the safe disposal of life-limited aircraft parts.	N/A	N/A	$11,000 per violation, adjusted 6/15/2006.	No change.
49 U.S.C. 46301(b)	Tampering with a smoke alarm device.	N/A	N/A	$2,200 per violation, adjusted 1/21/1997.	$3,200 per violation.
49 U.S.C. 46302	Knowingly providing false information about alleged violation involving the special aircraft jurisdiction of the United States.	N/A	N/A	$11,000 per violation, adjusted 1/21/1997.	$16,000 per violation.
49 U.S.C. 46318	Interference with cabin or flight crew.	N/A	N/A	$27,500, adjusted 6/15/2006.	No change.
49 U.S.C. 46319	Permanent closure of an airport without providing sufficient notice.	N/A	N/A	$11,000 per day, adjusted 6/15/2006.	No change.
49 U.S.C. 47531	Violation of 49 U.S.C. 47528–47530, relating to the prohibition of operating certain aircraft not complying with stage 3 noise levels.	N/A	N/A	See 49 U.S.C. 46301(a)(1)(A) and (a)(5), above.	No change.

Issued in Washington, DC on November 22, 2010.

J. Randolph Babbitt,

Administrator.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 71

[Docket No. FAA–2010–0719; Airspace Docket No. 10–ANM–8]

Modification of Class E Airspace; Portland, OR

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This action will modify existing Class E airspace at Portland, OR, to accommodate aircraft using the Localizer/Distance Measuring Equipment (LOC/DME) Standard Instrument Approach Procedures (SIAPs) at Portland International Airport. This will improve the safety and management of Instrument Flight Rules (IFR) operations at the airport. This action also would adjust the geographic coordinates for the airports and the Corvallis VHF Omni-Directional Radio Range/Distance Measuring Equipment (VOR/DME).

DATES: Effective date, 0901 UTC, March 10, 2011. The Director of the Federal Register approves this incorporation by reference action under 1 CFR Part 51, subject to the annual revision of FAA Order 7400.9 and publication of conforming amendments.

FOR FURTHER INFORMATION CONTACT: Eldon Taylor, Federal Aviation

Administration, Operations Support Group, Western Service Center, 1601 Lind Avenue, SW., Renton, WA 98057; telephone (425) 203–4537.

SUPPLEMENTARY INFORMATION:

History

On September 3, 2010, the FAA published in the **Federal Register** a notice of proposed rulemaking to modify controlled airspace at Portland, OR (75 FR 54057). Interested parties were invited to participate in this rulemaking effort by submitting written comments on the proposal to the FAA. No comments were received. Subsequent to publication, the FAA found the geographic coordinates for the airports and the Corvallis VOR/DME needed to be adjusted. This action makes the adjustment. With the exception of editorial changes, and the changes described above, this rule is the same as that proposed in the NPRM.

Class E airspace designations are published in paragraph 6005 of FAA Order 7400.9U dated August 18, 2010, and effective September 15, 2010, which is incorporated by reference in 14 CFR 71.1. The Class E airspace designations listed in this document will be published subsequently in that Order.

The Rule

This action amends Title 14 Code of Federal Regulations (14 CFR) Part 71 by modifying Class E airspace extending upward from 700 feet above the surface, at Portland International Airport, to accommodate IFR aircraft executing the LOC/DME SIAPs at the airport. This action is necessary for the safety and management of IFR operations. The geographic coordinates for Portland International Airport and McMinnville Municipal Airport, as well as the Corvallis VOR/DME, will be adjusted to coincide with the FAA's National Aeronautical Navigation Services.

The FAA has determined this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. Therefore, this regulation: (1) Is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified this rule, when promulgated, will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the U.S. Code. Subtitle 1, Section 106 discusses the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it establishes additional controlled airspace at Portland International Airport, Portland, OR.

List of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

Adoption of the Amendment

■ In consideration of the foregoing, the Federal Aviation Administration amends 14 CFR Part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

■ 1. The authority citation for 14 CFR Part 71 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40103, 40113, 40120; E. O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

■ 2. The incorporation by reference in 14 CFR 71.1 of the Federal Aviation Administration Order 7400.9U, Airspace Designations and Reporting Points, dated August 18, 2010, and effective September 15, 2010 is amended as follows:

Paragraph 6005 Class E airspace areas extending upward from 700 feet or more above the surface of the earth.

* * * * *

ANM OR E5 Portland, OR [Modified]

Portland International Airport, OR
(Lat. 45°35′19″ N., long. 122°35′49″ W.)
Newburg VORTAC
(Lat. 45°21′12″ N., long. 122°58′41″ W.)
Corvallis VOR/DME
(Lat. 44°29′58″ N., long. 123°17′37″ W.)
McMinnville Municipal Airport, OR
(Lat. 45°11′40″ N., long. 123°08′10″ W.)

That airspace extending upward from 700 feet above the surface within a line beginning at lat. 45°59′59″ N., long. 123°30′04″ W.; to lat. 46°00′00″ N., long. 122°13′00″ W.; thence via an 8.5-mile radius centered at lat. 45°55′07″ N., long. 122°03′02″ W. clockwise to lat. 45°46′39″ N., long. 122°04′00″ W.; thence via a line south along long. 122°04′00″ W. bounded on the south by lat. 45°09′59″ N., and on the west by long. 123°30′04″ W.; and within a 4.3-mile radius of the McMinnville Municipal Airport; and within 2 miles each side of the Newburg VORTAC 215° radial extending from lat. 45°09′59″ N., to 19.8 miles southwest of the Newburg VORTAC; that airspace extending upward from 1,200 feet above the surface bounded on the north by lat. 46°30′29″ N., extending from 2.7 miles offshore to V–25, and on the east by V–25, on the south by V–536 to Corvallis VOR/DME; thence via lat. 44°29′59″ N., to a point 2.7 miles offshore, and on the west by a line 2.7 miles offshore to the point of beginning.

Issued in Seattle, Washington, on November 17, 2010.

Christine Mellon,

Acting Manager, Operations Support Group, Western Service Center.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

14 CFR Part 97

[Docket No. 30755; Amdt. No. 3401]

Standard Instrument Approach Procedures, and Takeoff Minimums and Obstacle Departure Procedures; Miscellaneous Amendments

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This rule establishes, amends, suspends, or revokes Standard Instrument Approach Procedures (SIAPs) and associated Takeoff Minimums and Obstacle Departure Procedures for operations at certain airports. These regulatory actions are needed because of the adoption of new or revised criteria, or because of changes occurring in the National Airspace System, such as the commissioning of new navigational facilities, adding new obstacles, or changing air traffic requirements. These changes are designed to provide safe and efficient use of the navigable airspace and to promote safe flight operations under instrument flight rules at the affected airports.

DATES: This rule is effective November 29, 2010. The compliance date for each SIAP, associated Takeoff Minimums, and ODP is specified in the amendatory provisions.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of November 29, 2010.

ADDRESSES: Availability of matter incorporated by reference in the amendment is as follows:

For Examination

1. FAA Rules Docket, FAA Headquarters Building, 800 Independence Avenue, SW., Washington, DC 20591;

2. The FAA Regional Office of the region in which the affected airport is located;

3. The National Flight Procedures Office, 6500 South MacArthur Blvd., Oklahoma City, OK 73169 or,

4. The National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202–741–6030, or go to: *http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html.*

Availability—All SIAPs are available online free of charge. Visit *nfdc.faa.gov* to register. Additionally, individual SIAP and Takeoff Minimums and ODP copies may be obtained from:

1. FAA Public Inquiry Center (APA–200), FAA Headquarters Building, 800 Independence Avenue, SW., Washington, DC 20591; or

2. The FAA Regional Office of the region in which the affected airport is located.

FOR FURTHER INFORMATION CONTACT: Harry J. Hodges, Flight Procedure Standards Branch (AFS–420) Flight Technologies and Programs Division, Flight Standards Service, Federal Aviation Administration, Mike Monroney Aeronautical Center, 6500 South MacArthur Blvd., Oklahoma City, OK 73169 (Mail Address: P.O. Box 25082, Oklahoma City, OK 73125); telephone: (405) 954–4164.

SUPPLEMENTARY INFORMATION: This rule amends Title 14, Code of Federal Regulations, Part 97 (14 CFR part 97) by amending the referenced SIAPs. The complete regulatory description of each SIAP is listed on the appropriate FAA Form 8260, as modified by the National Flight Data Center (FDC)/Permanent Notice to Airmen (P–NOTAM), and is incorporated by reference in the amendment under 5 U.S.C. 552(a), 1 CFR part 51, and § 97.20 of Title 14 of the Code of Federal Regulations.

The large number of SIAPs, their complex nature, and the need for a special format make their verbatim publication in the **Federal Register** expensive and impractical. Further, airmen do not use the regulatory text of the SIAPs, but refer to their graphic depiction on charts printed by publishers of aeronautical materials. Thus, the advantages of incorporation by reference are realized and publication of the complete description of each SIAP contained in FAA form documents is unnecessary. This amendment provides the affected CFR sections and specifies the types of SIAP and the corresponding effective dates. This amendment also identifies the airport and its location, the procedure and the amendment number.

The Rule

This amendment to 14 CFR part 97 is effective upon publication of each separate SIAP as amended in the transmittal. For safety and timeliness of change considerations, this amendment incorporates only specific changes contained for each SIAP as modified by FDC/P–NOTAMs.

The SIAPs, as modified by FDC P–NOTAM, and contained in this amendment are based on the criteria contained in the U.S. Standard for Terminal Instrument Procedures (TERPS). In developing these changes to SIAPs, the TERPS criteria were applied only to specific conditions existing at the affected airports. All SIAP amendments in this rule have been previously issued by the FAA in a FDC NOTAM as an emergency action of immediate flight safety relating directly to published aeronautical charts. The circumstances which created the need for all these SIAP amendments requires making them effective in less than 30 days.

Because of the close and immediate relationship between these SIAPs and safety in air commerce, I find that notice and public procedure before adopting these SIAPs are impracticable and contrary to the public interest and, where applicable, that good cause exists for making these SIAPs effective in less than 30 days.

Conclusion

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) Is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. For the same reason, the FAA certifies that this amendment will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Air traffic control, Airports, Incorporation by reference, and Navigation (Air).

Issued in Washington, DC, on November 12, 2010.

Ray Towles,

Deputy Director, Flight Standards Service.

Adoption of the Amendment

■ Accordingly, pursuant to the authority delegated to me, Title 14, Code of Federal regulations, Part 97, 14 CFR part 97, is amended by amending Standard Instrument Approach Procedures, effective at 0901 UTC on the dates specified, as follows:

PART 97—STANDARD INSTRUMENT APPROACH PROCEDURES

■ 1. The authority citation for part 97 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40103, 40106, 40113, 40114, 40120, 44502, 44514, 44701, 44719, 44721–44722.

■ 2. Part 97 is amended to read as follows:

By amending: § 97.23 VOR, VOR/DME, VOR or TACAN, and VOR/DME or TACAN; § 97.25 LOC, LOC/DME, LDA, LDA/DME, SDF, SDF/DME; § 97.27 NDB, NDB/DME; § 97.29 ILS, ILS/DME, MLS, MLS/DME, MLS/RNAV; § 97.31 RADAR SIAPs; § 97.33 RNAV SIAPs; and § 97.35 COPTER SIAPs, Identified as follows:

[Docket No. 30754; Amdt. No. 3400]

Standard Instrument Approach Procedures, and Takeoff Minimums and Obstacle Departure Procedures; Miscellaneous Amendments

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This establishes, amends, suspends, or revokes Standard Instrument Approach Procedures (SIAPs) and associated Takeoff Minimums and Obstacle Departure Procedures for operations at certain airports. These regulatory actions are needed because of the adoption of new or revised criteria, or because of changes occurring in the National Airspace System, such as the commissioning of new navigational facilities, adding new obstacles, or changing air traffic requirements. These changes are designed to provide safe and efficient use of the navigable airspace and to promote safe flight operations under instrument flight rules at the affected airports.

DATES: This rule is effective November 29, 2010. The compliance date for each SIAP, associated Takeoff Minimums, and ODP is specified in the amendatory provisions.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of November 29, 2010.

ADDRESSES: Availability of matters incorporated by reference in the amendment is as follows:

For Examination

1. FAA Rules Docket, FAA Headquarters Building, 800 Independence Avenue, SW., Washington, DC 20591;

2. The FAA Regional Office of the region in which the affected airport is located;

3. The National Flight Procedures Office, 6500 South MacArthur Blvd., Oklahoma City, OK 73169 or

4. The National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202–741–6030, or go to: *http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html.*

Availability—All SIAPs and Takeoff Minimums and ODPs are available online free of charge. Visit *http://www.nfdc.faa.gov* to register. Additionally, individual SIAP and Takeoff Minimums and ODP copies may be obtained from:

1. FAA Public Inquiry Center (APA–200), FAA Headquarters Building, 800 Independence Avenue, SW., Washington, DC 20591; or

2. The FAA Regional Office of the region in which the affected airport is located.

FOR FURTHER INFORMATION CONTACT: Harry J. Hodges, Flight Procedure Standards Branch (AFS–420), Flight Technologies and Programs Divisions, Flight Standards Service, Federal Aviation Administration, Mike Monroney Aeronautical Center, 6500 South MacArthur Blvd. Oklahoma City, OK. 73169 (Mail Address: P.O. Box 25082, Oklahoma City, OK 73125) Telephone: (405) 954–4164.

SUPPLEMENTARY INFORMATION: This rule amends Title 14 of the Code of Federal Regulations, Part 97 (14 CFR part 97), by establishing, amending, suspending, or revoking SIAPS, Takeoff Minimums and/or ODPS. The complete regulators description of each SIAP and its associated Takeoff Minimums or ODP for an identified airport is listed on FAA form documents which are incorporated by reference in this amendment under 5 U.S.C. 552(a), 1 CFR part 51, and 14 CFR part 97.20. The applicable FAA Forms are FAA Forms 8260–3, 8260–4, 8260–5, 8260–15A, and 8260–15B when required by an entry on 8260–15A.

The large number of SIAPs, Takeoff Minimums and ODPs, in addition to their complex nature and the need for a special format make publication in the **Federal Register** expensive and impractical. Furthermore, airmen do not use the regulatory text of the SIAPs, Takeoff Minimums or ODPs, but instead refer to their depiction on charts printed by publishers of aeronautical materials. The advantages of incorporation by reference are realized and publication of the complete description of each SIAP, Takeoff Minimums and ODP listed on FAA forms is unnecessary. This amendment provides the affected CFR sections and specifies the types of SIAPs and the effective dates of the, associated Takeoff Minimums and ODPs. This amendment also identifies the airport and its location, the procedure, and the amendment number.

The Rule

This amendment to 14 CFR part 97 is effective upon publication of each separate SIAP, Takeoff Minimums and ODP as contained in the transmittal. Some SIAP and Takeoff Minimums and textual ODP amendments may have been issued previously by the FAA in a Flight Data Center (FDC) Notice to Airmen (NOTAM) as an emergency action of immediate flight safety relating directly to published aeronautical charts. The circumstances which created the need for some SIAP and Takeoff Minimums and ODP amendments may require making them

effective in less than 30 days. For the remaining SIAPS and Takeoff Minimums and ODPS, an effective date at least 30 days after publication is provided.

Further, the SIAPs and Takeoff Minimums and ODPS contained in this amendment are based on the criteria contained in the U.S. Standard for Terminal Instrument Procedures (TERPS). In developing these SIAPS and Takeoff Minimums and ODPs, the TERPS criteria were applied to the conditions existing or anticipated at the affected airports. Because of the close and immediate relationship between these SIAPs, Takeoff Minimums and ODPs, and safety in air commerce, I find that notice and public procedures before adopting these SIAPS, Takeoff Minimums and ODPs are impracticable and contrary to the public interest and, where applicable, that good cause exists for making some SIAPs effective in less than 30 days.

Conclusion

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule " under DOT Regulatory Policies and Procedures (44 FR 11034; February 26,1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. For the same reason, the FAA certifies that this amendment will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

[FR Doc. 2010–29411 Filed 11–26–10; 8:45 am]

BILLING CODE 4910–13–P

CONSUMER PRODUCT SAFETY COMMISSION

[CPSC Docket No. CPSC–2010–0085]

16 CFR Parts 1632 and 1633

Third Party Testing for Certain Children's Products; Mattresses, Mattress Pads, and/or Mattress Sets: Revisions to Terms of Acceptance of Children's Product Certifications Based on Third Party Conformity Assessment Body Testing Prior to Commission's Acceptance of Accreditation

AGENCY: Consumer Product Safety Commission.

ACTION: Notice of requirements; revision of retrospective testing terms.

SUMMARY: The Consumer Product Safety Commission ("CPSC," "Commission," or "we") is issuing a notice amending the terms under which it will accept certifications for children's products based on third party conformity assessment body (laboratory) testing to the flammability regulations at 16 CFR parts 1632 and/or 1633 that occurred before the Commission's acceptance of the accreditation of the third party conformity assessment body. We are taking this action in response to requests from certain mattress manufacturers to reduce unnecessary retesting of mattresses, mattress pads, and/or mattress sets that have already been tested and found to be in compliance with CPSC regulations.

DATES: *Effective Date:* The revision announced in this notice is effective November 29, 2010.

FOR FURTHER INFORMATION CONTACT: Robert "Jay" Howell, Assistant Executive Director for The Office of Hazard Identification and Reduction, U.S. Consumer Product Safety Commission, 4330 East West Highway, Bethesda, MD 20814; e-mail: *rhowell@cpsc.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

Section 14(a)(3)(B)(vi) of the CPSA, as added by section 102(a)(2) of the Consumer Product Safety Improvement Act of 2008 (CPSIA), Public Law 110–314, directs the CPSC to publish a notice of requirements for accreditation of third party conformity assessment bodies to assess children's products for conformity with "other children's product safety rules." Section 14(f)(1) of the CPSA defines "children's product safety rule" as "a consumer product safety rule under [the CPSA] or similar rule, regulation, standard, or ban under any other Act enforced by the Commission, including a rule declaring a consumer product to be a banned hazardous product or substance." Under section 14(a)(3)(A) of the CPSA, each manufacturer (including the importer) or private labeler of products subject to those regulations must have products that are manufactured more than 90 days after the Commission has established and published notice of the requirements for accreditation tested by a third party conformity assessment body accredited to do so, and must issue a certificate of compliance with the applicable regulations based on that testing. Section 14(a)(2) of the CPSA, as added by section 102(a)(2) of the CPSIA, requires that certification be based on testing of sufficient samples of the product, or samples that are identical in all material respects to the product. The Commission also emphasizes that, irrespective of certification, the product in question must comply with applicable CPSC requirements (*see, e.g.,* section 14(h) of the CPSA, as added by section 102(b) of the CPSIA).

In the **Federal Register** of August 18, 2010 (75 FR 51020), we published a notice of requirements providing the criteria and process for Commission acceptance of accreditation of third party conformity assessment bodies for testing pursuant to 16 CFR parts 1632, "Standard for the Flammability of Mattresses and Mattress Pads (FF 4–72, amended)," and/or 1633, "Standard for the Flammability (Open Flame) of Mattress Sets," which set minimum standards for flammability of mattresses, mattress pads, and/or mattress sets under the Flammable Fabrics Act (15 U.S.C. 1191 *et seq.*) (FFA). The notice of requirements stated that the publication had the effect of lifting the stay of enforcement with regard to testing and certification of children's products under 16 CFR parts 1632 and/or 1633, such that each manufacturer of such a product must have any such product manufactured after November 16, 2010, tested by a third party conformity assessment body accredited to do so, and must issue a certificate of compliance based on that testing (75 FR at 51021 through 51022).

We addressed testing performed by a third party conformity assessment body prior to the Commission's acceptance of its accreditation, or "retrospective" testing, in section IV of the notice of requirements. We stated that we would accept a certificate of compliance with the standard included in 16 CFR parts 1632 and/or 1633, based on testing performed by an accredited third party conformity assessment body (including a government-owned or -controlled conformity assessment body, and a

firewalled conformity assessment body), prior to the Commission's acceptance of its accreditation if:

- At the time of product testing, the product was tested by a third party conformity assessment body that was ISO/IEC 17025 accredited by an ILAC–MRA member at the time of the test. For firewalled conformity assessment bodies, the firewalled conformity assessment body must be one that the Commission accredited by order at or before the time the product was tested, even though the order will not have included the test methods in the regulations specified in this notice. If the third party conformity assessment body has not been accredited by a Commission order as a firewalled conformity assessment body, the Commission will not accept a certificate of compliance based on testing performed by the third party conformity assessment body before it is accredited, by Commission order, as a firewalled conformity assessment body;
- The third party conformity assessment body's application for testing using the test methods in 16 CFR part 1632 and/or 1633 is accepted by the CPSC on or before October 18, 2010;
- The product was tested under 16 CFR part 1632 and/or 1633 on or after August 18, 2010;
- The accreditation scope in effect for the third party conformity assessment body at the time of testing expressly included testing to 16 CFR part 1632 and/or 1633;
- The test results show compliance with the applicable current standards and/or regulations; and
- The third party conformity assessment body's accreditation, including inclusion in its scope of 16 CFR part 1632 and/or 1633, remains in effect through the effective date for mandatory third party testing and manufacturer certification for conformity with 16 CFR parts 1632 and/or 1633.

75 FR at 51022.

II. Requests for Revision

In response to the notice of requirements, the International Sleep Products Association (ISPA) submitted a letter to the Commission arguing that the CPSIA's third party testing requirements do not apply to part 1632 or 1633. In the alternative, the ISPA urged that we adopt a longer implementation period for third party testing under 16 CFR part 1632, and to "grandfather in all previously conducted 1632 and 1633 testing performed by third party labs accredited by the CPSC, regardless of whether those tests occurred before or after August 18, 2010." (The ISPA letter may be viewed at *http://www.regulations.gov* in the docket folder for docket number CPSC–2010–0085.) The ISPA met with individual Commissioners and CPSC staff to discuss the requests on September 15, October 22, October 26, and November 9, 2010. Summaries of those meetings may be found at: *http://www.cpsc.gov/library/foia/meetings/meetings.html.*

With regard to the request for a longer implementation period for third party testing for 16 CFR part 1632, the ISPA requested an additional year "[f]or those prototype and ticking substitutes that were not tested by a third party lab and that are being used in children's mattresses sold today * * * to allow manufacturers of children's mattresses 12 months to retest all of the applicable prototypes and ticking substitutes." The ISPA presented two main arguments in support of this request. First, it noted that "using a third party to perform the required 1632 tests will involve substantial time and costs." Second, it asserted that "changes in how 1632 tests are to be performed make it difficult to conduct those tests at this moment." The standard for the flammability of mattresses and mattress pads at 16 CFR part 1632 sets forth a test to determine the ignition resistance of a mattress or mattress pad when exposed to a smoldering cigarette. Lighted cigarettes are placed at specified locations on the surface of a mattress (or mattress pad). The ignition source is specified in 16 CFR part 1632 by physical properties that were originally selected to represent an unfiltered Pall Mall cigarette, but those cigarettes are no longer available. ISPA stated a concern that there may be substantial confusion about what ignition source will be required for part 1632 tests "[f]or at least the short term."

With regard to the request that we accept, for children's product certification purposes, all tests pursuant to 16 CFR parts 1632 and 1633 previously conducted by accredited third party laboratories, regardless of when the test occurred, the ISPA presented three main arguments, all of which focused on the testing conducted under 16 CFR part 1633. First, the ISPA noted that because the mattress flammability test required by 16 CFR part 1633 since 2007 is a complex, open-flame test that involves the destruction of a mattress, most manufacturers have been using third party laboratories for this testing. According to the ISPA, many of the laboratories that have done the testing since the standard was revised substantially in 2007 meet the baseline requirements for acceptance by the CPSC. Second, there have been no changes to the test method required under 16 CFR part 1633 since 2007. Third, the ISPA notes that testing under 16 CFR part 1633 is expensive and time-consuming. It argued that accepting only those third party tests of children's mattresses under 16 CFR part 1633 that have occurred since August 18, 2010, would be "arbitrary and wasteful" because requiring the mattress industry to retest all mattress prototypes used in making children's mattress sets "would take months to perform and cost the industry hundreds of thousands—if not millions—of dollars and would provide no discernable safety benefit."

Similarly, on November 2, 2010, the Commission received a letter from the Springs Creative Products Group, LLC, claiming that the notice of requirements would "put an extreme burden on mattress manufacturers to complete additional and redundant testing by accredited labs * * * by November 16, 2010," and asking that we:

- "Grandfather in all Part 1633 qualification and confirmation testing performed since 2006 by all test labs that are accredited by the CPSC;"
- "Grandfather in all Part 1632 tests performed by accredited labs since 2006;" and
- Grant a one year compliance period "for all Part 1632 prototypes and ticking substitutes that were not tested by accredited labs."

Letter from Derick S. Close, CEO, Springs Creative Products Group, LLC, to Inez Tenenbaum, Chairman, Consumer Product Safety Commission (October 26, 2010). (The Springs Creative Products Group letter may be viewed at *http://www.regulations.gov* in the docket folder for docket number CPSC–2010–0085). The letter asserted that "[r]equiring manufacturers to have the same labs retest the same Part 1633 prototypes following the same exact test method as was done since 2006 would impose wasted costs on an industry recovering from the worst recession in 70 years" and that "the industry needs more time to retest materials [in] an orderly manner because the CPSC is in the midst of changing the cigarettes used for testing." *Id.* at pages 1 through 2.

III. The Response to the Requests

A. A Brief Description of Testing Under 16 CFR Parts 1632 and 1633

We have considered the requests and, through this notice, are revising our position regarding "Limited Acceptance of Children's Product Certifications Based on Third Party Conformity Assessment Body Testing Prior to the Commission's Acceptance of Accreditation." To help interested parties understand our reasons for revising our position, we begin by explaining what prototype testing pursuant to 16 CFR parts 1632 and 1633 involves and the relevance of the letters' reference to cigarettes.

The Standard for the Flammability of Mattresses and Mattress Pads, 16 CFR part 1632, sets forth a test to determine the ignition resistance of a mattress or mattress pad when exposed to a lighted cigarette. In brief, the regulations require pre-market prototype testing for each new mattress design and also require prototype testing when there has been a change in materials of an existing prototype design that could influence cigarette ignition resistance. Six mattress surfaces must be tested for each prototype. Lighted cigarettes are placed at specified locations on the surface of a mattress (or mattress pad). The Standard establishes pass/fail criteria for the tests. Currently, the Standard specifies the ignition source for these tests by its physical properties. These properties originally were selected to represent an unfiltered Pall Mall cigarette, which was identified as the most severe smoldering ignition source. Recently, however, the Commission published a proposed rule (75 FR 67047 (Nov. 1, 2010)), to amend the mattress standard to require a standard reference material cigarette, which was developed by the National Institute of Standards and Technology, as the ignition source for testing to the mattress Standard.

The Standard for the Flammability (Open Flame) of Mattress Sets, 16 CFR part 1633, is intended to minimize or delay "flashover" when a mattress is ignited in a typical bedroom fire. ("Flashover" is the point at which the entire contents of a room are ignited simultaneously by radiant heat, making conditions in the room untenable and a safe exit from the room impossible. At flashover, room temperatures typically exceed 600–800 degrees Celsius (approximately 1100–1470 degrees Fahrenheit).) In general, the Standard requires manufacturers to test specimens of each of their mattress prototypes (designs) before mattresses of that prototype may be introduced into commerce. The specimen is to be no smaller than twin size, unless the largest size mattress or set produced of that type is smaller than twin size, in which case the largest size must be tested.

The Standard prescribes a full-scale test using a pair of T-shaped gas burners designed to represent burning bedclothes. The mattress set must not exceed a peak heat release rate of 200 kilowatts (kW) at any time during a 30 minute test, and the total heat release for the first 10 minutes of the test must not exceed 15 megajoules ("MJ"). Mattresses that meet the Standard's criteria will make only a limited contribution to a fire, especially in the fire's early stages. This will allow occupants more time to discover the fire and escape.

Thus, both 16 CFR parts 1632 and 1633 contemplate testing of prototypes rather than testing mattresses, mattress sets, or mattress pads that are already in production. The prototype itself does not have to be a children's mattress, mattress set, or mattress pad for purposes of section 14(a)(2) of the CPSA; however, to support the issuance of a certificate for a children's product, the prototype testing must be conducted by a CPSC-accepted third party conformity assessment body.

B. The Revised "Limited Acceptance of Children's Product Certifications Based on Third Party Conformity Assessment Body Testing Prior to the Commission's Acceptance of Accreditation"

Given the nature of prototype testing under 16 CFR parts 1632 and 1633, we agree that revising our position on our "Limited Acceptance of Children's Product Certifications Based on Third Party Conformity Assessment Body Testing Prior to the Commission's Acceptance of Accreditation" is appropriate. The revised position will reduce further the need for redundant testing. We will accept children's product certifications based on third party conformity assessment body testing, prior to our acceptance of accreditation, under two different scenarios.

1. Testing Performed by Certain Accredited Third Party Conformity Assessment Bodies on or After July 1, 2007

The notice of requirements that appeared in the **Federal Register** on August 18, 2010 described the circumstances under which the Commission would accept a certificate of compliance with the standard included in 16 CFR parts 1632 and/or 1633 based on testing performed by an accredited third party conformity assessment body (75 FR at 51023). Due to the nature of prototype testing under 16 CFR parts 1632 and 1633 and the date on which the requirements in 16 CFR part 1633 became effective, we are modifying section IV of the notice of requirements as follows:

- At the time of product testing, the product was tested by a third party conformity assessment body that was ISO/IEC 17025 accredited by an accreditation body that is a signatory to the ILAC–MRA;
- The third party conformity assessment body's application for testing using the test methods in 16 CFR part 1632 and/or 1633 is accepted by the CPSC on or before November 16, 2010;
- The product was tested under 16 CFR part 1632 and/or 1633 on or after July 1, 2007. The date on which the requirements in 16 CFR part 1633 became effective is July 1, 2007, and, in an "Interim Enforcement Policy for Mattresses Subject to 16 CFR Parts 1632 and 1633," dated May 15, 2006, the CPSC anticipated that 16 CFR part 1633 could prompt manufacturers to redesign mattress prototypes and use new materials to meet the then-new flammability requirements in 16 CFR part 1633, and that the new prototypes also would have to be tested to demonstrate compliance with 16 CFR part 1632. Therefore, provided that the other conditions set forth in part III.B.1 of this document are met, we will accept testing that was done on or after July 1, 2007. We decline to accept results for tests conducted in 2006, because such tests were not equivalent to the tests required in 16 CFR part 1633;
- The accreditation scope in effect for the third party conformity assessment body at the time of testing expressly included testing to 16 CFR part 1632 and/or 1633;
- The test results show compliance with the applicable current standards and/or regulations; and
- The third party conformity assessment body's accreditation, including inclusion in its scope of 16 CFR part 1632 and/or 1633, remains in effect through the effective date for mandatory third party testing and manufacturer certification for conformity with 16 CFR parts 1632 and/or 1633.

2. Testing Performed by Seven Testing Laboratories

In July 2007, CPSC staff conducted onsite reviews of the facilities that were performing testing to 16 CFR part 1633. During these reviews, we met with laboratory technical staff, toured the laboratory facilities, and observed the laboratory staff performing the test procedures. The purpose of the onsite reviews was to observe and gather information because the CPSC had concerns about test performance. The CPSC staff reviews examined:

- Laboratory staff qualifications;
- Test area and equipment;
- Calibration of equipment;
- Testing, data collection, and storage of samples; and
- Sample handling.

At the time that CPSC staff did the onsite reviews, there were 11 laboratories (nine within the United States and two in foreign countries) with the capability to perform the required test. (Resources limited the CPSC staff's ability to review the

remaining foreign and domestic laboratories prior to the implementation of the Consumer Product Safety Improvement Act.) CSPC staff visited the following laboratories:

(1) Underwriters Laboratories (UL), in Northbrook, IL;

(2) Stork Twin City Testing Corporation, in St. Paul, MN;

(3) Govmark Organization, in Farmingdale, NY;

(4) SGS US Testing, in Tulsa, OK;

(5) Southwest Research Institute, in San Antonio, TX;

(6) Intertek, in Elmendorf, TX; and

(7) Chilworth, in Kelso, WA.

CPSC staff has confidence that these laboratories can conduct the tests required by the mattress Standard properly because of these field visits and also on the basis of our review of test results submitted to the CPSC since 2007, and, in some instances, verification of the test results by our own independent testing of mattresses built from prototypes tested by these laboratories. Therefore, we will accept children's product certifications based on third party conformity assessment body testing by any of the seven laboratories listed above provided that:

- The laboratory will be ISO/IEC 17025 accredited by an accreditation body that is a signatory to the ILAC–MRA, and the accreditation scope will expressly include testing to 16 CFR part 1632 and/or 1633 by November 16, 2010;
- Testing was conducted on or after July 1, 2007, but not later than November 16, 2010; and
- The test results show compliance with the applicable current standards and/or regulations.

C. The Request for an Extended Compliance Period

Both the ISPA and the Springs Creative Products Group sought an additional one year for manufacturers to comply with the third party testing requirement. Both referred to costs and to the cigarettes to be used in the tests.

We decline to extend the time by which manufacturers must engage in third party testing. We believe that our revised position regarding our "Limited Acceptance of Children's Product Certifications Based on Third Party Conformity Assessment Body Testing Prior to the Commission's Acceptance of Accreditation" substantially reduces or eliminates the need to retest products. More importantly, however, we note that section 14(a)(3)(F) of the CPSA expressly declares that:

> If the Commission determines that an insufficient number of third party conformity assessment bodies have been accredited to permit certification for a children's product safety rule * * * the Commission may extend the deadline for certification to such rule by not more than 60 days.

Thus, the conditions set forth in section 14(a)(3)(F) of the CPSA have not been met. We do not have information suggesting that there are an insufficient number of third party conformity assessment bodies to conduct tests pursuant to 16 CFR parts 1632 and/or 1633. While we recognize that third party testing may present economic issues for certain manufacturers as described in the ISPA submissions and subsequent meetings, section 14(a)(3)(F) of the CPSA does not authorize us to consider cost or the past or present state of the national economy as reasons for extending the deadline for certification. Additionally, the statute specifically allows for extension "not more than 60 days"; therefore, the one-year extension sought by the ISPA and Springs Creative Product Group would not be possible under section 14(a)(3)(F) of the CPSA.

Dated: November 19, 2010.

Todd A. Stevenson,

Secretary, Consumer Product Safety Commission.

BILLING CODE 6355–01–P

DEPARTMENT OF THE INTERIOR

Office of Surface Mining Reclamation and Enforcement

30 CFR Part 935

[OH–253–FOR; Docket ID OSM–2009–0001]

Ohio Regulatory Program

AGENCY: Office of Surface Mining Reclamation and Enforcement (OSM), Interior.

ACTION: Final rule; approval of amendment.

SUMMARY: We are approving an amendment to the Ohio regulatory program (the "Ohio program") regulations under the Surface Mining Control and Reclamation Act of 1977 (SMCRA or the Act). The amendment that we are approving involves changes to Ohio's internal and procedural rules arising from a five-year review of the rules. The changes relate to practice and procedures before the reclamation commission, including definitions, commission meetings, appearance and practice before the commission; appeals to the reclamation commission; filing and service of papers; temporary relief; responsive pleadings; discovery; motions; pre-hearing procedures; notice of hearings and continuance of hearings; site views and location of hearings; conduct of evidentiary hearings; reports and recommendations of the hearing officer; and decisions of the commission.

DATES: *Effective Date:* This rule is effective November 29, 2010.

FOR FURTHER INFORMATION CONTACT: George Rieger, Chief, Pittsburgh Field Division, Columbus Office, Office of Surface Mining Reclamation and Enforcement, Telephone: (614) 416–2238, e-mail: *grieger@osmre.gov.*

SUPPLEMENTARY INFORMATION:

I. Background on the Ohio Program

Section 503(a) of the Act permits a State to assume primacy for the regulation of surface coal mining and reclamation operations on non-Federal and non-Indian lands within its borders by demonstrating that its State program includes, among other things, "a State law which provides for the regulation of surface coal mining and reclamation operations in accordance with the requirements of the Act * * *; and rules and regulations consistent with regulations issued by the Secretary pursuant to the Act." *See* 30 U.S.C. 1253(a)(1) and (7).

You can find background information on the Ohio program, including the Secretary's findings, the disposition of comments, and conditions of approval in the August 16, 1982, **Federal Register** (47 FR 34688). You can also find later actions concerning Ohio's program and program amendments at 30 CFR 935.11, 935.12, 935.15, and 935.16.

II. Description and Submission of the Amendment

By letter dated January 22, 2009, and received on January 23, 2009, (Administrative Record No. OH–2188–01), Ohio sent us an amendment to its program under SMCRA (30 U.S.C. 1201 *et seq.*). This amendment includes revisions to its regulations (Ohio Administrative Code).

Pursuant to Ohio Revised Code 119.032, all State agencies must review their internal and procedural rules every five years. In response to this requirement, the Ohio Reclamation Commission reviewed its procedural rules. The Commission's procedural rules are found at Ohio Administrative Code 1513–3–01 through 1513–3–22.

This amendment contains the changes made to the Ohio Administrative Code as a result of this review. Changes relate to practice and procedures before the reclamation commission, including definitions; commission meetings; appearance and practice before the commission; appeals to the reclamation commission; filing and service of papers; temporary relief; responsive pleadings; discovery; motions; pre-hearing procedures; notice of hearings and continuance of hearings; site views and location of hearings; conduct of evidentiary hearings; reports and recommendations of the hearing officer; and decisions of the commission. These changes are identified below, with additions italicized and deletions bracketed:

1513–3–01: Definitions.

(N) "*Regular business hours*" *for the reclamation commission means 10:00 a.m. to 6:00 p.m. Monday through Friday, except for State holidays or other days in which offices of the government of the State of Ohio are permitted to close due to weather, safety or other unforeseeable events which present a risk to the public or to the commission employees. In the event of the absence of the office staff, contact information for the chairman and vice-chairman of the commission will be prominently posted at the commission offices.*

[(N)]*(O)* "Rules of the reclamation commission" means rules 1513–3–01 to 1513–3–22 of the Administrative code and shall apply to appeals filed under both Chapters 1513 and 1514. of the Revised code, unless specifically provided otherwise.

1513–3–02: Internal regulations.

(B) Four members constitute a quorum, and no action of the commission shall be valid unless it has the concurrence of at least four members. Where, in rendering a decision, a concurrence of at least four commission members is not obtained, the existing record of proceedings may be submitted to any absent commission member, who will be permitted to participate in the rendering of the decision. [at a subsequent commission meeting.]

1513–3–02: Internal regulations.

(D) Pursuant to section 1513.05 of the Revised code, the reclamation commission *shall elect* [may appoint] a secretary, who shall perform such duties as the commission prescribes, including:

1513–3–02: Internal regulations.

(D)(4) Providing notice of all public *meetings* [hearings] of the reclamation commission in accordance with the following procedures:

(a) Any person may determine the time and place of *regularly-scheduled public meetings* [hearings or the time and place of any temporary relief hearings] by contacting the office of the reclamation commission during *regular* business hours;

(b) Upon request, any person may obtain advance notice of all *regularly-scheduled public meetings* [hearings] by supplying the office of the reclamation commission with stamped, self-addressed envelopes. The office will mail to such person a notice of the time and place of *meetings* [hearings] at least four calendar days before the *meeting* [hearing] is scheduled*;* [unless the hearing is a temporary relief hearing;]

(c) The reclamation commission shall provide the office of the reclamation commission with the time and place of *meetings* [hearings] requiring public notice under the provisions of this rule within sufficient time to enable the office to comply with the provisions of this rule.

(d) The time and location for commission meetings shall be announced in the Hannah Report published by Rotunda, Inc.

1513–3–02: Internal regulations.

(H) *Any* [The] transcript [or recording] of *a* [any] proceeding before the commission, *if filed with the commission* [shall be the property of the commission and] shall be made available for reproduction upon application to the commission and payment of reproduction costs.

(I) Issuance of subpoenas.

(1) Upon request of a party, *or at the initiative of the commission,* the commission shall issue subpoenas ad testificandum or duces tecum.

1513–3–03: Appearance and practice before the commission.

(C) *Except as prohibited by section 4705.01 of the Revised code, any party may appear on his own behalf or may be represented by an attorney at law admitted to practice before the Supreme Court of Ohio, or by an attorney admitted to practice by the commission pursuant to a motion to appear pro hac vice.* [In the absence of an attorney, a party may represent itself, a partnership may be represented by any of its members, a corporation or association may be represented by any of its officers and any governmental unit may be represented by an employee offering proof of authority.]

1513–3–04: Appeals to the reclamation commission.

(B) A notice of appeal must:

(7) *Pursuant to section 1513.13 of the Revised Code, identify* [Identify] the grounds upon which review is being sought, the manner in which appellant is aggrieved *or adversely affected* by the action of the chief of the division of mineral resources management and the relief sought on appeal;

1513–3–05: Filing and service of papers.

(H) If papers filed with the commission cite case law as authority in support of argument, the filing must include a copy of the case law cited *and must refer to the page number or paragraph on which the relevant language is found.*

1513–3–08: Temporary Relief.

(F) The decision of the chairman of the reclamation commission to grant or deny temporary relief may be appealed to the [full] commission, *including the chairman who decided temporary relief,* within thirty days after the chairman's issuance of the decision in accordance with the provisions of section 1513.13 of the Revised Code. The [full]-commission may confine its review to the record developed at the temporary relief hearing conducted by the chairman. The [full] commission shall affirm the decision of the chairman, unless it determines that the chairman's decision is arbitrary, capricious, or otherwise inconsistent with law.

1513–3–09: Responsive pleadings.

(B) Unless the commission orders otherwise, the party ordered to file a response pursuant to this rule shall have ten days from the issuance of the commission's order to make such filing.

[(B)*(C)* Failure to respond when ordered may be treated as a failure to appear at hearing.

1513–3–10: Discovery.

(C) Discovery shall be conducted in accordance with the procedural provisions of the "Ohio Rules of Civil Procedure." Discovery may include oral depositions, written interrogatories to parties, inspection of premises, requests for admission, and inspection of documents. [not privileged.]

1513–3–11: Motions.

(A) Except for oral motions which must be made in proceedings on the record, or where the commission otherwise directs, any motion made to the reclamation commission shall:

(4) Be filed with the commission and served upon all parties to the proceeding at least *ten* [five] days in advance of the hearing, unless the movant demonstrates that unusual circumstances exist justifying an exception to this rule.

1513–3–11: Motions.

(C) Motions for reconsideration of any decision of the commission shall be made in writing within *ten* [fourteen] days after the issuance of the commission's decision. A motion for reconsideration shall state with

particularity the grounds on which it is based. The filing of a motion for reconsideration does not extend the time for filing a notice of appeal in the appellate court.

1513–3–11: Motions.

(E) In compliance with the requirements of 1513–3–13(C)(2), motions for continuance of a hearing must be filed with the reclamation commission and served upon all parties to a proceeding at least fourteen days in advance of a hearing.

[(E)]*(F)* Unless the commission orders otherwise, any party to a proceeding shall have ten days from service of the motion or until hearing, whichever is earlier, to file a response to a motion.

[(F)]*(G)* Failure to make a timely motion or to file a statement in response to a motion may be construed as a waiver of objection.

1513–3–12: Pre-hearing procedures.

(A) The reclamation commission, *or its hearing officer,* may schedule and hold pre-hearing conferences for settlement or simplification of the issues in any appeal.

(B) Whenever a pre-hearing conference is held, the commission, *or its hearing officer,* may issue an order which recites the matters discussed, the agreements reached, and the rulings made at the pre-hearing conference.

(C) The commission, *or its hearing officer,* may require the filing of a pre-hearing statement by the parties to an appeal.

1513–3–13: Notice of hearings and continuance of hearings.

(C) Continuance of scheduled hearings.

(2) Motions for continuance of a hearing must be filed with the reclamation commission and served upon all parties to a proceeding at least *fourteen* [five] days in advance of a hearing.

(3) Motions for continuance made less than *fourteen* [five] days before hearing or at hearing shall be granted only upon demonstration that an extraordinary situation exists which could not have been anticipated and which would justify the granting of a continuance.

1513–3–14: Site views and location of hearings.

(A) Site views.

(2) *Subject to any applicable safety requirements, the* [The] commission may, upon reasonable notice and at reasonable times, inspect any site or other premises when the commission is of the opinion that such a viewing would have a beneficial value in any matter pending before the commission.

(3) [Unless the right to a site view is statutorily prescribed, a] *A* quorum of commission members need not attend a site view.

(4) All parties shall have prior notice of a site view and shall have the right to be present. *Parties shall be informed of any safety requirements prior to the site view. The commission may limit the number of persons, which may accompany a party at a site view.*

1513–3–16: Conduct of evidentiary hearings.

(E) Written testimony.

(2) The use of a deposition in lieu of the [dependent's] *deponent's* oral testimony at hearing shall be allowed under the same provisions as are articulated in rule 32 of the "Ohio Rules of Civil Procedure." A party desiring to use a deposition, or any designated part thereof, at hearing shall file the deposition with the commission and serve written notice to every other party at least five days prior to hearing.

(F) Witnesses.

(2) The commission may require each party in an appeal to identify prior to the commencement of a hearing each person who is or may be present *and* [in] his interest or who will or may be a witness for his cause in the appeal.

(G) If the appellant fails to appear personally or by counsel or other authorized representative at a hearing scheduled after being duly notified of the hearing by the mailing of a notice of hearing to such party's last known address, and if good cause for such failure to *appear* [appeal] is not shown, the commission shall dismiss the appeal.

(I) The reclamation commission may order the parties to a proceeding to submit post-hearing briefs or proposed findings of fact and conclusions of law at a time designated by the commission, on issues raised on the appeal or upon possible errors or omissions in the record or on any issues as the commission in its discretion shall determine. The commission may also order the parties to submit written closing arguments *or proposed findings of fact and conclusions of law* at the conclusion of hearing.

1513–3–18: Reports and recommendations of the hearing officer.

(F) Any party to a proceeding may have [seven] *fourteen* days from service of the objections to the report and recommendation of the hearing officer to file a response.

1513–3–19: Decisions of the commission.

(A) All decisions of the commission shall [incorporate] *set forth:*

(1) Findings of fact;

(2) Conclusions of law; and

(3) An order granting or denying relief.

1513–3–19: Decisions of the commission.

(F) Remission of prepaid civil penalty assessments.

(1) If a review of a civil penalty assessment results in an order reducing or eliminating a civil penalty, the reclamation commission shall remit the funds to the appellant in accordance with division [(F)]*(E)* of section 1513.02 of the Revised Code.

III. OSM's Findings

We are approving the amendment request under SMCRA and the Federal regulations at 30 CFR 732.15 and 732.17. Changes for which no findings are made below involve clarifications and non-substantive corrections of punctuation, typos, and errors in references.

1513–3–01: Definitions. These changes involve the addition of a description of regular business hours for the reclamation commission and subsequent paragraph renumbering. While this provision has no Federal counterpart, we find that it is not inconsistent with the Federal regulations at 43 CFR part 4, pertaining to the Office of Hearings and Appeals, and is therefore approved.

1513–3–02: Internal regulations. The changes to 1513–3–02(B) and (D) pertain to the Commission's procedural rules regarding quorums and the election of the secretary. While these provisions have no Federal counterpart, we find that they are not inconsistent with the Federal regulations at 43 CFR part 4, and are therefore approved.

1513–3–02: Internal regulations. The changes to 1513–3–02(D)(4) pertain to the notice of public meetings of the reclamation commission. These section changes replace references to public "hearings" to public "meetings" to reflect the same language that is included under Ohio's Sunshine Law. They clarify that a person may obtain advance notice of "regularly" scheduled public meetings, and provide the medium in which the time and location of such meetings are made available. Ohio explained that adjudicatory "hearings" are a subset of the term "meetings" (Administrative Record No. OH–2188–05). While these provisions have no Federal counterpart, we find that they are not inconsistent with the Federal regulations at 43 CFR part 4, and are therefore approved.

1513–3–02: Internal regulations. The change to 1513–3–02(H) regarding the availability of transcripts of commission proceedings is consistent with 43 CFR 4.23, Transcript of hearings, and is therefore approved.

1513–3–02: Internal regulations. The change to 1513–3–02(I) regarding the issuance of subpoenas is consistent with

43 CFR 4.26, Subpoena power and witness provisions generally, and is therefore approved.

1513–3–03: Appearance and practice before the commission. The changes to 1513–3–03(C) regarding representation when appearing before the commission are not inconsistent with 43 CFR 4.3, Representation before appeals boards, and are therefore approved.

1513–3–04: Appeals to the reclamation commission. The changes to 1513–3–04(B)(7) involve referencing pertinent regulations of the Revised Code and clarifying who may appeal. These changes are consistent with 43 CFR 4.1281, Who may appeal, and 43 CFR 4.1282, Appeals; how taken, and are therefore approved.

1513–3–05: Filing and service of papers. The change to 1513–3–05(H) involves the documentation required for a filing of an appeal. This change is not inconsistent with 43 CFR 4.1107, Filing of documents, and is therefore approved.

1513–3–08: Temporary Relief. The change to 1513–3–08(F) provides that the chairman who decided temporary relief will be involved in the final decision of the full commission with respect to an appeal of the temporary relief ruling. This change is not inconsistent with 43 CFR 4.1267, Appeals (of decisions on temporary relief) and 4.1367(f), Request for temporary relief, and is therefore approved.

1513–3–09: Responsive pleadings. The change to 1513–3–09(B) adds a time frame for responding to the commission. While this provision has no direct Federal counterpart, we find that it is not inconsistent with the Federal regulations at 43 CFR part 4, and is therefore approved.

1513–3–10: Discovery. The change to 1513–3–10(C) deletes the phrase "not privileged." Read by itself, this amendment could be construed to allow discovery of privileged information, without the permission of the person or agency in possession of the information. However, existing language also states that "[d]iscovery shall be conducted in accordance with the procedural provisions of the 'Ohio Rules of Civil Procedure.'" Rule 26 of Ohio's Rules of Civil Procedure provides "[p]arties may obtain discovery regarding any matter, not privileged, which is relevant to the subject matter involved in the pending action. Therefore, the change proposed here is non-substantive, does not render the State provision inconsistent with 43 CFR 4.1130 and 4.1132(a), and is approved.

1513–3–11: Motions. The changes to 1513–3–11(A)(4); 1513–3–11(C) and (E) amend the deadlines for filing responses to written motions, for filing motions for reconsideration, and for filing motions for continuance before the reclamation commission. Other changes in this section involve paragraph renumbering. While these amended time limitations have no direct Federal counterparts, we find that they are not inconsistent with 43 CFR 4.22(d) and 43 CFR 4.1112, and they are therefore approved.

1513–3–12: Pre-hearing procedures. The changes to 1513–3–12(A) through (C) provide that a hearings officer may schedule and hold pre-hearing conferences, issue orders involving such conferences, and require filing of pre-hearing statements. Under the current program, only the full reclamation commission may take these actions. While these changes have no Federal counterparts, we find that they are not inconsistent with 43 CFR 4.1121(b), and are therefore approved.

1513–3–13: Notice of hearings and continuance of hearings. Changes to 1513–3–13(C) require that motions be filed at least fourteen days prior to the hearing. Motions for continuance made after this deadline will be granted only upon a demonstration of a need based upon an extraordinary situation. Under the current regulation, such a motion could be filed as late as five days prior to the hearing and granted without a demonstration that an extraordinary situation exists. While this provision has no Federal counterpart, we find that it is not inconsistent with the Federal regulations at 43 CFR part 4, and is therefore approved.

1513–3–14: Site views and location of hearings. The changes to 1513–3–14(A) involving site inspections require that safety requirements be met; clarify that a quorum of commission members need not attend a site view; and add that the commission may limit the number of individuals that may accompany a party to a site view. While these provisions have no Federal counterpart, we find that they are not inconsistent with the Federal regulations at 43 CFR part 4, and are therefore approved.

1513–3–16: Conduct of evidentiary hearings. The change to 1513–16(I) allows the commission to order the parties to file proposed findings of fact and conclusions of law at the conclusion of a hearing. We find that this change is consistent with 43 CFR 4.1126, Proposed findings of fact and conclusions of law, and is therefore approved.

1513–3–18: Reports and recommendations of the hearing officer. The change to 1513–3–18(F) increases the time in which a party may file a response to objections to a hearing officer's report and recommendations from seven to fourteen days. While this provision has no Federal counterpart, we find that it is not inconsistent with the Federal regulations at 43 CFR part 4, and is therefore approved.

IV. Summary and Disposition of Comments

Public Comments

We asked for public comments on the amendment (Administrative Record No. OH–2188–04) 74 FR 17802. We did not receive any public comments or a request to hold a public meeting.

Federal Agency Comments

Under Federal regulations at 30 CFR 732.17(h)(11)(i) and section 503(b) of SMCRA, we requested comments on the amendment from various Federal agencies with an actual or potential interest in the Ohio program (Administrative Record No. OH–2188–02). The Mine Safety and Health Administration (MSHA), District 1, responded (Administrative Record No. OH–2188–03) that it did not find any changes or issues that would impact upon coal miners' health and safety.

Environmental Protection Agency (EPA) Concurrence and Comments

Under Federal regulations at 30 CFR 732.17(h)(11)(ii), we are required to get a written concurrence from EPA for those provisions of the program amendment that relate to air or water quality standards issued under the authority of the Clean Water Act (33 U.S.C. 1251 *et seq.*) or the Clean Air Act (42 U.S.C. 7401 *et seq.*).

None of the revisions that Ohio proposed to make in this amendment pertain to air or water quality standards. Therefore, we did not ask EPA to concur on the amendment.

V. OSM's Decision

Based on the above findings, we approve the amendment Ohio sent to us on January 22, 2009, pertaining to Ohio's Administrative code.

VI. Procedural Determinations

Executive Order 12630—Takings

This rule does not have takings implications. This determination is based on the analysis performed for the counterpart Federal regulations.

Executive Order 12866—Regulatory Planning and Review

This rule is exempted from review by the Office of Management and Budget under Executive Order 12866.

Executive Order 12988—Civil Justice Reform

The Department of the Interior has conducted the reviews required by Section 3 of Executive Order 12988 and has determined that, to the extent allowable by law, this rule meets the applicable standards of Subsections (a) and (b) of that Section. However, these standards are not applicable to the actual language of State regulatory programs and program amendments because each program is drafted and promulgated by a specific State, not by OSM. Under Sections 503 and 505 of SMCRA (30 U.S.C. 1253 and 1255) and the Federal regulations at 30 CFR 730.11, 732.15, and 732.17(h)(10), decisions on proposed State regulatory programs and program amendments submitted by the States must be based solely on a determination of whether the submittal is consistent with SMCRA and its implementing Federal regulations and whether the other requirements of 30 CFR parts 730, 731, and 732 have been met.

Executive Order 13132—Federalism

This rule does not have Federalism implications. SMCRA delineates the roles of the Federal and State governments with regard to the regulation of surface coal mining and reclamation operations. One of the purposes of SMCRA is to "establish a nationwide program to protect society and the environment from the adverse effects of surface coal mining operations." Section 503(a)(1) of SMCRA requires that State laws regulating surface coal mining and reclamation operations be "in accordance with" the requirements of SMCRA, and Section 503(a)(7) requires that State programs contain rules and regulations "consistent with" regulations issued by the Secretary pursuant to SMCRA.

Executive Order 13175—Consultation and Coordination With Indian Tribal Government

In accordance with Executive Order 13175, we have evaluated the potential effects of this rule on Federally-recognized Indian Tribes and have determined that the rule does not have substantial direct effects on one or more Indian Tribes, on the relationship between the Federal Government and Indian Tribes, or on the distribution of power and responsibilities between the Federal Government and Indian Tribes. The basis for this determination is that our decision is on a State regulatory program and does not involve a Federal program involving Indian lands.

Executive Order 13211—Regulations That Significantly Affect The Supply, Distribution, or Use of Energy

On May 18, 2001, the President issued Executive Order 13211 which requires agencies to prepare a Statement of Energy Effects for a rule that is (1) considered significant under Executive Order 12866, and (2) likely to have a significant adverse effect on the supply, distribution, or use of energy. Because this rule is exempt from review under Executive Order 12866 and is not expected to have a significant adverse effect on the supply, distribution, or use of energy, a Statement of Energy Effects is not required.

National Environmental Policy Act

This rule does not require an environmental impact statement because Section 702(d) of SMCRA (30 U.S.C. 1292(d)) provides that agency decisions on proposed State regulatory program provisions do not constitute major Federal actions within the meaning of Section 102(2)(C) of the National Environmental Policy Act (NEPA) (42 U.S.C. 4332(2)(C)).

Paperwork Reduction Act

This rule does not contain information collection requirements that require approval by OMB under the Paperwork Reduction Act (44 U.S.C. 3507 *et seq.*).

Regulatory Flexibility Act

The Department of the Interior certifies that this rule will not have a significant economic effect on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*). The State submittal, which is the subject of this rule, is based upon Federal regulations for which an economic analysis was prepared and certification made that such regulations would not have a significant economic effect upon a substantial number of small entities. In making the determination as to whether this rule would have a significant economic impact, the Department relied upon data and assumptions for the Federal regulations.

Small Business Regulatory Enforcement Fairness Act

This rule is not a major rule under 5 U.S.C. 804(2), the Small Business Regulatory Enforcement Fairness Act. This rule: (a) Does not have an annual effect on the economy of $100 million; (b) Will not cause a major increase in costs or prices for consumers, individual industries, geographic regions, or Federal, State, or local government agencies; and (c) Does not have significant adverse effects on competition, employment, investment, productivity, innovation, or the ability of U.S.-based enterprises to compete with foreign-based enterprises. This determination is based upon the fact that the State submittal, which is the subject of this rule, is based upon Federal regulations for which an analysis was prepared and a determination made that the Federal regulation was not considered a major rule.

Unfunded Mandates

This rule will not impose an unfunded mandate on State, local, or Tribal governments or the private sector of $100 million or more in any given year. This determination is based upon the fact that the State submittal, which is the subject of this rule, is based upon Federal regulations for which an analysis was prepared and a determination made that the Federal regulation did not impose an unfunded mandate.

List of Subjects in 30 CFR Part 935

Intergovernmental relations, Surface mining, Underground mining.

Dated: July 1, 2010.

Thomas D. Shope,

Regional Director, Appalachian Region.

■ For the reasons set out in the preamble, 30 CFR part 935 is amended as set forth below:

PART 935—OHIO

■ 1. The authority citation for part 935 continues to read as follows:

Authority: 30 U.S.C. 1201 *et seq.*

■ 2. Section 935.15 is amended in the table by adding a new entry in chronological order by "Date of Final Publication" to read as follows:

§ 935.15 Approval of Ohio regulatory program amendments.

* * * * *

Original amendment submission date	Date of final publication	Citation/description

BILLING CODE 4310–05–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket No. USCG–2010–0979]

RIN 1625–AA00

Safety Zone; 1000-yard radius from position 29°48.77′ N 091°33.02′ W, Charenton Drainage and Navigation Canal, St. Mary Parish, LA

AGENCY: Coast Guard, DHS.

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing a temporary safety zone extending to a 1000-yard radius from position 29°48.77′ N 091°33.02′ W, Charenton Drainage and Navigation Canal, St. Mary Parish, LA. This Safety Zone is needed to protect the general public, vessels and tows from destruction, loss or injury due to a sunken vessel and associated hazards.

DATES: This rule is effective in the CFR on November 29, 2010 through December 31, 2010. This rule is effective with actual notice for purposes of enforcement on October 20, 2010. This rule will remain in effect until December 31, 2010.

ADDRESSES: Documents indicated in this preamble as being available in the docket are part of docket USCG–2010–0979 and are available online by going to *http://www.regulations.gov,* inserting USCG–2010–0979 in the "Keyword" box, and then clicking "Search." They are also available for inspection or copying at the Docket Management Facility (M–30), U.S. Department of Transportation, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: If you have questions on this temporary rule, call or e-mail Lieutenant (LT) Russel Pickering, Coast Guard; telephone 985–380–5320, e-mail *russel.t.pickering@uscg.mil.* If you have questions on viewing the docket, call Renee V. Wright, Program Manager, Docket Operations, telephone 202–366–9826.

SUPPLEMENTARY INFORMATION:

Regulatory Information

The Coast Guard is issuing this temporary final rule without prior notice and opportunity to comment pursuant to authority under section 4(a) of the Administrative Procedure Act (APA) (5 U.S.C. 553(b)). This provision authorizes an agency to issue a rule without prior notice and opportunity to comment when the agency for good cause finds that those procedures are "impracticable, unnecessary, or contrary to the public interest." Under 5 U.S.C. 553(b)(B), the Coast Guard finds that good cause exists for not publishing a notice of proposed rulemaking (NPRM) with respect to this rule because publishing an NPRM would be impracticable, as immediate action is needed to protect the general public, vessel and tows from a sunken vessel and associated hazards in position 29°48.77′ N 091°33.02′ W, in the Charenton Drainage and Navigation Canal.

Under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making this rule effective less than 30 days after publication in the **Federal Register**. Publishing an NPRM and delaying its effective date would be contrary to public interest since immediate action is needed to protect the general public, vessel and tows from destruction, loss or injury due to sunken vessel and associated hazards in position 29°48.77′ N 091°33.02′ W.

Background and Purpose

A Mobile Inshore Drilling Rig (Hercules Rig 61) scheduled for scrap sank in the Charenton Navigation and Drainage Canal. The Charenton Navigation and Drainage Canal will be closed to all marine traffic within a 1000-yard radius of position 29°48.77′ N 091°33, from 20 OCT, 2010 through 31 DEC, 2010. This Safety Zone is needed to protect the general public, vessels and tows from destruction, loss or injury from a sunken vessel and associated hazards.

Discussion of Rule

The Coast Guard is establishing a temporary Safety Zone in a 1000-yard radius of position 29°48.77′ N 091°33.02′ W within the Charenton Drainage and Navigation Canal. The temporary Safety Zone will continue from October 20, 2010 through December 31, 2010. Vessels and tows may not enter this zone unless authorized by the Captain of the Port Morgan City.

Regulatory Analyses

We developed this rule after considering numerous statutes and executive orders related to rulemaking. Below we summarize our analyses based on 13 of these statutes or executive orders.

Regulatory Planning and Review

This rule is not a significant regulatory action under section 3(f) of Executive Order 12866, Regulatory Planning and Review, and does not require an assessment of potential costs and benefits under section 6(a)(3) of that Order. The Office of Management and Budget has not reviewed it under that Order.

This rule will only be in effect for a short period of time and notifications to the marine community will be made through broadcast notice to mariners and Local Notice to Mariners. The impacts on routine navigation are expected to be minimal.

Small Entities

Under the Regulatory Flexibility Act (5 U.S.C. 601–612), we have considered whether this rule would have a significant economic impact on a substantial number of small entities. The term "small entities" comprises small businesses, not-for-profit organizations that are independently

owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000.

The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

This rule will affect the following entities, some of which may be small entities: The owners or operators of vessels intending to transit through the Safety Zone from October 20, 2010 through December 31, 2010. This Safety Zone will not have a significant economic impact on a substantial number of small entities because this rule will be in effect for only a short period of time.

If you are a small business entity and are significantly affected by this regulation, please contact LT Russel Pickering, Marine Safety Unit Morgan City, at 985–380–5320.

Assistance for Small Entities

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we offer to assist small entities in understanding the rule so that they can better evaluate its effects on them and participate in the rulemaking process.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

Collection of Information

This rule calls for no new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

Federalism

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on State or local governments and would either preempt State law or impose a substantial direct cost of compliance on them. We have analyzed this rule under that Order and have determined that it does not have implications for federalism

Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 or more (adjusted for inflation) in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

Taking of Private Property

This rule will not cause a taking of private property or otherwise have taking implications under Executive Order 12630, Governmental Actions and Interference with Constitutionally Protected Property Rights.

Civil Justice Reform

This rule meets applicable standards in sections 3(a) and 3(b)(2) of Executive Order 12988, Civil Justice Reform, to minimize litigation, eliminate ambiguity, and reduce burden.

Protection of Children

We have analyzed this rule under Executive Order 13045, Protection of Children from Environmental Health Risks and Safety Risks. This rule is not an economically significant rule and does not create an environmental risk to health or risk to safety that may disproportionately affect children.

Indian Tribal Governments

This rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

Energy Effects

We have analyzed this rule under Executive Order 13211, Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use. We have determined that it is not a "significant energy action" under that order because it is not a "significant regulatory action" under Executive Order 12866 and is not likely to have a significant adverse effect on the supply, distribution, or use of energy. The Administrator of the Office of Information and Regulatory Affairs has not designated it as a significant energy action. Therefore, it does not require a Statement of Energy Effects under Executive Order 13211.

Technical Standards

The National Technology Transfer and Advancement Act (NTTAA) (15 U.S.C. 272 note) directs agencies to use voluntary consensus standards in their regulatory activities unless the agency provides Congress, through the Office of Management and Budget, with an explanation of why using these standards would be inconsistent with applicable law or otherwise impractical. Voluntary consensus standards are technical standards (e.g., specifications of materials, performance, design, or operation; test methods; sampling procedures; and related management systems practices) that are developed or adopted by voluntary consensus standards bodies.

This rule does not use technical standards. Therefore, we did not consider the use of voluntary consensus standards.

Environment

We have analyzed this rule under Department of Homeland Security Management Directive 023–01 and Commandant Instruction M16475.lD, which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321–4370f), and have concluded this action is one of a category of actions which do not individually or cumulatively have a significant effect on the human environment. This rule is categorically excluded, under figure 2–1, paragraph (34)(g), of the Instruction. This rule involves an emergency situation and will be in effect for over one week, but is not expected to result in any significant adverse environmental impact as described in NEPA.

An environmental analysis checklist and a categorical exclusion determination will be provided and made available at the docket as indicated in the **ADDRESSES** section.

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

■ For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 165 as follows:

PART 165— REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 33 U.S.C. 1226, 1231; 46 U.S.C. Chapter 701; 50 U.S.C. 191, 195; 33 CFR 1.05–1(g), 6.04–1, 6.04–6, and 160.5; Pub. L. 107–295, 116 Stat. 2064; Department of Homeland Security Delegation No. 0170.1.

■ 2. Add § 165.T08–0979 to read as follows:

§ 165.T08–0979 Safety Zone; 1000 yard radius from position 29°48.77′ N 091°33.02′ W, Charenton Drainage and Navigation Canal, St. Mary Parish, LA.

(a) *Enforcement Areas.* The safety zone exists in an area comprising a 1000 yard radius from position 29°48.77′ N 091°33.02′ W, Charenton Drainage and Navigation Canal.

(b) *Effective date.* This rule is effective on October 20, 2010 through December 31, 2010.

(c) *Regulations.* (1) In accordance with the general regulations in § 165.33 of this part, entry into this zone is prohibited unless authorized by the Captain of the Port Morgan City.

(2) Vessels requiring entry into or passage through the Safety Zone must request permission from the Captain of the Port Morgan City, or a designated representative. They may be contacted on VHF Channel 13 or 16, or by telephone at (985) 380–5320.

(3) All persons and vessels shall comply with the instructions of the Captain of the Port Morgan City and designated on-scene patrol personnel. On-scene patrol personnel include commissioned, warrant, and petty officers of the U.S. Coast Guard.

Dated: October 20, 2010.

Blake E. Welborn,

Commander, U.S. Coast Guard, Acting Captain of the Port Morgan City, Louisiana.

BILLING CODE P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R05–OAR–2010–0656; FRL–9232–2]

Approval and Promulgation of Air Quality Implementation Plans; Ohio; Ohio Portion of the Cincinnati-Hamilton Area; 8-Hour Ozone Maintenance Plan

AGENCY: Environmental Protection Agency.

ACTION: Direct final rule.

SUMMARY: EPA is approving a revision to the maintenance plan for the Ohio portion of the Cincinnati-Hamilton, OH–KY–IN 8-hour ozone area. The Cincinnati-Hamilton area includes Butler, Clermont, Clinton, Hamilton, and Warren Counties in Ohio, Lawrenceburg Township in Dearborn County, Indiana, and Boone, Campbell, and Kenton Counties in Kentucky. The Ohio Environmental Protection Agency (Ohio EPA) submitted a maintenance plan revision on July 6, 2010. The submittal contained revisions to 2015 and 2020 NO_X point source emissions projections for Butler County to reflect modifications at a major source that will occur during the maintenance period.

DATES: This direct final rule will be effective January 28, 2011, unless EPA receives adverse comments by December 29, 2010. If adverse comments are received, EPA will publish a timely withdrawal of the direct final rule in the **Federal Register** informing the public that the rule will not take effect.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R05–OAR–2010–0656, by one of the following methods:

1. *http://www.regulations.gov:* Follow the on-line instructions for submitting comments.

2. *E-mail: mooney.john@epa.gov.*

3. Fax: (312) 692–2551.

4. Mail: John M. Mooney, Chief, Attainment Planning and Maintenance Section, Air Programs Branch (AR–18J), U.S. Environmental Protection Agency, 77 West Jackson Boulevard, Chicago, Illinois 60604.

5. *Hand Delivery:* John M. Mooney, Chief, Attainment Planning and Maintenance Section, Air Programs Branch (AR–18J), U.S. Environmental Protection Agency, 77 West Jackson Boulevard, Chicago, Illinois 60604. Such deliveries are only accepted during the Regional Office normal hours of operation, and special arrangements should be made for deliveries of boxed information. The Regional Office official hours of business are Monday through Friday, 8:30 a.m. to 4:30 p.m., excluding Federal holidays.

Instructions: Direct your comments to Docket ID No. EPA–R05–OAR–2010–0656. EPA's policy is that all comments received will be included in the public docket without change and may be made available online at *http://www.regulations.gov,* including any personal information provided, unless the comment includes information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Do not submit information that you consider to be CBI or otherwise protected through *http://www.regulations.gov* or e-mail. The *http://www.regulations.gov* Web site is an "anonymous access" system, which means EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an e-mail comment directly to EPA without going through *http://www.regulations.gov* your e-mail address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the Internet. If you submit an electronic comment, EPA recommends that you include your name and other contact information in the body of your comment and with any disk or CD–ROM you submit. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comment. Electronic files should avoid the use of special characters, any form of encryption, and be free of any defects or viruses.

Docket: All documents in the docket are listed in the *http://www.regulations.gov* index. Although listed in the index, some information is not publicly available, *e.g.,* CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, will be publicly available only in hard copy. Publicly available docket materials are available either electronically in *http://www.regulations.gov* or in hard copy at the Environmental Protection Agency, Region 5, Air and Radiation Division, 77 West Jackson Boulevard, Chicago, Illinois 60604. This Facility is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding Federal holidays. We recommend that you telephone Kathleen D'Agostino, Environmental Engineer, at (312) 886–1767 before visiting the Region 5 office.

FOR FURTHER INFORMATION CONTACT: Kathleen D'Agostino, Environmental Engineer, Attainment Planning and Maintenance Section, Air Programs Branch (AR–18J), Environmental Protection Agency, Region 5, 77 West Jackson Boulevard, Chicago, Illinois 60604, (312) 886–1767, *dagostino.kathleen@epa.gov.*

SUPPLEMENTARY INFORMATION: Throughout this document whenever "we," "us," or "our" is used, we mean EPA. This supplementary information section is arranged as follows:

I. What is the background for this action?

On May 11, 2010 (75 FR 26118), EPA redesignated the Ohio and Indiana portions of the Cincinnati-Hamilton area to attainment for the 1997 8-hour ozone National Ambient Air Quality Standard (NAAQS). At that time, EPA also approved, as a revision to the Ohio and Indiana State Implementation Plans (SIP), the States' plans for maintaining the 8-hour ozone NAAQS through 2020 in the area.

The Ohio and Indiana plans demonstrated maintenance of the 8-hour ozone standard through 2020 by showing that current and future emissions of VOC and NO_X for the Cincinnati-Hamilton area remain at or below attainment year emission levels. The Cincinnati-Hamilton area attained the 8-hour ozone NAAQS during the 2007–2009 time period. For attainment emission levels, Ohio and Indiana used 2008 inventories. Emissions inventory projections for the years 2015 and 2020 were used to demonstrate maintenance.

As part of their maintenance plans, the States elected to include a "safety margin" for the area. A "safety margin" is the difference between the attainment level of emissions (from all sources) and the projected level of emissions (from all sources) in the maintenance plan which continues to demonstrate attainment of the standard. For the Ohio and Indiana portion of the Cincinnati-Hamilton area, the emissions from point, area, nonroad, and mobile sources in 2008 equaled 144.22 tons per day (tpd) and 230.28 tpd of VOC and NO_X, respectively. In the maintenance plans, Ohio and Indiana projected VOC and NO_X emission levels for 2020 to be 117.70 tpd and 197.75 tpd, respectively. The SIP submissions demonstrated that the Cincinnati-Hamilton area will continue to maintain the standard with emissions at this level. The safety margin was calculated to be the difference between 2008 and 2020 emissions levels. The 2020 safety margin for VOC was 26.52 tpd (*i.e.,* 144.22 tpd less 117.70). For NO_X, the 2020 safety margin was 32.53 tpd. Using the same method of calculation, the 2015 safety margins for VOC and NO_X were 23.40 tpd and 17.50 tpd, respectively. The safety margin, or a portion thereof, can be allocated to any of the source categories, as long as the total attainment level of emissions is maintained.

At the time the maintenance plan was approved, EPA also approved VOC and NO_X Motor Vehicle Emissions Budgets (MVEBs) for 2015 and 2020 for the Ohio and Indiana portions of the Cincinnati-Hamilton area. The MVEBs requested by Ohio EPA and the Indiana Department of Environmental Management (IDEM) contained safety margins for mobile sources smaller than the allowable safety margins reflected in the total emissions for the Ohio and Indiana portions of the Cincinnati-Hamilton area. For VOC, mobile safety margins of 4.14 tpd and 3.76 tpd were included for 2015 and 2020, respectively. For NO_X, mobile safety margins of 6.39 tpd and 4.49 tpd were included for 2015 and 2020, respectively.

II. What revisions are being made to the maintenance plan?

Ohio submitted revisions to 2015 and 2020 NO_X point source emissions projections for Butler County to reflect modifications at a major source which will occur during the maintenance period. These revised projections show an increase of 1.31 tons per day (tpd) of NO_X in both 2015 and 2020. As shown in Table 1, for the Ohio and Indiana portions of the Cincinnati-Hamilton area, 2015 and 2020 emissions remain below attainment levels.

TABLE 1—COMPARISON OF 2008, 2015 AND 2020 VOC AND NO_X EMISSIONS FOR THE OHIO AND INDIANA PORTION OF THE CINCINNATI-HAMILTON AREA (TPD)

	VOC					NO_X				
	2008	2015	2020	Net change (2008–2015)	Net change (2008–2020)	2008	2015	2020	Net change (2008–2015)	Net change (2008–2020)
Point	10.65	12.85	13.53	2.20	2.88	88.97	135.21	138.43	46.24	49.46
Area	57.73	54.33	54.33	−3.40	−3.40	10.98	11.03	11.03	0.05	0.05
Onroad	30.51	27.59	25.06	−2.92	−5.45	91.67	42.61	29.90	−49.06	−61.77
Nonroad	45.33	26.05	24.78	−19.28	−20.55	38.66	25.24	19.70	−13.42	−18.96
Total	144.22	120.82	117.70	−23.40	−26.52	230.28	214.09	199.06	−16.19	−31.22

For the Ohio and Indiana portion of the Cincinnati-Hamilton area, the NO_X emissions from point, area, nonroad, and mobile sources in 2008 equaled 230.28 tpd. For 2015, projected NO_X emission levels equal 214.09 tpd. The safety margin for NO_X is calculated to be the difference between these amounts or, in this case, 16.19 tpd for 2015. For 2020, the NO_X safety margin is 31.22 tpd. The portion of the NO_X safety margins allocated to the onroad mobile source sector when the MVEBs were approved remains smaller than the revised allowable safety margins reflected in the total emissions for the Ohio and Indiana portion of the Cincinnati-Hamilton area. Because no changes were made to the VOC inventories, the safety margins remain unchanged.

III. What action is EPA taking?

EPA is approving a revision to the maintenance plan for the Ohio portion of the Cincinnati-Hamilton 8-hour ozone area. Changes were made to the 2015 and 2020 NO_X point source emissions projections for Butler County to reflect modifications at a major source that will occur during the maintenance period.

We are publishing this action without prior proposal because we view this as a noncontroversial amendment and anticipate no adverse comments. However, in the proposed rules section of this **Federal Register** publication, we are publishing a separate document that will serve as the proposal to approve the State plan if relevant adverse written comments are filed. This rule will be effective January 28, 2011 without further notice unless we receive relevant adverse written comments by December 29, 2010. If we receive such comments, we will withdraw this action before the effective date by publishing a subsequent document that will withdraw the final action. All public comments received will then be addressed in a subsequent final rule based on the proposed action. The EPA will not institute a second comment period. Any parties interested in commenting on this action should do so at this time. Please note that if EPA

receives adverse comment on an amendment, paragraph, or section of this rule and if that provision may be severed from the remainder of the rule, EPA may adopt as final those provisions of the rule that are not the subject of an adverse comment. If we do not receive any comments, this action will be effective January 28, 2011.

IV. Statutory and Executive Order Reviews

Under the Clean Air Act (CAA), the Administrator is required to approve a SIP submission that complies with the provisions of the CAA and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve State choices, provided that they meet the criteria of the CAA. Accordingly, this action merely approves State law as meeting Federal requirements and does not impose additional requirements beyond those imposed by State law. For that reason, this action:

- Is not a "significant regulatory action" subject to review by the Office of Management and Budget under Executive Order 12866 (58 FR 51735, October 4, 1993);
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- Does not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
- Is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA; and
- Does not provide EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, this rule does not have Tribal implications as specified by Executive Order 13175 (65 FR 67249, November 9, 2000), because the SIP is not approved to apply in Indian country located in the State, and EPA notes that it will not impose substantial direct costs on Tribal governments or preempt Tribal law.

The Congressional Review Act, 5 U.S.C. 801 *et seq.,* as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. EPA will submit a report containing this action and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register.** A major rule cannot take effect until 60 days after it is published in the **Federal Register.** This action is not a "major rule" as defined by 5 U.S.C. 804(2).

Under section 307(b)(1) of the CAA, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by January 28, 2011. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this action for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. Parties with objections to this direct final rule are encouraged to file a comment in response to the parallel notice of proposed rulemaking for this action published in the proposed rules section of today's **Federal Register,** rather than file an immediate petition for judicial review of this direct final rule, so that EPA can withdraw this direct final rule and address the comment in the proposed rulemaking. This action may not be challenged later in proceedings to enforce its requirements. (*See* section 307(b)(2).)

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by reference, Intergovernmental relations, Ozone, Reporting and recordkeeping requirements, Volatile organic compounds.

Dated: November 15, 2010.

Susan Hedman,

Regional Administrator, Region 5.

■ 40 CFR part 52 is amended as follows:

PART 52—[AMENDED]

1. The authority citation for part 52 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

Subpart KK—Ohio

2. Section 52.1885 is amended by adding paragraph (ff)(11) to read as follows:

§ 52.1885 Control strategy: Ozone.

* * * * *

(ff) * * *

(11) Approval—On July 6, 2010, the Ohio Environmental Protection Agency submitted a request to revise the maintenance plan for the Ohio portion of the Cincinnati-Hamilton, OH–KY–IN 8-hour ozone area. The submittal revises 2015 and 2020 NO_X point source emissions projections for Butler County.

* * * * *

[FR Doc. 2010–29784 Filed 11–26–10; 8:45 am]

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R05–OAR–2009–0515; FRL–9232–3]

Approval and Promulgation of Air Quality Implementation Plans; Indiana; Clean Air Interstate Rule

AGENCY: Environmental Protection Agency (EPA).

ACTION: Direct final rule.

SUMMARY: EPA is taking direct final action to approve a request submitted by the Indiana Department of Environmental Management (IDEM) on June 29, 2009, to revise the Indiana State Implementation Plan (SIP) under the Clean Air Act (CAA). The State has submitted amendments to the Indiana Administrative Code (IAC), which supplement Indiana's Clean Air Interstate Rule (CAIR), for which EPA granted limited approval as an abbreviated SIP on October 22, 2007. The abbreviated SIP was to be implemented in conjunction with a Federal Implementation Plan (FIP) that specified requirements for emissions monitoring, permit provisions, and other elements of CAIR programs. The State's June 29, 2009, submittal includes elements that EPA deems necessary in order for EPA to fully approve Indiana's CAIR SIP. This will allow a transition from an abbreviated SIP with limited approval to a full SIP with full approval under which the various CAIR implementation provisions would be governed by State rules rather than FIP

rules. This action results in the withdrawal of the Indiana CAIR FIP concerning sulfur dioxide (SO_2), nitrogen oxides (NO_X) annual, and NO_X ozone season emissions.

DATES: This direct final will be effective January 28, 2011, unless EPA receives adverse comments by December 29, 2010. If adverse comments are received, EPA will publish a timely withdrawal of the direct final rule in the **Federal Register** informing the public that the rule will not take effect.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R05–OAR–2009–0515, by one of the following methods:

1. *http://www.regulations.gov:* Follow the on-line instructions for submitting comments.
2. *E-mail: mooney.john@epa.gov.*
3. *Fax:* (312) 692–2551.
4. *Mail:* John M. Mooney, Chief, Attainment Planning and Maintenance Section, Air Programs Branch (AR–18J), U.S. Environmental Protection Agency, 77 West Jackson Boulevard, Chicago, Illinois 60604.
5. *Hand Delivery:* John M. Mooney, Chief, Attainment Planning and Maintenance Section, Air Programs Branch (AR–18J), U.S. Environmental Protection Agency, 77 West Jackson Boulevard, Chicago, Illinois 60604. Such deliveries are only accepted during the Regional Office normal hours of operation, and special arrangements should be made for deliveries of boxed information. The Regional Office official hours of business are Monday through Friday, 8:30 a.m. to 4:30 p.m., excluding Federal holidays.

Instructions: Direct your comments to Docket ID No. EPA–R05–OAR–2009–0515. EPA's policy is that all comments received will be included in the public docket without change and may be made available online at *http://www.regulations.gov,* including any personal information provided, unless the comment includes information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Do not submit information that you consider to be CBI or otherwise protected through *http://www.regulations.gov* or e-mail. The *http://www.regulations.gov* Web site is an "anonymous access" system, which means EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an e-mail comment directly to EPA without going through *http://www.regulations.gov* your e-mail address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the Internet. If you submit an electronic comment, EPA recommends that you include your name and other contact information in the body of your comment and with any disk or CD–ROM you submit. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comment. Electronic files should avoid the use of special characters, any form of encryption, and be free of any defects or viruses.

Docket: All documents in the docket are listed in the *http://www.regulations.gov* index. Although listed in the index, some information is not publicly available, *e.g.,* CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, will be publicly available only in hard copy. Publicly available docket materials are available either electronically in *http://www.regulations.gov* or in hard copy at the Environmental Protection Agency, Region 5, Air and Radiation Division, 77 West Jackson Boulevard, Chicago, Illinois 60604. This facility is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding Federal holidays. We recommend that you telephone Andy Chang, Environmental Engineer, at (312) 886–0258 before visiting the Region 5 office.

FOR FURTHER INFORMATION CONTACT: Andy Chang, Environmental Engineer, Attainment Planning and Maintenance Section, Air Programs Branch (AR–18J), U.S. Environmental Protection Agency, Region 5, 77 West Jackson Boulevard, Chicago, Illinois 60604, (312) 886–0258, *chang.andy@epa.gov.*

SUPPLEMENTARY INFORMATION: Throughout this document whenever "we," "us," or "our" is used, we mean EPA. This supplementary information section is arranged as follows:

I. What action is EPA taking?

In this rulemaking EPA is fully approving Indiana's CAIR SIP, including the State's June 29, 2009, submittal. This will allow a transition from an abbreviated SIP with limited approval to a full SIP with full approval under which the various CAIR implementation provisions would be governed by State rules rather than FIP rules. This action causes the CAIR FIPs concerning SO_2, NO_X annual, and NO_X ozone season emissions by Indiana sources to be automatically withdrawn.

II. What is the regulatory history of CAIR and CAIR FIPs?

EPA published CAIR on May 12, 2005 (70 FR 25162). In that rule, EPA determined that 28 States and the District of Columbia contribute significantly to nonattainment and interfere with maintenance of the National Ambient Air Quality Standards (NAAQS) for fine particles ($PM_{2.5}$) and/or 8-hour ozone in downwind States in the eastern part of the country. As a result, EPA required those upwind States to revise their SIPs to include control measures that reduce emissions of SO_2, which is a precursor to $PM_{2.5}$ formation, and/or NO_X, which is a precursor to both ozone and $PM_{2.5}$ formation. For jurisdictions that contribute significantly to downwind $PM_{2.5}$ nonattainment, CAIR sets annual State-wide emission reduction requirements (*i.e.,* budgets) for SO_2 and NO_X. Similarly, for jurisdictions that contribute significantly to 8-hour ozone nonattainment, CAIR sets State-wide emission budgets for NO_X for the ozone season (May 1st to September 30th). Under CAIR, States may implement these reduction requirements by participating in the EPA-administered cap-and-trade programs or by adopting any other control measures.

CAIR establishes requirements that must be included in SIPs to address the requirements of section 110(a)(2)(D) of the CAA with regard to interstate transport for ozone and $PM_{2.5}$. On April 25, 2005 (70 FR 21147), EPA made national findings that the States had failed to submit SIPs meeting the requirements of section 110(a)(2)(D). The SIPs were due in July 2000, 3 years after the promulgation of the 8-hour ozone and $PM_{2.5}$ NAAQS. These findings started a 2-year clock for EPA to promulgate a FIP to address the

requirements of section 110(a)(2)(D). Under section 110(c)(1) of the CAA, EPA may issue a FIP anytime after such findings are made, and must do so within two years unless EPA has approved a SIP revision correcting the deficiency before the FIP is promulgated.

On April 28, 2006, EPA promulgated FIPs for all States covered by CAIR to ensure that the emissions reductions required by CAIR would be achieved on schedule. The CAIR FIPs required electric generating units (EGUs) to participate in the EPA-administered CAIR SO_2, NO_X annual, and NO_X ozone season trading programs, as appropriate. The CAIR FIP trading programs impose essentially the same requirements as, and are integrated with, the respective CAIR SIP trading programs. The integration of the FIP and SIP trading programs was meant to create a single trading program for each regulated pollutant (SO_2, NO_X annual, and NO_X ozone season) in all States covered by CAIR FIP or SIP trading programs for that pollutant. Further, as provided in a rule published by EPA on November 2, 2007 (72 FR 62338), a State's CAIR FIP is automatically withdrawn when EPA approves a SIP revision as fully meeting the requirements of CAIR. Where only portions of the SIP revision are approved, the corresponding portions of the FIPs are automatically withdrawn and the remaining portions of the FIP stay in place. Finally, the CAIR FIPs also allow States to submit abbreviated SIP revisions that, if approved by EPA, automatically replace or supplement certain CAIR FIP provisions (*e.g.,* the methodology for allocating NO_X allowances to sources in the State), while the CAIR FIP remains in place for all other provisions. Therefore, because Indiana only had an abbreviated CAIR SIP in place prior to today's rulemaking, there were also elements of CAIR FIPs in effect.

On October 19, 2007 (72 FR 59190), EPA amended CAIR and CAIR FIPs to clarify the definition of "cogeneration unit" and, thus, the applicability of the CAIR trading program to cogeneration units.

EPA was sued by a number of parties on various aspects of CAIR, and on July 11, 2008, the U.S. Court of Appeals for the District of Columbia Circuit issued its decision to vacate and remand both CAIR and the associated CAIR FIPs in their entirety. *North Carolina* v. *EPA,* 531 F.3d 836 (DC Cir. 2008). However, in response to EPA's petition for rehearing, the Court issued an order remanding CAIR to EPA without vacating either CAIR or the CAIR FIPs. *North Carolina* v. *EPA,* 550 F.3d 1176 (DC Cir. 2008). The Court thereby left CAIR in place in order to "temporarily preserve the environmental values covered by CAIR" until EPA replaces it with a rule consistent with the Court's opinion. *Id.* at 1178. The Court directed EPA to "remedy CAIR's flaws" consistent with its July 11, 2008, opinion, but declined to impose a schedule on EPA for completing that action. *Id.*

III. What are the general requirements of CAIR and CAIR FIPs?

CAIR, which establishes statewide emission budgets for SO_2 and NO_X, is to be implemented in two phases. The first phase of NO_X reductions starts in 2009 and continues through 2014, while the first phase of SO_2 reductions starts in 2010 and continues through 2014. The second phase of reductions for both NO_X and SO_2 starts in 2015 and continues thereafter. CAIR requires States to implement the budgets by either: (1) Requiring EGUs to participate in the EPA-administered cap-and-trade programs; or (2) adopting other control measures of the States' choosing and demonstrating that such control measures will result in compliance with the applicable State SO_2 and NO_X budgets. The May 12, 2005, and April 28, 2006, CAIR provides model rules that States must adopt (with certain limited changes, if desired) if they want to participate in the EPA-administered trading programs. With two exceptions, only States that choose to meet the requirements of CAIR through methods that exclusively regulate EGUs are allowed to participate in the EPA-administered trading programs. One exception is for States that adopt the opt-in provisions of the model rules to allow non-EGUs individually to opt into the EPA-administered trading programs. The other exception is for each State to include all non-EGUs from its respective NO_X Budget Trading Program into its respective CAIR NO_X Ozone Season Trading Program.

IV. What are the types of CAIR SIP submittals?

States have the flexibility to choose the type of control measures they will use to meet the requirements of CAIR. As EPA anticipated, most States have chosen to meet the CAIR requirements by selecting an option that requires EGUs to participate in the EPA-administered CAIR cap-and-trade programs. For such States, EPA has provided two approaches for submitting and obtaining approval for CAIR SIP revisions. States may submit full SIP revisions that adopt the model CAIR cap-and-trade rules. If approved, these SIP revisions will fully replace the CAIR FIPs. Alternatively, States may submit abbreviated SIP revisions. These SIP revisions will not replace the CAIR FIPs; however, the CAIR FIPs provide that, when approved, the provisions in these abbreviated SIP revisions will be used instead of or in conjunction with, as appropriate, the corresponding provisions of the CAIR FIPs (*e.g.,* the NO_X allowance allocation methodology).

A State submitting a full SIP revision may either adopt regulations that are substantively identical to the model rules or incorporate by reference the model rules. CAIR provides that States may only make limited changes to the model rules if the States want to participate in the EPA-administered trading programs. A full SIP revision may change the model rules only by altering their applicability and allowance allocation provisions to:

1. Include all NO_X Budget trading sources that are not EGUs under CAIR in the CAIR NO_X Ozone Season Trading Program;

2. Provide for State allocation of NO_X annual or ozone season allowances using a methodology chosen by the State;

3. Provide for State allocation of NO_X annual allowances from the compliance supplement pool (CSP) using the State's choice of allowed, alternative methodologies; or

4. Allow units that are not otherwise CAIR units to opt individually into the CAIR SO_2, NO_X Annual, or NO_X Ozone Season Trading Programs under the opt-in provisions in the model rules.

An approved CAIR SIP revision addressing EGUs' SO_2, NO_X annual, or NO_X ozone season emissions will replace the CAIR FIP for that State for the respective EGU emissions. As discussed above, once EPA has approved a CAIR SIP submission in full, without any conditions, the CAIR FIP is automatically withdrawn. *See* 72 FR 62338.

V. Analysis of Indiana's CAIR SIP submittals

A. What is the history of the State's submittals?

IDEM submitted the State's rules to address CAIR requirements on February 28, 2007, for incorporation into the SIP. On September 20, 2007, Indiana submitted a letter to EPA requesting that EPA act only on a portion of the February 28, 2007 submittal. Consequently, on October 22, 2007 (72 FR 59480) EPA gave a limited approval to portions of the February 28, 2007 submittal as an abbreviated SIP revision

which addressed the applicability provisions for the NO_X ozone season trading program and supporting definitions and terms, the methodology to be used to allocate annual and ozone season NO_X allowances and supporting definitions and terms, the CSP provisions for the NO_X annual trading program, and provisions for SO_2 and NO_X opt-in units, all under the CAIR FIP. EPA found several minor deficiencies in the February 28, 2007, submittal, as indentified in a technical support document that accompanied the October 22, 2007, limited approval. The State's June 29, 2009, submittal sufficiently addresses these deficiencies.

On October 19, 2007, EPA revised the definition of "cogeneration unit" (72 FR 59190). Particularly of note, the term "biomass" was added so that cogeneration units could exclude biomass energy input in efficiency calculations. IDEM has made corresponding and appropriate changes that adopt the Federal definition of "cogeneration unit" and "biomass" in its June 29, 2009, submittal. Indiana's budget and allowance allocation methodologies for CAIR trading programs were also included in the June 29, 2009, submittal. The amended rules became effective State-wide on June 11, 2009, and an in-depth analysis of the June 29, 2009, submittal follows below.

B. State Budgets for Allowance Allocations

In today's action, EPA is reaffirming its approval of Indiana's SIP revision adopting the budgets established for the State (by EPA) in CAIR in its October 22, 2007 limited approval.

In *North Carolina,* the Court determined, among other things, that the State SO_2 and NO_X budgets established in CAIR were arbitrary and capricious.[1] However, as discussed above, the Court also decided to remand CAIR but to leave the rule in place in order to "temporarily preserve the environmental values covered by CAIR" pending EPA's development and promulgation of a replacement rule that "remedies CAIR's flaws." *North Carolina,* at 1178. EPA had indicated to the Court that development and promulgation of a replacement rule would take about two years. *Reply in Support of Petition for Rehearing or Rehearing en Banc* at 5 (filed Nov. 17, 2008 in *North Carolina* v. *EPA,* Case No. 05–1224, DC Cir.). On August 2, 2010 (75 FR 45210), EPA proposed FIPs to Reduce Interstate Transport of Fine Particulate Matter and Ozone to replace CAIR; however, that rule is not yet final. In the meantime, consistent with the Court's orders, EPA is implementing CAIR by approving State SIP revisions that are consistent with CAIR (such as the provisions setting State SO_2 and NO_X budgets for the CAIR trading programs) in order to "temporarily preserve" the environmental benefits achievable under the CAIR trading programs.

C. CAIR Cap-and-Trade Programs

The CAIR NO_X annual and ozone season model trading rules both largely mirror the structure of the NO_X Budget model trading rule in 40 CFR Part 96, subparts A through I. While the provisions of the NO_X annual and ozone season model rules are similar, there are some differences. For example, the NO_X annual model rule (but not the NO_X ozone season model rule) provides for a CSP, which is discussed below and under which allowances may be awarded for early reductions of NO_X annual emissions. As a further example, the NO_X ozone season model rule reflects the fact that the CAIR NO_X Ozone Season Trading Program replaces the NO_X Budget Trading Program after the 2008 ozone season and is coordinated with the NO_X SIP Call program. The NO_X ozone season model rule provides incentives for early emissions reductions by allowing banked, pre-2009 NO_X Budget Trading Program allowances to be used for compliance in the CAIR NO_X ozone season trading program. In addition, States have the option of continuing to meet their NO_X SIP Call requirements by participating in the CAIR NO_X Ozone Season Trading Program and including all their NO_X Budget trading sources in that program.

The provisions of the CAIR SO_2 model rule are also similar to the provisions of the NO_X annual and ozone season model rules. However, since CAA title IV establishes an ongoing Acid Rain cap-and-trade program for SO_2 and not for NOx, the model rule for SO_2 must additionally be coordinated with the Acid Rain Program. The SO_2 model rule uses the title IV allowances for compliance, with each allowance allocated for 2010–2014 authorizing only 0.50 ton of emissions and each allowance allocated for 2015 and thereafter authorizing only 0.35 ton of emissions. Banked title IV allowances allocated for years before 2010 can be used at any time in the CAIR SO_2 cap-and-trade program, with each such allowance authorizing one ton of emissions. Title IV allowances are to be freely transferable among sources covered by the Acid Rain Program and sources covered by the CAIR SO_2 cap-and-trade program.

EPA used the CAIR model trading rules as the basis for the trading programs in the CAIR FIPs. The CAIR FIP trading rules are virtually identical to the CAIR model trading rules, with changes made to account for Federal rather than State implementation. The CAIR model SO_2, NO_X annual, and NO_X ozone season trading rules and the respective CAIR FIP trading rules are designed to work together as integrated SO_2, NO_X annual, and NO_X ozone season trading programs.

In the SIP revision EPA is approving, Indiana has chosen to implement its CAIR budgets by requiring EGUs to participate in EPA-administered cap-and-trade programs for SO_2, NO_X annual, and NO_X ozone season emissions. Indiana has adopted State rules for a full SIP revision that adopts, with certain allowed changes discussed below, the CAIR model cap-and-trade rules for SO_2, NO_X annual, and NO_X ozone season emissions. Finally, Indiana's rules provide that non-EGUs that were required to participate in the NO_X Budget Trading Program must participate in the CAIR NO_X Ozone Season Trading Program.

D. Applicability Provisions

In general, the CAIR model trading rules apply to any stationary, fossil-fuel-fired boiler or stationary, fossil-fuel-fired combustion turbine serving at any time, since the later of November 15, 1990, or the start-up of the unit's combustion chamber, a generator with nameplate capacity of more than 25 megawatts producing electricity for sale.

States have the option of bringing in, for the CAIR NO_X Ozone Season Trading Program only, those units in the State's NO_X Budget Trading Program that are not EGUs as defined under CAIR. EPA advises States exercising this option to add the applicability provisions in the State's NO_X Budget trading rule for non-EGUs to the applicability provisions in 40 CFR 96.304 in order to include in the CAIR NO_X Ozone Season Trading Program all units required to be in the State's NO_X Budget Trading Program that are not already included under 40 CFR 96.304. Under this option, the CAIR NO_X Ozone Season Trading Program must cover all large industrial boilers and combustion turbines, as well as any small EGUs (*i.e.,*

[1] The Court also determined that the CAIR trading programs were unlawful (*id.* at 906–8) and that the treatment of title IV allowances in CAIR was unlawful (*id.* at 921–23). For the same reason that EPA is approving the provisions of Indiana's SIP revision that use the SO_2 and NO_X budgets set in CAIR, EPA is also approving, as discussed below, Indiana's SIP revision to the extend the SIP revision adopts the CAIR trading programs, including the provisions addressing applicability, allowance allocations, and the use of title IV allowances.

units serving a generator with a nameplate capacity of 25 megawatts or less) that the State previously required to be in the NO_X Budget Trading Program. Indiana has chosen to expand the applicability provisions of the CAIR NO_X Ozone Season Trading Program to include all non-EGUs that were subject to the State's NO_X Budget Trading Program. Indiana's February 28, 2007, abbreviated SIP submittal did not include (or modify) certain definitions that are necessary in order to expand the CAIR NO_X Ozone applicability to all NO_X Budget Trading units. Indiana's June 29, 2009, submittal includes these definitions and modifications. These definitions are part of today's approval and are discussed in more detail under Section H. (Deficiencies in the State's submittal and the State's subsequent responses).

E. Individual Opt-in Units

The opt-in provisions of the CAIR SIP model trading rules allow certain non-EGUs (*i.e.,* boilers, combustion turbines, and other stationary fossil-fuel-fired devices) that do not meet the applicability criteria for a CAIR trading program to participate voluntarily in (*i.e.,* opt into) the CAIR trading program. A non-EGU may opt into one or more of the CAIR trading programs. In order to qualify to opt into a CAIR trading program, a unit must vent all emissions through a stack and be able to meet monitoring, recordkeeping, and recording requirements of 40 CFR part 75. The owners and operators seeking to include such a unit in a CAIR trading program must apply for a CAIR opt-in permit. If the unit is issued a CAIR opt-in permit, the unit becomes a CAIR unit, is allocated allowances, and must meet the same allowance-holding and emissions monitoring and reporting requirements as other units subject to the CAIR trading program. The opt-in provisions provide for two methodologies for allocating allowances for opt-in units, one methodology that applies to opt-in units in general and a second methodology that allocates allowances only to opt-in units that the owners and operators intend to repower before January 1, 2015.

States have several options concerning the opt-in provisions. States may adopt the CAIR opt-in provisions entirely or may adopt them but exclude one of the methodologies for allocating allowances. States may also decline to adopt the opt-in provisions at all.

Consistent with this flexibility, Indiana has chosen to allow non-EGUs meeting certain requirements to participate in the CAIR NO_X Annual Trading Program, the CAIR NO_X Ozone Season Trading Program, and the CAIR SO_2 Trading Program. EPA approved Indiana's earlier version of rules authorizing these opt-ins (72 FR 59480). The complete set of rules governing CAIR NO_X annual, CAIR SO_2, and CAIR NO_X ozone season opt-in units in Indiana are contained in 326 IAC 24–1–12, 326 IAC 24–2–11, and 326 IAC 24–3–12, respectively. Indiana's June 29, 2009, submittal includes some modifications to these parts. These modifications are part of today's approval.

F. Deficiencies in the State's February 28, 2007, Submittal and the State's Subsequent Responses

EPA found several deficiencies in Indiana's February 28, 2007, submittal and communicated these deficiencies to IDEM staff in August and September of 2007. The deficiencies and the State's subsequent responses to correct them are discussed in detail below. All responses to the deficiencies were provided in the State's June 29, 2009, submittal.

EPA found that Indiana needed to revise 326 IAC 24–3–1 in the following manner:

"Indiana needs to revise, in subsection (b), 'CAIR NO_X ozone season units as follows:' to read 'CAIR NO_X ozone season units under subsection 1(a)(1) or (3)' and revise, in subsections (b)(1), (2), and (3), 'under subsection (a)' to read 'under subsection (a)(1) or (3).'";

Indiana has made these changes verbatim; therefore, these deficiencies have been addressed and EPA concludes that the revisions to 326 IAC 24–3–1 are approvable.

EPA also found that Indiana needed to amend 326 IAC 24–3–2 by revising the definitions of "commence operation," "fossil-fuel-fired," and "unit."

IDEM addressed all of the deficiencies that EPA identified regarding the terms "commence operation," "fossil-fuel-fired," and "unit" at 326 IAC 24–3–2 (33), (44), and (80). EPA finds these revisions approvable.

EPA found that Indiana needed to add the definition of "electricity for firm sale to the electric grid," to read as follows:

"Electricity for firm sale to the electric grid means electricity for sale where the capacity involved is intended to be available at all times during the period covered by a guaranteed commitment to deliver, even under adverse conditions."

The State has added the following definition at 326 IAC 24–3–2 (38):

"'Electricity for sale under a firm contract to the electric grid' means electricity for sale where the capacity involved is intended to be available at all times during the period covered by the guaranteed commitment to deliver, even under adverse conditions."

EPA asked IDEM for clarification concerning the phrase "for sale under a firm contract" as opposed to the model language "for firm sale." On September 25, 2009, IDEM responded that the language originated in Indiana's NO_X SIP Call; therefore, all sources subject to the applicability of the NO_X Budget Trading Program would also be subject to the applicability of the CAIR NO_X Ozone Season Trading Program. Because there is no applicability gap for affected sources, IDEM has addressed this deficiency. EPA therefore finds that the addition of the term "electricity for sale under a firm contract to the electric grid" to 326 IAC 24–3–2 is approvable.

EPA found that Indiana needed to revise the definition of "large affected unit" to add, after clause (B):

"(C) For units other than cogeneration units commencing operation: (i) Before January 1, 1997, a unit serving a generator during 1995 or 1996 that had a nameplate capacity greater than twenty-five (25) megawatts and produced electricity for sale under a firm contract to the electric grid; (ii) on or after January 1, 1997, and before January 1, 1999, a unit serving a generator during 1997 or 1998 that had a nameplate capacity greater than twenty-five (25) megawatts and producing electricity for sale under a firm contract to the electric grid; or (iii) on or after January 1, 1999, a unit serving a generator at any time that has a nameplate capacity greater than twenty-five (25) megawatts and produces electricity for sale. (D) For cogeneration units commencing operation: (i) Before January 1, 1997, a unit serving a generator during 1995 or 1996 that had a nameplate capacity greater than twenty-five (25) megawatts and failing to qualify as an unaffected unit for 1995 or 1996 under the acid rain program; (ii) in 1997 or 1998, a unit serving a generator during 1997 or 1998 with a nameplate capacity greater than twenty-five (25) megawatts and failing to qualify as an unaffected unit for 1997 or 1998 under the acid rain program; or (iii) on or after January 1, 1999, a unit serving at any time as a generator with a nameplate capacity greater than twenty-five (25) megawatts and failing to qualify as an unaffected unit under the acid rain program for any year."

IDEM has made all the appropriate changes at 326 IAC 24–3–2 (51) with minor wording changes, which include the clarification of the phrase, "(C) For units other than cogeneration units that are not already subject to this rule under section 1(a)(1) or 1(a)(3) of this rule commencing operation * * *." and a phrase at the end of the rule that reads, "The term does not include a unit subject to 326 IAC 10–3." At 326 IAC 24–3–2 (51)(C)(iii), Indiana's rule ends with, "for sale under a firm contract to the electric grid," which differs from the

model rule which ends with, "for sale." EPA asked for clarification of the phrase, "for sale under a firm contract to the electric grid." On September 25, 2009, IDEM stated that, although the language differs slightly, all sources subject to the NO_X Budget Trading Program would also be subject to the CAIR NO_X Ozone season Trading Program. Because there is no applicability gap for affected sources, and because other revisions Indiana has made serve to clarify the existing rule, EPA finds that the revision of the term, "large affected unit" in 326 IAC 24–3–2 is approvable.

G. Federal Definition of "Biomass" in Reference to "Cogeneration Unit"

EPA changed the definition of "cogeneration unit" as it applies to CAIR, CAIR FIPs, and the CAIR model cap-and-trade rules in 72 FR 59190. Specifically, EPA revised the calculation methodology for the efficiency standard in the cogeneration unit definition to exclude energy input from biomass. At 326 IAC 24–1–2 (8), 326 IAC 24–2–2 (8), and 326 IAC 24–3–2 (8), Indiana has made this change verbatim. EPA finds the addition of the term "biomass" to the SIP approvable.

H. The State's Complete CAIR Regulations

As discussed previously, EPA granted a limited approval to Indiana's abbreviated SIP on October 22, 2007. This action was a result of the State's request on September 20, 2007, that EPA act on a portion of its February 28, 2007, submittal. Consequently, EPA approved an abbreviated SIP revision for Indiana which addressed the applicability provisions for the NO_X ozone season trading programs and supporting definitions of terms, the methodology to be used to allocate NO_X annual and ozone season NO_X allowances and supporting definitions of terms, the CSP provisions for the NO_X annual trading program, and provisions for SO_2 and NO_X opt-in units, all under the CAIR FIP.

The State's June 29, 2009, submittal was intended to satisfy requirements that would allow us to approve Indiana's CAIR regulations so as to transition from an abbreviated SIP with limited approval to a full SIP with full approval. Indiana addressed the deficiencies that EPA found with its existing CAIR regulations and also adopted the Federal definition of "biomass" as it pertains to "cogeneration unit."

However, it was not clear in the June 29, 2009, submittal that IDEM was requesting full approval of the CAIR rules contained in 326 IAC 24–1, 326 IAC 24–2, and 326 IAC 24–3. On December 9, 2009, IDEM sent a letter to EPA clarifying that such was its intent. Therefore, inasmuch as the State has cured the identified deficiencies and as such is the State's intent, we are approving Indiana's CAIR regulations in their entirety for incorporation into the SIP.

I. NO_X Reduction Program for Specific Source Categories—Applicability

On February 28, 2007, Indiana also submitted minor revisions to 326 IAC 10–3, "NO_X Reduction Program for Specific Source Categories." Namely, the revisions pertain to the "Applicability" portion of this rule. The revisions refer to 326 IAC 24 and 326 IAC 24–3. The reference to 326 IAC 24–3 clarifies that 326 IAC 10–3–1 applies to any other blast furnace gas fired boilers with a heat input greater than 250,000,000 Btu per hour that is not subject to 326 IAC 10–4 or 326 IAC 24–3. As this revision ensures that all applicable sources are covered, EPA finds it approvable. The reference to 326 IAC 24 clarifies that the monitoring, recordkeeping, and reporting requirements under section 4 and 5 of 326 IAC 10–3–1 does not apply to a unit that opts into the NO_X Budget Trading Program under 326 IAC 10–4 or 326 IAC 24. As the State's CAIR has its own set of monitoring, recordkeeping, and reporting requirements, EPA finds this revision to be approvable.

J. Sunset Provision

EPA did not act on 326 IAC 10–4–16, "Sunset," when Indiana submitted the rule as part of its original CAIR package on February 28, 2007. We are approving this rule into the Indiana SIP today, and it reads:

> "Sec. 16. (a) Sections 1 through 15 of this rule shall not apply to any control period in 2009 or thereafter. The 2009 NO_X allowances allocated under section 9 of this rule remain in effect for purposes of the Clean Air Interstate Rule (CAIR) NO_X ozone season trading program in 326 IAC 24–3.
>
> (b) By December 31, 2008, the department shall allocate any remaining allowances for the years 2004 through 2008 in the EGU or large affected unit new unit set-aside or the energy efficiency and renewable energy set-aside to the relevant existing NO_X budget units on a pro rata basis. The allowances from the energy efficiency and renewable energy set-aside shall be allocated to existing large affected units."

Approval of the termination of the NO_X Budget Trading Program provision ensures that there are no conflicts between allocations made under the NO_X Budget Trading Program and allocations made under the CAIR NO_X Ozone Season Trading Program. The NO_X SIP Call requirements will now be met through the implementation of CAIR.

VI. Final Action

EPA is approving revisions to Indiana's CAIR, which the State submitted on June 29, 2009. The rules supplement the State's original CAIR, for which EPA promulgated limited approval on October 22, 2007 (72 FR 59480). The State has corrected deficiencies in its original CAIR submittal, and has made appropriate revisions that align State and Federal definitions for "cogeneration unit" and "biomass," as contained in 72 FR 59190. In addition, EPA is approving into the Indiana SIP the remainder of Indiana's CAIR regulations upon which we did not previously act. EPA is also approving the applicability provisions of Indiana's NO_X Reduction Program for Specific Source Categories, as well as the sunset provision from Indiana's NO_X Budget Trading Program. Lastly, EPA is approving minor wording, formatting, and typographical changes contained in the State's submittal; since these changes serve to clarify the existing rules or to correct minor errors, EPA finds them approvable. With this approval, Indiana has transitioned from an abbreviated CAIR SIP with limited approval to a full SIP with full approval. After the effective date of this direct final rule, Indiana will no longer be subject to elements of CAIR FIPs. This action causes the CAIR FIPs with regard to sulfur dioxide (SO_2), NO_X annual, and NO_X ozone season emissions by Indiana sources to be automatically withdrawn.

Specifically, EPA is approving the following rules, which were submitted on June 29, 2009: 326 IAC 24–1–2, 326 IAC 24–1–7, 326 IAC 24–1–8, 326 IAC 24–1–9, 326 IAC 24–1–12, 326 IAC 24–2–2, 326 IAC 24–2–7, IAC 24–2–8, IAC 24–2–11, IAC 24–3–1, IAC 24–3–2, IAC 24–3–7, IAC 24–3–8, IAC 24–3–9, IAC 24–3–12. The rules became effective State-wide on June 11, 2009.

EPA is also approving the remainder of the State's CAIR regulations, which were submitted on February 28, 2007. These rules include: 326 IAC 24–1–1, 326 IAC 24–1–3, 326 IAC 24–1–4, 326 IAC 24–1–5, 326 IAC 24–1–6, 326 IAC 24–1–10, 326 IAC 24–1–11, 326 IAC 24–2–1, 326 IAC 24–2–3, 326 IAC 24–2–4, 326 IAC 24–2–5, 326 IAC 24–2–6, 326 IAC 24–2–9, 326 IAC 24–2–10, 326 IAC 24–3–3, 326 IAC 24–3–4, 326 IAC 24–3–5, 326 IAC 24–3–6, 326 IAC 24–3–10, and 326 IAC 24–3–11. These rules became effective State-wide on February 25, 2007.

As previously mentioned, EPA is further approving revisions submitted on February 28, 2007, pertaining to the State's Nitrogen Oxide Reduction Program for Specific Source Categories, Applicability provisions as contained in 326 IAC 10–3–1. This revision was effective State-wide on February 25, 2007. Lastly, EPA is approving the sunset provision in their NO_X Budget Trading Program; this specific provision is contained in 326 IAC 10–4–16. This rule was submitted on February 28, 2007, and became effective State-wide on February 25, 2007.

We are publishing this action without prior proposal because we view this as a noncontroversial amendment and anticipate no adverse comments. However, in the Proposed Rules section of this **Federal Register** publication, we are publishing a separate document that will serve as the proposal to approve the State plan if relevant adverse written comments are filed. This rule will be effective January 28, 2011 without further notice unless we receive relevant adverse written comments by December 29, 2010. If we receive such comments, we will withdraw this action before the effective date by publishing a subsequent document that will withdraw the final action. All public comments received will then be addressed in a subsequent final rule based on the proposed action. The EPA will not institute a second comment period; therefore, any parties interested in commenting on this action should do so at this time. If we do not receive any comments, this action will be effective January 28, 2011.

VII. Statutory and Executive Order Reviews

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the CAA and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve State choices, provided that they meet the criteria of the CAA. Accordingly, this action merely approves State law as meeting Federal requirements and does not impose additional requirements beyond those imposed by State law. For that reason, this action:

- Is not a "significant regulatory action" subject to review by the Office of Management and Budget under Executive Order 12866 (58 FR 51735, October 4, 1993);
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- Does not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
- Is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA; and
- Does not provide EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, this rule does not have Tribal implications as specified by Executive Order 13175 (65 FR 67249, November 9, 2000), because the SIP is not approved to apply in Indian country located in the State, and EPA notes that it will not impose substantial direct costs on Tribal governments or preempt Tribal law.

The Congressional Review Act, 5 U.S.C. 801 *et seq.,* as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. EPA will submit a report containing this action and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register.** A major rule cannot take effect until 60 days after it is published in the **Federal Register.** This action is not a "major rule" as defined by 5 U.S.C. 804(2).

Under section 307(b)(1) of the CAA, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by January 28, 2011. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this action for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. Parties with objections to this direct final rule are encouraged to file a comment in response to the parallel notice of proposed rulemaking for this action published in the Proposed Rules section of today's **Federal Register**, rather than file an immediate petition for judicial review of this direct final rule, so that EPA can withdraw this direct final rule and address the comment in the proposed rulemaking. This action may not be challenged later in proceedings to enforce its requirements. (*See* section 307(b)(2).)

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by reference, Intergovernmental relations, Nitrogen dioxide, Ozone, Particulate matter, Reporting and recordkeeping requirements, Sulfur oxides.

Dated: November 15, 2010.

Susan Hedman,

Regional Administrator, Region 5.

■ 40 CFR part 52 is amended as follows:

PART 52—[AMENDED]

■ 1. The authority citation for part 52 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

Subpart P—Indiana

§ 52.35 [Amended]

■ 2. Section 52.35 is amended by:

■ a. In paragraph (d)(1), by adding, after the word "are:", the words "Indiana, and"; and

■ b. In paragraph (d)(2), by adding, after the words "chapter, are:", the words "Indiana, and".

§ 52.36 [Amended]

■ 3. Section 52.36 is amended in paragraph (c) by adding, after the word "are:", the words "Indiana, and".

■ 4. In § 52.770, the table in paragraph (c) is amended by:

■ a. Revising the entries for Article 10, sections 10–3 and 10–4.

■ b. Revising the entries for Article 24, sections 24–1, 24–2 and 24–3.

■ The revisions read as follows:

§ 52.770 Identification of plan.

Approval and Promulgation of Air Quality Implementation Plans; Maryland; Control of Volatile Organic Compound Emissions From Industrial Solvent Cleaning Operations; Withdrawal of Direct Final Rule

AGENCY: Environmental Protection Agency (EPA).

ACTION: Withdrawal of direct final rule.

SUMMARY: Due to an adverse comment, EPA is withdrawing the direct final rule to approve revisions to Maryland's State Implementation Plan (SIP). This SIP revision consists of an addition to Maryland's Volatile Organic Compounds from Specific Processes Regulation. Maryland Department of the Environment (MDE) adopted standards for industrial solvent cleaning operations that satisfy the reasonably available control technology (RACT) requirements for sources of volatile organic compounds (VOCs) covered by control techniques guidelines (CTG). In the direct final rule published on September 29, 2010 (75 FR 59973), we stated that if we received any adverse comments by October 29, 2010, the rule would be withdrawn and would not take effect. EPA received an adverse comment within the comment period. EPA will address the comment received in a subsequent final action based upon the proposed action also published on September 29, 2010 (75 FR 60013). EPA will not institute a second comment period on this action.

DATES: The direct final rule published at 75 FR 59973, September 29, 2010, is withdrawn as of November 29, 2010.

ADDRESSES: EPA has established docket number EPA–R03–OAR–2010–0594 for this action. The index to the docket is available electronically at *http://www.regulations.gov* and in hard copy at Air Protection Division, U.S. Environmental Protection Agency, Region III, 1650 Arch Street, Philadelphia, Pennsylvania 19103.

Determinations of Attainment by the Applicable Attainment Date for the Hayden, Nogales, Paul Spur/Douglas PM_{10} Nonattainment Areas, Arizona; Withdrawal of Direct Final Rule

AGENCY: Environmental Protection Agency (EPA).

ACTION: Withdrawal of direct final rule.

SUMMARY: Due to the receipt of an adverse comment, EPA is withdrawing the November 2, 2010 (75 FR 67220), direct final rule determining that the Hayden, Nogales, and Paul Spur/Douglas areas in Arizona had attained the national ambient air quality standard (NAAQS) for particulate matter with an aerodynamic diameter of less than or equal to ten microns by the applicable attainment date. On the basis of this determination, EPA concluded that these three "moderate" nonattainment areas were not subject to reclassification. In the direct final rule, EPA stated that if adverse comments were submitted by December 2, 2010, the rule would be withdrawn and not take effect. On November 3, 2010, EPA received a comment. EPA believes this comment is adverse and, therefore, EPA is withdrawing the direct final rule. EPA will address the comment in a subsequent final action based upon the proposed action also published on November 2, 2010 (75 FR 67303). EPA will not institute a second comment period on this action.

DATES: The direct final rule published at 75 FR 67220 on November 2, 2010, is withdrawn as of November 29, 2010.

Disapproval and Promulgation of Air Quality Implementation Plans; Indiana; Addition of Incentive for Regulatory Flexibility for Its Environmental Stewardship Program

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: On July 6, 2007, the Indiana Department of Environmental Management (IDEM) submitted a request to EPA to amend its State Implementation Plan (SIP) to add incentives for regulatory flexibility for participants in its Environmental Stewardship Program (ESP) and Comprehensive Local Environmental Action Network (CLEAN) Community Challenge Program. Indiana requested that EPA approve the following for ESP and CLEAN members: The incorporation by reference of certain incentives under the National Environmental Performance Track (NEPT) Program, monthly averaging of volatile organic compound (VOC) coating limits, and the processing of pollution prevention projects as minor permit revisions. EPA proposed to disapprove these three incentives on August 19, 2010, and received no comments.

DATES: This final rule is effective on December 29, 2010.

ADDRESSES: EPA has established a docket for this action under Docket ID Nos. EPA–R05–OAR–2007–0642. All documents in the docket are listed on the *http://www.regulations.gov* Web site. Although listed in the index, some information is not publicly available, *i.e.,* Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the Internet and will be publicly available only in hard copy form. Publicly available docket materials are available either electronically through *http://www.regulations.gov* or in hard copy at the Environmental Protection Agency, Region 5, Air and Radiation Division, 77 West Jackson Boulevard, Chicago, Illinois 60604. This facility is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding Federal holidays. We recommend that you telephone Steven Rosenthal, Environmental Engineer, at (312) 886–6052 before visiting the Region 5 office.

FOR FURTHER INFORMATION CONTACT: Steven Rosenthal, Environmental Engineer, Attainment Planning and Maintenance Section, Air Programs Branch (AR–18J), Environmental Protection Agency, Region 5, 77 West Jackson Boulevard, Chicago, Illinois 60604, (312) 886–6052.

SUPPLEMENTARY INFORMATION: Throughout this document whenever "we," "us," or "our" is used, we mean EPA. This **SUPPLEMENTARY INFORMATION** section is arranged as follows:

I. What public comments were received on the proposed approval and what is EPA's response?

EPA's August 19, 2010, proposed action at 75 FR 51188 provided a 30-day public comment period. We did not receive any comments on the proposed action.

II. What action is EPA taking today and what is the reason for this action?

EPA is disapproving IDEM's request for an amendment to the Indiana SIP for incentives for regulatory flexibility for its ESP and CLEAN Community Challenge Program. EPA is disapproving the incorporation by reference of Federal incentives for NEPT members because EPA has discontinued its NEPT program. EPA is disapproving monthly averaging of VOC coating limits because this would constitute a relaxation that could exacerbate high ozone levels and contribute to violations of the ozone standard. EPA is disapproving the third incentive, which affects public notice requirements for pollution prevention projects, because it relaxes the existing SIP-approved public notice requirements and is inconsistent with EPA minor new source rule requirements.

III. Statutory and Executive Order Reviews

Executive Order 12866: Regulatory Planning and Review

Under Executive Order 12866 (58 FR 51735, October 4, 1993), this action is not a "significant regulatory action" and, therefore, is not subject to review by the Office of Management and Budget.

Executive Order 13211: Actions That Significantly Affect Energy Supply, Distribution, or Use

Because it is not a "significant regulatory action" under Executive Order 12866 or a "significant energy action," this action is also not subject to Executive Order 13211, "Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use" (66 FR 28355, May 22, 2001).

Regulatory Flexibility Act

This action merely approves State law as meeting Federal requirements and imposes no additional requirements beyond those imposed by State law. Accordingly, the Administrator certifies that this rule will not have a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*).

Unfunded Mandates Reform Act

Because this rule approves pre-existing requirements under State law and does not impose any additional enforceable duty beyond that required by State law, it does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4).

Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This rule also does not have Tribal implications because it will not have a substantial direct effect on one or more Indian Tribes, on the relationship between the Federal Government and Indian Tribes, or on the distribution of power and responsibilities between the Federal Government and Indian Tribes, as specified by Executive Order 13175 (59 FR 22951, November 9, 2000).

Executive Order 13132: Federalism

This action also does not have Federalism implications because it does not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government, as specified in Executive Order 13132 (64 FR 43255, August 10, 1999). This action merely approves a State rule implementing a Federal standard, and does not alter the relationship or the distribution of power and responsibilities established in the Clean Air Act (CAA).

Executive Order 13045: Protection of Children From Environmental Health and Safety Risks

This rule also is not subject to Executive Order 13045 "Protection of Children from Environmental Health Risks and Safety Risks" (62 FR 19885, April 23, 1997), because it approves a State rule implementing a Federal Standard.

National Technology Transfer Advancement Act

In reviewing State submissions, EPA's role is to approve State choices, provided that they meet the criteria of the CAA. In this context, in the absence of a prior existing requirement for the State to use voluntary consensus standards (VCS), EPA has no authority to disapprove a State submission for failure to use VCS. It would thus be inconsistent with applicable law for EPA, when it reviews a State submission, to use VCS in place of a State submission that otherwise satisfies the provisions of the CAA. Thus, the requirements of section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) do not apply.

Paperwork Reduction Act

This rule does not impose an information collection burden under the provisions of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

Congressional Review Act

The Congressional Review Act, 5 U.S.C. 801 *et seq.,* as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. EPA will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. A major rule cannot take effect until 60 days after it is published in the **Federal Register**. This action is not a "major rule" as defined by 5 U.S.C. 804(2).

Under section 307(b)(1) of the CAA, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by January 28, 2011. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this rule for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements. (*See* section 307(b)(2).)

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by reference, Intergovernmental relations, Ozone, Reporting and recordkeeping requirements.

RIN 3090–AJ09

Federal Travel Regulation; Removal of Privately Owned Vehicle Rates; Privately Owned Automobile Mileage Reimbursement When Government Owned Automobiles Are Authorized; Miscellaneous Amendments

AGENCY: Office of Governmentwide Policy, General Services Administration (GSA).

ACTION: Final rule.

SUMMARY: GSA is amending the Federal Travel Regulation (FTR) by removing the Privately Owned Vehicle (POV) rates from Section 301–10.303. These rates will be published on a periodic basis as FTR Bulletins by the Office of

Governmentwide Policy, Office of Travel, Transportation and Asset Management, and will be posted on the Internet at *http://www.gsa.gov/ftr.* This amendment also revises the reimbursement amount for travelers who are authorized to use a Government Owned Automobile (GOA) for temporary duty travel (TDY) and choose to use their privately owned automobile (POA) instead; updates the definition of "official station"; clarifies various provisions of Chapters 301, 302, and 303 regarding TDY and relocation travel; and makes certain grammatical corrections, where applicable.

DATES: *Effective Date:* This final rule is effective November 29, 2010.

Applicability Date: This final rule is applicable for official travel performed on or after December 29, 2010.

FOR FURTHER INFORMATION CONTACT: The Regulatory Secretariat (MVCB), 1275 First Street, NE., Washington, DC, 20417, (202) 501–4755, for information pertaining to status or publication schedules. For clarification of content, contact Mr. Cy Greenidge, Program Analyst, Office of Governmentwide Policy, at (202) 219–2349. Please cite FTR Amendment 2010–07; FTR case 2010–307.

SUPPLEMENTARY INFORMATION:

A. Background

Pursuant to 5 U.S.C. 5704(c), the Administrator of General Services has the responsibility to establish a mileage reimbursement rate based on the cost of travel by a Government vehicle when an employee on official business for the Government chooses to use a privately owned vehicle when a Government vehicle is authorized. This amendment, therefore, revises the reimbursement amount when travelers who are authorized to use a GOA choose to use their POA instead. This amendment also serves as notification to the public that all POV rates will be removed from the FTR and periodically published in FTR Bulletins; updates the definition of "official station"; clarifies what baggage expenses an agency may pay; clarifies that the employee is responsible for all additional expenses "that exceed the cost of the authorized method of transportation" when the employee chooses to travel via a different method of transportation than that which is authorized; requires agencies to establish policies regarding Seating Upgrade Programs in coach-class; and corrects grammatical errors.

Accordingly, this final rule amends the FTR by:

1. *Section 300–3.1*—Revising the term "official station".

2. *Section 301–10.6*—Clarifying that the employee will be responsible for all additional expenses that exceed the cost of the authorized method of transportation when the employee chooses to travel by a method of transportation other than that authorized by the agency.

3. *Section 301–10.124*—Correcting a grammatical error by removing the comma after "seat choice fee" in the last sentence and adding a regulatory citation.

4. *Section 301–10.301*—Clarifying how to compute mileage reimbursement.

5. *Section 301–10.303*—Revising the information pertaining to mileage reimbursement when the use of POV is determined to be advantageous to the Government.

6. *Section 301–10.304*—Revising the information in the heading pertaining to allowable expenses.

7. *Section 301–10.309*—Removing the reference to another chapter in this section.

8. *Section 301–10.310*—Revising the information pertaining to reimbursement for the use of a POA when a GOA is authorized and by removing all language pertaining to being committed to using a GOA.

9. *Section 301–12.1*—Revising reference to "official duty station" to read "official station."

10. *Section 301–12.2*—Revising subparagraph (d) in regard to checked baggage fee reimbursement.

11. *Section 301–30.5*—Revising reference to "official duty station" to read "official station."

12. *Section 301–70.102*—Adding paragraph (k) requiring agencies to establish policies regarding Seating Upgrade Programs in coach-class.

13. *Section 301–70.200*—Removing paragraph (g) requiring agencies to develop policy in regard to defining a broader radius than the official station in which per diem or actual expenses will not be authorized.

14. *Section 301–70.502*—Revising reference to "official duty station" to read "official station."

15. *Appendix C to Chapter 301*—Revising reference to "official duty station" to read "official station," and updating the definition of official station.

16. *Appendix E to Chapter 301, Sections 302–1.1, 302–2.2, 302–2.6, 302–3.312, 302–7.1, 302–11.1, and 303–70.300*—Revising references to "official duty station" to read "official station."

B. Executive Order 12866

This is not a significant regulatory action and, therefore, was not subject to review under Section 6(b) of Executive Order 12866, Regulatory Planning and Review, dated September 30, 1993. This final rule is not a major rule under 5 U.S.C. 804.

C. Regulatory Flexibility Act

This final rule will not have a significant economic impact on a substantial number of small entities within the meaning of the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.* This final rule is also exempt from the Regulatory Flexibility Act per 5 U.S.C. 553 (a)(2) because it applies to agency management. However, this final rule is being published to provide transparency in the promulgation of Federal policies.

D. Paperwork Reduction Act

The Paperwork Reduction Act does not apply because the changes to the FTR do not impose recordkeeping or information collection requirements, or the collection of information from offerors, contractors, or members of the public that require the approval of the Office of Management and Budget (OMB) under 44 U.S.C. 3501, *et seq.*

E. Small Business Regulatory Enforcement Fairness Act

This final rule is also exempt from congressional review prescribed under 5 U.S.C. 801 since it relates solely to agency management and personnel.

List of Subjects in 41 CFR Parts 300–3, 301–10, 301–12, 301–30, 301–70, Chapter 301, Parts 302–1, 302–2, 302–3, 302–7, 302–11, and 303–70

Government employees, Travel and transportation expenses, Administrative practices and procedures.

Dated: October 21, 2010.

Martha Johnson,

Administrator of General Services.

■ For the reasons set forth in the preamble, under 5 U.S.C. chapter 57, subchapters I, II, and III, GSA amends 41 CFR parts 300–3, 301–10, 301–12, 301–30, 301–70, Appendices C and E to Chapter 301, 302–1, 302–2, 302–3, 302–7, 302–11, and 303–70 as set forth below:

PART 300–3—GLOSSARY OF TERMS

■ 1. The authority citation for 41 CFR part 300–3 continues to read as follows:

Authority: 5 U.S.C. 5707; 40 U.S.C 121(c); 49 U.S.C. 40118; 5 U.S.C. 5738; 5 U.S.C. 5741–5742; 20 U.S.C. 905(a); 31 U.S.C. 1353; E.O. 11609, as amended; 3 CFR, 1971–1975 Comp., p. 586, OMB Circular No. A–126, revised May 22, 1992.

■ 2. Amend § 300–3.1 by revising the definition of "official station" to read as follows:

§ 300–3.1 What do the following terms mean?

* * * * *

Official station—An area defined by the agency that includes the location where the employee regularly performs his or her duties or an invitational traveler's home or regular place of business (see § 301–1.2). The area may be a mileage radius around a particular point, a geographic boundary, or any other definite domain, provided no part of the area is more than 50 miles from where the employee regularly performs his or her duties or from an invitational traveler's home or regular place of business. If the employee's work involves recurring travel or varies on a recurring basis, the location where the work activities of the employee's position of record are based is considered the regular place of work.

* * * * *

PART 301–10—TRANSPORTATION EXPENSES

■ 3. The authority citation for 41 CFR part 301–10 continues to read as follows:

Authority: 5 U.S.C. 5707, 40 U.S.C. 121(c); 49 U.S.C. 40118, OMB Circular No. A–126, revised May 22, 1992.

§ 301–10.6 [Amended]

■ 4. Amend § 301–10.6 by removing the word "selected" and adding the word "authorized" in its place whenever it appears in the section heading and the text, and by adding the words "which exceed the cost of the authorized method of transportation" after the word "incur".

§ 301–10.124 [Amended]

■ 5. Amend § 301–10.124 in the last sentence, by removing the comma after "seat choice fee"; and adding "(see 301–70.102(k))" after the word "policy".

§ 301–10.301 [Amended]

■ 6. Amend § 301–10.301 by removing the words "prescribed in § 301–10.303 of this subpart".

■ 7. Revise § 301–10.303 to read as follows:

§ 301–10.303 What am I reimbursed when use of POV is determined by my agency to be advantageous to the Government?

You will be reimbursed an applicable mileage rate based on the type of POV you actually use (privately owned airplane, privately owned automobile, privately owned motorcycle). These rates will be published in an FTR bulletin and are also displayed on GSA's Web site (*http://www.gsa.gov/mileage*).

■ 8. Amend § 301–10.304 by revising the section heading to read as follows:

§ 301–10.304 What expenses are allowable in addition to the POV mileage rate allowances?

* * * * *

§ 301–10.309 [Amended]

■ 9. Amend § 301–10.309 in the first sentence by removing "(see § 301–10.303)".

■ 10. Revise § 301–10.310 to read as follows:

§ 301–10.310 What will I be reimbursed if I am authorized to use a Government owned automobile and I use a privately owned automobile instead?

You will be reimbursed based on a constructive mileage rate limited to the cost that would be incurred for use of a Government automobile. This rate will be published in an FTR bulletin available at *http://www.gsa.gov/ftr.* If your agency determines the cost of providing a GOA would be higher because of unusual circumstances, it may allow reimbursement not to exceed the mileage rate for a POA. In addition, you may be reimbursed other allowable expenses as provided in § 301–10.304.

PART 301–12—MISCELLANEOUS EXPENSES

■ 11. The authority citation for 41 CFR part 301–12 continues to read as follows:

Authority: 5 U.S.C. 5707.

§ 301–12.1 [Amended]

■ 12. Amend § 301–12.1, in the third column of the table, in the second entry under the heading "Special expenses of foreign travel" by removing the words "official duty station" and adding the words "official station" in its place.

■ 13. Revise § 301–12.2(d) to read as follows:

§ 301–12.2 What baggage expenses may my agency pay?

* * * * *

(d) All fees pertaining to the first checked bag. In addition, charges relating to the second and subsequent bags may be reimbursed when the agency determines those expenses necessary and in the interest of the Government (*see* §§ 301–70.300, 301–70.301). Travelers should verify their agency's current policies and procedures regarding excess baggage prior to traveling; and

* * * * *

PART 301–30—EMERGENCY TRAVEL

■ 14. The authority citation for 41 CFR part 301–30 continues to read as follows:

Authority: 5 U.S.C. 5707.

§ 301–30.5 [Amended]

■ 15. Amend § 301–30.5(a)(1) by removing the word "duty".

PART 301–70—INTERNAL POLICY AND PROCEDURE REQUIREMENTS

■ 16. The authority citation for 41 CFR part 301–70 continues to read as follows:

Authority: 5 U.S.C. 5707; 40 U.S.C. 121(c); Sec 2, Pub. L. 105–264, 112 Stat. 2350 (5 U.S.C. 5701, note), OMB Circular No. A–126, revised May 22, 1992, and OMB Circular No. A–123, Appendix B, revised January 15, 2009.

■ 17. Amend § 301–70.102 by removing the word "and" at the end of paragraph (i); removing the period at the end of paragraph (j) and adding "; and" in its place; and adding paragraph (k) to read as follows:

§ 301–70.102 What governing policies must we establish for authorization and payment of transportation expenses?

* * * * *

(k) Develop and publish internal guidance regarding Seating Upgrade Programs in coach-class (see § 301–10.124).

§ 301–70.200 [Amended]

■ 18. Amend § 301–70.200–

■ a. In paragraph (f) by adding the word "and" after "case;";

■ b. By removing paragraph (g); and

■ c. By redesignating paragraph (h) as paragraph (g).

§ 301–70.502 [Amended]

■ 19. Amend § 301–70.502(a) by replacing the words "official duty station" with the words "official station" wherever it appears.

Appendix C to Chapter 301 [Amended]

■ 20. Amend Appendix C to Chapter 301, in the first table, under the heading "Traveler Identification"—

■ a. By removing the entry "Official Duty Station" and adding the entry "Official Station" in its place in the first column under the heading "Group name", and in the third column under the heading "Description" wherever it appears.

■ b. In the third column of the table under the heading "Description", by removing the entry "Either the corporate

limits of city/town or the reservation, station, established area where stationed" and adding "The location where the employee regularly performs his or her duties or an invitational traveler's home or regular place of business. If the employee's work involves recurring travel or varies on a recurring basis, the location where the work activities of the employee's position of record are based is considered the employee's official station" in its place.

Appendix E to Chapter 301 [Amended]

■ 21. Amend Appendix E to Chapter 301, under the heading "Food and Drink", in the first bulleted entry, by removing the words "official duty stations" and adding the words "official stations" in its place.

PART 302–1—GENERAL RULES

■ 22. The authority citation for 41 CFR part 302–1 continues to read as follows:

Authority: 5 U.S.C. 5738; 20 U.S.C. 905(a).

§ 302–1.1 [Amended]

■ 23. Amend § 302–1.1(a) by removing the words "official duty station" and adding the words "official station" in its place.

PART 302–2—EMPLOYEES ELIGIBILITY REQUIREMENTS

■ 24. The authority citation for 41 CFR part 302–2 continues to read as follows:

Authority: 5 U.S.C. 5738; 20 U.S.C. 905(a).

§ 302–2.2 [Amended]

■ 25. Amend § 302–2.2 by removing the words "official duty station" and adding the words "official station" in its place wherever it appears in the section heading and the text.

§ 302–2.6 [Amended]

■ 26. Amend § 302–2.6 by removing from the section heading the words "official duty station" and adding the words "official station" in its place.

PART 302–3—RELOCATION ALLOWANCE BY SPECIFIC TYPE

■ 27. The authority citation for 41 CFR part 302–3 continues to read as follows:

Authority: 5 U.S.C. 5738; 20 U.S.C. 905(a).

§ 302–3.312 [Amended]

■ 28. Amend § 302–3.312 by removing from the section heading the words "official duty station" and adding the words "official station" in its place.

PART 302–7—TRANSPORTATION AND TEMPORARY STORAGE OF HOUSEHOLD GOODS AND PROFESSIONAL BOOKS, PAPERS, AND EQUIPMENT (PBP&E)

■ 29. The authority citation for 41 CFR part 302–7 continues to read as follows:

Authority: 5 U.S.C. 5738; 20 U.S.C. 905(a); E.O 11609, 36 FR 13747, 3 CFR, 1971–1973 Comp. p. 586.

§ 302–7.1 [Amended]

■ 30. Amend § 302–7.1—

■ a. In paragraph (a) by removing the words "official duty stations" and adding the words "official stations" in its place.

■ b. In paragraph (b) by removing the words "official duty station" and adding the words "official station" in its place.

PART 302–11—ALLOWANCES FOR EXPENSES INCURRED IN CONNECTION WITH RESIDENCE TRANSACTIONS

■ 31. The authority citation for 41 CFR part 302–11 continues to read as follows:

Authority: 5 U.S.C. 5738 and 20 U.S.C. 905(c).

§ 302–11.1 [Amended]

■ 32. Amend § 302–11.1(a) by removing the words "official duty station" and adding the words "official station" in its place wherever it appears.

PART 303–70—AGENCY REQUIREMENTS FOR PAYMENT OF EXPENSES CONNECTED WITH THE DEATH OF CERTAIN EMPLOYEES

■ 33. The authority citation for 41 CFR part 303–70 continues to read as follows:

Authority: 5 U.S.C. 5721–5738; 5741–5742; E.O. 11609, 3 CFR, 1971–1975 Comp., p. 586.

§ 303–70.300 [Amended]

■ 34. Amend § 303–70.300 by removing the words "official duty station" and adding the words "official station" in its place.

BILLING CODE 6820–14–P

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 76

[MB Docket No. 10–148; FCC 10–193]

Implementation of Section 203 of the Satellite Television Extension and Localism Act of 2010 (STELA); Amendments to Section 340 of the Communications Act

AGENCY: Federal Communications Commission.

ACTION: Final rule.

SUMMARY: In this document, the Commission modifies its satellite television "significantly viewed" rules to implement Section 203 of the Satellite Television Extension and Localism Act of 2010 (STELA). Section 203 of the STELA amends Section 340 of the Communications Act, which gives satellite carriers the authority to offer out-of-market but "significantly viewed" broadcast television network stations as part of their local service to subscribers. The STELA requires the Commission to promulgate final rules in this proceeding on or before November 24, 2010.

DATES: Effective December 29, 2010.

FOR FURTHER INFORMATION CONTACT: Evan Baranoff, *Evan.Baranoff@fcc.gov*, of the Media Bureau, Policy Division, (202) 418–2120.

SUPPLEMENTARY INFORMATION: This is a summary of the Commission's *Report and Order and Order on Reconsideration* (Order), FCC 10–193, adopted on Nov. 22, 2010, and released on Nov. 23, 2010. The full text of this document is available electronically via ECFS at *http://fjallfoss.fcc.gov/ecfs/* or may be downloaded at *http://hraunfoss.fcc.gov/edocs-public/attachmatch/FCC–10–130.pdf*. (Documents will be available electronically in ASCII, Word 97, and/or Adobe Acrobat.) This document is also available for public inspection and copying during regular business hours in the FCC Reference Center, Federal Communications Commission, 445 12th Street, SW., CY–A257, Washington, DC 20554. The complete text may be purchased from the Commission's copy contractor, 445 12th Street, SW., Room CY–B402, Washington, DC 20554. Alternative formats are available for people with disabilities (Braille, large print, electronic files, audio format), by sending an e-mail to *fcc504@fcc.gov* or calling the Commission's Consumer and Governmental Affairs Bureau at (202)

418–0530 (voice), (202) 418–0432 (TTY).

Summary of the Report and Order and Order on Reconsideration

I. Introduction

1. With this *Report and Order* (“*R&O*”), we modify our satellite television “significantly viewed” rules to implement Section 203 of the Satellite Television Extension and Localism Act of 2010 (STELA).[1] Section 203 of the STELA amends Section 340 of the Communications Act of 1934 (“Communications Act” or “Act”), which gives satellite carriers the authority to offer out-of-market but “significantly viewed” broadcast television stations as part of their local service to subscribers.[2] We initiated this proceeding on July 23, 2010 by issuing a Notice of Proposed Rulemaking (“*NPRM*”).[3] We received 20 comments and reply comments (from 17 parties) in response to our *NPRM*.[4] With this *R&O,* we satisfy the STELA’s mandate that the Commission promulgate final rules in this proceeding on or before November 24, 2010.[5] In addition, in this *Order on Reconsideration,* we dispose of the pending petition for reconsideration of the 2005 *SHVERA Significantly Viewed Report and Order*.[6]

2. Significantly viewed (“SV”) stations are television broadcast stations that the Commission has determined have sufficient over-the-air (*i.e.,* non-cable or non-satellite) viewing[7] to be considered local for certain purposes and so are not constrained by the boundary of the stations’ local market or Designated Market Area (“DMA”).[8] The individual TV station, or cable operator or satellite carrier that seeks to carry the station, may petition the Commission to obtain “significantly viewed” status for the station,[9] and placement on the SV List.[10] The designation of “significantly viewed” status allows a station assigned to one market to be treated as a “local” station with respect to a particular cable or satellite community[11] in another market, and, thus, enables it to be carried by cable or satellite in that community in the other market.[12] In general, SV status applies to only some communities or counties in a DMA and does not apply throughout an entire DMA. In contrast, the “local” station designation based on Nielsen’s assignment to a particular DMA applies to the entire market.[13] Whereas cable operators have had carriage rights for SV stations since 1972,[14] satellite carriers have had such authority only since 2004[15] and may only retransmit SV network stations to “eligible” satellite subscribers.[16] These satellite subscriber eligibility restrictions are intended to prevent satellite carriers from favoring an SV network station over the in-market (local) station affiliated with the same network.[17]

3. Section 203 of the STELA changes the restrictions on subscriber eligibility to receive SV network stations from

[1] The Satellite Television Extension and Localism Act of 2010 (STELA) sec. 203, Public Law 111–175, 124 Stat. 1218, 1245 (2010) (sec. 203 codified as amended at 47 U.S.C. 340, other STELA amendments codified in scattered sections of 17 and 47 U.S.C.). The STELA was enacted on May 27, 2010 (S. 3333, 111th Cong.). This proceeding to implement STELA sec. 203 (titled “Significantly Viewed Stations”), 124 Stat. at 1245, and the related statutory copyright license provisions in STELA sec. 103 (titled “Modifications to Statutory License for Satellite Carriers in Local Markets”), 124 Stat. at 1227–28, is one of a number of Commission proceedings that are required to implement the STELA.

[2] 47 U.S.C. 340. We note that the nature of SV carriage under Section 340 is permissive (and not mandatory), meaning a satellite carrier may choose to carry an SV station. The statute also requires that the SV station grant consent in order for its signal to be carried. *Id.* 340(d).

[3] *STELA–Significantly Viewed NPRM,* FCC 10–130, 75 FR 44198, July 28, 2010 (*NPRM*).

[4] We identify the list of commenters and reply commenters to this docket in Appendix. We also received *ex parte* submissions in this docket. All of the filings made in this docket are available to the public both online via the Commission’s Electronic Comment Filing System (“ECFS”) at *http://www.fcc.gov/cgb/ecfs/* and during regular business hours in the FCC Reference Center, Federal Communications Commission, 445 12th Street, SW., CY–A257, Washington, DC 20554.

[5] The STELA requires the Commission to implement the amendments within 270 days after the date of the enactment. STELA sec. 203(b). The STELA establishes February 27, 2010 as its effective date or “date of enactment,” even though the law was enacted by Presidential signature on May 27, 2010. STELA sec. 307. Congress passed four short-term extensions of the distant signal statutory copyright license (December 19, 2009, March 2, March 25 and April 15, 2010) before passing STELA to reauthorize the compulsory license for distant signal carriage for five years. STELA sec. 107(a).

[6] *SHVERA Significantly Viewed Report and Order,* FCC 05–187, 70 FR 76504, December 27, 2005. *See* DIRECTV and EchoStar Satellite L.L.C. (now Dish) Joint Petition for Reconsideration in MB Docket No. 05–49 (filed Jan. 26, 2006) (“*2006 DIRECTV–EchoStar Joint Petition*”).

[7] To qualify for significantly viewed status (*i.e.,* for placement on the significantly viewed list or “SV List,” *see* note 10, *infra*), an SV station can be either a “network” station or an “independent” station, with network stations requiring a higher share of viewing hours. 47 CFR 76.5(i)(1) and (2). The Commission’s rules define network station as one of the “three major national television networks” (*i.e.,* ABC, CBS or NBC). 47 CFR 76.5(j) and (k). Parties may demonstrate that stations are significantly viewed either on a community basis or on a county-wide basis. 47 CFR 76.54(b), (d).

[8] *See* 17 U.S.C. 122(j)(2)(A) (defining “local market”).

[9] *See* 47 CFR 76.5, 76.7, 76.54. A TV station, cable operator or satellite carrier that wishes to have a station designated significantly viewed must file a petition pursuant to the pleading requirements in 47 CFR 76.7(a)(1) and use the method described in 47 CFR 76.54 to demonstrate that the station is significantly viewed as defined in 47 CFR 76.5(i).

[10] The significantly viewed list or “SV List” identifies the list of stations the Commission has determined to be significantly viewed in specified counties and communities. The list applies to both cable and satellite providers. The Commission updates this list as necessary upon the appropriate demonstrations by stations or cable or satellite providers. A station, satellite carrier or cable operator may petition the Commission, either to add eligible stations or communities pursuant to 47 CFR 76.54, or to restrict carriage of eligible stations through application of the Commission’s network non-duplication or syndicated exclusivity rules in 47 CFR 76.122(a), (j) and 76.123(a), (k). Generally, a station’s SV status is only challenged when another station seeks to exercise its rights under the network non-duplication or syndicated program exclusivity rules, and the SV station asserts its SV status, which is an exception to both requirements. *See* 47 CFR 76.92(f) (SV exception in cable network non-duplication rules); 47 CFR 76.106(a) (SV exception in cable syndicated program exclusivity rules); 47 CFR 76.122(j) (SV exception in satellite network non-duplication rules); and 47 CFR 76.123(k) (SV exception to satellite syndicated program exclusivity rules). If a station’s SV status is challenged, and it is demonstrated that the station is no longer significantly viewed in a particular community or county, the station’s listing is modified to indicate that it is subject to programming deletions in those communities or counties. *See SHVERA Significantly Viewed Report and Order* at para. 14. The current SV List is available on the Media Bureau’s Web site at *http://www.fcc.gov/mb/*.

[11] *See* 47 CFR 76.5(dd) (defining cable “community unit”) and 76.5(gg) (defining a “satellite community”).

[12] For copyright purposes, significantly viewed status means that cable and satellite providers may carry the out-of-market but SV station with the reduced copyright payment obligations applicable to local (in-market) stations. *See* 17 U.S.C. 111(a), (c), (d), and (f), as amended by STELA sec. 104 (relating to cable statutory copyright license) and 122(a)(2), as amended by STELA sec. 103 (relating to satellite statutory copyright license).

[13] 17 U.S.C. 122(j)(2)(C) (defining DMA as “a designated market area, as determined by Nielsen Media Research and published in the 1999–2000 Nielsen Station Index Directory and Nielsen Station Index United States Television Household Estimates or any successor publication”).

[14] *See Cable Television Report and Order,* FCC 72–108 at para. 83, 37 FR 3252, February 3, 1972 (adopting the concept of “significantly viewed” signals to differentiate between otherwise out-of-market television stations “that have sufficient audience to be considered local and those that do not”).

[15] Section 202 of the Satellite Home Viewer Extension and Reauthorization Act of 2004 (SHVERA) created Section 340 of the Communications Act, which authorized satellite carriage of Commission-determined SV stations. *See* SHVERA sec. 202, Public Law 108–447, 118 Stat 2809, 3393 (2004) (codified in 47 U.S.C. 340). *See also SHVERA Significantly Viewed Report and Order.*

[16] *See* 47 U.S.C. 340(b) and 47 CFR 76.54(g) and (h). *See also infra* para. 8 (for background).

[17] 47 U.S.C. 340(b)(1) and (2). *See SHVERA Significantly Viewed Report and Order* at para. 94. The Copyright Act’s definitions of “network station” and “non-network station” will apply for purposes of determining subscriber eligibility to receive an SV network station. *See* 47 U.S.C. 339(d) and 47 U.S.C 122(j)(4), as amended, applying the definitions of such terms in 47 U.S.C 119(d)(2) and (9). Unlike the definition in the Commission’s rules, which specifically include only ABC, CBS and NBC (*see supra* note 7), the Copyright Act definition of “network station” may include other stations. *See SHVERA Significantly Viewed Report and Order* at paras. 35–36 and n. 102.

satellite carriers.[18] To implement the STELA, we revise our satellite subscriber eligibility rules as follows:

- We find that the local service requirement in amended Section 340(b)(1) requires only that a satellite subscriber receive local-into-local satellite service as a precondition for that subscriber to receive SV stations. We find that the statute no longer requires a satellite subscriber to receive the specific local network station as a precondition for that subscriber to receive an SV station affiliated with the same network.
- We find that amended Section 340(b)(2) no longer requires that a satellite carrier offer "equivalent bandwidth" to the local and SV network station pair and instead imposes an "HD format" requirement. We find that the HD format requirement in amended Section 340(b)(2) requires that, in order to carry an SV station in high definition (HD) format, a satellite carrier must carry the local station affiliated with the same network in HD whenever such format is available from the local station.
  - The HD format requirement applies only where a satellite carrier retransmits to a subscriber the SV station in HD format. This requirement does not restrict a satellite carrier from retransmitting to a subscriber the SV station in standard definition (SD) format.
  - For purposes of the HD format requirement, the corresponding local (in-market) station will be considered "available" to the satellite carrier when the station: (1) Elects mandatory carriage or grants retransmission consent; (2) provides a good quality signal to the satellite carrier as required by Section 76.66(g) of the rules; and (3) is otherwise in compliance with the "good faith negotiation" and carriage provisions set forth in Sections 76.65 and 76.66 of the rules. However, the HD signal of the corresponding local station will be deemed "available" despite failure to reach agreement on the terms of retransmission if the satellite carrier is not in compliance with Section 76.65.
  - The HD format requirement requires satellite carriage of a secondary HD stream of a local station's multicast signal if that stream is affiliated with the same network as an SV station retransmitted in HD to satellite subscribers in the local market.
- We modify the Commission's 2005 interpretation of the Section 340(b)(3) exception, which is unchanged by the STELA, and find that, in the context of the newly revised statute, this exception permits a satellite carrier to offer an SV network station to a subscriber when there is no local affiliate of the same network present in the local market, even if the subscriber does not receive local-into-local service.

[18] 47 U.S.C. 340(b)(1) and (2).

II. Background

4. In May 2010, Congress passed and the President signed the STELA, which amends the 1988 copyright laws [19] and the Communications Act of 1934 [20] to "modernize, improve and simplify the compulsory copyright licenses governing the retransmission of distant and local television signals by cable and satellite television operators." [21] Congress intended for the STELA to increase competition between cable and satellite providers, increase service to satellite subscribers, and update the law to reflect the completion of the digital television (DTV) transition.[22] Notably, the STELA reauthorizes the statutory copyright license for satellite carriage of SV stations and moves that license from the distant signal statutory copyright license provisions to the local signal statutory copyright license provisions.[23]

5. The STELA is the fourth in a series of statutes that address satellite carriage of television broadcast stations. In the 1988 Satellite Home Viewer Act ("1988 SHVA"), Congress established a statutory copyright license to enable satellite carriers to offer subscribers who could not receive the over-the-air signal of a broadcast station access to broadcast programming via satellite.[24] The 1988 SHVA was intended to protect the role of local broadcasters in providing over-the-air television by limiting satellite delivery of network broadcast programming to subscribers who were "unserved" by over-the-air signals. The 1988 SHVA also permitted satellite carriers to offer distant "superstations" to subscribers.[25]

6. In the 1999 Satellite Home Viewer Improvement Act ("SHVIA"), Congress expanded satellite carriers' ability to retransmit local broadcast television signals directly to subscribers.[26] A key element of the SHVIA was the grant to satellite carriers of a statutory copyright license to retransmit local broadcast programming, or "local-into-local" service, to subscribers. A satellite carrier

[19] *See* 17 U.S.C. 119 and 122. 17 U.S.C. 119 contains the statutory copyright license for satellite carriage of "distant" network stations (limited to "unserved households") and 17 U.S.C. 122 contains the statutory copyright license for satellite carriage of "local" stations (generally defined as stations and subscribers in the same DMA but which now also includes SV stations, which are treated as "local" for copyright royalty purposes, even though such stations are not in the same DMA as the subscribers and are not entitled to mandatory carriage). The STELA also amended 17 U.S.C. 111, the statutory copyright license for cable carriage of broadcast stations.

[20] *See* 47 U.S.C. 325, 338, 339 and 340.

[21] *See* House Judiciary Committee Report dated Oct. 28, 2009, accompanying House Bill, H.R. 3570, 111th Cong. (2009), H.R. Rep. No. 111–319, at 4 ("*H.R. 3570 Report*"). *See also* House Energy and Commerce Committee Report dated Dec. 12, 2009, accompanying House Bill, H.R. 2994, 111th Cong. (2009), H.R. Rep. No. 111–349, at 16 ("*H.R. 2994 Report*"); and Senate Judiciary Committee Report dated Nov. 10, 2009, accompanying Senate Bill, S. 1670, 111th Cong. (2009), H.R. Rep. No. 111–98, at 5 ("*S. 1670 Report*"). There was no final Report issued to accompany the final version of the STELA bill (S. 3333) as it was enacted. *See* Senate Bill, S. 3333, 111th Cong. (2010) (enacted). Therefore, for the relevant legislative history, we look to the Reports accompanying the various predecessor bills (*e.g.,* H.R. 3570, H.R. 2994, and S. 1670). These Reports reflect Congressional intent with respect to the SV provisions, which were enacted as drafted in the House and Senate bills. (*see* STELA secs. 203, 103). Finally, also relevant are certain remarks made in floor statements in passing the bill (S. 3333). *See* "House of Representatives Proceedings and Debates of the 111st Congress, Second Session," 156 Cong. Rec. H3317, H3328–3330 (daily ed. May 12, 2010) (statements of Reps. Conyers and Smith) ("*House Floor Debate*") and "Senate Proceedings and Debates of the 111st Congress, Second Session," 156 Cong. Rec. S3435 (daily ed. May 7, 2010) (statement of Sen. Leahy) ("*Senate Floor Debate*"). We also find relevant certain remarks made in floor statements in passing the House Bill, H.R. 3570. *See* Chairmen Waxman's and Boucher's Floor Statements on the Satellite Home Viewer Reauthorization Act of 2009, 155 Cong. Rec. H13428, H13441–13442 (Dec. 2, 2009) ("*H.R. 3570 Waxman and/or Boucher Floor Statement(s)*").

[22] *See H.R. 3570 Report* at 5 and *H.R. 2994 Report* at 16. As of the June 12, 2009 statutory DTV transition deadline, all full-power television stations stopped broadcasting in analog and are broadcasting only digital signals. 47 U.S.C. 309(j)(14)(A).

[23] STELA sec. 103 (moving the SV signal statutory copyright license from 17 U.S.C. 119(a)(3) to 17 U.S.C. 122 (a)(2)). In doing so, Congress now defines SV signals as another type of local signal, rather than as an exception to distant signals. The move also means that the SV signal license does not expire on December 31, 2014, when the distant signal license will expire. STELA sec. 107(a).

[24] The Satellite Home Viewer Act of 1988 (SHVA), Public Law 100–667, 102 Stat. 3935, Title II (1988) (codified at 17 U.S.C. 111, 119). The 1988 SHVA was enacted on November 16, 1988, as an amendment to the copyright laws. The 1988 SHVA gave satellite carriers a statutory copyright license to offer distant signals to "unserved" households. 17 U.S.C. 119(a).

[25] *See id.* 119(a)(1) (2009). The STELA sec. 102(g) replaces the term "superstation" with the term "non-network station." This change in wording has no substantive impact on our rules. A non-network station (previously superstation) is defined as a television station, other than a network station, licensed by the Commission that is retransmitted by a satellite carrier. As the term would suggest, non-network stations are still not considered "network stations" for copyright purposes. *See id.* 119(d)(9); *see also supra* notes 7 and 17.

[26] The Satellite Home Viewer Improvement Act of 1999 (SHVIA), Public Law 106–113, 113 Stat. 1501 (1999). The SHVIA was enacted on November 29, 1999, as Title I of the Intellectual Property and Communications Omnibus Reform Act of 1999 (IPACORA) (relating to copyright licensing and carriage of broadcast signals by satellite carriers). In the SHVIA, Congress amended both the copyright laws, 17 U.S.C. 119 and 122, and the Communications Act, 47 U.S.C. 325, 338 and 339.

provides "local-into-local" service when it retransmits a local television signal back into the local market of that television station for reception by subscribers.[27] Generally, a television station's "local market" is the DMA in which it is located.[28] Each satellite carrier providing local-into-local service pursuant to the statutory copyright license is generally obligated to carry any qualified local television station in the particular DMA that requests carriage and complies with Commission rules, unless the station's programming is duplicative of the programming of another station carried by the carrier in the DMA or the station does not provide a good quality signal to the carrier's local receive facility.[29] This is commonly referred to as the "carry one, carry all" requirement. The Commission implemented the SHVIA by adopting rules for satellite carriers with regard to carriage of broadcast signals, retransmission consent, and program exclusivity that generally paralleled the requirements for cable service.[30]

7. In the 2004 Satellite Home Viewer Extension and Reauthorization Act (SHVERA), Congress established the framework for satellite carriage of "significantly viewed" stations.[31] Specifically, the SHVERA expanded the statutory copyright license to allow satellite carriers to retransmit an out-of-market network station as part of their local service to subscribers where the Commission determined that distant station to be "significantly viewed" (based on over-the-air viewing).[32] In providing this authority to satellite carriers, Congress sought to create parity with cable operators, who had already had such authority to offer SV stations to subscribers for more than 38 years.[33] The Commission implemented the SHVERA's significantly viewed provisions by publishing a list of SV stations [34] and adopting rules in the satellite context for stations to attain eligibility for significantly viewed status and for subscribers to receive SV stations from satellite carriers.[35] The SHVERA mandated that the Commission apply the same station eligibility requirements (*i.e.,* rules and procedures for parties to show that a station qualifies for significantly viewed status) to satellite carriers that already applied to cable operators.[36] However, to prevent a satellite carrier from favoring SV stations over traditional local market stations, the SHVERA also imposed subscriber eligibility requirements that applied only to satellite carriers.[37]

8. The SHVERA limited subscribers' eligibility to receive SV digital television stations from satellite carriers in two key ways. First, the SHVERA allowed a satellite carrier to offer SV stations only to subscribers that received the carrier's "local-into-local" service (the "local service" requirement).[38] The Commission interpreted this local service requirement to further require that the subscriber receive the local station affiliated with a particular network (as part of the carrier's "local-into-local" service) in order for that subscriber to also receive an SV station affiliated with the same network (the "same network affiliate" requirement).[39] Second, the SHVERA allowed a satellite carrier to offer an SV digital station to a subscriber only if the carrier also provided to that subscriber the local station affiliated with the same network in a format that used either (1) an "equivalent" amount of bandwidth for the local and SV network station pair, or (2) the "entire" bandwidth of the local station (the "equivalent or entire bandwidth" requirement).[40] The Commission interpreted this provision to require an objective comparison of each station's use of its bandwidth in terms of

[27] 47 CFR 76.66(a)(6).

[28] *See* 17 U.S.C. 122(j)(2)(A); 47 U.S.C. 340(i)(1). DMAs, which describe each television market in terms of a unique geographic area, are established by Nielsen Media Research based on measured viewing patterns. *See* 17 U.S.C. 122(j)(2)(A) through (C).

[29] *See* 47 U.S.C. 338.

[30] *See SHVIA Signal Carriage Order*, 66 FR 7410, January 23, 2001; *OET SHVIA Report*, FCC 00–416 (rel. Nov. 29, 2000); *SHVIA Satellite Exclusivity Order,* 65 FR 68082, November 14, 2000; *SHVIA Retransmission Consent Enforcement Order;* 65 FR 10718, February 29, 2000; *SHVIA Good Faith Retransmission Consent Order,* 65 FR 15559, March 23, 2000.

[31] The Satellite Home Viewer Extension and Reauthorization Act of 2004 (SHVERA), Public Law 108–447, 118 Stat 2809 (2004) (codified in scattered sections of 17 and 47 U.S.C.). The SHVERA was enacted on December 8, 2004 as title IX of the "Consolidated Appropriations Act, 2005." The SHVERA contained additional mandates requiring Commission action, but not relevant to this proceeding. *See SHVERA Reciprocal Bargaining Order*, 70 FR 40216, July 13, 2005 (imposing a reciprocal good faith retransmission consent bargaining obligation on multichannel video programming distributors); *SHVERA Section 210 Order*, 70 FR 51658, August 31, 2005 (requiring satellite carriers to carry local TV broadcast stations in Alaska and Hawaii); *SHVERA Procedural Rules Order*, 70 FR 21669, April 27, 2005 (adopting procedural rules concerning satellite carriers' notifications to TV broadcast stations and obligations to conduct signal testing); *Retransmission Consent and Exclusivity Rules: Report to Congress Pursuant to Section 208 of the Satellite Home Viewer Extension and Reauthorization Act of 2004*, dated Sept. 8, 2005, available at *http://www.fcc.gov/mb/policy/shvera.html* (Report analyzing comments received in MB Docket No. 05–28 and addressing impact of certain rules and statutory provisions on competition in the television marketplace).

[32] In the SHVERA, Congress again amended both the Communications Act, 47 U.S.C. 325, 338, 339 and 340, and the copyright laws, 17 U.S.C. 119 and 122. In creating a statutory copyright license for satellite carriers to offer significantly viewed stations to subscribers, Congress distinguished between out-of-market stations that had significant over-the-air viewership in another market (*i.e.,* significantly viewed stations) and truly "distant" stations.

[33] *See SHVERA Significantly Viewed Report and Order*, 20 FCC Rcd at 17280–1, para. 2. In 1972, the Commission adopted the concept of "significantly viewed" stations for cable television to differentiate between out-of-market television stations "that have sufficient audience to be considered local and those that do not." *1972 Cable R&O*, 36 FCC 2d at 174, para. 83. The Commission concluded at that time that it would not be reasonable if choices on cable were more limited than choices over-the-air, and gave cable carriage rights to stations in communities where they had significant over-the-air (non-cable) viewing. *Id.*

[34] *See supra* note 10 (for background on SV List).

[35] *See* 47 CFR 76.5(ee) (revised), 76.5(gg) (added), 76.54(a) through (c) (revised), 76.54(e) through (k) (added), 76.122(a) and (j) (revised), and 76.123(a) and (k) (revised).

[36] *See* 47 U.S.C. 340(a). As mandated by the SHVERA, the Commission required satellite carriers or broadcast stations seeking SV status for satellite carriage to follow the same petition process now in place for cable carriage. *See* 47 CFR 76.5, 76.7 and 76.54(a) through (d).

[37] 47 U.S.C. 340(b) (2004). The eligibility requirements also addressed the different carriage requirements that apply to cable (*i.e.,* "must carry" for all cable systems) as compared with satellite (*i.e.,* "carry one, carry all"). In the cable context, where mandatory carriage rules apply as opposed to satellite's carry one, carry all requirements, it was not necessary to include subscriber eligibility requirements, as it was presumed that all cable subscribers receive local broadcast stations as part of their cable package.

[38] The Commission found that "subscriber receipt of 'local-into-local' service [was] unambiguously required by the statute." *SHVERA Significantly Viewed Report and Order* at para. 68.

[39] *Id.* at para. 76 (discussing digital service limitations). The SHVERA's language differed with respect to the analog and digital service limitations. In 2004, television stations were transitioning from analog to digital service and most stations were broadcasting both analog and digital signals. Consequently, the SHVERA specified that certain provisions applied to analog signals and other, often different, provisions applied to digital signals. *See* 47 U.S.C. 340(b)(1) (analog service limitations) and 47 U.S.C. 340 (b)(2)(A) (digital service limitations) (2004). The Commission noted that, "[u]nlike the ambiguity in its sister analog provision [of 47 U.S.C. 340(b)(1) (2004)], Section 340(b)(2)(A) of the Act, 47 U.S.C. 340(b)(2)(A) (2004), is clear in requiring a subscriber to receive "the digital signal of a network station in the subscriber's local market that is affiliated with the same television network." *Id. See also id.* at 17305, para. 70 (discussing analog service limitations).

[40] 47 U.S.C. 340(b)(2)(B) (2004) ("With respect to a signal that originates as a digital signal of a network station, this section shall apply only if— * * * (B) either—(i) the retransmission of the local network station occupies at least the equivalent bandwidth as the digital signal retransmitted pursuant to this section; or (ii) the retransmission of the local network station is comprised of the entire bandwidth of the digital signal broadcast by such local network station."). Congress sought to prevent satellite carriers from offering the local network station's digital signal "in a less robust format" than the significantly viewed affiliate station's digital signal). *SHVERA Significantly Viewed Report and Order*, 20 FCC Rcd at 17314, para. 94.

megabits per second (mbps) or bit rate.[41] The SHVERA provided for two exceptions to the local service limitations, contained in 47 U.S.C. 340(b)(3) and (b)(4). Section 340(b)(3) allows satellite carriage of an SV network station to a subscriber when there is no local station affiliated with the same television network as the SV station present in the local market. Section 340(b)(4) allows a satellite carrier to negotiate privately with the local network station to obtain a waiver of the subscriber eligibility restrictions in Sections 340(b)(1) and 340(b)(2).

III. Discussion

9. We adopt rules in this *R&O* to implement the STELA's amendments to Section 340(b) of the Communications Act. Our discussion below addresses the two substantive changes to Section 340(b)(1) and (b)(2), as well as how these amended provisions will work with the existing statutory exceptions in Section 340(b)(3) and (b)(4). We decline to address here the merits of Dish's petition for further rulemaking filed with its comments, as those issues are beyond the scope of this proceeding.[42] Finally, we adopt some non-substantive, "housecleaning" rule changes.

10. The STELA amended Section 340(b) to read as follows: [43]

(1) Service Limited to Subscribers Taking Local-Into-Local Service.—This section shall apply only to retransmissions to subscribers of a satellite carrier who receive retransmissions of a signal from that satellite carrier pursuant to section 338.

(2) Service Limitations.—A satellite carrier may retransmit to a subscriber in high definition format the signal of a station determined by the Commission to be significantly viewed under subsection (a) only if such carrier also retransmits in high definition format the signal of a station located in the local market of such subscriber and affiliated with the same network whenever such format is available from such station.

(3) The limitations in paragraphs (1) and (2) shall not prohibit a retransmission under this section to a subscriber located in a local market in which there are no network stations affiliated with the same television network as the station whose signal is being retransmitted pursuant to this section.

(4) Paragraphs (1) and (2) shall not prohibit a retransmission of a network station to a subscriber if and to the extent that the network station in the local market in which the subscriber is located, and that is affiliated with the same television network, has privately negotiated and affirmatively granted a waiver from the requirements of paragraph (1) and (2) to such satellite carrier with respect to retransmission of the significantly viewed station to such subscriber.

11. These amendments simplify the significantly viewed provisions in Section 340(b) of the Communications Act to make it easier for satellite carriers to offer SV stations to subscribers.[44] Specifically, the STELA made two key changes to Section 340(b).[45] First, the STELA eliminated the language in Section 340(b)(2)(A) that had required that subscribers receive the same local network affiliate and, instead, retains only the language requiring that the subscriber receive local-into-local satellite service in order to be eligible to receive SV stations.[46] Second, the STELA replaces the "equivalent or entire bandwidth" requirement applicable to digital service, which was previously contained in Section 340(b)(2)(B), with an "HD format" requirement. The STELA did not amend the statutory exceptions in Sections 340(b)(3) and (b)(4) to the subscriber eligibility restrictions in Sections 340(b)(1) and (2).

A. The STELA Directs the Commission To Create a Workable Framework That Will Enable Satellite Carriers To Offer Both the SV and Local Stations to Consumers

12. We find that, in the STELA, Congress intended that the Commission create a workable framework for the satellite carriage of SV stations.[47] Congress intended the 2004 SHVERA to promote parity with cable,[48] while protecting localism by preventing satellite carriers from favoring an SV network station over the local in-market station affiliated with the same TV network.[49] However, very few SV stations made their way into the living rooms of satellite TV consumers.[50] The Satellite Carriers attribute this to the Commission's "restrictive" interpretation of Section 340(b) in the 2005 *SHVERA Significantly Viewed Report and Order,*[51] which they maintain made satellite carriage of SV

[41] *See SHVERA Significantly Viewed Report and Order*, 20 FCC Rcd at 17315, para. 96.

[42] Dish requested the Commission to undertake a rulemaking to revise the retransmission consent rules as they apply to carriage of SV stations. *See* Dish Comments (Petition) at 9.

[43] 47 U.S.C. 340(b) (2010), as amended by the STELA sec. 203(a). *See also* 17 U.S.C. 122(a)(2), as amended by STELA sec. 103(b).

[44] *See H.R. 3570 Report* at 4.

[45] STELA sec. 203(a) (amendments to be codified at 47 U.S.C. 340(b)(1) and (2)). We note that the subscriber eligibility limitations in 47 U.S.C. 340(b)(1) and (2), which are amended by the STELA sec. 203, do not apply to cable subscribers. We do not substantively amend our significantly viewed rules and procedures that satellite carriers share with cable operators. *See* 47 CFR 76.54(a) through (d). Furthermore, we note that the STELA sec. 203 does not amend the significantly viewed provisions in the Communications Act governing the eligibility of a television broadcast station to qualify for "significantly viewed" status. *See* 47 U.S.C. 340(a), (c) through (g). We do not make any substantive (non-"housecleaning") changes to our rules and procedures implementing the significantly viewed station eligibility requirements. *See* 47 CFR 76.54(a) through (f), (j) and (k). *See infra* Section III.F. (discussing housecleaning changes).

[46] Section 340(b)(1) as amended retains the reference to "a" signal carried pursuant to Section 338 and the explanatory heading referring to "subscribers taking local-into-local service." Congress removed from this section the phrase "that originates as an analog signal of a local network station" following the word "signal." *See* DIRECTV Reply at 5.

[47] *See STELA–Significantly Viewed NPRM, supra* note 3, at paras. 2, 11.

[48] *See, e.g.,* 2004 House Commerce Committee Report dated July 22, 2004, accompanying House Bill, H.R. 4501, 108th Cong. (2004), H.R. Rep. No. 108–634, at 1 and 9 (2004) ("*2004 House Commerce Committee Report*") (noting purpose of the SHVERA included "increasing regulatory parity by extending to satellite carriers the same type of authority cable operators already have to carry 'significantly viewed' signals into a market"). *See also, e.g.,* House of Representatives Floor Debate on the Satellite Home Viewer Extension and Reauthorization Act of 2004, House Bill H.R. 4518, 150 Cong. Rec. H8210, H8217–8219 (dated Oct. 6, 2004) ("*H.R. 4518 Floor Debate*"). In a statement in the floor debate, Rep. Joe Barton (Chairman, House Energy and Commerce Committee) stated: "The bill [H.R. 4518] would extend to satellite operators the authority to carry such significantly viewed signals on comparable terms as cable operators." *Id.* at H8219. *See also* The Honorable Joe Barton, Chairman, House Energy and Commerce Committee, "Floor Statement" on the Satellite Home Viewer Extension and Reauthorization Act of 2004, House Bill H.R. 4518, (dated Oct. 6, 2004) ("*Barton Floor Statement*") ("In implementing Section 340, the [Commission] should treat satellite operators in a comparable fashion to cable operators to the greatest extent possible with respect to carriage of significantly viewed stations, in terms of both current and future significantly viewed rulings.")

[49] *See 2004 House Commerce Committee Report* at 12 (noting that former "Section 340(b)(2)(B) prevents the satellite operator from retransmitting a local affiliate's digital signal in a less robust format than a significantly viewed digital signal of a distant affiliate of the same network, such as by down-converting the local affiliate's signal but not the distant affiliate's signal from high-definition digital format to analog or standard definition digital format").

[50] *See* DIRECTV Comments at 2 (noting that it has "offered only a handful" of SV stations since satellite carriage of such stations was authorized by SHVERA) and Dish Reply at 5 (noting that "when permitted to do so, Dish offered SV stations in certain counties of only seven DMAs").

[51] DIRECTV Comments at 1–2 and Dish Reply at 5 (noting that "the SV program that Congress spearheaded has not succeeded").

stations impractical or technically infeasible.[52]

13. Congress seemed to agree. As stated in one House Report:

The Commission's implementation of section 340, including its interpretation of the "equivalent bandwidth" requirement, has generally served to discourage satellite carriers from using section 340 to provide significantly viewed signals to qualified households.[53]

To achieve more widespread carriage of SV stations, the STELA amends Sections 340(b). As discussed below, Congress eliminated both the former Section 340(b)(2)(A), which required that digital local service subscribers receive the same network affiliate, and the former Section 340(b)(2)(B), which contained the "equivalent or entire bandwidth" requirement.[54] Based on these changes to the statutory text, Congress intended more than merely to fix a technical implementation issue with the equivalent bandwidth requirement, as the Broadcaster Associations contend,[55] but rather sought to simplify the law and increase service to satellite subscribers by encouraging SV carriage.[56] In reauthorizing the SHVERA and mostly retaining its framework for the carriage of SV stations, the STELA also retains the key goals of its predecessor statute –to foster localism and promote parity between cable and satellite service.[57]

14. The STELA's relocation of the statutory copyright license for SV stations into the "local" license provisions of the Copyright Act indicates that Congress considered the SV compulsory license to be more like the local license than like the distant signal license, recognizing that the SV station is "local" to the community in which it is significantly viewed.[58] SV stations have SV status because they have been viewed over-the-air by a sufficient number of households in the community in the relevant market. The Senate Report notes that the SV provision "relates to the ability to receive locally-oriented programming."[59] Furthermore, satellite TV consumers deserve access to the same locally-oriented programming—including SV stations—as their cable-subscribing neighbors.[60] Moreover, providing satellite carriers parity with cable was a core goal of the SHVERA in 2004 and it remains one today in the STELA.[61] Therefore, our implementation of the statutory changes to Section 340(b) focuses on enabling satellite TV consumers to receive both the local in-market and SV stations from their carriers, as is the plain intent of Section 340.[62] To achieve this objective, our interpretation of the statute reflects the practical realities of satellite local carriage, in accordance with Congress's intent to remove barriers to SV carriage.[63]

15. In the STELA, Congress directs us to implement Section 340 in a practical way that will better enable satellite carriers to offer SV stations to their subscribers. We find that carriage of both the SV and local in-market stations will best foster localism and promote parity with cable, and so, in implementing the law we must balance protection of local in-market stations against the cost of making SV carriage technically infeasible or impractical.

B. The STELA Eliminates the Requirement To Receive a Local Station Affiliated With the Same Network as the SV Station and Requires Instead That Subscribers Receive Local-Into-Local Service

16. We adopt our proposal to eliminate the requirement that a subscriber receive the local station affiliated with a specific network in order for that subscriber to also receive an SV station affiliated with the same network, and require instead that the subscriber receive local-into-local satellite service.[64] We clarify, however, that a satellite carrier must comply with Section 76.65 of our rules, which codifies the requirement for good faith in retransmission consent negotiations,

[52] DIRECTV and Dish *ex parte* (dated Sept. 22, 2010) Significantly Viewed Talking Points Appendix at 1 ("DIRECTV and Dish *Sept. 22 SV Talking Points*") (expressing concern that the Commission might adopt rules for SV carriage "that make it impractical to offer such stations").

[53] *H.R. 2994 Report* at 16. The use of the word "including" implies that Congress' dissatisfaction with the Commission's prior implementation of Section 340 was not limited to the "equivalent bandwidth" requirement.

[54] *See* 47 U.S.C. 340(b)(2)(A) and (B). *See infra* Sections III.B. and III.C.

[55] Broadcaster Associations Comments at 4 (arguing STELA's statutory changes only "address a technical implementation concern" with the "equivalent or entire bandwidth" requirement).

[56] *See H.R. 3570 Report* at 4 (noting STELA's general intent to "increase competition and service to satellite and cable consumers").

[57] *See e.g., H.R. 2994 Report* at 15 (noting that "the 'significantly viewed' provision was adopted in SHVERA to create parity with cable operators") and *also H.R. 3570 Report* at 10. *See SHVERA Significantly Viewed Report and Order,* 20 FCC Rcd at 17306–7, paras. 71–2 (noting statutory intent "to protect localism" by citing to the *2004 House Commerce Committee Report*).

[58] *See S. 1670 Report* at 5 (noting "The [STELA] moves locally-oriented provisions out of the distant signal license and places them into the permanent local license. These provisions include significantly viewed, special exception, and low-power stations. Shifting these provisions into the local license will ensure that the distant signal license is focused purely on providing truly distant signals to consumers unserved by their local broadcasters."). This makes sense given STELA's intent to create parity with cable, which characterizes SV signals as those with "sufficient audience to be considered local." *See 1972 Cable R&O,* 36 FCC 2d at 174, para. 83. *But see H.R. 3570 Report* at 10 (stating "Since significantly viewed signals are by definition a subset of distant signals, SHVERA included this provision in Section 119, the distant signal license. However, since significantly viewed signals do not incur royalties, the Committee believes it should be moved to Section 122, which governs all other royalty-free satellite transmissions under the compulsory license. The bill accordingly incorporates the significantly viewed provision, previously in Section 119(a)(3), into Section 122(a)."). The Broadcaster Associations argue that this statement means STELA considers SV signals to be distant by definition. *See* Broadcaster Associations Reply at 18. We disagree that these Congressional characterizations are necessarily at odds. The context of the *H.R. 3570 Report* referred to SHVERA's treatment of SV signals. In contrast, STELA intended to treat SV signals like "all other royalty-free satellite transmissions," *i.e.,* like local signals. The change in license and treatment is also consistent with the statutory copyright license for cable retransmission of SV signals, which also treats them, for royalty purposes, as local signals. *See* 17 U.S.C. 111(a), (c), (d), and (f), as amended by STELA sec. 104.

[59] *See S. 1670 Report* at 4. *See also* DIRECTV Reply at 1, n.4; Dish Reply at 6.

[60] *See, e.g., H.R. 4518 Floor Debate* (on SHVERA bill), *supra* note 48, at H8223 (in which Rep. Conyers states that the SHVERA bill [H.R. 4518] "address[ed] the desires of consumers in that it permits the satellite companies to retransmit a significantly viewed local signal to a customer"); *Id.* at H8217 (in which Rep. Sensenbrenner states that the SHVERA bill, H.R. 4518, "changes both the copyright and communications acts to ensure, first, that consumers will have greater choice in programming; second, that satellite providers will have greater freedom to deliver the content consumers desire"); and *Id.* at H8219 (in which Rep. Barton states that "[b]y extending the expiring provisions, increasing parity, and promoting further competition, this legislation [H.R. 4518] will continue to enhance service to consumers.")

[61] *See, e.g., H.R. 3570 Waxman Floor Statement* (on STELA bill), *supra* note 21, at H13441 (calling the bill [H.R. 3570] "an important step forward for consumers," Chairman Waxman notes, among other things, that the "bill makes changes to the existing rules on 'significantly viewed' signals in an effort to promote competition between satellite and cable companies"); and *H.R. 4518 Floor Debate* (on 2004 SHVERA bill), *supra* note 48, at H8223 (in which Rep. Dingell states that the bill [H.R. 4518] will not only "increase regulatory parity between cable and satellite providers" but that such "increased parity should help spur greater competition between cable and satellite providers and ultimately benefit consumers in the form of lower prices and better service"). Contrary to the Broadcaster Associations' argument, there is nothing in the record to suggest that cable carriage of SV stations has harmed localism over more than 30 years. *See NAB ex parte* (dated Oct. 7, 2010) Significantly Viewed Talking Points Appendix at 3 ("*NAB Oct. 7 SV Talking Points*") (claiming the Satellite Carriers ignore STELA's goal to protect localism).

[62] As discussed above in *supra* para. 1, the purpose of Section 340 is to give satellite carriers the authority to offer SV stations as part of their local service to their subscribers.

[63] *See* DIRECTV and Dish *ex parte* (dated Sept. 20, 2010) Significantly Viewed Talking Points Appendix at 1 ("DIRECTV and Dish *Sept. 20 SV Talking Points*").

[64] *STELA-Significantly Viewed NPRM, supra* note 3, at para. 14.

in order for it to carry an SV station. In the record, the Satellite Carriers support our proposal, while the Broadcaster Associations oppose it.[65]

17. In the 2004 SHVERA, Congress authorized satellite carriers to offer SV stations to subscribers, but crafted Sections 340(b)(1) and 340(b)(2)(A) of the Act to protect localism by requiring that these subscribers also receive the local network affiliate (called the "local service" requirement).[66] These two provisions, however, contained different language. Whereas the analog local service requirement in Section 340(b)(1)[67] required only that the subscriber receive local service "pursuant to Section 338"—referring to the "carry one, carry all" carriage requirements that pertain to local stations,[68] the digital local service requirement in Section 340(b)(2)(A)[69] contained additional language that expressly required the subscriber to receive the local digital station that was "affiliated with the same television network" as the SV station (hereinafter referred to as the "same network affiliate" language). Thus, while each of these provisions explicitly required a subscriber to at least receive the satellite carrier's local-into-local service before that subscriber could receive an SV station, it was unclear (when considering the two provisions together) whether Section 340(b)(1) also required a subscriber to receive the specific local analog network station before that subscriber could receive the SV station affiliated with the same network.[70] For example, it was unclear how the statute applied where there was a local network analog station, but such station failed to request local carriage, refused to grant retransmission consent, or was otherwise ineligible for local carriage.[71]

18. In the 2005 *SHVERA Significantly Viewed Report and Order,* the Commission interpreted former Sections 340(b)(1) and 340(b)(2)(A) to require that the subscriber receive the specific local station that is affiliated with the same network as the SV station, whether the station's signal was analog or digital.[72] Although former Section 340(b)(1) lacked the express "same network affiliate" language as that contained in its digital counterpart, the Commission interpreted the two provisions together and read the "same network affiliate" requirement into former Section 340(b)(1), based largely on the concept that Congress intended the two provisions to achieve similar ends.[73] Accordingly, the Commission adopted Section 76.54(g) of the rules, based on the "same network affiliate" language in former Section 340(b)(2)(A).[74]

19. As we tentatively concluded in the NPRM, new Section 340(b)(1) requires only that the subscriber receive local-into-local satellite service and no longer requires carriage of the local affiliate of the same network.[75] New Section 340(b)(1) applies "only to retransmissions to subscribers of a satellite carrier who receive retransmissions of a signal from that satellite carrier pursuant to Section 338."[76] By providing simply that a subscriber must receive "a" signal from the satellite carrier pursuant to Section 338 before receiving a SV signal, the statute removes any precondition that a subscriber receive "the" local affiliate of the same network as the SV station. In drafting new Section 340(b)(1) for the STELA, Congress eliminated the "same network affiliate" language that appeared in the provision enacted as part of the SHVERA in 2004.[77] Our interpretation that the new Section 340(b)(1) requires only that the subscriber receive local-into-local service is also consistent with the provision's heading: "Service Limited To Subscribers Taking Local-Into-Local Service," as well as with the statutory copyright license for SV stations, which allows a satellite carrier to retransmit SV stations to subscribers that receive signals pursuant to the statutory copyright license for local signals but says nothing about the subscriber having to receive the signal of the local affiliate of the same network.[78]

20. Based on the language of the amended text, Congress' purposes of facilitating SV carriage and achieving closer parity between cable and satellite providers, and the shift of the SV copyright license from the distant license to the local license,[79] we conclude that the best interpretation of new Section 340(b)(1) is that the subscriber need only receive a local station pursuant to Section 338 in order

[71] *See id.* at 17304, para. 67.

[72] *Id.* at 17305 and 17308, paras. 70 and 76. In the *2006 DIRECTV-EchoStar Joint Petition,* the Satellite Carriers challenged the Commission's interpretation of the *analog* service limitation provision in 47 U.S.C. 340(b)(1). With the end of analog full-power broadcasting, this issue is now moot. *See infra* Section III.G. (discussing Order on Reconsideration).

[73] *See SHVERA Significantly Viewed Report and Order,* 20 FCC Rcd at 17307, para. 72. We note that the Commission also stated that its interpretation of Section 340(b)(1) was necessary to give meaning to the statutory exceptions in Sections 340(b)(3) and (4); *see supra* para. 10 (for statutory text). As discussed, *infra,* in paras. 46–47 and note 167, we find the statutory exceptions remain meaningful to, and are consistent with, our interpretation of Section 340(b)(1) as amended by STELA.

[74] 47 CFR 76.54(g) states: "(g) Signals of analog or digital significantly viewed television broadcast stations may not be retransmitted by satellite carriers to subscribers who do not receive local-into-local service, including a station affiliated with the same network as the significantly viewed station, pursuant to § 76.66 of this chapter; except that a satellite carrier may retransmit a significantly viewed signal of a television broadcast station to a subscriber who receives local-into-local service but does not receive a local station affiliated with the same network as the significantly viewed station, if: (1) There is no station affiliated with the same television network as the station whose signal is significantly viewed; or (2) The station affiliated with the same television network as the station whose signal is significantly viewed has granted a waiver in accordance with 47 U.S.C. 340(b)(4)."

[75] *STELA-Significantly Viewed NPRM, supra* note 3, at para. 14.

[76] 47 U.S.C. 340(b)(1) (referring to retransmissions "pursuant to 47 U.S.C. 338"). Each satellite carrier providing a local station pursuant to the statutory copyright license is generally obligated to carry any qualified local television station in the same DMA that has requested carriage. 47 U.S.C. 338.

[77] In STELA, Congress eliminated most references distinguishing the treatment of "analog" versus "digital" signals or stations in light of the completion of the digital television transition for full power stations. In Section 340, Congress eliminated the text of the digital provision (former section 340(b)(2)(A), which had said: "With respect to a signal that originates as a digital signal of a network station, this section shall apply only if—(A) the subscriber receives from the satellite carrier pursuant to section 338 of this title the retransmission of *the digital signal of a network station in the subscriber's local market that is affiliated with the same television network;* and" (B) the retransmission complies with either the (i) equivalent or (ii) entire bandwidth requirement." (*Emphasis* added.)

[78] 17 U.S.C. 122(a)(2)(A) (providing a statutory copyright license to support satellite carriage of SV stations provided the subscriber is receiving stations pursuant to the statutory copyright license for local stations). *See* 17 U.S.C. 122(a)(1).

[79] We note that SV stations are treated as "local" for copyright purposes in 17 U.S.C. 111 (the cable copyright license). *See supra* note 58.

to be eligible to receive SV stations, and that it need not receive the network affiliate affiliated with the same network as the SV station.[80] The Broadcaster Associations disagree with the NPRM's interpretation of new Section 340(b)(1) and argue that the Commission should retain the interpretation it applied to the SHVERA, notwithstanding the change in the statutory language as enacted in the STELA.[81] They note that, in implementing the SHVERA in 2005, the Commission interpreted the former analog local service provision in former Section 340(b)(1) and the former digital local service provision in former Section 340(b)(2)(A) to require that a satellite subscriber must receive the local affiliate of a specific network in order to be eligible to receive the SV station affiliated with the same network.[82] The SHVERA, in contrast to the STELA, included language expressly requiring receipt of the "same network affiliate" in the provision applying to eligibility for a digital SV station.[83] The Commission, relying on the language in the former digital provision, applied the requirement to subscriber eligibility for both analog and digital SV stations.[84] The Broadcaster Associations contend that we should retain the former interpretation and apply it to the new STELA provision despite the removal of the old language.[85] They argue that nothing has materially changed with respect to the local service requirement, other than the completion of the DTV transition and, therefore, that the Commission's prior interpretation of Section 340(b)(1) should not change.[86] They argue that Congress "re-enacted" the Commission's 2005 interpretation of former Section 340(b)(1) because it did not substantively change that provision, thereby giving its "implicit approval" of that interpretation.[87] We reject these arguments as they ignore that the STELA does, in fact, materially change the SHVERA's local service requirements.[88]

21. The Broadcaster Associations assert that we must presume that Congress was aware of the Commission's prior interpretation of the local service provision.[89] By the same reasoning, however, we must also presume that Congress was aware of the basis for that interpretation: Namely, the "same network affiliate" language in the former *digital* local service requirement in former Section 340(b)(2)(A). Congress intentionally removed that requirement when it chose to strike that language in favor of the former analog local service limitation language. As we said in the NPRM, Congress chose to discard the "same network affiliate" language in the former digital local service requirement in Section 340(b)(2)(A), which the Commission had relied upon for its more restrictive interpretation of the former analog local service requirement in Section 340(b)(1).[90] As Dish notes: "Congress' eraser is no less dispositive than its pen."[91] Moreover, our interpretation is consistent with Congress' intent to facilitate carriage and availability of SV stations for more satellite subscribers, and, thereby, to achieve closer parity with cable carriage of SV stations.

22. The Broadcaster Associations also argue that because both the former and new Section 340(b)(2) contain the "same network affiliate" language, the need to reconcile these two provisions remains.[92] Moreover, they argue that because three out of four of the Section 340(b) provisions contain the "same network affiliate" language, we should read that language into the one that does not: The new local service requirement.[93] We reject both claims. New Section 340(b)(2) is a different requirement from the other provisions of Section 340(b), and addresses only when a satellite carrier may provide the HD signal of an SV station.[94] Moreover, contrary to the Broadcaster Associations' assertion, we find that Congress's inclusion of the "same network affiliate" language in three out of four of the Section 340(b) provisions and not in the amended digital local service provision indicates that such exclusion was intentional.[95]

23. We recognize that there may be tension in some circumstances between the goals of protecting localism, on the one hand, and achieving closer parity between pay television providers and increasing SV carriage, on the other. Specifically, our interpretation below of the STELA's amendments to Sections 340(b)(1) and (b)(2) makes it possible for a satellite carrier to carry an SV network station, even in HD format, without also carrying the corresponding local in-market affiliate if that local station has not granted retransmission consent. The Broadcaster Associations argue that this undermines local service.[96] However, because SV status generally applies to only some areas in a DMA and not throughout an entire DMA, we find it unlikely that an SV station could permanently substitute for a local in-market station, even in the provision of network programming to the market.[97] Moreover, because most viewers want to watch their local stations, we do not think that carriage of only SV stations would satisfy most subscribers for an extended time. Furthermore, as the Broadcaster Associations have noted in a different proceeding, retransmission consent impasses resulting in loss of a local station are relatively rare[98] and, when they do occur, they are usually short-lived. Although the Broadcaster Associations do provide a few examples of markets where they have concerns that satellite carriers could rely on

carriage of an SV station to the exclusion of the local in-market station, the record does not reflect instances in which an SV station has supplanted an in-market station in the cable or satellite context.[99] Therefore, we will monitor how the rules adopted in this order are working to determine if there are abuses, unintended consequences, or misuse of the rules that might lead to violations of the good faith requirements associated with retransmission consent negotiations.[100] Now that we have established a practical framework for satellite carriage of SV stations, we expect Satellite Carriers to offer SV stations to consumers wherever possible. However, if our implementation of Section 340(b) results in satellite carriers using SV stations to supplant, rather than supplement, their carriage of local in-market stations, we will reexamine our rules and our statutory analysis here in light of Congress' goals. In light of our conclusion that the new language in the STELA no longer requires subscriber receipt of a specific local station, we revise Section 76.54(g).[101] The amended rule requires that a subscriber receive the satellite carrier's local-into-local service as a precondition for the subscriber to receive SV stations.

C. The STELA Eliminates the "Equivalent or Entire Bandwidth" Requirement and Replaces it with an "HD Format" Requirement

24. We adopt our proposal to eliminate the "equivalent or entire bandwidth" requirement and to provide, in its place, that a satellite carrier may retransmit the HD signal of an SV station to a subscriber only if such carrier also retransmits the HD signal of the local station affiliated with the same network whenever that signal is available in HD format. Both the Broadcaster Associations and Satellite Carriers agree with this conclusion. The commenters disagree, however, how to interpret and implement the new "HD format" requirement.

25. In the 2004 SHVERA, Congress enacted the "equivalent or entire" bandwidth requirement to prevent a satellite carrier from using technological means to discriminate against a local network station in favor of the SV network affiliate.[102] The Commission codified these requirements in Section 76.54(h) of the rules, which tracks the language of SHVERA.[103] In implementing that provision, the Commission strictly interpreted the statutory requirement for "equivalent bandwidth." As a result, satellite carriers have been required to ensure equality between the satellite bandwidth allocated to carriage of the local station and the SV stations on virtually a minute-by-minute basis, making carriage of SV stations so burdensome that they are rarely carried.[104]

26. The STELA eliminated the "equivalent or entire bandwidth" requirement from the statute,[105] and replaced it with "HD format."[106] In doing so, Congress intended to facilitate satellite carriage of SV stations, which Congress thought was thwarted by the Commission's implementation of the predecessor provision.[107] The legislative history also shows that Congress wanted to simplify the law and increase service to satellite consumers.[108] Congress' principal concern was simply to clarify that a satellite carrier may provide an SV station in HD format as long as the carrier also carries the corresponding local network affiliate in HD format if it is available in HD format.[109]

27. Accordingly, we revise Section 76.54(h) to eliminate the "equivalent or entire bandwidth" requirement and to provide that a satellite carrier may retransmit the HD signal of an SV station to a subscriber only if such carrier also retransmits the HD signal of the local station affiliated with the same network whenever that signal is available in HD format.[110] This part of the rule tracks the amended statutory language.[111] In addition, as discussed below, we adopt additional rules to interpret and implement the new "HD format" requirement.

1. "HD Format" Requirement Applies Only Where a Satellite Carrier Retransmits the SV Station in HD Format

28. We adopt our tentative conclusion in the NPRM that the "HD format" requirement in Section 340(b)(2) applies only where a satellite carrier retransmits the SV station in HD format and does not restrict satellite carriage of the SV station in SD format.[112] The Satellite Carriers support this conclusion, while the Broadcaster Associations oppose it.[113]

29. The Broadcaster Associations object to the additional language in our proposed Section 76.54(g)(2) clarifying that the "HD format" requirement does not apply to satellite carriage of an SV station in SD format.[114] They argue that the statute requires satellite carriage of a local station in SD format if the satellite carrier retransmits the SV station in SD format. We disagree. As discussed above, the amended local service requirement in Section 340(b)(1) now requires only that a satellite subscriber receive the satellite carrier's local-into-local service as a precondition for the subscriber to receive SV stations.[115] Moreover, the express

language of the HD format requirement in Section 340(b)(2) applies only when a satellite carrier transmits an SV station in HD format. Therefore, in order for a satellite carrier to retransmit to a subscriber an SV station in SD format, the statute does not require satellite carriage of the local station affiliated with the same network in SD format.

30. Accordingly, we adopt our tentative conclusion that Section 340(b)(2) only limits satellite carriage of an SV station in HD format and does not apply if the satellite carrier only carries the SV station in SD format, and we adopt this requirement in new Section 76.54(g)(2).[116] We also adopt our proposal that, for purposes of this provision, "HD format" refers to a picture quality resolution of 720p, 1080i, or higher.[117] We received no opposition to this proposal.

2. "HD Format" Requirement Applies When a Local Station Makes Itself Technically and Legally "Available" to Satellite Carrier

31. We conclude that, for a local (in-market) station to be "available" for purposes of the "HD format" requirement in Section 340(b)(2), the local station must: (1) Timely request carriage (*i.e.,* elect mandatory carriage or grant retransmission consent); (2) provide a good quality HD signal to the satellite carrier's local receive facility (LRF) in accordance with Section 76.66(g) of the Commission's rules; and (3) otherwise comply with Sections 76.65 and 76.66.[118] We believe that the statute's use of the term "available," instead of "broadcast" or "transmitted," signifies that Congress did not intend a narrow technical meaning and affords us discretion to create a workable framework for satellite carriage of SV stations. Our conclusion is supported by Dish and DIRECTV,[119] while the Broadcaster Associations oppose it.[120]

32. The STELA establishes the new "HD format" requirement in Section 340(b)(2) to permit a satellite carrier to retransmit an SV network station in HD "only if such carrier also retransmits in high definition format the signal of a station located in the local market of such subscriber and affiliated with the same network whenever such format is available from such station."[121] In the NPRM, we sought comment on the significance of this language. We also sought comment on whether satellite carriers would face any technical problems in complying with our proposed rules.

33. The STELA does not define the term "available" for purposes of Section 340.[122] The legislative history likewise does not explain the meaning of the term. The Satellite Carriers and Broadcaster Associations offer competing interpretations as to what "available" should mean in this context. Dish argues that we should interpret this language to mean that, "if the local station has not elected must carry and has not signed a retransmission consent agreement, or fails to provide a good quality signal in accordance with [Section] 76.66(g), then the signal should be deemed not available for purposes of the ["HD format" requirement], and the satellite carrier should be able to supply the SV station in HD."[123] Dish argues that this interpretation is necessary to prevent a local station from depriving satellite subscribers of both the local and the SV station in the event of an impasse in retransmission negotiations, which they assert would be "a result directly at odds with Congress' express intent to make SV stations more available to satellite subscribers."[124] The Broadcaster Associations oppose Dish's proposal, asserting that the Satellite Carriers' interpretations of the new "HD format" requirement "are motivated by a desire to affect retransmission consent negotiations."[125]

34. The Broadcaster Associations argue that the term "available" should mean "whenever the television station is *transmitting* or *broadcasting* the relevant channel in HD format."[126] They argue that this interpretation is most consistent with other parts of the statute, such as Sections 339[127] and 342[128] of the Act.[129] We disagree. The Sections cited by the Broadcaster Associations pertain to a different use of the term "available" in different contexts and are expressly limited to those contexts. Moreover, even if we were to rely on the definition of "available" in Section 339 or the reference to "availability" in Section 342, the term "available" in the context of SV carriage would remain ambiguous. Section 339 relates to whether a satellite carrier's local-into-local package is "available" to a subscriber. If so, the subscriber is not eligible for distant signals (*i.e.,* "no distant, where local"). In the context of HD signal availability in Section 340, ascribing this meaning to the term "available" could support either the Satellite Carriers' interpretation that the HD signal is not available if the local station does not grant consent for retransmission or the Broadcaster Associations' interpretation that the HD signal is available if broadcast.[130] Similarly, Section 342 refers to the "availability level" of a satellite signal as a means of defining "good quality satellite signal" for purposes of a satellite carrier's eligibility for certification as a "qualified carrier."[131] We do not see the relevance of satellite signal coverage in the context of Section 342 to the interpretation of Section 340. Moreover, here again, even by strained analogy, signal availability could mean the physical presence of the signal, as

[116] *See* Appendix B final rule 47 CFR 76.54(g)(2)(i).

[120] Broadcaster Associations Reply at 14–16.

[121] *See* 47 U.S.C. 340(b)(2) (2010), as amended by the STELA sec. 203(a).

[122] The STELA amendments to the Communications Act use the word "available" with respect to a signal in three different contexts: (1) In Section 340 with respect to an HD signal; (2) in Section 339 in reference to whether the satellite carrier is retransmitting the local station to a subscriber as part of the local-into-local service package, *see* 47 U.S.C. 339(a)(2)(A)(i)(I), (2)(B)(i)(I) and (II), (2)(C)(i) and (ii), (2)(D)(iii), (2)(E), and (2)(H); and (3) "availability" in Section 342 with respect to a satellite carrier's "good quality signal," *see* 47 U.S.C. 342(e)(2)(A)(i). As discussed, *infra,* only Section 339 offers a definition of "available" but expressly limits this definition: "for purposes of this paragraph," that is, to Section 339(a).

[123] Dish Comments at 7–8.

[124] *Id.* at 8.

[125] Broadcaster Associations Reply at 12.

[126] *Id.* at 15.

[127] Section 339(a)(2)(H) of the Act defines the term "available" in this limited context (*i.e.,* "no distant where local"):

(H) Available defined. For purposes of this paragraph, a satellite carrier makes available a local signal to a subscriber or person if the satellite carrier offers that local signal to other subscribers who reside in the same zip code as that subscriber or person.

47 U.S.C. 339(a)(2)(H). *See also* Broadcaster Associations Reply at 14–15 (citing 47 U.S.C. 339(a)(2)(C)(i)).

[128] The Broadcaster Associations also argue that, in the qualified satellite carrier certification context in Section 342 of the Act, the "availability level of a satellite signal" "means that the satellite carrier is retransmitting the satellite signal in a manner to satisfy the 'good quality satellite signal' requirements." Broadcaster Associations Reply at 15 (citing 47 U.S.C. 342(e)(2)(A)(i)).

[129] *Id.* at 15.

[130] For example, the definition in Section 339 does not shed light on whether the term "available" takes into account practical considerations or whether it is sufficient for a signal simply to be theoretically available.

[131] 47 U.S.C. 342 (describing the process and grounds for the Commission to issue a "qualified carrier" certification pursuant to 17 U.S.C. 119(g)).

the Broadcaster Associations argue, or the ability to receive and use the signal, as the satellite carriers contend.

35. In contrast to the Broadcaster Associations' attempt to import uses of the word from other contexts, the Satellite Carriers describe the circumstances in which the HD format requirement is intended to apply: When the satellite carrier receives a station's HD signal and the permission to retransmit it but chooses not to retransmit the HD version and instead converts the HD signal to a standard definition ("SD") signal.[132] We believe that this interpretation is most consistent with common usage of the term "available." In contrast, we think it strains the common meaning of the term to consider "available" a signal that the satellite carrier is legally barred from carrying.

36. The Satellite Carriers also address the practical impact of defining the term "available" as suggested by the Broadcaster Associations. They explain that they offer local service in some markets only in HD.[133] Therefore, an SV station originating from such a market would have one HD feed covering both the station's local market and SV area and there would be no technical way for the satellite carrier to down-convert the HD feed signal to SD only in the SV area. Moreover, a satellite carrier would likely not have the capacity on its spot beam to add a duplicative, SD version of the station.[134] Therefore, if a local station withholds retransmission consent, the Satellite Carriers would have to either down-convert the SV station from HD to SD in its own local market or not carry it as an SV station, frustrating the intent of the statute.[135]

37. The question then is whether an HD signal is "available" for purposes of the statute any time a broadcaster is transmitting an HD signal, or whether the term "available" takes into account practical and legal considerations, such as whether the broadcaster is delivering a "good quality signal" to the satellite carrier[136] and the satellite carrier is legally permitted to carry it (*i.e.,* the broadcaster has elected mandatory carriage or granted retransmission consent).[137] We believe the term is ambiguous[138] and thus should be defined in a manner that best effectuates the text, history and purposes of the statute.[139] As discussed above, we believe the overriding goal of the legislative changes made in Section 340 is to facilitate satellite carriage of SV stations and remove the obstacles to carriage created by our interpretation of SHVERA.[140] With this goal in mind, we find that the term "available" within the context of Section 340(b)(2) is best interpreted by taking into account whether the satellite carrier has the legal authority to transmit the local broadcaster's signal and has been provided a "good quality" signal, and we believe that this interpretation is most consistent with common usage of the term.

38. We agree with the Broadcaster Associations that our rules must protect localism,[141] but disagree that we must protect the in-market station at the cost of making satellite carriage of the SV station impractical.[142] The Broadcaster Associations' argument fails to take into account that the SV station is generally not significantly viewed throughout an entire market. Indeed, the Satellite Carriers contend that stations that are significantly viewed outside of their own markets are generally significantly viewed only in small portions of neighboring markets, making it unlikely that satellite carriers could use SV stations to replace local stations in other markets.[143] As noted above, we also find it unlikely that an SV station could permanently substitute for a local in-market station to the satisfaction of subscribers throughout the market.[144]

39. We are persuaded that, if we were to adopt the Broadcaster Associations' interpretation that a station's HD signal is "available" even when it has not granted retransmission consent or is not providing a "good quality" signal, the satellite carrier in many cases will have to downconvert the SV station or not carry the SV station at all due to limited satellite capacity,[145] and Congressional intent will, again, be thwarted. If, on the other hand, we were to conclude that a station's HD signal is not "available" unless the carrier has the legal right to carry the station and a "good quality" signal is being provided, the satellite carrier will be able to carry an SV station and, in the overwhelming majority of cases, will continue to have the incentive to reach a retransmission consent agreement with the local station. Thus, this interpretation will likely result in carriage of both the SV and local stations. We acknowledge that this interpretation may affect retransmission consent negotiations in some situations by giving a satellite carrier the opportunity to provide network programming to some subscribers through the SV station. This interpretation may also affect the local

[132] DIRECTV and Dish *Sept. 22 SV Talking Points* at 1. "Every broadcast station that has an HD feed and is carried by a satellite carrier makes the HD feed 'available' to the satellite carrier—even if the satellite carrier does not retransmit the HD format of that station to its subscribers. This is because, as a technical matter, the satellite carrier offers [SD] service in such situations by taking the HD signal and downrezzing it to [SD]. Thus, the HD signal is 'available to the satellite carrier,' but the satellite carrier does not 'retransmit to a subscriber in [HD] format the signal of [such] station'—exactly the situation in which Congress meant to restrict the format of [SV] importation. So, if a satellite carrier offered an entire market in SD format only, it could not import a [SV] station in HD format because the HD format of the in-market station is 'available to' it." "Downrezzing" refers to reducing the resolution from high definition to standard definition.

[143] DIRECTV and Dish *Sept. 22 SV Talking Points* at 1. *But see* NAB *Oct. 22 ex parte* at 1, 3–6 (the Broadcaster Associations disagree, and contend that there are some small markets in which there is substantial "overshadowing" by a SV station from an adjacent, larger market (*e.g.,* Dayton, OH; Hartford-New Haven, CT; Lansing, MI; and Sherman, TX–Ada, OK DMAs)). Neither side quantifies the prevalence of (or potential for) overshadowing. We agree that overshadowing is a concern, but the potential for overshadowing already exists in the cable context, and there is no evidence that overshadowing is currently a problem in the cable context or would be more prevalent in the satellite context.

[144] *See supra* para. 23.

[145] DIRECTV and Dish *Sept. 20 SV Talking Points* at 2 ("explaining that under the Broadcaster Associations' interpretation, "in the event of a retrans dispute, the satellite carrier must downrez or black out the SV station").

station's leverage in negotiations because in certain areas of the DMA it would no longer be the only source of programming from that network to some satellite subscribers. We conclude, however, that this is the best interpretation of the statutory language because it ensures that the overall intent of the statutory provisions to promote SV carriage is carried out.[146]

40. Therefore, we find that Section 340(b)(2) is best interpreted to enable satellite TV consumers to receive both the SV and in-market stations as part of their carrier's local service package.[147] Accordingly, we amend Section 76.54(g)(2).[148] We note, however, that our interpretation here assumes that both parties are negotiating in good faith in compliance with our rules.[149] If the local station is willing to grant consent and make its HD signal available, but the satellite carrier is not negotiating for retransmission consent in good faith, as required by Section 76.65, then the local station's HD signal will be deemed available. The amended Section 76.54(g)(2) includes this condition.[150]

3. "HD Format" Requirement Applies to a Local Station's HD Multicast Signal

41. We find that the "HD format" requirement is best interpreted to require carriage of any HD signal of a local station affiliated with the same network as the SV station, regardless of whether the local station broadcasts the HD signal as a primary or as a secondary multicast stream.[151] The Broadcaster Associations and Dish debate whether the statute's use of the term "signal" includes a multicast stream, with the Broadcaster Associations arguing it does and Dish arguing it does not.

42. In the NPRM, we sought comment on how the "HD format" requirement in Section 340(b)(2) should apply in the event a satellite carrier wants to retransmit an SV network affiliate in HD and there is an in-market (local) station that is broadcasting multiple streams of programming ("multicasting") and more than one of the streams is in HD format and affiliated with a network. We asked whether the satellite carrier is required to carry the secondary stream in HD in order to be permitted to retransmit an SV station affiliated with the same network in HD, notwithstanding that the in-market station's primary stream is affiliated with a different network. In other words, would a satellite carrier be required to carry more than one HD programming stream of an in-market station if the in-market station is multicasting HD streams that are affiliated with different networks in order for the satellite carrier to carry an SV station affiliated with each network in HD? We also considered whether we could address this situation on a case-by-case basis. In their comments, both the Broadcaster Associations and the Satellite Carriers seek a Commission decision on the multicast question.[152]

43. We conclude that the statute's use of the term "signal" in this context does not differentiate between streams that are primary or secondary.[153] For purposes of carriage of SV signals in HD, the question is whether there is an in-market station affiliated with the same network as the SV station that makes its HD signal available to the satellite carrier. If so, the satellite carrier may not carry the SV station in HD format unless it carries the local station affiliated with the same network in HD format. Dish argues that Section 340(b)(2) does not expressly use the term "multicast stream," but, as noted by the Broadcaster Associations, this section also does not expressly use the term "primary stream."[154] Dish notes that, for purposes of the broadcast carriage requirements, a satellite carrier is generally only required to carry the stream that a station deems its "primary" stream if the station elects mandatory carriage.[155] That carriage requirement, however, is not determinative of which signal a satellite carrier is required to carry in order to carry a particular SV station in HD format under Section 340(b)(2). As stated above, when an SV station is carried in HD, we interpret Section 340(b)(2) as requiring carriage of any available HD signal of a local station affiliated with the same network as the SV station. We amend Section 76.54(g)(2) accordingly.[156]

44. Though appearing to acknowledge that the "HD format" requirement applies to multicast channels, DIRECTV expresses concern that applying the HD format requirement to multicast streams would make carriage of SV stations technically problematic because of what it calls the "mushroom" problem; that is, "if a new, [HD] network affiliate suddenly appeared on the multicast stream of an existing station, [DIRECTV] would have to drop or downrez the [SV] station until [DIRECTV] could negotiate carriage and make room for the 'new' local station."[157] We believe our definition of "available" in the HD format requirement may alleviate this "mushroom" problem in many cases because a new HD multicast stream would not be available to the satellite carrier until the station grants retransmission consent for that stream. Additionally, if the new HD multicast stream is a new station, our existing satellite carriage rules already recognize that satellite carriers may face technical issues associated with commencing carriage of new broadcast signals in a local market.[158] We recognize, however, that a satellite carrier may nonetheless face a "mushroom" problem where a new HD multicast stream is introduced by an existing station in the local market and such station has previously granted carriage consent. Furthermore, the satellite carrier may not be able to accommodate the new HD multicast stream in the market on its spot beam. Therefore, to minimize consumer disruption, we recognize that satellite carriers may need additional time to come into compliance with the HD format rule without having to drop an

[146] DIRECTV and Dish *Sept. 22 SV Talking Points* at 1 ("Treating satellite carriers like cable operators with respect to significantly viewed service would not give satellite carriers undue leverage in retransmission consent negotiations").

[147] DIRECTV Reply at 3, 11; DIRECTV Comments at 5. DIRECTV agreed with Dish's proposal in their joint *ex parte* presentations. *See, e.g.,* DIRECTV and Dish *Sept. 20 SV Talking Points.* This interpretation of "available" applies only with respect to the SV provisions in STELA and not to other provisions in STELA, including Section 339 (47 U.S.C. 339).

[151] A station may be affiliated with more than one network.

[152] *See* Broadcaster Associations Comments at 16 and Dish Reply at 11. The Broadcaster Associations contend that case-by-case multicast determinations would be discriminatory and would violate the STELA. Broadcaster Associations Comments at 16.

[153] DIRECTV at 5; Broadcaster Associations Reply at 10. For example, a local station may be affiliated with two different networks and broadcast programming from both networks using its digital signal capacity to air two or more signal streams simultaneously. If the local station makes an HD signal affiliated with a network available to the satellite carrier, and that carrier wishes to carry the HD signal of an SV station affiliated with the same network, Section 340(b)(2) requires carriage of the local station's HD signal, as discussed, *infra.* We conclude that it is irrelevant whether the local affiliate's broadcast of the HD signal is aired on a primary or secondary multicast stream, as long as the HD signal is available to the satellite carrier.

[154] Dish Comments at 6; Broadcaster Associations Comments at 16.

[155] 47 CFR 76.66(b). Dish Reply at 12–13. Satellite carriers are required to carry multicast streams only in Alaska and Hawaii. *See* 47 CFR 76.66(b)(2).

[157] DIRECTV Comments at 4–5. DIRECTV explains that, from its perspective, "a new multicast network affiliate can appear as quickly as a mushroom on the lawn after a rainy night." DIRECTV Reply at 12 (explaining "the moment a new multicast network affiliate appeared, DIRECTV would either have to carry it in HD or drop an SV station affiliated with the same network that it had been carrying").

[158] *See* 47 CFR 76.66(d)(3)(iii) (providing 90 days for the satellite carrier to commence carriage of a new station). *See also* 47 CFR 76.66(d)(2)(iv) (requiring satellite carriage within 90 days of receiving a mandatory carriage request in a new local-into-local market or upon commencing local-into-local service).

existing SV station while they make the technical adjustments necessary to carry a new HD format network stream.[159] We will consider special circumstances on a case-by-case basis, considering when the satellite carrier was informed of the introduction of a multicast stream containing HD signals in relation to the existing HD carriage of an SV station affiliated with the same network, as well as the carrier's compliance with its notice requirements with respect to carriage of SV signals.[160]

D. Statutory Exceptions to the Subscriber Eligibility Limitations

45. While the STELA revises the subscriber eligibility limitations on receipt of SV service in Sections 340(b)(1) and 340(b)(2), it does not amend the statutory exceptions to those limitations in Sections 340(b)(3) and 340(b)(4).[161] As noted above, the Section 340(b)(3) exception permits a satellite carrier to offer an SV network station to a subscriber when there is no local network affiliate present in the local market,[162] and the Section 340(b)(4) exception permits a satellite carrier to privately negotiate with the local network station to obtain a waiver of the eligibility restrictions.[163] The Broadcaster Associations argue that if Section 340(b)(1) were construed simply to require receipt of some local-into-local service, rather than local-into-local carriage of the local affiliate of the same network as the SV station, that reading would render superfluous the exceptions to Section 340(b)(1) contained in Sections 340(b)(3) and (b)(4).[164] To support their argument, the Broadcaster Associations rely on the Commission's 2005 decision that the "best reading" of the SHVERA version of Section 340(b)(1) required receipt of the local affiliate of the same network because, under any other reading, "there would be no need" for the Section 340(b)(3) or (b)(4) exceptions to Section 340(b)(1).[165] We reject the Broadcaster Associations' argument and find that our 2005 interpretation was not necessary to give effect to the Section 340(b)(3) and (b)(4) exceptions.[166] Giving effect to the most natural reading of Section 340(b)(1)—which lacks the "same network affiliate" language found elsewhere in Section 340 and simply requires receipt of some local-into-local service as a condition of retransmitting SV stations—does not render either Section 340(b)(3) or Section 340(b)(4) superfluous. For example, in a situation where a satellite carrier does not offer a local-into-local package and thus Section 340(b)(1) would otherwise prohibit retransmission of any SV network station, Section 340(b)(3) would allow retransmission of an SV station to subscribers where there is no local station affiliated with the same television network as the SV station in the market (*e.g.,* an SV station that is an ABC affiliate could be retransmitted if there is no local ABC affiliate). Likewise, if a subscriber does not receive the local-into-local package, thereby failing to meet the requirements of Section 340(b)(1), retransmission of an SV station to that subscriber would nonetheless be permissible under Section (b)(4) if the local station affiliated with the same network as the SV station grants a waiver from the requirements of Section 340(b)(1) (*e.g.,* the local ABC affiliate permits the satellite carrier to retransmit an SV station that is an ABC affiliate). These examples show that the exceptions of (b)(3) and (b)(4) have meaning even when we read (b)(1) simply to require receipt of some local-into-local service as a condition of retransmitting SV stations. Further, we reject the Broadcaster Associations' argument that because Congress did not amend Sections 340(b)(3) and (b)(4) when it adopted the STELA in 2010, the Commission may not depart from its 2005 interpretation of Section 340(b)(1).[167] This argument ignores that an agency is free within the limits of reasoned interpretation to change course so long as it adequately justifies the change.[168] In 2005, the Commission construed what it found to be an ambiguous provision in Section 340(b)(1) by adopting a reading that the Commission believed would best harmonize Section 340(b)(1) with Sections 340(b)(2), (b)(3) and (b)(4).[169] Given the modifications to Sections 340(b)(1) and (b)(2) enacted in STELA and Congress's intent to ease carriage of SV stations, nothing in that legislation suggests that Congress intended to lock in the Commission's 2005 interpretation of Section 340(b)(1) or restrict the Commission's discretion to interpret the revised eligibility requirements. As explained above, we now conclude that our earlier reading was not in fact necessary to harmonize the various provisions of Section 340(b). Moreover, our reading of Section 340(b)(1) here better serves the STELA's goals of improving service options for satellite subscribers by allowing SV carriage in additional situations.

46. In the 2005 *SHVERA Significantly Viewed Report and Order,* the Commission interpreted the Section 340(b)(3) exception to allow a satellite carrier to retransmit an SV station to a subscriber when there is no local affiliate of the same network present in that market, provided that the subscriber subscribes to and receives the carrier's local-into-local service.[170] Under our new interpretation of the subscriber eligibility limitations in Section 340(b)(1) and (2), the Section 340(b)(3) exception permits a subscriber to receive an SV network affiliate, even if he or she does not subscribe to local-into-local service, if there is no affiliate of that network in his or her local market.[171] In other words, Section 340(b)(3) operates as an exception to any limitations on subscriber eligibility to receive a SV station if there is no affiliate of the same network as the SV station in the local market. Because it gives effect to the language of Section

[159] We recognize that the HD format rule may require a satellite carrier to drop an existing SV station if it is not able to accommodate the new HD signal in the market on its spot beam. In such cases, the satellite carrier will be afforded a reasonable amount of time to inform its subscribers that it will be dropping the SV station.

[160] *See* 47 CFR 76.66(d)(3)(iii) and 47 CFR 76.54(e) (requiring satellite carriers that intend to carry SV stations to provide written 60 days notice to all TV stations assigned to the same local market).

[161] 47 U.S.C. 340(b)(3) and (4). We note that the STELA § 103 does amend the waiver provision in the corresponding satellite statutory copyright license in 17 U.S.C. 122(a)(2) to eliminate the now out-dated "sunset" provision and replace the term "superstation" with "non-network station," consistent with other references in the statute (*see supra* note 25).

[162] *Id.* at 340(b)(3). *See supra* para. 10 (for statutory text).

[163] *Id.* at 340(b)(4). *See supra* para. 10 (for statutory text).

[164] *See* NAB *ex parte* (dated Nov. 18, 2010) at 4–5 ("*NAB Nov. 18 ex parte*").

[165] Broadcaster Associations Comments at 10–11; *NAB Nov. 18 ex parte* at 4–5 (*citing SHVERA Significantly Viewed Report and Order,* 20 FCC Rcd at 17305–17306, paras. 70–71).

[166] The Satellite Carriers support changing the interpretation to comport with the literal language of 47 U.S.C. 340(b)(1) and (b)(3). DIRECTV Comments at 4 and Reply at 8; Dish Comments at 2.

[167] *NAB Nov. 18 ex parte* at 6.

[168] *See National Cable and Telecommunications Association* v. *Brand X Internet Services,* 545 U.S. 967, 980–981 (2005).

[169] *Compare SHVERA Significantly Viewed Report and Order,* 20 FCC Rcd at 17305, para. 70 ("Subscriber receipt of 'local-into-local' service is unambiguously required by the statute") *with id.* ("Subscriber receipt of a specific local network affiliate * *ensp;* is the best reading of 47 U.S.C. 340(b)(1) in the overall context of Section 340").

[170] *SHVERA Significantly Viewed Report and Order,* 20 FCC Rcd at 17309, para. 80.

[171] For example, the statutory exceptions in 47 U.S.C. 340(b)(3) and (4) would still apply where local-into-local service is not available to a subscriber for technical reasons (such as the spot beam does not cover the entire DMA or its reception is blocked for an individual subscriber by terrain or foliage) or if local-into-local service is not yet offered by the satellite carrier to a subscriber's market. *See STELA–Significantly Viewed NPRM, supra* note 3, at para. 18.

340(b)(3), as well as the amended language of the statute's subscriber eligibility limitations, and will serve the STELA's overarching goal of fostering SV carriage while protecting localism, we conclude that our new interpretation represents the best reading of Section 340(b)(3) in the context of the statute as a whole.

47. In this respect, we modify the Commission's 2005 interpretation of Section 340 and decline to adopt our tentative conclusion in the NPRM that the statutory exceptions should continue to apply as before. Section 340(b)(3) allows a satellite subscriber to receive an SV station notwithstanding the restrictions imposed by Sections 340(b)(1) and (b)(2) if there are no network stations affiliated with the same network as the SV station. Thus, even if the subscriber does not subscribe to local-into-local service, as would otherwise be required by Section 340(b)(1), the subscriber can receive an SV station if there is no local station affiliated with the same network as that SV station. We recognize that the compulsory copyright license, now in 17 U.S.C. 122(a)(2), limits SV service to markets in which local-into-local service is offered. However, we disagree that this requires us to read a requirement into the Communications Act that is not there. The compulsory copyright license in 17 U.S.C. 122(a)(2) permits waivers and automatically grants them if the in-market station affiliated with the same network as the out-of-market SV station does not respond to the satellite carrier's waiver request.[172] As a practical matter, if there is no affiliate in the market, then there is no affiliate who can respond to a waiver request or grant a waiver under Section 122(a)(2). Thus, the satellite carrier could ultimately offer the SV station because the waiver request would, inevitably, go unanswered.[173] Accordingly, we interpret the Section 340(b)(3) in accordance with its express language. We find it unnecessary to change the text of the rule that corresponds to the Section 340(b)(3) exception because the rule uses the statutory language and is consistent with the interpretation adopted here.[174]

E. Dish Petition for Further Rulemaking

48. We decline to consider here Dish's petition for further rulemaking (filed with its comments in this docket) as it is not within the scope of this proceeding.[175] The Dish petition seeks two changes to the Commission's rules.[176] First, Dish asks the Commission to adopt a rule "that tying retransmission consent to restrictions on SV station carriage" violates the requirement that parties negotiate retransmission consent in good faith.[177] Dish's first proposal to change the retransmission consent rules could have been filed in our open proceeding on retransmission consent issues in MB Docket No. 10–71.[178] Second, Dish seeks to amend the Commission's rules for determining when a station qualifies for "significantly viewed" status in order to address the "orphan county" problem, which refers to the situation in which a county in one State is assigned to a neighboring State's DMA and there are few, if any, stations assigned to that DMA which are licensed to communities located in the State in which the county is located.[179] This proposal is better addressed in our proceeding to implement Section 304 of the STELA.[180] We also note, as the Broadcaster Associations point out,[181] that any changes to the Commission's existing rules for determining significantly viewed status would be inconsistent with the statute's requirement that we use the same rules for making significantly viewed determinations that were in effect for cable operators as of April 15, 1976.[182]

F. Housecleaning Rule Changes

49. In this section, we make non-substantive changes to update our significantly viewed rules. In the NPRM, we sought comment on these rule changes. The Broadcaster Associations and Satellite Carriers support these changes. Accordingly, we adopt the NPRM's proposed housecleaning rule changes.

50. *Section 76.5(i).* We amend Section 76.5(i) of the rules to replace its references to the term "non-cable" with the term "over-the-air."[183] In the 2005 *SHVERA Significantly Viewed Report and Order,* the Commission made this change to Section 76.54 to reflect the rule's true meaning, that being to indicate over-the-air viewing.[184] The Commission explained that, in the *1972 Order,* the concept of significant viewing was adopted to apply to over-the-air households, which at the time essentially meant households without cable (*i.e.,* non-cable households).[185] Thus, amending Section 76.5(i) to change "non-cable" to "over-the-air" reflects the true intent of the rule as it was in 1976, and is more consistent with the STELA's intent to establish parity between cable and satellite.

51. *Section 76.54(c).* We amend Section 76.54(c) of the rules to strike the outdated reference to the analog Grade B contour.[186] In the 2004 *SHVERA Significantly Viewed Report and Order,* the Commission revised this rule to add the appropriate service contour relevant for a station's digital signal—that being the noise limited service contour ("NLSC").[187] With the completion of the transition, we now can eliminate the reference to the Grade B contour.

[172] *See* 17 U.S.C. 122(a)(2)(B).

[173] As a practical matter, we also agree with the Satellite Carriers that there would be no aggrieved party by this interpretation. DIRECTV Reply at 9 (noting that "if the same-network broadcaster grants a waiver, it has determined that it would benefit from the delivery of the neighboring station* * *. If there is no such broadcaster, there is nobody to be harmed even in theory."). Our interpretation, however, is limited to the provisions of the Communications Act. We do not intend to render any opinion with respect to a party's rights under the Copyright Act. *See* 17 U.S.C. 122(a)(2)(B).

[174] *See* Appendix B final rule 47 CFR 76.54(g)(3) and (g)(4). We renumber Sections 76.54(g)(1) and (g)(2) as Sections 76.54(g)(3) and (g)(4), as well as make some other non-substantive changes to these rules.

[175] *See* Broadcaster Associations Reply at 17 and 23.

[176] *See* Dish Comments (Petition) at 9.

[177] *Id.* at 9. Section 76.65 of our rules requires TV stations and satellite carriers "to negotiate in good faith the terms and conditions of retransmission consent." 47 CFR 76.65(a). For example, Dish argues that it is not good faith if a local station conditions the grant of its retransmission consent in its local market on a concession from the satellite carrier that it will not carry an SV station affiliated with the same network in the local market. *Id.*

[178] *See* Broadcaster Associations Reply at 17.

[179] *Id.* at 11. Dish seeks changes to Sections 76.5(i) (definition of "significantly viewed") and 76.54 (rules for demonstrating a station qualifies for "significantly viewed" status). 47 CFR 76.5(i) and 76.54. Several government representatives and citizens from southwest Colorado filed comments in support of Dish's proposals and any other ways for viewers in the counties of La Plata and Montezuma, CO, to receive in-state programming (such as from the Denver, CO DMA). *See* Appendix. The counties of La Plata and Montezuma, CO are assigned to the Albuquerque-Santa Fe, NM DMA.

[180] Section 304 of the STELA requires the Commission to produce a "Report on In-State Broadcast Programming," due to Congress in August 2011, to address the concerns, such as those voiced by the southwest Colorado group, that in some DMAs, some subscribers are not able to receive stations licensed to communities in their state via satellite. STELA sec. 304.

[181] *See* Broadcaster Associations Reply at 24.

[182] 17 U.S.C. 122(a)(2), as amended by STELA (which retained the SHVERA's requirement in the statutory copyright license for SV stations (previously 17 U.S.C. 119(a)(3)) that the Commission use the same rules established for cable operators that were in effect as of April 15, 1976.

[183] *See* Appendix B final rule change to 47 CFR 76.5(i).

[186] *See* Appendix B final rule change to 47 CFR 76.54(c).

[187] *SHVERA Significantly Viewed Report and Order,* 20 FCC Rcd at 17292, para. 31. (The digital NLSC is defined in 47 CFR 73.622(e).)

G. Order on Reconsideration Dismisses Pending Petition as Moot

52. In this *Order on Reconsideration,* we dismiss as moot the petition for reconsideration filed jointly by DIRECTV and Dish of the Commission's *SHVERA Significantly Viewed Report and Order.*[188] The petition seeks reconsideration of two decisions in the *SHVERA Significantly Viewed Report and Order.*

53. First, the petition challenges the Commission's interpretation that the analog "local service" requirement in former Section 340(b)(1) also contains the "same network affiliate" requirement.[189] The STELA eliminates former Sections 340(b)(1) and (b)(2)(A).[190] The *R&O* accompanying this *Order on Reconsideration* revises the satellite television significantly viewed rules to eliminate the analog local service requirement, as well as the digital "same network affiliate" requirement.[191] Accordingly, this issue is moot.

54. Second, the petition challenges the Commission's interpretation of the digital service "equivalent bandwidth" requirement in former Section 340(b)(2)(B).[192] The STELA eliminates the "equivalent bandwidth" requirement in former Section 340(b)(2)(B)[193] and, in the *R&O* accompanying this *Order,* we revise the satellite television significantly viewed rules to eliminate this requirement.[194] Accordingly, this issue is also moot and we dismiss the petition.

IV. Conclusion

55. In this *R&O,* we implement the STELA amendments to the SV provisions that apply to satellite carriers. We have been mindful that Congress amended the SV provisions to create a more workable framework to facilitate satellite carriage of SV stations and thereby provide satellite subscribers with greater choice of programming and to improve parity and competition between satellite and cable carriage of broadcast stations. We have also considered the importance of localism and balanced access to SV stations with the benefits of continued carriage of local stations. The rules adopted by this Order will advance these goals for the benefit of consumers and the competitive market for video distribution.

V. Procedural Matters

A. Final Regulatory Flexibility Act Analysis

56. As required by the Regulatory Flexibility Act of 1980, as amended ("RFA")[195] the Commission has prepared this present Final Regulatory Flexibility Analysis ("FRFA") relating to this *Report and Order.* As required by the RFA, an Initial Regulatory Flexibility Analysis ("IRFA") was incorporated in the *Notice of Proposed Rulemaking ("NPRM")* to this proceeding.[196] The Commission sought written public comment on the proposals in the *NPRM,* including comment on the IRFA.[197] The Commission received no comments on the IRFA. This present FRFA conforms to the RFA.[198]

1. Need for, and Objectives of, the Final Rule Changes

57. This document adopts changes to the Commission's satellite television "significantly viewed" rules to implement Section 203 of the Satellite Television Extension and Localism Act of 2010 (STELA).[199] We initiated this proceeding on July 23, 2010 by issuing a Notice of Proposed Rulemaking (NPRM). With this *R&O,* we satisfy the STELA's mandate that the Commission adopt final rules in this proceeding on or before November 24, 2010.

58. Section 203 of the STELA amends Section 340 of the Communications Act, which gives satellite carriers the authority to offer out-of-market but "significantly viewed" broadcast television stations as part of their local service to subscribers.[200] The designation of "significantly viewed" status allows a station assigned to one DMA to be treated as a "local" station with respect to a particular cable or satellite community in another DMA, and, thus, enables cable or satellite carriage into said community in that other DMA. Whereas cable operators have had carriage rights for "significantly viewed" ("SV") stations since 1972, satellite carriers have had such authority only since the 2004 Satellite Home Viewer Extension and Reauthorization Act of 2004 (SHVERA) and may only retransmit SV network stations to "eligible" satellite subscribers. The satellite subscriber eligibility rules impose conditions on when satellite carriers may retransmit SV stations to subscribers. These conditions are intended to prevent satellite carriers from favoring an SV network station over the in-market (local) station affiliated with the same network. We note that the nature of SV carriage under Section 340 is permissive (and not mandatory), meaning the statute applies when a satellite carrier chooses to carry an SV station and has obtained retransmission consent from such SV station.[201]

59. Section 203 of the STELA changes the restrictions on subscriber eligibility to receive SV network stations from satellite carriers. To implement the STELA, we revise our satellite subscriber eligibility rules as follows:

- We find that the local service requirement in amended Section 340(b)(1) requires only that a satellite subscriber receive local-into-local satellite service as a precondition for that subscriber to receive SV stations. We find that the statute no longer requires a satellite subscriber to receive the specific local network station as a precondition for that subscriber to receive an SV station affiliated with the same network.
- We find that amended Section 340(b)(2) no longer requires that a satellite carrier offer "equivalent bandwidth" to the local and SV network station pair and instead imposes an "HD format" requirement. We find that the HD format requirement in amended Section 340(b)(2) requires that, in order to carry an SV station in high definition (HD) format, a satellite carrier must carry the local station affiliated with the same network in HD whenever such format is available from the local station.
  - The HD format requirement applies only where a satellite carrier retransmits to a subscriber the SV station in HD format. This requirement does not restrict a satellite carrier from

[188] *2006 DIRECTV–EchoStar Joint Petition,* at *supra* note 6.

[189] *2006 DIRECTV–EchoStar Joint Petition* at 9. The petition does not challenge the Commission's interpretation that the digital requirement in former Section 340(b)(2)(A) contains the "same network affiliate" requirement, essentially conceding the plain meaning of that provision.

[190] *See supra* notes 66 and 68 (for former statutory text).

[191] *See supra* Section III.B. (for discussion of new Section 340(b)(1)).

[198] *See* 5 U.S.C. 604.

[199] The Satellite Television Extension and Localism Act of 2010 (STELA) sec. 203, Public Law 111–175, 124 Stat 1218, 1245 (2010) (sec. 203 codified as amended at 47 U.S.C. 340, other STELA amendments codified in scattered sections of 17 and 47 U.S.C.).

[200] 47 U.S.C. 340.

[201] *Id.* at 340(d).

retransmitting to a subscriber the SV station in standard definition (SD) format.

○ For purposes of the HD format requirement, the corresponding local (in-market) station will be considered "available" to the satellite carrier when the station: (1) Elects mandatory carriage or grants retransmission consent; (2) provides a good quality signal to the satellite carrier as required by Section 76.66(g) of the rules; and (3) is otherwise in compliance with the "good faith negotiation" and carriage provisions set forth in Sections 76.65 and 76.66 of the rules. However, the HD signal of the corresponding local station will be deemed "available" despite failure to reach agreement on the terms of retransmission if the satellite carrier is not in compliance with Section 76.65.

○ The HD format requirement requires satellite carriage of a secondary HD stream of a local station's multicast signal if that stream is affiliated with the same network as an SV station retransmitted in HD to satellite subscribers in the local market.

• We modify the Commission's 2005 interpretation of the Section 340(b)(3) exception, which is unchanged by the STELA, and find that, in the context of the newly revised statute, this exception permits a satellite carrier to offer an SV network station to a subscriber when there is no local affiliate of the same network present in the local market, even if the subscriber does not receive local-into-local service.

2. Summary of Significant Issues Raised by Public Comments in Response to the IRFA

60. There were no comments filed that specifically addressed the rules and policies proposed in the IRFA.

3. Description and Estimate of the Number of Small Entities to Which the Rules Will Apply

61. The RFA directs agencies to provide a description of and, where feasible, an estimate of the number of small entities that may be affected by the proposed rules, if adopted.[202] The RFA generally defines the term "small entity" as having the same meaning as the terms "small business," "small organization," and "small governmental jurisdiction."[203] In addition, the term "small business" has the same meaning as the term "small business concern" under the Small Business Act.[204] A small business concern is one which: (1) Is independently owned and operated; (2) is not dominant in its field of operation; and (3) satisfies any additional criteria established by the Small Business Administration ("SBA").[205] Below, we provide a description of such small entities, as well as an estimate of the number of such small entities, where feasible.

62. *Satellite Carriers.* The term "satellite carrier" means an entity that uses the facilities of a satellite or satellite service licensed under Part 25 of the Commission's rules to operate in the Direct Broadcast Satellite (DBS) service or Fixed-Satellite Service (FSS) frequencies.[206] As a general practice (not mandated by any regulation), DBS licensees usually own and operate their own satellite facilities as well as package the programming they offer to their subscribers. In contrast, satellite carriers using FSS facilities often lease capacity from another entity that is licensed to operate the satellite used to provide service to subscribers. These entities package their own programming and may or may not be Commission licensees themselves. In addition, a third situation may include an entity using a non-U.S. licensed satellite to provide programming to subscribers in the United States pursuant to a blanket earth station license.[207] In the *SHVERA Significantly Viewed Report and Order,* the Commission concluded that the definition of "satellite carrier" includes all three of these types of entities.[208]

63. *Direct Broadcast Satellite ("DBS") Service.* DBS service is a nationally distributed subscription service that delivers video and audio programming via satellite to a small parabolic "dish" antenna at the subscriber's location. DBS, by exception, is now included in the SBA's broad economic census category, "Wired Telecommunications Carriers,"[209] which was developed for small wireline firms. Under this category, the SBA deems a wireline business to be small if it has 1,500 or fewer employees.[210] However, the data we have available as a basis for estimating the number of such small entities were gathered under a superseded SBA small business size standard formerly titled "Cable and Other Program Distribution." The definition of Cable and Other Program Distribution provided that a small entity was one with $12.5 million or less in annual receipts.[211] Currently, only two entities provide DBS service, which requires a great investment of capital for operation: DIRECTV and EchoStar Communications Corporation ("EchoStar") (marketed as the DISH Network).[212] Each currently offer subscription services. DIRECTV[213] and EchoStar[214] each report annual revenues that are in excess of the threshold for a small business. Because DBS service requires significant capital, we believe it is unlikely that a small

[202] 5 U.S.C. 603(b)(3).

[203] 5 U.S.C. 601(6).

[204] 5 U.S.C. 601(3) (incorporating by reference the definition of "small business concern" in 15 U.S.C. 632). Pursuant to 5 U.S.C. 601(3), the statutory definition of a small business applies "unless an agency, after consultation with the Office of Advocacy of the Small Business Administration and after opportunity for public comment, establishes one or more definitions of such term which are appropriate to the activities of the agency and publishes such definition(s) in the **Federal Register**." 5 U.S.C. 601(3).

[205] 15 U.S.C. 632. Application of the statutory criteria of dominance in its field of operation and independence are sometimes difficult to apply in the context of broadcast television. Accordingly, the Commission's statistical account of television stations may be over-inclusive.

[206] The Communications Act defines the term "satellite carrier" by reference to the definition in the copyright laws in title 17. *See* 47 U.S.C. 340(i)(1) and 338(k)(3); 17 U.S.C. 119(d)(6). Part 100 of the Commission's rules was eliminated in 2002 and now both FSS and DBS satellite facilities are licensed under Part 25 of the rules. *Policies and Rules for the Direct Broadcast Satellite Service,* 67 FR 51110, August 7, 2002; 47 CFR 25.148.

[207] *See, e.g., DIRECTV 5 Blanket Earth Station License,* DA 04–2526, August 12, 2004.

[208] *SHVERA Significantly Viewed Report and Order,* 20 FCC Rcd at 17302–3, paras. 59–60.

[209] *See* 13 CFR 121.201, NAICS code 517110 (2007). The 2007 North American Industry Classification System ("NAICS") defines the category of "Wired Telecommunications Carriers" as follows: "This industry comprises establishments primarily engaged in operating and/or providing access to transmission facilities and infrastructure that they own and/or lease for the transmission of voice, data, text, sound, and video using wired telecommunications networks. Transmission facilities may be based on a single technology or a combination of technologies. Establishments in this industry use the wired telecommunications network facilities that they operate to provide a variety of services, such as wired telephony services, including VoIP services; wired (cable) audio and video programming distribution; and wired broadband Internet services. *By exception, establishments providing satellite television distribution services using facilities and infrastructure that they operate are included in this industry.*" (*Emphasis* added to text relevant to satellite services.) U.S. Census Bureau, 2007 NAICS Definitions, "517110 Wired Telecommunications Carriers"; *http://www.census.gov/naics/2007/def/ND517110.HTM.*

[210] 13 CFR 121.201, NAICS code 517110 (2007).

[211] 13 CFR 121.201, NAICS code 517510 (2002).

[212] *See Thirteenth Annual Cable/MVPD Competition Report,* 74 FR 11102, March 16, 2009. We note that, in 2007, EchoStar purchased the licenses of Dominion Video Satellite, Inc. ("Dominion") (marketed as Sky Angel). *See* Public Notice, "Policy Branch Information; Actions Taken," Report No. SAT–00474, 22 FCC Rcd 17776 (IB 2007).

[213] As of June 2006, DIRECTV is the largest DBS operator and the second largest MVPD, serving an estimated 16.20% of MVPD subscribers nationwide. *See id.* at 687, Table B–3.

[214] As of June 2006, DISH Network is the second largest DBS operator and the third largest MVPD, serving an estimated 13.01% of MVPD subscribers nationwide. *Id.* As of June 2006, Dominion served fewer than 500,000 subscribers, which may now be receiving "Sky Angel" service from DISH Network. *See id.* at 581, para. 76.

entity as defined by the SBA would have the financial wherewithal to become a DBS service provider. We seek comments that have data on the annual revenues and number of employees of DBS service providers.

64. *Fixed-Satellite Service ("FSS").* The FSS is a radiocommunication service between earth stations at a specified fixed point or between any fixed point within specified areas and one or more satellites.[215] The FSS, which utilizes many earth stations that communicate with one or more space stations, may be used to provide subscription video service. FSS, by exception, is now included in the SBA's broad economic census category, "Wired Telecommunications Carriers,"[216] which was developed for small wireline firms. Under this category, the SBA deems a wireline business to be small if it has 1,500 or fewer employees.[217] However, the data we have available as a basis for estimating the number of such small entities were gathered under a superseded SBA small business size standard formerly titled "Cable and Other Program Distribution." The definition of Cable and Other Program Distribution provided that a small entity was one with $12.5 million or less in annual receipts.[218] Although a number of entities are licensed in the FSS, not all such licensees use FSS frequencies to provide subscription services. The two DBS licensees (EchoStar and DIRECTV) have indicated interest in using FSS frequencies to broadcast signals to subscribers. It is possible that other entities could similarly use FSS frequencies, although we are not aware of any entities that might do so.

65. *Television Broadcasting.* The SBA defines a television broadcasting station as a small business if such station has no more than $14.0 million in annual receipts.[219] Business concerns included in this industry are those "primarily engaged in broadcasting images together with sound."[220] The Commission has estimated the number of licensed commercial television stations to be 1,392.[221] According to Commission staff review of the BIA/Kelsey, MAPro Television Database ("BIA") as of April 7, 2010, about 1,015 of an estimated 1,380 commercial television stations[222] (or about 74 percent) have revenues of $14 million or less and, thus, qualify as small entities under the SBA definition. The Commission has estimated the number of licensed noncommercial educational (NCE) television stations to be 390.[223] We note, however, that, in assessing whether a business concern qualifies as small under the above definition, business (control) affiliations[224] must be included. Our estimate, therefore, likely overstates the number of small entities that might be affected by our action, because the revenue figure on which it is based does not include or aggregate revenues from affiliated companies. The Commission does not compile and otherwise does not have access to information on the revenue of NCE stations that would permit it to determine how many such stations would qualify as small entities.

66. In addition, an element of the definition of "small business" is that the entity not be dominant in its field of operation. We are unable at this time to define or quantify the criteria that would establish whether a specific television station is dominant in its field of operation. Accordingly, the estimate of small businesses to which rules may apply do not exclude any television station from the definition of a small business on this basis and are therefore over-inclusive to that extent. Also, as noted, an additional element of the definition of "small business" is that the entity must be independently owned and operated. We note that it is difficult at times to assess these criteria in the context of media entities and our estimates of small businesses to which they apply may be over-inclusive to this extent.

67. *Satellite Master Antenna Television (SMATV) Systems, also known as Private Cable Operators (PCOs).* SMATV systems or PCOs are video distribution facilities that use closed transmission paths without using any public right-of-way. They acquire video programming and distribute it via terrestrial wiring in urban and suburban multiple dwelling units such as apartments and condominiums, and commercial multiple tenant units such as hotels and office buildings. SMATV systems or PCOs are now included in the SBA's broad economic census category, "Wired Telecommunications Carriers,"[225] which was developed for small wireline firms.[226] Under this category, the SBA deems a wireline business to be small if it has 1,500 or fewer employees.[227] However, the data we have available as a basis for estimating the number of such small entities were gathered under a superseded SBA small business size standard formerly titled "Cable and Other Program Distribution." The definition of Cable and Other Program Distribution provided that a small entity was one with $12.5 million or less in annual receipts.[228] As of June 2004, there were approximately 135 members in the Independent Multi-Family Communications Council (IMCC), the trade association that represents PCOs.[229] The IMCC indicates that, as of June 2006, PCOs serve about 1 to 2 percent of the multichannel video programming distributors (MVPD) marketplace.[230] Individual PCOs often serve approximately 3,000–4,000 subscribers, but the larger operations serve as many as 15,000–55,000 subscribers. In total, as of June 2006, PCOs serve approximately 900,000 subscribers.[231] Because these operators are not rate regulated, they are not required to file financial data with the Commission. Furthermore, we are not aware of any privately published financial information regarding these operators. Based on the estimated number of operators and the estimated number of units served by the largest 10 PCOs, we believe that a substantial number of PCOs may have been

categorized as small entities under the now superseded SBA small business size standard for Cable and Other Program Distribution.[232]

4. Description of Projected Reporting, Recordkeeping, and Other Compliance Requirements

68. The final rules do not impose any new reporting, recordkeeping or other compliance requirements.

5. Steps Taken to Minimize Significant Economic Impact on Small Entities, and Significant Alternatives Considered

69. The RFA requires an agency to describe any significant alternatives that it has considered in reaching its proposed approach, which may include the following four alternatives (among others): (1) The establishment of differing compliance or reporting requirements or timetables that take into account the resources available to small entities; (2) the clarification, consolidation, or simplification of compliance or reporting requirements under the rule for small entities; (3) the use of performance, rather than design, standards; and (4) an exemption from coverage of the rule, or any part thereof, for small entities.[233]

70. In the NPRM, we invited comment on whether there were any alternatives we should consider to our proposed implementation of the statutory amendments to Section 340(b) that would minimize any adverse impact on small businesses, but which are consistent with the statute and its goals and also maintain the benefits of our proposals. We explained that STELA's amendments to Section 340(b) intend to facilitate satellite carriage of SV stations, with the expectation that this will increase satellite TV service to consumers and promote regulatory parity between cable and satellite service.[234] We tentatively concluded that our proposed rule changes implement the statute in the way that is most consistent with the plain language of the statute.[235] We also noted that the plain language of the statute did not appear to give us discretion to treat small entities differently from larger ones, but sought comment on this question. We received no comments to the IRFA in the NPRM. We, therefore, affirm our conclusions in the NPRM's IRFA.

71. We find in the *R&O* that Congress amended the SV provisions to create a more workable framework to facilitate satellite carriage of SV stations and, thus, improve parity and competition between satellite and cable. Satellite carriers, and the SV stations which they would carry,[236] will certainly benefit from the opportunity for increased TV service afforded by the STELA's changes to the SV program. Furthermore, consumers of satellite TV service will benefit from greater choice of programming. We find that any adverse impact to these entities is unlikely because SV carriage under Section 340 is permissive (and not mandatory); that is, the satellite carrier chooses to carry an SV station and the SV station must grant its consent to be carried.[237]

72. While we have included this complete FRFA, we note that we could have certified that this rulemaking will not have a "significant economic impact on a substantial number of small entities."[238] The rules impose compliance requirements only on the two DBS service providers, neither of which qualify as a small entity.[239]

6. Report to Congress

73. The Commission will send a copy of this *R&O,* including this FRFA, in a report to be sent to Congress pursuant to the Congressional Review Act.[240] In addition, the Commission will send a copy of the *R&O,* including the FRFA, to the Chief Counsel for Advocacy of the SBA. A copy of the *R&O* and FRFA (or summaries thereof) will also be published in the **Federal Register.**[241]

B. Final Paperwork Reduction Act of 1995 Analysis

74. This Report and Order has been analyzed with respect to the Paperwork Reduction Act of 1995 ("PRA"),[242] and does not contain any new or modified information collection requirements.[243] In addition, therefore, it does not contain any new or modified "information collection burden for small business concerns with fewer than 25 employees," pursuant to the Small Business Paperwork Relief Act of 2002.[244]

C. Congressional Review Act

75. The Commission will send a copy of this Report and Order in a report to be sent to Congress and the Government Accountability Office, pursuant to the Congressional Review Act.[245]

D. Additional Information

76. For more information on this Report and Order, please contact Evan Baranoff, *Evan.Baranoff@fcc.gov,* of the Media Bureau, Policy Division, (202) 418–2120.

VI. Ordering Clauses

77. Accordingly, *it is ordered* that pursuant to Section 203 of the Satellite Television Extension and Localism Act of 2010 (STELA), and Sections 1, 4(i) and (j), and 340 of the Communications Act of 1934, as amended, 47 U.S.C. 151, 154(i) and (j), and 340, this Report and Order IS *adopted,* and the Commission's rules *are hereby amended* as set forth in the final rule changes appendix (Appendix B) attached to this Report and Order.

78. *It is also ordered* that, pursuant to the authority contained in Sections 203(b) and 307 of the STELA, STELA secs. 203(b) and 307, the rules adopted in this Report and Order *are adopted* and *will be effective* 30 days after date of publication in the **Federal Register.**

79. *It is also ordered* that, pursuant to Sections 1, 4(i) and (j), and 340 of the Communications Act of 1934, as amended, 47 U.S.C. 151, 154(i) and (j), and 340; and Section 1.429 of our rules, 47 CFR 1.429, the petition for reconsideration in MB Docket No. 05–49 which was filed jointly by DIRECTV and Dish (formerly Echostar) *is dismissed as moot.*

80. *It is further ordered* that, pursuant to the Congressional Review Act, 5 U.S.C. 801(a)(1)(A), the Commission *will send* a copy of this Report and Order in a report to Congress and the General Accounting Office.

81. *It is further ordered* that the Commission's Consumer and Governmental Affairs Bureau, Reference Information Center, *will send* a copy of this Report and Order, including the Final Regulatory Flexibility Analysis, to the Chief Counsel for Advocacy of the Small Business Administration.

Secretary, Federal Communications Commission.

Final Rules

■ For the reasons discussed in the preamble, the FCC amends 47 CFR part 76 as follows:

PART 76—MULTICHANNEL VIDEO AND CABLE TELEVISION SERVICE

■ 1. The authority citation for part 76 continues to read as follows:

Authority: 47 U.S.C. 151, 152, 153, 154, 301, 302, 302a, 303, 303a, 307, 308, 309, 312, 315, 317, 325, 339, 340, 341, 503, 521, 522, 531, 532, 534, 535, 536, 537, 543, 544, 544a, 545, 548, 549, 552, 554, 556, 558, 560, 561, 571, 572, 573.

■ 2. Amend § 76.5(i) by removing the words "other than cable television" and adding in their place the words "over-the-air" and in the Note following paragraph (i) remove the word "noncable" each place it appears and add in its place the words "over-the-air".

■ 3. Amend § 76.54 by revising the first sentence in paragraph (c), revising paragraph (g), removing and reserving paragraph (h), and revising paragraph (i), to read as follows:

§ 76.54 Significantly viewed signals; method to be followed for special showings.

* * * * *

(c) Notice of a survey to be made pursuant to paragraph (b) of this section shall be served on all licensees or permittees of television broadcast stations within whose predicted noise limited service contour, as defined in § 73.622(e) of this chapter, the cable or satellite community or communities are located, in whole or in part, and on all other system community units, franchisees, and franchise applicants in the cable community or communities at least (30) days prior to the initial survey period. * * *

* * * * *

(g) *Limitations on satellite subscriber eligibility.* A satellite carrier may retransmit a significantly viewed network station to a subscriber, provided the conditions in paragraphs (g)(1) and (g)(2) of this section are satisfied or one of the two exceptions to these conditions provided in paragraphs (g)(3) and (g)(4) of this section apply.

(1) *Local service requirement.* A satellite carrier may retransmit to a subscriber the signal of a significantly viewed station if:

(i) Such subscriber receives local-into-local service pursuant to § 76.66; and

(ii) Such satellite carrier is in compliance with § 76.65 with respect to the stations located in the local market into which the significantly viewed station will be retransmitted.

(2) *HD format requirement.* Subject to the conditions in paragraphs (g)(2)(i) through (iv) of this section, a satellite carrier may retransmit to a subscriber in high definition (HD) format the signal of a significantly viewed station only if such carrier also retransmits in HD format the signal of a station located in the local market of such subscriber and affiliated with the same network whenever such format is available from such station, including when the HD signal is broadcast on a multicast stream.

(i) The requirement in paragraph (g)(2) of this section applies only where a satellite carrier retransmits to a subscriber the significantly viewed station in HD format, and does not restrict a satellite carrier from retransmitting to a subscriber a significantly viewed station in standard definition (SD) format.

(ii) For purposes of paragraph (g)(2) of this section, the term "HD format" refers to a picture quality resolution of 720p, 1080i, or higher.

(iii) For purposes of paragraph (g)(2) of this section, the local station's HD signal will be considered "available" to the satellite carrier when the station:

(A) Elects mandatory carriage or grants retransmission consent;

(B) Provides a good quality HD signal to the satellite carrier's local receive facility (LRF); and

(C) Complies with the requirements of §§ 76.65 and 76.66.

(iv) Notwithstanding the provisions of paragraph (g)(2)(iii) of this section, if the local station is willing to grant retransmission consent and make its HD signal available to the satellite carrier, but the satellite carrier does not negotiate with the local station in good faith, as required by § 76.65, then the local station's HD signal will be deemed "available" for purposes of paragraph (g)(2) of this section.

(3) *Exception if no network affiliate in local market.* The limitations in paragraphs (g)(1) and (g)(2) of this section will not prohibit a satellite carrier from retransmitting a significantly viewed network station to a subscriber located in a local market in which there are no network stations affiliated with the same television network as the significantly viewed station.

(4) *Exception if waiver granted by local station.* The limitations in paragraphs (g)(1) and (g)(2) of this section will not apply if, and to the extent that, the local network station affiliated with the same television network as the significantly viewed station has granted a waiver in accordance with 47 U.S.C. 340(b)(4).

* * * * *

(i) For purposes of paragraph (g) of this section, television network and network station are as defined in 47 U.S.C. 339(d).

* * * * *

BILLING CODE 6712–01–P

DEPARTMENT OF TRANSPORTATION

Federal Motor Carrier Safety Administration

49 CFR Parts 371, 375, 386, and 387

[Docket No. FMCSA–2004–17008]

RIN 2126–AA84

Brokers of Household Goods Transportation by Motor Vehicle

AGENCY: Federal Motor Carrier Safety Administration (FMCSA), DOT.

ACTION: Final rule.

SUMMARY: FMCSA amends its regulations to require brokers that arrange the transportation of household goods in interstate or foreign commerce for consumers to comply with certain consumer protection requirements. Brokers must provide: their U.S. DOT number on their advertisements and Internet Web sites; estimates of expected moving charges and brokerage fees; FMCSA pamphlets containing tips for successful moves and the consumer's rights and responsibilities; and the broker's policies concerning deposits, cancellations, and refunds. This rulemaking is in response to the Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users (SAFETEA–LU) and a petition for rulemaking from the American Moving and Storage Association. This rulemaking is intended to ensure that individual shippers who arrange for transportation of household goods through brokers receive necessary information regarding their rights and responsibilities in connection with interstate household goods moves.

DATES: *Effective date:* The effective date of this final rule is January 28, 2011. *Compliance date for 49 CFR 387.307(a)(2):* Brokers that arrange the transportation of household goods in interstate or foreign commerce must increase their surety bonds or trust funds to the new minimum amount of $25,000 and have surety companies or trust fund managers file appropriate Forms BMC–84 or BMC–85 with FMCSA no later than January 1, 2012.

ADDRESSES: For access to the docket to read background documents or comments received, go to *http://www.regulations.gov* at any time or to U.S. Department of Transportation, Room W12–140, 1200 New Jersey Avenue, SE., Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: Mr. Brodie Mack, FMCSA Household Goods Enforcement and Compliance Team Leader, (202) 385–2400.

SUPPLEMENTARY INFORMATION:

Legal Basis for the Rulemaking

The Secretary of Transportation's (Secretary) general jurisdiction to establish regulations concerning the procurement by property brokers of for-hire transportation in interstate or foreign commerce is found at 49 U.S.C. 13501. Brokers of household goods are a subset of all property brokers and specifically register with FMCSA as household goods brokers as required by 49 U.S.C. 13901 and 13904. This rulemaking applies only to household goods brokers that procure for-hire transportation in interstate or foreign commerce.

The Secretary is authorized to collect from household goods brokers "information the Secretary decides is necessary" to ensure a transportation system that meets the needs of the United States (49 U.S.C. 13101 and 13301). The Secretary also has authority to adopt regulations applicable to registered household goods brokers which "shall provide for the protection of shippers by motor vehicle" (49 U.S.C. 13904(c)). The Secretary's authority to inspect and copy household goods broker records is found at 49 U.S.C. 14122. The Secretary has delegated these various authorities to the FMCSA Administrator (49 CFR 1.73(a)).

This rulemaking is based on the statutory provisions cited above and on the Household Goods Mover Oversight Enforcement and Reform Act of 2005, Title IV, Subtitle B of the Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users (SAFETEA–LU) (Pub. L. 109–59). This rulemaking focuses on the business practices of household goods brokers engaged in interstate or foreign commerce. Household goods brokers arrange, but do not perform, the transportation of household goods shipments.

Section 4212 of SAFETEA–LU directs the Secretary to require a household goods broker to provide shippers with the following information whenever the broker has contact with a shipper or a potential shipper:

1. The broker's U.S. DOT number.

2. The FMCSA pamphlet titled, "Your Rights and Responsibilities When You Move."

3. A list of all motor carriers providing transportation of household goods used by the broker and a statement that the broker is not a motor carrier providing transportation of household goods.

Section 4209 of SAFETEA–LU adds new civil penalties for unlawful broker estimating practices and increases existing civil penalties for providing household goods motor carrier or broker services subject to FMCSA jurisdiction without being registered with FMCSA.

The Secretary's general jurisdiction at 49 U.S.C. 13501 authorizes FMCSA to establish shipment estimating and other requirements not specifically mandated by SAFETEA–LU in this final rule.

Background

Existing FMCSA Regulations Applicable to Household Goods Brokers

Household goods brokers have been regulated by FMCSA and its predecessor agencies for many years and a number of regulations apply to them, including registration requirements (49 CFR part 365), process agent requirements (49 CFR part 366), and financial responsibility [1] requirements (49 CFR part 387). Section 387.307 requires property brokers, including household goods brokers, to maintain a surety bond or trust fund agreement in the amount of at least $10,000 to provide for payments to motor carriers or shippers, if the broker fails to carry out its agreement to supply transportation by authorized motor carriers.

Part 371 of FMCSA's regulations specifies general property broker transaction record requirements, prohibits misrepresentation of the broker's name or non-carrier status, and prohibits certain rebating and compensation practices. Part 379 specifies general recordkeeping retention periods.

FMCSA may also issue orders to compel compliance, impose civil monetary penalties, revoke the broker's license, or seek Federal court orders to stop statutory and/or regulatory violations. Because household goods brokers do not provide the actual transportation, they are not subject to FMCSA's safety jurisdiction.

Petition for Rulemaking

On March 6, 2003, the American Moving and Storage Association (AMSA) petitioned FMCSA to initiate a rulemaking to amend 49 CFR part 371, "Brokers of Property," to impose specific

[1] The term "financial responsibility," is not specifically defined in subpart C of 49 CFR part 387 (property brokers) and takes the general, commonly understood meaning of responsibility to compensate a party for losses, whether those losses are caused by physical damage, breach of contract, or other type of injury. The use of the term "financial responsibility" in Subpart C does not incorporate the definitions of that term found at 49 CFR 387.5 and 387.29, which apply to Subparts A (motor carriers of property) and B (motor carriers of passengers), respectively, of 49 CFR part 387.

additional requirements on household goods brokers. A copy of AMSA's petition is in docket FMCSA–2004–17008. AMSA's main argument for additional rulemaking was its assertion that there were an increasing number of moving-related Web sites hosted by household goods brokers engaging in unfair business practices.

FMCSA granted AMSA's petition and issued an Advance Notice of Proposed Rulemaking (ANPRM) in 2004 (69 FR 76664, December 22, 2004). In the ANPRM, FMCSA sought answers to 36 questions related to household goods broker issues. By posing these questions, the Agency sought to determine the extent to which the public believes a problem exists with household goods brokers and, if so, whether regulatory or non-regulatory solutions would better solve the problem.

Also in the ANPRM, FMCSA discussed how it became responsible for household goods broker regulatory oversight through the Interstate Commerce Commission Termination Act of 1995 (ICCTA) (Pub. L. 104–88, December 29, 1995, 109 Stat. 803) and the Motor Carrier Safety Improvement Act of 1999 (MCSIA) (Pub. L. 106–159, December 9, 1999, 113 Stat. 1748). The ICCTA gave the Secretary of Transportation jurisdiction over the procurement of interstate motor carrier transportation (49 U.S.C. 13501). The MCSIA, in establishing FMCSA, granted to the Agency regulatory oversight of the property broker regulations. The former Interstate Commerce Commission (ICC) decided on May 16, 1949 (Ex Parte MC–39 "Practices of Property Brokers," 49 M.C.C. 277, at 286) (14 FR 2833, May 28, 1949) that it was necessary to regulate all property brokers, including household goods brokers, in interstate or foreign commerce. In that proceeding, the ICC decided it was unnecessary to regulate household goods brokers separately from general freight brokers.

Generally, the commenters to the ANPRM did not express support for rulemaking action or address many of the specific questions raised in the ANPRM. For example, none of the commenters submitted specific information related to the questions about the estimated number of household goods brokers, or questions about details of the household goods broker business. Commenters did, however, offer useful information and suggestions in other areas to assist FMCSA in developing a rulemaking proposal.

The Proposed Rule

The Notice of Proposed Rulemaking (NPRM) (72 FR 5947, February 8, 2007), addressed the problems and recommendations identified by AMSA in its petition, incorporated requirements mandated by SAFETEA–LU, and adopted some of the recommendations made by commenters to the ANPRM. FMCSA proposed to amend the current broker regulations in part 371 by adding a new subpart B specifically for household goods brokers; amend appendix B of part 386 to incorporate the civil penalties applicable to household goods brokers added by SAFETEA–LU; and amend part 387 to increase the amount of the surety bond or trust fund currently required for household goods brokers.

The proposed rule consisted of five basic elements that are being made final in this rule:

- It would require household goods brokers to disclose to individual shippers critical information designed to educate the shipper and facilitate a satisfactory moving experience.
- It would require household goods brokers to use only household goods motor carriers that are properly licensed and insured.
- It would impose requirements governing estimates, consistent with those statutorily imposed on household goods motor carriers.
- It would incorporate new statutory penalties for providing estimates without an agreement with a household goods motor carrier and for operating without being registered with FMCSA.
- It would adjust for inflation the current minimum level of financial responsibility required of household goods brokers.

Discussion of Comments on the Proposed Rule

FMCSA received 11 comments on the notice of proposed rulemaking (NPRM) (72 FR 5947, February 8, 2007). Several commenters expressed general support for the requirements imposed on household goods brokers. The following sections discuss comments on specific issues and FMCSA's responses to those comments.

Scope of Part 371, Subpart B

Proposed § 371.101 would require household goods brokers that operate in interstate or foreign commerce to comply with all of the provisions of subpart B. AMSA recommends adding a phrase to state that the rule applies to a broker offering services "to individual shippers."

FMCSA response. FMCSA agrees with AMSA. The subpart's scope should be limited to only household goods brokers offering services to individual shippers. It should not include commercial and government shippers that are generally more knowledgeable of brokerage transactions. FMCSA will change the rule to the following. "Yes, you must comply with all regulations in this subpart when you operate as a household goods broker offering services to individual shippers in interstate or foreign commerce. The regulations in this subpart do not apply to a household goods broker when providing services to commercial or government shippers in interstate or foreign commerce."

Definitions of Terms

Proposed § 371.103 would define terms used in subpart B. FMCSA proposed definitions for the terms "household goods," "household goods broker," and "individual shipper." The acronym "FMCSA" was used numerous times in the proposed rule, but the Agency does not show a definition of the term in part 371.The Agency will add the acronym "FMCSA" in the final rule and define it to mean "Federal Motor Carrier Safety Administration."

Qualifications of Motor Carriers Used by the Broker

Proposed § 371.105 would make it clear that a household goods broker may only act as a household goods broker for a household goods motor carrier that has a valid, active U.S. DOT number and valid, active operating authority issued by FMCSA. This requirement was requested by AMSA in its Petition for Rulemaking and was suggested by some of the commenters to the ANPRM. The use of FMCSA-registered household goods motor carriers to provide the transportation will provide a greater level of assurance that the household goods motor carrier will comply with applicable FMCSA regulations. The Public Utilities Commission of Ohio (PUCO) believes it would be useful to keep a database of consumer complaints against each carrier so that potential shippers could identify potentially troublesome movers.

FMCSA response. FMCSA maintains a consumer complaint database and allows public access to consumer complaint information regarding household goods carriers and brokers. This database can be accessed on the Internet by going to *http://www.protectyourmove.gov* and selecting the hyperlink "Search for Moving Companies and View Complaint History" which will lead to *http://ai.volpe.dot.gov/hhg/search.asp.* In a separate rulemaking (73 FR 9266,

February 20, 2008), FMCSA proposed that each household goods carrier must submit a statutorily-mandated quarterly report about consumer complaints it receives, which should assist individual shippers in evaluating their transportation options.

Information in Advertisements and Internet Web Sites

FMCSA proposed (§ 371.107) implementing section 4212 of SAFETEA–LU by requiring that household goods brokers disclose to potential shippers their Department of Transportation registration number and that they are not motor carriers providing transportation of household goods. FMCSA also proposed that household goods brokers disclose certain information not required by SAFETEA–LU, but which FMCSA believes is necessary to assist individual shippers. The Agency proposed that household goods brokers prominently display in their advertisements and on their Web sites the following:

1. The physical location of the business.

2. Its "MC" operating authority number and U.S. DOT registration number.[2]

3. Its status as a household goods broker that does not transport household goods but that arranges for such transportation.

AMSA urges FMCSA to monitor brokers' Web sites to ensure that unscrupulous brokers are not providing misleading information. The commenter also recommends an additional subparagraph in the rule to prohibit the broker from including the names or logos of motor carriers unless they are FMCSA-authorized household goods motor carriers with which the broker has a written agreement, as specified in § 371.115.

FMCSA response. As a part of its enforcement program, FMCSA already monitors the Web sites of household goods brokers and carriers to determine if they are providing misleading information on the Internet. We conduct compliance reviews and initiate enforcement action when appropriate.

We add a subparagraph in the final rule to provide more information to individual shippers receiving estimates prepared by brokers pursuant to § 371.113(b). A household goods broker that provides an estimate on behalf of a motor carrier must state on the broker's Web site that any estimate must be based on the carrier's tariff and that the carrier is required to make the tariff available for public inspection upon a reasonable request. We add this requirement to better ensure that individual shippers understand their rights with respect to broker-prepared estimates.

We have adopted AMSA's suggestion to add a subparagraph in the final rule to prohibit household goods brokers from including the names or logos of motor carriers unless they are FMCSA-authorized household goods motor carriers with which the broker has a written agreement, as required by § 371.115. We agree that brokers should not misrepresent to shippers that their shipments will be moved by specific moving companies, when the broker does not have agreements with those companies. The provision is intended to further full and honest disclosure to the shipper.

List of Motor Carriers

FMCSA proposed (§ 371.109) that a household goods broker must provide to each potential individual shipper who has contact with the household goods broker a list of all household goods motor carriers used by the broker, to implement sec. 4212(3) of SAFETEA–LU. National Relocation Services and Pro Movers Network believe that the requirement is burdensome on the broker and does not serve a consumer protection purpose for the shipper.

FMCSA response. Notwithstanding the commenters' concerns about burden, the carrier list requirement is mandated by SAFETEA–LU. To address concerns regarding potential burdens on household goods brokers, FMCSA revises its proposal to allow household goods brokers to provide the information required by § 371.109 electronically either through a Web site or by electronic messaging (e-mail), as an alternative to a paper-based communication.

Consumer Protection Information

FMCSA proposed (§ 371.111) requiring that each household goods broker provide potential shippers with one copy of each of the two FMCSA consumer pamphlets: "Your Rights and Responsibilities When You Move," and "Ready to Move?—Tips for a Successful Interstate Move." Section 4205 of SAFETEA–LU requires household goods motor carriers to distribute both pamphlets and the proposal would impose the same requirement on household goods brokers. Proposed paragraph (a) permitted the household goods broker to make the information available through its Web site or by distribution of paper copies to each potential shipper. PUCO supports the proposed requirement. AMSA suggests FMCSA's requirements for household goods motor carriers in part 375 should allow use of a hyperlink on the carrier's Web site to provide the required consumer protection information.

FMCSA response. To better verify that shippers have been fully informed of their opportunity to access the consumer protection information via the broker's Web site, FMCSA has added a new paragraph (b) to § 371.111 to provide that the broker must state on any written estimate provided pursuant to § 371.113 that the individual shipper has expressly agreed to accept access to the information via the Web site in lieu of paper copies. FMCSA has also revised § 371.111 paragraph (c) to require written or electronic verification of the shipper's agreement to access the Federal consumer protection information via the Internet, instead of receiving the booklet copies in paper form.

AMSA's suggested revision of part 375 has merit and FMCSA will make the change it requested. This change will allow household goods motor carriers also to use a hyperlink on the carrier's Web site to provide the required consumer protection information. FMCSA believes it is in the best interests of shippers, brokers, and carriers for the consumer protection information to be distributed electronically if consumers choose to receive the information in that format. A shipper's ability to receive consumer protection information in his/her preferred medium should not depend on whether he/she arranges for transportation through a broker or directly with a motor carrier.

Written Estimate Based on a Physical Survey

Proposed § 371.113(a) would require that, if the household goods broker provides an estimate, it must be in writing and must be based on a physical survey of the shipper's household goods, if the household goods are located within a 50 air-mile radius of the broker or its estimating agent. The

[2] Brokers currently receive "MC" numbers, not U.S. DOT registration numbers. FMCSA proposed eliminating the "MC" operating authority number in its May 19, 2005 NPRM regarding the Unified Registration System (URS) mandated by 49 U.S.C. 13908 (70 FR 28990). FMCSA intends to issue and notify each household goods broker of the U.S. DOT number FMCSA will assign to that active household goods broker before the URS final rule is published. The URS final rule will remove the requirements for household goods brokers to display their "MC" numbers in their advertisements, Web sites, and agreements with household goods motor carriers. Household goods brokers will only be required to display their assigned U.S. DOT number after the URS final rule becomes effective. Until FMCSA publishes a final rule in that proceeding, household goods brokers must display their "MC" numbers in their advertisements.

Owner Operator Independent Drivers Association (OOIDA) believes the household goods broker should be required to conduct a physical survey regardless of the distance from the broker's place of business, unless the shipper can provide the broker a weight by which to determine an estimate of charges.

AMSA argues that proposed § 371.113(a) does not adequately address the inaccurate, "lowball" broker estimating problems experienced by consumers who receive estimates over the telephone or Internet without a physical survey because, in most cases, brokers are not located anywhere near shipping sites. Accordingly, AMSA recommends that the Agency revise its proposal by requiring that estimates be based on a physical survey conducted by the authorized motor carrier on whose behalf the estimate is provided, if the goods are located within a 50-mile radius of the motor carrier or its agent. AMSA also proposes that 49 CFR 375.409(a) be revised to require that all estimates provided by the broker be based on physical surveys conducted by the motor carrier transporting the shipment.

Pro Movers Network opposes the requirement for an in-home survey, because the provision is especially burdensome for consumers who are shipping a very small amount of goods. Pro Movers Network believes that if the list of goods provided by the shipper is complete, an accurate non-binding estimate based on weight does not require an in-home estimate. Also, Pro Movers Network commented that requiring in-home surveys limits a consumer's choices and the ability to receive a moving estimate remotely via the Internet.

FMCSA response. In the NPRM, FMCSA expressly invited comment on the impact to shippers, brokers, and motor carriers of applying or removing the 50-mile requirement for household goods broker estimates based on physical surveys, and invited comments on alternatives to this requirement. The Agency agrees with AMSA that because household goods brokers are rarely located within 50 miles of the shippers to whom they provide estimates, it is likely that the 50-mile radius exception, if implemented as proposed, would become the standard practice. As a result, FMCSA revised § 371.113(a) to require brokers to conduct or arrange for someone to conduct physical surveys of goods that are located within 50 miles of either the broker or the carrier on whose behalf the broker submits an estimate. As we stated in the NPRM, FMCSA recognizes that SAFETEA–LU did not prescribe estimating requirements for household goods brokers as it did for household goods motor carriers. Nevertheless, 49 U.S.C. 13904(c) grants FMCSA the authority to promulgate this requirement. The Agency believes that an individual shipper's protection against unreliable estimates should not depend upon whether the shipper uses a broker or carrier to provide the estimate. We believe AMSA's suggested revision to proposed § 371.113(a) accomplishes the goal more effectively than FMCSA's original proposal and we adopt that revision in the final rule, with a minor modification as described below.

We decline to adopt AMSA's proposed revision to 49 CFR 375.409(a) requiring that all estimates be based on physical surveys conducted by motor carriers because it would essentially prevent household goods brokers from making estimates under any circumstances. Such a prohibition is inconsistent with section 4209 of SAFETEA–LU, which prohibits household good brokers from making estimates before entering into an agreement with a carrier to provide the transportation. Section 4209, therefore, implicitly recognizes that brokers are permitted to make estimates after entering into agreements with carriers, and not simply to provide shippers with estimates prepared by motor carriers or their agents. However, we have revised § 375.409(a) to make it consistent with revised § 371.113(a).

We also decline to adopt OOIDA's suggestion to require household goods brokers to perform a physical survey regardless of the distance from the broker's place of business. We do not require household goods motor carriers or their agents to perform a physical survey regardless of the distance from the motor carrier's or agent's place of business. We do not believe it would be appropriate to place this burden on brokers when we do not place it on motor carriers.

FMCSA does not agree with the suggestion of Pro Movers Network that the requirement for a physical survey should be eliminated because it limits a consumer's choice to receive a remote estimate. Section 371.113(c) expressly permits the individual shipper to waive the physical survey requirement.

Explanation of Waiving the Physical Survey

PUCO states that estimates are most frequently a disputed issue and it is important that the broker be required to provide estimates in writing based on a survey of the property to be shipped. It believes the option of waiving the physical survey should be explained and should be printed in a required font size in a required location on a standard document to ensure that the shippers are fully informed.

FMCSA response. We agree with PUCO that waiving the physical survey requirement, where it would otherwise apply, should be explained, printed on a standard document and printed with a minimum font size and font typeface. We have adopted PUCO's suggestion for the final rule. FMCSA will adopt in today's final rule the minimum font size and font typeface following the General Services Administration (GSA) guidelines in the "Standard and Optional Forms Procedural Handbook." The GSA handbook requires the font typeface Universe and minimum font size of 7 points for all standard Federal forms and documents.

Estimates Based on Published Tariffs

FMCSA proposed (§ 371.113(b)) requiring household goods brokers to base their estimates upon the published tariffs (as defined in § 375.103) of the authorized household goods motor carriers they use. Nationwide Relocation Services believes the rule should require any motor carrier accepting jobs from a broker to adopt the broker's tariff as its own for all jobs secured from the broker. AMSA suggests that the rule should require the broker's fee or service charge to be separately stated in the estimate and not included in the motor carrier's estimate of transportation charges.

FMCSA response. Household goods motor carriers are required to maintain tariffs under 49 U.S.C. 13702 and must charge individual shippers in accordance with those tariffs. Implementing regulations of the Surface Transportation Board (STB) governing household goods carrier tariffs, at 49 CFR 1310.3(a), require such tariffs to provide "the specific applicable rates, charges and service terms; and must be arranged in a way that allows for the determination of the exact rate, charges and service terms applicable to any given shipment." Section 1310.3(b) permits use of multiple tariffs to determine applicable rates and charges, provided "the tariff containing the rates must make specific reference to all other tariffs required to determine applicable rates, charges and service terms. The carrier(s) party to the rate(s) must participate in all of the tariffs so linked * * *". A "carrier party to the rate" means more than one carrier can use the same rates. A broker's rate schedule is not a tariff subject to 49 U.S.C. 13702 and the STB regulations. There is no regulatory requirement that brokers adhere to such rate schedules, as there

is for household goods motor carriers to adhere to the terms of their tariffs. FMCSA believes Nationwide Relocation Services' suggestion would be inconsistent with 49 CFR 1310.3 and therefore, FMCSA will not adopt it.

At this time, the Agency does not adopt AMSA's suggestion that the broker's fee or service charge be separately stated in the estimate. The Agency does not have sufficient information about how different brokers charge their fees and what affect this change would have.

Agreements With Motor Carriers

Proposed § 371.115(a) would require household goods brokers to maintain written agreements with authorized household goods motor carriers before providing estimates and lists the items that must be included in these agreements. Nationwide Relocation Services suggests all agreements should be submitted and filed with FMCSA. Paragraph (a)(6) would require the signatures on the agreement to be notarized. Pro Movers Network believes the requirement for a notarized agreement is unrealistic and would almost certainly be impossible to execute successfully. Because household goods carriers typically have working agreements with between 5 and 15 brokers, the commenter asserts, the notary requirement would have to be repeated many times for each carrier. The commenter believes the rule would ultimately be too stressful to the broker-carrier business relationships and transactions. The commenter argues that the potential of lost opportunity costs caused by strained business relationships between household goods brokers and carriers is a distinct possibility and FMCSA's cost and risk assessments did not take these lost opportunity costs into account.

We also proposed changing § 375.409 to state that the written agreement between the household goods broker and the household goods motor carrier must contain all of the items required in proposed § 371.115. AMSA recommends adding a sentence stating that the estimate is based on a physical survey of the goods conducted by the motor carrier.

FMCSA response. We believe the filing requirement suggested by Nationwide Relocation Services would create an unnecessary burden for FMCSA, carriers, and brokers that would have little usefulness in protecting individual shippers. Based on comments received, we agree that the notarization requirement will be unduly burdensome and is unnecessary. We have removed the requirement that the agreements be notarized.

We have also revised § 375.409 to reflect the changes to § 371.113(a) discussed above (requiring a physical survey if the carrier on whose behalf the broker makes an estimate is within 50 miles of the household goods). However, as discussed earlier in this preamble, we are not adopting AMSA's suggested change to require that all estimates be based on physical surveys of the property conducted by household goods motor carriers, because it would prohibit anyone other than the authorized motor carrier from performing the estimate. As such, it would be inconsistent with SAFETEA–LU and would limit the flexibility FMCSA intends to afford household goods brokers and carriers to provide services to their individual shippers. Motor carriers can certainly provide additional restrictions in their agreements with household goods brokers beyond FMCSA's minimum requirements.

Verifying the Motor Carrier's Authority

As proposed, § 371.119 would have required that each household goods broker "inspect, verify, and document" the validity of the U.S. DOT registration and MC operating authority for each household goods motor carrier with which it arranges transportation each month. The household goods broker would comply with this requirement by using FMCSA's Web site (*http://www.protectyourmove.gov*) to check whether the motor carrier has active for-hire authority to transport household goods and evidence of the necessary financial responsibility on file with FMCSA. Nationwide Relocation Services suggests that monitoring the authority and licensing status of motor carriers is a role best suited for FMCSA, and a private broker should not be required to undertake the regulatory duty of FMCSA in policing the authority status of motor carriers. Pro Movers Network believes FMCSA should devise an e-mail notification system to register a broker's carriers and automatically e-mail the broker when one of its carrier's authorities is suspended or revoked. Manual checks by the broker of its entire network of carriers would be time- and resource-intensive, the commenter asserts, and a once per month check by the broker is not a fool-proof method of verification. The commenter believes the broker should only have to confirm whether the carrier is in "Active" or "NonActive" status in FMCSA's Safety and Fitness Electronic Records (SAFER) database. The commenter also states that it is not the broker's obligation and responsibility to report carrier non-compliance to FMCSA.

FMCSA response. In response to comments and after further consideration, FMCSA has decided to eliminate proposed § 371.119 from the final rule. The intent of proposed § 371.119 was to provide additional protection to shippers by requiring brokers to verify the validity of carriers' registration and operating authority on a monthly basis. However, proposed § 371.105 independently prohibits anyone from acting as a household goods broker for household goods motor carriers that do not have valid U.S. DOT numbers and valid operating authority from FMCSA. Regardless of whether a broker complies with the monthly verification and recordkeeping requirements, it would nonetheless be bound by § 371.105 and subject to penalties for arranging moves with unregistered or unauthorized carriers. Considering this redundancy, it is unclear what additional protections § 371.119 would provide to shippers. Because brokers would be required to comply with § 371.105 under threat of penalty with or without § 371.119, the Agency does not believe that eliminating § 371.119 would diminish brokers' incentives to avoid doing business with unregistered or unauthorized carriers. Thus, the Agency believes that eliminating § 371.119 would leave shippers with the same level of protection against unregistered or unauthorized carriers, while reducing the administrative burden on brokers. Furthermore, striking this provision would eliminate any confusion over whether compliance with § 371.119 excuses or provides mitigating circumstances for failure to comply with § 371.105. FMCSA is concerned that proposed § 371.119, as written, could be interpreted as a safe haven for brokers who comply with the verification and recordkeeping requirements, but nonetheless arrange a move with an unregistered or unauthorized carrier. FMCSA never intended for proposed § 371.119 to be interpreted this way. As a result, FMCSA leaves it to the household goods brokers to determine the most effective and efficient manner in which to ensure compliance with § 371.105.

Broker Surety Bond or Trust Fund

FMCSA proposed to add specific language to § 387.307(a) to require household goods brokers to have a surety bond or trust fund in effect for $25,000, based on adjustments for inflation. The former ICC increased the financial responsibility requirement for

brokers in 1979 from $5,000 to $10,000.[3] *See* 44 FR 70167, December 6, 1979. The NPRM proposed adjusting the $10,000 minimum figure for inflation as measured by the Consumer Price Index, which resulted in purchasing power of $24,490.29 in 2006. Because a final rule based on the NPRM would not be in effect until after the 2007's NPRM, FMCSA found it reasonable to round the minimum requirement up to $25,000. The requirement was raised to $10,000 to ensure shippers or motor carriers would be paid if the broker failed to carry out its contracts, agreements, or arrangements for the supplying of transportation by authorized motor carriers. Sandra Irwin supports raising the amount of the surety bond or trust fund, and AMSA, PUCO, and OOIDA believe an increase to $25,000 is inadequate. According to OOIDA, surety companies have reported an aggregate amount of outstanding claims against broker bonds of between $300,000 and $500,000 in response to OOIDA's efforts to submit claims by its members against broker bonds. Nationwide Relocation Services believes the amount of the surety bond or trust fund should be $50,000, and David Marsh suggests $100,000. Sandra Irwin, David Marsh, and the Transportation Intermediaries Association suggest the increase in the surety bond or trust fund should apply to all property brokers, not just household goods brokers.

On the other hand, Pro Movers Network points out that household goods brokers may incur a high cost of doing business, such as increased costs of advertising, and increasing the surety bond or trust fund requirement to $25,000 represents an unnecessary financial burden.

FMCSA response. Commenters that favored increasing the amount of the surety bond or trust fund did not provide adequate justification for an increase above $25,000, especially in light of the number of small business household goods brokers and the potential impact of significantly increasing the amount of financial responsibility beyond a level adjusted for inflation. Inasmuch as OOIDA did not provide specific information regarding the number and amount of outstanding claims per broker, its argument that an aggregate amount of $300,000 to $500,000 in outstanding claims warrants an increase in the amount of the bond to that level is not justifiable.

[3] The ICC established the broker surety bond amount at $5,000 in 1936, 1 FR 1156, August 20, 1936.

The surety bond and trust fund provisions apply only to household goods transportation. FMCSA may consider applying the increased surety bond and trust fund provisions to general freight brokers in the future. Finally, FMCSA acknowledges Pro Movers Network's comment about high costs of doing business, however, it did not provide sufficiently specific information to justify changing FMCSA's proposal to something other than an adjustment for inflation.

Implementation of the Household Goods Broker Surety Bond or Trust Fund Amount

FMCSA did not propose how the Agency would implement the additional $15,000 increase in the amount of the surety bond or trust fund agreement. FMCSA believes it is necessary to provide household goods brokers a sufficient amount of time to acquire the additional $15,000 for surety bonds and trust funds. The Agency will set one year from the date of the final rule as the date when all brokers of household goods must have filed new BMC–84s or BMC–85s, as appropriate, to prove they have the minimum $25,000 in effect. This should give sufficient time to household goods brokers, especially small entities, to find sureties willing to write $25,000 surety bonds to replace their $10,000 bonds. Likewise, for those household goods brokers using trust fund agreements, this should give sufficient time for these entities to raise the additional $15,000 of capital to place in escrow with their trust fund managers.

The Final Rule

FMCSA adopts the proposed rule as final with minor changes in response to the comments. First, as discussed in the section on the "Scope of part 371, subpart B," at the suggestion of AMSA, we are limiting the scope of part 371, subpart B to only household goods brokers offering services to individual shippers. We have made the appropriate changes to § 371.101 to limit the scope to individual shippers. Second, as discussed in the section of the "Definitions," the Agency is adding the acronym "FMCSA" and the definition that it means the Federal Motor Carrier Safety Administration, an agency within the U.S. Department of Transportation. Third, as discussed in the section on "information in advertisements and Internet Web homepages," we are adding § 371.107(d) to require household goods brokers who provide estimates on behalf of household goods motor carriers, to state prominently on their Web site(s) that the estimates must be based on the carrier's tariff and that the carrier is required to make the tariff available for public inspection upon a reasonable request. Fourth, also as discussed in the section on "information in advertisements and Internet Web homepages," at the suggestion of AMSA, we are adding § 371.107(e) to prohibit the broker from including the names or logos of motor carriers unless they are FMCSA-authorized household goods motor carriers with which the broker has a written agreement as specified in § 371.115. Fourth, as discussed in the section "list of motor carriers," FMCSA will allow household goods brokers to provide the information required by § 371.109 electronically as an alternative to a paper-based communication.

Fifth, as discussed in the section "consumer protection information," FMCSA is adding § 371.111(b) to require that, if a shipper elects to access the statutorily-mandated consumer information via the household goods broker's Web site, then the broker must state on the written estimate described in § 371.113 that the individual shipper expressly agreed to access the consumer protection information via the Internet in lieu of a paper copy.

Sixth, as discussed further in the section "consumer protection information," FMCSA has also revised § 371.111 paragraph (c) to require written or electronic verification of the shipper's agreement to access the Federal consumer protection information on the Internet, instead of receiving the booklet copies in paper form.

Seventh, as discussed in the section "Written estimate based on a physical survey," we are adopting one of AMSA's two suggestions to require in § 371.113(a) that a physical survey of the household goods must be conducted by the authorized motor carrier on whose behalf the estimate is provided, if the shipment is located within a 50-mile radius of the carrier's "household goods agent preparing the estimate," unless the physical survey requirement is waived by the shipper.

Eighth, for § 371.113(c)(2), as discussed in the section on "Explanation of waiving the physical survey," we are adopting PUCO's suggestion that the final rule require brokers to explain the physical survey and waiver requirement to individual shippers, print the waiver agreement on the written estimate, and print the agreement with a minimum font size and font typeface. Ninth, as discussed in the section "verifying the motor carrier's authority," FMCSA is eliminating proposed § 371.119 from the final rule. Tenth, as discussed in the sections on "Written estimate based on

a physical survey" and "Estimates provided by household goods brokers," we have revised the household goods motor carrier requirements applicable to household goods broker estimates in § 375.409(a) to make them consistent with our revised written estimate revisions in § 371.113(a). Finally, we are adding a 1-year compliance date in § 387.307(a)(2) for household goods brokers to obtain the additional $15,000 of financial responsibility over the current $10,000 requirement, and to file with FMCSA the required proof (Forms BMC–84 or BMC–85, as appropriate) of the total $25,000 minimum financial responsibility required by the 1-year compliance date.

Regulatory Analyses

Executive Order 12866 (Regulatory Planning and Review); DOT Regulatory Policies and Procedures

FMCSA has determined that this action is a not a significant regulatory action within the meaning of Executive Order 12866 and the U.S. Department of Transportation regulatory policies and procedures (44 FR 11034, February 26, 1979). The Agency received only 11 comments and the costs are minimal.

The total cost of the final rule is approximately $5.543 million in the first year with annual, recurring costs of $1.776 million thereafter. As such, the costs of this final rule do not exceed the $100 million annual threshold as defined in Executive Order 12866. The ten-year costs and benefits of the final rule are shown in Table 1:

TABLE 1—SUMMARY OF TEN-YEAR COSTS AND BENEFITS FOR FINAL RULE

[In millions]

7% Discount Rate	Option 3
Costs	$17.11
Benefits	46.97
Net Benefits	32.25
3% Discount Rate	**Option 3**
Costs	16.58
Benefits	54.91
Net Benefits	38.33

FMCSA's full Final Regulatory Evaluation is in the docket for this rule. It explains in detail how we estimated cost impacts for the final rule.

This rule establishes additional consumer protection regulations specifically for household goods brokers to supplement the regulations at 49 CFR part 375, which apply to motor carriers transporting household goods by commercial motor vehicle in interstate and foreign commerce.

FMCSA estimates these regulatory changes will produce three primary cost impacts on household goods brokers: (1) Costs of training certain employees on the proper application of the regulatory changes; (2) costs to revise broker marketing materials, forms, and orders for service, including technical writing, Web site editing, and printing costs associated with incorporating mandated consumer information; and (3) additional information collection burdens associated with the new regulations, including traveling to and performing on-site physical surveys for written estimates; making written agreements with household goods motor carriers, stating on the written estimate that the individual shipper expressly agreed to access the consumer protection information on the Internet; obtaining written or electronic verification of the shipper's agreement to access the Federal consumer protection information on the Internet; explaining the physical survey and waiver requirement to individual shippers; printing the waiver agreement on the written estimate; printing the agreement with a minimum font size and font typeface; and, finally, requiring household goods brokers to have their sureties or trust fund managers file proof of their $25,000 minimum financial responsibility on the Forms BMC–84 or BMC–85, as appropriate.

Regulatory Flexibility Act, as Amended by the Small Business Regulatory Enforcement Fairness Act of 1996

The Regulatory Flexibility Act (RFA) (5 U.S.C. 601–612), as amended by the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121, 110 Stat. 857), requires Federal agencies, as a part of each rulemaking, to consider regulatory alternatives that minimize the impact on small entities while achieving the objectives of the rulemaking. The Agency's Initial Regulatory Flexibility Analysis is available in docket FMCSA–2004–17008 at item 0018. FMCSA received no specific comments about its Initial Regulatory Flexibility Analysis. The Agency's Final Regulatory Flexibility Analysis (FRFA) for this final rule is discussed below.

(1) A description of the reasons why action by the agency is being considered.

The American Moving and Storage Association (AMSA) petitioned the DOT for a rulemaking in March 2003 that would amend the property broker regulations in part 371 to require brokers that arrange for household goods transportation by motor carrier (household goods brokers) to provide consumer information that only household-goods motor-carriers must now provide, as well as establish additional consumer protection requirements. Many of AMSA's concerns were addressed in the Safe Accountable, Flexible, Efficient Transportation Equity Act: A Legacy For Users (SAFETEA–LU), Public Law 109–59, which was enacted into law on August 10, 2005. Specifically, section 4212 of SAFETEA–LU directs FMCSA to issue regulations requiring household goods brokers to provide this information to consumers.

(2) Objectives of, and legal basis for, the final rule.

This rulemaking is mandated by section 4212 of SAFETEA–LU. FMCSA's general authority to enact consumer protection regulations governing broker operations is contained in 49 U.S.C. 13904(c). The objective of this rule is to ensure that individual shippers of household goods that arrange for transportation through household goods brokers (rather than directly through motor carriers) receive necessary information regarding the parties with which they are dealing and their rights and responsibilities in connection with interstate household goods moves. It also is intended to ensure that household goods brokers deal only with properly registered and insured motor carriers and that estimates provided by household goods brokers be provided under specific circumstances designed to protect the shipper against abuse. Finally, it increases the level of financial responsibility required to ensure that household goods brokers perform their transportation contracts.

(3) Significant issues raised by small entities' comments.

A summary of the significant issues raised by the public in response to the NPRM and the assessment of each significant issue are discussed earlier in this final rule under the heading "Discussion of Comments on the Proposed Rule."

FMCSA is adopting the proposed rule as final with the minor changes discussed above under the heading The Final Rule, based mainly on comments to the NPRM. FMCSA believes most household goods brokers that commented to the NPRM would meet the definition of a small business entity.

(4) Description and estimate of the number of small entities to which the final rule will apply.

There are currently 615 active, registered household goods brokers and another 394 registered household goods

brokers that are inactive.[4] We do not know the number of unregistered household goods brokers, but we suspect that there are many. For the purposes of our analysis, we assume the number is 75—which would put the percentage of unregistered brokers at just over ten percent (75 is 10.87% of (615 + 75)). The figure is based on conversations with industry experts and information from broker Web sites. We use 690, then, as the estimate of total active brokers—registered and (now) unregistered. Almost all are small entities according to the definition in Small Business Administration (SBA) regulations (13 CFR part 121) which defines a "small entity" in the North American Industrial Classification System (NAICS) Code 488510 "Freight Transportation Arrangement" industry by average annual receipts, which are currently set at $7 million per firm. The motor carriers with whom household goods brokers deal may also be indirectly affected.

(5) Description of the projected reporting, record-keeping and other compliance requirements for small entities.

The final rule requires additional record-keeping on the part of household goods brokers to demonstrate compliance. The cost to the household goods broker industry of this additional record-keeping ($5.543 million in the first year and $1.776 million annually to inform, display, and disclose information to shippers and maintain the files for three years) is reflected in our cost estimates. Additionally, the aggregate cost to the household goods broker industry of raising the financial responsibility requirement to $25,000 from $10,000 (approximately $50,000 annually) is also reflected in our cost estimates. The total cost has a present value of approximately $17.11 million over ten years when discounted at 7 percent, and does not require any special skills that would be available to large entities any more than to small entities.

(6) Duplication with other Federal rules.

FMCSA is unaware of any other Federal rules which will duplicate, overlap, or conflict with this proposed rule except for the household goods carriers rule published on July 12, 2005.[5] Because these rules apply only to household goods motor carriers, it was necessary to establish separate rules applicable to household goods brokers, even though they contain certain similarities. For example, SAFETEA–LU requires every shipper to receive the pamphlet "Your Rights and Responsibilities When You Move." Household goods carriers are already required to make this pamphlet available to every shipper. This rule requires household goods brokers to make the same pamphlet available to shippers. There is no practical way around the duplication because some shippers do not use a household goods broker and those who do often do not have any direct contact with a household goods carrier early enough in the process to make effective use of the information contained in the pamphlet.

(7) Description of any significant alternatives to the final rule.

FMCSA believes that there are no significant alternatives to the final rule which would accomplish the stated objectives of the Household Goods Mover Oversight Enforcement and Reform Act of 2005, otherwise known as Title IV, Subtitle B of the Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users (SAFETEA–LU) (Pub. L.109–59) and which would minimize any significant economic impact of the final rule on small entities.

The Agency did consider ways in which it could assist small household goods broker entities to mitigate the impact of increasing the trust fund resources to the new minimum requirement of $25,000. The Agency decided it could extend the compliance date regarding the financial responsibility requirement so that brokers will have a full year after publication of the final rule to come into compliance with the $25,000 requirement, increasing trust funds from the minimum of $10,000 to the final rule's minimum requirement of $25,000.

Therefore, FMCSA is mitigating the impact of obtaining the additional $15,000 of financial responsibility over the current $10,000 requirement by adding a 1-year compliance date in § 387.307(a)(2). Thus, all household goods brokers will have one year from the date of publication of this final rule to obtain the additional $15,000 of financial responsibility over the current $10,000 requirement, and to have their sureties and trust fund managers file with FMCSA the required proof (Forms BMC–84 or BMC–85, as appropriate) of the total $25,000 minimum financial responsibility required by the compliance date for § 387.307(a)(2).

As we stated above, almost all of the 690 household goods brokers subject to this final rule meet the definition of a small business entity under the RFA. We have estimated this final rule will cause the average household goods broker to incur an estimated, additional $8,030 in the first year of implementation and annual recurring costs of about $2,575. The Administrator of the FMCSA believes this final rule will have a significant economic impact on a substantial number of small entities (SEISONOSE).

Unfunded Mandates Reform Act

This rule does not impose a Federal mandate resulting in the expenditure by State, local, or Tribal governments, in the aggregate, or by the private sector, of $140.3 million or more in any one year (2 U.S.C. 1531 *et seq.*). The present value of the final rule is about $17.11 million.

National Environmental Policy Act

The Agency analyzed this rule for the purpose of the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321 *et seq.*) and determined under our environmental procedures Order 5610.1 published March 1, 2004 (69 FR 9680), that this action is categorically excluded under Appendix 2, paragraphs 6.d, 6.m, and 6.q of the Order from further environmental documentation. These categorical exclusions relate to rulemaking actions affecting household goods brokers. In addition, the Agency believes that the action includes no extraordinary circumstances that would have any effect on the quality of the environment. Thus, the action does not require an environmental assessment or an environmental impact statement.

We have also analyzed this rule under the Clean Air Act, as amended (CAA) section 176(c), (42 U.S.C. 7401 *et seq.*) and implementing regulations promulgated by the Environmental Protection Agency. Approval of this action is exempt from the CAA's general conformity requirement since it involves rulemaking and policy development and issuance. *See* 40 CFR 93.153(c)(2). It will not result in any emissions increase nor will it have any potential to result in emissions that are above the general conformity rule's *de minimis* emission threshold levels. Moreover, it is reasonably foreseeable that the rule will not increase total CMV mileage, or change the routing of CMVs, how CMVs operate, or the CMV fleet-mix of motor carriers. This action merely establishes regulations applicable to the business practices of household goods brokers, which do not operate CMVs. FMCSA received no comments to its NEPA and Clean Air Act analyses.

[4] A broker generally becomes inactive after registering with FMCSA when its surety bond or trust fund is cancelled.

[5] 70 FR 39949 (Jul. 12, 2005).

Privacy Impact Assessment

FMCSA conducted a privacy impact assessment of this rule as required by section 522(a)(5) of the FY 2005 Omnibus Appropriations Act, Public Law 108–447, 118 Stat. 3268 (Dec. 8, 2004) [set out as a note to 5 U.S.C. 552a]. The assessment considers any impacts of the rule on the privacy of information in an identifiable form and related matters. FMCSA has determined this rule imposes no privacy impacts.

Paperwork Reduction Act

Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501–3520), a Federal agency must obtain approval from the Office of Management and Budget (OMB) for each collection of information it conducts, sponsors, or requires through regulations. FMCSA seeks approval of the information collection requirements in a new information collection to be entitled "Practices of Household Goods Brokers."

The collected information encompasses that which is generated, maintained, retained, disclosed, and provided to, or for, the agency under 49 CFR part 371. It will assist shippers in their commercial dealings with interstate household goods brokers. The collection of information will be used by prospective shippers to make informed decisions about contracts and services to be ordered, executed, and settled within the interstate household goods motor carrier industry. Some of these information collection items were required by regulations issued by the former ICC; however, that agency was not required to comply with the PRA. When these items transferred from the ICC to the Federal Highway Administration, and ultimately to FMCSA, no OMB control number was assigned to cover this information collection transfer. It was therefore necessary to calculate the old information collection burden hours for these items approved under the ICC rules and to add the new burden that will be generated by this final rule.

Assumptions used for calculation of the information collection burden include the following: (1) There are currently approximately 690 active household goods brokers; (2) on average, each household goods broker will enter into written agreements to estimate shipment costs with about 31 motor carriers, (3) household goods brokers will eventually sever some of these written agreements and make agreements with new household goods motor carriers. We assume that an average agreement lasts for about six years, meaning that brokers will enter into about five new agreements each year, and (4) FMCSA estimates household goods brokers handle about 100,000 moves each year. The first two items result in 24,390 respondents subject to the information collection ($690 \times 31 = 24{,}390$). The third item results in an additional 3,450 respondents subject to the information collection ($690 \times 5 = 3{,}450$). Together with the fourth item, a total of about 127,900 respondents (24,390 + 3,450 + 100,000) would be subject to the information collection.

The PRA regulations at 5 CFR 1320.3(b)(2) allow FMCSA to calculate no burden when the agency demonstrates to OMB that the activity needed to comply with the specific regulation is usual and customary. FMCSA sought comment in the NPRM on whether setting up the first accounting system for a new business is a usual and customary business practice. FMCSA received no comments from the public about this accounting system issue. Thus, FMCSA concludes the public believes it is a usual and customary practice when starting a new business.

Table 2 summarizes the information collection burden hours by the actions being taken in the final rule. *See* attachment S of the supporting statement for the Paperwork Reduction Act Submission in docket FMCSA–2004–17008 for the detailed FMCSA analysis.

TABLE 2—ANNUAL BURDEN HOURS ACROSS THE 127,900 RESPONDENTS

Section	Description	Calculation	Total hours
371.3	Transaction records	60hr × 690	41,400
371.13	Second accounting system	8hr × 125	1,000
371.107	Web site/Ad Modification	20hr × 690	13,800
371.109	Create A List of Carriers	10hr × 690	6,900
371.111(a)	Pamphlet Provision (One-Time)	0.5hr × 690	345
371.111(c)	Confirming Required Information	0.5hr/month × 12 × 690	4,140
371.113	Explanation of Waiver-Agreement	(1/12)hr × 20,000	1,667
371.115	Negotiation of Agreements (One-Time)	4hr × 31 agreements × 690	85,560
	Additional Agreements Through Turnover	4 hrs × 5 agreements × 690	13,800
371.117	Disclosure and Records	10hr × 690	6,900
371.119	Removed Verification Requirement	Removed	0
	Total First Year Hours		175,512
.			
	Total Recurring Annual Hours		89,607

We have rounded the estimates and have asked OMB for approval for first-year burden-hours of 175,500, and subsequent-year burden-hours of 89,600. We particularly request your comments on whether the collection of information is necessary for FMCSA to meet the goal of 49 CFR part 371 to protect consumers and household goods motor carriers, including: (1) Whether the information is useful to this goal; (2) the accuracy of the estimate of the burden of the information collection; (3) ways to enhance the quality, utility and clarity of the information collected; and (4) ways to minimize the burden of the collection of information on respondents, including the use of automated collection techniques or other forms of information technology.

You must submit comments on the information collection burden addressed by this final rule to the Office of Management and Budget (OMB). The deadline for such submissions is December 29, 2010. Interested persons are invited to submit written comments on the proposed information collection to the Office of Information and Regulatory Affairs, Office of Management and Budget. Comments should be addressed to the attention of the Desk Officer, Department of Transportation/Federal Motor Carrier Safety Administration, and sent via electronic mail to *oira_submission@omb.eop.gov,* or faxed to (202) 395–6974, or mailed to the Office of Information and Regulatory

Affairs, Office of Management and Budget, Docket Library, Room 10102, 725 17th Street, NW., Washington, DC 20503.

Executive Order 12988 (Civil Justice Reform)

This rulemaking meets applicable standards in sections 3(a) and 3(b)(2) of Executive Order 12988, entitled "Civil Justice Reform," to minimize litigation, eliminate ambiguity, and reduce burden.

Executive Order 12630 (Taking of Private Property)

This rule will not effect a taking of private property or otherwise have taking implications under Executive Order 12630, entitled "Governmental Actions and Interference with Constitutionally Protected Property Rights."

Executive Order 13132 (Federalism)

This action has been analyzed in accordance with the principles and criteria contained in Executive Order 13132. The FMCSA has determined that this rulemaking would not have a substantial direct effect on States, nor would it limit the policy-making discretion of the States.

Executive Order 13211 (Energy Effects)

FMCSA has analyzed this action under Executive Order 13211, entitled "Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use." The Agency has determined that it is not a "significant energy action" under that order because it does not appear to be economically significant (*i.e.,* imposing a cost of more than $100 million in a single year) based upon analyses performed at this stage of the rulemaking process, and is not likely to have a significant adverse effect on the supply, distribution, or use of energy.

Executive Order 12372 (Intergovernmental Review)

The regulations implementing Executive Order 12372 regarding intergovernmental consultation on Federal programs and activities do not apply to this program.

List of Subjects

49 CFR Part 371

Brokers, Motor carriers, Reporting and recordkeeping requirements.

49 CFR Part 375

Advertising, Arbitration, Consumer protection, Freight, Highways and roads, Insurance, Motor carriers, Moving of household goods, Reporting and recordkeeping requirements.

49 CFR Part 386

Administrative practice and procedure, Brokers, Freight forwarders, Hazardous materials transportation, Highway safety, Motor carriers, Motor vehicle safety, Penalties.

49 CFR Part 387

Buses, Freight, Freight forwarders, Hazardous materials transportation, Highway safety, Insurance, Intergovernmental relations, Motor carriers, Motor vehicle safety, Moving of household goods, Penalties, Reporting and recordkeeping requirements, Surety bonds.

■ For the reasons discussed above, FMCSA is amending title 49, Code of Federal Regulations, chapter III, subchapter B, as set forth below:

PART 371—BROKERS OF PROPERTY

■ 1. Revise the authority citation for part 371 to read as follows:

Authority: 49 U.S.C. 13301, 13501, and 14122; subtitle B, title IV of Pub. L. 109–59; and 49 CFR 1.73.

Subpart A—General Requirements

■ 2. Add a heading for subpart A to read as set forth above, and designate §§ 371.1 through 371.13 under subpart A.

■ 3. Add a new subpart B to read as follows:

Subpart B—Special Rules for Household Goods Brokers

Sec.

Subpart B—Special Rules for Household Goods Brokers

§ 371.101 If I operate as a household goods broker in interstate or foreign commerce, must I comply with subpart B of this part?

Yes, you must comply with all regulations in this subpart when you operate as a household goods broker offering services to individual shippers in interstate or foreign commerce. The regulations in this subpart do not apply to a household goods broker when providing services to commercial or government shippers in interstate or foreign commerce.

§ 371.103 What are the definitions of terms used in this subpart?

FMCSA means the Federal Motor Carrier Safety Administration within the U.S. Department of Transportation.

Household goods has the same meaning as the term is defined in § 375.103 of this subchapter.

Household goods broker means a person, other than a motor carrier or an employee or bona fide agent of a motor carrier, that as a principal or agent sells, offers for sale, negotiates for, or holds itself out by solicitation, advertisement, or otherwise as selling, providing, or arranging for, transportation of household goods by motor carrier for compensation.

Individual shipper has the same meaning as the term is defined in § 375.103 of this subchapter.

§ 371.105 Must I use a motor carrier that has a valid U.S. DOT number and valid operating authority issued by FMCSA to transport household goods in interstate or foreign commerce?

You may only act as a household goods broker for a motor carrier that has a valid, active U.S. DOT number and valid operating authority issued by FMCSA to transport household goods in interstate or foreign commerce.

§ 371.107 What information must I display in my advertisements and Internet Web homepage?

(a) You must prominently display in your advertisements and Internet Web homepage(s) the physical location(s) (street or highway address, city, and State) where you conduct business.

(b) You must prominently display your U.S. DOT registration number(s) and MC license number issued by the FMCSA in your advertisements and Internet Web homepage(s).

(c) You must prominently display in your advertisements and Internet Web site(s) your status as a household goods broker and the statement that you will not transport an individual shipper's

household goods, but that you will arrange for the transportation of the household goods by an FMCSA-authorized household goods motor carrier, whose charges will be determined by its published tariff.

(d) If you provide estimates on any carrier's behalf pursuant to § 371.113(b), you must prominently display in your Internet Web site(s) that the estimate must be based on the carrier's tariff and that the carrier is required to make its tariff available for public inspection upon a reasonable request.

(e) You may only include in your advertisements or Internet Web site(s) the names or logos of FMCSA-authorized household goods motor carriers with whom you have a written agreement as specified in § 371.115 of this part.

§ 371.109 Must I inform individual shippers which motor carriers I use?

(a) You must provide to each potential individual shipper who contacts you a list of all authorized household goods motor carriers you use, including their U.S. DOT registration number(s) and MC license numbers. You may provide the list electronically or on paper.

(b) You must provide to each potential individual shipper who contacts you a statement indicating that you are not a motor carrier authorized by the Federal Government to transport the individual shipper's household goods, and you are only arranging for an authorized household goods motor carrier to perform the transportation services and, if applicable, additional services. You may provide the statement electronically or on paper.

§ 371.111 Must I provide individual shippers with Federal consumer protection information?

(a) You must provide potential individual shippers with Federal consumer protection information by one of the following three methods:

(1) Provide a hyperlink on your Internet Web site to the FMCSA Web site containing the information in FMCSA's publications "Ready to Move?—Tips for a Successful Interstate Move" and "Your Rights and Responsibilities When You Move."

(2) Distribute to each shipper and potential shipper at the time you provide an estimate, copies of FMCSA's publications "Ready to Move?—Tips for a Successful Interstate Move" and "Your Rights and Responsibilities When You Move."

(3) Distribute to each shipper and potential shipper at the time you provide an estimate, copies of "Ready to Move?—Tips for a Successful Interstate Move" and "Your Rights and Responsibilities When You Move" as modified and produced by the authorized, lawful motor carrier to which you intend to provide the shipment under your written agreement required by § 371.115.

(b) If an individual shipper elects to waive physical receipt of the Federal consumer protection information by one of the methods described in paragraphs (a)(2) and (a)(3) of this section, and elects to access the same information via the hyperlink on the Internet as provided in paragraph (a)(1) of this section, you must include a clear and concise statement on the written estimate described in § 371.113 that the individual shipper expressly agreed to access the Federal consumer protection information on the Internet.

(c) You must obtain a signed, dated, electronic or paper receipt showing the individual shipper has received both booklets that includes, if applicable, verification of the shipper's agreement to access the Federal consumer protection information on the Internet.

(d) You must maintain the signed receipt required by paragraph (c) of this section for three years from the date the individual shipper signs the receipt.

§ 371.113 May I provide individual shippers with a written estimate?

(a) You may provide each individual shipper with an estimate of transportation and accessorial charges. If you provide an estimate, it must be in writing and must be based on a physical survey of the household goods conducted by the authorized motor carrier on whose behalf the estimate is provided if the goods are located within a 50-mile radius of the motor carrier's or its agent's location, whichever is closer. The estimate must be prepared in accordance with a signed, written agreement, as specified in § 371.115 of this subpart.

(b) You must base your estimate upon the published tariffs of the authorized motor carrier who will transport the shipper's household goods.

(c)(1) A shipper may elect to waive the physical survey required in paragraph (a) of this section by written agreement signed by the shipper before the shipment is loaded.

(2) The household goods broker must explain the physical survey waiver agreement to the individual shipper in plain English. The physical survey waiver agreement must be printed on the written estimate and must be printed at no less than 7-point font size and with the font typeface Universe.

(3) A copy of the waiver agreement must be retained as an addendum to the bill of lading and is subject to the same record inspection and preservation requirements as are applicable to bills of lading.

(d) You must keep the records required by this section for three years following the date you provide the written estimate for an individual shipper who accepts the estimate and has you procure the transportation.

§ 371.115 Must I maintain agreements with motor carriers before providing written estimates on behalf of these carriers?

(a) In order to provide estimates of charges for the transportation of household goods, you must do so in accordance with the written agreement required by § 375.409 of this subchapter. Your written agreement with the motor carrier(s) must include the following items:

(1) Your broker name as shown on your FMCSA registration, your physical address, and your U.S. DOT registration number and MC license number;

(2) The authorized motor carrier's name as shown on its FMCSA registration, its physical address, and its U.S. DOT registration number and MC license number;

(3) A concise, easy to understand statement that your written estimate to the individual shipper:

(i) Will be exclusively on behalf of the authorized household goods motor carrier;

(ii) Will be based on the authorized household goods motor carrier's published tariff; and

(iii) Will serve as the authorized household goods motor carrier's estimate for purposes of complying with the requirements of part 375 of this chapter, including the requirement that the authorized household goods motor carrier relinquishes possession of the shipment upon payment of no more than 110 percent of a non-binding estimate at the time of delivery;

(4) Your owner's, corporate officer's, or corporate director's signature lawfully representing your household goods broker operation and the date;

(5) The signature of the authorized household goods motor carrier's owner, corporate officer, or corporate director lawfully representing the household goods motor carrier's operation and the date; and

(b) The signed written agreement required by this section is public information and you must produce it for review upon reasonable request by a member of the public.

(c) You must keep copies of the agreements required by this section for as long as you provide estimates on behalf of the authorized household

goods motor carrier and for three years thereafter.

§ 371.117 Must I provide individual shippers with my policies concerning cancellation, deposits, and refunds?

(a) You must disclose prominently on your Internet Web site and in your agreements with prospective shippers your cancellation policy, deposit policy, and policy for refunding deposited funds in the event the shipper cancels an order for service before the date an authorized household goods motor carrier has been scheduled to pick up the shipper's property.

(b) You must maintain records showing each individual shipper's request to cancel a shipment and the disposition of each request for a period of three years after the date of a shipper's cancellation request. If you refunded a deposit, your records must include:

(1) Proof that the individual shipper cashed or deposited the check or money order, if the financial institution provides documentary evidence; or

(2) Proof that you delivered the refund check or money order to the individual shipper.

§ 371.121 What penalties may FMCSA impose for violations of this part?

The penalty provisions of 49 U.S.C. chapter 149, *Civil and Criminal Penalties* apply to this subpart. These penalties do not overlap. Notwithstanding these civil penalties, nothing in this section deprives an individual shipper of any remedy or right of action under existing law.

PART 375—TRANSPORTATION OF HOUSEHOLD GOODS IN INTERSTATE COMMERCE; CONSUMER PROTECTION REGULATIONS

■ 4. Revise the authority citation for part 375 to read as follows:

Authority: 5 U.S.C. 553; 49 U.S.C. 13102, 13301, 13704, 13707, 14104, 14706, 14708; subtitle B, title IV of Pub. L. 109–59; and 49 CFR 1.73.

■ 5. Amend § 375.213 by revising paragraphs (a), (b)(1), and (d), and adding paragraph (e) to read as follows:

§ 375.213 What information must I provide to a prospective individual shipper?

(a) When you provide the written estimate to a prospective individual shipper, you must also provide the individual shipper with a copy of Department of Transportation publication FMCSA–ESA–03–005 (or its successor publication) entitled "Ready to Move?—Tips for a Successful Interstate Move." You may provide the individual shipper with a paper copy or you may provide a hyperlink on your Internet Web site to the FMCSA Web site containing the information in FMCSA's publication "Ready to Move?—Tips for a Successful Interstate Move."

(b) * * *

(1) The contents of appendix A of this part, entitled "Your Rights and Responsibilities When You Move" (Department of Transportation publication FMCSA–ESA–03–006, or its successor publication). You may provide the individual shipper with a paper copy or you may provide a hyperlink on your Internet Web site to the FMCSA Web site containing the information in FMCSA's publication "Your Rights and Responsibilities When You Move."

* * * * *

(d) Paragraphs (c)(2) and (c)(3) of this section do not apply to exact copies of appendix A published in the **Federal Register,** the Code of Federal Regulations, or on FMCSA's Web site.

(e) If an individual shipper elects to waive physical receipt of the Federal consumer protection information by one of the methods described in paragraphs (a) and (b)(1) of this section, and elects to access the same information via the hyperlink on the Internet as provided in paragraphs (a) and (b)(1) of this section:

(1) You must include a clear and concise statement on the written estimate described in § 375.401 that the individual shipper expressly agreed to access the Federal consumer protection information on the Internet.

(2) You must obtain a signed, dated, electronic or paper receipt showing the individual shipper has received both booklets that includes, if applicable, verification of the shipper's agreement to access the Federal consumer protection information on the Internet.

(3) You must maintain the signed receipt required by paragraph (e)(2) of this section for three years from the date the individual shipper signs the receipt.

■ 5. Revise § 375.409 to read as follows:

§ 375.409 May household goods brokers provide estimates?

(a) Subject to the limitations in § 371.113(a) of this subchapter, household goods brokers may provide estimates to individual shippers provided there is a written agreement between the broker and you, the motor carrier, adopting the broker's estimate as your own estimate. If you, the motor carrier, make such an agreement with a household goods broker, you must ensure compliance with all requirements of this part pertaining to estimates, including the requirement that you must relinquish possession of the shipment if the shipper pays you no more than 110 percent of a non-binding estimate at the time of delivery.

(b) Your written agreement with the household goods broker(s) must include the items required in § 371.115(a) of this subchapter.

PART 386—RULES OF PRACTICE FOR MOTOR CARRIER, BROKER, FREIGHT FORWARDER, AND HAZARDOUS MATERIALS PROCEEDINGS

■ 6. Revise the authority citation for part 386 to read as follows:

Authority: 49 U.S.C. 113, chapters 5, 51, 59, 131–141, 145–149, 311, 313, and 315; Sec. 204, Pub. L. 104–88, 109 Stat. 803, 941 (49 U.S.C. 701 note); Sec. 217, Pub. L. 105–159, 113 Stat. 1748, 1767; Sec. 206, Pub. L. 106–159, 113 Stat. 1763; subtitle B, title IV of Pub. L. 109–59; and 49 CFR 1.45 and 1.73.

■ 7. Amend appendix B to part 386 by revising the heading and by adding paragraphs (g)(22) and (23) to read as follows:

Appendix B to Part 386—Penalty Schedule; Violations and Monetary Penalties

* * * * *

(g) * * *

(22) A broker for transportation of household goods who makes an estimate of the cost of transporting any such goods before entering into an agreement with a motor carrier to provide transportation of household goods subject to FMCSA jurisdiction is liable to the United States for a civil penalty of not less than $10,000 for each violation.

(23) A person who provides transportation of household goods subject to jurisdiction under 49 U.S.C. chapter 135, subchapter I, or provides broker services for such transportation, without being registered under 49 U.S.C. chapter 139 to provide such transportation or services as a motor carrier or broker, as the case may be, is liable to the United States for a civil penalty of not less than $25,000 for each violation.

* * * * *

PART 387—MINIMUM LEVELS OF FINANCIAL RESPONSIBILITY FOR MOTOR CARRIERS

■ 8. The authority citation for part 387 continues to read as follows:

Authority: 49 U.S.C. 13101, 13301, 13906, 14701, 31138, 31139, and 31144; and 49 CFR 1.73.

■ 9. Amend § 387.307 by redesignating paragraph (a) as paragraph (a)(1) and adding new paragraph (a)(2) to read as follows:

§ 387.307 Property broker surety bond or trust fund.

(a) *Security.* (1) * * *

(2) A household goods broker must have a surety bond or trust fund in effect for $25,000 on and after January 1, 2012. The FMCSA will not issue a household goods broker license until a surety bond or trust fund for the full limits of liability prescribed herein is in effect. The household goods broker license remains valid or effective only as long as a surety bond or trust fund remains in effect and ensures the financial responsibility of the household goods broker. The compliance date for paragraph (a)(2) is January 1, 2012.

* * * * *

Issued on: November 19, 2010.

Anne S. Ferro,

Administrator.

Proposed Rules

Federal Register
Vol. 75, No. 228
Monday, November 29, 2010

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

NATIONAL CREDIT UNION ADMINISTRATION

12 CFR Parts 701, 704, and 741

RIN 3133–AD74

Corporate Credit Unions

AGENCY: National Credit Union Administration.

ACTION: Proposed rule.

SUMMARY: NCUA is issuing proposed amendments to its rule governing corporate credit unions (corporates). The amendments include internal control and reporting requirements for corporates similar to those required for banks under the Federal Deposit Insurance Act and the Sarbanes-Oxley Act. The amendments require each corporate to establish an enterprise-wide risk management committee staffed with at least one risk management expert. The amendments provide for the equitable sharing of Temporary Corporate Credit Union Stabilization Fund (TCCUSF) expenses among all members of corporates, including both credit union and noncredit union members. The amendments increase the transparency of decision-making by requiring that corporates conduct all board of director votes as recorded votes and include the votes of individual directors in the meeting minutes. The amendments permit corporates to charge their members reasonable one-time or periodic membership fees as necessary to facilitate retained earnings growth. For senior corporate executives who are dual employees of corporate credit union service organizations (CUSOs), the amendments require disclosure of certain compensation received from the corporate CUSO. In addition, this proposal would amend our regulations to limit natural person credit unions (NPCUs) to membership in one corporate credit union at any particular time and provide that a natural person credit union may not make any investment in a corporate credit union of which the natural person credit union is not also a member. These proposed amendments will further strengthen individual corporates and the corporate system as a whole.

DATES: Comments must be received on or before December 29, 2010.

ADDRESSES: You may submit comments by any of the following methods (Please send comments by one method only):

Federal eRulemaking Portal: http://www.regulations.gov. Follow the instructions for submitting comments.

NCUA Web site: *http://www.ncua.gov/Resources/RegulationsOpinionsLaws/ProposedRegulations.aspx.* Follow the instructions for submitting comments.

E-mail: Address to *regcomments@ncua.gov.* Include "[Your name] Comments on 'Notice of Proposed Rulemaking for Part 704—Corporate Credit Unions' " in the e-mail subject line.

Fax: (703) 518–6319. Use the subject line described above for e-mail.

Mail: Address to Mary Rupp, Secretary of the Board, National Credit Union Administration, 1775 Duke Street, Alexandria, Virginia 22314–3428.

Hand Delivery/Courier: Same as mail address.

Public Inspection: All public comments are available on the agency's Web site at *http://www.ncua.gov/Resources/RegulationsOpinionsLaws/ProposedRegulations.aspx* as submitted, except as may not be possible for technical reasons. Public comments will not be edited to remove any identifying or contact information. Paper copies of comments may be inspected in NCUA's law library at 1775 Duke Street, Alexandria, Virginia 22314, by appointment weekdays between 9 a.m. and 3 p.m. To make an appointment, call (703) 518–6546 or send an e-mail to *OGCMail@ncua.gov.*

FOR FURTHER INFORMATION CONTACT: Jacqueline Lussier, Staff Attorney, Office of General Counsel; Elizabeth Wirick, Staff Attorney, Office of General Counsel; and Lisa Henderson, Staff Attorney, Office of General Counsel, at the address above or telephone (703) 518–6540; or David Shetler, Deputy Director, Office of Corporate Credit Unions, at the address above or telephone (703) 518–6640.

SUPPLEMENTARY INFORMATION: The NCUA performs its mission of ensuring the safety and soundness of Federally-insured credit unions by examining all Federal credit unions, participating in the examination and supervision of Federally-insured, State-chartered credit unions in coordination with State regulators, and insuring Federally-insured credit union members' accounts. In its statutory role as the administrator of the National Credit Union Share Insurance Fund (NCUSIF), NCUA insures and supervises approximately 7,500 Federally-insured credit unions (FICUs), representing 98 percent of all credit unions and serving approximately 90 million members.

Corporate Credit Union System

A corporate credit union is an organization, chartered under the Federal Credit Union Act (the Act) or under applicable State law as a credit union that receives share deposits from and provides loan and other services primarily to other credit unions. 12 CFR 704.2. There are 26 *retail* corporates that provide services directly to NPCUs, and there is one *wholesale* corporate, U.S. Central Bridge Federal Credit Union (U.S. Central Bridge), that provides services to many of the 26 retail corporates. Fourteen retail corporates and U.S. Central Bridge are Federally-chartered and 12 retail corporates are State-chartered.

Like NPCUs, corporates are member-owned cooperatives. However, at corporates the member-owners are primarily NPCUs. Over 95 percent of NPCUs belong to corporate credit unions. In addition, other entities that are not Federally-insured credit unions (*i.e.,* "non FICUs") also may become members of corporates. These nonfederally-insured members consist of nonfederally-insured credit unions [1] and non credit union entities. Non credit union entities include credit union leagues and trade associations, CUSOs, certain banks, and other types of organizations. These other organizations include, for example, credit union political action committees, credit union charitable and educational foundations, and law firms, insurance agencies, and mortgage

[1] Within the 50 states, approximately 152 state-chartered credit unions have private, primary share insurance and are not subject to NCUA regulation or oversight.

companies that are connected to the credit union industry.

The corporate system offers a broad range of support to its members. The products and services provided by U.S. Central Bridge to retail corporates, and by retail corporates to their members, include, among other things: investment and deposit services, wire transfers, share draft processing and imaging, automated clearinghouse (ACH) transactions processing, automated teller machine (ATM) processing, bill payment services, and security safekeeping. The volume of payment systems-related transactions throughout the system annually runs into the millions and the dollar amounts associated with those transactions are in the billions each month. Corporates also serve as liquidity providers for their members. An NPCU invests excess liquidity in a corporate when the NPCU has lower loan demand and draws down the invested liquidity when loan demand increases.

Some NPCUs depend heavily on corporates; for example, 75 percent of NPCUs rely on a corporate as their primary settlement agent. Corporates provide NPCUs with convenient and quality services and expertise, all at a fair price. For many NPCUs, this is a combination that makes the corporate system a valuable resource and, for some smaller NPCUs, an essential resource.

Federally-chartered corporates are governed by Federal law and State-chartered corporate credit unions by State law. In addition, all corporates that are Federally insured, or that accept share deposits from NPCU members that are Federally insured, must comply with NCUA's part 704 corporate rule. 12 CFR 704.1, 12 U.S.C. 1766(a).

NCUA recently made substantial revisions to part 704 (with conforming amendments to parts 702, 703, 709, and 747). Final Rule, 75 FR 64786 (October 20, 2010) (September Rulemaking). The most significant amendments establish a new capital scheme, including risk-based capital requirements; impose new prompt corrective action requirements; place various new limits on corporate investments; impose new asset-liability management controls; amend some corporate governance provisions; and limit a corporate CUSO to categories of services preapproved by NCUA. The preamble to the September Rulemaking also stated that shortly after its promulgation the Board intended to issue another proposal that would further amend Part 704 and related provisions. *Id.* at 64824. This current proposal is the referenced follow-on rulemaking.

These proposed amendments would:

(1) Increase the transparency of corporate credit union decision-making by requiring corporates conduct all board of director votes as recorded votes and include the votes of individual directors in the meeting minutes;

(2) Incorporate certain sound audit, reporting, and audit committee practices from the Federal Deposit Insurance Act (FDI Act), Part 363 of the Federal Deposit Insurance Corporation (FDIC) Regulations, and the Sarbanes-Oxley Act of 2002 (SOX);

(3) Provide for the equitable sharing of TCCUSF expenses among all members of corporate credit unions, including both credit union and noncredit union members, by establishing procedures for requesting members not insured by the NCUSIF to make voluntary premium payments to the TCCUSF;

(4) Protect against unnecessary competition between corporates by limiting NPCUs to membership in one corporate of the NPCU's choice at any one time and prohibiting an NPCU from making any investment in a corporate where the NPCU is not also a member;

(5) Improve risk management at corporates by requiring corporates to establish enterprise-wide risk management committees staffed with at least one independent risk management expert;

(6) Provide corporates with more options to grow retained earnings by allowing corporates to charge their members reasonable one-time or periodic membership fees; and

(7) Require the disclosure of compensation received from a corporate CUSO by certain highly compensated corporate credit union executives.

These proposals are discussed in more detail below in the section-by-section analysis.

Section-by-Section Analysis of Proposed Amendments

Section 701.5 Membership Limited to One Corporate Credit Union

In the recent past, some NPCUs "rate shopped" among corporates for the highest deposit rates and lowest service costs. This rate shopping resulted in increased competition and, in some cases, led to unsafe investment activities as corporates sought higher investment yields to subsidize share dividends and service costs.

Proposed § 701.5 seeks to prevent unhealthy competition among corporates by requiring Federal credit unions to make a decision to commit to membership in one corporate at a time. The proposal provides that a Federal credit union may belong to two corporates for a short period of time, but only when transitioning between those corporates. In addition, the proposal prohibits a Federal credit union from making any investment, including a share or deposit account, a loan, or a capital investment, in a corporate of which the Federal credit union is not a member.[2] This will avoid unhealthy competition among corporates driven by rate shopping among nonmembers.

Proposed § 701.5 has prospective impact only. That is, credit unions that are currently members of two or more corporates do not have to relinquish memberships in any of those corporates. The Board believes that the members of a credit union are owners of that credit union, including the members of a corporate, and that "once a member, always a member."

The Board also notes that § 704.8(k) applies a 15 percent investment limit to investments in a corporate made by a "member or nonmember credit union." This section does not authorize investments by nonmembers, and, if the Board adopts § 701.5(c) as proposed, it is unlikely that a nonmember credit union would be able to make any investments in a corporate where it is not already a member.

These same restrictions, through language added in new § 741.226 of part 741, would apply to State-chartered Federally-insured NPCUs as well as FCUs.

This proposal also contains the following changes to part 704.

Section 704.2 Definitions

The NCUA Board is proposing to add a number of new definitions to § 704.2 to assist in complying with the proposed revisions to § 704.15 discussed below. The defined terms include: *Critical accounting policies, Enterprise risk management, Examination of internal control, Family, Financial statements, Financial statement audit, Generally accepted auditing standards, Independent public accountant, Internal control, Internal control framework, Internal control over financial reporting,* and *Supervisory committee.*

The associated definitions come from a variety of sources, including other sections of the NCUA Rules and Regulations, auditing and accounting industry standards, and Securities and Exchange Commission (SEC) rules. The Board requests comment on the appropriateness of these definitions.

[2] The FCU Act provisions generally authorizing such nonmember transactions, such as 12 U.S.C. 1757(6) and 1757(7)(C), are specifically subject to the regulation of the Board. 12 U.S.C. 1757 and 1782.

Section 704.11 Corporate Credit Union Service Organizations; § 704.19 Disclosure of Executive and Director Compensation

The recently adopted revisions in the September Rulemaking require that each corporate annually prepare, and provide to its members, a document that discloses the compensation of certain employees. 12 CFR 704.19(a). An employee of a corporate may also, however, be an employee of a corporate CUSO and receive additional compensation from the CUSO. The dual employee's compensation disclosure under § 704.19(a) would be incomplete without a disclosure of both sources of compensation, particularly where the employee's corporate has made a loan to, or other investment in, that corporate CUSO and so has some control over the CUSO.

The proposal amends § 704.19 to clarify that for CUSOs in which a corporate has invested, the corporate must include compensation received from the CUSO in disclosures of compensation paid to the corporate's most highly compensated employees. To facilitate this disclosure, the proposal also amends § 704.11(g), which lists certain items with which a CUSO must agree in writing before a corporate credit union may make a loan to or invest in the CUSO. The amendment to § 704.11(g) requires a corporate CUSO disclose compensation paid to any employees that are also employees of a corporate credit union lending to, or investing in, the CUSO. This ensures that CUSOs will provide corporate credit unions the information necessary for the corporate to make the full disclosure required by § 704.19.

The proposal applies only to corporate employees. It does not amend or otherwise modify § 704.11(f), which prohibits officials of corporate credit unions which have invested in or loaned to a corporate CUSO from receiving any compensation or other payments from the corporate CUSO.

Section 704.13 Board Responsibilities

The proposal adds a new subparagraph (c)(8) to § 704.13, *Board responsibilities,* to require that all board of directors votes be conducted by recorded votes.[3]

The minutes reporting the vote must identify the board members, by name, who voted for or against the proposal, as well as, if applicable, the board members who were absent or otherwise failed to vote, and any board members who abstained from voting. The Board believes this provision is necessary so as to increase the transparency of corporate board actions.

The corporate credit union system has confronted profound challenges during the economic crisis of the past several years. Some corporate credit unions made poor investment decisions, and these decisions caused billions of dollars of losses. Unfortunately, the role of individual directors in these decisions was not always clear because the board secretary did not always record the votes of individual directors in the minutes of the board meeting.

Corporate boards are likely to continue to face crucial decisions. For example, the ongoing effects of the financial crisis may force some corporates to confront critical restructuring questions in which the interests of NPCUs utilizing different services of the corporate may diverge. In these situations, members may need to know how each director voted in addition to knowing the outcome of the vote.

Also, requiring recorded votes will help to ensure that corporate directors comply with their obligation to recuse themselves from deliberating and voting on items which may involve a conflict of interest. Article XI, § 2 of the Standard Corporate Federal Credit Union Bylaws prohibits corporate insiders, including directors, from participating "in any manner, directly, or indirectly in the deliberation upon or the determination of any question affecting his/her pecuniary interest or the pecuniary interest of any corporation, partnership, or association (other than the corporate credit union) in which he/she is directly or indirectly interested." If a director is disqualified because of a conflict, the director must withdraw from deliberation and determination of the issue. *Id.* Under the bylaw, the director has the obligation to identify issues that may pose a conflict of interest and withdraw from deliberation and determination of these issues. If, however, a director fails to self-identify or report a potential conflict, it would be difficult to determine whether or how the director voted on an issue without disclosure of votes on a director-by-director basis. The accountability and transparency that results from recording vote tallies by name will provide an important backstop to the self-policing aspect of the corporate bylaw conflict-of-interest provision.

NCUA's existing regulations provide some transparency to members, but may not be sufficient absent a specific requirement to record votes by name. For example, NCUA's regulations provide a process by which members of credit unions, including members of corporate credit unions, may inspect the credit union's books and records as well as minutes of member, board, and committee meetings. 12 CFR 701.3(a). Members seeking access to records must submit a petition signed by one percent of the credit union's members; the petition must identify particular records and state a purpose related to the protection of the members' financial interest in the credit union. 12 CFR 701.3(b). Like the current proposal, the rule providing for member access to records increases the transparency of actions and decisions of the credit union's leadership. If, however, the corporate credit union's records lack recorded votes showing how each director voted on a particular issue, members would not be able to get the director-by-director tally even after submitting a petition.

There are multiple sources of authority for NCUA's proposed amendment to paragraph 704.13(c). The Act grants NCUA broad authority to require FICUs, including corporate credit unions, to submit financial data and other information as required by the NCUA Board. 12 U.S.C. 1761, 1766, 1781, and 1789. Further, the Act authorizes the NCUA Board to request additional information as it may require. 12 U.S.C. 1782(a)(2). NCUA's recommended standard procedures for corporate credit union examinations include a review of minutes of the board of directors' meetings or actions. NCUA Corporate Examination Procedures § 301P–004 (2003). Like the review of board minutes, the proposal falls under NCUA's general powers to require both Federal credit unions and Federally-insured State-chartered credit unions to prepare and submit information in connection with insurance examinations.

Section 704.15 Audit and Reporting Requirements

Both NCUA and natural person credit unions rely upon financial information to evaluate the condition of insured corporate credit unions and to determine the adequacy of regulatory capital. Accurate and reliable measurement of a corporate credit union's assets and earnings has a direct bearing on the determination of regulatory capital. Interested parties can place greater reliance on recognition, measurement, and disclosures contained in financial statements that have been subject to an independent audit. Independent audits help to identify weaknesses in internal control

[3] The September Rulemaking redesignated the *Board Responsibilities* section from § 704.4 to § 704.13.

over financial reporting and risk management at corporate credit unions and reinforce corrective measures, thus complementing supervisory efforts in contributing to the safety and soundness of corporate credit unions.

NCUA currently requires that a corporate credit union's board of directors ensure the preparation of timely and accurate balance sheets, income statements, and internal risk assessments and that systems are audited periodically in accordance with industry standards. 12 CFR 704.4(c). In addition, a corporate credit union's supervisory committee must ensure that: (1) An external audit is performed annually in accordance with generally accepted auditing standards; and (2) the audit report is submitted to the board of directors, to NCUA, and in a summary version, to the members. 12 CFR 704.15(a).

To facilitate early identification of problems in financial management at corporate credit unions, the NCUA Board is proposing to amend § 704.15 to add certain additional auditing, reporting, and supervisory committee requirements. The most significant proposed revisions would require a corporate credit union to:

Ensure that its financial reports reflect all material correcting adjustments necessary to conform with generally accepted accounting principles (GAAP) that were identified by the corporate credit union's independent public accountant (IPA).

Prepare an annual management report, signed by the chief executive officer and the chief accounting officer or chief financial officer, that contains: (1) A statement of management's responsibility for preparing financial statements, responsibility for establishing and maintaining an adequate internal control structure, responsibility for procedures for financial reporting, and responsibility for complying with laws and regulations relating to safety and soundness designated by NCUA; (2) an assessment of the corporate credit union's compliance with such laws and regulations; and (3) for a corporate with assets of at least $1 billion, an assessment of the effectiveness of the internal control structure and procedures over financial reporting, including identifying the internal control framework used to evaluate such internal control.

Ensure that its IPA: (1) Reports on a timely basis to the supervisory committee all critical accounting policies, alternative accounting practices discussed with management, and written communications provided to management; (2) retains the working papers related to an audit and, if applicable, the evaluation of the corporate credit union's internal control over financial reporting, for seven years from the report release date; (3) complies with the independence standards and interpretations of the American Institute of Certified Public Accountants (AICPA); (4) has, prior to beginning any services for a corporate, a peer review that meets acceptable audit industry guidelines; (5) notifies NCUA if the IPA ceases being a corporate credit union's independent accountant; and (6) for a corporate with assets of at least $1 billion, reports separately to the supervisory committee on management's assertions concerning the effectiveness of the corporate credit union's internal control structure and procedures for financial reporting.

Ensure that its supervisory committee (1) consists of members who are not employees of the corporate credit union; (2) supervises the IPA; and (3) ensures that audit engagement letters do not contain unsafe and unsound limitation of liability provisions.

NCUA has based many of these proposed revisions on part 363 of the FDIC's Rules, 12 CFR part 363. The FDIC has provided guidance, found in Appendices A and B to part 363, to assist managements of banks and thrifts in complying with a number of part 363 requirements. The NCUA Board has determined not to issue similar formal guidance in conjunction with the proposed revisions to part 704.

The NCUA Board also notes that part 363 only applies to banks and thrifts with assets of at least $500 million. In contrast, most of these proposed provisions to part 704 would apply to all corporate credit unions, even those smaller corporates with under $500 million in assets.[4] The Board believes that because corporates provide services to NPCUs, smaller corporate credit unions may present systemic risks that smaller banks and thrifts do not. The Board requests comment, however, on whether certain of the proposed provisions should apply only to corporate credit unions with assets above a certain threshold. Commenters should specify which provisions and what the asset threshold or thresholds should be.

Paragraph 704.15(a) Annual Reporting Requirements

704.15(a)(1) Audited Financial Statements

Proposed paragraph (a)(1) restates the existing requirement that a corporate credit union prepare audited financial statements that conform with GAAP. To facilitate a more accurate picture of a corporate credit union's financial condition, the proposal also adds the requirement that the annual financial statements reflect all material correcting adjustments identified by the IPA as necessary to conform with GAAP.

704.15(a)(2) Management Report

Proposed paragraph (a)(2) requires the management of a corporate prepare an annual report that contains certain enumerated elements.

The Board is concerned that management in some corporate credit unions may have insufficient oversight over certain reporting, control, and compliance functions. The Board believes that requiring management to acknowledge its responsibilities in these areas will help the corporate credit union identify needed improvements in financial management. Accordingly, proposed paragraph (a)(2)(i) requires management reports contain a statement of management's responsibilities for preparing the corporate credit union's annual financial statements, for establishing and maintaining an adequate internal control structure and procedures for financial reporting, and for complying with certain laws and regulations relating to safety and soundness.

The proposed rule identifies the following five safety and soundness areas about which the NCUA Board is concerned: affiliate transactions, legal lending limits, loans to insiders, restrictions on capital and share dividends, and regulatory reporting that meets full and fair disclosure. When the FDIC issued a proposed rule implementing new audit, reporting, and internal control requirements for certain banks and thrifts, *see* 12 CFR part 363, it identified these five areas as presenting the greatest risks. *See* 57 FR 42516, Sept. 15, 1992.[5] Corporate credit unions are structured differently from banks, however, and the Board seeks comment on whether the five identified areas are appropriate. The Board also seeks comment on whether the final regulation should specify the laws and rules and regulations covered by

[4] A few provisions in proposed 704.15 would apply only to corporates with assets of at least $1 billion.

[5] Ultimately, the FDIC limited its compliance concerns to laws and regulations concerning insider lending and dividend restrictions. *See* 58 FR 31332, June 2, 1993.

proposed paragraph (a)(2), such as section 107(5)(A)(iv) and (v) of the Federal Credit Union Act, 12 U.S.C. 1757(5)(A)(iv) and (v), governing loans to directors and committee members, and § 704.7, governing corporate credit union lending.

Proposed paragraph (a)(2)(ii) requires management assess and report on the corporate credit union's compliance with those designated safety and soundness laws and regulations. This assessment requirement reinforces the importance of management's responsibility for complying with the rules by requiring disclosure of instances of noncompliance. Management should perform its own investigation and review of compliance with the rules and maintain records of its assessments until the next NCUA examination or such later date as specified by NCUA.

The NCUA Board has determined that corporate credit unions with $1 billion or more in total assets present additional risks. Accordingly, proposed paragraph (a)(2)(iii) requires these larger corporate credit unions include in their management reports an assessment of the effectiveness of the internal control structure over financial reporting. Management must identify the internal control framework used to make its evaluation, include a statement that the evaluation included controls over the preparation of financial statements and regulatory reports, include a statement as to management's conclusion regarding the effectiveness of internal control over financial reporting, and disclose all material weaknesses identified by management. Management may not conclude that internal control over financial reporting is effective if there are any material weaknesses.

A suitable control framework is one established by a body of experts following widespread opportunity for comment, including the broad distribution of the framework for public comment. A framework is suitable only when it:

- Is free from bias;
- Permits reasonably consistent qualitative and quantitative measurements of a corporate credit union's internal control over financial reporting;
- Is sufficiently complete so that those relevant factors that would alter a conclusion about the effectiveness of a corporate credit union's internal control over financial reporting are not omitted; and
- Is relevant to an evaluation of internal control over financial reporting.

The *Internal Control—Integrated Framework* published by the Committee of Sponsoring Organizations of the Treadway Commission (the "COSO Report") provides a suitable and recognized framework for purposes of a management assessment in the United States. Other suitable frameworks have been published in other countries, and still others may be developed in the future. Such other suitable frameworks may be used by management and the corporate credit union's IPA in assessments, attestations, and audits of internal control over financial reporting.

704.15(a)(3) Management Report Signatures

To ensure that management understands its ultimate responsibility for the corporate credit union's performance, proposed paragraph (a)(3) requires the chief executive officer and either the chief accounting officer or chief financial officer of the corporate credit union to sign the management report.

704.15(b)(1) Annual Audit of Financial Statements

Proposed paragraph (b) sets forth the requirements applicable to the corporate's IPA. Proposed paragraph (b)(1) clarifies the existing requirement that a corporate credit union have its annual financial statements audited by an IPA in accordance with generally accepted auditing standards. The IPA should be registered or licensed to practice as a public accountant, and be in good standing, under the laws of the State or other political subdivision of the United States in which the home office of the corporate credit union is located.

704.15(b)(2) Internal Control Over Financial Reporting

Proposed paragraph (b)(2) requires an IPA who audits a corporate credit union with assets of at least $1 billion attest to management's assertions concerning the effectiveness of the corporate credit union's internal control structure and procedures for financial reporting. To ensure that an attestation report is sufficiently informative, the report must:

- Identify the internal control framework that the IPA used to make the evaluation (which must be the same as the internal control framework used by management);
- Include a statement that the IPA's evaluation included controls over the preparation of regulatory financial statements;
- Include a clear statement as to the IPA's conclusion regarding the effectiveness of internal control over financial reporting;
- Disclose all material weaknesses identified by the IPA that have not been remediated;
- Conclude that internal control is ineffective if there are any material weaknesses; and
- Be dated by the IPA on or after the date of management's report on its assessment of the effectiveness of internal control over financial reporting.

704.15(b)(3) Notice by Accountant of Termination of Services

In the interests of safety and soundness, and to ensure that NCUA is aware of potential conflicts between a corporate credit union and its IPA, proposed paragraph (b)(3) requires an IPA to notify NCUA if the IPA terminates work as the corporate credit union's auditor. The IPA's notice of termination under (b)(3) is similar to the notice of termination in proposed paragraph (c)(4) that the corporate credit union must provide to both NCUA and the IPA. In its (b)(3) notice, the IPA must state whether the IPA agrees with the corporate credit union's assertions contained in the (c)(4) notice and whether the IPA agrees that the (c)(4) notice discloses all relevant reasons for the IPA's termination.

704.15(b)(4) Communications With Supervisory Committee

The Board believes that communications between a corporate credit union's supervisory committee and its auditor are critical to proper oversight of the auditing function. Accordingly, proposed paragraph (b)(4) establishes certain communication requirements between the auditor and the committee. Under the proposal, an IPA must inform the supervisory committee on a timely basis about: (1) All critical accounting policies, (2) alternative accounting treatments discussed with management, and (3) written communications provided to management, such as a management letter or schedule of unadjusted differences. These requirements are minimum requirements—other communications beyond these requirements are encouraged.

704.15(b)(5) Retention of Working Papers

Consistent with best industry practices, proposed paragraph (b)(5) requires an IPA to retain the working papers related to its audit of a corporate credit union's financial statements for at least seven years. If the IPA has conducted an evaluation of internal control over financial reporting, the IPA must also retain those working papers for at least seven years.

704.15(b)(6) Independence

Proposed paragraph (b)(6) codifies existing industry self-governance requirements that auditors comply with the independence standards of the American Institute of Certified Public Accountants (AICPA).

704.15(b)(7) Peer Reviews

Proposed paragraph (b)(7) codifies existing industry self-governance requirements that auditors undergo periodic peer reviews. The proposal clarifies that acceptable peer reviews include those performed in accordance with the AICPA's Peer Review Standards and inspections conducted by the Public Company Accounting Oversight Board (PCAOB). This paragraph also requires a corporate credit union's IPA to file a copy of the peer review report, or the public portion of the PCAOB inspection report, with NCUA.

704.15(c)(1) Annual Reporting

Proposed paragraph 704.15(c) sets forth various reporting, filing, and notice requirements. The current regulation is silent on when a corporate credit union must provide a copy of its annual report to NCUA. To ensure timely filing and provide consistent application of the requirement, proposed paragraph (c)(1) provides that a corporate credit union must file a copy of its annual report to NCUA within 180 days after the end of the calendar year. The report must contain the audited financial statements, the IPA's report on those statements, a management report, and, if applicable, the IPA's attestation report on management's assessment of internal control over financial reporting.

704.15(c)(2) Public Availability

Proposed paragraph (c)(2) provides that NCUA will make a corporate credit union's annual report available for public inspection.

704.15(c)(3) IPA's Reports

Consistent with good corporate governance, proposed paragraph (c)(3) requires a corporate credit union to provide NCUA with a copy of any management letter or report issued by its IPA. The proposal includes examples of the types of reports covered.

704.15(c)(4) Notice of Engagement or Change of Accountants

In the interests of safety and soundness, and as discussed above, proposed paragraph (c)(4) requires a corporate to inform NCUA when the credit union engages an IPA or loses an IPA through dismissal or resignation. The corporate must include with the notice a reasonably detailed statement of the reasons for any dismissal or resignation. The corporate must send a copy of the (c)(4) notice required to the IPA when the notice is filed with NCUA.

704.15(c)(5) Notification of Late Filing

Proposed paragraph (c)(5) requires the corporate provide a notice to NCUA of late filing of the annual report. The notice must specify the reasons for the inability to comply with the 180-day requirement and must also state the date by which the report will be filed.

704.15(c)(6) Report to Members

Paragraph (a) of the current § 704.15 requires a corporate credit union to submit a summary of its annual report to the membership. Recognizing that a corporate credit union may not have completed its annual report at the time of the annual meeting, proposed paragraph (c)(6) substitutes the word "preliminary" for "summary."

704.15(d)(1) Composition

Proposed paragraph 704.15(d) deals with the corporate's supervisory committee. Proposed paragraph (d)(1) discusses the composition of the supervisory committee, stating that its members may not be employees of the corporate credit union and must be independent of the corporate credit union. The employment prohibition codifies Article X, Section 1, of the Corporate Federal Credit Union Bylaws for all corporates. The NCUA Board believes that in the interests of sound governance this prohibition should be applied to all corporates.

The Board further believes that to avoid potential conflicts of interest, supervisory committee members should be independent of the corporate. Under the proposal, a committee member is independent if he or she does not have any family relationships or material business or professional relationships with the corporate credit union and has been free of such relationships for at least three years.

704.15(d)(2) Duties

As a general matter, the supervisory committee should perform all the duties required of it under the corporate's bylaws as determined by the corporate's board of directors. Proposed paragraph (d)(2) clarifies that the committee is also responsible for the appointment, compensation, and oversight of the IPA, and for reviewing with management and the IPA the basis for audit reports.

As the SEC noted when it adopted its final rule implementing a similar provision regarding the audit committees of public companies, the auditing process may be compromised if a company's outside auditors incorrectly view their primary responsibility as serving the company's management rather than the company's full board of directors or audit committee. *See* 68 FR 18787, 18796, Apr. 16, 2003. The SEC went on to state that auditors may view management as the "employer" if management has the power to hire, fire, and set compensation and that under these circumstances the auditor may not have the appropriate incentive to raise concerns and conduct an objective review. *Id.* The SEC concluded that one way to promote auditor independence was for the auditor to be hired, evaluated, and, if necessary, terminated by the audit committee. *Id.* The NCUA Board believes it is critical that accountants who perform audit and attestation services for corporates have an appropriate incentive to conduct an objective review and identify potential concerns. In this regard, the Board believes it is a sound governance practice for a corporate's supervisory committee, rather than its management, to be responsible for the appointment, compensation, and oversight of the accountant.

704.15(d)(3) IPA Engagement Letters

In response to an observed increase in the types and frequency of provisions in financial institutions' external audit engagement letters that limit the auditors' liability, in February 2006 the Federal financial institution regulatory agencies, including NCUA, issued an Interagency Advisory on the Unsafe and Unsound Use of Limitation of Liability Provisions in External Audit Engagement Letters (Interagency Advisory).[6] The Advisory states that such provisions may weaken the external auditors' objectivity, impartiality, and performance, which in turn may reduce the reliability of audits and consequently raise safety and soundness concerns. The agencies stated that a financial institution should not enter into any agreement that incorporates limitation of liability provisions with respect to audits.

Since a central purpose of this proposal is to increase the reliability of audits, proposed paragraph (d)(3)(i)(B) requires the supervisory committee ensure that audit engagement letters and any related agreements with the IPA for services to be performed under part 704 do not contain certain limitation of liability provisions. Prohibited provisions include any language that

[6] 27 FR 6847, Feb. 9, 2006.

indemnifies the IPA against claims made by third parties; holds harmless or release the IPA from liability for claims or potential claims that might be asserted by the client corporate credit union, other than claims for punitive damages; or limits the remedies available to the client corporate credit union. Consistent with the Interagency Advisory, the proposal does not preclude the use of alternative dispute resolution agreements and jury trial waivers.

704.15(d)(4) Outside Counsel

Proposed paragraph (d)(4) provides that the supervisory committee must, when deemed necessary by the committee, have access to its own outside counsel. All counsel retained by a corporate, regardless of who at the corporate retained the counsel, owe the same fiduciary duties, that is, to provide advice in the best interests of the membership. Accordingly, in most circumstances the Board expects the supervisory committee, when seeking legal advice, would employ the services of the in-house counsel or other counsel under contract to the corporate. The Board believes, however, that in the interest of safety and soundness the supervisory committee must be able to retain counsel at its discretion without prior permission of the board of directors or management, particularly when the committee perceives that the in-house counsel or other counsel under contract to the corporate may be unable to provide unbiased advice.

704.15(e) Internal Audit

Paragraph (e) restates the internal audit requirements in the current paragraph (b).

704.21 Equitable Distribution of Corporate Credit Union Stabilization Expenses

Some of the recent corporate investment losses were absorbed directly by the members of the corporates in the form of capital depletion. Much of these losses, however, were absorbed by the NCUSIF as it made capital injections and launched liquidity and share guarantee programs designed to stabilize the corporate system and protect the system from collapse. The corporate losses absorbed by the NCUSIF—and subsequently transferred from the NCUSIF to the TCCUSF in June of 2009 and 2010—will be paid by all FICUs in the form of premium assessments now and over the next several years. The stabilization actions taken by NCUA to protect the corporate system benefitted *every* member of *every* corporate, both FICU and non FICU.[7] Without NCUA's stabilization actions, the entire corporate system would have been in danger of collapse. NCUA's actions protected both FICUs and non FICUs from potential losses in their uninsured shares and from other potential problems, such as interruptions in their payment systems. Unfortunately, however, not all corporate members have assumed their fair share of the expense of NCUA's corporate stabilization actions. In particular, non FICU members have not paid, and likely will not pay in the future without some encouragement, their fair share of the expenses associated with NCUA's stabilization actions. Accordingly, and as discussed below, this proposal seeks to encourage existing non FICU members to pay their fair share of such expenses.

The proposal adds a new § 704.21, *Equitable Distribution of Corporate Credit Union Stabilization Expenses,* to provide for the equitable sharing of TCCUSF expenses among all members of corporate credit unions. Proposed § 704.21 provides that when the NCUA Board assesses a TCCUSF premium on FICUs, NCUA will request existing non FICU members make voluntary payments to the TCCUSF. It requires that when the NCUA Board imposes a TCCUSF premium assessment on FICUs, a corporate credit union must furnish to NCUA information about all its non FICU members. NCUA will then request each of these non FICU members to make a voluntary premium payment to the TCCUSF in an amount calculated as a percentage of the non FICU member's previous year-end assets.[8] In the event one or more of these non FICUs declines to make the requested payment, or makes a payment in an amount less than requested, the proposal requires the corporate conduct a member vote on whether to expel that non FICU. A paragraph-by-paragraph breakdown of § 704.21 follows.

When the Board acts to assess a premium on FICUs, paragraph (a) provides that each corporate credit union must prepare a list of all its members on the date of the assessment that are non FICUs, including the name and assets of each such member, with the address and contact information for each such member. The assets of the non FICUs will be determined as of the previous year-end. The corporate should collect information from the member to support this asset calculation, such as an annual financial statement. If the member will not provide this information to the corporate, the corporate should simply make its best estimate of the asset size and inform NCUA of the basis for the estimate.

Paragraph (b) provides that within 14 days after the date of the assessment on FICUs, the corporate credit union must send the list of non FICU members to the NCUA Office of Corporate Credit Unions. A corporate that has no non FICU members must provide the Office of Corporate Credit Unions with a statement to that effect.

Paragraph (c) provides that within 60 days after the date of assessment on FICUs, the NCUA Chief Financial Officer will request each non FICU to make a voluntary payment to the TCCUSF. The amount of the requested payment will be the entity's assets times 0.815 times the percentage of insured shares that each FICU was assessed. The payment must be received by NCUA within 60 days after the date of the Chief Financial Officer's request.

NCUA determined the 0.815 factor by using the ratio of total aggregate FICU insured shares to aggregate FICU assets. NCUA calculated these ratios for year-end 2008 (ratio = 0.810) [9] and year-end 2009 (ratio = 0.819) [10] and then averaged the two ratios to obtain the factor 0.815. Accordingly, multiplying a non FICU's assets by 0.815 produces an amount approximating the entity's "insured shares" as if the entity were a Federally-insured credit union.

Paragraph (d) provides that if NCUA does not receive a full, timely payment of the TCCUSF contribution requested, NCUA will notify the corporate credit union of the failure. Paragraph (e) requires that no later than 90 days after receipt of the notice from NCUA, the corporate must call a special meeting of its members to determine whether each member that failed to make the full payment should be expelled from the corporate credit union. For Federally-chartered corporates, the expulsion vote will be conducted in accordance with § 118(a) of the Act, which provides that a member may be expelled by a two-thirds vote of the members present at a special meeting called for that purpose,

[7] The term "non FICU" includes every corporate member that is not insured by the NCUSIF. Trade associations, CUSOs, non credit union cooperatives, banks, insurance companies, and privately insured credit unions are examples of entities that might be members of certain corporates and fall within the term "non FICU."

[8] *See* 12 U.S.C. 1772a (authority of NCUA to accept gifts for carrying out any of its functions under the Act); and 12 U.S.C. 1789.

[9] 2008: total shares $658.9 billion; total assets $813.4 billion. *http://www.ncua.gov/Resources/Reports/statistics/Yearend2008.pdf* (page 1, footnote 3).

[10] 2009: total shares $724.8 billion; total assets $884.8 billion. *http://www.ncua.gov/Resources/Reports/statistics/Yearend2009.pdf* (page 1).

but only after an opportunity has been given to the member to be heard. 12 U.S.C. 1764(a); *see* Article III, § 5 of the Standard Federal Corporate Credit Union Bylaws. For State-chartered corporates, the expulsion vote will be conducted in accordance with the bylaws of the corporate and applicable State law.

Paragraph (f) permits the corporate to conduct the expulsion vote at an annual meeting, if that would coincide with the date of any special meeting called under paragraph (e).

Paragraph (g) provides that for non FICUs that belong to more than one corporate, NCUA will request only one voluntary payment from that non FICU in connection with each TCCUSF assessment. If NCUA does not receive full payment of the amount requested, however, NCUA will notify all corporates to which the non FICU belongs for purposes of conducting an expulsion vote.

As should be clear from the language of proposed § 704.21, NCUA does not ultimately make the determination of whether a non FICU should make a payment to the TCCUSF or the amount of the payment. The non FICU makes that determination. NCUA also does not make the determination of the adequacy of any payment. The members of the affected corporate make that determination when deciding whether or not to expel the non FICU member. It is these corporate members, and particularly the FICU corporate members, that have a vested financial interest in whether or not non FICU members are contributing equitably to cover losses in the corporate credit union system.

The Board does not intend at this time to apply § 704.21 retroactively. Section 704.21 would only apply to TCCUSF assessments made following the effective date of any final rule.

704.22 Enterprise Risk Management

Sound risk management is an integral part of running a corporate credit union, and corporates need to strengthen their enterprise risk management. A well-designed enterprise risk management process can help a corporate by providing a framework within which the board of directors and senior management can determine:

- Where all the corporate's risk exposures lie;
- The amount of risk the corporate has in each exposure and the maximum levels it is willing to accept;
- How the risk exposures are changing; and
- The appropriate risk controls to limit overall risk to targeted levels.

Accordingly, this proposal adds a new § 704.22, *Enterprise Risk Management.* This section requires corporates to develop and follow an enterprise risk management policy (paragraph (a)). The board of directors must establish an enterprise risk management committee that is responsible for overseeing the corporate's risk management practices and must report at least annually to the board of directors (paragraph (b)). The committee must include at least one independent risk management expert with sufficient experience in identifying, assessing, and managing risk exposures (paragraph (c)).

The proposal defines *independent* to mean that the expert does not have any family relationships or any material business or professional relationships with the corporate that would affect his or her independence as a committee member, and has been free of any such relationships for at least three years (paragraph (d)). The risk management expert will have post-graduate education; an actuarial, accounting, economics, financial, or legal background; and at least five years experience in identifying, assessing, and managing risk exposures. The expert's experience must also be commensurate with the size of the corporate and the complexity of its operations. Proposed paragraph 704.22(e) clarifies that the risk management expert is not required to be a director of the corporate credit union. The board must hire this individual from outside the corporate.

Proposed paragraph 704.15(a)(2)(iii) requires management of a corporate with assets of at least $1 billion assess the effectiveness of the corporate's internal control structure and procedures for financial reporting. Proposed paragraph 704.15(a)(3) requires the corporate's managers to sign the report. The Board requests comment on whether NCUA should add a corresponding requirement that management assess the effectiveness of the corporate's enterprise risk reporting and that the senior risk management official sign the management report.

704.23 Membership Fees

This proposal adds a new § 704.23, *Membership Fees,* permitting corporates the option of charging their members, as a mandatory requirement of membership, reasonable one-time or periodic membership fees. The fees must generally be proportional to the member's asset size, and a member must be given at least six months notice of any new fees, or any material change to an existing fee. Furthermore, a corporate can terminate the membership of any credit union that fails to pay the fee fully and on time.

The September Rulemaking requires corporates to achieve certain minimum capital ratios, including, over time, certain minimum retained earnings ratios. NCUA is proposing this amendment to provide corporates with additional options in building up their retained earnings. Unlike a capital contribution, which will not flow to retained earnings, a membership fee flows directly to a corporate's retained earnings.

Paragraph (a) states that a corporate may charge its members a membership fee. The fees may be assessed on a periodic basis or as a one-time fee.

Paragraph (b) provides that the corporate must calculate the fee uniformly for all members and as a percentage of each member's assets. However, the corporate has the discretion to reduce the amount of the fee for members that have contributed capital to the corporate. Any such reduction must be proportional to the amount of the member's non-depleted contributed capital. Calculating the fee as a percentage of each member's assets is fairer to smaller natural person credit unions than a one-size-fits-all fee. In addition, NCUA wishes to give corporates the flexibility to reduce the size of the fee for those members that are contributing more capital to the corporate.

Paragraph (c) requires a corporate to give its members a minimum of six months notice of any new fee, including disclosure of its terms and conditions, before invoicing the fee. For a recurring fee, the corporate must also provide six months notice of any material change to the terms and condition of the fee. Corporate members should be given adequate time to look for alternatives to membership in the corporate should they find the fees too onerous. The Board believes that six months to find an alternative service provider should be appropriate.

Paragraph (d) permits a corporate to terminate the membership of any credit union that fails to pay the fee in full within 60 days of the invoice date. The Board believes this is a reasonable amount of time, given the advance notice required by paragraph (c).

Comment Period

The Board is putting this proposal out for a 30-day comment period in lieu of the standard 60-day comment period. The proposed rule is straightforward in its operation, and so does not require extensive time to consider. In addition, the Board desires, as much as possible, to coordinate the effective date of this

rulemaking with the effective dates of the September Rulemaking.

Regulatory Procedures

Regulatory Flexibility Act

The Regulatory Flexibility Act requires NCUA to prepare an analysis to describe any significant economic impact any proposed regulation may have on a substantial number of small entities (those under $10 million in assets). For the most part, the proposal applies only to corporate credit unions, all of which have assets well in excess of $10 million. The one provision that applies directly to natural person credit unions, which generally limits membership in one corporate at a time, will not affect many small credit unions because they generally do not belong to multiple corporates. Accordingly, the proposed amendments will not have a significant economic impact on a substantial number of small credit unions and, therefore, a regulatory flexibility analysis is not required.

Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (PRA) applies to rulemakings in which an agency by rule creates a new paperwork burden on regulated entities or modifies an existing burden. 44 U.S.C. 3507(d); 5 CFR part 1320. For purposes of the PRA, a paperwork burden may take the form of a reporting, recordkeeping, or disclosure requirement, each referred to as an information collection.

The proposed changes to part 704 in this proposal impose new information collection requirements. As required by the PRA, NCUA is submitting a copy of this proposal to OMB for its review and approval. Persons interested in submitting comments with respect to the information collection aspects of the proposed rule should submit them to OMB at the address noted below.

Estimated PRA Burden

The following discussion describes the new information collection requirements in the proposal:

1. Recorded director votes.

Proposed § 704.13(c)(8) revises existing § 704.13(c), *Board responsibilities,* to require corporates to conduct all board of directors votes by recorded vote, such that the minutes reporting the vote list the board members (by name) voting for or against the proposal, as well as, if applicable, board members who were absent or otherwise failed to vote, and board members who abstained from the vote. Proposed paragraph (c)(8) would apply to all 27 corporates. NCUA estimates that compliance with the requirement to record all board votes and to include the votes of each director by name in the minutes will take about one hour. Corporates are required to hold a minimum of twelve meetings each year. 27 corporates × 12 meetings = 324 meetings per year. 324 meetings × 1 hour = 324 hours.

2. Equitable distribution of corporate credit union stabilization fund expenses.

When the NCUA Board assesses a premium on FICUs for the TCCUSF in accordance with proposed § 704.21, NCUA will ask current non FICU members of corporates to make voluntary contributions to the TCCUSF. Proposed § 704.21(e) requires a corporate hold an expulsion vote if a non FICU member does not make the requested payment. These provisions would apply to all 27 corporates. NCUA estimates that the NCUA Board may assess a premium on FICUs for the TCCUSF about once each year for the next several years.

Proposed paragraphs (a) and (b) of § 704.21 state that when a TCCUSF premium is assessed on FICUs, a corporate must immediately prepare a list of all its members that are non FICUs, including the name and asset size of each such member as of the end of the previous year, and the address and contact information of each such member, and forward the list to NCUA. NCUA estimates that it should take each corporate approximately 20 hours to collect the information, prepare the list, and submit the list to NCUA. 27 corporates × 20 hours = 540 hours.

Proposed paragraph (e) of § 704.21 provides that following receipt of a notice of non-payment from NCUA, the corporate must call a special meeting of its members to determine whether each non FICU member that failed to make the full payment to the TCCUSF should be expelled from membership in the corporate. The corporate must notify NCUA of the result of the member vote. NCUA estimates that approximately 27 corporates will be required to conduct a member vote on expulsion once each year. NCUA estimates the preparation and mailing of notices and ballots (if paper ballots are used), the collection of ballots (if paper ballots are used), and notifying NCUA of the result of the vote will take about 25 hours. 27 corporates × 25 hours = 675 hours.

3. Disclosure of dual employee compensation from corporate CUSOs.

The amendment to § 704.11 requires that each corporate CUSO disclose compensation of dual employees to the corporate credit unions that make loans to, or invest in, the CUSO. NCUA estimates that this requirement will apply to five or fewer CUSOs, and that making these disclosures will take one hour per CUSO. 5 CUSOs × 1 hour = 5 hours.

4. Management report.

Proposed § 704.15(a)(2) requires each corporate credit union to prepare an annual management report that contains a statement of management's responsibilities for performing certain duties in the corporate credit union. The report must also contain an assessment of the corporate's compliance with certain laws and regulations. NCUA estimates that it should take each corporate approximately 4 hours to prepare its management report. 27 corporates × 4 hours = 108 hours.

5. Large corporate credit union management report.

Proposed § 704.15(a)(2)(iii) requires a corporate credit union with assets of $1 billion or more to include in its management report an assessment by management of the effectiveness of the corporate credit union's internal control structure and procedures for financial reporting. Currently, there are 16 corporates with at least $1 billion in assets. NCUA estimates that it should take a corporate credit union approximately 8 hours to prepare its assessment. 16 corporates × 8 hours = 128 hours.

6. Notice of engagement or change of accountants.

Proposed § 704.15(c)(4) requires a corporate credit union to notify NCUA when it engages an independent public accountant or loses an independent public accountant through dismissal or resignation. The corporate credit union must include with the notice a reasonably detailed statement of the reasons for any dismissal or resignation. NCUA estimates that no more than five corporate credit unions will change accountants each year and that it should take a corporate credit union about two hours to prepare the notice and submit it to NCUA. 5 corporates × 2 hours = 10 hours.

7. Notification of late filing.

Proposed § 704.15(c)(5) requires a corporate credit union that is unable to timely file its Annual Report to submit a written notice to NCUA. NCUA estimates that no more than five corporate credit unions will need to submit such notice and that it should take about one hour to prepare the notice and submit it to NCUA. 5 corporates × 1 hour = 5 hours.

B. Summary of Collection Burden

NCUA estimates the total information collection burden represented by the proposal, calculated on an annual basis, as follows:

Recorded director votes: 27 corporates × 12 meetings × 1 hour = 324 hours.

Preparation of list of non FICU members of a corporate and providing list to NCUA: 27 corporates × 20 hours = 540 hours.

Conducting special meeting of a corporate's members to expel a member and notifying NCUA of result of vote: 27 corporates × 25 hours = 675 hours.

Disclosure of dual employee compensation from corporate CUSOs: 5 CUSOs × 1 hour = 5 hours.

Management report: 27 corporates × 4 hours = 108 hours.

Large corporate credit union management report: 16 corporates × 8 hours = 128 hours.

Notice of engagement or change of accountants: 5 corporates × 2 hours = 10 hours.

Notification of late filing: 5 corporates × 1 hour = 5 hours.

Total Burden Hours: 1,795 hours.

The NCUA considers comments by the public on this proposed collection of information in:

Evaluating whether the proposed collection of information is necessary for the proper performance of the functions of the NCUA, including whether the information will have a practical use;

Evaluating the accuracy of the NCUA's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

Enhancing the quality, usefulness, and clarity of the information to be collected; and

Minimizing the burden of collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology; *e.g.,* permitting electronic submission of responses.

The Paperwork Reduction Act requires OMB to make a decision concerning the collection of information contained in the proposed regulation between 30 and 60 days after publication of this document in the **Federal Register**. Therefore, a comment to OMB is best assured of having its full effect if OMB receives it within 30 days of publication. This does not affect the deadline for the public to comment to the NCUA on the proposed regulation.

Comments on the proposed information collection requirements should be sent to: Office of Information and Regulatory Affairs, OMB, New Executive Office Building, Washington, DC 20503; Attention: NCUA Desk Officer, with a copy to Mary Rupp, Secretary of the Board, National Credit Union Administration, 1775 Duke Street, Alexandria, Virginia 22314–3428.

Executive Order 13132

Executive Order 13132 encourages independent regulatory agencies to consider the impact of their actions on State and local interests. In adherence to fundamental federalism principles, NCUA, an independent regulatory agency as defined in 44 U.S.C. 3502(5), voluntarily complies with the executive order.

The proposed rule would not have substantial direct effects on the States, on the connection between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. NCUA has determined that this proposal does not constitute a policy that has federalism implications for purposes of the executive order.

The Treasury and General Government Appropriations Act, 1999—Assessment of Federal Regulations and Policies on Families

The NCUA has determined that this proposed rule will not affect family well-being within the meaning of section 654 of the Treasury and General Government Appropriations Act, 1999, Public Law 105–277, 112 Stat. 2681 (1998).

List of Subjects

12 CFR Part 701

Credit unions, Reporting and recordkeeping requirements.

12 CFR Part 704

Credit unions, Corporate credit unions, Reporting and recordkeeping requirements.

12 CFR Part 741

Bank deposit insurance, Credit unions, Reporting and recordkeeping requirements.

By the National Credit Union Administration Board on November 18, 2010.

Mary F. Rupp,

Secretary of the Board.

For the reasons stated in the preamble, the National Credit Union Administration proposes to amend 12 CFR parts 701, 704, and 741 as set forth below:

PART 701—ORGANIZATION AND OPERATION OF FEDERAL CREDIT UNIONS

1. The authority citation for part 701 continues to read as follows:

Authority: 12 U.S.C. 1752(5), 1755, 1756, 1757, 1758, 1759, 1761a, 1761b, 1766, 1767, 1782, 1784, 1786, 1787, 1789.

2. Add a new § 701.5 to read as follows:

§ 701.5 Membership limited to one corporate credit union.

(a) A Federal credit union is prohibited from joining a corporate credit union if, after joining, the Federal credit union would be a member of three or more corporate credit unions.

(b) A Federal credit union is prohibited from joining a corporate credit union if, after joining, the Federal credit union would be a member of exactly two corporate credit unions. As an exception, a Federal credit union may join a second corporate credit union, but only if the Federal credit union intends to transfer its share and deposit account(s) from one corporate credit union to the other corporate credit union and has informed the former corporate credit union of its intent to resign its membership no later than six months after joining the latter corporate credit union.

(c) A Federal credit union is prohibited from making any investment, including a share or deposit account, a loan, or a capital investment, in a corporate credit union of which the Federal credit union is not also a member. This prohibition does not apply to investments made at a time when the Federal credit union was a member of the corporate.

PART 704—CORPORATE CREDIT UNIONS

3. The authority citation for part 704 continues to read as follows:

Authority: 12 U.S.C. 1762, 1766(a), 1772a, 1781, 1789, and 1795e.

4. In § 704.2, add the following new definitions:

* * * * *

Critical accounting policies means those policies that are most important to the portrayal of a corporate credit union's financial condition and results and that require management's most difficult, subjective, or complex judgments, often as a result of the need to make estimates about the effect of matters that are inherently uncertain.

* * * * *

Enterprise risk management means the process of addressing risk on an entity-wide basis. The purpose of this process is not to eliminate risk but, rather, to provide the knowledge the board of directors and management need to effectively measure, monitor, and control risk and to then plan

appropriate strategies to achieve the entity's business objectives with a reasonable amount of risk taking.

Examination of internal control means an engagement of an independent public accountant to report directly on internal control or on management's assertions about internal control. An examination of internal control over financial reporting includes controls over the preparation of financial statements in accordance with accounting principles generally accepted in the United States of America and NCUA regulatory reporting requirements.

* * * * *

Family, as it relates to a particular individual, means that individual's spouse, parents, children, and siblings, whether by blood, marriage, or adoption; and any other person residing in the individual's home.

* * * * *

Financial statements means the presentation of a corporate credit union's financial data, including accompanying notes, derived from accounting records of the credit union, and intended to disclose the credit union's economic resources or obligations at a point in time, or the changes therein for a period of time, in conformity with GAAP. Each of the following is considered to be a financial statement: A balance sheet or statement of financial condition; statement of income or statement of operations; statement of undivided earnings; statement of cash flows; statement of changes in members' equity; statement of revenue and expenses; and statement of cash receipts and disbursements.

Financial statement audit means an audit of the financial statements of a credit union performed in accordance with generally accepted auditing standards by an independent person who is licensed by the appropriate State or jurisdiction. The objective of a financial statement audit is to express an opinion as to whether those financial statements of the credit union present fairly, in all material respects, the financial position and the results of its operations and its cash flows in conformity with GAAP.

Generally accepted auditing standards (GAAS) means the standards approved and adopted by the American Institute of Certified Public Accountants which apply when an "independent, licensed certified public accountant" audits private company financial statements in the United States of America. Auditing standards differ from auditing procedures in that "procedures" address acts to be performed, whereas "standards" measure the quality of the performance of those acts and the objectives to be achieved by use of the procedures undertaken. In addition, auditing standards address the auditor's professional qualifications as well as the judgment exercised in performing the audit and in preparing the report of the audit.

* * * * *

Independent public accountant (IPA) means a person who is licensed by the appropriate State or jurisdiction to practice public accounting. An IPA must be able to exercise fairness toward credit union officials, members, creditors and others who may rely upon the report of a supervisory committee audit and demonstrate the impartiality necessary to produce dependable findings. As used in this part, IPA is synonymous with the terms "auditor" or "accountant." The term IPA does not include a licensed person working in his or her capacity as an employee of an unlicensed entity and issuing an audit opinion in the unlicensed entity's name, *e.g.,* a licensed league auditor or licensed retired examiner working for a non-licensed entity.

Internal control means the process, established by the credit union's board of directors, officers and employees, designed to provide reasonable assurance of reliable financial reporting and safeguarding of assets against unauthorized acquisition, use, or disposition. A credit union's internal control structure generally consists of five components: Control environment; risk assessment; control activities; information and communication; and monitoring. Reliable financial reporting refers to preparation of Call Reports that meet management's financial reporting objectives. Internal control over safeguarding of assets against unauthorized acquisition, use, or disposition refers to prevention or timely detection of transactions involving such unauthorized access, use, or disposition of assets which could result in a loss that is material to the financial statements.

Internal control framework means criteria such as that established in *Internal Control—Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO) or comparable, reasonable, and U.S. recognized criteria.

Internal control over financial reporting means a process effected by those charged with governance, management, and other personnel, designed to provide reasonable assurance regarding the preparation of reliable financial statements in accordance with accounting principles generally accepted in the United States of America. A corporate credit union's internal control over financial reporting includes those policies and procedures that:

(1) Pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the entity;

(2) Provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with accounting principles generally accepted in the United States of America, and that receipts and expenditures of the entity are being made only in accordance with authorizations of management and those charged with governance; and

(3) Provide reasonable assurance regarding prevention, or timely detection and correction of unauthorized acquisition, use, or disposition of the entity's assets that could have a material effect on the financial statements.

* * * * *

Supervisory committee means, for Federally chartered corporate credit unions, the supervisory committee as defined in Section 111(b) of the Federal Credit Union Act, 12 U.S.C. 1761(b). For State chartered corporate credit unions, the term supervisory committee refers to the audit committee, or similar committee, designated by State statute or regulation.

* * * * *

5. In § 704.11, revise paragraphs (g)(5) and (g)(6), and add a new paragraph (g)(7), to read as follows:

§ 704.11. Corporate Credit Union Service Organizations (Corporate CUSOs).

* * * * *

(g) * * *

(5) Will allow the auditor, board of directors, and NCUA complete access to its personnel, facilities, equipment, books, records, and any other documentation that the auditor, directors, or NCUA deem pertinent;

(6) Will inform the corporate, at least quarterly, of all the compensation paid by the CUSO to its employees who are also employees of the corporate credit union; and

(7) Will comply with all the requirements of this section.

6. In § 704.13, revise paragraphs (c)(6) and (c)(7), and add a new paragraph (c)(8), to read as follows:

§ 704.13 Board responsibilities.

* * * * *

(c) * * *

(6) Financial performance is evaluated to ensure that the objectives of the corporate credit union and the responsibilities of management are met;

(7) Planning addresses the retention of external consultants, as appropriate, to review the adequacy of technical, human, and financial resources dedicated to support major risk areas; and

(8) All board of directors votes are conducted by recorded vote, such that the minutes reporting the vote list the board members (by name) voting for or against the proposal, as well as, if applicable, board members who were absent or otherwise failed to vote and board members who abstained from the vote.

7. Revise § 704.15 to read as follows:

§ 704.15 Audit and reporting requirements.

(a) *Annual reporting requirements—(1) Audited financial statements.* A corporate credit union must prepare annual financial statements in accordance with generally accepted accounting principles (GAAP), which must be audited by an independent public accountant in accordance with generally accepted auditing standards. The annual financial statements and regulatory reports must reflect all material correcting adjustments necessary to conform with GAAP that were identified by the corporate credit union's independent public accountant.

(2) Management report. Each corporate credit union must prepare, as of the end of the previous calendar year, an annual management report that contains the following:

(i) A statement of management's responsibilities for preparing the corporate credit union's annual financial statements, for establishing and maintaining an adequate internal control structure and procedures for financial reporting, and for complying with laws and regulations relating to safety and soundness in the following areas: Affiliate transactions, legal lending limits, loans to insiders, restrictions on capital and share dividends, and regulatory reporting that meets full and fair disclosure;

(ii) An assessment by management of the corporate credit union's compliance with such laws and regulations during the past calendar year. The assessment must state management's conclusion as to whether the corporate credit union has complied with the designated safety and soundness laws and regulations during the calendar year and disclose any noncompliance with the laws and regulations; and

(iii) For a corporate credit union with consolidated total assets of $1 billion or more as of the beginning of such calendar year, an assessment by management of the effectiveness of such internal control structure and procedures as of the end of such calendar year that must include the following:

(A) A statement identifying the internal control framework used by management to evaluate the effectiveness of the corporate credit union's internal control over financial reporting;

(B) A statement that the assessment included controls over the preparation of regulatory financial statements in accordance with regulatory reporting instructions including identification of such regulatory reporting instructions; and

(C) A statement expressing management's conclusion as to whether the corporate credit union's internal control over financial reporting is effective as of the end of the previous calendar year. Management must disclose all material weaknesses in internal control over financial reporting, if any, that it has identified that have not been remediated prior to the calendar year-end. Management may not conclude that the corporate credit union's internal control over financial reporting is effective if there are one or more material weaknesses.

(3) Management report signatures. The chief executive officer and either the chief accounting officer or chief financial officer of the corporate credit union must sign the management report.

(b) *Independent public accountant—(1) Annual audit of financial statements.* Each corporate credit union must engage an independent public accountant to audit and report on its annual financial statements in accordance with generally accepted auditing standards. The scope of the audit engagement must be sufficient to permit such accountant to determine and report whether the financial statements are presented fairly and in accordance with GAAP. A corporate credit union must provide its independent public accountant with a copy of its most recent Call Report and NCUA examination report. It must also provide its independent public accountant with copies of any notice that its capital category is being changed or reclassified and any correspondence from NCUA regarding compliance with this section.

(2) Internal control over financial reporting. For each corporate credit union with total assets of $1 billion or more at the beginning of the calendar year, the independent public accountant who audits the corporate credit union's financial statements must examine, attest to, and report separately on the assertion of management concerning the effectiveness of the corporate credit union's internal control structure and procedures for financial reporting. The attestation and report must be made in accordance with generally accepted standards for attestation engagements. The accountant's report must not be dated prior to the date of the management report and management's assessment of the effectiveness of internal control over financial reporting. Notwithstanding the requirements set forth in applicable professional standards, the accountant's report must include the following:

(i) A statement identifying the internal control framework used by the independent public accountant, which must be the same as the internal control framework used by management, to evaluate the effectiveness of the corporate credit union's internal control over financial reporting;

(ii) A statement that the independent public accountant's evaluation included controls over the preparation of regulatory financial statements in accordance with regulatory reporting instructions including identification of such regulatory reporting instructions; and

(iii) A statement expressing the independent public accountant's conclusion as to whether the corporate credit union's internal control over financial reporting is effective as of the end of the previous calendar year. The report must disclose all material weaknesses in internal control over financial reporting that the independent public accountant has identified that have not been remediated prior to the calendar year-end. The independent public accountant may not conclude that the corporate credit union's internal control over financial reporting is effective if there are one or more material weaknesses.

(3) Notice by accountant of termination of services. An independent public accountant performing an audit under this part who ceases to be the accountant for a corporate credit union must notify NCUA in writing of such termination within 15 days after the occurrence of such event and set forth in reasonable detail the reasons for such termination.

(4) Communications with supervisory committee. In addition to the requirements for communications with audit committees set forth in applicable professional standards, the independent public accountant must report the

following on a timely basis to the supervisory committee:

(i) All critical accounting policies and practices to be used by the corporate credit union;

(ii) All alternative accounting treatments within GAAP for policies and practices related to material items that the independent public accountant has discussed with management, including the ramifications of the use of such alternative disclosures and treatments, and the treatment preferred by the independent public accountant; and

(iii) Other written communications the independent public accountant has provided to management, such as a management letter or schedule of unadjusted differences.

(5) Retention of working papers. The independent public accountant must retain the working papers related to the audit of the corporate credit union's financial statements and, if applicable, the evaluation of the corporate credit union's internal control over financial reporting for seven years from the report release date, unless a longer period of time is required by law.

(6) Independence. The independent public accountant must comply with the independence standards and interpretations of the American Institute of Certified Public Accountants (AICPA).

(7) Peer reviews and inspection reports. (i) Prior to commencing any services for a corporate credit union under this section, the independent public accountant must have received a peer review, or be enrolled in a peer review program, that meets acceptable guidelines. Acceptable peer reviews include peer reviews performed in accordance with the AICPA's Peer Review Standards and inspections conducted by the Public Company Accounting Oversight Board (PCAOB).

(ii) Within 15 days of receiving notification that the AICPA has accepted a peer review or the PCAOB has issued an inspection report, or before commencing any audit under this section, whichever is earlier, the independent public accountant must file a copy of the most recent peer review report and the public portion of the most recent PCAOB inspection report, if any, accompanied by any letters of comments, response, and acceptance, with NCUA if the report has not already been filed.

(iii) Within 15 days of the PCAOB making public a previously nonpublic portion of an inspection report, the independent public accountant must file a copy of the previously nonpublic portion of the inspection report with NCUA.

(c) *Filing and notice requirements—(1) Annual Report.* Each corporate credit union must, no later than 180 days after the end of the calendar year, file an Annual Report with NCUA consisting of the following documents:

(i) The audited comparative annual financial statements;

(ii) The independent public accountant's report on the audited financial statements;

(iii) The management report; and, if applicable,

(iv) The independent public accountant's attestation report on management's assessment concerning the corporate credit union's internal control structure and procedures for financial reporting.

(2) Public availability. The annual report in paragraph (c)(1) of this section will be made available for public inspection by NCUA.

(3) Independent public accountant's letters and reports. Each corporate credit union must file with NCUA a copy of any management letter or other report issued by its independent public accountant with respect to such corporate credit union and the services provided by such accountant pursuant to this part (except for the independent public accountant's reports that are included in the Annual Report) within 15 days after receipt by the corporate credit union. Such reports include, but are not limited to:

(i) Any written communication regarding matters that are required to be communicated to the supervisory committee (for example, critical accounting policies, alternative accounting treatments discussed with management, and any schedule of unadjusted differences); and

(ii) Any written communication of significant deficiencies and material weaknesses in internal control required by the AICPA's auditing standards.

(4) Notice of engagement or change of accountants. Each corporate credit union that engages an independent public accountant, or that loses an independent public accountant through dismissal or resignation, must notify NCUA within 15 days after the engagement, dismissal, or resignation. The corporate credit union must include with the notice a reasonably detailed statement of the reasons for any dismissal or resignation. The corporate credit union must also provide a copy of the notice to the independent public accountant at the same time the notice is filed with NCUA.

(5) Notification of late filing. A corporate credit union that is unable to timely file any part of its Annual Report or any other report or notice required by this paragraph (c) must submit a written notice of late filing to NCUA. The notice must disclose the corporate credit union's inability to timely file all or specified portions of its Annual Report or other report or notice and the reasons therefore in reasonable detail. The late filing notice must also state the date by which the report or notice will be filed. The written notice must be filed with NCUA before the deadline for filing the Annual Report or any other report or notice, as appropriate. NCUA may take appropriate enforcement action for failure to timely file any report, or notice of late filing, required by this section.

(6) Report to Members. A corporate credit union must submit a preliminary Annual Report to the membership at the next calendar year's annual meeting.

(d) Supervisory committees. *(1) Composition.* Each corporate credit union must establish a supervisory committee. The members of the supervisory committee must not be employees of the corporate credit union and must be independent of the corporate credit union. A committee member is independent if:

(i) The committee member does not have any family relationships or any material business or professional relationships with the corporate credit union or its management that would affect his or her independence as a committee member, and

(ii) The committee member has not had any such relationships for at least three years preceding his or her appointment to the committee.

(2) Duties. In addition to any duties specified under the corporate credit union's bylaws and these regulations, the duties of the credit union's supervisory committee include the appointment, compensation, and oversight of the independent public accountant who performs services required under this section and reviewing with management and the independent public accountant the basis for all the reports prepared and issued under this section. The supervisory committee must submit the audited comparative annual financial statements and the independent public accountant's report on those statements to the corporate credit union's board of directors.

(3) Independent public accountant engagement letters. (i) In performing its duties with respect to the appointment of the corporate credit union's independent public accountant, the supervisory committee must ensure that engagement letters and/or any related

agreements with the independent public accountant for services to be performed under this section:

(A) Obligate the independent public accountant to comply with the requirements of paragraph (b) of this section (including, but not limited to, the notice of termination of services, communications with the supervisory committee, and notifications of peer reviews and inspection reports); and

(B) Do not contain any limitation of liability provisions that:

(*1*) Indemnify the independent public accountant against claims made by third parties;

(*2*) Hold harmless or release the independent public accountant from liability for claims or potential claims that might be asserted by the client corporate credit union, other than claims for punitive damages; or

(*3*) Limit the remedies available to the client corporate credit union.

(ii) Engagement letters may include alternative dispute resolution agreements and jury trial waiver provisions provided that the letters do not incorporate any limitation of liability provisions set forth in paragraph (e)(2)(i)(B) of this section.

(4) Outside counsel. The supervisory committee of any corporate credit union must, when deemed necessary by the committee, have access to its own outside counsel.

(e) *Internal audit.* A corporate credit union with average daily assets in excess of $400 million for the preceding calendar year, or as ordered by NCUA, must employ or contract, on a full- or part-time basis, the services of an internal auditor. The internal auditor's responsibilities will, at a minimum, comply with the Standards and Professional Practices of Internal Auditing, as established by the Institute of Internal Auditors. The internal auditor will report directly to the chair of the corporate credit union's supervisory committee, who may delegate supervision of the internal auditor's daily activities to the chief executive officer of the corporate credit union. The internal auditor's reports, findings, and recommendations will be in writing and presented to the supervisory committee no less than quarterly, and will be provided upon request to the IPA and NCUA.

8. Revise the introductory text of paragraph (a) of § 704.19 to read as follows:

§ 704.19. Disclosure of executive and director compensation.

(a) Annual disclosure. A corporate credit union must annually prepare and maintain a disclosure of the dollar amount of compensation paid to its most highly compensated employees, including compensation from any corporate CUSO in which the corporate has invested or made a loan, in accordance with the following schedule:

* * * * *

9. Add a new § 704.21 to read as follows:

§ 704.21 Equitable distribution of corporate credit union stabilization expenses.

When the NCUA Board acts to assess a premium on Federally-insured credit unions for the Temporary Corporate Credit Union Stabilization Fund (TCCUSF):

(a) A corporate credit union must immediately prepare a list of all its non-natural person members on the date of assessment that are not Federally-insured credit unions ("non-FICU members"), including the name of each such non-FICU member, the assets of each such non-FICU member as of the end of the previous year, and the address and contact information of each such non-FICU member.

(b) Within 14 days after the date of the assessment, the corporate credit union must forward the list described in paragraph (a) of this section to the Office of Corporate Credit Unions. A corporate credit union that has no non-FICU members must provide the Office of Corporate Credit Unions with a response indicating that it has no non-FICU members.

(c) Within 60 days after the date of assessment, the NCUA Chief Financial Officer will request each member on the list described in paragraph (a) of this section to make a voluntary payment to the TCCUSF. The amount of the requested payment will be the member's assets (as of the previous year-end) times 0.815 times the percentage of insured shares that NCUA assessed each Federally-insured credit union. If the member decides to make a payment, the member must deliver the payment to NCUA no later than 60 days after the date of the NCUA Chief Financial Officer's request.

(d) If NCUA fails to receive a full, timely payment of the amount requested in paragraph (c) of this section, NCUA will notify the corporate credit union of the failure.

(e) No later than 90 days following receipt of the notice in paragraph (d) of this section, the corporate credit union must call a special meeting of its members to determine whether each non-FICU member that failed to make the full payment to the TCCUSF should be expelled from the corporate credit union. For a Federally-chartered corporate credit union, the expulsion vote will be conducted in accordance with section 118(a) of the Federal Credit Union Act (12 U.S.C. 1764(a)) and the bylaws of the corporate credit union. For a State-chartered corporate credit union, the expulsion vote will be conducted in accordance with the bylaws of the corporate credit union and applicable State law. The corporate credit union must notify the Office of Corporate Credit Unions of the results of the member vote no later than 14 days following the date of the vote.

(f) If the corporate credit union's annual meeting falls within the timeframe specified in paragraph (e) of this section, the expulsion vote may be conducted at the annual meeting instead of a special meeting.

(g) For non-FICUs that belong to more than one corporate credit union, NCUA will request only one voluntary payment from that non-FICU in connection with each TCCUSF assessment. If NCUA fails to receive a full payment of the amount requested in paragraph (c) of this section, however, NCUA will notify all corporate credit unions to which the non-FICU belongs for purposes of conducting an expulsion vote.

10. Add a new § 704.22 to read as follows:

§ 704.22 Enterprise risk management.

(a) A corporate credit union must develop and follow an enterprise risk management policy.

(b) The board of directors of a corporate credit union must establish an enterprise risk management committee (ERMC) responsible for the oversight of the enterprise-wide risk management practices of the corporate credit union. The ERMC must report at least annually to the board of directors.

(c) The ERMC must include at least one independent risk management expert. The risk management expert will have post-graduate education; an actuarial, accounting, economics, financial, or legal background; and at least five years experience in identifying, assessing, and managing risk exposures. The risk management expert's experience must also be commensurate with the size of the corporate credit union and the complexity of its operations.

(d) An expert is independent if:

(1) He or she does not have any family relationships or any material business or professional relationships with the corporate credit union that would affect his or her independence as a committee member, and

(2) He or she has not had any such relationships for at least three years

preceding his or her appointment to the committee.

(e) The risk management expert is not required to be a director of the corporate credit union.

11. Add a new § 704.23 to read as follows:

§ 704.23 Membership fees.

(a) A corporate credit union may charge its members a membership fee. The fee may be one-time or periodic.

(b) The corporate credit union must calculate the fee uniformly for all members as a percentage of each member's assets, except that the corporate credit union may reduce the amount of the fee for members that have contributed capital to the corporate. Any reduction must be proportional to the amount of the member's nondepleted contributed capital.

(c) The corporate credit union must give its members at least six months advance notice of any initial or new fee, including terms and conditions, before invoicing the fee. For a recurring fee, the corporate credit union must also give six months notice of any material change to the terms and conditions of the fee.

(d) The corporate credit union may terminate the membership of any credit union that fails to pay the fee in full within 60 days of the invoice date.

PART 741—REQUIREMENTS FOR INSURANCE

12. The authority citation for part 741 continues to read as follows:

Authority: 12 U.S.C. 1757, 1766(a), 1781–1790, and 1790d; 31 U.S.C. 3717.

13. Add a new § 741.226 to read as follows:

§ 741.226 Membership in one corporate credit union.

Any credit union which is insured pursuant to Title II of the Act must adhere to the requirements stated in § 701.5 of this chapter.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 61

Notice of Public Meeting: Updating the Flight Instructor Renewal Process To Enhance Safety of Flight

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of public meeting.

SUMMARY: The FAA announces a public meeting to receive industry input as to how to improve the Certificated Flight Instructor (CFI) biennial renewal process to enhance the safety of flight in the General Aviation (GA) community. This is an information gathering meeting.

DATES: The public meetings will be held on the following dates.

- December 6, 2010, from 9 a.m. until no later than 4 p.m., and
- December 7, 2010 from 9 p.m. until no later than 4 p.m.

ADDRESSES: The December 6 and 7, 2010, public meetings will be held at the FAA headquarters building B, located at 600 Independence Avenue, SW., Washington, DC 20591.

Because of limited capacity, we ask that all those who anticipate attending the meeting contact *Gregory.french@faa.gov* with written confirmation of attendance and the number of members in the attending party. If we find that we are nearing capacity, we may request that those who are planning on sending more than a single representative reduce the number in their party. If this is the case, respondents will be notified by e-mail and/or phone prior to the meeting date.

FOR FURTHER INFORMATION CONTACT: Requests to attend this public meeting, questions regarding the logistics of the meeting, and any technical questions should be directed to Inspector Gregory French, AFS–800, General Aviation and Commercial Division, Federal Aviation Administration, 800 Independence Avenue, SW., Washington, DC 20591; telephone (202) 267–8212, facsimile (202) 267–5094, or, preferably, via e-mail at *Gregory.french@faa.gov.*

SUPPLEMENTARY INFORMATION:

Background

The FAA has been reviewing safety of flight data in the general aviation (GA) community over the last ten years. Even with the advent of new technologies to assist the GA pilot, there has been little improvement in the accident/incident rate among that community of aviators.

CFIs are responsible for ensuring that pilots are properly educated to operate safely within the National Airspace System (NAS). For CFIs to accomplish that mission effectively they must be provided the means and knowledge to do so, and there must be some objective method of measuring that information transfer and retention. The FAA has been reviewing indicators that suggest that the processes currently in place may lack sufficient effectiveness in ensuring that CFIs are being provided the best information in the most useful manner. This meeting will elicit input from the community of authorized flight instructor renewal program operators so that the FAA can better analyze how to improve the process.

Purpose of the Public Meeting

The purpose of this public meeting is for the FAA to hear the public's views and obtain information relevant to improving the CFI biennial renewal process. The FAA will consider comments made at this public meeting before making decisions on any suggested changes to the current policy.

More specifically, the FAA seeks information on the following questions. The FAA requests that that all meeting participants provide written comments to support any positions they may express support for, or disagreement with.

- How effective have Flight Instructor Refresher Clinics been in transferring relevant information to flight instructors?
- What can be done to improve the effectiveness of flight instructor refresher clinics?
- How effective are the written tests provided at the conclusion of flight instructor refresher clinics?
- How can the effectiveness of flight instructor knowledge be better assessed?
- How effective have the online courses been?
- How do we effectively measure the success of knowledge transfer in online flight instructor renewal courses?
- Should there be changes to 14 CFR part 61.197?
- Are those non-FIRC methods of CFI biennial certificate renewal found in 14 CFR part 61.197 adequate and effective in ensuring that CFIs possess the most up to date information in terms of both proficiency and knowledge?
- What can the community conducting flight instructor recurrent training, the FIRC providers, do to contribute to enhancing safety of flight among the GA community at large?

Participation at the Public Meetings

Commenters who wish to present oral statements at the December 6 and 7, 2010, public meetings will be permitted to do so on an ad-hoc basis during the meeting.

The FAA will have available a projector and a computer capable of accommodating Word and PowerPoint presentations from a compact disk (CD) or USB memory device. Persons requiring any other kind of audiovisual equipment should notify the FAA prior to the meeting.

Sign and oral interpretation can be made available at the meeting, as well

as an assistive listening device, if requested 10 calendar days before the meeting.

Public Meeting Procedures

A panel of representatives from the FAA will be present. An FAA representative will facilitate the meetings in accordance with the following procedures:

(1) The meetings are designed to facilitate the public input on policies that directly affect them. The meetings will be informal and non-adversarial. No individual will be subject to cross-examination by any other participant. Government representatives on the panel may ask questions to clarify statements and to ensure an accurate record. Any statement made during the meetings by a panel member should not be construed as an official position of the government.

(2) There will be no admission fees or other charges to attend or to participate in the public meetings. The meetings will be open to all persons, subject to availability of space in the meeting room. The FAA will make every effort to accommodate all persons wishing to attend. The FAA asks that participants sign in at 9 a.m. on each day of the meeting being attended. The FAA will try to accommodate all speakers; however if available time does not allow this, speakers will be scheduled on a first-come-first-served basis. The FAA reserves the right to exclude some speakers, if necessary, to obtain balanced viewpoints. The meetings may adjourn early if scheduled speakers complete their statements in less time than is scheduled for the meetings.

(3) The FAA will prepare agendas of speakers and presenters and make the agendas available at the meetings.

(4) The meeting is intended to produce an environment conducive to an exchange of ideas. If speakers wish to give dedicated presentations, they may be limited to 5–10-minute statements. If possible, the FAA will notify speakers if additional time is available.

(5) The FAA will review and consider all material presented by participants at the public meetings. Position papers or materials presenting views or information related to the topics discussed may be accepted at the discretion of the presiding officer and will be subsequently placed in the public docket. If the attendees wish to provide written materials, the FAA requests that the presenters provide at least 10 copies of all materials for distribution to the panel members. Presenters may provide other copies to the audience at their discretion.

(6) Each person presenting comments is asked to submit data to support the comments. The FAA will protect from disclosure all proprietary data submitted in accordance with applicable laws.

Issued in Washington, DC on November 18, 2010.

Melvin O. Cintron,

Manager, General Aviation and Commercial Division.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 71

[Docket No. FAA–2010–0938; Airspace Docket No. 10–ANE–108]

Proposed Amendment of Class E Airspace; Newport, VT

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This action proposes to amend Class E Airspace at Newport, VT, as the Newport Non-Directional Beacon (NDB) has been decommissioned and new Standard Instrument Approach Procedures (SIAPs) have been developed at Newport State Airport. This action would enhance the safety and airspace management of Instrument Flight Rules (IFR) operations at the airport.

DATES: Effective 0901 UTC. Comments must be received on or before January 13, 2011.

ADDRESSES: Send comments on this rule to: U.S. Department of Transportation, Docket Operations, West Building Ground Floor, Room W12–140, 1200 New Jersey Ave., SE., Washington, DC 20590–0001; Telephone: 1–800–647–5527; Fax: 202–493–2251. You must identify the Docket Number FAA–2010–0938; Airspace Docket No. 10–ANE–108, at the beginning of your comments. You may also submit and review received comments through the Internet at *http://www.regulations.gov.*

FOR FURTHER INFORMATION CONTACT: Melinda Giddens, Operations Support Group, Eastern Service Center, Federal Aviation Administration, P.O. Box 20636, Atlanta, Georgia 30320; telephone (404) 305–5610.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested persons are invited to comment on this rule by submitting such written data, views, or arguments, as they may desire. Comments that provide the factual basis supporting the views and suggestions presented are particularly helpful in developing reasoned regulatory decisions on the proposal. Comments are specifically invited on the overall regulatory, aeronautical, economic, environmental, and energy-related aspects of the proposal.

Communications should identify both docket numbers (FAA Docket No. FAA–2010–0938; Airspace Docket No. 10–ANE–108) and be submitted in triplicate to the Docket Management System (*see* **ADDRESSES** section for address and phone number). You may also submit comments through the Internet at *http://www.regulations.gov.*

Commenters wishing the FAA to acknowledge receipt of their comments on this action must submit with those comments a self-addressed stamped postcard on which the following statement is made: "Comments to Docket No. FAA–2010–0938; Airspace Docket No. 10–ANE–108." The postcard will be date/time stamped and returned to the commenter.

All communications received before the specified closing date for comments will be considered before taking action on the proposed rule. The proposal contained in this notice may be changed in light of the comments received. A report summarizing each substantive public contact with FAA personnel concerned with this rulemaking will be filed in the docket.

Availability of NPRMs

An electronic copy of this document may be downloaded from and comments submitted through *http://www.regulations.gov.* Recently published rulemaking documents can also be accessed through the FAA's Web page at *http://www.faa.gov/airports_airtraffic/air_traffic/publications/airspace_amendments/.*

You may review the public docket containing the proposal, any comments received, and any final disposition in person in the Dockets Office (*see* the **ADDRESSES** section for address and phone number) between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. An informal docket may also be examined during normal business hours at the office of the Eastern Service Center, Federal Aviation Administration, room 210, 1701 Columbia Avenue, College Park, Georgia 30337.

Persons interested in being placed on a mailing list for future NPRMs should contact the FAA's Office of Rulemaking, (202) 267–9677, to request a copy of Advisory Circular No. 11–2A, Notice of Proposed Rulemaking Distribution System, which describes the application procedure.

The Proposal

The FAA is considering an amendment to Title 14, Code of Federal Regulations (14 CFR) part 71 to amend Class E airspace extending upward from 700 feet above the surface for new SIAPs developed at Newport State Airport, Newport, VT. Airspace reconfiguration is necessary due to the decommissioning of the Newport NDB and cancellation of the NDB approach. Controlled airspace is necessary for the safety and management of IFR operations.

Class E airspace designations are published in Paragraph 6005 of FAA order 7400.9U, dated August 18, 2010, and effective September 15, 2010, which is incorporated by reference in 14 CFR 71.1. The Class E airspace designation listed in this document will be published subsequently in the Order.

The FAA has determined that this proposed regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore, (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a Regulatory Evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this proposed rule, when promulgated, would not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This proposed rulemaking is promulgated under the authority described in subtitle VII, part A, subpart I, section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This proposed regulation is within the scope of that authority as it would amend Class E airspace at Newport State Airport, Newport, VT.

Lists of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (Air).

The Proposed Amendment

In consideration of the foregoing, the Federal Aviation Administration proposes to amend 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND CLASS E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

1. The authority citation for part 71 continues to read as follows:

Authority: 49 U.S.C. 106(g); 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

2. The incorporation by reference in 14 CFR 71.1 of Federal Aviation Administration Order 7400.9U, Airspace Designations and Reporting Points, dated August 18, 2010, effective September 15, 2010, is amended as follows:

Paragraph 6005 Class E Airspace Areas Extending Upward From 700 Feet or More Above the Surface of the Earth.

* * * * *

ANE VT E5 Newport, VT [AMENDED]

Newport State Airport, VT
(Lat. 44°53′20″ N., long. 72°13′45″ W.)

That airspace extending upward from 700 feet above the surface within a 6.4-mile radius of the Newport State Airport and within 1.8 miles each side of the 159° bearing from the airport extending from the 6.4-mile radius to 10.9 miles south of Newport State Airport.

Issued in College Park, Georgia, on November 16, 2010.

Mark D. Ward,

Manager, Operations Support Group, Eastern Service Center, Air Traffic Organization.

The Proposal

The FAA is considering an amendment to Title 14, Code of Federal Regulations (14 CFR) part 71 to establish Class E airspace at Kenbridge, VA to provide controlled airspace required to support the SIAPs developed for Lunenburg County Airport. Class E airspace extending upward from 700 feet above the surface would be established for the safety and management of IFR operations.

Class E airspace designations are published in Paragraph 6005 of FAA order 7400.9U, dated August 18, 2010, and effective September 15, 2010, which is incorporated by reference in 14 CFR 71.1. The Class E airspace designation listed in this document would be published subsequently in the Order.

The FAA has determined that this proposed regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore, (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a Regulatory Evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this proposed rule, when promulgated, would not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

The FAA's authority to issue rules regarding aviation safety is found in title 49 of the United States Code. Subtitle I, section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This proposed rulemaking is promulgated under the authority described in subtitle VII, part A, subpart I, section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This proposed regulation is within the scope of that authority as it would establish Class E airspace at Lunenburg County Airport, Kenbridge, VA.

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R04–OAR–2010–0816–201057; FRL–9233–6]

Approval and Promulgation of Implementation Plans; Georgia: Prevention of Significant Deterioration; Greenhouse Gas Tailoring Rule and Fine Particulate Matter Revision

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: EPA is proposing to approve a draft revision to the Georgia State Implementation Plan (SIP), submitted by the State of Georgia, through the Georgia Department of Natural Resources' Environmental Protection Division (EPD), to EPA on September 30, 2010, for parallel processing. The proposed revision makes two changes for which EPA is proposing approval in today's rulemaking. First, the proposed SIP revision modifies Georgia's New Source Review (NSR) Prevention of Significant Deterioration (PSD) program. Specifically, the proposed SIP revision establishes appropriate emission thresholds for determining which new stationary sources and modification projects become subject to Georgia's PSD permitting requirements for their greenhouse gas (GHG) emissions. Second, the proposed SIP revision incorporates provisions for implementing the PSD program for fine particulate matter ($PM_{2.5}$). The first component of this proposed SIP revision is necessary because without it, on January 2, 2011, PSD requirements would apply at the 100 or 250 tons per year (tpy) levels provided under the Clean Air Act (CAA or Act), which would overwhelm Georgia's permitting

resources. The second component of this proposed SIP revision (addressing the $PM_{2.5}$ national ambient air quality standard (NAAQS)) is necessary to comply with Federal regulations related to PSD permitting. EPA is proposing approval of Georgia's September 30, 2010, SIP revision because the Agency has made the preliminary determination that this SIP revision is in accordance with the CAA and EPA regulations regarding PSD permitting for GHGs and the $PM_{2.5}$ NAAQS.

DATES: Comments must be received on or before December 29, 2010.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R04–OAR–2010–0816 by one of the following methods:

1. *http://*www.regulations.gov: Follow the on-line instructions for submitting comments.
2. *E-mail: benjamin.lynorae@epa.gov.*
3. *Fax:* (404) 562–9019.
4. *Mail:* EPA–R04–OAR–2010–0816, Regulatory Development Section, Air Planning Branch, Air, Pesticides and Toxics Management Division, U.S. Environmental Protection Agency, Region 4, 61 Forsyth Street, SW., Atlanta, Georgia 30303–8960.
5. *Hand Delivery or Courier:* Ms. Lynorae Benjamin, Chief, Regulatory Development Section, Air Planning Branch, Air, Pesticides and Toxics Management Division, U.S. Environmental Protection Agency, Region 4, 61 Forsyth Street, SW., Atlanta, Georgia 30303–8960. Such deliveries are only accepted during the Regional Office's normal hours of operation. The Regional Office's official hours of business are Monday through Friday, 8:30 to 4:30, excluding Federal holidays.

Instructions: Direct your comments to Docket ID No. "EPA–R04–OAR–2010–0816." EPA's policy is that all comments received will be included in the public docket without change and may be made available online at *http://www.regulations.gov,* including any personal information provided, unless the comment includes information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Do not submit through *http://www.regulations.gov* or e-mail, information that you consider to be CBI or otherwise protected. The *http://www.regulations.gov* Web site is an "anonymous access" system, which means EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an e-mail comment directly to EPA without going through *http://www.regulations.gov,* your e-mail address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the Internet. If you submit an electronic comment, EPA recommends that you include your name and other contact information in the body of your comment and with any disk or CD–ROM you submit. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comment. Electronic files should avoid the use of special characters, any form of encryption, and be free of any defects or viruses. For additional information about EPA's public docket visit the EPA Docket Center homepage at *http://www.epa.gov/epahome/dockets.htm.*

Docket: All documents in the electronic docket are listed in the *http://www.regulations.gov* index. Although listed in the index, some information is not publicly available, *i.e.,* CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the Internet and will be publicly available only in hard copy form. Publicly available docket materials are available either electronically in *http://www.regulations.gov* or in hard copy at the Regulatory Development Section, Air Planning Branch, Air, Pesticides and Toxics Management Division, U.S. Environmental Protection Agency, Region 4, 61 Forsyth Street, SW., Atlanta, Georgia 30303–8960. EPA requests that if at all possible, you contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to schedule your inspection. The Regional Office's official hours of business are Monday through Friday, 8:30 to 4:30, excluding Federal holidays.

FOR FURTHER INFORMATION CONTACT: For information regarding the Georgia SIP, contact Ms. Twunjala Bradley, Regulatory Development Section, Air Planning Branch, Air, Pesticides and Toxics Management Division, U.S. Environmental Protection Agency, Region 4, 61 Forsyth Street, SW., Atlanta, Georgia 30303–8960. Ms. Bradley's telephone number is (404) 562–9352; e-mail address: *bradley.twunjala@epa.gov.* For information regarding the GHG Tailoring Rule and the $PM_{2.5}$ NAAQS PSD requirements, contact Ms. Heather Abrams, Air Permits Section, at the same address above. Ms. Abrams' telephone number is (404) 562–9185; e-mail address: *abrams.heather@epa.gov.*

SUPPLEMENTARY INFORMATION:

Table of Contents

I. What action is EPA proposing in today's Notice?

On September 30, 2010,[1] EPD submitted a draft revision to EPA for approval into the Georgia SIP to establish appropriate emission thresholds for determining which new or modified stationary sources become subject to Georgia's PSD permitting requirements for GHG emissions. Final approval of Georgia's September 30, 2010, SIP revision will put in place the GHG emission thresholds for PSD applicability set forth in EPA's Tailoring Rule, ensuring that smaller GHG sources emitting less than these thresholds will not be subject to permitting requirements when these requirements begin applying to GHGs on January 2, 2011. Additionally, Georgia's September 30, 2010, SIP revision incorporates Federal requirements into Georgia's SIP for PSD permitting related to the $PM_{2.5}$ NAAQS. Pursuant to section 110 of the CAA, EPA is proposing to approve these changes into the Georgia SIP.

Because this draft SIP revision is not yet State-effective, Georgia requested that EPA "parallel process" the SIP revision. Under this procedure, the EPA Regional Office works closely with the State while developing new or revised regulations. Generally, the State submits a copy of the proposed regulation or other revisions to EPA before conducting its public hearing. EPA reviews this proposed State action and prepares a notice of proposed rulemaking. EPA publishes this notice

[1] With respect to $PM_{2.5,}$ Georgia's September 30, 2010, SIP revision only addresses PSD requirements. The nonattainment NSR provisions for Georgia for the $PM_{2.5}$ NAAQS are still under development at the State level and are not due to EPA until May 16, 2011. Additionally, Georgia's submittal contains provisions at 391–3–1–.02(7)(a)(2)(iv)(I) and (II) of Georgia's PSD regulations that would render Georgia's regulation or a portion thereof automatically invalid in the wake of certain court decisions or other events. At this time, EPA is not proposing to approve this provision into the Georgia SIP.

of proposed rulemaking in the **Federal Register** and solicits public comment in approximately the same time frame during which the State is holding its public hearing. The State and EPA thus provide for public comment periods on both the State and the Federal actions in parallel.

After Georgia submits the formal State-effective SIP revision request (including a response to all public comments raised during the State's public participation process), EPA will prepare a final rulemaking notice for the SIP revision. If changes are made to the SIP revision after EPA's notice of proposed rulemaking, such changes must be acknowledged in EPA's final rulemaking action. If the changes are significant, then EPA may be obliged to re-propose the action. In addition, if the changes render the SIP revision not approvable, EPA's re-proposal of the action would be a disapproval of the revision.

In addition to changes to address PSD permitting requirements for GHGs and $PM_{2.5}$, Georgia's September 30, 2010, SIP revision also includes: (1) A provision that excludes facilities that produce ethanol through a natural fermentation process from the definition of "chemical process plants" in the major NSR source permitting program; and (2) a provision that incorporates by reference changes pursuant to EPA's Fugitive Emissions Rule, 73 FR 77882 (December 19, 2008).[2] In today's proposed rulemaking, EPA is not proposing to take action on Georgia's changes to its PSD regulations to exclude facilities that produce ethanol through a natural fermentation process from the definition of "chemical process plants" in the major NSR permitting program, nor is EPA proposing to take action on Georgia's changes to incorporate the provisions of the Fugitive Emission Rule.

II. What is the background for the action proposed by EPA in today's Notice regarding PSD permitting requirements for GHG-emitting sources?

Today's proposed action on the Georgia SIP primarily relates to EPA's "Prevention of Significant Deterioration and Title V Greenhouse Gas Tailoring Rule," Final Rule (the Tailoring Rule). 75 FR 31514. In the Tailoring Rule, EPA established appropriate GHG emission thresholds for determining the applicability of PSD requirements to GHG-emitting sources. These applicability thresholds were designed to ensure that smaller GHG sources will not be subject to GHG permitting requirements. While Georgia already has authority to issue PSD permits governing GHGs when PSD requirements begin applying to GHGs on January 2, 2011, Georgia needs to amend its SIP to incorporate the Tailoring Rule's applicability thresholds. Today's notice announces EPA's proposed approval of a revision to Georgia's SIP that would put these applicability thresholds in place.[3]

A. What are GHGs and their sources?

A detailed explanation of GHGs, climate change and the impact on health, society, and the environment is included in EPA's technical support document for EPA's GHG endangerment finding final rule (Document ID No. EPA–HQ–OAR–2009–0472–11292 at *http://www.regulations.gov).* The endangerment finding rulemaking is discussed later in this rulemaking. A summary of the nature and sources of GHGs is provided below.

GHGs trap the Earth's heat that would otherwise escape from the atmosphere into space and form the greenhouse effect that helps keep the Earth warm enough for life. GHGs are naturally present in the atmosphere and are also emitted by human activities. Human activities are intensifying the naturally occurring greenhouse effect by increasing the amount of GHGs in the atmosphere, which is changing the climate in a way that endangers human health, society, and the natural environment.

Some GHGs, such as carbon dioxide (CO_2), are emitted to the atmosphere through natural processes as well as human activities. Other gases, such as fluorinated gases, are created and emitted solely through human activities. The well-mixed GHGs of concern directly emitted by human activities include CO_2, methane (CH_4), nitrous oxide (N_2O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF_6), hereafter referred to collectively as "the six well-mixed GHG," or, simply, GHGs. Together these six well-mixed GHGs constitute the "air pollutant" upon which the GHG thresholds in EPA's Tailoring Rule are based. These six gases remain in the atmosphere for decades to centuries where they become well-mixed globally in the atmosphere. When they are emitted more quickly than natural processes can remove them from the atmosphere, their concentrations increase, thus increasing the greenhouse effect.

In the U.S., the combustion of fossil fuels (*e.g.,* coal, oil, gas) is the largest source of CO_2 emissions and accounts for 80 percent of the total GHG emissions by mass. Anthropogenic CO_2 emissions released from a variety of sources, including through the use of fossil fuel combustion and cement production from geologically stored carbon (*e.g.,* coal, oil, and natural gas) that is hundreds of millions of years old, as well as anthropogenic CO_2 emissions from land-use changes such as deforestation, perturb the atmospheric concentration of CO_2, and the distribution of carbon within different reservoirs readjusts. More than half of the energy-related emissions come from large stationary sources such as power plants, while about a third come from transportation. Of the six well-mixed GHGs, four (CO_2, CH_4, N_2O, and HFCs) are emitted by motor vehicles. In the U.S., industrial processes (such as the production of cement, steel, and aluminum), agriculture, forestry, other land use, and waste management are also important sources of GHGs.

Different GHGs have different heat-trapping capacities. The concept of Global Warming Potential (GWP) was developed to compare the heat-trapping capacity and atmospheric lifetime of one GHG to another. The definition of a GWP for a particular GHG is the ratio of heat trapped by one unit mass of the GHG to that of one unit mass of CO_2 over a specified time period. When quantities of the different GHGs are multiplied by their GWPs, the different GHGs can be summed and compared on a carbon dioxide equivalent (CO_2e) basis. For example, CH_4 has a GWP of 21, meaning each ton of CH_4 emissions would have 21 times as much impact on global warming over a 100-year time horizon as 1 ton of CO_2 emissions. Thus, on the basis of heat-trapping capability, 1 ton of CH_4 would equal 21 tons of CO_2e. The GWPs of the non-CO_2 GHG range from 21 (for CH_4) up to 23,900 (for SF_6). Aggregating all GHG on a CO_2e basis at the source level allows a facility

[2] On March 31, 2010, EPA stayed the Fugitive Emissions Rule (73 FR 77882) for 18 months to October 3, 2011, to allow the Agency time to propose, take comment and issue a final action regarding the inclusion of fugitive emissions in NSR applicability determinations. Therefore, the 40 CFR part 51 and part 52 administrative regulations that were amended by the Fugitive Emissions Rule are stayed through October 3, 2011.

[3] On September 2, 2010, EPA proposed a "SIP Call" that would require those States with SIPs that do not authorize PSD permitting for GHGs to submit a SIP revision providing such authority. 75 FR 53892. In a companion rulemaking, EPA proposed a Federal Implementation Plan (FIP) that would apply in any State that is unable to submit the required SIP revision by its deadline. 75 FR 53883 (September 2, 2010). Because Georgia's SIP already authorizes Georgia to regulate GHGs once GHGs become subject to PSD requirements on January 2, 2011, Georgia is not subject to the proposed SIP Call or FIP.

to evaluate its total GHG emissions contribution based on a single metric.

B. What are the general requirements of the PSD program?

1. Overview of the PSD Program

The PSD program is a preconstruction review and permitting program applicable to new major stationary sources and major modifications at existing stationary sources. The PSD program applies in areas that are designated "attainment" or "unclassifiable" for a national ambient air quality standard (NAAQS). The PSD program is contained in part C of title I of the CAA. The "nonattainment NSR" program applies in areas not in attainment of a NAAQS or in the Ozone Transport Region, and it is implemented under the requirements of part D of title I of the CAA. Collectively, EPA commonly refers to these two programs as the major NSR program. The governing EPA rules are contained in 40 CFR 51.165, 51.166, 52.21, 52.24, and part 51, Appendices S and W. There is no NAAQS for CO_2 or any of the other well-mixed GHGs, nor has EPA proposed any such NAAQS; therefore, unless and until EPA takes further such action, the nonattainment NSR program does not apply to GHGs.

The applicability of PSD to a particular source must be determined in advance of construction or modification and is pollutant-specific. The primary criterion in determining PSD applicability is whether the proposed project is sufficiently large (in terms of its emissions) to be a major stationary source or modification, both of which are described below. EPA has implemented these requirements in its regulations, which use somewhat different terminology than the CAA does, for determining PSD applicability.

a. Major Stationary Sources

Under PSD, a "major stationary source" is any source belonging to a specified list of 28 source categories that emits or has the potential to emit 100 tpy or more of any air pollutant subject to regulation under the CAA, or any other source type that emits or has the potential to emit such pollutants in amounts equal to or greater than 250 tpy. *See, e.g.,* 40 CFR 52.21(b)(1). We refer to these levels as the 100/250-tpy thresholds. A new source with a potential to emit (PTE) at or above the applicable "major stationary source threshold" is subject to major NSR. These limits originate from section 169 of the CAA, which applies PSD to any "major emitting facility" and defines the term to include any source that emits or has a PTE of 100 or 250 tpy, depending on the source category. Note that the major source definition incorporates the phrase "subject to regulation," which, as described later, will begin to include GHGs on January 2, 2011, under our interpretation of that phrase as discussed in the recent memorandum entitled, "EPA's Interpretation of Regulations that Determine Pollutants Covered by Federal Prevention of Significant Deterioration (PSD) Permit Program." 75 FR 17004 (April 2, 2010).

b. Major Modifications

PSD also applies to existing sources that undertake a "major modification," which occurs when: (1) There is a physical change in, or change in the method of operation of, a "major stationary source;" (2) the change results in a "significant" emissions increase of a pollutant subject to regulation (equal to or above the significance level that EPA has set for the pollutant in 40 CFR 52.21(b)(23)); and (3) there is a "significant net emissions increase" of a pollutant subject to regulation that is equal to or above the significance level (defined in 40 CFR 52.21(b)(23)). Significance levels, which EPA has promulgated for criteria pollutants and certain other pollutants, represent a de minimis contribution to air quality problems. When EPA has not set a significance level for a regulated NSR pollutant, PSD applies to an increase of the pollutant in any amount (that is, in effect, the significance level is treated as zero).

2. General Requirements for PSD

This section provides a very brief summary of the main requirements of the PSD program. One principal requirement is that a new major source or major modification must apply best available control technology (BACT), which is determined on a case-by-case basis taking into account, among other factors, the cost effectiveness of the control and energy and environmental impacts. EPA has developed a "top-down" approach for BACT review, which involves a decision process that includes identification of all available control technologies, elimination of technically infeasible options, ranking of remaining options by control and cost effectiveness, and then selection of BACT. Under PSD, once a source is determined to be major for any regulated NSR pollutant, a BACT review is performed for each attainment pollutant that exceeds its PSD significance level as part of new construction or for modification projects at the source, where there is a significant increase and a significant net emissions increase of such pollutant.[4]

In addition to performing BACT, the source must analyze impacts on ambient air quality to assure that its emissions do not cause or contribute to violation of any NAAQS or PSD increments and must analyze impacts on soil, vegetation, and visibility. In addition, sources or modifications that would impact Class I areas (*e.g.,* national parks) may be subject to additional requirements to protect air quality related values (AQRVs) that have been identified for such areas. Under PSD, if a source's proposed project impacts a Class I area, the Federal Land Manager is notified and is responsible for evaluating a source's projected impact on the AQRVs and recommending either approval or disapproval of the source's permit application based on anticipated impacts.

Because there are no NAAQS or PSD increments established for GHGs, the requirement to demonstrate that a source does not cause or contribute to a violation of the NAAQS is not applicable to GHGs. Furthermore, consistent with EPA's statement in the Tailoring Rule, EPA believes it is not necessary for applicants or permitting authorities to assess impacts from GHGs in the context of the additional impacts analysis or Class I area provisions of the PSD regulations for the following policy reasons. Although it is clear that GHG emissions contribute to global warming and other climate changes that result in impacts on the environment, including impacts on Class I areas and soils and vegetation, due to the global scope of the problem, climate change modeling and evaluations of risks and impacts of GHG emissions typically are conducted for emission changes orders of magnitude larger than the emissions from individual projects that might be analyzed in PSD permit reviews. Quantifying the exact impacts attributable to a specific GHG source obtaining a permit in specific places and points would not be possible with current climate change modeling. Given these considerations, GHG emissions would serve as the more appropriate and credible proxy for assessing the impact of a given facility. Thus, EPA believes that the most practical way to address the considerations reflected in the Class I area and additional impacts

[4] EPA notes that the PSD program has historically operated in this fashion for all pollutants—when new sources or modifications are "major," PSD applies to all pollutants that are emitted in significant quantities from the source or project. This rule does not alter that for sources or modifications that are major due to their GHG emissions.

analysis is to focus on reducing GHG emissions to the maximum extent. In light of these analytical challenges, compliance with the BACT analysis is the best technique that can be employed at present to satisfy the additional impacts analysis and Class I area requirements of the rules related to GHGs.

However, if PSD is triggered for a GHG-emitting source, all regulated NSR pollutants that the source emits in significant amounts would be subject to PSD requirements. Therefore, if a facility triggers review for regulated NSR pollutants that are non-GHG pollutants for which there are established NAAQS or increments, the air quality, additional impacts, and Class I requirements must be satisfied for those pollutants and the applicant and permitting authority are required to conduct the necessary analysis.

Pursuant to existing PSD requirements, the permitting authority must provide notice of its preliminary decision on a source's application for a PSD permit and must provide an opportunity for comment by the public, industry, and other interested persons. After considering and responding to comments, the permitting authority must issue a final determination on the construction permit. Usually NSR permits are issued by a State or local air pollution control agency that has its own authority to issue PSD permits under a permit program that has been approved by EPA for inclusion in its SIP. In some areas, EPA has delegated its authority to issue PSD permits under Federal regulations to the State or local agency. In other areas, EPA issues the permits under its own authority.

C. What are the CAA requirements to include the PSD program in the SIP?

The CAA contemplates that the PSD program be implemented in the first instance by the States and requires that States include PSD requirements in their SIPs. CAA section 110(a)(2)(C) requires that—

> Each implementation plan * * * shall * * * include a program to provide for * * * regulation of the modification and construction of any stationary source within the areas covered by the plan as necessary to assure that national ambient air quality standards are achieved, including a permit program as required in part [C] * * * of this subchapter.

CAA section 110(a)(2)(J) requires that—

> Each implementation plan * * * shall * * * meet the applicable requirements of * * * part C of this subchapter (relating to significant deterioration of air quality and visibility protection).

CAA section 161 provides that—

> [E]ach applicable implementation plan shall contain emission limitations and such other measures as may be necessary, as determined under regulations promulgated under this part [C], to prevent significant deterioration of air quality in each region * * * designated * * * as attainment or unclassifiable.

These provisions, read in conjunction with the PSD applicability provisions as well as other provisions such as the BACT provision under CAA Section 165(a)(4), mandate that SIPs include PSD programs that are applicable to, among other things, any air pollutant that is subject to regulation. As discussed below, this includes GHGs on and after January 2, 2011.[5]

A number of States do not have PSD programs approved into their SIPs. In those States, EPA's regulations at 40 CFR 52.21 govern, and either EPA or the State as EPA's delegatee acts as the permitting authority. However, most States have PSD programs that have been approved into their SIPs, and these States implement their PSD programs and act as the permitting authority. Georgia has a SIP-approved PSD program.

D. What actions has EPA taken concerning PSD requirements for GHG-emitting sources?

1. What are the Endangerment Finding, the Light Duty Vehicle Rule, and the Johnson Memo Reconsideration?

By notice dated December 15, 2009, and pursuant to CAA section 202(a), EPA issued two findings regarding GHGs that are commonly referred to as the "Endangerment Finding" and the "Cause or Contribute Finding." "Endangerment and Cause or Contribute Findings for Greenhouse Gases Under Section 202(a) of the Clean Air Act," 74 FR 66496. In the Endangerment Finding, the Administrator found that six long-lived and directly emitted GHGs—CO_2, CH_4, N_2O, HFCs, PFCs, and SF_6—may reasonably be anticipated to endanger public health and welfare. In the Cause or Contribute Finding, the Administrator "defin[ed] the air pollutant as the aggregate group of the same six * * * greenhouse gases," 74 FR at 66536, and found that the combined emissions of this air pollutant from new motor vehicles and new motor vehicle engines contribute to the GHG air pollution that endangers public health and welfare.

By notice dated May 7, 2010, EPA published what is commonly referred to as the "Light-Duty Vehicle Rule" (LDVR), which for the first time established Federal controls on GHGs emitted from light-duty vehicles. "Light-Duty Vehicle Greenhouse Gas Emission Standards and Corporate Average Fuel Economy Standards; Final Rule." 75 FR 25324. In its applicability provisions, the LDVR specifies that it "contains standards and other regulations applicable to the emission * * * of six greenhouse gases," including CO_2, CH_4, N_2O, HFCs, PFCs, and SF_6. 75 FR at 25686 (40 CFR 86.1818–12(a)).

On December 18, 2008, EPA issued a memorandum, "EPA's Interpretation of Regulations that Determine Pollutants Covered by Federal Prevention of Significant Deterioration (PSD) Permit Program" (known as the "Johnson Memo" or the "PSD Interpretive Memo," and referred to in this preamble as the "Interpretive Memo"), that set forth EPA's interpretation regarding which EPA and State actions, with respect to a previously unregulated pollutant, cause that pollutant to become "subject to regulation" under the Act. Whether a pollutant is "subject to regulation" is important for the purposes of determining whether it is covered under the Federal PSD permitting program. The Interpretive Memo established that a pollutant is "subject to regulation" only if it is subject to either a provision in the CAA or regulation adopted by EPA under the CAA that requires actual control of emissions of that pollutant (referred to as the "actual control interpretation"). On February 17, 2009, EPA granted a petition for reconsideration on the Interpretive Memo and announced its intent to conduct a rulemaking to allow for public comment on the issues raised in the memorandum and on related issues. EPA also clarified that the Interpretive Memo would remain in effect pending reconsideration.

On April 2, 2010, EPA published a notice conveying its decision to continue applying (with one limited refinement) the Interpretive Memo's interpretation of "subject to regulation." "Reconsideration of Interpretation of Regulations that Determine Pollutants Covered by Clean Air Act Permitting Programs," 75 FR 17004. EPA concluded that the "actual control interpretation" is the most appropriate interpretation to apply given the policy implications. However, EPA refined the Agency's interpretation in one respect: EPA

[5] In the Tailoring Rule, EPA noted that commenters argued, with some variations, that the PSD provisions applied only to NAAQS pollutants, and not GHG, and EPA responded that the PSD provisions apply to all pollutants subject to regulation, including GHG. *See* 75 FR at 31560–62. EPA maintains its position that the PSD provisions apply to all pollutants subject to regulation, and the Agency incorporates by reference the discussion of this issue in the Tailoring Rule.

established that PSD permitting requirements apply to a newly regulated pollutant at the time a regulatory requirement to control emissions of that pollutant "takes effect" (rather than upon promulgation or the legal effective date of the regulation containing such a requirement). In addition, based on the anticipated promulgation of the LDVR, EPA stated that the GHG requirements of the vehicle rule would take effect on January 2, 2011, because that is the earliest date that a 2012 model year vehicle may be introduced into commerce. In other words, the compliance obligation under the LDVR does not occur until a manufacturer may introduce into commerce vehicles that are required to comply with GHG standards, which will begin with model year 2012 and will not occur before January 2, 2011.

2. What is EPA's Tailoring Rule?

On June 3, 2010 (effective August 2, 2010), EPA promulgated a final rulemaking, the Tailoring Rule, for the purpose of relieving overwhelming permitting burdens that would, in the absence of the rule, fall on permitting authorities and sources. 75 FR 31514. EPA accomplished this by tailoring the applicability criteria that determine which GHG emission sources become subject to the PSD program [6] of the CAA. In particular, EPA established in the Tailoring Rule a phase-in approach for PSD applicability and established the first two steps of the phase-in for the largest GHG-emitters. Additionally, EPA committed to certain follow-up actions regarding future steps beyond the first two, discussed in more detail later in this notice.

For the first step of the Tailoring Rule, which will begin on January 2, 2011, PSD requirements will apply to major stationary source GHG emissions only if the sources are subject to PSD anyway due to their emissions of non-GHG pollutants. Therefore, in the first step, EPA will not require sources or modifications to evaluate whether they are subject to PSD requirements solely on account of their GHG emissions. Specifically, for PSD, Step 1 requires that as of January 2, 2011, the applicable requirements of PSD, most notably, the BACT requirement, will apply to projects that increase net GHG emissions by at least 75,000 tpy CO_2e, but only if the project also significantly increases emissions of at least one non-GHG pollutant.

The second step of the Tailoring Rule, beginning on July 1, 2011, will phase in additional large sources of GHG emissions. New sources that emit, or have the potential to emit, at least 100,000 tpy CO_2e will become subject to the PSD requirements. In addition, sources that emit or have the potential to emit at least 100,000 tpy CO_2e and that undertake a modification that increases net GHG emissions by at least 75,000 tpy CO_2e will also be subject to PSD requirements. For both steps, EPA notes that if sources or modifications exceed these CO_2e-adjusted GHG triggers, they are not covered by permitting requirements unless their GHG emissions also exceed the corresponding mass-based triggers in tpy.

EPA believes that the costs to the sources and the administrative burdens to the permitting authorities of PSD permitting will be manageable at the levels in these initial two steps and that it would be administratively infeasible to subject additional sources to PSD requirements at those times. However, EPA also intends to issue a supplemental notice of proposed rulemaking in 2011, in which the Agency will propose or solicit comment on a third step of the phase-in that would include more sources, beginning on July 1, 2013. In the Tailoring Rule, EPA established an enforceable commitment that the Agency will complete this rulemaking by July 1, 2012, which will allow for one year's notice before Step 3 would take effect.

In addition, EPA committed to explore streamlining techniques that may well make the permitting programs much more efficient to administer for GHG, and that therefore may allow their expansion to smaller sources. EPA expects that the initial streamlining techniques will take several years to develop and implement.

In the Tailoring Rule, EPA also included a provision that no source with emissions below 50,000 tpy CO_2e and no modification resulting in net GHG increases of less than 50,000 tpy CO_2e will be subject to PSD permitting before at least 6 years (*i.e.,* April 30, 2016). This is because EPA has concluded that at the present time, the administrative burdens that would accompany permitting sources below this level would be so great that even with the streamlining actions that EPA may be able to develop and implement in the next several years, and even with the increases in permitting resources that EPA can reasonably expect the permitting authorities to acquire, it would be impossible to administer the permit programs for these sources until at least 2016.

As EPA explained in the Tailoring Rule, the threshold limitations are necessary because without them PSD would apply to all stationary sources that emit or have the potential to emit more than 100 or 250 tons of GHG per year beginning on January 2, 2011. This is the date when EPA's recently promulgated LDVR takes effect, imposing control requirements for the first time on CO_2 and other GHGs. If this January 2, 2011, date were to pass without the Tailoring Rule being in effect, PSD requirements would apply to GHG emissions at the 100/250 tpy applicability levels provided under a literal reading of the CAA as of that date. From that point forward, a source owner proposing to construct any new major source that emits at or higher than the applicability levels (and which therefore may be referred to as a "major" source) or modify any existing major source in a way that would increase GHG emissions would need to obtain a permit under the PSD program that addresses these emissions before construction or modification could begin.

Under these circumstances, many small sources would be burdened by the costs of the individualized PSD control technology requirements and permit applications that the PSD provisions, absent streamlining, require. Additionally, State and local permitting authorities would be burdened by the extraordinary number of these permit applications, which are orders of magnitude greater than the current inventory of permits and would vastly exceed the current administrative resources of the permitting authorities. Permit gridlock would result since the permitting authorities would likely be able to issue only a tiny fraction of the permits requested.

The Tailoring Rule's thresholds are based on CO_2e for the aggregate sum of six GHGs that constitute the pollutant that will be subject to regulation, which we refer to as GHG.[7] These gases are CO_2, CH_4, N_2O, HFCs, PFCs, and SF_6. Thus, in EPA's Tailoring Rule, EPA provided that PSD applicability is based on the quantity that results when the mass emissions of each of these gases is multiplied by the GWP of that gas, and then summed for all six gases. However, EPA further provided that in order for a source's GHG emissions to trigger PSD requirements, the quantity of the GHG

[6] The Tailoring Rule also applies to the title V program, which requires operating permits for existing sources. However, today's action does not affect Georgia's title V program.

[7] The term "greenhouse gases" is commonly used to refer generally to gases that have heat-trapping properties. However, in this notice, unless noted otherwise, we use it to refer specifically to the pollutant regulated in the LDVR.

emissions must equal or exceed both the applicability thresholds established in the Tailoring Rule on a CO_2e basis and the statutory thresholds of 100 or 250 tpy on a mass basis.[8] Similarly, in order for a source to be subject to the PSD modification requirements, the source's net GHG emissions increase must exceed the applicable significance level on a CO_2e basis and must also result in a net mass increase of the constituent gases combined.

In the Tailoring Rule, EPA adopted regulatory language codifying the phase-in approach. As explained in that rulemaking, many State, local and Tribal area programs will likely be able to immediately implement the approach without rule or statutory changes by, for example, interpreting the term "subject to regulation" that is part of the applicability provisions for PSD permitting. EPA has requested permitting authorities to confirm that they will follow this implementation approach for their programs, and if they cannot, then EPA has requested that they notify the Agency so that we can take appropriate follow-up action to narrow Federal approval of their programs before GHGs become subject to PSD permitting on January 2, 2011.[9] On August 2, 2010, Georgia provided a letter to EPA confirming that the State has the authority to issue PSD permits governing GHG emissions as of January 2, 2011, but explaining that Georgia needs to amend its SIP to enable it to implement the Tailoring Rule thresholds. *See* the docket for this proposed rulemaking for a copy of Georgia's letter.

3. What is the GHG SIP Call?

By **Federal Register** notice dated September 2, 2010, EPA proposed the GHG SIP Call. In that action, along with the companion GHG FIP rulemaking published at the same time, EPA took steps to ensure that in the 13 States that do not appear to have authority to issue PSD permits to GHG-emitting sources at present, either the State or EPA will have the authority to issue such permits by January 2, 2011. EPA explained that although for most States either the State or EPA is already authorized to issue PSD permits for GHG-emitting sources as of that date, our preliminary information shows that these 13 States have EPA-approved PSD programs that do not appear to include GHG-emitting sources and therefore do not appear to authorize these States to issue PSD permits to such sources. Therefore, EPA proposed to find that these 13 States' SIPs are substantially inadequate to comply with CAA requirements and, accordingly, proposed to issue a SIP Call to require a SIP revision that applies their SIP PSD programs to GHG-emitting sources. In the companion GHG FIP rulemaking, EPA proposed a FIP that would give EPA authority to apply EPA's PSD program to GHG-emitting sources in any State that is unable to submit a corrective SIP revision by its deadline. Georgia was not one of the States for which EPA proposed a SIP Call.

III. What is the relationship between today's proposed action and EPA's proposed GHG SIP Call and GHG FIP?

As noted above, by notice dated September 2, 2010, EPA proposed the GHG SIP Call. At the same time, EPA proposed a FIP to apply in any State that is unable to submit, by its deadline, a SIP revision to ensure that the State has authority to issue PSD permits to GHG-emitting sources.[10] As discussed in Section IV of this rulemaking, Georgia interprets its current PSD regulations as providing it with the authority to regulate GHGs, and as such, Georgia is not included on the list of areas for the proposed SIP call. Additionally, Georgia would not be subject to the FIP to implement GHG for PSD applicability. Georgia's September 30, 2010, proposed SIP revision (the subject of this rulemaking) merely modifies Georgia's SIP to establish appropriate thresholds for determining which stationary sources and modification projects become subject to permitting requirements for GHG emissions under the PSD program of the CAA.

IV. What is the background for the action proposed by EPA in today's Notice regarding the PSD Permitting Requirements for the $PM_{2.5}$ NAAQS?

Today's proposed action on the Georgia SIP also relates to EPA's "Implementation of the New Source Review (NSR) Program for Particulate Matter Less Than 2.5 Micrometers ($PM_{2.5}$)" Final Rule (the NSR $PM_{2.5}$ Rule). 73 FR 28321 (May 16, 2008). In the NSR $PM_{2.5}$ Rule, EPA finalized regulations to implement the NSR program for fine particulate matter. As a result of EPA's final NSR $PM_{2.5}$ Rule, States are required to provide SIP submissions no later than May 16, 2011, to address those requirements for both the PSD and nonattainment NSR programs. Georgia's September 30, 2010, SIP revision addresses the PSD requirements for the $PM_{2.5}$ NAAQS. Georgia will provide a subsequent SIP revision to address the nonattainment NSR requirements for the $PM_{2.5}$ NAAQS. More detail on the NSR $PM_{2.5}$ Rule can be found in EPA's May 16, 2008, final rule and is summarized below.

A. Fine Particulate Matter and the NAAQS for $PM_{2.5}$

Fine particles in the atmosphere are made up of a complex mixture of components. Common constituents include sulfate (SO_4); nitrate (NO_3); ammonium; elemental carbon; a great variety of organic compounds; and inorganic material (including metals, dust, sea salt, and other trace elements) generally referred to as "crustal" material, although it may contain material from other sources. Airborne particulate matter (PM) with a nominal aerodynamic diameter of 2.5 micrometers or less (a micrometer is one-millionth of a meter, and 2.5 micrometers is less than one-seventh the average width of a human hair) are considered to be "fine particles" and are also known as $PM_{2.5}$. "Primary" particles are emitted directly into the air as a solid or liquid particle (*e.g.,* elemental carbon from diesel engines or fire activities, or condensable organic particles from gasoline engines). "Secondary" particles (*e.g.,* sulfate and nitrate) form in the atmosphere as a result of various chemical reactions.

On July 18, 1997, EPA revised the NAAQS for PM to add new standards for fine particles, using $PM_{2.5}$ as the indicator. (Previously EPA used PM_{10} (inhalable particles smaller than, or equal to 10 micrometers in diameter) as the indicator for the PM NAAQS.) EPA established health-based (primary) annual and 24-hour standards for $PM_{2.5}$,

[8] The relevant thresholds are 100 tpy for title V, and 250 tpy for PSD, except for 28 categories listed in EPA regulations for which the PSD threshold is 100 tpy.

[9] Narrowing EPA's approval will ensure that for Federal purposes, sources with GHG emissions that are less than the Tailoring Rule's emission thresholds will not be obligated under Federal law to obtain PSD permits during the gap between when GHG PSD requirements go into effect on January 2, 2011 and when either (1) EPA approves a SIP revision adopting EPA's tailoring approach, or (2) if a State opts to regulate smaller GHG-emitting sources, the State demonstrates to EPA that it has adequate resources to handle permitting for such sources. EPA expects to finalize the narrowing action prior to the January 2, 2011 deadline with respect to those States for which EPA will not have approved the Tailoring Rule thresholds in their SIPs by that time.

[10] As explained in the proposed GHG SIP Call (75 FR 53892, 53896), EPA intends to finalize its finding of substantial inadequacy and the SIP call for the 13 listed States by December 1, 2010. EPA requested that the States for which EPA is proposing a SIP call identify the deadline—between 3 weeks and 12 months from the date of signature of the final SIP Call—that they would accept for submitting their corrective SIP revision.

setting an annual standard at a level of 15 micrograms per cubic meter (μg/m^3) and a 24-hour standard at a level of 65 μg/m^3. 62 FR 38652. At the time the 1997 primary standards were established, EPA also established welfare-based (secondary) standards identical to the primary standards. The secondary standards are designed to protect against major environmental effects of $PM_{2.5}$, such as visibility impairment, soiling, and materials damage. On October 17, 2006, EPA revised the primary and secondary NAAQS for $PM_{2.5}$. In that rulemaking, EPA reduced the 24-hour NAAQS for $PM_{2.5}$ to 35 μg/m^3 and retained the existing annual $PM_{2.5}$ NAAQS of 15 μg/m^3. 71 FR 61144.

B. Implementation of NSR for the $PM_{2.5}$ NAAQS

After EPA promulgated the NAAQS for $PM_{2.5}$ in 1997, the Agency issued a guidance document entitled "Interim Implementation of New Source Review Requirements for $PM_{2.5}$." John S. Seitz, EPA, October 23, 1997 (the "Seitz memo").[11] The Seitz memo was designed to help States implement PSD requirements pertaining to the new $PM_{2.5}$ NAAQS in light of known technical difficulties posed by $PM_{2.5}$, including the lack of necessary tools to calculate the emissions of $PM_{2.5}$ and related precursors, the lack of adequate modeling techniques to project ambient impacts, and the lack of $PM_{2.5}$ monitoring sites. Specifically, the Seitz memo authorized sources to use implementation of a PM_{10} program as a surrogate for meeting $PM_{2.5}$ PSD requirements until EPA resolved these technical difficulties.

On May 16, 2008, EPA finalized a rule to implement the 1997 $PM_{2.5}$ NAAQS, including changes to the NSR program. *See* 73 FR 28321. The 2008 NSR $PM_{2.5}$ Rule revised the NSR program requirements to establish the framework for implementing preconstruction permit review for the $PM_{2.5}$ NAAQS in both attainment and nonattainment areas. In summary, the NSR $PM_{2.5}$ Rule: (1) Requires NSR permits to address directly emitted $PM_{2.5}$ and precursor pollutants (2) establishes significant emission rates for direct $PM_{2.5}$ and precursor pollutants; (3) allows interpollutant trading under the $PM_{2.5}$ nonattainment NSR program; and (4) requires States to address condensable PM in establishing enforceable emission limits. With two exceptions, the 2008 NSR $PM_{2.5}$ Rule requires that major stationary sources seeking permits must begin directly satisfying the $PM_{2.5}$ requirements as of the effective date of the rule, rather than relying on PM_{10} as a surrogate. The first exception is a "grandfathering" provision in the Federal PSD program at 40 CFR 52.21(i)(1)(xi). This grandfathering provision applied to sources that had applied for, but had not yet received, a final and effective PSD permit before the July 15, 2008 effective date of the May 2008 final rule. The second exception was that States with SIP-approved PSD programs could continue to implement the Seitz Memo's PM_{10} Surrogate Policy for up to three years (until May 2011) or until the individual revised State PSD programs for $PM_{2.5}$ are approved by EPA, whichever comes first. For additional information on the NSR $PM_{2.5}$ Rule, *see* 73 FR 28321.

On February 11, 2010, EPA proposed to repeal the grandfathering provision for $PM_{2.5}$ contained in the Federal PSD program at 40 CFR 52.21(i)(1)(xi), and to end early the PM_{10} Surrogate Policy applicable in States that have a SIP-approved PSD program. 75 FR 6827. In support of this proposal, EPA explained that the $PM_{2.5}$ implementation issues that led to the adoption of the PM_{10} Surrogate Policy in 1997 have been largely resolved to a degree sufficient for sources and permitting authorities to conduct meaningful permit-related $PM_{2.5}$ analyses. EPA has not yet taken final action on this proposal.[12]

Georgia's September 30, 2010, submittal addresses the PSD requirements related to EPA's May 16, 2008, NSR $PM_{2.5}$ Rule. Though EPA has not finalized a repeal of the $PM_{2.5}$ grandfathering provision at 40 CFR 52.21(i)(1)(xi), Georgia elected not to include this provision in its SIP submittal.

V. What is EPA's analysis of Georgia's SIP revision?

On September 30, 2010, EPD provided a revision to Georgia's SIP to EPA for parallel processing and eventual approval. The proposed change pertaining to PSD permitting for GHGs is necessary because without it PSD requirements would apply for GHGs, as of January 2, 2011, at the 100- or 250-tpy levels provided under the CAA. This would greatly increase the number of required permits, imposing undue costs on small sources; which would overwhelm Georgia's permitting resources and severely impair the function of the program. The proposed change pertaining to PSD permitting for $PM_{2.5}$ is necessary to comply with Federal requirements. More detail regarding EPA's analysis of the proposed changes to Georgia's SIP (as provided in the September 30, 2010, submittal) is provided below.

A. Analysis Regarding Georgia's Changes To Incorporate the Tailoring Rule

The State of Georgia's September 30, 2010, proposed SIP revision establishes thresholds for determining which stationary sources and modification projects become subject to permitting requirements for GHG emissions under Georgia's PSD program. Specifically, Georgia's September 30, 2010, proposed SIP revision incorporates by reference the Federal Tailoring Rule provisions at 40 CFR 52.21 (as amended June 3, 2010, and effective August 2, 2010), into the Georgia SIP (Georgia's Regulation 391–3–1–.02(7)—*Prevention of Significant Deterioration of Air Quality)*[13] to address the thresholds for GHG permitting applicability.

Georgia is currently a SIP-approved State for the PSD program, and has incorporated by reference EPA's 2002 NSR reform revisions for PSD at 40 CFR 52.21 into its SIP.[14] The State has informed EPA that it interprets SIP Rule 391–3–1-.02(7), which includes the preconstruction review program required by Part C of title I of the CAA, as providing it with authority to issue

[11] EPA also issued a guidance document entitled "Implementation of New Source Review Requirements in PM–2.5 Nonattainment Areas" (the "2005 $PM_{2.5}$ Nonattainment NSR Guidance"), on April 5, 2005, the date that EPA's $PM_{2.5}$ nonattainment area designations became effective. This memorandum provides guidance on the implementation of the nonattainment major NSR provisions in $PM_{2.5}$ nonattainment areas in the interim period between the effective date of the $PM_{2.5}$ nonattainment area designations (April 5, 2005) and EPA's promulgation of final $PM_{2.5}$ nonattainment NSR regulations. Besides re-affirming the continuation of the PM_{10} Surrogate Policy for $PM_{2.5}$ attainment areas set forth in the Seitz memo, the 2005 $PM_{2.5}$ Nonattainment NSR Guidance recommended that until EPA promulgates the $PM_{2.5}$ major NSR regulations, States should use a PM_{10} nonattainment major NSR program as a surrogate to address the requirements of nonattainment major NSR for the $PM_{2.5}$ NAAQS. As mentioned earlier in this rulemaking, Georgia's September 30, 2010, SIP revision only relates to the PSD provisions for the $PM_{2.5}$ standard.

[12] Additional information on this issue can also be found in an August 12, 2009, final order on a title V petition describing the use of PM_{10} as a surrogate for $PM_{2.5}$. In the Matter of *Louisville Gas & Electric Company,* Petition No. IV–2008–3, Order on Petition (August 12, 2009).

[13] Georgia's submittal also relates to title V provisions which are not included in the SIP. As such, EPA is not proposing to take action to approve Georgia's update to their title V regulations in this rulemaking.

[14] On September 4, 2008, EPA proposed to approve Georgia's submittal related to the 2002 NSR reform rules. *See* 73 FR 51606. EPA considered the comments received on the September 4, 2008, proposal, and has addressed the comments in a final rulemaking that was signed on November 12, 2010.

PSD permits governing GHGs. Georgia's current PSD program incorporates by reference the Federal requirements, found at 40 CFR 52.21 (adopted prior to the promulgation of EPA's Tailoring Rule), into the State's major source PSD program (which applies to major stationary sources having the potential to emit at least 100-tpy or 250-tpy or more of a regulated NSR pollutant, depending on the type of source or modifications constructing in areas designated attainment or unclassifiable with respect to the NAAQS).

This current SIP revision to Georgia's Regulation 391–3–1-.02(7) (the subject of this proposed rulemaking) incorporates by reference the provisions at 40 CFR 52.21 as amended by the promulgation of the Tailoring Rule. Specifically, Georgia's September 30, 2010 revision updates its existing incorporation by reference of the Federal NSR program to include the relevant Federal Tailoring Rule provisions set forth at 40 CFR 52.21. EPA has preliminarily determined that Georgia's proposed SIP revision is consistent with the Tailoring Rule. Furthermore, EPA has preliminarily determined that this revision to Georgia's SIP is consistent with section 110 of the CAA. *See, e.g.,* Tailoring Rule, 75 FR at 31561.

B. Analysis Regarding Georgia's Changes To Incorporate the NSR $PM_{2.5}$ Requirements for PSD

Georgia's Regulation 391–3–1-.02(7) (the subject of this proposed rulemaking) also incorporates by reference the provisions at 40 CFR 52.21 as amended by the promulgation of the NSR $PM_{2.5}$ Rule for PSD. Specifically, Georgia's September 30, 2010, revision updates its existing incorporation by reference of the Federal NSR program to include the relevant Federal NSR $PM_{2.5}$ Rule provisions for PSD set forth at 40 CFR 52.21. However, in light of EPA's proposed rulemaking to repeal the $PM_{2.5}$ "grandfathering" provision, as noted in section IV.B. above, Georgia's revision excludes adoption of the relevant Federal rule provision, 40 CFR 52.21(i)(1)(ix). EPA has preliminarily determined that Georgia's proposed SIP revision is consistent with the NSR $PM_{2.5}$ Rule for PSD. Furthermore, EPA has preliminarily determined that this revision to Georgia's SIP is consistent with section 110 of the CAA.

VI. Proposed Action

EPA is proposing to approve Georgia's September 30, 2010, SIP revision, relating to PSD requirements for GHG-emitting sources and for the $PM_{2.5}$ NAAQS. Specifically, Georgia's September 30, 2010, proposed SIP revision establishes appropriate emissions thresholds for determining PSD applicability with respect to new and modified GHG-emitting sources in accordance with EPA's Tailoring Rule, and incorporates Federal requirements related to PSD for the $PM_{2.5}$ NAAQS. EPA has made the preliminary determination that this SIP revision is approvable because it is in accordance with the CAA and EPA regulations regarding PSD permitting for GHGs and for the $PM_{2.5}$ NAAQS.

VII. Statutory and Executive Order Reviews

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the Act and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve State choices, provided that they meet the criteria of the CAA. Accordingly, this proposed action merely approves the State's law as meeting Federal requirements and does not impose additional requirements beyond those imposed by the State's law. For that reason, this proposed action:

- Is not a "significant regulatory action" subject to review by the Office of Management and Budget under Executive Order 12866 (58 FR 51735, October 4, 1993);
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- Does not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
- Is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA; and
- Does not provide EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, this proposed rule does not have Tribal implications as specified by Executive Order 13175 (65 FR 67249, November 9, 2000), because the SIP is not approved to apply in Indian country located in the State, and EPA notes that it will not impose substantial direct costs on Tribal governments or preempt Tribal law.

Approval and Promulgation of Air Quality Implementation Plans; Ohio; Ohio Portion of the Cincinnati-Hamilton Area; 8-Hour Ozone Maintenance Plan

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: EPA is proposing to approve a revision to the maintenance plan for the Ohio portion of the Cincinnati-Hamilton, OH–KY–IN 8-hour ozone area. The Cincinnati-Hamilton area includes Butler, Clermont, Clinton, Hamilton, and Warren Counties in Ohio, Lawrenceburg Township in Dearborn County, Indiana, and Boone, Campbell, and Kenton Counties in Kentucky. The Ohio Environmental Protection Agency (Ohio EPA) submitted a maintenance plan revision on July 6, 2010. The submittal contained revisions to 2015 and 2020 NO_X point source emissions projections for Butler County to reflect modifications at a major source that will occur during the maintenance period.

DATES: Comments must be received on or before December 29, 2010.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R05–

OAR–2010–0656, by one of the following methods:

1. *http://www.regulations.gov:* Follow the online instructions for submitting comments.
2. *E-mail: mooney.john@epa.gov.*
3. *Fax:* (312) 692–2551.
4. *Mail:* John M. Mooney, Chief, Attainment Planning and Maintenance Section, Air Programs Branch (AR–18J), U.S. Environmental Protection Agency, 77 West Jackson Boulevard, Chicago, Illinois 60604.
5. *Hand Delivery:* John M. Mooney, Chief, Attainment Planning and Maintenance Section, Air Programs Branch (AR–18J), U.S. Environmental Protection Agency, 77 West Jackson Boulevard, Chicago, Illinois 60604. Such deliveries are only accepted during the Regional Office normal hours of operation, and special arrangements should be made for deliveries of boxed information. The Regional Office official hours of business are Monday through Friday, 8:30 a.m. to 4:30 p.m., excluding Federal holidays.

Please see the direct final rule which is located in the Rules section of this **Federal Register** for detailed instructions on how to submit comments.

FOR FURTHER INFORMATION CONTACT: Kathleen D'Agostino, Environmental Engineer, Attainment Planning and Maintenance Section, Air Programs Branch (AR–18J), Environmental Protection Agency, Region 5, 77 West Jackson Boulevard, Chicago, Illinois 60604, (312) 886–1767, *dagostino.kathleen@epa.gov.*

SUPPLEMENTARY INFORMATION: In the Final Rules section of this **Federal Register**, EPA is approving the maintenance plan revision as a direct final rule without prior proposal because the Agency views this as a noncontroversial submittal and anticipates no adverse comments. A detailed rationale for the approval is set forth in the direct final rule. If no adverse comments are received in response to this rule, no further activity is contemplated. If EPA receives adverse comments, the direct final rule will be withdrawn and all public comments received will be addressed in a subsequent final rule based on this proposed rule. EPA will not institute a second comment period. Any parties interested in commenting on this action should do so at this time. Please note that if EPA receives adverse comment on an amendment, paragraph, or section of this rule and if that provision may be severed from the remainder of the rule, EPA may adopt as final those provisions of the rule that are not the subject of an adverse comment. For additional information, see the direct final rule which is located in the Rules section of this **Federal Register**.

Dated: November 15, 2010.

Approval and Promulgation of Air Quality Implementation Plans; Indiana; Clean Air Interstate Rule

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: EPA is proposing to approve a request submitted by the Indiana Department of Environmental Management (IDEM) on June 29, 2009, to revise the Indiana State Implementation Plan (SIP) under the Clean Air Act (CAA). The State has submitted amendments to the Indiana Administrative Code (IAC), which supplement Indiana's Clean Air Interstate Rule (CAIR), for which EPA granted limited approval as an abbreviated SIP on October 22, 2007. The State's June 29, 2009, submittal includes elements that EPA deems necessary in order for EPA to fully approve Indiana's CAIR SIP. This will allow a transition from an abbreviated SIP with limited approval to a full SIP with full approval under which the various CAIR implementation provisions would be governed by State rules rather than Federal Implementation Plan (FIP) rules. This action results in the withdrawal of the Indiana CAIR FIP concerning sulfur dioxide (SO_2), nitrogen oxides (NO_X) annual, and NO_X ozone season emissions.

DATES: Comments must be received on or before December 29, 2010.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R05–OAR–2009–0515, by one of the following methods:

1. *http://www.regulations.gov:* Follow the on-line instructions for submitting comments.
2. *E-mail: mooney.john@epa.gov.*
3. *Fax:* (312) 692–2551.
4. *Mail:* John M. Mooney, Chief, Attainment Planning and Maintenance Section, Air Programs Branch (AR–18J), U.S. Environmental Protection Agency, 77 West Jackson Boulevard, Chicago, Illinois 60604.
5. *Hand Delivery:* John M. Mooney, Chief, Attainment Planning and Maintenance Section, Air Programs Branch (AR–18J), U.S. Environmental Protection Agency, 77 West Jackson Boulevard, Chicago, Illinois 60604. Such deliveries are only accepted during the Regional Office normal hours of operation, and special arrangements should be made for deliveries of boxed information. The Regional Office official hours of business are Monday through Friday, 8:30 a.m. to 4:30 p.m., excluding Federal holidays.

Please see the direct final rule which is located in the Final Rules section of this **Federal Register** for detailed instructions on how to submit comments.

FOR FURTHER INFORMATION CONTACT: Andy Chang, Environmental Engineer, Attainment Planning and Maintenance Section, Air Programs Branch (AR–18J), Environmental Protection Agency, Region 5, 77 West Jackson Boulevard, Chicago, Illinois 60604, (312) 886–0258, *chang.andy@epa.gov.*

SUPPLEMENTARY INFORMATION: In the Final Rules section of this **Federal Register,** EPA is approving the State's SIP submittal as a direct final rule without prior proposal because the Agency views this as a noncontroversial submittal and anticipates no adverse comments. A detailed rationale for the approval is set forth in the direct final rule. If we do not receive any adverse comments in response to this rule, we do not contemplate taking any further action. If EPA receives adverse comments, we will withdraw the direct final rule, and will address all public comments in a subsequent final rule based on this proposed rule. EPA will not institute a second comment period. Any parties interested in commenting on this action should do so at this time. Please note that if EPA receives adverse comment on an amendment, paragraph, or section of this rule and if that provision may be severed from the remainder of the rule, EPA may adopt as final those provisions of the rule that are not the subject of an adverse comment. For additional information, see the direct final rule, which is located in the Final Rules section of this **Federal Register.**

DEPARTMENT OF AGRICULTURE

Commodity Credit Corporation

Cooperative Conservation Partnership Initiative and Wetlands Reserve Enhancement Program

AGENCY: Commodity Credit Corporation and Natural Resources Conservation Service, United States Department of Agriculture.

ACTION: Notice of request for proposals through the Mississippi River Basin Healthy Watersheds Initiative.

SUMMARY: The Natural Resources Conservation Service (NRCS) announces the availability of financial assistance funds in fiscal year (FY) 2011 for up to $15 million in the Cooperative Conservation Partnership Initiative (CCPI) and up to $25 million in the Wetlands Reserve Enhancement Program (WREP) through the Mississippi River Basin Healthy Watersheds Initiative (MRBI). These funding levels are available for new MRBI proposals only. However, CCPI and WREP will not be the only funding mechanisms for MRBI in FY 2011. The Chief of NRCS reserves discretion in utilizing other NRCS conservation program funds and mechanisms in support of the objectives of MRBI.

Through agreements, partners and NRCS will provide assistance to eligible participants in the 43 designated focus areas (8-digit HUCs) in the following 13 States: Arkansas, Illinois, Indiana, Iowa, Kentucky, Louisiana, Minnesota, Mississippi, Missouri, Ohio, Tennessee, South Dakota, and Wisconsin. The purpose of this notice is to solicit proposals from potential partners to enter into agreements with NRCS and to inform agricultural producers and landowners of the future availability of program funds through approved partnership projects. Proposals must be based on one or more 12-digit HUCs within the 43 designated focus areas. Partners who are currently involved in approved MRBI agreements through CCPI or WREP and want to work in other 12-digit watersheds must submit new proposals for a new project.

DATES: Eligible partners may submit proposals for MRBI–CCPI and/or MRBI–WREP via email or U.S. Postal Service; however, all proposals must be received on or before January 28, 2011.

ADDRESSES: Applicants are encouraged to submit proposals electronically to *MRBI–CCPI@wdc.usda.gov* for CCPI and *MRBI–WREP@wdc.usda.gov* for WREP. If submitting a paper proposal, the proposal may be mailed to: Troy Daniell, Initiatives Coordinator, Conservation Initiatives Team, Natural Resources Conservation Service, P.O. Box 2890, Washington, DC 20013.

Do not send submissions via registered or certified mail. Do not send the same proposal both electronically and to the P.O. Box address; use only one method to submit a proposal. If submitting more than one project proposal, please submit each separately.

FOR FURTHER INFORMATION CONTACT: Troy Daniell, Initiatives Coordinator, Conservation Initiatives Team, Natural Resources Conservation Service; *Telephone:* (202) 690–2825; *e-mail: Troy.Daniell@wdc.usda.gov*.

Persons with disabilities who require alternative means for communication (Braille, large print, audio tape, etc.) should contact the USDA TARGET Center at: (202) 720–2600 (voice and TDD).

SUPPLEMENTARY INFORMATION:

Part A—General WREP and CCPI Proposal Information

Focus Area Watersheds

Forty-three focus area (8-digit hydrologic unit code (HUC)) watersheds have been selected by NRCS State Conservationists, with input from the State Technical Committees and State water quality agencies, to help improve water quality by reducing nitrogen and sediment levels in the watersheds of the Mississippi River Basin, as well as improve wildlife habitat and restore wetlands. The designated 8-digit HUC focus areas are listed below. A complete list of the smaller-scale, 12-digit HUC sub-watersheds within the designated 8-digit HUC focus areas can be found at: *http://www.nrcs.usda.gov/programs/mrbi/unit_code_lists.html*.

DESIGNATED FOCUS AREAS FOR THE MRBI FY 2011 (8-DIGIT HUCS)

Wisconsin/Illinois	Sugar	07090004
Wisconsin/Illinois	Upper Rock	07090001
Wisconsin/Illinois	Pecatonica	07090003

Under MRBI, NRCS works with partners through CCPI and WREP to help address conservation concerns and opportunities within the watershed of the Mississippi River Basin. In approved MRBI–CCPI project areas, NRCS will make Environmental Quality Incentives Program (EQIP), Conservation Stewardship Program (CSP), and Wildlife Habitat Incentive Program (WHIP) funds available to eligible producers consistent with the proposal design as much as possible. In approved MRBI–WREP project areas, funds are available through the Wetlands Reserve Program (WRP).

Proposal Submission, Review, and Notification

Potential partners are highly encouraged to submit proposals to the email address provided in the "Addresses" section of this notice. If the proposal is submitted in hard copy, the potential partner must submit two copies of the proposal, typewritten or printed on 8½″ x 11″ white paper. The entire project proposal, not including letters of support, cannot exceed 12 pages in length including a summary, responses to the information requested in this RFP, maps, and other supporting documents. The proposal must address, in sufficient detail, all the criteria outlined in the "Proposal Requirements" section of this notice in order to be considered.

MRBI–CCPI and MRBI–WREP proposals submitted to NRCS become the property of the agency for use in the administration of the program, may be filed or disposed of by the agency, and will not be returned to the potential partner. Once proposals have been submitted for review and ranking, there will be no further opportunity for the potential partner to change or re-submit the proposal; however, NRCS may request certain changes before finalizing the selection and approval of a project. Incomplete proposals or those that do not meet the requirements set forth in this notice will not be considered, and notification of elimination will be mailed to the applicant. Partner proposals may be withdrawn by written notice to Troy Daniell, Initiatives Coordinator, Conservation Initiatives Team, at any time prior to selection (see "Addresses" section in this notice).

NRCS will review, evaluate, and rank proposals based on the criteria set forth in the respective "Proposal Requirements" sections of this notice for both MRBI–CCPI and MRBI–WREP. Potential partners should recognize that the proposal is the only document NRCS will use in the evaluation process. The proposal must request NRCS program funds for obligation beginning in FY 2011 (October 1, 2010–September 30, 2011). Proposals which request funding with obligation starting after FY 2011 will not be evaluated or considered under this request for proposals.

Partners whose proposals have been selected will receive an official letter of notification. Upon notification of selection, the partner should contact the appropriate State Conservationist(s) to develop the required partnership agreement and other project implementation requirements. Potential partners should note that, depending upon available funding and agency priorities, NRCS may offer a reduced amount of program financial assistance from what was requested in the proposal and may require adjustments to the proposal as a condition of approval to meet program or other requirements. Partner submissions of proposals that are not selected will also be notified by mail.

State Conservationist(s) Proposal Review

Once a project proposal is received, the agency will provide a copy of it to the appropriate State Conservationist(s). State Conservationist(s) will review the proposals to:

(a) Document potential duplication with other projects or existing programs;

(b) Ensure adherence to and consistency with program regulation, including requirements related to land and landowner eligibility and other program requirements;

(c) Address expected benefits for project implementation in their State(s);

(d) For multi-State proposals, coordinate with all State Conservationists involved in the proposal to verify there is concurrence and support for the project;

(e) Identify other issues or concerns that should be considered; and

(f) Provide a recommendation to the NRCS Chief for approval or disapproval of the project.

Waiver Authority

To assist in the implementation of approved WREP and CCPI projects, the Chief may waive the applicability of the Adjusted Gross Income Limitation, on a case-by-case basis, in accordance with 7 CFR part 1400. Such waiver requests must be submitted in writing from the program applicant, not the sponsoring partner, addressed to the Chief, and submitted through the local NRCS designated conservationist.

Part B—The Cooperative Conservation Partnership Initiative (CCPI) Component of MRBI

To improve the health of the watersheds within the Mississippi River Basin, NRCS and its partners will help producers to voluntarily implement conservation practices that avoid, control, and trap nutrient runoff; improve wildlife habitat; restore wetlands; and maintain agricultural productivity. These improvements will be accomplished through a conservation systems approach to address water quality, wetland, and wildlife related resource concerns. NRCS will provide producers assistance in implementing a suite of practices that will reduce the impacts of nutrients and sediment leaving agricultural fields.

Overview of the CCPI

The CCPI is a voluntary conservation initiative that enables the use of certain conservation programs, combined with resources from eligible partners, to provide financial and technical assistance to owners and operators of agricultural and nonindustrial private forest lands in order to enhance conservation outcomes and achieve resource conservation objectives. The functions of CCPI can best be described in two parts: CCPI partnerships and CCPI program participation.

CCPI Partnerships

Under CCPI, eligible potential partners may submit proposals addressing the criteria that are outlined in this request for proposals. Partners who may enter into partnership agreements with NRCS include federally recognized Indian tribes, State and local units of government, producer associations, farmer cooperatives, institutions of higher education, and nongovernmental organizations with a history of working cooperatively with producers to effectively address conservation priorities related to agricultural production and nonindustrial private forest land. Individual agricultural producers are not an eligible partner entity and may not submit CCPI proposals. However, individual agricultural producers can participate by applying for program assistance in the approved proposal areas, through their local NRCS office.

Proposals will be evaluated through a competitive review process. After selection, the partners will enter into a partnership agreement with NRCS. The partnership agreement will not obligate funds, but will address the:

(a) Role of the partner;

(b) Role of NRCS;

(c) Responsibilities of the partner as it relates to the monitoring and evaluation;

(d) Frequency and duration of monitoring and evaluation to be completed by the partner;

(e) Format and frequency of reports that are required as a condition of the partnership agreement;

(f) Budget which includes other funding sources (if applicable) for financial and technical assistance;

(g) Specified project schedule and timeframe; and

(h) Other requirements deemed necessary by NRCS to further the purposes of MRBI.

Where flexibility is needed to meet project objectives, the partner may request that program adjustments be allowed, provided such adjustments are within the scope of the applicable programs' statutory and regulatory program authorities. An example of an adjustment may be to expedite the applicable program ranking process in a situation where a partner has identified the producers approved to participate in the project. Other examples of flexibilities are payments rates, or use of a single area-wide conservation plan of operations rather than individual conservation plans of operation. An example of an ineligible flexibility would be to request funds for activities that do not meet NRCS conservation practice standards.

CCPI is not a grant program, and all Federal funds made available through this request for proposals will be paid directly to producers through program contract agreements. If desired, producers may elect to have their payments assigned to another party. No technical assistance funding may be provided to a partner through the CCPI partner agreement. However, if requested by a partner, the State Conservationist may consider development of a separate contribution agreement with a qualified partner to provide funding for delivery of technical services to producers participating in an approved CCPI project.

CCPI Program Participation

Once the agency approves and announces the selected partner projects, eligible agricultural producers located within the approved project areas may apply directly to NRCS for funding through one or more of the following programs: EQIP, CSP, or WHIP. CCPI uses the funds, policies, and processes of these programs to deliver assistance to eligible producers to implement approved core and supporting conservation practices, enhancements, and activities under MRBI. Producers interested in applying must meet the eligibility requirements of the program for which they are applying. Individual applications from eligible producers will be evaluated and ranked to ensure that producer applications selected for funding are most likely to achieve project objectives. Once applications are selected, the producers may enter into one or more contracts or cost-share agreements with NRCS within one or more of the programs offered under CCPI. During FY 2011, an objective of MRBI–CCPI is to deliver EQIP, CSP, and WHIP assistance to producers to achieve MRBI priority conservation objectives in geographic areas defined by the partner. Depending upon the program available in the project area, the assistance provided enables eligible producers to implement conservation practices and enhancements, including the development and adoption of innovative conservation practices and management approaches.

Availability of Funding

Effective on the publication date of this notice, the CCC announces the availability of up to $9 million in EQIP and $500,000 in WHIP financial assistance; and 278,000 acres in CSP for MRBI–CCPI during FY 2011.

Proposal Requirements

The proposal must include the following:

(1) Proposal Cover and Summary:

(a) Project Title.

(b) Project director/manager name, telephone number, and mailing and email addresses.

(c) Name and contact information for lead partner entity submitting proposal and other collaborating partners.

(d) Short summary of project including:

i. Project start and end dates (not to exceed a period of 4 years),

ii. Designated 12-digit HUC, or contiguous multiple 12-digit HUCs sub-watersheds where the project is located, including the State(s) and county(s),

iii. General project objectives and resource concerns to be addressed as they relate to MRBI priorities and objectives,

iv. Total amount of CCPI financial assistance being requested by program, and

v. Whether the MRBI–CCPI proposal will be used in conjunction with a MRBI–WREP, MRBI–CIG, or other Federal programs to meet MRBI objectives. Include the name of that project and the associated Federal agency. (Note: Federal funds cannot be used as a match to the funds provided by NRCS.)

(2) Project Natural Resource Objectives and Concerns:

(a) Identify and provide detail about the project objectives. Objectives should be specific, measureable, achievable, and results-oriented.

(b) Identify and provide detail about the natural resource concern(s) to be addressed in this project. Include in this description how the proposal objectives will address the priority MRBI resource concerns of water quality, wetland restoration, and improved wildlife habitat. Potential partners will work with the State Conservationist(s) to ensure the priority resource concerns are addressed by utilizing approved conservation practices, enhancements and activities, and conservation program requirements. A list of NRCS approved natural resource concerns for MRBI may be found on the MRBI Web site at *http://www.nrcs.usda.gov/programs/mrbi/mrbi_overview.html*.

(3) Detailed Project Description:

(a) A detailed description of the geographic area covered by the proposal, including:

i. Types of land uses to be treated, and

ii. The location and size of the proposed project area and what 12-digit HUC sub-watershed(s) the project will be within.

(b) A detailed map showing the project area. Include on the map:

i. Outlined areas that need conservation treatments,

ii. Location where conservation treatments are needed, and

iii. Priority order for the different areas to be treated.

(c) A description of the project timeline. Include:

i. Duration of the project, not to exceed 4 consecutive years in length beginning in FY 2011,

ii. Project implementation schedule that details when different objectives and conservation practices and enhancements will be completed,

iii. When partner and Federal resources will be used within the timeframe of the project. Include the total amount of financial assistance funds requested for each fiscal year of the project to be made available for producer contracts and cost-share agreements (for multi-State projects, provide the funds or acres by State as appropriate), and

iv. When the final project report will be submitted.

(d) A description of the plan for evaluating and reporting on progress made toward achieving the objectives of the agreement.

(e) Identify potential criteria to be used by NRCS to prioritize and rank agricultural producers' applications for EQIP, CSP, and WHIP in the project area. Potential partners should collaborate with NRCS to develop meaningful criteria that NRCS can use to evaluate and rank producer program applications. This will ensure that producer applications which will best accomplish MRBI objectives will be selected.

(f) An estimate of the percentage of producers, including nonindustrial private forest landowners, in the project area that may participate in the project along with an estimate of the total number of producers located in the project area. Provide details about additional information such as how the partner will encourage producer participation; does the project include any tribal producers, beginning farmers or ranchers, socially disadvantaged farmers or ranchers, or limited resource farmers or ranchers; and are there groups of producers who may submit joint applications to address resource issues of common interest and need.

(g) A listing and description of the approved MRBI–CCPI core conservation practices, conservation activity plans, enhancements, and partner activities to be implemented during the project timeframe and the general sequence of implementation of the project. Information about approved MRBI–CCPI EQIP, WHIP, and CSP practices, enhancements, and activities can be accessed at *http://nrcs.usda.gov/programs/mrbi/mrbi.html*. Only the conservation practices listed, which are available in the applicable State's Field Office Technical Guide, are eligible for use in MRBI. For each conservation practice, estimate the amount of practice extent (feet, acres, number, etc.) the partner expects producers to implement and the amount of financial assistance requested to support implementation of each practice through producer contracts.

(h) Also address technical assistance efforts that will be made by the partner. Describe any activities that are innovative and include outcome-based performance measures, such as water quality monitoring, to be implemented by the partner.

(i) Indicate whether the project will address specific regulatory compliance and any other outcomes the partner expects to complete during the project period.

(j) A detailed description of any requested adjustments, by program, with an explanation of why the adjustment is needed in order to achieve the objectives of the project. Requested adjustments or flexibilities must comply with statutory and regulatory requirements.

(k) A science-based description of how the proposal's objectives also may provide additional benefits by addressing energy conservation or mitigating the effects of climate change, if applicable.

(l) A description of a plan to conduct water quality monitoring and evaluation and the reporting of progress made toward achieving MRBI objectives and desired outcomes. NRCS is especially interested in proposals that adopt a three-tiered monitoring and evaluation approach designed to assess environmental outcomes at the edge-of-field, in-stream, and at the 12-digit HUC level. Higher priority will be given to projects that adopt this three-tiered approach where the partner provides resources or technical services to carry it out. Higher priority will also be given to projects that utilize environmental indicators to assess water quality and evaluate effects of conservation systems and activities implemented through the project at the edge-of-field level in conjunction with in-stream and 12-digit HUC monitoring. Information concerning water quality monitoring and evaluation can be found at *http://www.nrcs.usda.gov/programs/pdf_files/water_quality_monitoring_reference_material.pdf*.

(4) Partner Description:

(a) A description of the partner(s) history of working with agricultural producers to address conservation priorities.

(b) A description of how the partner(s) will collaborate to achieve the objectives of the agreement. Include:

i. The roles, responsibilities, and capabilities of the partner(s), and

ii. The financial or technical commitments of each of the partner(s) and how they will be leveraged by the Federal contribution through EQIP, WHIP, CSP, or a combination of the three. Include specifically what commitments will be used toward water quality monitoring needs. If partners who do not submit the proposal intend to commit resources, a letter or other documentation from these partners confirming a commitment of specified resources is required.

(c) A description of the resources (financial and technical assistance) requested from each of the applicable NRCS programs (EQIP, WHIP, and CSP) and the non-Federal resources provided by the partner that will be leveraged by the Federal contribution. Partners need to clearly state, by project objective, how they intend to leverage Federal funds along with partner resources. The funding and time contribution by agricultural producers to implement agreed-to conservation practices and enhancements in program contracts will not be considered any part of a match from the potential partner for purposes of CCPI.

(d) A description of how the partner will facilitate the submission of landowner applications.

(e) A description of how the partner will provide for outreach to beginning farmers or ranchers, limited resource farmers or ranchers, socially disadvantaged farmers or ranchers, and Indian tribes.

National Ranking Considerations

The agency will evaluate proposals using a national competitive process. A higher priority may be given to proposals that:

(a) Have a high percentage of producers actively farming or managing working agricultural or nonindustrial private forest lands included in the proposed project area;

(b) Significantly leverage non-Federal financial and technical resources and coordinate with other local, State, or Federal efforts. This includes resources committed to provide for water quality monitoring and evaluation of conservation practices;

(c) Integrate both WREP and CCPI within a project area;

(d) Deliver high percentages of applied conservation practices to address water quality, wildlife habitat, and wetland restoration;

(e) Provide innovation in approved conservation practices, conservation methods, and delivery, including outcome-based performance measures and methods such as adaptive management strategies;

(f) Complete the application of the conservation practices and activities on all of the covered program contracts or cost-share agreements in 4 years or less;

(g) Assist the participants in meeting local, State, and Federal regulatory requirements;

(h) Provide for environmental monitoring and evaluation of conservation practices, enhancements, and activities;

(i) Provide for outreach to, and participation of, beginning farmers or ranchers, socially disadvantaged farmers or ranchers, limited resource farmers or ranchers, and Indian tribes within the proposed project area;

(j) Have a high potential to achieve MRBI water quality objectives of nitrogen and sediment reductions leaving the field; and

(k) Identify other factors and criteria which best achieve the purposes of MRBI–CCPI.

Part C—The Wetlands Reserve Enhancement Program Component of MRBI

Availability of Funding

Effective upon publication of this notice, NRCS on behalf of CCC, announces that within the designated focus areas in the Mississippi River Basin Watersheds, up to $25 million in financial assistance funds are available in FY 2011 for the WREP to eligible participants through approved partnership projects within the 43 designated 8-digit HUC focus area watersheds in the following states: Arkansas, Illinois, Indiana, Iowa, Kentucky, Louisiana, Minnesota, Mississippi, Missouri, Ohio, Tennessee, South Dakota, and Wisconsin.

Under WREP, NRCS enters into multi-year agreements with eligible State and local governments, nongovernmental organizations, and Indian tribes to target and leverage resources to carry out high priority wetland protection, restoration, and enhancement activities; and improve water quality and wildlife habitat. Eligible partners should submit complete proposals to the addresses listed in this notice addressing the MRBI conservation objectives to be achieved in one or more 12-digit HUC watersheds within the 43 eligible 8-digit HUC focus area watersheds. Proposals that integrate a MRBI–WREP proposal with a MRBI–CCPI project in one or more 12-digit HUC watersheds will be given additional consideration in the selection process.

Overview

WREP is a voluntary conservation program which is a component of WRP. WREP leverages resources of eligible partners to provide financial assistance to eligible landowners to protect, restore, and enhance high priority wetlands; improve wildlife habitat; and improve water quality. WREP partners are required to contribute a match as detailed in the proposal requirement section at 3(e). Proposals which include additional partner resources will be given higher priority consideration in the selection process.

WREP financial assistance is delivered to eligible landowners and partners in approved project areas through easement acquisition, conservation program contracts, cooperative agreements, contribution agreements, or Federal contracts. Restoration may be achieved through payments to other parties who conduct the restoration activities.

Only States and local units of government, Indian tribes, and nongovernmental organizations are eligible to submit a proposal and enter into agreements with NRCS. A nongovernmental organization is an organization described in section 501(c) (3) of the Internal Revenue Code of 1986. Individual landowners may not submit WREP proposals through this submission process. However, once a WREP project has been approved and announced, eligible landowners may apply for WREP through their local NRCS office. As part of the agreement, approved partners may also help facilitate the submission of landowner applications, provide additional technical or financial assistance to landowners, and provide other resources as defined in the agreement.

Written proposals are to be submitted by eligible partners, and project evaluation will be based upon a competitive process and the criteria established in this notice. Once NRCS selects a partner's proposal, landowners within the selected project area may submit an application directly to NRCS for participation in WRP. Individual landowner applications will be evaluated and ranked along with other applications in the watershed or geographic project area, when applicable, to ensure that the properties selected for funding will achieve project objectives.

Wetland restoration and enhancement actions will be designed to improve water quality, and maximize wildlife habitat benefits and wetland functions and values according to the WRP regulation, 7 CFR part 1467, and NRCS conservation practice standards. Additionally, the successful restoration of land and the resultant wetland values must take into consideration the cost of

such restoration, as required by the WRP statute and reflected in the WRP regulation at 7 CFR part 1467.4. Proposals must conform to the WRP guidelines for restoration and management of lands subject to a WRP easement.

Benefits to the partners in WREP agreements include:

- Involvement in wetland restorations in high priority MRBI focus areas;
- Ability to cost-share restoration or enhancement components beyond those required by NRCS;
- Ability to participate in management or monitoring of selected project locations; and
- Opportunity to utilize innovative restoration methods and practices.

Land Eligibility

The land eligibility criteria for WREP are the same as for WRP and are listed in 7 CFR § 1467.4.

Proposal Requirements

For consideration, the proposal must be in the following format and contain the information set forth below.

(1) *Proposal Cover and Summary.* The first few pages of the proposal must include—

(a) Project Title.

(b) Project Director/Manager name, telephone, and mailing and email address.

(c) Name and contact information for lead partner submitting proposal and other collaborating partners.

(d) Short general summary of project, including:

(i) Potential acres to be enrolled in the project area,

(ii) Designated 12-digit watershed(s) where the project is located, including the State(s), and county(s). Include a general location map,

(iii) Proposed project start and end dates that do not exceed 4 consecutive years including FY 2011,

(iv) The project objectives and resource concerns to be addressed, and

(v) Total amount of financial assistance being requested.

(2) *Project Natural Resource Objectives and Actions.* The proposal must—

(a) Identify and provide detail about the wildlife and water quality concerns to be addressed and how the proposal's objectives will address those concerns. Objectives should be specific, measurable, achievable, results-oriented, and include a timeline for completion.

(b) For each objective, identify the actions to be completed to achieve that objective and address the identified natural resource concern. Specify which actions are to be addressed through this project using WREP assistance, and which are being addressed through alternate non-Federal funding sources or other resources provided.

(c) Identify the total acres that require wetland protection, restoration, and enhancement.

(3) *Detailed Project Description.* Information provided in the proposal must include—

(a) A description of the partner(s) history of working cooperatively with landowners on conservation easements.

(b) A description of the watershed characteristics within the designated focus area covered by the proposal including a detailed watershed map that indicates the project location. The description should include information related to land use types, vegetation, soils, hydrology, potential sources of water quality impairments, occurrences of at-risk species, proximity to other protected areas, and a summary of resource concerns. Proposals should state whether a MRBI–WREP proposal is integrated with a MRBI–CCPI proposed project and include the name of the proposed project.

(c) A description of the partner(s) and the roles, responsibilities, and capabilities of the partner(s). Proposals which include resources from partners other than the lead partner must include a letter or other documentation confirming the commitment of resources.

(d) A description of the project duration, plan of action, and project implementation schedule. Project proposals cannot exceed 4 years.

(e) A description of the financial assistance resources that are requested through WREP, and the non-Federal resources provided by the partner(s) that will be leveraged by the Federal contribution. WREP requires partners to contribute a match of:

(i) In-kind only contributions of at least 20 percent of the restoration costs,

(ii) Cash only contributions of at least 5 percent of the restoration costs, or

(iii) A combination of in-kind and cash contributions of at least 20 percent of the restoration costs.

Proposals which include additional partner resources will be given additional consideration in the selection process. Contributions provided by the partners to achieve additional ranking points can be in the form of technical or financial assistance for the protection, restoration, and enhancement of the wetland. Contributions can also be in the form of assistance with management and monitoring activities. Contributions above the match requirement can be cash or in-kind equipment or services. Partners may provide incentives to landowners to participate in WREP; however, incentive payments will not be considered part of the match requirement. Incentives include sign-up bonuses, practice incentive payments, or similar activities not funded through WRP.

(f) Total budget for the project including all partner resources which will be leveraged for the project and the amount of WREP financial assistance being requested for project broken out by fiscal year with totals. Include a description of the amount of funds needed annually for easement acquisition and wetland restoration and enhancement activities.

(g) A description of non-Federal resources that will be available for implementation of the proposal. Proposals which include additional non-Federal resources will be given higher consideration in the selection process. The partner needs to state clearly how they intend to leverage Federal funds along with partner resources. Landowner contributions in the implementation of agreed-to wetland restoration and enhancement practices may not be considered any part of a match from the potential partner for purposes of WREP. Partners will also be required to submit a plan for monitoring, evaluating, and reporting progress made toward achieving the objectives of the agreement.

(h) An estimate of the percentage of potential landowners, or estimate of the percentage of acres likely to be enrolled within the project area, compared to the total number of potential landowners or acres located in the project area. A statement on how the partner will encourage participation to guarantee success of the project. It is not necessary for a target area to involve multiple landowners to be selected. Projects will be evaluated based on the ecological merits of the proposal and contributions by the partners.

(i) A statement describing how the partner will provide outreach, especially to encourage participation by Indian tribes, beginning farmers or ranchers, socially disadvantaged farmers or ranchers, and limited resource farmers or ranchers.

(j) A description of the wetland protection, restoration, and enhancement activities to be implemented during the project timeframe, and the general sequence of implementation of the project. Activities may include those efforts undertaken by the partner and those that the partner requests NRCS to address through financial support.

National Ranking Considerations

The appropriate State Conservationist will evaluate proposals using a competitive process and forward recommended proposals to the Chief for review and selection. The Chief will give a higher priority to proposals that:

(a) Have a high potential to achieve wetland restoration;

(b) Have a high potential to significantly improve water quality;

(c) Have a high potential to significantly improve wildlife habitat;

(d) Significantly leverage non-Federal financial and technical resources and coordinate with other local, State, tribal, or Federal efforts;

(e) Demonstrate the partner's history of working cooperatively with landowners on conservation easements;

(f) Provide innovation in wetland protection, restoration, and enhancement methods and outcome-based performance measures and methods;

(g) Provide evidence that wetland restoration and enhancement activities will be completed within 2 years of easement closing;

(h) Provide for monitoring and evaluation of the effectiveness of the restoration activities on water quality;

(i) Provide for matching financial or technical assistance funds to assist landowners with the implementation of the Wetlands Reserve Plan of Operations and associated contracts;

(j) Facilitate the submission of landowner applications;

(k) Provide for outreach to, and participation of, Indian tribes, beginning farmers or ranchers, socially disadvantaged farmers or ranchers, and limited resource farmers or ranchers within the area covered by the agreement; and

(l) Integrate a MRBI–WREP proposal with a MRBI–CCPI proposed or approved project.

Partnership Agreements

Upon proposal selection, NRCS will enter an agreement with a partner as the mechanism for partner participation in WREP. At a minimum, the agreement will address:

(a) The role of the partner;

(b) The role of NRCS;

(c) The format and frequency of reports that is required as a condition of the agreement;

(d) The Plan of Work and budget to identify other funding sources (if applicable) for financial or technical assistance;

(e) The specified project schedule and timeframe;

(f) Whether the agreement will serve as an obligating document or whether funds will be obligated under a separate agreement with the partner or with a third party; and

(g) Other requirements deemed necessary by NRCS to achieve purposes of the WRP.

Landowner Application

Landowners must meet the eligibility requirements of WRP, as published in 7 CFR part 1467. Landowners interested in participating may apply for designated WREP funds at their local service center after WREP proposals are selected. In FY 2011, NRCS will make WREP funds available to eligible landowners to enroll land under a permanent easement, a 30-year easement, a 30-year contract on acreage owned by Indian tribes, or through a Restoration Agreement.

NRCS and the partner may assist landowners in determining whether the application is appropriate for WREP depending on the wetland protection, restoration, and enhancement activities that the applicant seeks to install or perform.

Signed the 20th day of November, 2010, in Washington, DC.

Dave White,

Vice President, Commodity Credit Corporation and Chief, Natural Resources Conservation Service.

BILLING CODE 3410–16–P

DEPARTMENT OF COMMERCE

International Trade Administration

[A–549–502]

Circular Welded Carbon Steel Pipes and Tubes from Thailand: Amended Final Results of Antidumping Duty Administrative Review

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

DATES: *Effective Date:* November 29, 2010.

FOR FURTHER INFORMATION CONTACT: Myrna Lobo, AD/CVD Operations, Office 6, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue, NW., Washington, DC 20230; *telephone:* (202) 482–2371.

SUPPLEMENTARY INFORMATION: On October 13, 2010, the Department of Commerce (the Department) completed the final results of administrative review of the antidumping duty order on circular welded carbon steel pipes and tubes (pipes and tubes) from Thailand, covering the period March 1, 2008 through February 28, 2009. The final results were subsequently released to all parties in the proceeding, and published in the **Federal Register** on October 20, 2010. *See Circular Welded Carbon Steel Pipes and Tubes From Thailand: Final Results of Antidumping Duty Administrative Review,* 75 FR 64696 (October 20, 2010).

The Department disclosed the calculations in connection with the final results as required under 19 CFR 351.224(b). On October 20, 2010, pursuant to 19 CFR 351.224(c)(2), we received a timely filed allegation from the respondent in this administrative review, Saha Thai Steel Pipe (Public) Company, Limited (Saha Thai), that the Department made a ministerial error with respect to the calculation of Saha Thai's dumping margin. *See* Letter from Saha Thai to the Department of Commerce, regarding "Ministerial Error in Final Results," dated October 20, 2010. For further details, *see* Memorandum from Myrna Lobo, Case Analyst, and Heidi Schriefer, Senior Accountant, to Barbara E. Tillman, Director, titled, "Ministerial Error Allegation—Final Results of the Antidumping Duty Administrative Review of Circular Welded Carbon Steel Pipes and Tubes from Thailand: Saha Thai Steel Pipe (Public) Company Ltd.," dated November 19, 2010 (*Ministerial Error Allegation Memorandum*). We did not receive comments on this allegation from any other interested parties.

A ministerial error, as defined at section 751(h) of the Tariff Act of 1930, as amended (the Act), includes "errors in addition, subtraction, or other arithmetic function, clerical errors resulting from inaccurate copying, duplication, or the like, and any other type of unintentional error which the Department considers ministerial." *See also* 19 CFR 351.224(f). In its letter, Saha Thai alleges that the Department made a ministerial error by using Saha Thai's 2008 selling and administrative expenses to calculate Saha Thai's 2007 general and administrative (G&A) expense ratio. As stated in the final cost calculation memorandum accompanying the *Final Results,* we calculated the fiscal year 2007 G&A expense rate to use in the calculation of cost of production and constructed value for products with dates of sale prior to the POR (*i.e.,* the pre-POR quarters). *See* Memorandum from Heidi K. Schriefer, Senior Accountant to Neal M. Halper, Director, Office of Accounting "Cost of Production and Constructed Value Calculation Adjustments for the Final Results—Saha Thai Steel Pipe (Public) Company, Ltd.

("Saha Thai")" dated October 13, 2010. The Department agrees that this constitutes a ministerial error within the meaning of section 751(h) of the Act and 19 CFR 351.224(f) because it inadvertently used the 2008 figure instead of the 2007 figure to calculate the 2007 G&A expense ratio. Therefore, the Department has corrected this expense ratio and revised its margin calculations to reflect this correction. *See Ministerial Error Allegation Memorandum* at 2.

In accordance with section 751(h) of the Act and 19 CFR 351.224(e), we are amending the final results in this antidumping duty administrative review of pipes and tubes from Thailand. As a result of correcting the ministerial error, the amended final weighted-average dumping margin is as follows:

Manufacturer/exporter	Final results weighted-average margin percentage	Amended final results weighted-average margin percentage
Saha Thai Steel Pipe (Public) Co. Ltd.	2.13 percent	1.76 percent

Assessment Rates

The Department shall determine, and U.S. Customs and Border Protection (CBP) shall assess, antidumping duties on all appropriate entries. Pursuant to 19 CFR 351.212(b)(1), the Department calculates an assessment rate for each importer of the subject merchandise. The Department intends to issue appropriate assessment instructions directly to CBP 15 days after the date of publication of these amended final results of review.

The Department clarified its "automatic assessment" regulation on May 6, 2003. This clarification will apply to entries of subject merchandise during the period of review produced by the company included in these amended final results of review for which the reviewed company did not know their merchandise was destined for the United States. In such instances, we will instruct CBP to liquidate unreviewed entries at the all-others rate from the investigation if there is no rate for the intermediate company involved in the transaction. For a full discussion of this clarification, *see Antidumping and Countervailing Duty Proceedings: Assessment of Antidumping Duties,* 68 FR 23954 (May 6, 2003).

Cash Deposit Requirements

The following deposit requirements will be effective upon publication of the amended final results of this administrative review for all shipments of subject merchandise entered, or withdrawn from warehouse, for consumption on or after the publication date of these amended final results, as provided by section 751(a)(2)(C) of the Act: (1) For the company covered by this review, the cash deposit rate will be the rate listed above; (2) for merchandise exported by producers or exporters not covered in this review but covered in a previous segment of this proceeding, the cash deposit rate will continue to be the company-specific rate published in the most recent final results in which that producer or exporter participated; (3) if the exporter is not a firm covered in this review or in any previous segment of this proceeding, but the producer is, the cash deposit rate will be that established for the producer of the merchandise in these final results of review or in the most recent final results in which that producer participated; and (4) if neither the exporter nor the producer is a firm covered in this review or in any previous segment of this proceeding, the cash deposit rate will be 15.67 percent, the all-others rate established in the less than fair value investigation. *See Circular Welded Carbon Steel Pipes and Tubes From Thailand: Final Determination of Sales at Less Than Fair Value,* 51 FR 3384 (January 27, 1986).

Notification of Interested Parties

This notice also serves as a final reminder to importers of their responsibility under 19 CFR 351.402(f)(2) to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during this review period. Failure to comply with this requirement could result in the Secretary's presumption that reimbursement of the antidumping duties occurred and the subsequent assessment of double antidumping duties.

This notice also serves as a reminder to parties subject to administrative protective order (APO) of their responsibility concerning the return or destruction of proprietary information disclosed under APO in accordance with 19 CFR 351.305, which continues to govern business proprietary information in this segment of the proceeding. Timely written notification of the return/destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and terms of an APO is a violation that is subject to sanction.

We are issuing and publishing these amended final results of review and notice in accordance with sections 751(a), 751(h), and 777(i) of the Act, and 19 CFR 351.224(e).

Dated: November 19, 2010.

Ronald K. Lorentzen,

Deputy Assistant Secretary for Import Administration.

[FR Doc. 2010–29962 Filed 11–26–10; 8:45 am]

BILLING CODE 3510–DS–P

DEPARTMENT OF COMMERCE

International Trade Administration

Application(s) for Duty-Free Entry of Scientific Instruments

Pursuant to Section 6(c) of the Educational, Scientific and Cultural Materials Importation Act of 1966 (Pub. L. 89–651, as amended by Pub. L. 106–36; 80 Stat. 897; 15 CFR part 301), we invite comments on the question of whether instruments of equivalent scientific value, for the purposes for which the instruments shown below are intended to be used, are being manufactured in the United States.

Comments must comply with 15 CFR 301.5(a)(3) and (4) of the regulations and be postmarked on or before December 20, 2010. Address written comments to Statutory Import Programs Staff, Room 3720, U.S. Department of Commerce, Washington, DC 20230. Applications may be examined between 8:30 a.m. and 5 p.m. at the U.S. Department of Commerce in Room 3720.

Docket Number: 10–065. *Applicant:* Vanderbilt University, 2201 West End Avenue, Nashville, TN 37235. *Instrument:* Electron Microscope. *Manufacturer:* FEI Company, Czech Republic. *Intended Use:* The instrument will be used to support general biological investigations into structure function relationships. Key capabilities of the instrument include extended

variable pressure capability, low kV and Schottky field emission source, secondary and backscatter detection, and a temperature control Peltier stage. *Justification for Duty-Free Entry:* There are no instruments of the same general category manufactured in the United States. *Application accepted by Commissioner of Customs:* October 27, 2010.

Docket Number: 10–066. *Applicant:* Vanderbilt University, 2201 West End Avenue, Nashville, TN 37235. *Instrument:* Electron Microscope. *Manufacturer:* JEOL Limited, Japan. *Intended Use:* The instrument will be used to study cement-based composites, environmental materials, and geological samples for their microstructure, phase characteristics, and interfacial processes. This instrument can image and analyze samples that are completely wet while carrying the humidity and pressure in the specimen chamber. This instrument also offers a WetSTEM detector for imaging completely wet samples in both bright field (BF) and dark field (DF) modes without special sample handling/encapsulation. *Justification for Duty-Free Entry:* There are no instruments of the same general category manufactured in the United States. *Application accepted by Commissioner of Customs:* October 27, 2010.

Dated: November 22, 2010.

Gregory Campbell,

Acting Director, IA Subsidies Enforcement Office.

Purified Carboxymethylcellulose From Finland; Notice of Final Results of Antidumping Duty Administrative Review

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

SUMMARY: On August 9, 2010, the Department of Commerce (the Department) published in the **Federal Register** the preliminary results of the administrative review of the antidumping duty order on purified carboxymethylcellulose from Finland. *See Purified Carboxymethylcellulose from Finland; Notice of Preliminary Results of Antidumping Duty Administrative Review,* 75 FR 47788 (August 9, 2010) (*Preliminary Results*). We gave interested parties an opportunity to comment on the *Preliminary Results* and received no comments.

DATES: *Effective Date:* November 29, 2010.

FOR FURTHER INFORMATION CONTACT: Tyler Weinhold, or Robert James, AD/CVD Operations, Office 7, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue, NW., Washington, DC 20230; telephone (202) 482–1121 or (202) 482–0649, respectively

SUPPLEMENTARY INFORMATION:

Background

On August 9, 2010, the Department published the preliminary results of administrative review of the antidumping duty order covering purified carboxymethylcellulose from Finland. *See Preliminary Results.* The parties subject to this review are CP Kelco Oy and CP Kelco U.S., Inc. (collectively, CP Kelco). The petitioner in this proceeding is the Aqualon Company, a division of Hercules Incorporated (Petitioner).

In the *Preliminary Results,* the Department stated that interested parties may submit case briefs within 30 days of publication of the *Preliminary Results* and rebuttal briefs within five days after the due date for filing case briefs. *See Preliminary Results* at 47794. No interested party submitted a case or rebuttal brief. Accordingly, we made no changes for the final results. *See* Memorandum from Tyler Weinhold, to the File, "Analysis of Data Submitted by CP Kelco Oy and CP Kelco U.S. Inc. (collectively, CP Kelco) in the Preliminary Results of the 2008–2009 Administrative Review of Purified Carboxymethylcellulose (CMC) from Finland," dated August 2, 2010; Memorandum from Tyler Weinhold, to the File, "Analysis of Data Submitted by CP Kelco Oy and CP Kelco U.S. Inc. (collectively, CP Kelco) in the 2008–2009 Administrative Review of Purified Carboxymethylcellulose (CMC) from Finland," and Memorandum from Sheikh M. Hannan, to the File, "Cost of Production and Constructed Value Calculation Adjustments for the Preliminary Results—CP Kelco Oy."

Period of Review

The period of review (POR) is July 1, 2008, through June 30, 2009.

Scope of the Order

The merchandise covered by this order is all purified carboxymethylcellulose (CMC), sometimes also referred to as purified sodium CMC, polyanionic cellulose, or cellulose gum, which is a white to off-white, non-toxic, odorless, biodegradable powder, comprising sodium CMC that has been refined and purified to a minimum assay of 90 percent. Purified CMC does not include unpurified or crude CMC, CMC Fluidized Polymer Suspensions, and CMC that is cross-linked through heat treatment. Purified CMC is CMC that has undergone one or more purification operations which, at a minimum, reduce the remaining salt and other by-product portion of the product to less than ten percent. The merchandise subject to this order is classified in the Harmonized Tariff Schedule of the United States at subheading 3912.31.00. This tariff classification is provided for convenience and customs purposes; however, the written description of the scope of the order is dispositive.

Final Results of Review

The Department has determined that the following margin exists for the period July 1, 2008, through June 30, 2009:

Manufacturer	Weighted-average margin (percentage)
CP Kelco Oy	6.10

Assessment Rates

Pursuant to these final results, the Department has determined, and U.S. Customs and Border Protection (CBP) shall assess, antidumping duties on all appropriate entries. The Department intends to issue assessment instructions for CP Kelco to CBP 15 days after the date of publication of these final results. Pursuant to 19 CFR 351.212(b)(1), we calculated importer-specific (or customer-specific) *ad valorem* duty assessment rates based on the ratio of the total amount of the dumping margins calculated for the examined sales to the total entered value of those same sales. We will instruct CBP to assess antidumping duties on all appropriate entries covered by this review if any importer-specific (or customer-specific) assessment rate calculated in the final results of this review are above *de minimis.*

The Department clarified its "automatic assessment" regulation on May 6, 2003. *See Antidumping and Countervailing Duty Proceedings: Assessment of Antidumping Duties,* 68 FR 23954 (May 6, 2003) (*Assessment of Antidumping Duties*). This clarification will apply to entries of subject

merchandise during the POR produced by CP Kelco for which CP Kelco did not know the merchandise was destined for the United States. In such instances, we will instruct CBP to liquidate unreviewed entries at the 6.65 percent all-others rate from the LTFV investigation if there is no company-specific rate for an intermediary involved in the transaction. *See Notice of Antidumping Duty Orders: Purified Carboxymethylcellulose from Finland, Mexico, the Netherlands and Sweden,* 70 FR 39734 (July 11, 2005). *See Assessment of Antidumping Duties* for a full discussion of this clarification.

Cash Deposit Requirements

Furthermore, the following cash deposit requirements will be effective upon publication of these final results for all shipments of purified carboxymethylcellulose from Finland entered, or withdrawn from warehouse, for consumption on or after the publication date of the final results of this administrative review, as provided by section 751(a)(1) of the Tariff Act of 1930, as amended (the Act): (1) The cash deposit rate for CP Kelco will be the rate established in the final results of review; (2) if the exporter is not a firm covered in this review or the less-than-fair-value (LTFV) investigation, but the manufacturer is, the cash deposit rate will be the rate established for the most recent period for the manufacturer of the merchandise; and (3) if neither the exporter nor the manufacturer is a firm covered in this or any previous review conducted by the Department, the cash deposit rate will be the all-others rate from the LTFV investigation. *Id.* These deposit requirements, when imposed, shall remain in effect until further notice.

Reimbursement of Duties

This notice also serves as a final reminder to importers of their responsibility under 19 CFR 351.402(f) to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during this POR. Failure to comply with this requirement could result in the Secretary's presumption that reimbursement of antidumping duties occurred and the subsequent assessment of doubled antidumping duties.

Administrative Protective Orders

This notice also serves as a reminder to parties subject to administrative protective orders (APO) of their responsibility concerning the return or destruction of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3), which continues to govern business proprietary information in this segment of the proceeding. Timely written notification of the return/destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and terms of an APO is a violation which is subject to sanction.

We are issuing and publishing this notice in accordance with sections 751(a)(1) and 777(i) of the Act.

Dated: November 15, 2010.

Ronald K. Lorentzen,

Deputy Assistant Secretary for Import Administration.

BILLING CODE 3510–DS–P

DEPARTMENT OF COMMERCE

International Trade Administration

Initiation of Antidumping and Countervailing Duty Administrative Reviews

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce ("the Department") has received requests to conduct administrative reviews of various antidumping and countervailing duty orders and findings with October anniversary dates. In accordance with the Department's regulations, we are initiating those administrative reviews.

DATES: *Effective Date:* November 29, 2010.

FOR FURTHER INFORMATION CONTACT: Sheila E. Forbes, Office of AD/CVD Operations, Customs Unit, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue, NW., Washington, DC 20230, telephone: (202) 482–4697.

SUPPLEMENTARY INFORMATION:

Background

The Department has received timely requests, in accordance with 19 CFR 351.213(b), for administrative reviews of various antidumping and countervailing duty orders and findings with October anniversary dates.

All deadlines for the submission of various types of information, certifications, or comments or actions by the Department discussed below refer to the number of calendar days from the applicable starting date.

Notice of No Sales

Under 19 CFR 351.213(d)(3), the Department may rescind a review where there are no exports, sales, or entries of subject merchandise during the respective period of review ("POR") listed below. If a producer or exporter named in this notice of initiation had no exports, sales, or entries during the POR, it must notify the Department within 60 days of publication of this notice in the **Federal Register**. The Department will consider rescinding the review only if the producer or exporter, as appropriate, submits a properly filed and timely statement certifying that it had no exports, sales, or entries of subject merchandise during the period of review. All submissions must be made in accordance with 19 CFR 351.303 and are subject to verification in accordance with section 782(i) of the Tariff Act of 1930, as amended ("the Act"). Six copies of the submission should be submitted to the Assistant Secretary for Import Administration, International Trade Administration, Room 1870, U.S. Department of Commerce, 14th Street & Constitution Avenue, NW., Washington, DC 20230. Further, in accordance with 19 CFR 351.303(f)(1)(i), a copy of each request must be served on every party on the Department's service list.

Respondent Selection

In the event the Department limits the number of respondents for individual examination for administrative reviews, the Department intends to select respondents based on U.S. Customs and Border Protection ("CBP") data for U.S. imports during the period of review ("POR"). We intend to release the CBP data under Administrative Protective Order ("APO") to all parties having an APO within seven days of publication of this initiation notice and to make our decision regarding respondent selection within 21 days of publication of this **Federal Register** notice. The Department invites comments regarding the CBP data and respondent selection within five days of placement of the CBP data on the record of the applicable review.

Separate Rates

In proceedings involving non-market economy ("NME") countries, the Department begins with a rebuttable presumption that all companies within the country are subject to government control and, thus, should be assigned a single antidumping duty deposit rate. It is the Department's policy to assign all exporters of merchandise subject to an administrative review in an NME country this single rate unless an exporter can demonstrate that it is sufficiently independent so as to be entitled to a separate rate.

To establish whether a firm is sufficiently independent from government control of its export activities to be entitled to a separate rate, the Department analyzes each entity exporting the subject merchandise under a test arising from the *Final Determination of Sales at Less Than Fair Value: Sparklers from the People's Republic of China,* 56 FR 20588 (May 6, 1991), as amplified by *Final Determination of Sales at Less Than Fair Value: Silicon Carbide from the People's Republic of China,* 59 FR 22585 (May 2,1994). In accordance with the separate-rates criteria, the Department assigns separate rates to companies in NME cases only if respondents can demonstrate the absence of both *de jure* and *de facto* government control over export activities.

All firms listed below that wish to qualify for separate-rate status in the administrative reviews involving NME countries must complete, as appropriate, either a separate-rate application or certification, as described below. For these administrative reviews, in order to demonstrate separate-rate eligibility, the Department requires entities for whom a review was requested, that were assigned a separate rate in the most recent segment of this proceeding in which they participated, to certify that they continue to meet the criteria for obtaining a separate rate. The Separate Rate Certification form will be available on the Department's Web site at *http://www.trade.gov/ia* on the date of publication of this **Federal Register.** In responding to the certification, please follow the "Instructions for Filing the Certification" in the Separate Rate Certification. Separate Rate Certifications are due to the Department no later than 60 days after publication of this **Federal Register** notice. The deadline and requirement for submitting a Certification applies equally to NME-owned firms, wholly foreign-owned firms, and foreign sellers who purchase and export subject merchandise to the United States.

Entities that currently do not have a separate rate from a completed segment of the proceeding [1] should timely file a Separate Rate Application to demonstrate eligibility for a separate rate in this proceeding. In addition, companies that received a separate rate in a completed segment of the proceeding that have subsequently made changes, including, but not limited to, changes to corporate structure, acquisitions of new companies or facilities, or changes to their official company name,[2] should timely file a Separate Rate Application to demonstrate eligibility for a separate rate in this proceeding. The Separate Rate Application will be available on the Department's Web site at *http://www.trade.gov/ia* on the date of publication of this **Federal Register** notice. In responding to the Separate Rate Status Application, refer to the instructions contained in the application. Separate Rate Status Applications are due to the Department no later than 60 calendar days of publication of this **Federal Register** notice. The deadline and requirement for submitting a Separate Rate Status Application applies equally to NME-owned firms, wholly foreign-owned firms, and foreign sellers that purchase and export subject merchandise to the United States.

For exporters and producers who submit a separate-rate status application or certification and subsequently are selected as mandatory respondents, these exporters and producers will no longer be eligible for separate-rate status unless they respond to all parts of the questionnaire as mandatory respondents.

Initiation of Reviews

In accordance with section 19 CFR 351.221(c)(1)(i), we are initiating administrative reviews of the following antidumping and countervailing duty orders and findings. We intend to issue the final results of these reviews not later than October 31, 2011.

[3] If one of the above named companies does not qualify for a separate rate, all other exporters of Kitchen Appliance Shelving and Racks from the PRC who have not qualified for a separate rate are deemed to be covered by this review as part of the single PRC entity of which the named exporters are a part.

[4] In the notice of initiation for September anniversary cases, published in the **Federal Register** on October 28, 2008 (75 FR 66349) and corrected on November 10, 2010 (75 FR 69054), the Department postponed initiation of five companies. We have determined to initiate on two of the companies (listed above). Regarding the three additional companies, the Department does not conduct administrative reviews to investigate transshipment allegations. *See Globe Metallurgical Inc.* v. *United States,* Slip Op. 10–100 (Ct. Int'l Trade Sept. 1, 2010). Petitioners (SSW Holding Company, Inc. and Nashville Wire Products, Inc.) have not provided any reason, other than potential transshipment of subject merchandise, for requesting a review of these three additional companies. Therefore, we are not initiating a review with respect to the following companies: Asia Pacific CIS (Thailand) Co., Ltd.; Taiwan Rail Company; and King Shan Wire Co., Ltd.

[5] If one of the above-named companies does not qualify for a separate rate, all other exporters of Steel Wire Garment Hangers from the PRC who have not qualified for a separate rate are deemed to be covered by this review as part of the single PRC entity of which the named exporter is a part.

[6] In the notice of initiation for September anniversary cases, published in the **Federal Register** on October 28, 2008 (75 FR 66349) and corrected on November 10, 2010 (75 FR 69054), the Department postponed initiation of five companies. We have determined to initiate on two of the companies (listed above). Regarding the three additional companies, the Department does not conduct administrative reviews to investigate transshipment allegations. *See Globe Metallurgical Inc.* v. *United States,* Slip Op. 10–100 (Ct. Int'l Trade Sept. 1, 2010). Petitioners (SSW Holding Company, Inc. and Nashville Wire Products, Inc.) have not provided any reason, other than potential transshipment of subject merchandise, for requesting a review of these three additional companies. Therefore, we are not initiating a review with respect to the following companies: Asia Pacific CIS (Thailand) Co., Ltd.; Taiwan Rail Company; and King Shan Wire Co., Ltd.

During any administrative review covering all or part of a period falling between the first and second or third and fourth anniversary of the publication of an antidumping duty order under section 351.211 or a determination under section 351.218(f)(4) to continue an order or suspended investigation (after sunset review), the Secretary, if requested by a domestic interested party within 30 days of the date of publication of the notice of initiation of the review, will determine, consistent with *FAG Italia* v. *United States, 291 F.3d 806* (Fed Cir. 2002), as appropriate, whether antidumping duties have been absorbed by an exporter or producer subject to the review if the subject merchandise is sold in the United States through an importer that is affiliated with such exporter or producer. The request must include the name(s) of the exporter or producer for which the inquiry is requested.

For the first administrative review of any order, there will be no assessment of antidumping or countervailing duties on entries of subject merchandise entered, or withdrawn from warehouse, for consumption during the relevant provisional-measures "gap" period, of the order, if such a gap period is applicable for the POR.

Interested parties must submit applications for disclosure under administrative protective orders in accordance with 19 CFR 351.305. On January 22, 2008, the Department published *Antidumping and Countervailing Duty Proceedings: Documents Submission Procedures; APO Procedures,* 73 FR 3634 (January 22, 2008). Those procedures apply to administrative reviews included in this notice of intiation. Parties wishing to participate in any of these administrative reviews should ensure that they meet the requirements of these procedures (*e.g.,* the filing of separate letters of appearance as discussed in 19 CFR 351.103(d)).

These initiations and this notice are in accordance with section 751(a) of the Tariff Act of 1930, as amended (19 U.S.C. 1675(a)), and 19 CFR 351.221(c)(1)(i).

Dated: November 22, 2010.

Susan H. Kuhbach,

Acting Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations.

DEPARTMENT OF COMMERCE

International Trade Administration

Renewable Energy and Energy Efficiency Advisory Committee (RE&EEAC)

November 22, 2010.

AGENCY: International Trade Administration, U.S. Department of Commerce.

ACTION: Notice of Open Meeting; Correction.

SUMMARY: The U.S. Department of Commerce published a document in the **Federal Register** of November 17, 2010 concerning a notification of an open

meeting of the Renewable Energy and Energy Efficiency Advisory Committee (RE&EEAC) on December 7, 2010. The document contained an incorrect e-mail address and an incorrect mailing address.

FOR FURTHER INFORMATION CONTACT: Brian O'Hanlon, 202–482–3492.

Correction

In the **Federal Register** of November 17, 2010, in FR Doc. 75–70214 on page 70214 in the second column, correct the e-mail listed under "**FOR FURTHER INFORMATION CONTACT**" header to read:

FOR FURTHER INFORMATION CONTACT: Brian O'Hanlon, Office of Energy and Environmental Industries, International Trade Administration, U.S. Department of Commerce at (202) 482–3492; e-mail: *brian.ohanlon@trade.gov.* This meeting is physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to OEEI at (202) 482–5225.

Correction

In the **Federal Register** of November 17, 2010, in FR Doc. 75–70214 on page 70214 in the third column, correct the address "*Public Participation*" to read:

Public Participation: The meeting is open to the public and the room is disabled-accessible. Public seating is limited and available on a first-come, first-served basis. Members of the public wishing to attend the meeting must notify Brian O'Hanlon at the contact information above by 5 p.m. EST on Thursday, December 2, in order to pre-register for clearance into the building. Please specify any requests for reasonable accommodation at least five business days in advance of the meeting. Last minute requests will be accepted, but may be impossible to fill. A limited amount of time, from 3 p.m.–3:30 p.m., will be available for pertinent brief oral comments from members of the public attending the meeting.

Any member of the public may submit pertinent written comments concerning the RE&EEAC's affairs at any time before or after the meeting. Comments may be submitted to the Renewable Energy and Energy Efficiency Advisory Committee, C/O: Brian O'Hanlon, Office of Energy and Environmental Technologies, U.S. Department of Commerce, Mail Stop: 4053, 1401 Constitution Avenue, NW., Washington, DC 20230. To be considered during the meeting, written comments must be received no later than 5 p.m. EST on Thursday, December 2, 2010, to ensure transmission to the Committee prior to the meeting. Comments received after that date will be distributed to the members but may not be considered at the meeting.

Edward A. O'Malley,

Director, Office of Energy and Environmental Industries.

Certain Tissue Paper Products From the People's Republic of China: Notice of Partial Rescission and Extension of Time Limit for Preliminary Results of 2009–2010 Antidumping Duty Administrative Review

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

SUMMARY: The U.S. Department of Commerce (the Department) is rescinding in part the administrative review of the antidumping duty order on certain tissue paper products from the People's Republic of China (PRC) for the period of review (POR) of March 1, 2009, to February 28, 2010, with respect to Max Fortune Industrial Limited (Max Fortune Industrial), Max Fortune (FZ) Paper Products Co., Ltd. (formerly known as Max Fortune (FETDE) Paper Products Co., Ltd.) (Max Fortune Fuzhou), and Fujian Provincial Shaowu City Huaguang Special Craft Co., Ltd. (Huaguang Special Craft). This partial rescission is based on the timely withdrawal of the requests for review by the only interested parties that requested the review of these companies. The Department is also fully extending the time limit for completion of the preliminary results of this administrative review with respect to Max Fortune (Vietnam) Paper Products Company Limited (Max Fortune Vietnam) to no later than March 31, 2011.

DATES: *Effective Date:* November 29, 2010.

FOR FURTHER INFORMATION CONTACT: Brian Smith or Gemal Brangman, AD/CVD Operations, Office 2, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue, NW., Washington, DC 20230; telephone (202) 482–1766 or (202) 482–3773, respectively.

SUPPLEMENTARY INFORMATION:

Background

On March 1, 2010, the Department published a notice of opportunity to request an administrative review of the antidumping duty order on certain tissue paper products from the PRC. *See Antidumping or Countervailing Duty Order, Finding, or Suspended Investigation; Opportunity to Request Administrative Review,* 75 FR 9162 (March 1, 2010). In response, on March 31, 2010, the petitioner [1] timely requested an administrative review of the antidumping duty order on certain tissue paper products from the PRC for entries of the subject merchandise during the POR, from Max Fortune Industrial, Max Fortune Fuzhou, and Max Fortune Vietnam (*i.e.,* exporters of the subject merchandise). Similarly, in a letter dated March 31, 2010, Huaguang Special Craft (*i.e.,* an exporter of the subject merchandise) submitted a timely request for an administrative review of its entries of the subject merchandise during the POR. Therefore, on April 19, 2010, the Department initiated a review of Max Fortune Industrial, Max Fortune Fuzhou, Max Fortune Vietnam, and Huaguang Special Craft. *See Initiation of Antidumping and Countervailing Duty Administrative Reviews and Request for Revocation in Part,* 75 FR 22107 (April 27, 2010).

In a letter dated July 6, 2010, Huaguang Special Craft informed the Department that it had withdrawn from this review and would no longer be participating in this segment of the proceeding. In a letter dated July 26, 2010, the petitioner withdrew its request for review of Max Fortune Industrial and Max Fortune Fuzhou, and requested that the Department rescind the review with respect to these companies. No other parties requested a review of Max Fortune Industrial, Max Fortune Fuzhou, or Huaguang Special Craft. The request for review of Max Fortune Vietnam was not withdrawn, and therefore, this administrative review will continue with respect to that company to examine its claim that it did not use PRC jumbo rolls or sheets of tissue paper in its shipments of tissue paper to the United States during the period of review. Max Fortune Vietnam is also a respondent in an ongoing anticircumvention inquiry and the Department intends to conduct verification of the above-mentioned claim in the context of that segment (*see* discussion below).

On March 29, 2010, the Department also initiated a circumvention inquiry on certain imports of tissue paper from

[1] The petitioner is Seaman Paper Company of Massachusetts, Inc.

Vietnam. *See Certain Tissue Paper Products from the People's Republic of China: Initiation of Anti-circumvention Inquiry,* 75 FR 17127 (April 5, 2010) (*Initiation*). In the *Initiation* notice, the Department stated that it would focus its analysis on the significance of the production process in Vietnam by Max Fortune Vietnam, the company the petitioner identified in its circumvention request (which is the same company on which the Department initiated an administrative review). In its June 28, 2010, response to the Department's April 23, 2010, questionnaire in the anticircumvention inquiry, Max Fortune Vietnam claimed that it did not export tissue paper to the United States produced from jumbo rolls imported from the PRC since January 2008. Likewise, in its August 17, 2010, response to the Department's May 7, 2010, questionnaire, in this review, Max Fortune Vietnam claimed that it did not export subject merchandise from the PRC or Vietnam.

Rescission, in Part, of Administrative Review

Pursuant to 19 CFR 351.213(d)(1), the Secretary will rescind an administrative review, in whole or in part, if the party who requested the review withdraws the request within 90 days of the date of publication of the notice of initiation of the requested review. Accordingly, the petitioner timely withdrew its request for review of Max Fortune Industrial and Max Fortune Fuzhou. In addition, Huaguang Special Craft withdrew its own request for review within the 90-day period. Because no other party requested a review of these companies' entries, we are rescinding this administrative review with respect to these companies in accordance with 19 CFR 351.213(d)(1).

Extension of Time Limits for Preliminary Results

Section 751(a)(3)(A) of the Tariff Act of 1930, as amended (the Act), requires the Department to issue the preliminary results of an administrative review within 245 days after the last day of the anniversary month of the date of publication of an order for which a review is requested. If it is not practicable to complete the review within this time period, section 751(a)(3)(A) of the Act allows the Department to extend this deadline to a maximum of 365 days.

As noted above, Max Fortune Vietnam claimed that it made no shipments from Vietnam of tissue paper made from PRC-origin jumbo rolls or sheets to the U.S. market during the POR. Data on the record does indicate, however, that Max Fortune Vietnam has exported tissue paper from Vietnam to the U.S. market during the period overlapping the administrative review POR. In response to the Department's questionnaire in the anticircumvention inquiry, Max Fortune Vietnam claimed that it has not exported to the United States tissue paper produced from jumbo rolls imported from the PRC since January 2008. Depending on the Department's finding in the anticircumvention segment, Max Fortune Vietnam may or may not continue to be a respondent in the administrative review. Because the Department intends to conduct verification of Max Fortune Vietnam's claims in the circumvention segment, the results of that verification will directly impact the administrative review segment of this proceeding. The Department, therefore, requires additional time in this review to make a preliminary finding on Max Fortune Vietnam's "no shipment" claim. For this reason, it is not practicable to complete this review within the original time limit. Thus, the Department is fully extending the time limit for completion of the preliminary results by 120 days to 365 days, in accordance with section 751(a)(3)(A) of the Act. The preliminary results are now due no later than March 31, 2011. The final results continue to be due 120 days after publication of the preliminary results.

Assessment

For the companies for which the Department is rescinding this review, the Department will instruct U.S. Customs and Border Protection (CBP) to assess antidumping duties on all appropriate entries. Therefore, for Max Fortune Industrial, Max Fortune Fuzhou, and Huaguang Special Craft, antidumping duties shall be assessed, if applicable, at rates equal to the cash deposit of estimated antidumping duties required at the time of entry, or withdrawal from warehouse, for consumption, in accordance with 19 CFR 351.212(c)(1)(i). The Department intends to issue appropriate assessment instructions directly to CBP 15 days after publication of this notice.

Notification to Importers

This notice serves as a reminder to importers of their responsibility under 19 CFR 351.402(f)(2) to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during this review period. Failure to comply with this requirement could result in the Secretary's presumption that reimbursement of antidumping duties occurred and the subsequent assessment of double antidumping duties.

Notification Regarding Administrative Protective Orders

This notice also serves as a reminder to parties subject to administrative protective orders (APO) of their responsibility concerning the return or destruction of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3), which continues to govern business proprietary information in this segment of the proceeding. Timely written notification of the return or destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and the terms of an APO is a sanctionable violation.

This notice is published in accordance with sections 751(a)(3)(A) and 777(i) of the Act, and 19 CFR 351.213(d)(4) and 351.213(h)(2).

Dated: November 19, 2010.

Susan H. Kuhbach,

Acting Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations.

BILLING CODE 3510–DS–P

DEPARTMENT OF COMMERCE

International Trade Administration

[A–570–967]

Aluminum Extrusions From the People's Republic of China: Postponement of Final Determination of Sales at Less Than Fair Value

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

DATES: *Effective Date:* November 29, 2010.

FOR FURTHER INFORMATION CONTACT: Paul Stolz or Lori Apodaca, 14th Street and Constitution Avenue, NW., Washington, DC 20230; telephone: (202) 482–4474 and (202) 482–4551, respectively.

Postponement of Final Determination

The Department of Commerce ("Department") initiated the antidumping duty investigation of aluminum extrusions from the People's Republic of China ("PRC") on April 27, 2010.[1] On November 12, 2010, the Department published the *Preliminary*

[1] *See Aluminum Extrusions from the People's Republic of China: Initiation of Antidumping Duty Investigation,* 75 FR 22109 ("*Initiation Notice*").

Determination in the **Federal Register.**[2] The final determination of this antidumping duty investigation is currently due on January 10, 2011.

Section 735(a)(2) of the Tariff Act of 1930 ("the Act") provides that a final determination may be postponed until not later than 135 days after the date of the publication of the preliminary determination if, in the event of an affirmative determination, a request for such postponement is made by exporters who account for a significant proportion of exports of the subject merchandise, or in the event of a negative preliminary determination, a request for such postponement is made by petitioner. In addition, 19 CFR 351.210(e)(2) requires that requests by respondents for postponement of a final determination be accompanied by a request for extension of provisional measures from a four-month period to not more than six months.

On November 1, 2010, Guang Ya Aluminium Industries Co., Ltd., Foshan Guangcheng Aluminium Co., Ltd., Kong Ah International Company Limited, and Guang Ya Aluminium Industries (Hong Kong) Limited, (collectively, "Guang Ya Group"), one of the entities comprising the sole active mandatory respondent in this investigation, requested an extension of the final determination and extension of the provisional measures.[3] Thus, because the *Preliminary Determination* is affirmative, the respondent requesting extension of the final determination and extension of the provisional measures accounts for significant proportion of exports of the subject merchandise, and no compelling reasons for denial exist, we are extending the due date for the final determination in this investigation to no later than 135 days after the date of the publication of the preliminary determination.

For the reasons identified above, we are postponing the final determination until March 28, 2011.[4]

This notice is issued and published pursuant to sections 777(i) and 735(a)(2) of the Act and 19 CFR 351.210(g).

Dated: November 15, 2010.

Ronald K. Lorentzen,

Deputy Assistant Secretary for Import Administration.

1-Hydroxyethylidene-1, 1-Diphosphonic Acid From India: Preliminary Results of Antidumping Duty Administrative Review

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

SUMMARY: In response to a timely request by one manufacturer/exporter, Aquapharm Chemicals Pvt., Ltd. (Aquapharm), the Department of Commerce (the Department) is conducting an administrative review of the antidumping duty order on 1-hydroxyethylidene-1, 1-diphosphonic acid (HEDP) from India with respect to Aquapharm. The review covers the period April 23, 2009, through March 31, 2010. We preliminarily determine that Aquapharm did not make sales below normal value (NV).

If the preliminary results are adopted in our final results of the administrative review, we will issue appropriate assessment instructions to U.S. Customs and Border Protection (CBP).

FOR FURTHER INFORMATION CONTACT: David Goldberger or Brandon Custard, AD/CVD Operations, Office 2, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue, NW., Washington, DC, 20230; telephone (202) 482–4136 or (202) 482–1823, respectively.

SUPPLEMENTARY INFORMATION:

Background

In response to a timely request by Aquapharm, on May 28, 2010, the Department published in the **Federal Register** a notice of initiation of an administrative review of the antidumping duty order on HEDP from India with respect to Aquapharm covering the period April 23, 2009, through March 31, 2010. *See Initiation of Antidumping and Countervailing Duty Administrative Reviews,* 75 FR 29976 (May 28, 2010).

On June 11, 2010, we issued the antidumping duty questionnaire to Aquapharm. On July 19, 2010, we received a response to section A (*i.e.,* the section covering general information about the company), and on August 10, 2010, we received responses to sections B (*i.e.,* the section covering comparison-market sales) and C (*i.e.,* the section covering U.S. sales) of the antidumping duty questionnaire from Aquapharm.

On September 15, 2010, we issued to Aquapharm a supplemental questionnaire regarding its responses to sections A, B, and C of the original questionnaire, and received a response to this supplemental questionnaire on September 29, 2010.

Scope of the Order

The merchandise covered by this order includes all grades of aqueous, acidic (non-neutralized) concentrations of 1-hydroxyethylidene-1, 1-diphosphonic acid,[1] also referred to as hydroxethlylidenediphosphonic acid, hydroxyethanediphosphonic acid, acetodiphosphonic acid, and etidronic acid. The CAS (Chemical Abstract Service) registry number for HEDP is 2809–21–4. The merchandise subject to this order is currently classified in the Harmonized Tariff Schedule of the United States (HTSUS) at subheading 2931.00.9043. It may also enter under HTSUS subheading 2811.19.6090. While HTSUS subheadings are provided for convenience and customs purposes only, the written description of the scope of this order is dispositive.

Period of Review

The period of review (POR) is April 23, 2009, through March 31, 2010.

Comparisons to Normal Value

To determine whether Aquapharm's sales of HEDP from India to the United States were made at less than NV, we compared the export price (EP) or constructed export price (CEP) to NV, as described in the "Export Price and Constructed Export Price" and "Normal Value" sections of this notice.

Pursuant to section 777A(d)(2) of the Tariff Act of 1930, as amended (the Act), we compared the EPs and CEPs of individual U.S. transactions to the weighted-average NV of the foreign like product where there were sales made in the ordinary course of trade. *See* discussion below.

Product Comparisons

In accordance with section 771(16) of the Act, we considered all products produced by Aquapharm covered by the

[1] $C_2H_8O_7P_2$ or $C(CH_3)(OH)(PO_3H_2)_2$.

[2] *See Aluminum Extrusions from the People's Republic of China: Notice of Preliminary Determination of Sales at Less Than Fair Value, and Preliminary Determination of Targeted Dumping,* 75 FR 69403 (November 12, 2010) ("*Preliminary Determination*").

[3] *See* Aluminum Extrusions from the PRC: Request by Guang Ya Group for an Extension of the Final Determination (November 1, 2010). *See also Preliminary Determination,* finding that Guang Ya Group, Zhaoqing New Zhongya Aluminum Co., Ltd., Zhongya Shaped Aluminium (HK) Holding Limited and Karlton Aluminum Company Ltd., and Xinya Aluminum & Stainless Steel Product Co., Ltd. should be considered a single entity for purposes of this investigation.

[4] March 27, 2011, is 135 days after the date of the publication of the preliminary determination. However, because March 27, 2011, is a Sunday, we will postpone the due date to the next business day, Monday, March 28, 2011.

description in the "Scope of the Order" section, above, to be foreign like products for purposes of determining appropriate product comparisons to U.S. sales. Pursuant to 19 CFR 351.414(e)(2), we compared Aquapharm's U.S. sales of HEDP to its sales of HEDP made in the home market. Where there were no contemporaneous sales within the definition of 19 CFR 351.414(e)(2)(i), pursuant to 19 CFR 351.414(e)(2)(ii) and (iii), we compared sales within the contemporaneous window period, which extends from three months prior to the month of the U.S. sale until two months after the sale. In making the product comparisons, we matched foreign like products based on their aqueous concentration. Aquapharm reported that, pursuant to section 771(16)(A) of the Act, all of its U.S. sales during the POR were identical based on the product matching criterion (*i.e.,* aqueous concentration) to contemporaneous sales in the home market. Accordingly, in calculating Aquapharm's NV, we made product comparisons without having to account for cost differences associated with differences in the physical characteristics of the merchandise pursuant to section 773(a)(6)(C)(ii) of the Act.

Export Price and Constructed Export Price

In accordance with section 772(a) of the Act, we calculated EP for those sales where the subject merchandise was sold to the first unaffiliated purchaser in the United States prior to importation and CEP methodology was not otherwise warranted based on the facts of the record. We based EP on the packed delivered price to unaffiliated purchasers in the United States. Where appropriate, pursuant to 19 CFR 351.401(c), we adjusted the starting prices for billing adjustments. We made deductions for movement expenses in accordance with section 772(c)(2)(A) of the Act, which included, where appropriate, foreign inland freight from plant to the port of exportation, foreign brokerage and handling, U.S. brokerage and handling, international freight, U.S. inland freight to the customer, marine insurance, and U.S. customs duties (including harbor maintenance fees and merchandise processing fees).

Pursuant to section 772(b) of the Act, we calculated CEP for those sales where the subject merchandise was first sold or agreed to be sold in the United States before or after the date of importation by or for the account of the producer or exporter or by a seller affiliated with the producer or exporter, to a purchaser not affiliated with the producer or exporter. We based CEP on the packed ex-U.S. warehouse prices to unaffiliated purchasers in the United States. Where appropriate, pursuant to 19 CFR 351.401(c), we adjusted the starting prices for billing adjustments. We made deductions for movement expenses, in accordance with section 772(c)(2)(A) of the Act, which included, where appropriate, foreign inland freight from plant to the port of exportation, foreign brokerage and handling, U.S. brokerage and handling, international freight (inclusive of U.S. port to U.S. warehouse transportation), marine insurance, U.S. customs duties (including harbor maintenance fees and merchandise processing fees), and warehouse expenses. In accordance with section 772(d)(1) of the Act and 19 CFR 351.402(b), we deducted those selling expenses associated with economic activities occurring in the United States, including direct selling expenses (*i.e.,* credit expenses, commissions, and bank charges), and indirect selling expenses (including inventory carrying costs). We also deducted from CEP an amount for profit in accordance with section 772(d)(3) of the Act. In accordance with sections 772(f)(1) and (2)(C)(iii) of the Act, we calculated the CEP profit percentage using information from Aquapharm's audited financial statement. *See* Memorandum entitled "Aquapharm Preliminary Results Margin Calculation," dated contemporaneously with this notice, for further discussion of the CEP profit calculation.

Normal Value

A. Home Market Viability and Selection of Comparison Market

To determine whether there was a sufficient volume of sales in the home market to serve as a viable basis for calculating NV, we compared the volume of home market sales of the foreign like product to the volume of U.S. sales of the subject merchandise, in accordance with section 773(a)(1)(C) of the Act. Based on this comparison, we determined that, pursuant to 19 CFR 351.404(b), Aquapharm had a viable home market during the POR. Consequently, pursuant to section 773(a)(1)(B)(i) of the Act and 19 CFR 351.404(c)(i), we based NV on home market sales.

B. Level of Trade

Section 773(a)(1)(B)(i) of the Act states that, to the extent practicable, the Department will calculate NV based on sales of the foreign like product at the same level of trade (LOT) as the EP or CEP. Sales are made at different LOTs if they are made at different marketing stages (or their equivalent). *See* 19 CFR 351.412(c)(2). Substantial differences in selling activities are a necessary, but not sufficient condition for determining that there is a difference in the stages of marketing. *See id.; see also Notice of Final Determination of Sales at Less Than Fair Value: Certain Cut-to-Length Carbon Steel Plate From South Africa,* 62 FR 61731, 61732 (November 19, 1997) (*Plate from South Africa*). To determine whether the comparison-market sales were at different stages in the marketing process than the U.S. sales, we reviewed the distribution system in each market (*i.e.,* the chain of distribution), including selling functions, class of customer (customer category), and the level of selling expenses for each type of sale.

Pursuant to section 773(a)(1)(B)(i) of the Act, in identifying LOTs for EP and comparison-market sales (*i.e.,* where NV is based on either home market or third country prices),[2] we consider the starting prices before any adjustments. For CEP sales, we consider only the selling activities reflected in the price after the deduction of expenses and profit under section 772(d) of the Act. *See Micron Technology, Inc.* v. *United States,* 243 F. 3d 1301, 1314–16 (Fed. Cir. 2001). When the Department is unable to match U.S. sales of the foreign like product in the comparison market at the same LOT as the EP or CEP, the Department may compare the U.S. sales to sales at a different LOT in the comparison market. In comparing EP or CEP sales at a different LOT in the comparison market, where available data make it practicable, we make an LOT adjustment under section 773(a)(7)(A) of the Act. Finally, for CEP sales only, if the NV LOT is at a more advanced stage of distribution than the LOT of the CEP and there is no basis for determining whether the difference in LOTs between NV and CEP affects price comparability (*i.e.,* no LOT adjustment was practicable), the Department shall grant a CEP offset, as provided in section 773(a)(7)(B) of the Act. *See Plate from South Africa,* 62 FR at 61732–33.

In this administrative review, we obtained information from Aquapharm regarding the marketing stages involved in making its reported home market and U.S. sales, including a description of the selling activities performed by Aquapharm for each channel of distribution.

[2] Where NV is based on constructed value (CV), we determine the NV LOT based on the LOT of the sales from which we derive selling expenses, general and administrative (G&A) expenses, and profit for CV, where possible.

Aquapharm reported that during the POR it sold HEDP to end-users, distributors, and end-users/distributors through three channels of distribution in the United States, and to end-users and traders through two channels of distribution in the home market.

Aquapharm made CEP sales in the U.S. market through one channel of distribution: sales through an unaffiliated U.S. selling agent to an unaffiliated U.S. distributor of HEDP maintained in inventory at an unaffiliated U.S. warehouse (Channel 1). In addition, Aquapharm made EP sales in the U.S. market through two channels of distribution: Direct sales/shipments to unaffiliated U.S. end-users (Channel 2); and direct sales/shipments to unaffiliated U.S. distributors (Channel 3).

We examined the selling activities performed for the three U.S. sales channels and found that Aquapharm performed the following selling functions for each channel: sales forecasting, order input/processing, direct sales personnel, packing, freight and delivery services, inventory maintenance, technical assistance, warranty service, and after-sales service. These selling activities can be generally grouped into four selling function categories for analysis: (1) Sales and marketing; (2) freight and delivery; (3) warehousing and inventory; and (4) warranty and technical support. Accordingly, based on the four selling function categories, we find that Aquapharm performed primarily sales and marketing, freight and delivery services, and warranty and technical services for U.S. sales. Although Aquapharm performed additional freight and delivery functions, (such as repacking) and warehousing functions for its U.S. sales through Channel 1, we did not find these differences to be material selling function distinctions which are significant enough to warrant a separate LOT in the U.S. market. Therefore, we preliminarily determine that there is one LOT in the U.S. market because Aquapharm performed essentially the same selling functions for all U.S. sales.

With respect to the home market, Aquapharm made sales through the following channels of distribution: (1) Sales to unaffiliated end-users (Channel 1); and sales to unaffiliated traders (Channel 2). We examined the selling activities performed for each home market sales channel and found that Aquapharm performed the following selling functions for sales made through both channels: Sales forecasting, order input/processing, advertising, direct sales personnel, sales/marketing support, market research, packing, freight and delivery services, inventory maintenance, technical assistance, and warranty service. Accordingly, based on the four selling function categories described above, we find that Aquapharm performed primarily sales and marketing, freight and delivery services, and warranty and technical services for home market sales. Moreover, we did not find any significant distinctions between the selling functions Aquapharm performed for each home market channel to warrant a separate LOT in the home market. Therefore, we preliminarily determine that there is one LOT in the home market because Aquapharm performed essentially the same selling functions for all home market sales.

Finally, we compared the U.S. LOT to the home market LOT and found that the selling functions performed for home market sales are either performed at the same degree of intensity as, or vary only slightly from, the selling functions performed for U.S. sales. Specifically, we found that with respect to the four selling function categories, there are only slight differences in the level of intensity between the home and U.S. markets, and have preliminarily determined that these slight differences do not provide a sufficient basis to find separate LOTs between the two markets. Therefore, we find that the single home market LOT and single U.S. LOT are the same and, as a result, no LOT adjustment or CEP offset is warranted. Accordingly, we matched U.S. and home market sales at the same LOT.

C. Calculation of Normal Value Based on Comparison-Market Prices

We based NV for Aquapharm on delivered prices to unaffiliated customers in the home market. We made deductions, where appropriate, from the starting price for discounts, inland freight expenses and inland insurance expenses, under section 773(a)(6)(B)(ii) of the Act. Where appropriate, we also added freight and insurance revenue to the starting price, and capped it by the amount of freight and insurance expenses incurred, in accordance with our practice. *See, e.g., Certain Orange Juice from Brazil: Final Results of Antidumping Duty Administrative Review and Notice of Intent Not To Revoke Antidumping Duty Order in Part,* 75 FR 50999 (August 18, 2010), and accompanying Issues and Decision Memorandum at Comment 2.

Pursuant to section 773(a)(6)(C)(iii) of the Act and 19 CFR 351.410(b), we made, where appropriate, circumstance-of-sale adjustments for imputed credit expenses and bank charges. We also made adjustments in accordance with 19 CFR 351.410(e) for indirect selling expenses incurred on comparison market or U.S. sales where commissions were granted on sales in one market but not the other. Specifically, where commissions were granted in the U.S. market but not in the comparison market, we made a downward adjustment to NV for the lesser of: (1) The amount of the commission paid in the U.S. market; or (2) the amount of the indirect selling expenses incurred in the comparison market. We also deducted home market packing costs and added U.S. packing costs, in accordance with sections 773(a)(6)(A) and (B) of the Act.

Currency Conversion

We made currency conversions into U.S. dollars in accordance with section 773A of the Act and 19 CFR 351.415, based on the exchange rates in effect on the dates of the U.S. sales as certified by the Federal Reserve Bank.

Preliminary Results of the Review

We preliminarily determine that the following weighted-average dumping margin exists for Aquapharm for the period April 23, 2009, through March 31, 2010:

Manufacturer/exporter	Percent margin
Aquapharm Chemicals Pvt., Ltd.	0.00

Disclosure and Public Hearing

The Department will disclose to parties the calculations performed in connection with these preliminary results within five days of the date of publication of this notice. *See* 19 CFR 351.224(b). Pursuant to 19 CFR 351.309, interested parties may submit case briefs not later than 30 days after the date of publication of this notice. Rebuttal briefs, limited to issues raised in the case briefs, may be filed not later than five days after the date for filing case briefs. Parties who submit case briefs or rebuttal briefs in this proceeding are encouraged to submit with each argument: (1) A statement of the issue; (2) a brief summary of the argument; and (3) a table of authorities.

Interested parties who wish to request a hearing or to participate if one is requested must submit a written request to the Assistant Secretary for Import Administration, Room 1870, within 30 days of the date of publication of this notice. Requests should contain: (1) The party's name, address and telephone number; (2) the number of participants; and (3) a list of issues to be discussed. *See* 19 CFR 351.310(c). Issues raised in

the hearing will be limited to those raised in the respective case briefs.

The Department will issue the final results of this administrative review, including the results of its analysis of issues raised in any written briefs, not later than 120 days after the date of publication of this notice, pursuant to section 751(a)(3)(A) of the Act.

Assessment Rates

Upon completion of the administrative review, the Department shall determine, and CBP shall assess, antidumping duties on all appropriate entries, in accordance with 19 CFR 351.212. The Department intends to issue appropriate appraisement instructions for the company subject to this review directly to CBP 15 days after the date of publication of the final results of this review.

Where the respondent reported entered value for its U.S. sales, we will calculate importer-specific *ad valorem* duty assessment rates based on the ratio of the total amount of antidumping duties calculated for the examined sales to the total entered value of the examined sales for that importer.

Where the respondent did not report entered value for its U.S. sales, we will calculate importer-specific per-unit duty assessment rates by aggregating the total amount of antidumping duties calculated for the examined sales and dividing this amount by the total quantity of those sales. To determine whether the duty assessment rates are *de minimis,* in accordance with the requirement set forth in 19 CFR 351.106(c)(2), we will calculate importer-specific *ad valorem* ratios based on the estimated entered value.

We will instruct CBP to assess antidumping duties on all appropriate entries covered by this review if any importer-specific assessment rate calculated in the final results of this review is above *de minimis* (*i.e.,* at or above 0.50 percent). Pursuant to 19 CFR 351.106(c)(2), we will instruct CBP to liquidate without regard to antidumping duties any entries for which the assessment rate is *de minimis* (*i.e.,* less than 0.50 percent). The final results of this review shall be the basis for the assessment of antidumping duties on entries of merchandise covered by the final results of this review and for future deposits of estimated duties, where applicable.

The Department clarified its "automatic assessment" regulation on May 6, 2003. *See Antidumping and Countervailing Duty Proceedings: Assessment of Antidumping Duties,* 68 FR 23954 (May 6, 2003) (*Assessment Policy Notice*). This clarification will apply to entries of subject merchandise during the POR produced by the company included in these final results of review for which the reviewed company did not know that the merchandise it sold to the intermediary (*e.g.,* a reseller, trading company, or exporter) was destined for the United States. In such instances, we will instruct CBP to liquidate unreviewed entries at the all-others rate effective during the POR if there is no rate for the intermediary involved in the transaction. *See Assessment Policy Notice* for a full discussion of this clarification.

Cash Deposit Requirements

The following cash deposit requirements will be effective for all shipments of the subject merchandise entered, or withdrawn from warehouse, for consumption on or after the publication date of the final results of this administrative review, as provided by section 751(a)(2)(C) of the Act: (1) The cash deposit rate for the company listed above will be that established in the final results of this review, except if the rate is less than 0.50 percent and, therefore, *de minimis* within the meaning of 19 CFR 351.106(c)(1), in which case the cash deposit rate will be zero; (2) for previously reviewed or investigated companies not participating in this review, the cash deposit rate will continue to be the company-specific rate published for the most recent period; (3) if the exporter is not a firm covered in this review or the original less-than-fair-value (LTFV) investigation, but the manufacturer is, the cash deposit rate will be the rate established for the most recent period for the manufacturer of the merchandise; and (4) the cash deposit rate for all other manufacturers or exporters will continue to be 3.10 percent, the all-others rate made effective by the LTFV investigation. *See 1–Hydroxyethylidene–1, 1–Diphosphonic Acid from India: Notice of Final Determination of Sales at Less Than Fair Value,* 74 FR 10543 (March 11, 2009). These requirements, when imposed, shall remain in effect until further notice.

Notification to Importers

This notice also serves as a preliminary reminder to importers of their responsibility under 19 CFR 351.402(f) to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during this review period. Failure to comply with this requirement could result in the Secretary's presumption that reimbursement of antidumping duties occurred and the subsequent assessment of double antidumping duties.

This administrative review and notice are published in accordance with sections 751(a)(1) and 777(i)(1) of the Act and 19 CFR 351.221.

Dated: November 19, 2010.

Ronald K. Lorentzen,

Deputy Assistant Secretary for Import Administration.

DEPARTMENT OF COMMERCE

International Trade Administration

[A–570–896]

Magnesium Metal From the People's Republic of China: Rescission of Antidumping Duty Administrative Review

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

DATES: November 29, 2010.

SUMMARY: On May 28, 2010, the U.S. Department of Commerce ("the Department") published a notice of initiation of an administrative review of the antidumping duty order on magnesium metal from the People's Republic of China ("PRC").[1] The review covers one manufacturer/exporter of subject merchandise from the PRC, Tianjin Magnesium International Co., Ltd. ("TMI"). The period of review ("POR") is April 1, 2009, through March 31, 2010. Following the receipt of a certification of no shipments from TMI, we notified all interested parties of the Department's intent to rescind this review and provided an opportunity to comment on the rescission.[2] We received no comments. Therefore, we are rescinding this administrative review.

FOR FURTHER INFORMATION CONTACT: Laurel LaCivita, AD/CVD Operations, Office 8, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue, NW., Washington, DC 20230; *telephone:* (202) 482–4243.

SUPPLEMENTARY INFORMATION:

[1] *See Initiation of Antidumping and Countervailing Duty Administrative Reviews,* 75 FR 29976 (May 28, 2010) ("*Initiation*").

[2] *See* Memorandum to the File, "Magnesium Metal from the People's Republic of China: Intent to Rescind the 2009–2010 Antidumping Duty Administrative Review of Magnesium Metal from the People's Republic of China—A–570–896," dated November 1, 2010 ("Intent to Rescind Memorandum").

Background

On April 1, 2010, the Department published a notice of opportunity to request an administrative review of the antidumping duty order on magnesium metal from the PRC for the period April 1, 2009, through March 31, 2010.[3] On April 30, 2010, U.S. Magnesium LLC ("U.S. Magnesium"), a domestic producer and Petitioner in the underlying investigation of this case, made a timely request that the Department conduct an administrative review of TMI.[4] On May 28, 2010, in accordance with section 751(a) of the Tariff Act of 1930, as amended ("the Act"), the Department published in the **Federal Register** a notice of initiation of this antidumping duty administrative review.[5] On June 28, 2010, TMI submitted a letter to the Department certifying that it did not export magnesium metal for consumption in the United States during the POR.

On June 30, 2010, the Department placed on the record information obtained in response to the Department's query to U.S. Customs and Border Protection ("CBP") concerning imports into the United States of subject merchandise during the POR. This data indicates that TMI made an entry of merchandise during the POR under the tariff item that includes magnesium metal.[6]

On July 14, 2010, TMI explained that it correctly classified the merchandise in question using the same Harmonized Tariff System ("HTS") category as magnesium metal.[7] However, TMI noted that the merchandise in question is covered by the scope of the antidumping duty order on pure magnesium from the PRC.[8] Moreover, TMI maintained that it reported, and the Department reviewed and verified, the merchandise at issue during the 2008–2009 review of pure magnesium from the PRC.[9]

On October 19, 2010, the Department placed on the record of this review, copies of the entry documents received from CBP.[10] These documents indicate that the merchandise at issue does not consist of subject merchandise.[11] Rather, this merchandise is included in the scope of the order or pure magnesium, which states in relevant part:[12]

> (3) Products that contain 50% or greater, but less than 99.8% primary magnesium, by weight, and that do not conform to ASTM specifications for alloy magnesium (generally referred to as "off-specification pure" magnesium).
>
> "Off-specification pure" magnesium is pure primary magnesium containing magnesium scrap, secondary magnesium, oxidized magnesium or impurities (whether or not intentionally added) that cause the primary magnesium content to fall below 99.8% by weight. It generally does not contain, individually or in combination, 1.5% or more, by weight, of the following alloying elements: aluminum, manganese, zinc, silicon, thorium, zirconium and rare earths.

On November 1, 2010, the Department notified interested parties of its intent to rescind this administrative review and gave parties until November 8, 2010, to provide comments. We did not receive any comments.

Scope of the Order

The product covered by this antidumping duty order is magnesium metal, which includes primary and secondary alloy magnesium metal, regardless of chemistry, raw material source, form, shape, or size. Magnesium is a metal or alloy containing by weight primarily the element magnesium. Primary magnesium is produced by decomposing raw materials into magnesium metal. Secondary magnesium is produced by recycling magnesium-based scrap into magnesium metal. The magnesium covered by this order includes blends of primary and secondary magnesium.

The subject merchandise includes the following alloy magnesium metal products made from primary and/or secondary magnesium including, without limitation, magnesium cast into ingots, slabs, rounds, billets, and other shapes, and magnesium ground, chipped, crushed, or machined into raspings, granules, turnings, chips, powder, briquettes, and other shapes: Products that contain 50 percent or greater, but less than 99.8 percent, magnesium, by weight, and that have been entered into the United States as conforming to an "ASTM Specification for Magnesium Alloy"[13] and thus are outside the scope of the existing antidumping orders on magnesium from the PRC (generally referred to as "alloy" magnesium).

The scope of this order excludes: (1) All forms of pure magnesium, including chemical combinations of magnesium and other material(s) in which the pure magnesium content is 50 percent or greater, but less 99.8 percent, by weight, that do not conform to an "ASTM Specification for Magnesium Alloy"[14]; (2) magnesium that is in liquid or molten form; and (3) mixtures containing 90 percent or less magnesium in granular or powder form by weight and one or more of certain non-magnesium granular materials to make magnesium-based reagent mixtures, including lime, calcium metal, calcium silicon, calcium carbide, calcium carbonate, carbon, slag coagulants, fluorspar, nephaline syenite, feldspar, alumina (Al203), calcium aluminate, soda ash, hydrocarbons, graphite, coke, silicon, rare earth metals/mischmetal, cryolite, silica/fly ash, magnesium oxide, periclase, ferroalloys, dolomite lime, and colemanite.[15]

The merchandise subject to this order is classifiable under items 8104.19.00, and 8104.30.00 of the Harmonized Tariff Schedule of the United States

[7] *Id.* at 3.

[8] *Id.*

[9] *Id.* at 4.

[10] *See* Memorandum to the File, "Magnesium Metal from the People's Republic of China: Release of U.S. Entry Documents from the Department's August 17, 2010 Request—A–570–896," ("Release of Entry Documents") dated October 19, 2010.

[11] *See* Release of Entry Documents at Attachment I.

[12] *See Notice of Antidumping Duty Orders: Pure Magnesium From the People's Republic of China, the Russian Federation and Ukraine; Notice of Amended Final Determination of Sales at Less Than Fair Value: Antidumping Duty Investigation of Pure Magnesium From the Russian Federation,* 60 FR 25691 (May 12, 1995).

[13] The meaning of this term is the same as that used by the American Society for Testing and Materials in its *Annual Book of ASTM Standards: Volume 01.02 Aluminum and Magnesium Alloys.*

[14] This material is already covered by existing antidumping orders. *See Notice of Antidumping Duty Orders: Pure Magnesium from the People's Republic of China, the Russian Federation and Ukraine; Notice of Amended Final Determination of Sales at Less Than Fair Value: Antidumping Duty Investigation of Pure Magnesium from the Russian Federation,* 60 FR 25691 (May 12, 1995); and *Antidumping Duty Order: Pure Magnesium in Granular Form from the People's Republic of China,* 66 FR 57936 (Nov. 19, 2001).

[15] This third exclusion for magnesium-based reagent mixtures is based on the exclusion for reagent mixtures in the 2000–2001 investigations of magnesium from China, Israel, and Russia. *See Final Determination of Sales at Less Than Fair Value: Pure Magnesium in Granular Form From the People's Republic of China,* 66 FR 49345 (September 27, 2001); *Final Determination of Sales at Less Than Fair Value: Pure Magnesium From Israel,* 66 FR 49349 (September 27, 2001); *Final Determination of Sales at Not Less Than Fair Value: Pure Magnesium From the Russian Federation,* 66 FR 49347 (September 27, 2001). These mixtures are not magnesium alloys, because they are not chemically combined in liquid form and cast into the same ingot.

("HTSUS"). Although the HTSUS items are provided for convenience and customs purposes, the written description of the merchandise is dispositive.

Rescission of the Administrative Review

Based upon the certifications and the evidence on the record, the Department finds TMI's claim of no shipments of subject merchandise to the United States during the POR to be substantiated. Pursuant to 19 CFR 351.213(d)(3), the Department may rescind an administrative review, in whole or with respect to a particular exporter or producer, if the Secretary concludes that, during the period covered by the review, there were no entries, exports, or sales of the subject merchandise. Therefore, the Department is rescinding this review in accordance with 19 CFR 351.213(d)(3). The Department intends to instruct CBP fifteen days after the publication of this notice to liquidate such entries. Antidumping duties shall be assessed at rates equal to the cash deposit of estimated antidumping duties required at the time of entry, or withdrawal from warehouse, for consumption, in accordance with 19 CFR 351.212(c)(2).

We are issuing and publishing this notice in accordance with sections 751(a)(1) and 777(i) of the Act and 19 CFR 351.213(d)(4).

Dated: November 19, 2010.

Susan H. Kuhbach,

Acting Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations.

[FR Doc. 2010–29965 Filed 11–26–10; 8:45 am]

BILLING CODE 3510–DS–P

CONSUMER PRODUCT SAFETY COMMISSION

[Docket No. CPSC 2010–0112]

Agency Information Collection Activities; Proposed Collection; Comment Request; Prize Competitions and Contests

AGENCY: Consumer Product Safety Commission.

ACTION: Notice.

SUMMARY: The Consumer Product Safety Commission ("CPSC" or "Commission") is announcing an opportunity for public comment on the proposed collection of certain information by the agency. Under the Paperwork Reduction Act of 1995 ("the PRA"), Federal agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information and to allow 60 days for public comment in response to the notice. This notice solicits comments on the proposed collection of information for CPSC-sponsored prize competitions or contests.

DATES: Submit written or electronic comments on the collection of information by January 28, 2011.

ADDRESSES: You may submit comments, identified by Docket No. [CPSC 2010–0112], by any of the following methods:

Electronic Submissions

Submit electronic comments in the following way:

Federal eRulemaking Portal: http://www.regulations.gov. Follow the instructions for submitting comments. To ensure timely processing of comments, the Commission is no longer accepting comments submitted by electronic mail (e-mail), except through *http://www.regulations.gov.*

Written Submissions

Submit written submissions in the following way:

Mail/Hand delivery/Courier (for paper, disk, or CD–ROM submissions), preferably in five copies, to: Office of the Secretary, Consumer Product Safety Commission, Room 502, 4330 East West Highway, Bethesda, MD 20814; telephone (301) 504–7923.

Instructions: All submissions received must include the agency name and docket number for this notice. All comments received may be posted without change, including any personal identifiers, contact information, or other personal information provided, to *http://www.regulations.gov.* Do not submit confidential business information, trade secret information, or other sensitive or protected information electronically. Such information should be submitted in writing.

Docket: For access to the docket to read background documents or comments received, go to *http://www.regulations.gov.*

FOR FURTHER INFORMATION CONTACT: Linda Glatz, Division of Policy and Planning, Office of Information Technology, Consumer Product Safety Commission, 4330 East West Highway, Bethesda, MD 20814, 301–504–7671, *lglatz@cpsc.gov.*

SUPPLEMENTARY INFORMATION: Under the PRA (44 U.S.C. 3501–3520), Federal agencies must obtain approval from the Office of Management and Budget ("OMB") for each collection of information they conduct or sponsor. "Collection of information" is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c), and includes agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA (44 U.S.C. 3506(c)(2)(A)) requires Federal agencies to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information before submitting the collection to the OMB for approval. To comply with this requirement, the CPSC is publishing notice of the proposed collection of information set forth in this document.

With respect to the following collection of information, the CPSC invites comments on these topics: (1) Whether the proposed collection of information is necessary for the proper performance of the CPSC's functions, including whether the information will have practical utility; (2) the accuracy of the CPSC's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques, when appropriate, and other forms of information technology.

Consistent with the OMB Memorandum on the Use of Challenges and Prizes to Promote Open Government (M–10–11, March 8, 2010), the CPSC intends to establish contests and give awards to members of the public to further the mission of the CPSC. The purposes of the proposed contests and awards range from increasing the knowledge and awareness of schoolchildren of certain safety hazards, such as carbon monoxide poisoning, to recognizing outstanding consumer product safety accomplishments of scientists, business leaders, entrepreneurs, and others who have demonstrated support of the CPSC's product safety mission. The CPSC awards and contests will highlight excellence in consumer product safety to motivate, inspire, and guide others, including companies across the supply chain; to increase the number and diversity of the individuals, organizations, and teams that are addressing consumer product safety issues; to educate children and consumers about safety hazards; and to attract more public interest and attention to the issues involving consumer product hazards and safety.

The CPSC is seeking OMB approval for a generic clearance for CPSC's contests and awards. The information to be collected from contestants and award

nominees or nominators includes contact and background information necessary to conduct a contest or award program. Limited background or biographical information similar to data found on a resume, such as a nominee's education and work experience, may be requested for some contests or awards. Additionally, the substantive entries that are the subject of the contests or awards, such as essays, posters, drawings, and videos, descriptions of products, services, or invention descriptions, and statistics on product or service performance or impact, may be requested from contestants and award nominees.

We estimate the burden of this collection of information as follows. The CPSC estimates up to 500 contest or award participants each year. The estimated time to complete a contest or award submission is five hours. In addition, approximately 20 applicants may be asked to provide additional information, a task that may take up to two additional hours to complete. Therefore, the total estimated burden on respondents is 2,540 hours ((500 participants × 5 hours/participant) + (20 applicants × 2 hours/participant) = 2,500 hours + 40 hours = 2,540 hours). The estimated total annual cost of the burden to all respondents is $75,463. This estimate is based on the total estimated burden on respondents (2,540 hours) multiplied against an hourly civilian rate of $29.71 per hour as specified by the Bureau of Labor Statistics, March 2010, All Workers, resulting in a total of $75,463.40 which we have rounded down to $75,463.

We estimate the total annual costs to the Federal government as follows. Ten staff members would support the contest or award activities annually. The CPSC tentatively estimates that each staff member will spend approximately six hours per work week for six months on such contest or award activities. Of the ten staff members, the CPSC tentatively believes that seven will be General Schedule (GS) employees and three will be Senior Executive Service (SES) employees. Accordingly, for seven GS employees, the estimated total annual cost to the Federal government is determined as follows: Seven employees × (six hours/week/employee × 24 weeks) = 1,008 hours. Assuming the employees are at the GS–15, Step 5 level, the hourly rate for such an employee located in the Washington, DC area is $67.21/hour; thus $67.21/hour × 1,008 hours = $67,747.68. For the SES employees three employees × (six hours/week/employee × 24 weeks) = 432 hours. Assuming the employees are at the Level III level for SES employees, the hourly rate for such an employee is approximately $79.47/hour; thus $79.47/hour × 432 hours = $34,331.04. The estimated total annual cost to the Federal government is $67,747.68 + $34,331.04 = $102,078.72, which we have rounded up to $102,079.

Dated: November 22, 2010.

Alberta E. Mills,

Acting Secretary, Consumer Product Safety Commission.

[FR Doc. 2010–29833 Filed 11–26–10; 8:45 am]

BILLING CODE 6355–01–P

CONSUMER PRODUCT SAFETY COMMISSION

Notice of Meeting of Chronic Hazard Advisory Panel on Phthalates and Phthalate Substitutes

AGENCY: Consumer Product Safety Commission.

ACTION: Notice of meeting.

SUMMARY: The Commission announces the third meeting of the Chronic Hazard Advisory Panel (CHAP) on phthalates and phthalate substitutes. The Commission appointed this CHAP to study the effects on children's health of all phthalates and phthalate alternatives as used in children's toys and child care articles, pursuant to section 108 of the Consumer Product Safety Improvement Act of 2008 (CPSIA) (Pub. L. 110–314).

DATES: The meeting will be held Thursday, December 2, and Friday, December 3, 2010. The meeting will begin at approximately 8 a.m. both days. It will end at approximately 5 p.m. on Thursday and approximately 3 p.m. on Friday.

ADDRESSES: The meeting will be held in the fourth floor hearing room in the Commission's offices at 4330 East West Highway, Bethesda, Maryland.

Registration and Webcast: Members of the public who wish to attend the meeting may register on the day of the meeting. This meeting will also be available live via Webcast December 2 and 3, 2010, at *http://www.cpsc.gov/Webcast.* Registration is not necessary to view the Webcast. There will not be any opportunity for public participation at this meeting.

FOR FURTHER INFORMATION CONTACT: Michael Babich, Directorate for Health Sciences, Consumer Product Safety Commission, Bethesda, MD 20814; telephone (301) 504–7253; e-mail *mbabich@cpsc.gov.*

SUPPLEMENTARY INFORMATION: Section 108 of the CPSIA permanently prohibits the sale of any "children's toy or child care article" containing more than 0.1 percent of each of three specified phthalates: Di-(2-ethylhexyl) phthalate (DEHP), dibutyl phthalate (DBP), and benzyl butyl phthalate (BBP). Section 108 of the CPSIA also prohibits, on an interim basis, the sale of any "children's toy that can be placed in a child's mouth" or "child care article" containing more than 0.1 percent of each of three additional phthalates: diisononyl phthalate (DINP), diisodecyl phthalate (DIDP), and di-*n*-octyl phthalate (DnOP).

Moreover, section 108 of the CPSIA requires the Commission to convene a CHAP "to study the effects on children's health of all phthalates and phthalate alternatives as used in children's toys and child care articles." The CPSIA requires the CHAP to complete an examination of the full range of phthalates that are used in products for children and:

- Examine all of the potential health effects (including endocrine disrupting effects) of the full range of phthalates;
- Consider the potential health effects of each of these phthalates, both in isolation and in combination with other phthalates;
- Examine the likely levels of children's, pregnant women's, and others' exposure to phthalates, based on a reasonable estimation of normal and foreseeable use and abuse of such products;
- Consider the cumulative effect of total exposure to phthalates, both from children's products and from other sources, such as personal care products;
- Review all relevant data, including the most recent, best-available, peer-reviewed, scientific studies of these phthalates and phthalate alternatives that employ objective data collection practices or employ other objective methods;
- Consider the health effects of phthalates not only from ingestion but also as a result of dermal, hand-to-mouth, or other exposure;
- Consider the level at which there is a reasonable certainty of no harm to children, pregnant women, or other susceptible individuals and their offspring, considering the best available science, and using sufficient safety factors to account for uncertainties regarding exposure and susceptibility of children, pregnant women, and other potentially susceptible individuals; and
- Consider possible similar health effects of phthalate alternatives used in children's toys and child care articles.

The CHAP's examination must be conducted *de novo,* and the CPSIA contemplates completion of the CHAP's examination within 18 months of the CHAP's appointment. The CHAP must

review prior work on phthalates by the Commission, but it is not to be considered determinative.

The CHAP must make recommendations to the Commission regarding any phthalates (or combinations of phthalates) in addition to those identified in section 108 of the CPSIA or phthalate alternatives that the panel determines should be prohibited from use in children's toys or child care articles or otherwise restricted. The CHAP members were selected by the Commission from scientists nominated by the National Academy of Sciences. See 15 U.S.C. 2077, 2030(b).

The CHAP met previously on April 14–15, 2010, and July 26–28, 2010. The CHAP heard public comments at the July meeting. The December 2–3 meeting will include discussion of possible risk assessment approaches. The analysis of biomonitoring data will also be discussed. There will not be any opportunity for public comment at the December 2–3 meeting.

Dated: November 19, 2010.

Todd A. Stevenson,

Secretary, Consumer Product Safety Commission.

[FR Doc. 2010–29868 Filed 11–26–10; 8:45 am]

BILLING CODE 6355–01–P

DEPARTMENT OF EDUCATION

Notice of Proposed Information Collection Requests

AGENCY: Department of Education.

ACTION: Comment Request.

SUMMARY: The Department of Education (the Department), in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)), provides the general public and Federal agencies with an opportunity to comment on proposed and continuing collections of information. This helps the Department assess the impact of its information collection requirements and minimize the reporting burden on the public and helps the public understand the Department's information collection requirements and provide the requested data in the desired format. The Director, Information Collection Clearance Division, Regulatory Information Management Services, Office of Management, invites comments on the proposed information collection requests as required by the Paperwork Reduction Act of 1995.

DATES: Interested persons are invited to submit comments on or before January 28, 2011.

ADDRESSES: Comments regarding burden and/or the collection activity requirements should be electronically mailed to *ICDocketMgr@ed.gov* or mailed to U.S. Department of Education, 400 Maryland Avenue, SW., LBJ, Washington, DC 20202–4537. Please note that written comments received in response to this notice will be considered public records.

SUPPLEMENTARY INFORMATION: Section 3506 of the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35) requires that Federal agencies provide interested parties an early opportunity to comment on information collection requests. The Director, Information Collection Clearance Division, Regulatory Information Management Services, Office of Management, publishes this notice containing proposed information collection requests at the beginning of the Departmental review of the information collection. The Department of Education is especially interested in public comment addressing the following issues: (1) Is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology.

Dated: November 23, 2010.

Darrin A. King,

Director, Information Collection Clearance Division, Regulatory Information Management Services, Office of Management.

Office of the Secretary

Type of Review: Extension.

Title of Collection: U.S. Department of Education Grant Performance Report Form (ED 524B)

OMB Control Number: 1894–0003.

Agency Form Number(s): ED 524 B Form.

Frequency of Responses: Annually.

Affected Public: State, Local, or Tribal Government, State Educational Agencies or Local Educational Agencies.

Total Estimated Number of Annual Responses: 5,900.

Total Estimated Number of Annual Burden Hours: 132,300.

Abstract: The ED 524B form and instructions are used in order for grantees to meet Department of Education (ED) deadline dates for submission of performance reports for ED discretionary grant programs. Recipients of multi-year discretionary grants must submit an annual performance report for each year funding has been approved in order to receive a continuation award. The annual performance report should demonstrate whether substantial progress has been made toward meeting the approved goals and objectives of the project. ED program offices may also require recipients of "forward funded" grants that are awarded funds for their entire multi-year project up-front in a single grant award to submit the ED 524B on an annual basis. In addition, ED program offices may also require recipients to use the ED 524B to submit their final performance reports to demonstrate project success, impact and outcomes. In both the annual and final performance reports, grantees are required to provide data on established performance measures for the grant program (*e.g.,* Government Performance and Results Act measures) and on project performance measures that were included in the grantee's approved grant application. The ED 524B also contains a number of questions related to project financial data such as Federal and non-Federal expenditures and indirect cost information. Performance reporting requirements are found in 34 CFR 74.51, 75.118, 75.253, 75.590 and 80.40 of the Education Department General Administrative Regulations.

Requests for copies of the proposed information collection request may be accessed from *http://edicsweb.ed.gov,* by selecting the "Browse Pending Collections" link and by clicking on link number 4421. When you access the information collection, click on "Download Attachments" to view. Written requests for information should be addressed to U.S. Department of Education, 400 Maryland Avenue, SW., LBJ, Washington, DC 20202–4537. Requests may also be electronically mailed to *ICDocketMgr@ed.gov* or faxed to 202–401–0920. Please specify the complete title of the information collection and OMB Control Number when making your request.

Individuals who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1–800–877–8339.

BILLING CODE 4000–01–P

DEPARTMENT OF EDUCATION

Office of Elementary and Secondary Education Overview Information; College Assistance Migrant Program (CAMP); Notice Inviting Applications for New Awards for Fiscal Year (FY) 2011

Catalog of Federal Domestic Assistance (CFDA) Number: 84.149A.

DATES: *Applications Available:* November 29, 2010.

Deadline for Transmittal of Applications: January 19, 2011.

Deadline for Intergovernmental Review: March 21, 2011.

Full Text of Announcement

I. Funding Opportunity Description

Purpose of Program: The purpose of CAMP is to provide academic and financial support to help migrant and seasonal farmworkers and their children complete their first year of college and continue in postsecondary education.

Priorities: This competition includes four priorities. In accordance with 34 CFR 75.105(b)(2)(ii), the competitive preference priority for being a "novice applicant" is from the Education Department General Administrative Regulations (EDGAR) (34 CFR 75.225). In accordance with 34 CFR 75.105(b)(2)(iv), the competitive preference priority for "prior experience of service delivery" is from section 418A(e) of the Higher Education Act of 1965, as amended by the Higher Education Opportunity Act (20 U.S.C. 1070d–2(e)). The third priority is an invitational priority for applications that promote science, technology, engineering, and mathematics (STEM) education. The fourth priority is an invitational priority for applications that propose to engage faith-based and community organizations in the delivery of services under this program.

Competitive Preference Priorities: For FY 2011 these priorities are competitive preference priorities. Under 34 CFR 75.105(c)(2)(i) we award: (1) An additional five points to an application that meets the "novice applicant" competitive preference priority; and (2) up to a maximum of 15 additional points to an application, depending on how well the applicant meets the "prior experience of service delivery" competitive preference priority.

These priorities are:

Novice Applicant: The applicant must be a "novice applicant" as defined in 34 CFR 75.225(a). A novice applicant is defined as one who has: (i) Never received a grant or a subgrant under the CAMP program; (ii) never been a member of a group application, submitted in accordance with 34 CFR 75.127–75.129, that received a grant under the CAMP program; and (iii) not had an active discretionary grant from the Federal government in the five (5) years before the deadline date of receiving applications.

Prior Experience of Service Delivery: For applicants with an expiring CAMP project, the Secretary will consider the applicant's prior experience in implementing its expiring CAMP project, based on information contained in documents previously provided to the Department, such as annual performance reports, project evaluation reports, site visit reports, and the previously approved CAMP application.

Under this competition, we also are particularly interested in applications that address the following priorities.

Invitational Priorities: For FY 2011, these priorities are invitational priorities. Under 34 CFR 75.105(c)(1), we do not give an application that meets these invitational priorities a competitive or absolute preference over other applications.

These priorities are:

Invitational Priority 1—Science, Technology, Engineering and Mathematics (STEM) Education:

Projects that are designed to address one or more of the following priority areas:

(a) Providing students with increased access to rigorous and engaging coursework in STEM.

(b) Increasing the number and proportion of students prepared for postsecondary or graduate study and careers in STEM, with a specific focus on an increase in the number and proportion of students so prepared who are from groups traditionally underrepresented in STEM careers, including minorities, individuals with disabilities, and women.

Note: Applicants could consider increasing participants' access to studies in STEM through such activities as counseling and tutoring of participants in ways that motivate them to pursue postsecondary education in the areas of STEM. Similarly, applicants could consider increasing students' preparedness for study and careers in STEM through activities such as referrals to STEM-oriented work study, exposure to academic programs and careers in STEM-related fields, and providing support services, such as services to improve participants' academic skills and content knowledge, so that they may pursue studies and careers in STEM-related fields.

Invitational Priority 2—Faith-Based and Community Organizations: Applications that propose to engage faith-based and community organizations in the delivery of services under this program.

Program Authority: 20 U.S.C. 1070d–2.

Applicable Regulations: (a) The Education Department General Education Regulations (EDGAR) in 34 CFR parts 74, 75, 77, 79, 82, 84, 85, 86, 97, 98, and 99. (b) The regulations in 34 CFR part 206. (c) The definitions of a *migratory agricultural worker* in 34 CFR 200.81(d), *migratory child* in 34 CFR 200.81(e), and *migratory fisher* in 34 CFR 200.81(f). (d) The regulations in 20 CFR 669.110 and 669.320.

Note: The regulations in 34 CFR part 86 apply to institutes of higher education (IHEs) only.

Note: The Department published final regulations updating the program regulations in accordance with the changes enacted by the HEOA in the **Federal Register** on October 26, 2010 (75 FR 65711). These revised regulations will be effective on December 27, 2010. The application package identifies any provisions in part 206 that have been superseded by enactment of the HEOA.

II. Award Information

Type of Award: Discretionary grants.

Estimated Available Funds: The Administration has requested $2,841,000 for new awards for this program for FY 2011. The actual level of funding, if any, depends on final congressional action. However, we are inviting applications to allow enough time to complete the grant process if Congress appropriates funds for this program.

Estimated Range of Awards: $180,000–$425,000.

Estimated Average Size of Awards: $410,000.

Maximum Award: We will reject any application that proposes a CAMP award exceeding $425,000 for any of the five single budget periods of 12 months. The Assistant Secretary for Elementary and Secondary Education may change the maximum amount through a notice published in the **Federal Register**.

Minimum Award: We will reject any application that proposes a CAMP award that is less than $180,000 for any of the five single budget periods of 12 months. The Assistant Secretary for Elementary and Secondary Education may change the minimum amount through a notice published in the **Federal Register**.

Estimated Number of Awards: 7.

Note: The Department is not bound by any estimates in this notice.

Project Period: Up to 60 months.

III. Eligibility Information

1. *Eligible Applicants:* IHEs or private non-profit organizations (including faith-based organizations) that plan their projects in cooperation with an IHE and

propose to operate some aspects of the project with the facilities of the IHE.

2. *Cost Sharing or Matching:* This program does not require cost sharing or matching. However, consistent with 34 CFR 75.700, which requires an applicant to comply with its approved application, an applicant that proposes non-Federal matching funds and is awarded a grant must provide those funds for each year that the funds are proposed.

3. *Annual Meeting Attendance:* Projects funded under this competition are encouraged to budget for a two-day Office of Migrant Education Annual Meeting for CAMP Directors in the Washington, DC area during each year of the project period.

IV. Application and Submission Information

1. *Address to Request Application Package:* David De Soto, U.S. Department of Education, Office of Migrant Education, 400 Maryland Avenue, SW., room 3E344, Washington, DC 20202–6135. Telephone: (202) 260–8103 or by e-mail: *david.de.soto@ed.gov.*

The application package content also can be viewed electronically at the following address: *http://www.ed.gov/programs/camp/applicant.html.*

If you use a telecommunications device for the deaf (TDD), call the Federal Relay Service (FRS), toll free, at 1–800–877–8339.

Individuals with disabilities can obtain a copy of the application package in an accessible format (*e.g.*, braille, large print, audiotape, or computer diskette) by contacting the program contact person listed in this section.

2. *Content and Form of Application Submission:*

Requirements concerning the content of an application, together with the forms you must submit, are in the application package for this competition.

Page Limit: The application narrative is where you, the applicant, address the selection criteria that reviewers use to evaluate your application. Panel readers will award points only for an applicant's response to a given selection criterion that is contained within the section of the application designated to address that particular selection criterion. Readers will not review, or award points for responses to a given selection criterion that are in any other section of the application or appendices. You must limit the application narrative to no more than 25 pages, using the following standards:

- A "page" is 8.5″ × 11″, on one side only, with 1″ margins at the top, bottom, and both sides.
- Double space (no more than three lines per vertical inch) all text in the application narrative, including titles, headings, footnotes, quotations, references, and captions. However, you may single space all text in charts, tables, figures, and graphs. Charts, tables, figures, and graphs presented in the application narrative count toward the page limit.
- Use a font that is either 12 point or larger or no smaller than 10 pitch (characters per inch) throughout the entire application package.
- Appendices must be limited to 20 pages and must include the following: Resumes, job descriptions of key personnel. Job descriptions must include duties and minimum qualifications. Items in the appendices will only be used by the program office for the purpose of approving any future personnel changes.

The 25-page limit for the project narrative does not apply to the cover sheet; the budget section, including the narrative budget justification; the assurances and certifications; and the one-page abstract. However, the page limit does apply to all of the application narrative section.

Our reviewers will not read any pages of your application that exceed the page limit.

3. *Submission Dates and Times:*

Applications Available: November 29, 2010.

Deadline for Transmittal of Applications: January 19, 2011.

Applications for grants under this competition must be submitted electronically using the Grants.gov Apply site (Grants.gov). For information (including dates and times) about how to submit your application electronically, or in paper format by mail or hand delivery if you qualify for an exception to the electronic submission requirement, please refer to section IV.7. *Other Submission Requirements* of this notice.

We do not consider an application that does not comply with the deadline requirements.

Individuals with disabilities who need an accommodation or auxiliary aid in connection with the application process should contact the person listed under **FOR FURTHER INFORMATION CONTACT** in section VII of this notice. If the Department provides an accommodation or auxiliary aid to an individual with a disability in connection with the application process, the individual's application remains subject to all other requirements and limitations in this notice. Deadline for Intergovernmental Review: March 21, 2011.

4. *Intergovernmental Review:* This competition is subject to Executive Order 12372 and the regulations in 34 part 79. Information about Intergovernmental Review of Federal Programs under Executive Order 12372 is in the application package for this competition.

5. *Funding Restrictions:* We reference regulations outlining funding restrictions in the *Applicable Regulations* section of this notice.

6. *Data Universal Numbering System Number, Taxpayer Identification Number, and Central Contractor Registry:* To do business with the Department of Education, you must—

a. Have a Data Universal Numbering System (DUNS) number and a Taxpayer Identification Number (TIN);

b. Register both your DUNS number and TIN with the Central Contractor Registry (CCR), the Government's primary registrant database;

c. Provide your DUNS number and TIN on your application; and

d. Maintain an active CCR registration with current information while your application is under review by the Department and, if you are awarded a grant, during the project period.

You can obtain a DUNS number from Dun and Bradstreet. A DUNS number can be created within one business day.

If you are a corporate entity, agency, institution, or organization, you can obtain a TIN from the Internal Revenue Service. If you are an individual, you can obtain a TIN from the Internal Revenue Service or the Social Security Administration. If you need a new TIN, please allow 2–5 weeks for your TIN to become active.

The CCR registration process may take five or more business days to complete. If you are currently registered with the CCR, you may not need to make any changes. However, please make certain that the TIN associated with your DUNS number is correct. Also note that you will need to update your CCR registration on an annual basis. This may take three or more business days to complete.

In addition, if you are submitting your application via Grants.gov, you must (1) be designated by your organization as an Authorized Organization Representative (AOR); and (2) register yourself with Grants.gov as an AOR. Details on these steps are outlined in the Grants.gov 3-Step Registration Guide (*see http://www.grants.gov/section910/Grants.govRegistrationBrochure.pdf*).

7. *Other Submission Requirements:* Applications for grants under this

competition must be submitted electronically unless you qualify for an exception to this requirement in accordance with the instructions in this section.

a. Electronic Submission of Applications

Applications for grants under the College Assistance Migrant Program, CFDA number 84.149A must be submitted electronically using the Governmentwide Grants.gov Apply site at *http://www.Grants.gov.* Through this site, you will be able to download a copy of the application package, complete it offline, and then upload and submit your application. You may not e-mail an electronic copy of a grant application to us.

We will reject your application if you submit it in paper format unless, as described elsewhere in this section, you qualify for one of the exceptions to the electronic submission requirement *and* submit, no later than two weeks before the application deadline date, a written statement to the Department that you qualify for one of these exceptions. Further information regarding calculation of the date that is two weeks before the application deadline date is provided later in this section under *Exception to Electronic Submission Requirement.*

You may access the electronic grant application for the College Assistance Migrant Program at *http://www.Grants.gov.* You must search for the downloadable application package for this competition by the CFDA number. Do not include the CFDA number's alpha suffix in your search (*e.g.,* search for 84.149, not 84.149A).

Please note the following:

- When you enter the Grants.gov site, you will find information about submitting an application electronically through the site, as well as the hours of operation.
- Applications received by Grants.gov are date and time stamped. Your application must be fully uploaded and submitted and must be date and time stamped by the Grants.gov system no later than 4:30:00 p.m., Washington, DC time, on the application deadline date. Except as otherwise noted in this section, we will not accept your application if it is received—that is, date and time stamped by the Grants.gov system—after 4:30:00 p.m., Washington, DC time, on the application deadline date. We do not consider an application that does not comply with the deadline requirements. When we retrieve your application from Grants.gov, we will notify you if we are rejecting your application because it was date and time stamped by the Grants.gov system after 4:30:00 p.m., Washington, DC time, on the application deadline date.
- The amount of time it can take to upload an application will vary depending on a variety of factors, including the size of the application and the speed of your Internet connection. Therefore, we strongly recommend that you do not wait until the application deadline date to begin the submission process through Grants.gov.
- You should review and follow the Education Submission Procedures for submitting an application through Grants.gov that are included in the application package for this competition to ensure that you submit your application in a timely manner to the Grants.gov system. You can also find the Education Submission Procedures pertaining to Grants.gov under News and Events on the Department's G5 system home page at *http://www.G5.gov.*
- You will not receive additional point value because you submit your application in electronic format, nor will we penalize you if you qualify for an exception to the electronic submission requirement, as described elsewhere in this section, and submit your application in paper format.
- You must submit all documents electronically, including all information you typically provide on the following forms: the Application for Federal Assistance (SF 424), the Department of Education Supplemental Information for SF 424, Budget Information—Non-Construction Programs (ED 524), and all necessary assurances and certifications.
- You must attach any narrative sections of your application as files in a .PDF (Portable Document) format only. If you upload a file type other than .PDF or submit a password-protected file, we will not review that material.
- Your electronic application must comply with any page-limit requirements described in this notice.
- After you electronically submit your application, you will receive from Grants.gov an automatic notification of receipt that contains a Grants.gov tracking number. (This notification indicates receipt by Grants.gov only, not receipt by the Department.) The Department then will retrieve your application from Grants.gov and send a second notification to you by e-mail. This second notification indicates that the Department has received your application and has assigned your application a PR/Award number (an ED-specified identifying number unique to your application).
- We may request that you provide us original signatures on forms at a later date.

Application Deadline Date Extension in Case of Technical Issues with the Grants.gov System: If you are experiencing problems submitting your application through Grants.gov, please contact the Grants.gov Support Desk, toll free, at 1–800–518–4726. You must obtain a Grants.gov Support Desk Case Number and must keep a record of it.

If you are prevented from electronically submitting your application on the application deadline date because of technical problems with the Grants.gov system, we will grant you an extension until 4:30:00 p.m., Washington, DC time, the following business day to enable you to transmit your application electronically or by hand delivery. You also may mail your application by following the mailing instructions described elsewhere in this notice.

If you submit an application after 4:30:00 p.m., Washington, DC time, on the application deadline date, please contact the person listed under **FOR FURTHER INFORMATION CONTACT** in section VII of this notice and provide an explanation of the technical problem you experienced with Grants.gov, along with the Grants.gov Support Desk Case Number. We will accept your application if we can confirm that a technical problem occurred with the Grants.gov system and that that problem affected your ability to submit your application by 4:30:00 p.m., Washington, DC time, on the application deadline date. The Department will contact you after a determination is made on whether your application will be accepted.

Note: The extensions to which we refer in this section apply only to the unavailability of, or technical problems with, the Grants.gov system. We will not grant you an extension if you failed to fully register to submit your application to Grants.gov before the application deadline date and time or if the technical problem you experienced is unrelated to the Grants.gov system.

Exception to Electronic Submission Requirement: You qualify for an exception to the electronic submission requirement, and may submit your application in paper format, if you are unable to submit an application through the Grants.gov system because—

- You do not have access to the Internet; or
- You do not have the capacity to upload large documents to the Grants.gov system; and
- No later than two weeks before the application deadline date (14 calendar days or, if the fourteenth calendar day before the application deadline date falls on a Federal holiday, the next business day following the Federal

holiday), you mail or fax a written statement to the Department, explaining which of the two grounds for an exception prevent you from using the Internet to submit your application.

If you mail your written statement to the Department, it must be postmarked no later than two weeks before the application deadline date. If you fax your written statement to the Department, we must receive the faxed statement no later than two weeks before the application deadline date.

Address and mail or fax your statement to: David De Soto, U.S. Department of Education, 400 Maryland Avenue, SW., room 3E344, LBJ, Washington, DC 20202–6135. FAX: (202) 205–0089.

Your paper application must be submitted in accordance with the mail or hand delivery instructions described in this notice.

b. Submission of Paper Applications by Mail

If you qualify for an exception to the electronic submission requirement, you may mail (through the U.S. Postal Service or a commercial carrier) your application to the Department. You must mail the original and two copies of your application, on or before the application deadline date, to the Department at the following address: U.S. Department of Education, Application Control Center, Attention: CFDA Number 84.149A, LBJ Basement Level 1, 400 Maryland Avenue, SW., Washington, DC 20202–4260.

You must show proof of mailing consisting of one of the following:

(1) A legibly dated U.S. Postal Service postmark.

(2) A legible mail receipt with the date of mailing stamped by the U.S. Postal Service.

(3) A dated shipping label, invoice, or receipt from a commercial carrier.

(4) Any other proof of mailing acceptable to the Secretary of the U.S. Department of Education.

If you mail your application through the U.S. Postal Service, we do not accept either of the following as proof of mailing:

(1) A private metered postmark.

(2) A mail receipt that is not dated by the U.S. Postal Service.

If your application is postmarked after the application deadline date, we will not consider your application.

Note: The U.S. Postal Service does not uniformly provide a dated postmark. Before relying on this method, you should check with your local post office.

c. Submission of Paper Applications by Hand Delivery

If you qualify for an exception to the electronic submission requirement, you (or a courier service) may deliver your paper application to the Department by hand. You must deliver the original and two copies of your application by hand, on or before the application deadline date, to the Department at the following address: U.S. Department of Education, Application Control Center, Attention: CFDA Number 84.149A, 550 12th Street, SW., Room 7041, Potomac Center Plaza, Washington, DC 20202–4260.

The Application Control Center accepts hand deliveries daily between 8:00 a.m. and 4:30:00 p.m., Washington, DC time, except Saturdays, Sundays, and Federal holidays.

Note for Mail or Hand Delivery of Paper Applications: If you mail or hand deliver your application to the Department—

(1) You must indicate on the envelope and—if not provided by the Department—in Item 11 of the SF 424 the CFDA number, including suffix letter, if any, of the competition under which you are submitting your application; and

(2) The Application Control Center will mail to you a notification of receipt of your grant application. If you do not receive this notification within 15 business days from the application deadline date, you should call the U.S. Department of Education Application Control Center at (202) 245–6288.

V. Application Review Information

1. *Selection Criteria:* The selection criteria for this competition are from 34 CFR 75.210 of EDGAR and are listed in the application package.

2. *Review and Selection Process:* We remind potential applicants that in reviewing applications in any discretionary grant competition, the Secretary may consider, under 34 CFR 75.217(d)(3), the past performance of the applicant in carrying out a previous award, such as the applicant's use of funds, and compliance with grant conditions. The Secretary may also consider whether the applicant failed to submit a timely performance report or submitted a report of unacceptable quality.

In addition, in making a competitive grant award, the Secretary also requires various assurances including those applicable to Federal civil rights laws that prohibit discrimination in programs or activities receiving Federal financial assistance from the Department of Education (34 CFR 100.4, 104.5, 106.4, 108.8, and 110.23).

3. *Special Conditions:* Under 34 CFR 74.14 and 80.12, the Secretary may impose special conditions on a grant if the applicant or grantee is not financially stable; has a history of unsatisfactory performance; has a financial or other management system that does not meet the standards in 34 CFR parts 74 or 80, as applicable; has not fulfilled the conditions of a prior grant; or is otherwise not responsible.

VI. Award Administration Information

1. *Award Notices:* If your application is successful, we notify your U.S. Representative and U.S. Senators and send you a Grant Award Notification (GAN). We may notify you informally, also.

If your application is not evaluated or not selected for funding, we notify you.

2. *Administrative and National Policy Requirements:*

We identify administrative and national policy requirements in the application package and reference these and other requirements in the *Applicable Regulations* section of this notice.

We reference the regulations outlining the terms and conditions of an award in the *Applicable Regulations* section of this notice and include these and other specific conditions in the GAN. The GAN also incorporates your approved application as part of your binding commitments under the grant.

3. *Reporting:* (a) If you apply for a grant under this competition, you must ensure that you have in place the necessary processes and systems to comply with the reporting requirements in 2 CFR part 170 should you receive funding under the competition. This does not apply if you have an exception under 2 CFR 170.110(b).

(b) At the end of your project period, you must submit a final performance report, including financial information, as directed by the Secretary. If you receive a multi-year award, you must submit an annual performance report that provides the most current performance and financial expenditure information as directed by the Secretary in 34 CFR 75.118. The Secretary may also require more frequent performance reports under 34 CFR 75.720(c). For specific requirements on reporting, please go to *http://www.ed.gov/fund/grant/apply/appforms/appforms.html.*

4. *Performance Measures:* Under the Government Performance and Results Act of 1993 (GPRA), the Department developed the following performance measures to evaluate the overall effectiveness of the CAMP: (1) The percentage of CAMP participants completing the first academic year of their postsecondary program, and (2) the percentage of CAMP participants, after completing the first academic year of

college, continue their postsecondary education.

Applicants must propose annual targets for these measures in their applications. The national target for GPRA 1 for FY 2011 is that 86 percent of CAMP participants will complete the first academic year of their postsecondary program. The national target for GPRA 2 for 2011 is that 85 percent of CAMP participants after completing the first academic year of college, continue their postsecondary education. The national targets for subsequent years may be adjusted based on additional baseline data. The panel readers will score related selection criteria on the basis of how well an applicant addresses these GPRA measures. Therefore, applicants will want to consider how they will make demonstration of a sound capacity to provide reliable data on GPRA measures, including the project's annual performance targets for addressing the GPRA performance measures, as is required by the OMB approved annual performance report that is included in the application package. All grantees will be required to submit, as part of their annual performance report, information with respect to these performance measures.

5. *Continuation Awards:* In making a continuation award, the Secretary may consider, under 34 CFR 75.253, the extent to which a grantee has made "substantial progress toward meeting the objectives in its approved application." This consideration includes the review of a grantee's progress in meeting the targets and projected outcomes in its approved application, and whether the grantee has expended funds in a manner that is consistent with its approved application and budget. In making a continuation grant, the Secretary also considers whether the grantee is operating in compliance with the assurances in its approved application, including those applicable to Federal civil rights laws that prohibit discrimination in programs or activities receiving Federal financial assistance from the Department (34 CFR 100.4, 104.5, 106.4, 108.8, and 110.23).

VII. Agency Contact

FOR FURTHER INFORMATION CONTACT: David De Soto, U.S. Department of Education, Office of Migrant Education, 400 Maryland Avenue, SW., room 3E344, Washington, DC 20202–6135. Telephone Number: (202) 260–8103, or by e-mail: *david.de.soto@ed.gov,* or Tara Ramsey, U.S. Department of Education, Office of Migrant Education, 400 Maryland Avenue, SW., room 3E342, Washington, DC 20202–6135. Telephone Number: (202) 260–2063, or by e-mail: *tara.ramsey@ed.gov.*

If you use a TDD, call the Federal Relay Service (FRS), toll free, at 1–800–877–8339.

VIII. Other Information

Accessible Format: Individuals with disabilities can obtain this document and a copy of the application package in an accessible format (*e.g.,* braille, large print, audiotape, or computer diskette) on request to the program contact person listed under **FOR FURTHER INFORMATION CONTACT** in section VII of this notice.

Electronic Access to This Document: You can view this document, as well as all other documents of this Department published in the **Federal Register**, in text or Adobe Portable Document Format (PDF) on the Internet at the following site: *http://www.ed.gov/news/fedregister.* To use PDF you must have Adobe Acrobat Reader, which is available free at this site.

Note: The official version of this document is the document published in the **Federal Register**. Free Internet access to the official edition of the **Federal Register** and the Code of Federal Regulations is available on GPO Access at: *http://www.gpoaccess.gov/nara/index.html.*

Dated: November 23, 2010.

Thelma Meléndez de Santa Ana,

Assistant Secretary for Elementary and Secondary Education.

[FR Doc. 2010–29987 Filed 11–26–10; 8:45 am]

BILLING CODE 4000–01–P

DEPARTMENT OF EDUCATION

Office of Elementary and Secondary Education; Overview Information; High School Equivalency Program (HEP); Notice Inviting Applications for New Awards for Fiscal Year (FY) 2011

Catalog of Federal Domestic Assistance (CFDA) Number: 84.141A.

DATES: *Applications Available:* November 29, 2010.

Deadline for Transmittal of Applications: January 19, 2011.

Deadline for Intergovernmental Review: March 21, 2011.

Full Text of Announcement

I. Funding Opportunity Description

Purpose of Program: The purpose of HEP is to help migrant and seasonal farmworkers and members of their immediate family obtain a general education diploma (GED) that meets the guidelines for high school equivalency established by the State in which the HEP project is conducted, and to help them gain employment or be placed in an institution of higher education (IHE) or other postsecondary education or training.

Priorities: This competition includes four priorities. In accordance with 34 CFR 75.105(b)(2)(ii), the competitive preference priority for being a "novice applicant" is from the Education Department General Administrative Regulations (EDGAR) (34 CFR 75.225). In accordance with 34 CFR 75.105(b)(2)(iv), the competitive preference priority for "prior experience of service delivery" is from section 418A(e) of the Higher Education Act of 1965, as amended by section 408(3) of the Higher Education Opportunity Act (20 U.S.C. 1070d–2(e)). The third priority is an invitational priority for applications that promote science, technology, engineering and mathematics (STEM) education. The fourth priority is an invitational priority for applications that propose to engage faith-based and community organizations in the delivery of services under this program.

Competitive Preference Priorities: For FY 2011 these priorities are competitive preference priorities. Under 34 CFR 75.105(c)(2)(i) we award: (1) An additional five points to an application that meets the "novice applicant" competitive preference priority; and (2) up to a maximum of 15 additional points to an application, depending on how well the applicant meets the "prior experience of service delivery" competitive preference priority.

These priorities are:

Novice Applicant

The applicant must be a "novice applicant," as defined in 34 CFR 75.225(a). A novice applicant is defined as one who has: (i) Never received a grant or a subgrant under the HEP program; (ii) never been a member of a group application, submitted in accordance with 34 CFR 75.127–75.129, that received a grant under the HEP program; and (iii) not had an active discretionary grant from the Federal government in the five (5) years before the deadline date of receiving applications.

Prior Experience of Service Delivery

For applicants with an expiring HEP project, the Secretary will consider the applicant's prior experience in implementing its expiring HEP project, based on information contained in documents previously provided to the Department, such as annual performance reports, project evaluation

reports, site visit reports, and the previously approved HEP application.

Under this competition, we also are particularly interested in applications that address the following priorities.

Invitational Priorities: For FY 2011, these priorities are invitational priorities. Under 34 CFR 75.105(c)(1) we do not give an application that meets these invitational priorities a competitive or absolute preference over other applications.

These priorities are:

Invitational Priority 1—Science, Technology, Engineering and Mathematics (STEM) Education

Projects that are designed to address one or more of the following priority areas:

(a) Providing students with increased access to rigorous and engaging coursework in STEM.

(b) Increasing the opportunities for high-quality preparation of, or professional development for, teachers or other educators of STEM subjects.

Note: Applicants could consider activities to better prepare program participants to transition into postsecondary education, such as preparing students to successfully pass the sections of college entrance examinations in STEM-related subjects, or activities such as counseling and tutoring services that are designed to motivate participants to pursue postsecondary education in STEM-related fields. Similarly, for demonstrating professional development, applicants could propose how they intend to increase the opportunities for high-quality professional development in the area of mathematics instruction and related GED instruction among their project instructors. Opportunities for increasing professional development of GED instructors of STEM-related subjects could include, for example, these instructors' participation in training on intensive science teaching techniques presented by a professionally credentialed expert in science education.

Invitational Priority 2—Faith-Based and Community Organizations

Applications that propose to engage faith-based and community organizations in the delivery of services under this program.

Program Authority: 20 U.S.C. 1070d–2.

Applicable Regulations: (a) The Education Department General Education Regulations (EDGAR) in 34 CFR parts 74, 75, 77, 79, 82, 84, 85, 86, 97, and 99. (b) The regulations in 34 CFR part 206. (c) The definitions in 34 CFR 200.81. (d) The regulations in 20 CFR 669.110 and 669.320. *Note:* The regulations in 34 CFR part 86 apply to IHEs only.

Note: The Department published final regulations updating the program regulations in accordance with the changes enacted by the HEOA in the **Federal Register** on October 26, 2010 (75 FR 65711). These revised regulations will be effective on December 27, 2010. The application package identifies any provisions in part 206 that have been superseded by enactment of the HEOA.

II. Award Information

Type of Award: Discretionary grants.

Estimated Available Funds: The Administration has requested $4,629,000 for new awards for this program for FY 2011. The actual level of funding, if any, depends on final congressional action. However, we are inviting applications to allow enough time to complete the grant process if Congress appropriates funds for this program.

Estimated Range of Awards: $180,000–$475,000.

Estimated Average Size of Awards: $432,000.

Maximum Award: We will reject any application that proposes a HEP award exceeding $475,000 for any of the five single budget periods of 12 months. The Assistant Secretary for Elementary and Secondary Education may change the maximum amount through a notice published in the **Federal Register**.

Minimum Award: We will reject any application that proposes a HEP award that is less than $180,000 for any of the five single budget periods of 12 months. The Assistant Secretary for Elementary and Secondary Education may change the minimum amount through a notice published in the **Federal Register**.

Estimated Number of Awards: 11.

Note: The Department is not bound by any estimates in this notice.

Project Period: Up to 60 months.

III. Eligibility Information

1. *Eligible Applicants:* IHEs or private non-profit organizations (including faith-based organizations) that plan their projects in cooperation with an IHE and propose to operate some aspects of the project with the facilities of the IHE.

2. *Cost Sharing or Matching:* This program does not require cost sharing or matching. However, consistent with 34 CFR 75.700, which requires an applicant to comply with its approved application, an applicant that proposes non-Federal matching funds and is awarded a grant must provide those funds for each year that the funds are proposed.

3. *Annual Meeting Attendance:* Projects funded under this competition are encouraged to budget for a two-day Annual Meeting for HEP Directors in the Washington, DC area during each year of the project period.

IV. Application and Submission Information

1. *Address to Request Application Package:* David De Soto, U.S. Department of Education, Office of Migrant Education, 400 Maryland Avenue, SW., room 3E344, Washington, DC 20202–6135. Telephone: (202) 260–8103 or by e-mail: *david.de.soto@ed.gov.*

The application package content also can be viewed electronically at the following address: *http://www.ed.gov/programs/hep/applicant.html.*

If you use a telecommunications device for the deaf (TDD), call the Federal Relay Service (FRS), toll free, at 1–800–877–8339.

Individuals with disabilities can obtain a copy of the application package in an accessible format (*e.g.,* Braille, large print, audiotape, or computer diskette) by contacting the program contact person listed in this section.

2. *Content and Form of Application Submission:* Requirements concerning the content of an application, together with the forms you must submit, are in the application package for this competition. Page Limit: The application narrative is where you, the applicant, address the selection criteria that reviewers use to evaluate your application. Panel readers will award points only for an applicant's response to a given selection criterion that is contained within the section of the application designated to address that particular selection criterion. Readers will not review, or award points for responses to a given selection criterion that is located in any other section of the application or the appendices. You must limit the application narrative to no more than 25 pages, using the following standards:

- A "page" is 8.5″ x 11″, on one side only, with 1″ margins at the top, bottom, and both sides.
- Double space (no more than three lines per vertical inch) all text in the application narrative, including titles, headings, footnotes, quotations, references, and captions. However, you may single space all text in charts, tables, figures, and graphs. Charts, tables, figures, and graphs presented in the application narrative count toward the page limit.
- Use a font that is either 12 point or larger or no smaller than 10 pitch (characters per inch) throughout the entire application package.
- Appendices must be limited to 20 pages and must include the following: Resumes and job descriptions of key personnel. Job descriptions must include duties and minimum

qualifications. Items in the appendices will only be used by the program office for the purpose of approving any future personnel changes.

The 25-page limit for the project narrative does not apply to the cover sheet; the budget section, including the narrative budget justification; the assurances and certifications; or the one-page abstract. However, the page limit does apply to all of the application narrative section.

Our reviewers will not read any pages of your application that exceed the page limit.

3. *Submission Dates and Times:*

Applications Available: November 29, 2010.

Deadline for Transmittal of Applications: January 19, 2011.

Applications for grants under this competition must be submitted electronically using the Grants.gov Apply site (Grants.gov). For information (including dates and times) about how to submit your application electronically, or in paper format by mail or hand delivery if you qualify for an exception to the electronic submission requirement, please refer to section IV. 7. *Other Submission Requirements* of this notice.

We do not consider an application that does not comply with the deadline requirements.

Individuals with disabilities who need an accommodation or auxiliary aid in connection with the application process should contact the person listed under **FOR FURTHER INFORMATION CONTACT** in section VII of this notice. If the Department provides an accommodation or auxiliary aid to an individual with a disability in connection with the application process, the individual's application remains subject to all other requirements and limitations in this notice.

Deadline for Intergovernmental Review: March 21, 2011.

4. *Intergovernmental Review:* This competition is subject to Executive Order 12372 and the regulations in 34 CFR part 79. Information about Intergovernmental Review of Federal Programs under Executive Order 12372 is in the application package for this competition.

5. *Funding Restrictions:* We reference regulations outlining funding restrictions in the *Applicable Regulations* section of this notice.

6. *Data Universal Numbering System Number, Taxpayer Identification Number, and Central Contractor Registry:* To do business with the Department of Education, you must—

a. Have a Data Universal Numbering System (DUNS) number and a Taxpayer Identification Number (TIN);

b. Register both your DUNS number and TIN with the Central Contractor Registry (CCR), the Government's primary registrant database;

c. Provide your DUNS number and TIN on your application; and

d. Maintain an active CCR registration with current information while your application is under review by the Department and, if you are awarded a grant, during the project period.

You can obtain a DUNS number from Dun and Bradstreet. A DUNS number can be created within one business day.

If you are a corporate entity, agency, institution, or organization, you can obtain a TIN from the Internal Revenue Service. If you are an individual, you can obtain a TIN from the Internal Revenue Service or the Social Security Administration. If you need a new TIN, please allow 2–5 weeks for your TIN to become active.

The CCR registration process may take five or more business days to complete. If you are currently registered with the CCR, you may not need to make any changes. However, please make certain that the TIN associated with your DUNS number is correct. Also note that you will need to update your CCR registration on an annual basis. This may take three or more business days to complete.

In addition, if you are submitting your application via Grants.gov, you must (1) be designated by your organization as an Authorized Organization Representative (AOR); and (2) register yourself with Grants.gov as an AOR. Details on these steps are outlined in the Grants.gov 3-Step Registration Guide (*see http://www.grants.gov/section910/Grants.govRegistrationBrochure.pdf*).

7. *Other Submission Requirements:* Applications for grants under this competition must be submitted electronically unless you qualify for an exception to this requirement in accordance with the instructions in this section.

a. *Electronic Submission of Applications.*

Applications for grants under the High School Equivalency Program, CFDA number 84.141A, must be submitted electronically using the Governmentwide Grants.gov Apply site at *http://www.Grants.gov.* Through this site, you will be able to download a copy of the application package, complete it offline, and then upload and submit your application. You may not e-mail an electronic copy of a grant application to us.

We will reject your application if you submit it in paper format unless, as described elsewhere in this section, you qualify for one of the exceptions to the electronic submission requirement *and* submit, no later than two weeks before the application deadline date, a written statement to the Department that you qualify for one of these exceptions. Further information regarding calculation of the date that is two weeks before the application deadline date is provided later in this section under *Exception to Electronic Submission Requirement.*

You may access the electronic grant application for HEP at *http://www.Grants.gov.* You must search for the downloadable application package for this competition by the CFDA number. Do not include the CFDA number's alpha suffix in your search (*e.g.,* search for 84.141, not 84.141A).

Please note the following:

- When you enter the Grants.gov site, you will find information about submitting an application electronically through the site, as well as the hours of operation.
- Applications received by Grants.gov are date and time stamped. Your application must be fully uploaded and submitted and must be date and time stamped by the Grants.gov system no later than 4:30:00 p.m., Washington, DC time, on the application deadline date. Except as otherwise noted in this section, we will not accept your application if it is received—that is, date and time stamped by the Grants.gov system—after 4:30:00 p.m., Washington, DC time, on the application deadline date. We do not consider an application that does not comply with the deadline requirements. When we retrieve your application from Grants.gov, we will notify you if we are rejecting your application because it was date and time stamped by the Grants.gov system after 4:30:00 p.m., Washington, DC time, on the application deadline date.
- The amount of time it can take to upload an application will vary depending on a variety of factors, including the size of the application and the speed of your Internet connection. Therefore, we strongly recommend that you do not wait until the application deadline date to begin the submission process through Grants.gov.
- You should review and follow the Education Submission Procedures for submitting an application through Grants.gov that are included in the application package for this competition to ensure that you submit your application in a timely manner to the Grants.gov system. You can also find the Education Submission Procedures

pertaining to Grants.gov under News and Events on the Department's G5 system home page at *http://www.G5.gov.*

• You will not receive additional point value because you submit your application in electronic format, nor will we penalize you if you qualify for an exception to the electronic submission requirement, as described elsewhere in this section, and submit your application in paper format.

• You must submit all documents electronically, including all information you typically provide on the following forms: the Application for Federal Assistance (SF 424), the Department of Education Supplemental Information for SF 424, Budget Information—Non-Construction Programs (ED 524), and all necessary assurances and certifications.

• You must attach any narrative sections of your application as files in a .PDF (Portable Document) format only. If you upload a file type other than .PDF or submit a password-protected file, we will not review that material.

• Your electronic application must comply with any page-limit requirements described in this notice.

• After you electronically submit your application, you will receive from Grants.gov an automatic notification of receipt that contains a Grants.gov tracking number. (This notification indicates receipt by Grants.gov only, not receipt by the Department.) The Department then will retrieve your application from Grants.gov and send a second notification to you by e-mail. This second notification indicates that the Department has received your application and has assigned your application a PR/Award number (an ED-specified identifying number unique to your application).

• We may request that you provide us original signatures on forms at a later date.

Application Deadline Date Extension in Case of Technical Issues with the Grants.gov System: If you are experiencing problems submitting your application through Grants.gov, please contact the Grants.gov Support Desk, toll free, at 1–800–518–4726. You must obtain a Grants.gov Support Desk Case Number and must keep a record of it.

If you are prevented from electronically submitting your application on the application deadline date because of technical problems with the Grants.gov system, we will grant you an extension until 4:30:00 p.m., Washington, DC time, the following business day to enable you to transmit your application electronically or by hand delivery. You also may mail your application by following the mailing instructions described elsewhere in this notice.

If you submit an application after 4:30:00 p.m., Washington, DC time, on the application deadline date, please contact the person listed under **FOR FURTHER INFORMATION CONTACT** in section VII of this notice and provide an explanation of the technical problem you experienced with Grants.gov, along with the Grants.gov Support Desk Case Number. We will accept your application if we can confirm that a technical problem occurred with the Grants.gov system and that that problem affected your ability to submit your application by 4:30:00 p.m., Washington, DC time, on the application deadline date. The Department will contact you after a determination is made on whether your application will be accepted.

Note: The extensions to which we refer in this section apply only to the unavailability of, or technical problems with, the Grants.gov system. We will not grant you an extension if you failed to fully register to submit your application to Grants.gov before the application deadline date and time or if the technical problem you experienced is unrelated to the Grants.gov system.

Exception to Electronic Submission Requirement: You qualify for an exception to the electronic submission requirement, and may submit your application in paper format, if you are unable to submit an application through the Grants.gov system because—

• You do not have access to the Internet; or

• You do not have the capacity to upload large documents to the Grants.gov system; and

• No later than two weeks before the application deadline date (14 calendar days or, if the fourteenth calendar day before the application deadline date falls on a Federal holiday, the next business day following the Federal holiday), you mail or fax a written statement to the Department, explaining which of the two grounds for an exception prevent you from using the Internet to submit your application.

If you mail your written statement to the Department, it must be postmarked no later than two weeks before the application deadline date. If you fax your written statement to the Department, we must receive the faxed statement no later than two weeks before the application deadline date.

Address and mail or fax your statement to: David De Soto, U.S. Department of Education, 400 Maryland Avenue, SW., room 3E344, LBJ, Washington, DC 20202–6135. FAX: (202) 205–0089.

Your paper application must be submitted in accordance with the mail or hand delivery instructions described in this notice.

b. *Submission of Paper Applications by Mail.*

If you qualify for an exception to the electronic submission requirement, you may mail (through the U.S. Postal Service or a commercial carrier) your application to the Department. You must mail the original and two copies of your application, on or before the application deadline date, to the Department at the following address: U.S. Department of Education, Application Control Center, Attention: CFDA Number 84.141A, LBJ Basement Level 1, 400 Maryland Avenue, SW., Washington, DC 20202–4260.

You must show proof of mailing consisting of one of the following:

(1) A legibly dated U.S. Postal Service postmark.

(2) A legible mail receipt with the date of mailing stamped by the U.S. Postal Service.

(3) A dated shipping label, invoice, or receipt from a commercial carrier.

(4) Any other proof of mailing acceptable to the Secretary of the U.S. Department of Education.

If you mail your application through the U.S. Postal Service, we do not accept either of the following as proof of mailing:

(1) A private metered postmark.

(2) A mail receipt that is not dated by the U.S. Postal Service.

If your application is postmarked after the application deadline date, we will not consider your application.

Note: The U.S. Postal Service does not uniformly provide a dated postmark. Before relying on this method, you should check with your local post office.

c. *Submission of Paper Applications by Hand Delivery.*

If you qualify for an exception to the electronic submission requirement, you (or a courier service) may deliver your paper application to the Department by hand. You must deliver the original and two copies of your application by hand, on or before the application deadline date, to the Department at the following address: U.S. Department of Education, Application Control Center, Attention: CFDA Number 84.141A, 550 12th Street, SW., Room 7041, Potomac Center Plaza, Washington, DC 20202–4260.

The Application Control Center accepts hand deliveries daily between 8 a.m. and 4:30:00 p.m., Washington, DC time, except Saturdays, Sundays, and Federal holidays.

Note for Mail or Hand Delivery of Paper Applications: If you mail or hand deliver your application to the Department—

(1) You must indicate on the envelope and—if not provided by the Department—in Item 11 of the SF 424 the CFDA number, including suffix letter, if any, of the competition under which you are submitting your application; and

(2) The Application Control Center will mail to you a notification of receipt of your grant application. If you do not receive this notification within 15 business days from the application deadline date, you should call the U.S. Department of Education Application Control Center at (202) 245–6288.

V. Application Review Information

1. *Selection Criteria:* The selection criteria for this competition are from 34 CFR 75.210 of EDGAR and are listed in the application package.

2. *Review and Selection Process:* We remind potential applicants that in reviewing applications in any discretionary grant competition, the Secretary may consider, under 34 CFR 75.217(d)(3), the past performance of the applicant in carrying out a previous award, such as the applicant's use of funds, and compliance with grant conditions. The Secretary may also consider whether the applicant failed to submit a timely performance report or submitted a report of unacceptable quality.

In addition, in making a competitive grant award, the Secretary also requires various assurances including those applicable to Federal civil rights laws that prohibit discrimination in programs or activities receiving Federal financial assistance from the Department of Education (34 CFR 100.4, 104.5, 106.4, 108.8, and 110.23).

3. *Special Conditions:* Under 34 CFR 74.14 and 80.12, the Secretary may impose special conditions on a grant if the applicant or grantee is not financially stable; has a history of unsatisfactory performance; has a financial or other management system that does not meet the standards in 34 CFR parts 74 or 80, as applicable; has not fulfilled the conditions of a prior grant; or is otherwise not responsible.

VI. Award Administration Information

1. *Award Notices:* If your application is successful, we notify your U.S. Representative and U.S. Senators and send you a Grant Award Notification (GAN). We may notify you informally, also.

If your application is not evaluated or not selected for funding, we notify you.

2. *Administrative and National Policy Requirements:* We identify administrative and national policy requirements in the application package and reference these and other requirements in the *Applicable Regulations* section of this notice.

We reference the regulations outlining the terms and conditions of an award in the *Applicable Regulations* section of this notice and include these and other specific conditions in the GAN. The GAN also incorporates your approved application as part of your binding commitments under the grant.

3. *Reporting:* (a) If you apply for a grant under this competition, you must ensure that you have in place the necessary processes and systems to comply with the reporting requirements in 2 CFR part 170 should you receive funding under the competition. This does not apply if you have an exception under 2 CFR 170.110(b).

(b) At the end of your project period, you must submit a final performance report, including financial information, as directed by the Secretary. If you receive a multi-year award, you must submit an annual performance report that provides the most current performance and financial expenditure information as directed by the Secretary under 34 CFR 75.118. The Secretary may also require more frequent performance reports under 34 CFR 75.720(c). For specific requirements on reporting, please go to *http://www.ed.gov/fund/grant/apply/appforms/appforms.html.*

4. *Performance Measures:* Under the Government Performance and Results Act of 1993 (GPRA), the Department developed the following performance measures to evaluate the overall effectiveness of HEP: (1) The percentage of HEP program exiters receiving a General Education Diploma (GED) (GPRA 1), and (2) the percentage of HEP GED recipients who enter postsecondary education or training programs, upgraded employment, or the military (GPRA 2).

Applicants must propose annual targets for these measures in their applications. The national target for GPRA 1 for FY 2011 is that 69 percent of HEP program exiters will receive a GED credential. The national target for GPRA 2 for FY 2011 is that 80 percent of HEP GED recipients will enter postsecondary education or training programs, upgraded employment, or the military. The national targets for subsequent years may be adjusted based on additional baseline data. The panel readers will score related selection criteria for applicants, in part, on the basis of how well an applicant addresses these GPRA measures. Therefore, applicants should consider how they will demonstrate their capacity to provide reliable data on these measures, including the project's annual performance targets for the GPRA measures, as required by the OMB approved annual performance report that is included in the application package. All grantees will be required to submit, as part of their annual performance report, information with respect to these GPRA measures.

5. *Continuation Awards:* In making a continuation award, the Secretary may consider, under 34 CFR 75.253, the extent to which a grantee has made "substantial progress toward meeting the objectives in its approved application." This consideration includes the review of a grantee's progress in meeting the targets and projected outcomes in its approved application, and whether the grantee has expended funds in a manner that is consistent with its approved application and budget. In making a continuation grant, the Secretary also considers whether the grantee is operating in compliance with the assurances in its approved application, including those applicable to Federal civil rights laws that prohibit discrimination in programs or activities receiving Federal financial assistance from the Department (34 CFR 100.4, 104.5, 106.4, 108.8, and 110.23).

VII. Agency Contact

FOR FURTHER INFORMATION CONTACT: David De Soto, U.S. Department of Education, 400 Maryland Avenue, SW., room 3E344, LBJ, Washington, DC 20202–6135. Telephone: (202) 260–8103 or by e-mail: *david.de.soto@ed.gov,* or Tara Ramsey, U.S. Department of Education, 400 Maryland Avenue, SW., room 3E342, LBJ, Washington, DC 20202–6135. Telephone: (202) 260–2063 or by e-mail: *tara.ramsey@ed.gov.*

If you use a TDD, call the Federal Relay Service, FRS, toll free, at 1–800–877–8339.

VIII. Other Information

Accessible Format: Individuals with disabilities can obtain this document and a copy of the application package in an accessible format (*e.g.,* braille, large print, audiotape, or computer diskette) on request to the program contact persons listed under **FOR FURTHER INFORMATION CONTACT** in section VII of this notice.

Electronic Access to This Document: You can view this document, as well as all other documents of this Department published in the **Federal Register**, in text or Adobe Portable Document Format (PDF) on the Internet at the following site: *http://www.ed.gov/news/fedregister.* To use PDF you must have Adobe Acrobat Reader, which is available free at this site.

Note: The official version of this document is the document published in the **Federal Register**. Free Internet access to the official edition of the **Federal Register** and the Code of Federal Regulations is available on GPO Access at: *http://www.gpoaccess.gov/nara/index.html.*

Dated: November 23, 2010.

Thelma Meléndez de Santa Ana,

Assistant Secretary for Elementary and Secondary Education.

[FR Doc. 2010–29993 Filed 11–26–10; 8:45 am]

BILLING CODE 4000–01–P

DEPARTMENT OF EDUCATION

Discretionary Grant Programs

AGENCY: Department of Education.

ACTION: Notice announcing additional requirement for applicants and grantees.

SUMMARY: The Department of Education announces an additional requirement affecting applicants and grantees. We are taking this action to conform our requirements with final guidance issued by the Office of Management and Budget (OMB) on September 14, 2010 (Financial Assistance Use of Universal Identifier and Central Contractor Registration). The new guidance affects an applicant's or grantee's registration of its Dun and Bradstreet Data Universal Numbering System (DUNS) Number and its Taxpayer Identification Number (TIN) with the Central Contractor Registration (CCR) database.

FOR FURTHER INFORMATION CONTACT: Greg Vick, U.S. Department of Education, 400 Maryland Avenue, SW., Washington, DC 20202–0170. *Telephone:* (202) 245–6147 or by *e-mail: gregory.vick@ed.gov.*

SUPPLEMENTARY INFORMATION: In each notice inviting applications for grant awards, we include requirements governing an applicant's DUNS Number and TIN and specify that to do business with the Department, an applicant must register those numbers with the CCR, the Government's primary registrant database.

In its final guidance issued under 2 CFR Part 25 and published in the **Federal Register** on September 14, 2010 (75 FR 55671), OMB added a requirement that an entity doing business with the Department must maintain an active CCR registration with current information while its application is under review and, if it is awarded a grant, during the project period.

The final guidance took effect on October 1, 2010, which made it applicable to every grant competition with an application deadline date on or after October 1, 2010. However, on or before the effective date, we had published a number of notices inviting applications that had application deadline dates on or after October 1, 2010, but that did not include the new requirement with regard to maintaining an active CCR registration.

This notice serves to inform applicants and potential applicants under those affected competitions that the new requirement applies to them, and each such potential applicant must, therefore, maintain an active CCR registration during the time its application is under review and, if funded, during the project period. However, this requirement does not affect the submission of their applications and does not require any applicant to amend, withdraw, or resubmit its application.

The affected competitions and the publication date in the **Federal Register** of each notice inviting applications are shown below in order of Catalog of Federal Domestic Assistance (CFDA) Number. Questions about the applicability of this notice to any application submitted under these programs should be directed to the program contact identified for each program.

CFDA No. 84.019A—Office of Postsecondary Education; Overview Information; Fulbright-Hays Faculty Research Abroad Fellowship Program; Notice Inviting Applications for New Awards for Fiscal Year (FY) 2011. Published October 1, 2010 (75 FR 60740). *Program contact:* Cynthia Dudzinski, 202–502–7589.

CFDA No. 84.021A—Office of Postsecondary Education; Overview Information; Fulbright-Hays Group Projects Abroad Program; Notice Inviting Applications for New Awards for Fiscal Year (FY) 2011. Published September 24, 2010 (75 FR 59051). *Program contact:* Michelle Guilfoil, 202–502–7625.

CFDA No. 84.022A—Office of Postsecondary Education; Overview Information; Fulbright-Hays Doctoral Dissertation Research Abroad (DDRA) Fellowship Program; Notice Inviting Applications for New Awards for Fiscal Year (FY) 2011. BILLING CODE 4000–01–P

DEPARTMENT OF ENERGY

Office of Energy Efficiency and Renewable Energy

Record of Decision and Floodplain Statement of Findings for the Cushman Hydroelectric Project, Mason County, Washington, Environmental Impact Statement (DOE/EIS–0456)

AGENCY: Office of Energy Efficiency and Renewable Energy, U.S. Department of Energy (DOE).

ACTION: Record of Decision (ROD) and Floodplain Statement of Findings.

SUMMARY: DOE announces its decision to provide approximately $4.6 million appropriated under the American Recovery and Reinvestment Act, Public Law 111–5 (Recovery Act), to the City

of Tacoma, Washington (Tacoma), for the design and construction of certain components of the Cushman Hydroelectric Project in Mason County, Washington. These components include a new 3.6 megawatt (MW) powerhouse on the North Fork of the Skokomish River, an integral fish collection, handling, and sorting facility, and related transmission infrastructure.

The environmental impacts from the proposed action were analyzed in the Federal Energy Regulatory Commission's (FERC's) *1996 Final Environmental Impact Statement for the Cushman Hydroelectric Project* (FERC Project No. 460) (1996 FEIS). In a July 15, 2010, Order [1] (FERC's 2010 Order), FERC lifted a stay on a 1998 license for the Cushman Hydroelectric Project and amended the license to include *inter alia* conditions for fish passage facilities and authorization to construct the powerhouse. FERC's 2010 Order includes the components of the Cushman Hydroelectric Project that DOE proposes to fund. FERC relied on the 1996 FEIS to fulfill its National Environmental Policy Act (NEPA) obligations for the 1998 license as amended on July 15, 2010. DOE has adopted the 1996 FEIS and 2010 Order, together, as a final DOE EIS (DOE/EIS–0456).

ADDRESSES: DOE's final EIS, this ROD, and other project information are available on the DOE NEPA Web site at *http://nepa.energy.gov.* In addition, copies of this ROD may be requested by contacting Ms. Jane Summerson, NEPA Document Manager, Office of Energy Efficiency and Renewable Energy Department of Energy at *jane.summerson@ee.doe.gov.* Ms. Summerson can be reached at the U.S. Department of Energy, 1000 Independence Ave, SW., EE–4a, Washington, DC 20585, phone (202) 287–6188 or fax (202) 586–8177.

FOR FURTHER INFORMATION CONTACT: For further information about this project, contact Ms. Summerson as indicated in the **ADDRESSES** section above. For information about DOE's NEPA process, contact Ms. Carol M. Borgstrom, Director, NEPA Policy and Compliance, GC–54, U.S. Department of Energy, 1000 Independence Avenue, SW., Washington, DC 20585, telephone (202) 586–4600, or leave a message at (800) 472–2756.

SUPPLEMENTARY INFORMATION:

Background

DOE is providing approximately $4.6 million to Tacoma, for the design and construction of certain components of the Cushman Hydroelectric Project in Mason County, Washington. These components include a new 3.6 MW powerhouse on the North Fork of the Skokomish River, an integral fish collection and sorting facility, and related transmission infrastructure.[2]

Tacoma applied for this funding in response to DOE Solicitation (FOA–0000120), entitled "Hydroelectric Facility Modernization," pursuant to the Wind and Water Technologies Program. The goal of the Solicitation is to provide funding for industry members who propose to develop, deploy, and test hydropower projects that would modernize the existing hydropower infrastructure in the U.S. and increase the quantity, value, and environmental performance of hydropower generation. Because the funds are appropriated by the Recovery Act, the projects must stimulate the economy and create and retain jobs.

The background on the relicensing of the Cushman Project spans several decades and includes administrative and judicial litigation and multiple stays with interim operating requirements. To fully understand the history of the relicensing process, please refer to FERC's 2010 Order, the 1998 license,[3] and the 1996 FEIS. What follows is a brief summary setting forth those aspects of the Cushman Project and relicensing process relevant to this ROD.

In 1924, Tacoma obtained a license from the Federal Power Commission (predecessor to FERC) to flood 8.8 acres of national forest land by damming the North Fork of the Skokomish River at Lake Cushman on the Olympic Peninsula. This license was designated a "minor part license" because it covered only a small part of Tacoma's much larger hydroelectric project (Cushman Project). At that time, the Federal Power Commission interpreted its licensing authority narrowly, and the 1924 minor part license gave Tacoma the authority it needed to proceed with the Cushman Project.

The 131 MW Cushman Project is located on the North Fork of the Skokomish River (North Fork) in Mason County, Washington, and occupies U.S. lands within the Olympic National Forest and the Skokomish Indian Reservation. Tacoma built two dams across the Skokomish River. Dam No. 1, which was completed in 1926, impounds Lake Cushman and supplies water for electricity generation at a powerhouse with a capacity of 50 MW, located downstream of that dam. Dam No. 2, which was completed in 1930, impounds Lake Kokanee, a much smaller reservoir than Lake Cushman. Water leaving Dam No. 2 passes through a tunnel to a second powerhouse with 81 MW capacity and does not return to the North Fork. Historically, the Cushman Project diverted nearly all of the flow of the North Fork out of the river basin, leading to controversy regarding the total amount of flow diverted from the river, its environmental effects, and the appropriate level of minimum flows that should be required to return water to the North Fork. The Cushman Project is currently operated to provide load-following power and to meet peak-demand period needs.

In 1963, the Federal Power Commission determined that its hydroelectric licensing jurisdiction extends to whole projects, not just to the parts of those projects that occupy or use Federal land. As required by Title I of the Federal Power Act, Tacoma filed for a "major project license" for the Cushman Project on November 5, 1974. Tacoma continued to operate the Cushman Project under the terms of its 1924 minor part license, and FERC issued annual renewals of Tacoma's existing license during the application review period.

FERC's 1996 FEIS

Subsequent to Tacoma's application for a major part license, FERC decided to prepare an environmental impact statement to analyze the impacts from the Cushman Project and alternatives to it. FERC issued a Notice of Intent to prepare a Draft EIS for the Cushman Project on November 12, 1992 (57 FR 53727). FERC held two rounds of scoping, in December 1992 and April 1993, and issued a final Scoping Document in February 1994. FERC issued the Draft EIS in November 1995 and held three public meetings in January and February 1996 to receive public comments on the Draft EIS (61 FR 1375). The comment period closed on February 13, 1996. FERC issued the 1996 FEIS on November 15, 1996 (61 FR 59435).

After a lengthy relicensing proceeding, FERC issued a new license for the Cushman Project on July 30,

[1] *City of Tacoma, Washington* 132 FERC ¶ 61,037, (*Order on Remand and an Offer of Settlement, Amending License, Authorizing New Powerhouse, and Lifting Stay*).

[2] The "Cushman Project" refers to the entire project that FERC licensed in its 2010 Order. The scope of the Cushman Project is broader than the project that DOE is funding, and is defined in this section of this ROD.

[3] *City of Tacoma, Washington* 84 FERC ¶ 61107 (1998).

1998,[4] and issued an order on rehearing on March 30, 1999.[5] The license then became the subject of judicial and administrative review, in which the principal plaintiff was the Skokomish Tribe (Tribe), and concerns about endangered and threatened species and minimum flow were at the center of the dispute. The relicensing was stayed in part for most of the following decade, and FERC, at various times, amended the license with conditions for interim operation of the Cushman Project.

As required by Section 7 of the Endangered Species Act, the Fish and Wildlife Service (FWS) filed a biological opinion for protection of listed fish in 2004. On January 21, 2009, the City of Tacoma and other parties to the litigation, including the Tribe, filed a comprehensive offer of settlement that includes conditions for protection of the Skokomish Indian Reservation, fish passage facilities, and measures for fish and wildlife protection. The National Marine Fisheries Service (NMFS) and FWS filed revised biological opinions in 2010.

FERC's 2010 Order

In its July 15, 2010, Order, FERC lifted a stay on a 1998 license for the Cushman Project and amended the license to include conditions for fish passage facilities and authorization to construct the 3.6 MW powerhouse. FERC relied on the 1996 FEIS to fulfill its NEPA obligations for the 1998 license, as amended in FERC's 2010 Order. The amended license includes license articles consistent with the settlement, extends the license expiration date to June 20, 2048, and authorizes construction of a new 3.6 MW powerhouse that will increase the Cushman Project's authorized capacity to 134.6 MW.

As stated above, FERC's license authorizes all activities that DOE is funding through this decision. In FERC's 2010 Order, FERC found that the activities it authorized, including the proposed powerhouse, were within the range of alternatives examined in the 1996 FEIS and that a supplemental EIS would not be needed for the activities.

Alternatives Analyzed in FERC's 1996 EIS

In the 1996 FEIS, FERC analyzed Tacoma's proposal, which included replacing turbine runners at the second powerhouse; installing a 1.3 MW powerhouse at the base of Dam No. 2; implementing major environmental enhancements such as increasing instream flows into the North Fork; removing resident fish passage barriers in project reservoir tributaries; and executing a land exchange to remove lands within Olympic National Forest. FERC also analyzed four other alternatives:

(1) No Action Alternative;

(2) Alternative adapted from resource agencies' and Tribe's recommended alternatives to Tacoma's proposal. Under this alternative, Tacoma would build a new powerhouse with a generating capacity of 16 MW at the base of Dam No. 2, and the project would operate with full river flows. Tacoma would remove certain dikes, enhance more than 15,000 acres of land for wildlife, and stop diverting water from the North Fork;

(3) Alternative intended to achieve, to the extent practicable, important elements of each objective: under this alternative, Tacoma would manage flow levels through an instream flow schedule to balance the competing demands on North Fork water; build a new 3 MW powerhouse near the base of Dam No. 2; and implement a staff-formulated wildlife habitat enhancement plan covering 5,981 acres of land for wildlife; and

(4) Decommissioning Alternative.

Environmentally Preferred Alternative

FERC identified Alternative (2) as the environmentally preferred alternative in the 1996 FEIS because, among other things, it maximizes river flows and enhances the greatest area of land for wildlife in comparison to the other alternatives.

Alternatives Available to DOE

DOE's two alternatives are to (1) provide funding for certain components of the Cushman Project as defined and conditioned in FERC's 2010 Order and which were analyzed in substantive part in Alternative 2 of the 1996 EIS, or (2) not provide funding (No Action Alternative). Under either alternative, Tacoma would construct and operate the Cushman Project consistent with FERC's 2010 Order and related settlement agreements.

Consultation

FERC is the lead Federal agency for complying with Section 106 of the National Historic Preservation Act (NHPA) and Tribal Consultation for all components of the Cushman Project. The Tribe and others originally opposed Tacoma's Cultural Resource Summary Report, and cultural resource protection became a contested issue. On May 13, 2010, however, FERC entered into a Memorandum of Agreement (MOA) with the Washington State Historic Preservation Officer (SHPO) and the Tribe, and other interested parties concurred in the MOA. The MOA includes a Treatment Plan that Tacoma must follow to protect cultural resources during the construction of the new powerhouse. On June 8, 2010, the Advisory Council on Historic Preservation (ACHP) acknowledged receipt of the MOA and stated that FERC had completed its requirements under Section 106 of the NHPA.

DOE hereby concurs with the May 13, 2010, MOA and, in so doing, completes its own consultation requirements under Section 106 of the NHPA. DOE's proposed action is to fund elements of the Cushman Project that were already the subject of extensive Section 106 consultations.

FERC is also the lead Federal agency for complying with Section 7 of the Endangered Species Act (16 U.S.C. 1536) (ESA). FERC consulted extensively with both NMFS and FWS regarding impacts from the Cushman Project on listed species and critical habitat. These agencies concluded consultation when NMFS and FWS issued Biological Opinions finding that the Cushman Project is not likely to result in jeopardy to listed species or destruction or adverse modification of critical habitat. FERC and Tacoma agreed to implement certain mitigation measures (2010 Order at 148).

DOE finds that, either with or without DOE funding, Tacoma will manage the Cushman Project in compliance with the terms of FERC's relicense and the settlement agreement, which include terms that mitigate impacts to listed species. Thus, DOE's proposed action will have no effect on listed species or critical habitat and DOE has fulfilled its obligations under Section 7 of the ESA.

EIS Adoption

DOE has independently reviewed the 1996 FEIS and FERC's 2010 Order and has concluded that, together, the 1996 FEIS and FERC's 2010 Order meet the standards for an adequate environmental impact statement under the Council on Environmental Quality's and DOE's NEPA regulations, which can be found at 40 CFR Parts 1500–1508 and 10 CFR Part 1021, respectively. In addition, DOE has determined that the Cushman Project is within the range of alternatives analyzed in the 1996 FEIS.

The only difference between the project that DOE is funding and the actions analyzed under the 1996 FEIS is the placement of a transmission line. In the 1996 FEIS, FERC analyzed an

[4] *City of Tacoma, Washington* 84 FERC ¶ 61107 (1998).

[5] *City of Tacoma, Washington* 86 FERC ¶ 61311 (1999).

aboveground transmission line. Tacoma is now planning to bury the line underground to mitigate environmental impacts. This mitigation measure is not a substantial change in the proposed action relevant to environmental concerns, within the meaning of 40 CFR 1502.9(c), warranting a supplement to the FEIS. Accordingly, DOE adopted FERC's 1996 FEIS and 2010 Order as a final DOE EIS (DOE/EIS–0456).

Because DOE did not participate as a cooperating agency in preparation of FERC's 1996 FEIS, DOE recirculated the adopted document as a DOE final EIS and filed it with the Environmental Protection Agency (EPA). EPA published a notice of availability in the **Federal Register** on October 8, 2010 (75 FR 62386). DOE did not receive any comments on the final EIS.

Floodplain Statement of Findings

In accordance with DOE regulations at 10 CFR Part 1022 (*Compliance with Floodplain and Wetland Environmental Review Requirements*), DOE considered the potential impacts of the Cushman Project on floodplains. These findings are based on the assessment of environmental impacts in the final EIS. The location of the Cushman Project and the alternatives considered are discussed in detail in the final EIS. The differences among the alternatives, including the original proposal from Tacoma, are summarized above.

DOE finds that no practicable alternative to locating the Cushman Project in a floodplain is available. The nature of the existing Cushman Dam site and the process of generating electricity from water pressure require that the proposed powerhouse be constructed downstream of the dam; therefore the proposed construction will necessarily be within a floodplain.

FERC's 2010 Order establishes numerous requirements that Tacoma must follow in constructing and operating the proposed new facilities to minimize potential harm to or within the floodplain, including measures to reduce flooding hazards while protecting water quality and fish habitat. For example, Article 403 of FERC's 2010 Order requires Tacoma to implement measures to enhance the channel conveyance capacity of the mainstem Skokomish River for the reduction of risks to human health and welfare from flooding, including, among other things, providing funds to the U.S. Army Corps of Engineers for a *Skokomish River Basin Ecosystem Restoration and Flood Damage Reduction General Investigation;* the preparation, under certain conditions, of a *Mainstem Channel Restoration Plan* in consultation with NMFS, FWS, the Bureau of Indian Affairs (BIA) and including the comments of the Federal Emergency Management Agency, EPA, and Mason County; and, under certain conditions, providing funds for a *Channel Restoration Account.*

In addition, under Articles 406 and 407 of FERC's 2010 Order, Tacoma must prepare and implement an *Operational and Flow Monitoring Plan* to improve fish habitat, address lake water use changes, improve sediment transport and stream flow, and improve flood control and forecasting. This plan must be submitted to and approved by NMFS, FWS, and BIA. Under certain conditions, Tacoma would be required to develop a *Flood Damage and Mitigation Plan* and provide funding to implement the plan.

Mitigation

In addition to adopting the measures addressing floodplain impacts, described above, DOE adopts and incorporates by reference all other mitigation measures documented in FERC's 2010 Order. These other measures include but are not limited to:

- Monitoring water use, which provides a feedback mechanism to help ensure that adequate flows will be available to meet the needs of anadromous fish at different times of the year, support aquatic habitats, maintain improvements to the channel capacity of the river, and provide some assurances that the flows released will benefit these resources.
- A variety of fish habitat protection, mitigation and enhancement measures such as habitat enhancement and restoration work that benefits anadromous fish by improving channel habitat and removing instream barriers.
- The use of a floating surface collector for downstream fish passage. Tacoma will use a trap and haul system for upstream fish passage.
- Implementation of a resident fishery, which will include anadromous fish hatcheries.

Decision

DOE has decided to provide funding, appropriated by the Recovery Act, to Tacoma for the design and construction of certain components of the Cushman Project in Mason County, Washington. These components include a new 3.6 MW powerhouse on the North Fork of the Skokomish River, an integral fish collection and sorting facility, and related transmission infrastructure.

DOE incorporates by reference all mitigation measures and other conditions identified in FERC's 2010 Order. DOE expects that Tacoma will execute the Cushman Project in compliance with FERC's 2010 Order. Thus, all practicable means to avoid or minimize environmental harm have been adopted.

Basis for Decision

DOE's decision enables it to meet the objectives set forth in the Solicitation, namely, to provide financial assistance for industry members and industry-led partnerships who propose to develop, deploy, and test hydropower projects to modernize the existing hydropower infrastructure in the U.S. and increase the quantity, value, and environmental performance of hydropower generation.

DOE did not select the No Action alternative because it would not meet DOE's objectives, as set forth in the Solicitation.

DOE decided not to fund alternatives, or alternative components, that were analyzed in the 1996 FEIS but were not authorized under FERC's 2010 Order. Without a FERC license, Tacoma would not be able to implement such alternatives.

Issued in Washington, DC, on this 18th day of November 2010.

Cathy Zoi,

Assistant Secretary, Energy Efficiency and Renewable Energy.

[Project No. 13848–000]

Qualified Hydro 27, LLC; Notice of Preliminary Permit Application Accepted for Filing and Soliciting Comments, Motions To Intervene, and Competing Applications

November 19, 2010.

On September 30, 2010, Qualified Hydro 27, LLC filed an application for a preliminary permit, pursuant to section 4(f) of the Federal Power Act (FPA), proposing to study the feasibility of the Howard A. Hanson Dam Hydroelectric Project (Howard A. Hanson project) to be located in King County, Washington, near the town of Palmer. The sole purpose of a preliminary permit, if issued, is to grant the permit holder priority to file a license application during the permit term. A preliminary permit does not authorize the permit holder to perform any land-disturbing activities or otherwise enter upon lands or waters owned by others without the owners' express permission.

The proposed project will consist of the following: (1) The existing 675-foot-long, 235-foot-high earth and rockfill Howard A. Hanson dam; (2) the existing Howard A. Hanson reservoir, which has a maximum usable storage of 106,000 acre-feet between elevation 1,206 feet above mean sea level (msl) and elevation 1,035 feet msl; (3) an 800-foot-long steel liner, placed within the existing outlet tunnel, bifurcated above the existing discharge outlet; (4) a 200-foot-long, 10-foot-diameter steel penstock leading from the right branch of the bifurcation to the powerhouse; (5) a 40-foot-long, 80-foot-wide reinforced concrete powerhouse containing one 2-megawatt (MW) and one 3-MW Francis-type turbine; (6) a substation adjacent to the powerhouse; (7) a 1,000-foot-long, 69-kilovolt (kV) transmission line that will interconnect with the local utility; and (8) appurtenant facilities. The estimated annual generation of the Howard A. Hanson project would be 14 gigawatt-hours.

Federal Energy Regulatory Commission

[Project No. 13762–000; Project No. 13773–000; Project No. 13784–000]

Notice of Competing Preliminary Permit Applications Accepted for Filing and Soliciting Comments, and Motions To Intervene

November 19, 2010.

FFP Missouri 15, LLC ..... Project No. 13762–000.
Morgantown Hydro, LLC ..... Project No. 13773–000.
Three Rivers Hydro, LLC ..... Project No. 13784–000.

On May 18, 2010, FFP Missouri 15, LLC, Morgantown Hydro, LLC, and Three Rivers Hydro LLC filed applications, pursuant to section 4(f) of the Federal Power Act, proposing to study the feasibility of hydropower at the U.S. Army Corps of Engineers Morgantown Lock & Dam located on the Monongahela River in Monongahela County, West Virginia. The sole purpose of a preliminary permit, if issued, is to grant the permit holder priority to file a license application during the permit term. A preliminary permit does not authorize the permit holder to perform any land-disturbing activities or otherwise enter upon lands or waters owned by others without the owners' express permission.

Descriptions of the Proposed Morgantown Lock & Dam Projects

FFP Missouri 15, LLC's project (Project No. 13762–000) would consist of: (1) An excavated intake channel slightly longer and wider than the powerhouse; (2) a 60-foot-long, 110-foot-wide, 40-foot-high proposed powerhouse containing two generating units having a total installed capacity of 9.0 megawatts (MW); (3) an excavated tailrace channel slightly longer and wider than the powerhouse; and (4) a proposed 13-mile-long, ranging from 34.0 to 230-kilovolt (kV) transmission line. The proposed project would have an average annual generation of 26.0 gigawatt-hours (GWh), which would be sold to a local utility.

Applicant Contact: Ms. Ramya Swaminathan, Free Flow Power Corporation, 33 Commercial Street, Gloucester, MA 01930; phone (978) 283–2822.

Morgantown Hydro LLC's project (Project No. 13773–000) would consist of: (1) A proposed 80-foot-long excavated power canal; (2) a proposed powerhouse containing two generating units having a total installed capacity of 7.2 MW; (3) a 120-foot-long excavated tailrace; and (4) a proposed 0.3-mile-long, 69.0-kV transmission line. The proposed project would have an average annual generation of 26.2 GWh, which would be sold to a local utility.

Applicant Contact: Mr. Brent Smith, Symbiotics, LLC., P.O. Box 535, Rigby, ID 83442; phone (208) 745–0834.

Three Rivers Hydro, LLC's project (Project No. 13784–000) would consist of: (1) A proposed 85-foot-long excavated power canal; (2) a 45-foot-long, 110-foot-wide, 40-foot-high proposed powerhouse containing two generating units having a total installed capacity of 3.7 MW; (3) a 95-foot-long excavated tailrace; and (4) a proposed 1,100-foot-long, ranging from 34 to 230-kV transmission line. The proposed project would have an average annual generation of 20.0 GWh, which would be sold to a local utility.

Applicant Contact: Mr. Joseph Watt, Esq., Three Rivers Hydro, LLC, 316 South Clinton Street, Suite 4, Syracuse, NY 13202; phone (315) 477–9914.

FERC Contact: Tim Looney (202) 502–6096.

Lock Hydro Friends Fund XLI; Allegheny 7 Hydro, LLC; Notice of Competing Preliminary Permit Applications Accepted for Filing and Soliciting Comments, and Motions To Intervene

November 19, 2010.

On May 18, 2010, Lock Hydro Friends Fund XLI, and Allegheny 7 Hydro, LLC filed applications, pursuant to section 4(f) of the Federal Power Act, proposing to study the feasibility of hydropower at the U.S. Army Corps of Engineers (Corps) Allegheny River Lock & Dam No. 7 located on the Allegheny River in Armstrong County, Pennsylvania. The sole purpose of a preliminary permit, if issued, is to grant the permit holder priority to file a license application during the permit term. A preliminary permit does not authorize the permit holder to perform any land-disturbing activities or otherwise enter upon lands or waters owned by others without the owners' express permission.

Descriptions of the Proposed Allegheny River Lock & Dam No. 7 Projects

Lock Hydro Friends Fund XLI's project (Project No. 13736–000) would consist of: (1) Two 24-foot-high, 75-foot-long prefabricated concrete walls attached to the downstream side of the Corps dam which would support one frame module; (2) the frame module would be 109 feet long and weigh 1.16 million pounds and contain 10 generating units with a total combined capacity of 12.5 megawatts (MW); (3) a new switchyard containing a transformer; (4) a proposed 6,000-foot-long, 36.7-kilovolt (kV) transmission line to an existing substation. The proposed project would have an average annual generation of 54.787 gigawatt-hours (GWh), which would be sold to a local utility.

Applicant Contact: Mr. Mark R. Stover, Hydro Green Energy LLC, 5090 Richmond Avenue #390, Houston, TX 77056; phone (877) 556–6566 x711.

Allegheny 7 Hydro, LLC's project (Project No. 13777–000) would consist of: (1) A proposed 100-foot-long excavated power canal; (2) a proposed powerhouse containing three generating units having a total installed capacity of 13.3 MW; (3) a 260-foot-long excavated tailrace; (4) a proposed 2.1-mile-long, 69.0–kV transmission line. The proposed project would have an average annual generation of 49.7 GWh, which would be sold to a local utility.

Applicant Contact: Mr. Brent Smith, Symbiotics LLC, P.O. Box 535, Rigby, ID 83442; phone (208) 745–0834.

FERC Contact: Michael Spencer, (202) 502–6093.

Deadline for filing comments, motions to intervene, competing applications (without notices of intent), or notices of intent to file competing applications: 60 days from the issuance of this notice. Competing applications and notices of intent must meet the requirements of 18 CFR 4.36. Comments, motions to intervene, notices of intent, and competing applications may be filed electronically via the Internet. *See* 18 CFR 385.2001(a)(1)(iii) and the instructions on the Commission's Web site *http://www.ferc.gov/docs-filing/efiling.asp.* Commenters can submit brief comments up to 6,000 characters, without prior registration, using the eComment system at *http://www.ferc.gov/docs-filing/ecomment.asp.* You must include your name and contact information at the end of your comments. For assistance, please contact FERC Online Support at *FERCOnlineSupport@ferc.gov;* call toll-free at (866) 208–3676; or, for TTY, contact (202) 502–8659. Although the Commission strongly encourages electronic filing, documents may also be paper-filed. To paper-file, mail an original and seven copies to: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426.

More information about this project, including a copy of the application, can be viewed or printed on the "eLibrary" link of the Commission's Web site at *http://www.ferc.gov/docs-filing/elibrary.asp.* Enter the docket number (P–13736–000 or 13777–000) in the docket number field to access the document. For assistance, contact FERC Online Support.

Notice of Competing Preliminary Permit Applications Accepted for Filing and Soliciting Comments, and Motions To Intervene

November 19, 2010.

Lock+ Hydro Friends Fund XXXIX	Project No. 13740–000
FFP Missouri 3, LLC	Project No. 13749–000
Allegheny 3 Hydro, LLC	Project No. 13775–000
Three Rivers Hydro, LLC	Project No. 13781–000

On May 18, 2010, Lock+ Hydro Friends Fund XXXIX, FFP Missouri 3, LLC, Allegheny 3 Hydro, LLC, and Three Rivers Hydro LLC filed applications, pursuant to section 4(f) of the Federal Power Act, proposing to study the feasibility of hydropower at the U.S. Army Corps of Engineers (Corps) C.W. Bill Young Lock and Dam located on the Allegheny River in Allegheny County, Pennsylvania. The sole purpose of a preliminary permit, if issued, is to grant the permit holder priority to file a license application during the permit term. A preliminary

permit does not authorize the permit holder to perform any land-disturbing activities or otherwise enter upon lands or waters owned by others without the owners' express permission.

Descriptions of the proposed C.W. Bill Young Lock and Dam Projects:

Lock+ Hydro Friends Fund XXXIX's project (Project No. 13740–000) would consist of: (1) Two 41-foot-high, 75-foot-long prefabricated concrete walls attached to the downstream side of the Corps dam which would support one frame module; (2) each frame module would be 109 feet long and weigh 1.16 million pounds and contain 10 generating units with a total combined capacity of 12.5 megawatts (MW); (3) a new switchyard containing a transformer; and (4) a proposed 6,000-foot-long, 69-kilovolt (kV) transmission line connecting to an existing substation. The proposed project would have an average annual generation of 54.787 gigawatt-hours (GWh), which would be sold to a local utility.

Applicant Contact: Mr. Mark R. Stover, Hydro Green Energy LLC, 5090 Richmond Avenue #390, Houston, TX 77056; phone (877) 556–6566 x711.

FFP Missouri 3, LLC's project (Project No. 13749–000) would consist of: (1) An excavated intake channel slightly longer and wider than the powerhouse; (2) a 125-foot-long, 160-foot-wide, 60-foot-high proposed powerhouse containing three generating units having a total installed capacity of 15.0 MW; (3) an excavated tailrace channel slightly longer and wider than the powerhouse; and (4) a proposed 6,500-foot-long, ranging from 34.0 to 230-kV transmission line. The proposed project would have an average annual generation of 93.0 GWh, which would be sold to a local utility.

Applicant Contact: Ms. Ramya Swaminathan, Free Flow Power Corporation, 33 Commercial Street, Gloucester, MA 01930; phone (978) 283–2822.

Allegheny 3 Hydro, LLC's project (Project No. 13775–000) would consist of: (1) A proposed 170-foot-long excavated power canal; (2) a proposed powerhouse containing three generating units having a total installed capacity of 21.0 MW; (3) a 160-foot-long excavated tailrace; and (4) a proposed 1.6-mile-long, 69.0-kV transmission line. The proposed project would have an average annual generation of 92.2 GWh, which would be sold to a local utility.

Applicant Contact: Mr. Brent Smith, Symbiotics, LLC., P.O. Box 535, Rigby, ID 83442; phone (208) 745–0834.

Three Rivers Hydro, LLC's project (Project No. 13781–000) would consist of: (1) A proposed 85-foot-long excavated power canal; (2) a 125-foot-long, 160-foot-wide, 60-foot-high proposed powerhouse containing three generating units having a total installed capacity of 15.0 MW; (3) a 95-foot-long excavated tailrace; and (4) a proposed 500-foot-long, 25-kV transmission line. The proposed project would have an average annual generation of 93.0 GWh, which would be sold to a local utility.

Applicant Contact: Mr. Joseph Watt, Esq., Three Rivers Hydro, LLC, 316 South Clinton Street, Suite 4, Syracuse, NY 13202; phone (315) 477–9914.

FERC Contact: Tim Looney (202) 502–6096.

Deadline for filing comments, motions to intervene, competing applications (without notices of intent), or notices of intent to file competing applications: 60 days from the issuance of this notice. Competing applications and notices of intent must meet the requirements of 18 CFR 4.36. DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP11–22–000]

Tennessee Gas Pipeline Company; Notice of Application

November 18, 2010.

Take notice that on November 5, 2010 Tennessee Gas Pipeline Company (Tennessee), 1001 Louisiana Street, Houston, Texas 77002, filed in Docket No. CP11–22–000, an application pursuant to section 3 of the Natural Gas Act (NGA), to amend its authorization under NGA section 3 and Presidential Permits to allow it to import and export natural gas from the United States to Canada utilizing Tennessee's existing cross-border facilities. Specifically, Tennessee proposes that its Presidential Permits be amended and reissued, and authorizations under Section 3 of the NGA be amended to authorize Tennessee to operate bi-directionally two existing international border crossings between Canada and the United States located near Niagara Falls, New York. Tennessee proposes no new facilities, all as more fully set forth in the application which is on file with the Commission and open to public inspection. This filing may also be viewed on the Commission's Web site at *http://www.ferc.gov* using the "eLibrary" link. Enter the docket number, excluding the last three digits, in the docket number field to access the document. For assistance, call (202) 502–8659 or TTY, (202) 208–3676.

Any questions regarding this application should be directed to Mr. Thomas Joyce, Manager, Certificates, Tennessee Gas Pipeline Company, 1001 Louisiana Street, Houston, Texas 77002, phone (713) 420–3299 or facsimile (713) 420–1605 or e-mail *tom.joyce@elpaso.com.*

There are two ways to become involved in the Commission's review of this project. First, any person wishing to obtain legal status by becoming a party to the proceedings for this project should, on or before the below listed comment date, file with the Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426, a motion to intervene in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 385.214 or 385.211) and the Regulations under the NGA (18 CFR 157.10). A person obtaining party status will be placed on the service list maintained by the Secretary of the Commission and will receive copies of all documents filed by the applicant and

by all other parties. A party must submit 14 copies of filings made with the Commission and must mail a copy to the applicant and to every other party in the proceeding. Only parties to the proceeding can ask for court review of Commission orders in the proceeding.

However, a person does not have to intervene in order to have comments considered. The second way to participate is by filing with the Secretary of the Commission, as soon as possible, an original and two copies of comments in support of or in opposition to this project. The Commission will consider these comments in determining the appropriate action to be taken, but the filing of a comment alone will not serve to make the filer a party to the proceeding. The Commission's rules require that persons filing comments in opposition to the project provide copies of their protests only to the party or parties directly involved in the protest.

Motions to intervene, protests and comments may be filed electronically via the Internet in lieu of paper; *see,* 18 CFR 385.2001(a)(1)(iii) and the instructions on the Commission's Web site under the "e-Filing" link. The Commission strongly encourages electronic filings.

Comment Date: December 9, 2010.

Kimberly D. Bose,

Secretary.

[Project No. 13869–000]

Qualified Hydro 35, LLC; Notice of Preliminary Permit Application Accepted for Filing and Soliciting Comments, Motions To Intervene, and Competing Applications

November 18, 2010.

On October 15, 2010, Qualified Hydro 35, LLC filed an application for a preliminary permit, pursuant to section 4(f) of the Federal Power Act (FPA), proposing to study the feasibility of the Tionesta Dam Hydroelectric Project to be located on Tionesta Creek near Tionesta, in Forest County, Pennsylvania. The sole purpose of a preliminary permit, if issued, is to grant the permit holder priority to file a license application during the permit term. A preliminary permit does not authorize the permit holder to perform any land-disturbing activities or otherwise enter upon lands or waters owned by others without the owners' express permission.

The proposed project would consist of the following: (1) Two vertical Kaplan turbine-generators with a combined capacity of 5 megawatts; (2) a 150-foot-long steel liner with a bifurcated 75-foot-long penstock leading to the powerhouse; (3) a 40-foot by 80-foot concrete powerhouse; (4) a new 5 MVA substation adjacent to the powerhouse; (5) a 9,800-foot-long transmission line; and (6) appurtenant facilities. The estimated annual generation of the Tionesta Dam Hydroelectric Project would be 22,000 megawatt-hours.

FFP Missouri 13, LLC; Grays Hydro, LLC; Notice of Competing Preliminary Permit Applications Accepted for Filing and Soliciting Comments, and Motions To Intervene

November 19, 2010.

On May 18, 2010, FFP Missouri 13, LLC and Grays Hydro, LLC filed applications, pursuant to section 4(f) of the Federal Power Act, proposing to study the feasibility of hydropower at the U.S. Army Corps of Engineers (Corps) Grays Landing Lock & Dam located on the Monongahela River in Greene County, Pennsylvania. The sole purpose of a preliminary permit, if issued, is to grant the permit holder priority to file a license application during the permit term. A preliminary permit does not authorize the permit holder to perform any land-disturbing activities or otherwise enter upon lands or waters owned by others without the owners' express permission.

Descriptions of the proposed Grays Landing Lock & Dam Projects:

FFP Missouri 13, LLC's project (Project No. 13763–000) would consist of: (1) An excavated intake channel slightly longer and wider than the powerhouse; (2) a 140-foot-long, 16-foot-wide, 40-foot-high proposed powerhouse containing two generating units having a total installed capacity of 15.0 megawatts (MW); (3) an excavated tailrace channel slightly longer and wider than the powerhouse; (4) a proposed 7,400-foot-long, 34.0 to 230-kilovolt (kV) transmission line. The proposed project would have an average annual generation of 47.0 gigawatt-hours (GWh), which would be sold to a local utility.

Applicant Contact: Ms. Ramya Swaminathan, Free Flow Power Corporation, 33 Commercial Street, Gloucester, MA 01930; phone (978) 283–2822.

Grays Hydro, LLC's project (Project No. 13772–000) would consist of: (1) A proposed 230-foot-long excavated power canal; (2) a proposed powerhouse

containing three generating units having a total installed capacity of 12.0 MW; (3) a 450-foot-long excavated tailrace; (4) a proposed 0.9-mile-long, 25.0-kV transmission line. The proposed project would have an average annual generation of 52.6 GWh, which would be sold to a local utility.

Applicant Contact: Mr. Brent Smith, Symbiotics LLC, P.O. Box 535, Rigby, ID 83442; phone (208) 745–0834.

FERC Contact: Michael Spencer, (202) 502–6093.

Deadline for filing comments, motions to intervene, competing applications (without notices of intent), or notices of intent to file competing applications: 60 Days from the issuance of this notice. [Project No. 13746–000; Project No. 13750–000; Project No. 13776–000; Project No. 13782–000]

Notice of Competing Preliminary Permit Applications Accepted for Filing and Soliciting Comments, and Motions To Intervene

Lock + Hydro Friends Fund XL	Project No. 13746–000.
FFP Missouri 4, LLC	Project No. 13750–000.
Allegheny 4 Hydro, LLC	Project No. 13776–000.
Three Rivers Hydro, LLC	Project No. 13782–000.

November 19, 2010.

On May 18, 2010, Lock+ Hydro Friends Fund XL, FFP Missouri 4, LLC, Allegheny 4 Hydro, LLC, and Three Rivers Hydro LLC filed applications, pursuant to section 4(f) of the Federal Power Act, proposing to study the feasibility of hydropower at the U.S. Army Corps of Engineers (Corps) Allegheny River Lock and Dam No. 4 located on the Allegheny River in Allegheny County, Pennsylvania. The sole purpose of a preliminary permit, if issued, is to grant the permit holder priority to file a license application during the permit term. A preliminary permit does not authorize the permit holder to perform any land-disturbing activities or otherwise enter upon lands or waters owned by others without the owners' express permission.

Descriptions of the proposed Allegheny River Lock and Dam No. 4 Projects:

Lock+ Hydro Friends Fund XL project (Project No. 13746–000) would consist of: (1) Two 34-foot-high, 75-foot-long prefabricated concrete walls attached to the downstream side of the Corps dam which would support one frame modules; (2) each frame module would be 109 feet long and weigh 1.16 million pounds and contain 10 generating units with a total combined capacity of 10.0 megawatts (MW); (3) a new switchyard containing a transformer; and (4) a proposed 400-foot-long, 69-kilovolt (kV) transmission line connecting to an existing substation. The proposed project would have an average annual generation of 43.83 gigawatt-hours (GWh), which would be sold to a local utility.

Applicant Contact: Mr. Mark R. Stover, Hydro Green Energy LLC, 5090 Richmond Avenue #390, Houston, TX 77056; phone (877) 556–6566 x711.

FFP Missouri 4, LLC's project (Project No. 13750–000) would consist of: (1) An excavated intake channel slightly longer and wider than the powerhouse; (2) a 125-foot-long, 160-foot-wide, 60-foot-high proposed powerhouse containing three generating units having a total installed capacity of 15.0 MW; (3) an excavated tailrace channel slightly longer and wider than the powerhouse; and (4) a proposed 500-foot-long, ranging from 34.0 to 230-kilovolt (kV) transmission line. The proposed project would have an average annual generation of 89.0 GWh, which would be sold to a local utility.

Applicant Contact: Ms. Ramya Swaminathan, Free Flow Power Corporation, 33 Commercial Street, Gloucester, MA 01930; phone (978) 283–2822.

Allegheny 4 Hydro, LLC's project (Project No. 13776–000) would consist of: (1) A proposed 165-foot-long excavated power canal; (2) a proposed powerhouse containing three generating units having a total installed capacity of 15.9 MW; (3) a 135-foot-long excavated tailrace; and (4) a proposed 0.3-mile-long, 69.0-kV transmission line. The proposed project would have an average annual generation of 62.6 GWh, which would be sold to a local utility.

Applicant Contact: Mr. Brent Smith, Symbiotics, LLC., P.O. Box 535, Rigby, ID 83442; phone (208) 745–0834.

Three Rivers Hydro, LLC's project (Project No. 13782–000) would consist of: (1) A proposed 85-foot-long excavated power canal; (2) a 125-foot-long, 160-foot-wide, 60-foot-high proposed powerhouse containing three generating units having a total installed capacity of 15.0 MW; (3) a 95-foot-long excavated tailrace; and (4) a proposed 500-foot-long, 138-kV transmission line. The proposed project would have an average annual generation of 89.0 GWh, which would be sold to a local utility.

Applicant Contact: Mr. Joseph Watt, Esq., Three Rivers Hydro, LLC, 316 South Clinton Street, Suite 4, Syracuse, NY 13202; phone (315) 477–9914.

FERC Contact: Tim Looney (202) 502–6096.

Deadline for filing comments, motions to intervene, competing applications (without notices of intent), or notices of intent to file competing applications: 60 days from the issuance of this notice. Competing applications and notices of intent must meet the requirements of 18 CFR 4.36. Comments, motions to intervene, notices of intent, and

competing applications may be filed electronically via the Internet. *See* 18 CFR 385.2001(a)(1)(iii) and the instructions on the Commission's Web site *http://www.ferc.gov/docs-filing/efiling.asp*. Commenters can submit brief comments up to 6,000 characters, without prior registration, using the eComment system at *http://www.ferc.gov/docs-filing/ecomment.asp*. You must include your name and contact information at the end of your comments. For assistance, please contact FERC Online Support at *FERCOnlineSupport@ferc.gov;* call toll-free at (866) 208–3676; or, for TTY, contact (202) 502–8659. Although the Commission strongly encourages electronic filing, documents may also be paper-filed. To paper-file, mail an original and seven copies to: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426.

More information about this project, including a copy of the application, can be viewed or printed on the "eLibrary" link of the Commission's Web site at *http://www.ferc.gov/docs-filing/elibrary.asp*. Enter the docket number (P–13746–000, 13750–000, 13776–000, or 13782) in the docket number field to access the document. For assistance, contact FERC Online Support.

Notice of Competing Preliminary Permit Applications Accepted for Filing and Soliciting Comments, and Motions To Intervene

November 19, 2010.

Lock Hydro Friends Fund XLIII	Project No. 13745–000
FFP Missouri 14, LLC	Project No. 13758–000
Solia 4 Hydroelectric LLC	Project No. 13767–000
Monongahela 4 Hydro, LLC	Project No. 13788–000

On May 18, 2010, Lock Hydro Friends Fund XLIII, FFP Missouri 14, LLC, Solia 4 Hydroelectric LLC, and on May 19, 2010, Monongahela 4 Hydro, LLC filed applications, pursuant to section 4(f) of the Federal Power Act, proposing to study the feasibility of hydropower at the U.S. Army Corps of Engineers (Corps) Monongahela River Lock & Dam No. 4 located on the Monongahela River in Washington County, Pennsylvania. The sole purpose of a preliminary permit, if issued, is to grant the permit holder priority to file a license application during the permit term. A preliminary permit does not authorize the permit holder to perform any land-disturbing activities or otherwise enter upon lands or waters owned by others without the owners' express permission.

Descriptions of the proposed Monongahela River Lock & Dam No. 4 Projects:

Lock Hydro Friends Fund XLIII's project (Project No. 13745–000) would consist of: (1) Two 45-foot-high, 75-foot-long prefabricated concrete walls attached to the downstream side of the Corps dam which would support one frame module; (2) the frame module would be 109 feet long and weigh 1.16 million pounds and contain 10 generating units with a total combined capacity of 18.0 megawatts (MW); (3) a new switchyard containing a transformer; (4) a proposed 5,000-foot-long, 36.7-kilovolt (kV) transmission line to an existing substation. The proposed project would have an average annual generation of 78.894 gigawatt-hours (GWh), which would be sold to a local utility.

Applicant Contact: Mr. Mark R. Stover, Hydro Green Energy LLC, 5090 Richmond Avenue #390, Houston, TX 77056; phone (877) 556–6566 x711.

FFP Missouri 14, LLC's project (Project No. 13758–000) would consist of: (1) An excavated intake channel slightly longer and wider than the powerhouse; (2) a 200-foot-long, 25-foot-wide, 60-foot-high proposed powerhouse containing four generating units having a total installed capacity of 20.0 MW; (3) an excavated tailrace channel slightly longer and wider than the powerhouse; (4) a proposed 5,500-foot-long, 34.0 to 230-kV transmission line. The proposed project would have an average annual generation of 85.0 GWh, which would be sold to a local utility.

Applicant Contact: Ms. Ramya Swaminathan, Free Flow Power Corporation, 33 Commercial Street, Gloucester, MA 01930; phone (978) 283–2822.

Solia 4 Hydroelectric LLC's project (Project No. 13767–000) would consist of: (1) A proposed 300-foot-long, 80-foot-wide excavated intake channel on the left bank of the dam, requiring removal of part of the left dam abutment; (2) a proposed powerhouse containing four generating units having a total installed capacity of 18.7 MW; (3) a 200-foot-long, 80-foot-wide excavated tailrace; (4) a proposed 4,900-foot-long, 34.0 to 230-kV transmission line. The proposed project would have an average annual generation of 81.8 GWh, which would be sold to a local utility.

Applicant Contact: Mr. Douglas Spaulding, Nelson Energy, 8441 Wayzata Blvd. Suite 101, Golden Valley, MN 55426; phone (952) 544–8133.

Monongahela 4 Hydro, LLC's project (Project No. 13788–000) would consist of: (1) A proposed 190-foot-long excavated power canal; (2) a proposed powerhouse containing two generating units having a total installed capacity of 8.2 MW; (3) a 145-foot-long excavated tailrace; (4) a proposed 0.8-mile-long, 69.0-kV transmission line. The proposed project would have an average annual generation of 28.1 GWh, which would be sold to a local utility.

Applicant Contact: Mr. Brent Smith, Symbiotics LLC., P.O. Box 535, Rigby, ID 83442; phone (208) 745–0834.

FERC Contact: Michael Spencer, (202) 502–6093.

Deadline for filing comments, motions to intervene, competing applications (without notices of intent), or notices of intent to file competing applications: 60 days from the issuance of this notice. Competing applications and notices of intent must meet the requirements of 18 CFR 4.36. Comments, motions to intervene, notices of intent, and competing applications may be filed electronically via the Internet. See 18 CFR 385.2001(a)(1)(iii) and the instructions on the Commission's website *http://www.ferc.gov/docs-filing/efiling.asp.* Commenters can submit brief comments up to 6,000 characters, without prior registration, using the eComment system at *http://www.ferc.gov/docs-filing/ecomment.asp.* You must include your name and contact information at the end of your comments. For assistance, please contact FERC Online Support at *FERCOnlineSupport@ferc.gov;* call toll-

free at (866) 208–3676; or, for TTY, contact (202) 502–8659. Although the Commission strongly encourages electronic filing, documents may also be paper-filed. To paper-file, mail an original and seven copies to: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426.

More information about this project, including a copy of the application, can be viewed or printed on the "eLibrary" link of the Commission's Web site at *http://www.ferc.gov/docs-filing/elibrary.asp.* Enter the docket number (P–13745–000, 13758–000, 13767–000, or 13788–000) in the docket number field to access the document. For assistance, contact FERC Online Support.

[Project No. 13855–000]

NorthHydro, LLC; Notice of Preliminary Permit Application Accepted for Filing and Soliciting Comments, Motions To Intervene, and Competing Applications

November 18, 2010.

On October 1, 2010, and supplemented on November 16, 2010, NortHydro, LLC filed an application for a preliminary permit pursuant to section 4(f) of the Federal Power Act (FPA), proposing to study the feasibility of the Boulder Creek Water Power Project (Boulder Creek project) to be located on Boulder Creek in the vicinity of Bonner's Ferry, Idaho and Troy, Montana in Boundary County, Idaho and Lincoln County, Montana. The sole purpose of a preliminary permit, if issued, is to grant the permit holder priority to file a license application during the permit term. A preliminary permit does not authorize the permit holder to perform any land-disturbing activities or otherwise enter upon lands or waters owned by others without the owners' express permission.

The proposed project will consist of the following: (1) A 6-foot-high, 75-foot-long reinforced concrete diversion and inlet structure on Boulder Creek; (2) an impoundment of less than 1 acre-foot; (3) an 8,500-foot-long, 4.5-foot-diameter pressurized HDPE penstock from the intake structure to the powerhouse; (4) a powerhouse containing one or more turbines with a total installed capacity of 4.3 megawatts; (5) a concrete or rip-rap-lined tailrace channel to return flows from the powerhouse to Boulder Creek; (6) an approximately 5-mile-long, 115 kV transmission line which will tie into an undetermined interconnection; and (7) appurtenant facilities. The estimated annual generation of the Boulder Creek project would be 15.75 gigawatt-hours.

Applicant Contact: Darius Ruen, NortHydro, LLC, 3201 Huetter Rd Suite 102, Coeur d'Alene, ID 83814; phone: (208) 292–0820.

FERC Contact: Ryan Hansen (202) 502–8074.

Deadline for filing comments, motions to intervene, competing applications (without notices of intent), or notices of intent to file competing applications: 60 days from the issuance of this notice. [Project No. 2621–009]

Lockhart Power Company, South Carolina; Notice of Availability of Environmental Assessment

November 19, 2010.

In accordance with the National Environmental Policy Act of 1969 and the Federal Energy Regulatory Commission's (Commission or FERC's) regulations, 18 Code of Federal Regulations (CFR) Part 380 (Order No. 486, 52 **Federal Register** [FR] 47897), the Office of Energy Projects has reviewed Lockhart Power Company's application for license for the Pacolet Hydroelectric Project (FERC Project No. 2621), located on the Pacolet River in Spartanburg County, South Carolina. The project does not occupy any Federal lands.

Staff prepared an environmental assessment (EA), which analyzes the potential environmental effects of relicensing the project, and concludes that licensing the project, with appropriate environmental protection measures, would not constitute a major Federal action that would significantly affect the quality of the human environment.

A copy of the EA is available for review at the Commission in the Public Reference Room or may be viewed on the Commission's Web site at *http://www.ferc.gov* using the "eLibrary" link. Enter the docket number excluding the last three digits in the docket number field to access the document. For assistance, contact FERC Online Support at *FERCOnlineSupport@ferc.gov;* toll-free at 1–866–208–3676, or for TTY, 202–502–8659.

You may also register online at *http://www.ferc.gov/docs-filing/esubscription.asp* to be notified via e-mail of new filings and issuances related to this or other pending projects. For assistance, contact FERC Online Support.

Any comments should be filed within 30 days from the date of this notice. Comments may be filed electronically via the Internet. *See* 18 CFR 385.2001(a)(1)(iii) and the instructions on the Commission's Web site *http://www.ferc.gov/doc-filing/efiling.asp.* Commenters can submit brief comments up to 6,000 characters, without prior registration, using the eComment system at *http://www.ferc.gov/docs-filing/ecomment.asp.* You must include your name and contact information at the end of your comments. DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP10–493–000]

Empire Pipeline, Inc.; Notice of Availability of the Environmental Assessment for the Proposed Tioga County Extension Project

November 19, 2010.

The staff of the Federal Energy Regulatory Commission (FERC or Commission) has prepared an environmental assessment (EA) for the Tioga County Extension Project proposed by Empire Pipeline, Inc. (Empire) in the above-referenced docket. Empire requests authorization to construct and replace pipeline facilities to provide an additional 350,000 dekatherms per day of natural gas capacity from new producer interconnections in Pennsylvania to new interconnections on its pipeline system and on Tennessee Gas Pipeline Company's system in New York.

The EA assesses the potential environmental effects of the construction and operation of the Tioga County Extension Project in accordance with the requirements of the National Environmental Policy Act (NEPA). The FERC staff concludes that approval of the proposed project, with appropriate mitigating measures, would not constitute a major Federal action significantly affecting the quality of the human environment.

The New York State Department of Environmental Conservation, New York State Department of Agriculture and Markets, and the U.S. Army Corps of Engineers participated as cooperating agencies in the preparation of the EA. Cooperating agencies have jurisdiction by law or special expertise with respect to resources potentially affected by the proposal and generally participate in the NEPA analysis.

The proposed Tioga County Extension Project includes the following facilities:

- Construction of approximately 14.9 miles of new 24-inch-diameter pipeline in Tioga County, Pennsylvania and Steuben County, New York;
- Replacement of approximately 1.4 miles of existing 24-inch-diameter pipeline in Ontario County, New York;
- Construction of a new interconnect with Tennessee Gas Pipeline Company in Ontario County, New York; and
- Construction of miscellaneous pipeline modifications and appurtenant facilities at the existing Oakfield Compressor Station in Genessee County, New York.

The EA has been placed in the public files of the FERC and is available for public viewing on the FERC's Web site at *http://www.ferc.gov* using the eLibrary link. A limited number of copies of the EA are available for distribution and public inspection at: Federal Energy Regulatory Commission, Public Reference Room, 888 First Street, NE., Room 2A, Washington, DC 20426. (202) 502–8371.

Copies of the EA have been mailed to Federal, State, and local government representatives and agencies; elected officials; environmental and public interest groups; Native American Tribes; potentially affected landowners and other interested individuals and groups; newspapers and libraries in the project area; and parties to this proceeding.

Any person wishing to comment on the EA may do so. Your comments should focus on the potential environmental effects, reasonable alternatives, and measures to avoid or lessen environmental impacts. The more specific your comments, the more useful they will be. To ensure that your comments are properly recorded and considered prior to a Commission decision on the proposal, it is important that the FERC receives your comments in Washington, DC, on or before December 20, 2010.

For your convenience, there are three methods you can use to submit your comments to the Commission. In all instances, please reference the project docket number (CP10–493–000) with your submission. The Commission encourages electronic filing of comments and has dedicated eFiling expert staff available to assist you at (202) 502–8258 or *efiling@ferc.gov.*

(1) You may file your comments electronically by using the eComment feature, which is located on the Commission's Web site at *http://www.ferc.gov* under the link to Documents and Filings. An eComment is an easy method for interested persons to submit brief, text-only comments on a project;

(2) You may file your comments electronically by using the eFiling feature, which is located on the Commission's Web site at *http://www.ferc.gov* under the link to *Documents and Filings.* With eFiling, you can provide comments in a variety of formats by attaching them as a file with your submission. New eFiling users must first create an account by clicking on "eRegister." You will be asked to select the type of filing you are making. A comment on a particular project is considered a "Comment on a Filing"; or

(3) You may file a paper copy of your comments at the following address: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 888 First Street, NE., Room 1A, Washington, DC 20426.

Although your comments will be considered by the Commission, simply filing comments will not serve to make the commenter a party to the proceeding. Any person seeking to become a party to the proceeding must file a motion to intervene pursuant to Rule 214 of the Commission's Rules of Practice and Procedures (18 CFR 385.214).[1] Only intervenors have the right to seek rehearing of the Commission's decision.

Affected landowners and parties with environmental concerns may be granted intervenor status upon showing good cause by stating that they have a clear and direct interest in this proceeding which would not be adequately represented by any other parties. You do not need intervenor status to have your comments considered.

Additional information about the project is available from the Commission's Office of External Affairs, at (866) 208–FERC or on the FERC Web site (*http://www.ferc.gov*) using the eLibrary link. Click on the eLibrary link, click on "General Search" and enter the docket number excluding the last three digits in the Docket Number field (*i.e.,* CP10–493). Be sure you have selected an appropriate date range. For assistance, please contact FERC Online Support at *FercOnlineSupport@ferc.gov* or toll free at (866) 208–3676, or for TTY, contact (202) 502–8659. The eLibrary link also provides access to the texts of formal documents issued by the Commission, such as orders, notices, and rulemakings.

In addition, the Commission offers a free service called eSubscription which allows you to keep track of all formal issuances and submittals in specific dockets. This can reduce the amount of time you spend researching proceedings by automatically providing you with notification of these filings, document summaries, and direct links to the documents. Go to *http://www.ferc.gov/esubscribenow.htm.*

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP10–82–000]

Northern Natural Gas Company, Southern Natural Gas Company, Florida Gas Transmission Company, LLC, Transcontinental Gas Pipe Line Company, LLC, Enterprise Field Services, LLC; Notice of Availability of the Environmental Assessment for the Proposed Matagorda Offshore Pipeline System Abandonment Project

November 19, 2010.

The staff of the Federal Energy Regulatory Commission (FERC or Commission) has prepared an environmental assessment (EA) for the Matagorda Offshore Pipeline System Abandonment Project proposed by Northern Natural Gas Company, Southern Natural Gas Company, Florida Gas Transmission Company, LLC, Transcontinental Gas Pipe Line Company, LLC, and Enterprise Field Services, LLC (Applicants) in the above referenced docket. The Applicants request authorization to abandon in place about 86.9 miles of pipeline and related facilities onshore in Refugio and Calhoun Counties, Texas, and offshore in state and Federal waters. These facilities are referred to as the Matagorda Offshore Pipeline System (MOPS). The onshore facilities that would be abandoned in place include about 26.8 miles of pipeline, the Tivoli Dehydration Plant, and several interconnect. The offshore facilities would be abandoned include about 60.1 miles of pipeline and several interconnects. Further, about 19.8 miles of the MOPS offshore pipeline is nonjurisdicational gathering pipeline and related facilities; abandonment of these facilities are also considered in this EA.

The EA assesses the potential environmental effects of the abandonment of the Matagorda Offshore Pipeline System Abandonment Project in accordance with the requirements of the National Environmental Policy Act. The FERC staff concludes that approval of the proposed project, with appropriate mitigating measures, would not constitute a major Federal action significantly affecting the quality of the human environment.

The EA has been placed in the public files of the FERC and is available for public viewing on the FERC's Web site at *http://www.ferc.gov* using the eLibrary link. A limited number of copies of the EA are available for distribution and public inspection at: Federal Energy Regulatory Commission, Public Reference Room, 888 First Street, NE., Room 2A, Washington, DC 20426, (202) 502–8371.

Copies of the EA have been mailed to Federal, State, and local government representatives and agencies; elected officials; Native American tribes; potentially affected landowners and other interested individuals and groups; newspapers and libraries in the project area; and parties to this proceeding.

Any person wishing to comment on the EA may do so. Your comments should focus on the potential environmental effects, reasonable alternatives, and measures to avoid or lessen environmental impacts. The more specific your comments, the more useful they will be. To ensure that your comments are properly recorded and

considered prior to a Commission decision on the proposal, it is important that the FERC receives your comments in Washington, DC on or before December 20, 2010.

For your convenience, there are three methods you can use to submit your comments to the Commission. In all instances, please reference the project docket number (CP10–82–000) with your submission. The Commission encourages electronic filing of comments and has dedicated eFiling expert staff available to assist you at (202) 502–8258 or *efiling@ferc.gov*.

(1) You may file your comments electronically by using the eComment feature, which is located on the Commission's Web site at *http://www.ferc.gov* under the link to *Documents and Filings*. An eComment is an easy method for interested persons to submit brief, text-only comments on a project;

(2) You may file your comments electronically by using the *eFiling* feature, which is located on the Commission's Web site at *http://www.ferc.gov* under the link to *Documents and Filings*. With eFiling you can provide comments in a variety of formats by attaching them as a file with your submission. New eFiling users must first create an account by clicking on "*eRegister*." You will be asked to select the type of filing you are making. A comment on a particular project is considered a "Comment on a Filing"; or

(3) You may file a paper copy of your comments at the following address: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 888 First Street, NE., Room 1A, Washington, DC 20426.

Although your comments will be considered by the Commission, simply filing comments will not serve to make the commenter a party to the proceeding. Any person seeking to become a party to the proceeding must file a motion to intervene pursuant to Rule 214 of the Commission's Rules of Practice and Procedures (18 CFR 385.214).[1] Only intervenors have the right to seek rehearing of the Commission's decision.

Affected landowners and parties with environmental concerns may be granted intervenor status upon showing good cause by stating that they have a clear and direct interest in this proceeding which would not be adequately represented by any other parties. You do not need intervenor status to have your comments considered.

Moore, Cody; Notice of Filing

November 19, 2010.

Take notice that, on November 17, 2010, Cody Moore filed an application to hold an interlocking position, pursuant to section 305(b) of the Federal Power Act and Part 45 of the regulations of the Federal Energy Regulatory Commission.

Any person desiring to intervene or to protest this filing must file in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211, 385.214). Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a notice of intervention or motion to intervene, as appropriate. Such notices, motions, or protests must be filed on or before the comment date. Anyone filing a motion to intervene or protest must serve a copy of that document on the Applicant and all the parties in this proceeding.

The Commission encourages electronic submission of protests and interventions in lieu of paper using the "eFiling" link at *http://www.ferc.gov*. Persons unable to file electronically should submit an original and 14 copies of the protest or intervention to the Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426.

This filing is accessible online at *http://www.ferc.gov*, using the "eLibrary" link and is available for review in the Commission's Public Reference Room in Washington, DC. There is an "eSubscription" link on the Web site that enables subscribers to receive e-mail notification when a document is added to a subscribed docket(s). Terra-Gen Dixie Valley, LLC TGP Dixie Development Company, LLC. New York Canyon, LLC. *Green Borders Geothermal, LLC* v. *Terra-Gen Dixie Valley, LLC*	EL10–29–002 EL10–36–002

November 18, 2010.

Take notice that, on November 15, 2010, Terra-Gen Dixie, LLC (Dixie Valley) filed its proposed open access transmission tariff to govern the terms of new interconnection and transmission service on Dixie Valley's existing 212-mile, 230 kV radial generator tie line, in compliance with the Federal Energy Regulatory Commission's (Commission) September 16, 2010 "Order Granting in Part and Denying in Part Petition for Declaratory Order and Complaint, 132 FERC ¶ 61,215, (*September 16 Order*). Dixie Valley is also submitting evidence

of its specific pre-existing generation development plans to support priority rights for itself and its affiliates to the existing and planned capacity of the Dixie Valley Line, in compliance with the Commission's October 8, 2010, *Notice of Extension of Time,* Docket Nos. EL10–29–000 and EL10–36–000 (Oct 8, 2010).

Any person desiring to intervene or to protest this filing must file in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211, 385.214). Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a notice of intervention or motion to intervene, as appropriate. Such notices, motions, or protests must be filed on or before the comment date. Anyone filing a motion to intervene or protest must serve a copy of that document on the Applicant and all the parties in this proceeding.

The Commission encourages electronic submission of protests and interventions in lieu of paper using the "eFiling" link at *http://www.ferc.gov.* Persons unable to file electronically should submit an original and 14 copies of the protest or intervention to the Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426.

This filing is accessible on-line at *http://www.ferc.gov,* using the "eLibrary" link and is available for review in the Commission's Public Reference Room in Washington, DC. There is an "eSubscription" link on the Web site that enables subscribers to receive e-mail notification when a document is added to a subscribed docket(s). For assistance with any FERC Online service, please e-mail *FERCOnlineSupport@ferc.gov,* or call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

Comment Date: 5 p.m. Eastern Time on December 6, 2010.

[Docket No. PR11–74–000]

Washington Gas Light Company; Notice of Filing

November 18, 2010.

Take notice that on November 15, 2010, Washington Gas Light Company (Washington Gas) filed its annual actual lost and unaccounted for volumes (LAUF) adjustment to comply with Paragraph IV.F. of its Firm Interstate Transportation Service Operating Statement (FITSOS). Washington Gas states the actual LAUF applicable to the firm transportation service provided to Mountaineer Gas Company effective from November 1, 2010 will be 1.22 percent.

Any person desiring to participate in this rate filing must file in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a notice of intervention or motion to intervene, as appropriate. Such notices, motions, or protests must be filed on or before the date as indicated below. Anyone filing an intervention or protest must serve a copy of that document on the Applicant. Anyone filing an intervention or protest on or before the intervention or protest date need not serve motions to intervene or protests on persons other than the Applicant.

The Commission encourages electronic submission of protests and interventions in lieu of paper using the "eFiling" link at *http://www.ferc.gov.* Persons unable to file electronically should submit an original and 7 copies of the protest or intervention to the Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426.

This filing is accessible online at *http://www.ferc.gov,* using the "eLibrary" link and is available for review in the Commission's Public Reference Room in Washington, DC. [Docket No. ER11–2063–000]

Supplemental Notice That Initial Market-Based Rate Filing Includes Request for Blanket Section 204 Authorization

November 18, 2010.

Duke Energy Vermillion II, LLC.	Docket No. ER11–2063–000.

This is a supplemental notice in the above-referenced proceeding, of Duke Energy Vermillion II, LLC's application for market-based rate authority, with an accompanying rate tariff, noting that such application includes a request for blanket authorization, under 18 CFR part 34, of future issuances of securities and assumptions of liability.

Any person desiring to intervene or to protest should file with the Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). Anyone filing a motion to intervene or protest must serve a copy of that document on the Applicant.

Notice is hereby given that the deadline for filing protests with regard to the applicant's request for blanket authorization, under 18 CFR part 34, of future issuances of securities and assumptions of liability is December 7, 2010.

The Commission encourages electronic submission of protests and interventions in lieu of paper, using the FERC Online links at *http://www.ferc.gov.* To facilitate electronic service, persons with Internet access who will eFile a document and/or be listed as a contact for an intervenor must create and validate an eRegistration account using the eRegistration link. Select the eFiling link to log on and submit the intervention or protests.

Persons unable to file electronically should submit an original and 14 copies of the intervention or protest to the Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426.

The filings in the above-referenced proceeding(s) are accessible in the Commission's eLibrary system by clicking on the appropriate link in the above list. [Docket No. PR08–28–002]

Calpine Texas Pipeline, L.P.; Notice of Motion for Extension of Rate Case Filing Deadline

November 18, 2010.

Take notice that on November 10, 2010, Calpine Texas Pipeline, L.P. (Calpine Texas) filed a motion to extend the date for filing its next rate case to August 22, 2013. Calpine Texas states that in Order No. 735 the Commission modified its policy concerning periodic reviews of rates charges by section 311 and Hinshaw pipelines to extend the cycle for such reviews from three to five years.[1] Therefore, Calpine Texas requests that the date for Calpine Texas' next rate filing be extended to August 22, 2013, which is five years from the date of Calpine Texas' most recent rate filing with this Commission.

Any person desiring to participate in this rate proceeding must file a motion to intervene or to protest this filing must file in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a notice of intervention or motion to intervene, as appropriate. Such notices, motions, or protests must be filed on or before the date as indicated below. Anyone filing an intervention or protest must serve a copy of that document on the Applicant. Anyone filing an intervention or protest on or before the intervention or protest date need not serve motions to intervene or protests on persons other than the Applicant.

The Commission encourages electronic submission of protests and interventions in lieu of paper using the "eFiling" link at *http://www.ferc.gov.* Persons unable to file electronically should submit an original and 7 copies of the protest or intervention to the Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426.

National Gas Supply Association, American Forest and Paper Association, Inc., American Public Gas Association, Independent Petroleum Association of America, Process Gas Consumers Group; Notice of Petition

November 19, 2010.

Take notice that on November 17, 2010, the Natural Gas Supply Association, American Forest and Paper Association, Inc., American Public Gas Association, Independent Petroleum Association of America, and Process Gas Consumers Group (collectively, the Associations), filed in Docket No. RP11–1538–000, a petition pursuant to Rule 207(a)(5) of the Commission's Rules of Practice and Procedure, requesting that the Commission exercise its authority under section 5 of the Natural Gas Act to enforce its policy regarding pipeline reservation charge crediting during outages and order pipelines to amend their tariffs in accordance with Commission policy.

Specifically, the Associations ask the Commission to ensure that: (1) All pipelines incorporate into their tariffs an acceptable sharing mechanism that allows for partial reservation charge credits during outages that are due to unexpected and uncontrollable *force majeure* events, and (2) all pipeline tariffs require full reservation charge credits to shippers during outages that are not due to unexpected and uncontrollable *force majeure* events.

Any person desiring to intervene or to protest in this proceeding must file in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214) on or before 5 p.m. Eastern time on the specified comment date. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Anyone filing a motion to intervene or protest must serve a copy of that document on the Applicant. In reference to filings initiating a new proceeding, interventions or protests submitted on or before the comment deadline need not be served on persons other than the Applicant.

The Commission encourages electronic submission of protests and interventions in lieu of paper, using the FERC Online links at *http://www.ferc.gov.* To facilitate electronic service, persons with Internet access who will eFile a document and/or be listed as a contact for an intervenor must create and validate an eRegistration account using the eRegistration link. BILLING CODE 6717–01–P

ENVIRONMENTAL PROTECTION AGENCY

[EPA–OAR–2007–0093, FRL–9232–8]

Agency Information Collection Activities; Proposed Collection; Comment Request; Clean Air Act Tribal Authority, EPA ICR No. 1676.05, OMB Control No. 2060–0306

AGENCY: Environmental Protection Agency.

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act (PRA) (44 U.S.C. 3501 *et seq.*), this document announces that EPA is planning to submit a request to renew an existing approved Information Collection Request (ICR) to the Office of Management and Budget (OMB). This ICR is scheduled to expire on 05/31/2011. Before submitting the ICR to OMB for review and approval, EPA is soliciting comments on specific aspects of the proposed information collection as described below.

DATES: Comments must be submitted on or before January 28, 2011.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–OAR–2007–0093 identified by the Docket ID numbers provided for each item in the text, by one of the following methods:

- *http://www.regulations.gov*: Follow the on-line instructions for submitting comments.
- *E-mail: a-and-r-Docket@epa.gov.*
- *Fax:* 202–566–9744.
- *Mail:* Clean Air Act Tribal Authority, Environmental Protection Agency, Mailcode: 2822T, 1200 Pennsylvania Ave., NW., Washington, DC 20460
- *Hand Delivery:* EPA Docket Center, Public Reading Room, EPA West Building, Room 3334, 1301 Constitution Ave. NW., Washington DC 20004. Such deliveries are only accepted during the Docket's normal hours of operation, and special arrangements should be made for deliveries of boxed information.

Instructions: Direct your comments to Docket ID No. EPA–OAR–2007–0093. EPA's policy is that all comments received will be included in the public docket without change and may be made available online at *http://www.regulations.gov,* including any personal information provided, unless the comment includes information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Do not submit information that you consider to be CBI or otherwise protected through *http://*

www.regulations.gov or e-mail. The *http://www.regulations.gov* Web site is an "anonymous access" system, which means EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an e-mail comment directly to EPA without going through *http://www.regulations.gov* your e-mail address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the Internet. If you submit an electronic comment, EPA recommends that you include your name and other contact information in the body of your comment and with any disk or CD–ROM you submit. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comment. Electronic files should avoid the use of special characters, any form of encryption, and be free of any defects or viruses. For additional information about EPA's public docket visit the EPA Docket Center homepage at *http://www.epa.gov/epahome/dockets.htm.*

FOR FURTHER INFORMATION CONTACT: Danielle Dixon, Office of Air and Radiation, Office of Air Quality Planning and Standards, Outreach & Information Division, (C304–01), Environmental Protection Agency, 109 TW Alexander Dr., Durham, NC 27707; *telephone number:* 919–541–0028; *fax number:* 919–541–0072; *e-mail address: dixon.danielle@epa.gov.*

SUPPLEMENTARY INFORMATION:

How can I access the docket and/or submit comments?

EPA has established a public docket for this ICR under Docket ID No. EPA–OAR–2007–0093, which is available for online viewing at *http://www.regulations.gov,* or in person viewing at the Clean Air Act Tribal Authority Docket in the EPA Docket Center (EPA/DC), EPA West, Room 3334, 1301 Constitution Ave., NW., Washington, DC. The EPA/DC Public Reading Room is open from 8 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Reading Room is 202–566–1744, and the telephone number for the Clean Air Act Tribal Authority Docket is 202–566–1742.

Use *http://www.regulations.gov* to obtain a copy of the draft collection of information, submit or view public comments, access the index listing of the contents of the docket, and to access those documents in the public docket that are available electronically. Once in the system, select "search," then key in the docket ID number identified in this document.

What information is EPA particularly interested in?

Pursuant to section 3506(c)(2)(A) of the PRA, EPA specifically solicits comments and information to enable it to:

(i) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the Agency, including whether the information will have practical utility;

(ii) Evaluate the accuracy of the Agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

(iii) Enhance the quality, utility, and clarity of the information to be collected; and

(iv) Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses. In particular, EPA is requesting comments from very small businesses (those that employ less than 25) on examples of specific additional efforts that EPA could make to reduce the paperwork burden for very small businesses affected by this collection.

What should I consider when I prepare my comments for EPA?

You may find the following suggestions helpful for preparing your comments:

1. Explain your views as clearly as possible and provide specific examples.

2. Describe any assumptions that you used.

3. Provide copies of any technical information and/or data you used that support your views.

4. If you estimate potential burden or costs, explain how you arrived at the estimate that you provide.

5. Offer alternative ways to improve the collection activity.

6. Make sure to submit your comments by the deadline identified under **DATES**.

7. To ensure proper receipt by EPA, be sure to identify the docket ID number assigned to this action in the subject line on the first page of your response. You may also provide the name, date, and **Federal Register** citation.

What information collection activity or ICR does this apply to?

Docket ID No. EPA–OAR–2007–0093; FRL 8336–3.

Affected entities: Entities potentially affected by this action are State, local or Tribal governments.

Title: Clean Air Act Tribal Authority.

ICR numbers: EPA ICR No. 1676.05, OMB Control No. 2060–0306.

ICR status: This ICR is currently scheduled to expire on 05/31/2011. An Agency may not conduct or sponsor, and a person is not required to respond to, a collection of information, unless it displays a currently valid OMB control number. The OMB control numbers for EPA's regulations in title 40 of the CFR, after appearing in the **Federal Register** when approved, are listed in 40 CFR part 9, are displayed either by publication in the **Federal Register** or by other appropriate means, such as on the related collection instrument or form, if applicable. The display of OMB control numbers in certain EPA regulations is consolidated in 40 CFR part 9.

Abstract: This Information Collection Request (ICR) seeks authorization for Tribes to demonstrate their eligibility to be treated in the same manner as States under the Clean Air Act (CAA) and to submit applications to implement a CAA program. This ICR extends the collection period of information for determining eligibility, which expires May 31, 2011. The ICR also is revising the estimates of burden costs for Tribes in completing a CAA application.

The program regulation provides for Indian Tribes, if they so choose, to assume responsibility for the development and implementation of CAA programs. The regulation, Indian Tribes: Air Quality Planning and Management (Tribal Authority Rule [TAR] 40 CFR parts 9, 35, 49, 50 and 81), sets forth how Tribes may seek authority to implement their own air quality planning and management programs. The rule establishes: (1) Which CAA provisions Indian Tribes may seek authority to implement, (2) what requirements the Tribes must meet when seeking such authorization, and (3) what Federal financial assistance may be available to help Tribes establish and manage their air quality programs. The TAR provides Tribes the authority to administer air quality programs over all air resources, including non-Indian owned fee lands, within the exterior boundaries of a reservation and other areas over which the Tribe can demonstrate jurisdiction. An Indian Tribe that takes responsibility for a CAA program would essentially be treated in the same way as a State would be treated for that program.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information

unless it displays a currently valid OMB control number. The OMB control numbers for EPA's regulations are listed in 40 CFR part 9 and 48 CFR Chapter 15, and are identified on the form and/or instrument, if applicable.

Burden Statement: The annual public reporting and recordkeeping burden for this collection of information is estimated to average 40 hours per response. Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a Federal agency. This includes the time needed to review instructions; develop, acquire, install, and utilize technology and systems for the purposes of collecting, validating, and verifying information, processing and maintaining information, and disclosing and providing information; adjust the existing ways to comply with any previously applicable instructions and requirements which have subsequently changed; train personnel to be able to respond to a collection of information; search data sources; complete and review the collection of information; and transmit or otherwise disclose the information.

The ICR provides a detailed explanation of the Agency's estimate, which is only briefly summarized here:

Estimated total number of potential respondents: 27.

Frequency of response: One-time application.

Estimated total average number of responses for each respondent: 1.

Estimated total annual burden hours: 1080.

Estimated total annual costs: $18,838.80. This includes an estimated burden cost of $18,838.80 and an estimated cost of $0 for capital investment or maintenance and operational costs.

Are there changes in the estimates from the last approval?

There is no decrease of hours in the total estimated respondent burden compared with that identified in the ICR currently approved by OMB.

What is the next step in the process for this ICR?

EPA will consider the comments received and amend the ICR as appropriate. The final ICR package will then be submitted to OMB for review and approval pursuant to 5 CFR 1320.12. At that time, EPA will issue another **Federal Register** notice pursuant to 5 CFR 1320.5(a)(1)(iv) to announce the submission of the ICR to OMB and the opportunity to submit additional comments to OMB. If you have any questions about this ICR or the approval process, please contact the technical person listed under **FOR FURTHER INFORMATION CONTACT**.

Dated: November 18, 2010.

Jan Cortelyou-Lee,

Acting Director, Office of Air Quality Planning and Standards.

FIFRA Scientific Advisory Panel; Notice of Change of Meeting Location

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The Agency is issuing this notice to change the meeting location of the December 7, 2010 Federal Insecticide, Fungicide, and Rodenticide Act Scientific Advisory Panel (FIFRA SAP) meeting. The FIFRA SAP is meeting to consider and review scientific issues associated with pesticide exposure models and climate change.

DATES: The meeting will be held on December 7, 2010, from 8:30 a.m. to approximately 5 p.m.

ADDRESSES: The meeting will be held at the Hyatt Regency, Tidewater Room Hyatt Regency Crystal City at Reagan National Airport, 2799 Jefferson Davis Highway, Arlington, VA 22202.

FOR FURTHER INFORMATION CONTACT: Fred Jenkins, DFO, Office of Science Coordination and Policy (7201M), Environmental Protection Agency, 1200 Pennsylvania Ave., NW., Washington, DC 20460–0001; telephone number: (202) 564–3327; fax number: (202) 564–8382; e-mail address: *jenkins.fred@epa.gov.*

SUPPLEMENTARY INFORMATION: All other information provided in the September 29, 2010 (75 FR 60110) **Federal Register** notice remains unchanged.

List of Subjects

Environmental protection, Pesticides and pests.

Dated: November 23, 2010.

Frank Sanders,

Director, Office of Science Coordination and Policy.

Human Studies Review Board (HSRB); Notification of a Public Teleconference To Review Draft Report From the October 27–28, 2010 HSRB Meeting

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The EPA Human Studies Review Board (HSRB) announces a public teleconference meeting to discuss its draft report from the October 27–28, 2010 HSRB meeting.

DATES: The teleconference will be held on Monday, December 13, 2010 from 3–5 p.m. (Eastern Time).

Location: The meeting will take place via telephone only.

Meeting Access: For information on access or services for individuals with disabilities, please contact Lu-Ann Kleibacker at least ten business days prior to the meeting using the information under **FOR FURTHER INFORMATION CONTACT,** so that appropriate arrangements can be made.

Procedures for Providing Public Input: Interested members of the public may submit relevant written or oral comments for the HSRB to consider during the advisory process. Additional information concerning submission of relevant written or oral comments is provided in section I, under subsection D, of this notice.

FOR FURTHER INFORMATION CONTACT: Members of the public who wish to receive further information should contact Jim Downing at telephone number: (202) 564–2468; fax: (202) 564–2070; e-mail address: *downing.jim@epa.gov,* or Lu-Ann Kleibacker at telephone number: (202) 564–7189; fax: (202) 564–2070; e-mail address: *kleibacker.lu-ann@epa.gov;* mailing address: U.S. Environmental Protection Agency, Office of the Science Advisor, Mail Code 8105R, 1200 Pennsylvania Ave., NW., Washington, DC 20460. General information concerning the EPA HSRB can be found on the EPA Web site at *http://www.epa.gov/osa/hsrb/.*

ADDRESSES: Submit your written comments, identified by Docket ID No. EPA–HQ–ORD–2010–0919, by one of the following methods: *http://www.regulations.gov:* Follow the on-line instructions for submitting comments.

E-mail: ORD.Docket@epa.gov.

Mail: ORD Docket, U.S. Environmental Protection Agency, Mail Code 28221T, 1200 Pennsylvania Ave., NW., Washington, DC 20460.

Hand Delivery: EPA Docket Center (EPA/DC), Public Reading Room, Infoterra Room (Room Number 3334), EPA West Building, 1301 Constitution Ave., NW., Washington, DC 20460, Attention Docket ID No. EPA–ORD–2010–0919. Deliveries are only accepted from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. Special arrangements should be made for deliveries of boxed information.

Instructions: Direct your comments to Docket ID No. EPA–HQ–ORD–2010–0919. EPA's policy is that all comments received will be included in the public docket without change and may be made available online at *http://www.regulations.gov,* including any personal information provided, unless the comments includes information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Do not submit information that you consider to be CBI or otherwise protected through *http://www.regulations.gov* or e-mail. The *http://www.regulations.gov* Web site is an "anonymous access" system, which means EPA will not know your identity or contact information unless you provide it in the body of your comment. If you submit an electronic comment, EPA recommends that you include your name and other contact information in the body of your comment and with any disk or CD–ROM you submit. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comment. Electronic files should avoid the use of special characters, any form of encryption, and be free of any defects or viruses. If you send an e-mail comment directly to EPA, without going through *http://www.regulations.gov,* your e-mail address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the Internet.

I. General Information

A. Does this action apply to me?

This action is directed to the public in general. This action may, however, be of interest to persons who conduct or assess human studies on substances regulated by EPA or to persons who are or may be required to conduct testing of chemical substances under the Federal Food, Drug, and Cosmetic Act (FFDCA) or the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA). Since other entities may also be interested, the Agency has not attempted to describe all the specific entities that may be affected by this notice. If you have any questions regarding the applicability of this notice to a particular entity, consult the person listed under **FOR FURTHER INFORMATION CONTACT**.

B. How can I access electronic copies of this document and other related information?

In addition to using regulations.gov, you may access this **Federal Register** document electronically through the EPA Internet under the **Federal Register** listings at *http://www.epa.gov/fedrgstr/.*

Docket: All documents in the docket are listed in the index under the docket number. Even though it will be listed by title in the index, some information is not publicly available, *e.g.,* CBI or other information whose disclosure is restricted by statute. Copyright material will be publicly available only in hard copy. Publicly available docket materials are electronically available either through *http://www.regulations.gov* or in hard copy at the ORD Docket, EPA/DC, Public Reading Room, Infoterra Room (Room Number 3334), 1301 Constitution Ave., NW., Washington, DC. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566–1744, and the telephone number for the ORD Docket is (202) 566–1752.

C. What should I consider as I prepare my comments for EPA?

You may find the following suggestions helpful for preparing your comments:

1. Explain your views as clearly as possible.

2. Describe any assumptions that you used.

3. Provide copies of any technical information and/or data you use that support your views.

4. Provide specific examples to illustrate your concerns and suggest alternatives.

5. To ensure proper receipt by EPA, be sure to identify the docket ID number assigned to this action in the subject line on the first page of your response. You may also provide the name, date and **Federal Register** citation.

D. How may I participate in this meeting?

You may participate in this meeting by following the instructions in this section. To ensure proper receipt by EPA, it is imperative that you identify docket ID number EPA–HQ–ORD–2010–0919 in the subject line on the first page of your request.

1. *Oral comments.* Requests to present oral comments will be accepted up to December 6, 2010. To the extent that time permits, interested persons who have not pre-registered may be permitted by the HSRB Chair to present oral comments at the meeting. Each individual or group wishing to make brief oral comments to the HSRB is strongly advised to submit their request (preferably via e-mail) to Lu-Ann Kleibacker listed under **FOR FURTHER INFORMATION CONTACT** no later than noon, Eastern Time, December 6, 2010 in order to be included on the meeting agenda and to provide sufficient time for the HSRB Chair and HSRB Designated Federal Official to review the meeting agenda to provide an appropriate public comment period. The request should identify the name of the individual making the presentation and the organization (if any) the individual will represent. Oral comments before the HSRB are limited to five minutes per individual or organization. Please note that this includes all individuals appearing either as part of, or on behalf of, an organization. While it is our intent to hear a full range of oral comments on the science and ethics issues under discussion, it is not our intent to permit organizations to expand the time limitations by having numerous individuals sign up separately to speak on their behalf. If additional time is available, public comments may be possible.

2. *Written comments.* Although you may submit written comments at any time, for the HSRB to have the best opportunity to review and consider your comments as it deliberates on its report, you should submit your comments at least five business days prior to the beginning of this teleconference. If you submit comments after this date, those comments will be provided to the Board members, but you should recognize that the Board members may not have adequate time to consider those comments prior to making a decision. Thus, if you plan to submit written comments, the Agency strongly encourages you to submit such comments no later than noon, Eastern Time, December 6, 2010. You should submit your comments using the instructions in section I, under subsection C, of this notice. In addition, the Agency also requests that persons submitting comments directly to the docket also provide a copy of their comments to Lu-Ann Kleibacker or Jim Downing listed under **FOR FURTHER INFORMATION CONTACT.** There is no limit

on the length of written comments for consideration by the HSRB.

E. Background

The EPA Human Studies Review Board will be reviewing its draft report from the October 27–28, 2010 HSRB meeting. The Board may also discuss planning for future HSRB meetings. Background on the October 27–28, 2010 HSRB meeting can be found at **Federal Register** 75 193, 61748 (October 6, 2010) and at the HSRB Web site *http://www.epa.gov/osa/hsrb/.* The October 27–28, 2010 meeting draft report is now available. You may obtain electronic copies of this document and certain other related documents that might be available electronically from the *http://www.regulations.gov* Web site and the HSRB Internet home page at *http://www.epa.gov/osa/hsrb/.* For questions on document availability or if you do not have access to the Internet, consult the person listed under **FOR FURTHER INFORMATION CONTACT**.

Dated: November 19, 2010.

Paul T. Anastas,

EPA Science Advisor.

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

[FRL–9233–2]

Notice of Public Hearing and Extension of Public Comment Period of Draft National Pollutant Discharge Elimination System (NPDES) General Permits for Small Municipal Separate Storm Sewer Systems (MS4)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of Public Hearing and Extension of Public Comment Period of Draft NPDES General Permits.

SUMMARY: The Director of the Office of Ecosystem Protection, Environmental Protection Agency—Region 1 (EPA), issued a Notice of Availability of Draft NPDES general permits for discharges from small MS4s to certain waters of the Commonwealth of Massachusetts on November 4, 2010. The draft general permits are the Draft Small MS4 General Permits for Massachusetts Interstate, Merrimack, and South Coastal Watersheds. These three general permits are for the discharge of stormwater from Small MS4s to the waters in these watersheds. The November 4, 2010 notice included information on a public hearing. The notice did not meet the time frames required by 40 CFR 124.10. Therefore, EPA has rescheduled the hearing and extended the comment permit of the draft permits. Throughout this documents the terms "this permit" and "the permit" will refer to all three general permits.

Information on the draft permits, appendices and fact sheet is available at: *http://www.epa.gov/ne/npdes/stormwater/mimsc_sms4.html.*

DATES: The public comment period is from the November 4, 2010 to January 21, 2011. Interested persons may submit comments on the draft general permit as part of the administrative record to the EPA—Region 1, at the address given below, no later than midnight January 21, 2011. The general permit shall be effective on the date specified in the **Federal Register** publication of the Notice of Availability of the final general permit. The final general permit will expire five years from the effective date.

ADDRESSES: Submit comments by one of the following methods:

- *E-mail:* Renahan.Kate@epa.gov.
- *Mail:* Kate Renahan, U.S. EPA—Region 1, Office of the Regional Administrator, 5 Post Office Square—Suite 100, Mail Code—ORA01–1, Boston, MA 02109–3912.

No facsimiles (faxes) will be accepted.

The draft permit is based on an administrative record available for public review at EPA—Region 1, Office of Ecosystem Protection, 5 Post Office Square—Suite 100, Boston, Massachusetts 02109–3912. A reasonable fee may be charged for copying requests. The November 4, 2010 Notice of Availability sets forth principal facts and the significant factual, legal, and policy questions considered in the development of the draft permit.

Public Meeting Information: EPA—Region 1 will hold two public meetings to provide information about the draft general permit and its requirements. Each public meeting will include a brief presentation on the draft general permit and a brief question and answer session. Written, but not oral, comments for the official draft permit record will be accepted at the public meetings. Public meetings will be held at the following times and locations:

Thursday—December 2, 2010

Lakeville Public Library (Large Meeting Room), 4 Precinct Street, Lakeville, MA 02347, 10 a.m.

Wednesday—January 12, 2011

Leominster Public Library Community Room, 30 West Street, Leominster, MA 01453, 10 a.m.—11 a.m.

The dates and times of any additional public meetings will be posted on EPA–Region 1's Web site at: *http://www.epa.gov/ne/npdes/stormwater/mimsc_sms4.html.*

Public Hearing Information: Following the January 12, 2011 public meeting, a public hearing will be conducted in accordance with 40 CFR 124.12 and will provide interested parties with the opportunity to provide written and/or oral comments for the official draft permit record. The public hearing will be held at the following time and location:

Wednesday—January 12, 2011

Leominster Public Library Community Room, 30 West Street, Leominster, MA 01453, 11:30 a.m.—2 p.m.

FOR FURTHER INFORMATION CONTACT: Additional information concerning the draft permit may be obtained between the hours of 9 a.m. and 5 p.m. Monday through Friday excluding holidays from: Kate Renahan, Office of the Regional Administrator, Environmental Protection Agency, 5 Post Office Square—Suite 100, Mail Code: ORA01–1, Boston, MA 02109–3912; *telephone:* 617–918–1491; *e-mail: Renahan.Kate@epa.gov.*

SUPPLEMENTARY INFORMATION: Information about the proposed permits including background of the permit and summary of permit conditions was previously published on the November 4, 2010 (75 FR 67960–67962).

Dated: November 19, 2010.

Ira W. Leighton,

Acting Regional Administrator, Region 1.

[FR Doc. 2010–29978 Filed 11–26–10; 8:45 am]

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

[FRL–9232–9]

Science Advisory Board Staff Office; Request for Nominations of Experts for the SAB Polychlorinated Biphenyls (PCBs) Review Panel

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The EPA Science Advisory Board (SAB) Staff Office is requesting public nominations of experts to form an SAB panel to review EPA's non-cancer health effects assessment for Polychlorinated Biphenyls (PCBs).

DATES: Nominations should be submitted by December 20, 2010 per instructions below.

FOR FURTHER INFORMATION CONTACT: Any member of the public wishing further information regarding this Notice and Request for Nominations may contact Dr. Diana Wong, Designated Federal Officer (DFO), SAB Staff Office, by telephone/voice mail at (202) 564–2049, by fax at (202) 565–2098, or via e-mail at *wong.diana-M@epa.gov.* General information concerning the EPA Science Advisory Board can be found at the EPA SAB Web site at *http//www.epa.gov/sab.*

SUPPLEMENTARY INFORMATION:

Background: Polychlorinated biphenyls (PCBs) have been utilized for various commercial applications, such as insulating fluids, hydraulic and lubricating fluids, heat exchanger fluids, and additives in adhesives and paints. PCBs are widespread in the environment and represent a public health concern.

At present, there are IRIS reference doses (RfDs) for two commercial PCB mixtures: Aroclor 1016 and Aroclor 1254 that were last updated in 1993 and 1994, respectively. EPA's Office of Research and Development (ORD) is developing a draft assessment of the potential noncancer health hazards of complex PCB mixtures for inclusion on EPA's Integrated Risk Information System (IRIS). The new assessment will review current science with the goal of establishing an RfD for application to complex PCB mixtures.

The EPA's National Center for Environmental Assessment (NCEA) has requested the SAB to review ORD's draft assessment of the potential noncancer health hazards of PCBs. The SAB Staff Office will form an expert panel to review the PCBs assessment. The SAB (42 U.S.C. 4365) is a chartered Federal Advisory Committee that provides independent scientific and technical peer review, advice, consultation, and recommendations to the EPA Administrator on the technical basis for EPA actions. As a Federal Advisory Committee, the SAB conducts business in accordance with the Federal Advisory Committee Act (FACA) (5 U.S.C. App. 2) and related regulations. The SAB Panel will comply with the provisions of FACA and all appropriate SAB Staff Office procedural policies.

Request for Nominations: The SAB Staff Office is seeking nominations of nationally and internationally recognized scientists with demonstrated expertise in one or more of the following areas, particularly with respect to PCBs: General toxicology, neurodevelopmental toxicology, immunotoxicology, endocrinology, reproductive toxicology, toxicokinetics, physiologically-based pharmacokinetic modeling, epidemiology, statistics, dose-response assessment, and risk assessment.

Availability of the review materials: The Polychlorinated Biphenyls (PCBs) noncancer IRIS assessment to be reviewed by the PCBs Review Panel will be available by the Office of Research and Development at the following URL: *http://cfpub.epa.gov/ncea/iris_drafts/.* and at the SAB Web site *http://yosemite.epa.gov/sab/sabpeople.nsf/WebCommittees/BOARD.* For questions concerning the PCBs Assessment, please contact Dr. Geniece Lehmann of EPA's NCEA by phone (919) 541–2289, fax (919) 541–0245, or e-mail (lehmann.geniece@epa.gov).

Process and Deadline for Submitting Nominations: Any interested person or organization may nominate qualified individuals in the areas of expertise described above for possible service on this expert Panel. Nominations should be submitted in electronic format (which is preferred over hard copy) following the instructions for "Nominating Experts to Advisory Panels and Ad Hoc Committees Being Formed" provided on the SAB Web site. The instructions can be accessed through the "Nomination of Experts" link on the blue navigational bar on the SAB Web site at *http://www.epa.gov/sab.* To receive full consideration, nominations should include all of the information requested below.

EPA's SAB Staff Office requests contact information about the person making the nomination; contact information about the nominee; the disciplinary and specific areas of expertise of the nominee; the nominee's curriculum vita; sources of recent grant and/or contract support; and a biographical sketch of the nominee indicating current position, educational background, research activities, and recent service on other national advisory committees or national professional organizations.

Persons having questions about the nomination procedures, or who are unable to submit nominations through the SAB Web site, should contact Dr. Diana Wong, DFO, as indicated above in this notice. Nominations should be submitted in time to arrive no later than December 20, 2010. EPA values and welcomes diversity. In an effort to obtain nominations of diverse candidates, EPA encourages nominations of women and men of all racial and ethnic groups.

The EPA SAB Staff Office will acknowledge receipt of nominations. The names and bio-sketches of qualified nominees identified by respondents to this **Federal Register** notice, and additional experts identified by the SAB Staff, will be posted in a List of Candidates on the SAB Web site at *http://www.epa.gov/sab.* Public comments on this List of Candidates will be accepted for 21 calendar days. The public will be requested to provide relevant information or other documentation on nominees that the SAB Staff Office should consider in evaluating candidates.

For the EPA SAB Staff Office, a review panel includes candidates who possess the necessary domains of knowledge, the relevant scientific perspectives (which, among other factors, can be influenced by work history and affiliation), and the collective breadth of experience to adequately address the charge. In forming this expert panel, the SAB Staff Office will consider public comments on the List of Candidates, information provided by the candidates themselves, and background information independently gathered by the SAB Staff Office. Selection criteria to be used for Panel membership include: (a) Scientific and/or technical expertise, knowledge, and experience (primary factors); (b) availability and willingness to serve; (c) absence of financial conflicts of interest; (d) absence of an appearance of a lack of impartiality; and (e) skills working in committees, subcommittees and advisory panels; and, (f) for the Panel as a whole, diversity of expertise and viewpoints.

The SAB Staff Office's evaluation of an absence of financial conflicts of interest will include a review of the "Confidential Financial Disclosure Form for Special Government Employees Serving on Federal Advisory Committees at the U.S. Environmental Protection Agency" (EPA Form 3110–48). This confidential form allows Government officials to determine whether there is a statutory conflict between that person's public responsibilities (which includes membership on an EPA Federal advisory committee) and private interests and activities, or the appearance of a lack of impartiality, as defined by Federal regulation. The form may be viewed and downloaded from the following URL address *http://www.epa.gov/sab/pdf/epaform3110–48.pdf.*

The approved policy under which the EPA SAB Office selects subcommittees and review panels is described in the following document: *Overview of the Panel Formation Process at the Environmental Protection Agency Science Advisory Board* (EPA–SAB–EC–02–010), which is posted on the SAB

Web site at *http://www.epa.gov/sab/pdf/ec02010.pdf.*

Dated: November 18, 2010.

Anthony Maciorowski,

Deputy Director, EPA Science Advisory Board Staff Office.

BILLING CODE 6560–50–P

EXPORT–IMPORT BANK OF THE U.S.

[Public Notice 2010–0058]

Agency Information Collection Activities: Final Collection; Comment Request

AGENCY: Export-Import Bank of the U.S.

ACTION: Submission for OMB Review and Comments Request.

Form Title: Application for Approved Finance Provider (EIB 10–06).

SUMMARY: The Export-Import Bank of the United States (Ex-Im Bank), as a part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal Agencies to comment on the proposed information collection, as required by the Paperwork Reduction Act of 1995.

The Application for Approved Finance Provider will be used to determine if the finance provider has the financial strength and administrative staff to originate, administer, collect, and if needed, restructure international loans. This application will also improve Ex-Im Bank' s compliance with the Open Government initiative by providing transparency into specific information used to determine if an applicant is qualified to use our loan guarantee programs. Export-Import Bank potential finance providers will be able to submit this form on paper. In the future, we will consider allowing the submission of this information electronically.

This application can be viewed at *http://www.exim.gov/pub/pending/EIB10_06.pfd.*

DATES: Comments should be received on or before January 28, 2011 to be assured of consideration.

ADDRESSES: Comments may be submitted electronically on *http://www.regulations.gov* or by mail to Jeffrey Abramson, Export-Import Bank of the United States, 811 Vermont Ave., NW., Washington, DC 20571.

SUPPLEMENTARY INFORMATION: *Titles and Form Number:* EIB 10–06 Application for Approved Finance Provider.

OMB Number: 3048-xxxx.

Type of Review: New.

Need and Use: The Application for Approved Finance Provider will be used to determine the financial and administrative capabilities of a financial provider who will arrange, fund and administer international loans.

Annual Number of Respondents: 50.

Estimated Time per Respondent: 3 hours.

Government Annual Burden Hours 8 hours.

Frequency of Reporting or Use: As needed.

Sharon A. Whitt,

Agency Clearance Officer.

BILLING CODE 6690–01–P

EXPORT–IMPORT BANK OF THE UNITED STATES

Notice of Open Meeting of the Advisory Committee of the Export-Import Bank of the United States (Ex-Im Bank)

SUMMARY: The Advisory Committee was established by Public Law 98–181, November 30, 1983, to advise the Export-Import Bank on its programs and to provide comments for inclusion in the reports of the Export-Import Bank of the United States to Congress.

TIME AND PLACE: Tuesday, December 14, 2010 from 11 a.m. to 3 p.m. A break for lunch will be at the expense of the attendee. Security processing will be necessary for reentry into the building. The meeting will be held at Ex-Im Bank in the Main Conference Room 1143, 811 Vermont Avenue, NW., Washington, DC 20571.

AGENDA: Agenda items include a briefing of the Advisory Committee members on challenges for 2011, their roles and responsibilities and an ethics briefing.

PUBLIC PARTICIPATION: The meeting will be open to public participation, and the last 10 minutes will be set aside for oral questions or comments. Members of the public may also file written statement(s) before or after the meeting. If you plan to attend, a photo ID must be presented at the guard's desk as part of the clearance process into the building, and you may contact Susan Houser to be placed on an attendee list. If any person wishes auxiliary aids (such as a sign language interpreter) or other special accommodations, please contact, prior to December 6, 2010, Susan Houser, Room 1273, 811 Vermont Avenue, NW., Washington, DC 20571. *Voice:* (202) 565–3232.

FURTHER INFORMATION: For further information, contact Susan Houser, Room 1273, 811 Vermont Ave., NW., Washington, DC 20571, (202) 565–3232.

Jonathan Cordone,

Senior Vice President and General Counsel.

BILLING CODE 6690–01–M

EXPORT–IMPORT BANK OF THE UNITED STATES

Sunshine Act Meeting

ACTION: Notice of a Partially Open Meeting of the Board of Directors of the Export-Import Bank of the United States.

TIME AND PLACE: Thursday, December 2, 2010 at 9:30 a.m. The meeting will be held at Ex-Im Bank in Room 1143, 811 Vermont Avenue, NW., Washington, DC 20571.

OPEN AGENDA ITEM: Item No. 1: Ex-Im Bank Advisory Committee for 2011.

PUBLIC PARTICIPATION: The meeting will be open to public observation for Item No. 1 only.

FURTHER INFORMATION: For further information, contact: Office of the Secretary, 811 Vermont Avenue NW., Washington, DC 20571 (Tele. No. 202–565–3957)

Jonathan J. Cordone,

Senior Vice President and General Counsel.

BILLING CODE 6690–01–M

FEDERAL COMMUNICATIONS COMMISSION

Notice of Public Information Collection(s) Being Reviewed by the Federal Communications Commission, Comments Requested

November 18, 2010.

SUMMARY: The Federal Communications Commission, as part of its continuing effort to reduce paperwork burden invites the general public and other Federal agencies to take this opportunity to comment on the following information collection(s), as required by the Paperwork Reduction Act (PRA) of 1995, 44 U.S.C. 3501–3520. Comments are requested concerning: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; (b) the accuracy of the Commission's burden estimate; (c) ways to enhance the quality, utility, and clarity of the information collected; (d) ways to minimize the burden of the collection of information on the respondents,

including the use of automated collection techniques or other forms of information technology; and (e) ways to further reduce the information collection burden on small business concerns with fewer than 25 employees.

The FCC may not conduct or sponsor a collection of information unless it displays a currently valid OMB control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the Paperwork Reduction Act (PRA) that does not display a valid OMB control number.

DATES: Written Paperwork Reduction Act (PRA) comments should be submitted on or before January 28, 2011. If you anticipate that you will be submitting PRA comments, but find it difficult to do so within the period of time allowed by this notice, you should advise the FCC contact listed below as soon as possible.

ADDRESSES: Direct all PRA comments to Nicholas A. Fraser, Office of Management and Budget, via fax at 202–395–5167 or via Internet at *Nicholas_A._Fraser@omb.eop.gov* and to *the* Federal Communications Commission. To submit your PRA comments by e-mail send them to: *PRA@fcc.gov.*

FOR FURTHER INFORMATION CONTACT: For additional information, contact Judith B. Herman at 202–418–0214 or via the Internet at *Judith-B.Herman@fcc.gov.*

SUPPLEMENTARY INFORMATION:

OMB Control Number: 3060–0056.

Title: Part 68, Connection of Terminal Equipment to the Telephone Network.

Form No.: N/A.

Type of Review: Extension of a currently approved collection.

Respondents: Business or other for-profit.

Number of Respondents: 58,310 respondents; 68,077 responses.

Estimated Time per Response: .05 hours to 24 hours.

Frequency of Response: On occasion reporting requirement, recordkeeping requirement and third party disclosure requirement.

Obligation to Respond: Required to obtain or retain benefits. Statutory authority for this information collection is contained in the 47 U.S.C. sections 151–154, 201–205, and 303(r).

Total Annual Burden: 21,369 hours.

Total Annual Cost: $935,000.

Privacy Act Impact Assessment: N/A.

Nature and Extent of Confidentiality: The information respondents are requested to provide is not proprietary, trade secret or other confidential information. Applicants are advised not to submit proprietary signal processing or control circuitry not directly involved with Part 68 requirements.

Needs and Uses: The Commission will submit this expiring information collection to the Office of Management and Budget (OMB) after this comment period to obtain the full, three year clearance from them. The Commission is not changing any of the reporting, recordkeeping and/or third party disclosure requirements. The Commission is reporting a 10,658 hourly decrease in burden and a $225,000 decrease in annual costs. This adjustment is due to 12,140 fewer respondents.

The purpose of 47 CFR Part 68 is to protect the telephone network from certain types of harm and prevent interference to subscribers. To demonstrate that terminal equipment comply with criteria for protecting the network; and to ensure that consumers, providers of telecommunications, the Commission and others are able to trace products to the party responsible for placing terminal equipment on the market, it is essential to require manufacturers or other responsible parties to provide the information required by Part 68. In addition, incumbent local exchange carriers (ILECS) must provide the information in Part 68 to warn their subscribers of impending disconnection of service when the subscriber terminal equipment is causing telephone network harm.

There are sixteen specific reporting, recordkeeping and/or third party disclosure requirements under this OMB control number. Part 68 also establishes the right of consumers to use competitively provided inside wiring.

Marlene H. Dortch,

Secretary, Federal Communications Commission.

BILLING CODE 6712–01–P

FEDERAL COMMUNICATIONS COMMISSION

Sunshine Act Meeting; Open Commission Meeting

November 30, 2010.

The Federal Communications Commission will hold an Open Meeting on the subjects listed below on Tuesday, November 30, 2010, which is scheduled to commence at 10:30 a.m. in Room TW–C305, at 445 12th Street, SW., Washington, DC.

Item No.	Bureau	Subject
1	OFFICE OF ENGINEERING AND TECHNOLOGY.	TITLE: Innovation in the Broadcast Television Bands: Allocations, Channel Sharing and Improvements to VHF. SUMMARY: The Commission will consider a Notice of Proposed Rulemaking seeking comment on rules to facilitate the most efficient use of the UHF and VHF TV bands. These proposals, an important step toward the agency's spectrum goals as outlined in the National Broadband Plan, would take steps to enable mobile broadband use within spectrum currently reserved for use by TV broadcasters, including through innovations such as channel sharing and generating increased value within the VHF band.
2	OFFICE OF ENGINEERING AND TECHNOLOGY.	TITLE: Promoting Expanded Opportunities for Radio Experimentation and Market Studies under Part 5 of the Commission's Rules and Streamlining Other Related Rules; 2006 Biennial Review of Telecommunications Regulations—Part 2 Administered by the Office of Engineering and Technology (OET) (ET Docket No. 06–105). SUMMARY: The Commission will consider a Notice of Proposed Rulemaking seeking comment on steps to promote innovation and efficiency in spectrum use under Part 5 Experimental Radio Service (ERS).
3	OFFICE OF ENGINEERING AND TECHNOLOGY AND WIRELESS TELECOMMUNICATIONS.	TITLE: Promoting More Efficient Use of Spectrum Through Dynamic Spectrum Use Technologies. SUMMARY: The Commission will consider a Notice of Inquiry seeking comment on promoting more intensive and efficient use of the radio spectrum, thereby potentially enabling more effective spectrum management, through dynamic spectrum use technologies.

Item No.	Bureau	Subject
4	CONSUMER AND GOVERNMENTAL AFFAIRS.	The Bureau will present an overview of the Twenty-First Century Communications and Video Accessibility Act, Public Law 111–260, the Commission's implementation plans, and demonstrate accessibility technologies.

The meeting site is fully accessible to people using wheelchairs or other mobility aids. Sign language interpreters, open captioning, and assistive listening devices will be provided on site. Other reasonable accommodations for people with disabilities are available upon request. In your request, include a description of the accommodation you will need and a way we can contact you if we need more information. Last minute requests will be accepted, but may be impossible to fill. Send an e-mail to: *fcc504@fcc.gov* or call the Consumer & Governmental Affairs Bureau at 202–418–0530 (voice), 202–418–0432 (tty).

Additional information concerning this meeting may be obtained from Audrey Spivack or David Fiske, Office of Media Relations, (202) 418–0500; TTY 1–888–835–5322. Audio/Video coverage of the meeting will be broadcast live with open captioning over the Internet from the FCC Live Web page at *http://www.fcc.gov/live.*

For a fee this meeting can be viewed live over George Mason University's Capitol Connection. The Capitol Connection also will carry the meeting live via the Internet. To purchase these services call (703) 993–3100 or go to *http://www.capitolconnection.gmu.edu.*

Copies of materials adopted at this meeting can be purchased from the FCC's duplicating contractor, Best Copy and Printing, Inc. (202) 488–5300; Fax (202) 488–5563; TTY (202) 488–5562. These copies are available in paper format and alternative media, including large print/type; digital disk; and audio and video tape. Best Copy and Printing, Inc. may be reached by e-mail at *FCC@BCPIWEB.com.*

Marlene H. Dortch,

Secretary, Federal Communications Commission.

BILLING CODE P

FEDERAL RESERVE SYSTEM

Formations of, Acquisitions by, and Mergers of Bank Holding Companies

The companies listed in this notice have applied to the Board for approval, pursuant to the Bank Holding Company Act of 1956 (12 U.S.C. 1841 *et seq.*) (BHC Act), Regulation Y (12 CFR part 225), and all other applicable statutes and regulations to become a bank holding company and/or to acquire the assets or the ownership of, control of, or the power to vote shares of a bank or bank holding company and all of the banks and nonbanking companies owned by the bank holding company, including the companies listed below.

The applications listed below, as well as other related filings required by the Board, are available for immediate inspection at the Federal Reserve Bank indicated. The application also will be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing on the standards enumerated in the BHC Act (12 U.S.C. 1842(c)). If the proposal also involves the acquisition of a nonbanking company, the review also includes whether the acquisition of the nonbanking company complies with the standards in section 4 of the BHC Act (12 U.S.C. 1843). Unless otherwise noted, nonbanking activities will be conducted throughout the United States.

Unless otherwise noted, comments regarding each of these applications must be received at the Reserve Bank indicated or the offices of the Board of Governors not later than December 9, 2010.

A. Federal Reserve Bank of San Francisco (Kenneth Binning, Vice President, Applications and Enforcement) 101 Market Street, San Francisco, California 94105–1579:

1. Franklin Resources, Inc., San Mateo, California; to acquire additional voting shares of First Chicago Bancorp, and thereby indirectly acquire voting shares of First Chicago Bank & Trust, both of Chicago, Illinois.

Board of Governors of the Federal Reserve System, November 24, 2010.

Robert deV. Frierson,

Deputy Secretary of the Board.

BILLING CODE 6210–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Office of the Secretary

Findings of Misconduct in Science

AGENCY: Office of the Secretary, HHS.

ACTION: Notice.

SUMMARY: Notice is hereby given that the Office of Research Integrity (ORI) has taken final action in the following case:

Bengu Sezen, Ph.D., Columbia University: Based on the findings of an investigation by Columbia University (CU) and additional analysis conducted by the Office of Research Integrity (ORI) during its oversight review, ORI found that Bengu Sezen, former graduate student, Department of Chemistry, CU, engaged in misconduct in science in research funded by National Institute of General Medical Sciences (NIGMS), National Institutes of Health (NIH), grant R01 GM60326.

Specifically, ORI made twenty-one (21) findings of scientific misconduct against Dr. Sezen based on evidence that she knowingly and intentionally falsified and fabricated, and in one instance plagiarized, data reported in three (3) papers [1] and her doctoral thesis.

The following administrative actions have been implemented for a period of five (5) years, beginning on November 4, 2010:

(1) Dr. Sezen is debarred from eligibility for any contracting or subcontracting with any agency of the United States Government and from eligibility or involvement in nonprocurement programs of the United States Government, referred to as "covered transactions," pursuant to HHS' Implementation of OMB Guidelines to Agencies on Governmentwide Debarment and Suspension (2 CFR 376 *et seq.*); and

(2) Dr. Sezen is prohibited from serving in any advisory capacity to the U.S. Public Health Service (PHS), including but not limited to service on any PHS advisory committee, board, and/or peer review committee, or as a consultant.

[1] Sezen, B., Franz, R., & Sames, D. "C–C bond formation via C–H bond activations: Catalytic arylation and alkenation of alkane segments." *J. Am. Chem. Soc.* 124:13372–13373, 2002. Retracted in *J. Am. Chem. Soc.* 128:8364, 2006.

Sezen, B. & Sames, D. "Oxidative C-arylation of free (NH)—heterocycles via direct (sp^3) C–H bond functionalization." *J. Am. Chem. Soc.* 126:13244–13246, 2004. Retracted in *J. Am. Chem. Soc.* 128:3102, 2006.

Sezen, B. & Sames, D. "Selective and catalytic arylation of N-phenylpryrrolidine: sp^3 C–H bond functionalization in the absence of a directing group." *J. Am. Chem. Soc.* 127:5284–5285, 2005. Retracted in *J. Am. Chem Soc.* 128:3102, 2006.

FOR FURTHER INFORMATION CONTACT: Director, Division of Investigative Oversight, Office of Research Integrity, 1101 Wootton Parkway, Suite 750, Rockville, MD 20852, (240) 453–8800.

John Dahlberg,

Director, Division of Investigative Oversight, Office of Research Integrity.

BILLING CODE 4150–31–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Toxicology Program (NTP): Office of Liaison, Policy, and Review; Availability of Draft NTP Technical Reports; Request for Comments; Announcement of a Panel Meeting to Peer Review Draft NTP Technical Reports

AGENCY: National Institute of Environmental Health Sciences (NIEHS); National Institutes of Health (NIH).

ACTION: Availability of Draft Reports; Request for Comments; and Announcement of a Meeting.

SUMMARY: The NTP announces the availability of draft NTP Technical Reports (TRs; available at *http://ntp.niehs.nih.gov/go/36051*) that will be peer-reviewed by an NTP Technical Reports Peer Review Panel at a meeting on January 26, 2011. The meeting is open to the public with time scheduled for oral public comment. The NTP also invites written comments on the draft reports (*see* "Request for Comments" below). Summary minutes from the peer review will be posted on the NTP Web site following the meeting.

DATES: The meeting to review the draft NTP TRs will be held on January 26, 2011. The draft NTP TRs will be available for public comment by December 8, 2010. The deadline to submit written comments is January 12, 2011, and the deadline for pre-registration to attend the meeting and/or provide oral comments at the meeting is January 19, 2011.

ADDRESSES: The meeting will be held at the Rodbell Auditorium, Rall Building, NIEHS, 111 T. W. Alexander Drive, Research Triangle Park, NC 27709. Public comments and any other correspondence on the draft TRs should be sent to Dr. Lori White, NIEHS, P.O. Box 12233, MD K2–03, Research Triangle Park, NC 27709, *FAX:* (919) 541–0295, or *whiteld@niehs.nih.gov.* Courier address: 530 Davis Drive, Room 2136, Morrisville, NC 27560. Persons needing interpreting services in order to attend should contact (301) 402–8180 (voice) or (301) 435–1908 (TTY). Requests should be made at least seven business days in advance of the meeting.

FOR FURTHER INFORMATION CONTACT: Dr. Lori White, NTP Designated Federal Officer, (919) 541–9834, *whiteld@niehs.nih.gov.*

SUPPLEMENTARY INFORMATION:

Preliminary Agenda Topics and Availability of Meeting Materials

The agenda topic is the peer review of the findings and conclusions of draft NTP TRs of toxicology and carcinogenicity studies. The preliminary agenda listing the draft reports and electronic files (PDF) of the draft reports should be posted on the NTP Web site by December 8, 2010. Any additional information, when available, will be posted on the NTP Web site (*http://ntp.niehs.nih.gov/go/36051*) or may be requested in hardcopy from the Designated Federal Officer (*see* **ADDRESSES** above). Following the meeting, summary minutes will be prepared and made available on the NTP Web site. Information about the NTP testing program is found at *http://ntp.niehs.nih.gov/go/test.*

Attendance and Registration

The meeting is scheduled for January 26, 2011, from 8:30 a.m. EST to adjournment and is open to the public with attendance limited only by the space available. Individuals who plan to attend are encouraged to register online at the NTP Web site (*http://ntp.niehs.nih.gov/go/36051*) by January 19, 2011, to facilitate access to the NIEHS campus. A photo ID is required to access the NIEHS campus. The NTP is making plans to videocast the meeting through the Internet at *http://www.niehs.nih.gov/news/video/live.* Registered attendees are encouraged to access the meeting page to stay abreast of the most current information regarding the meeting.

Request for Comments

The NTP invites written comments on the draft reports, which should be received by January 12, 2011, to enable review by the panel and NTP staff prior to the meeting. Persons submitting written comments should include their name, affiliation, mailing address, phone, e-mail, and sponsoring organization (if any) with the document. Written comments received in response to this notice will be posted on the NTP Web site, and the submitter will be identified by name, affiliation, and/or sponsoring organization.

Public input at this meeting is also invited, and time is set aside for the presentation of oral comments on the draft reports. In addition to in-person oral comments at the meeting at the NIEHS, public comments can be presented by teleconference line. There will be 50 lines for this call; availability will be on a first-come, first-served basis. The available lines will be open from 8:00 AM until adjournment on January 26, although public comments will be received only during the formal public comment periods indicated on the preliminary agenda. Each organization is allowed one time slot per draft report. At least 7 minutes will be allotted to each speaker, and if time permits, may be extended to 10 minutes at the discretion of the chair. Persons wishing to make an oral presentation are asked to notify Dr. Lori White via online registration at *http://ntp.niehs.nih.gov/go/166,* phone, or e-mail (*see* **ADDRESSES** above) by January 19, 2011, and if possible, to send a copy of the statement or talking points at that time. Written statements can supplement and may expand the oral presentation. Registration for oral comments will also be available at the meeting, although time allowed for presentation by on-site registrants may be less than that for pre-registered speakers and will be determined by the number of persons who register on-site.

Background Information on NTP Peer Review Panels

NTP panels are technical, scientific advisory bodies established on an "as needed" basis to provide independent scientific peer review and advise the NTP on agents of public health concern, new/revised toxicological test methods, or other issues. Previously, a subcommittee of the NTP Board of Scientific Counselors provided peer review of draft NTP Technical Reports. The subcommittee has been discontinued and peer review of the draft reports will now be conducted by peer review panels. These panels help ensure transparent, unbiased, and scientifically rigorous input to the program for its use in making credible decisions about human hazard, setting research and testing priorities, and providing information to regulatory agencies about alternative methods for toxicity screening. The NTP welcomes nominations of scientific experts for upcoming panels. Scientists interested in serving on an NTP panel should provide a current *curriculum vita* to Dr. Lori White (*see* **ADDRESSES**). The authority for NTP panels is provided by 42 U.S.C. 217a; section 222 of the Public Health Service (PHS) Act, as amended.

The panel is governed by the Federal Advisory Committee Act, as amended (5 U.S.C. Appendix 2), which sets forth standards for the formation and use of advisory committees.

Dated: November 18, 2010.

John R. Bucher,

Associate Director, National Toxicology Program.

[FR Doc. 2010–29945 Filed 11–26–10; 8:45 am]

BILLING CODE 4140–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

[CMS–4154–PN]

Medicare and Medicaid Programs; Renewal of Deeming Authority of the National Committee for Quality Assurance for Medicare Advantage Health Maintenance Organizations and Local Preferred Provider Organizations

AGENCY: Centers for Medicare & Medicaid Services, HHS.

ACTION: Proposed notice.

SUMMARY: This proposed notice announces the receipt of an application to renew the Medicare Advantage Deeming Authority of the National Committee for Quality Assurance (NCQA) for Health Maintenance Organizations and Preferred Provider Organizations for a term of 4 years. The new term of approval would begin October 19, 2010, and would end October 18, 2014. In addition, this proposed notice announces a 30-day public comment period on the renewal of the application.

DATES: To be assured consideration, comments must be received at one of the addresses provided below, no later than 5 p.m. on January 28, 2011.

ADDRESSES: In commenting, please refer to file code CMS–4154–PN. Because of staff and resource limitations, we cannot accept comments by facsimile (FAX) transmission.

You may submit comments in one of four ways (please choose only one of the ways listed):

1. *Electronically.* You may submit electronic comments on this regulation to *http://www.regulations.gov.* Follow the "Submit a comment" instructions.

2. *By regular mail.* You may mail written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, *Attention:* CMS–4154–PN, P.O. Box 8010, Baltimore, MD 21244–1850.

Please allow sufficient time for mailed comments to be received before the close of the comment period.

3. *By express or overnight mail.* You may send written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, *Attention:* CMS–4154–PN, Mail Stop C4–26–05, 7500 Security Boulevard, Baltimore, MD 21244–1850.

4. *By hand or courier.* If you prefer, you may deliver (by hand or courier) your written comments before the close of the comment period to either of the following addresses:

a. For delivery in Washington, DC—Centers for Medicare & Medicaid Services, Department of Health and Human Services, Room 445–G, Hubert H. Humphrey Building, 200 Independence Avenue, SW., Washington, DC 20201.

(Because access to the interior of the Hubert H. Humphrey Building is not readily available to persons without Federal government identification, commenters are encouraged to leave their comments in the CMS drop slots located in the main lobby of the building. A stamp-in clock is available for persons wishing to retain a proof of filing by stamping in and retaining an extra copy of the comments being filed.)

b. For delivery in Baltimore, MD—Centers for Medicare & Medicaid Services, Department of Health and Human Services, 7500 Security Boulevard, Baltimore, MD 21244–1850.

If you intend to deliver your comments to the Baltimore address, please call telephone number (410) 786–9994 in advance to schedule your arrival with one of our staff members.

Comments mailed to the addresses indicated as appropriate for hand or courier delivery may be delayed and received after the comment period.

For information on viewing public comments, see the beginning of the **SUPPLEMENTARY INFORMATION** section.

FOR FURTHER INFORMATION CONTACT: Caroline L. Baker (410) 786–0116.

SUPPLEMENTARY INFORMATION: *Inspection of Public Comments:* All comments received before the close of the comment period are available for viewing by the public, including any personally identifiable or confidential business information that is included in a comment. We post all comments received before the close of the comment period on the following Web site as soon as possible after they have been received: *http://www.regulations.gov.* Follow the search instructions on that Web site to view public comments.

Comments received timely will also be available for public inspection as they are received, generally beginning approximately 3 weeks after publication of a document, at the headquarters of the Centers for Medicare & Medicaid Services, 7500 Security Boulevard, Baltimore, Maryland 21244, Monday through Friday of each week from 8:30 a.m. to 4 p.m. To schedule an appointment to view public comments, phone 1–800–743–3951.

I. Background

Under the Medicare program, eligible beneficiaries may receive covered services through a Medicare Advantage (MA) organization that contracts with the Centers for Medicare & Medicaid Services (CMS). The regulations specifying the Medicare requirements that must be met in order for an Medicare Advantage Organization (MAO) to enter into a contract with CMS are located at 42 CFR part 422. These regulations implement Part C of Title XVIII of the Social Security Act (the Act), which specifies the services that an MAO must provide and the requirements that the organization must meet to be an MA contractor. Other relevant sections of the Act are Parts A and B of Title XVIII and Part A of Title XI of the Act pertaining to the provision of services by Medicare certified providers and suppliers.

Generally, for an entity to be an MA organization, the organization must be licensed by the State as a risk bearing organization as set forth in Part 422 of our regulations.

To assure compliance with certain Medicare requirements, an MA organization may chose to become accredited by a CMS approved accrediting organization (AO). By doing so, the MA organization may be "deemed" compliant in one or more of 6 requirements set forth in section 1852(e)(4)(B) of the Act. In order for an AO to be able to "deem" an MA plan as compliant with these MA requirements, the AO must prove to CMS that its standards are at least as stringent as Medicare requirements. MA organizations that are licensed as health maintenance organizations (HMOs) or preferred provider organizations (PPOs) and are accredited by an approved accrediting organization may receive, at their request, deemed status for CMS requirements in the following six MA survey areas: (1) Quality Improvement, (2) Antidiscrimination, Access to Services, (3) Confidentiality and Accuracy of Enrollee Records, (4) Information on Advanced Directives, and Provider Participation Rules. (See 42 CFR 422.156(b).) We note that at this

time, deeming does not include the Part D areas of review listed in § 422.156(b).

Organizations that apply for MA deeming authority are generally recognized by the health care industry as entities that accredit HMOs and PPOs. As we specified in § 422.157(b)(2), the term for which an AO may be approved by CMS may not exceed 6 years. For continuing approval, the AO must renew their application with CMS.

The National Committee for Quality Assurance (NCQA) was approved as an accrediting organization for MA deeming of HMOs from January 19, 2002 through January 18, 2008. The NCQA was reapproved as an accrediting organization for MA deeming of HMOs on January 18, 2008, for a term of 6 years, which was set to expire on January 17, 2014.

The NCQA was approved for MA deeming of PPOs from October 20, 2004 through October 19, 2010. On July 20, 2010, the NCQA submitted an application to renew their deeming authority which, at the request of CMS for administrative simplification purposes, combined their HMO and PPO deeming authority. On July 20, 2010, the NCQA also submitted all of the prerequisite materials as specified in § 422.158(a) for receiving CMS deeming program approval. This information was previously submitted to CMS by NCQA as a part of their initial HMO and PPO applications.

II. Approval of Deeming Organizations

Section 1852(e)(4)(C) of the Act provides a statutory timetable to ensure that our review of deeming applications in conducted in a timely manner. The Act provides us with 210 calendar days after the date of receipt of an application to complete our survey activities and application review process. At the end of the 210 day period, we must publish an approval or denial of the application in the **Federal Register**.

III. Evaluation of Deeming Authority Request

As set forth in § 1852(e)(4) of the Act and our regulations at § 422.158, the review and evaluation of NCQA's accreditation program (including its standards and monitoring protocol) were compared to the requirements set forth in part 422 for the MA program.

A. Components of the Review Process

The review of NCQA's application for approval of MA deeming authority included the following components:

- The types of MA plans that it would review as part of its accreditation process.
- A detailed comparison of the organization's accreditation requirements and standards with the Medicare requirements (for example, a crosswalk).
- Detailed information about the organization's survey process, including—

++ Frequency of surveys and whether surveys are announced or unannounced.

++ Copies of survey forms, and guidelines and instructions to surveyors.

++ Description of The survey review process and the accreditation status decision making process;

++ The procedures used to notify accredited MA organizations of deficiencies and to monitor the correction of those deficiencies; and

++ The procedures used to enforce compliance with accreditation requirements.

- Detailed information about the individuals who perform surveys for the accreditation organization, including—

++ The size and composition of accreditation survey teams for each type of plan reviewed as part of the accreditation process.

++ The education and experience requirements surveyors must meet.

++ The content and frequency of the in-service training provided to survey personnel.

++ The evaluation systems used to monitor the performance of individual surveyors and survey teams.

- The organization's policies and practice with respect to the participation, in surveys or in the accreditation decision process by an individual who is professionally or financially affiliated with the entity being surveyed.
- A description of the organization's data management and analysis system with respect to its surveys and accreditation decisions, including the kinds of reports, tables, and other displays generated by that system.
- A description of the organization's procedures for responding to and investigating complaints against accredited organizations, including policies and procedures regarding coordination of these activities with appropriate licensing bodies and ombudsmen programs.
- A description of the organization's policies and procedures with respect to the withholding or removal of accreditation for failure to meet the accreditation organization's standards or requirements, and other actions the organization takes in response to noncompliance with its standards and requirements.
- A description of all types (for example, full and partial) and categories (for example, provisional, conditional, and temporary) of accreditation offered by the organization, the duration of each type and category of accreditation, and a statement identifying the types and categories that would serve as a basis for accreditation if CMS approves the accreditation organization.
- A list of all currently accredited MA organizations and the type, category, and expiration date of the accreditation held by each of them.
- A list of all full and partial accreditation surveys scheduled to be performed by the accreditation organization as requested by CMS.
- The name and address of each person with an ownership or control interest in the accreditation organization.
- The NCQA's past performance in the deeming program and results of recent deeming validation reviews, or look-behind audits conducted as part of continuing Federal oversight of the deeming program under § 422.157(d).

B. Results of the Review Process

Using the information listed in section III.A. of this proposed notice, we determined that NCQA's current accreditation program for HMO and PPO MA plans continues to be at least as stringent as the MA requirements contained in the six categories specified in section 1852(e)(4)(C) of the Act and our methods of evaluation for those areas.

IV. Response to Public Comments and Notice Upon Completion of Evaluation

Because of the large number of public comments we normally receive on **Federal Register** documents, we are not able to acknowledge or respond to them individually. We will consider all comments we receive by the date and time specified in the **DATES** section of this notice, and, when we proceed with a subsequent document, we will respond to the comments in the preamble to that document.

Upon completion of our evaluation, including evaluation of comments received as a result of this notice, we will publish a final notice in the **Federal Register** announcing the result of our evaluation.

V. Collection of Information Requirements

This document does not impose information collection and recordkeeping requirements. Consequently, it need not be reviewed by the Office of Management and Budget under the authority of the Paperwork Reduction Act of 1995 (44 U.S.C. 35).

VI. Regulatory Impact Statement

In accordance with the provisions of Executive Order 12866, this regulation was not reviewed by the Office of Management and Budget.

BILLING CODE 4120–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare and Medicaid Services

[CMS–2332–PN]

Medicare Program; Application by the American Association for Accreditation of Ambulatory Surgery Facilities, Inc. (AAAASF) for Deeming Authority for Providers of Outpatient Physical Therapy and Speech-Language Pathology Services.

AGENCY: Centers for Medicare and Medicaid Services, HHS.

ACTION: Proposed notice.

SUMMARY: This proposed notice acknowledges the receipt of a deeming application from the American Association for Accreditation of Ambulatory Surgery Facilities (AAAASF) for recognition as a national accrediting organization for providers of outpatient physical therapy and speech-language pathology services that wish to participate in the Medicare or Medicaid programs. Section 1865(a)(3)(A) of the Social Security Act requires that within 60 days of receipt of an organization's complete application, the Secretary of the Department of Health and Human Services publish a notice that identifies the national accrediting body making the request, describes the nature of the request, and provides at least a 30-day public comment period.

DATES: To be assured consideration, comments must be received at one of the addresses provided below, no later than 5 p.m. on December 29, 2010.

ADDRESSES: In commenting, please refer to file code CMS–2332–PN. Because of staff and resource limitations, we cannot accept comments by facsimile (FAX) transmission.

You may submit comments in one of four ways (no duplicates, please):

1. *Electronically.* You may submit electronic comments on specific issues in this regulation to *http://www.regulations.gov.* Click on the link "Submit electronic comments on CMS regulations with an open comment period." (Attachments should be in Microsoft Word, WordPerfect, or Excel; however, we prefer Microsoft Word.)

2. By regular mail. You may mail written comments (one original and two copies) to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, *Attention:* CMS–2332–PN, P.O. Box 8010, Baltimore, MD 21244–8010.

Please allow sufficient time for mailed comments to be received before the close of the comment period.

3. *By express or overnight mail.* You may send written comments (one original and two copies) to the following address ONLY:

Centers for Medicare & Medicaid Services, Department of Health and Human Services, *Attention:* CMS–2332–PN, Mail Stop C4–26–05, 7500 Security Boulevard, Baltimore, MD 21244–1850.

4. *By hand or courier.* If you prefer, you may deliver (by hand or courier) your written comments (one original and two copies) before the close of the comment period to one of the following addresses. If you intend to deliver your comments to the Baltimore address, please call telephone number (410) 786–9994 in advance to schedule your arrival with one of our staff members.

Room 445–G, Hubert H. Humphrey Building, 200 Independence Avenue, SW., Washington, DC 20201; or 7500 Security Boulevard, Baltimore, MD 21244–1850.

(Because access to the interior of the HHH Building is not readily available to persons without Federal Government identification, commenters are encouraged to leave their comments in the CMS drop slots located in the main lobby of the building. A stamp-in clock is available for persons wishing to retain a proof of filing by stamping in and retaining an extra copy of the comments being filed.)

Comments mailed to the addresses indicated as appropriate for hand or courier delivery may be delayed and received after the comment period.

For information on viewing public comments, see the beginning of the **SUPPLEMENTARY INFORMATION** section.

FOR FURTHER INFORMATION CONTACT: L. Alexis Prete, (410) 786–0375.

Patricia Chmielewski, (410) 786–6899.

SUPPLEMENTARY INFORMATION:

Submitting Comments: We welcome comments from the public on all issues set forth in this proposed notice to assist us in fully considering issues and developing policies. You can assist us by referencing the file code CMS–2332–PN and the specific "issue identifier" that precedes the section on which you choose to comment.

Inspection of Public Comments: All comments received before the close of the comment period are available for viewing by the public, including any personally identifiable or confidential business information that is included in a comment. We post all comments received before the close of the comment period on the following Web site as soon as possible after they have been received: *http://www.regulations.gov.* Click on the link "Electronic Comments on CMS Regulations" on that Web site to view public comments.

Comments received timely will also be available for public inspection as they are received, generally beginning approximately 3 weeks after publication of a document, at the headquarters of the Centers for Medicare & Medicaid Services, 7500 Security Boulevard, Baltimore, Maryland 21244, Monday through Friday of each week from 8:30 a.m. to 4 p.m. To schedule an appointment to view public comments, phone 1–800–743–3951.

I. Background

Under the Medicare program, eligible beneficiaries may receive outpatient physical therapy services (OPT) from a provider of services, a clinic, a rehabilitation agency, a public health agency, or by others under an arrangement with and under the supervision of such provider, clinic, rehabilitation agency, or public health agency (collectively, "organizations"), provided certain requirements are met. Section 1861(p)(4) of the Social Security Act (the Act) establishes distinct criteria for organizations seeking approval to provide OPT services. Regulations concerning provider agreements are at 42 CFR part 489 and those pertaining to activities relating to the survey and certification of facilities are at 42 CFR part 488. Our regulations at 42 CFR part 485, subpart H specify the conditions that an organization providing OPT services must meet in order to participate in the Medicare program.

Generally, in order to enter into a provider agreement with the Medicare program, an organization offering OPT services must first be certified by a State survey agency as complying with the applicable conditions or requirements set forth in part 42 CFR part 485.

Thereafter, the organization is subject to regular surveys by a State survey agency to determine whether it continues to meet these requirements.

There is an alternative, however, to State certification and surveys by State agencies, as a means to enter into a Medicare provider agreement. Section 1865(a)(1) of the Act provides that, if a provider entity demonstrates through accreditation by a national accrediting organization approved by the Secretary, that all applicable Medicare conditions are met or exceeded, we will deem those provider entities as having met the requirements. Accreditation by an accrediting organization is voluntary and is not required for Medicare participation.

If an accrediting organization is recognized by the Secretary as having standards for accreditation that meet or exceed Medicare requirements, any provider entity accredited by the national accrediting body's approved program would be deemed to meet the Medicare conditions. A national accrediting organization applying for deeming authority under part 488, subpart A must provide us with reasonable assurance that the accrediting organization requires the accredited provider entities to meet requirements that are at least as stringent as the Medicare conditions of participation. The regulations at § 488.8(d)(3) require accrediting organizations to reapply for continued deeming authority every six years or sooner, as determined by the Secretary.

II. Approval of Deeming Organizations

Section 1865(a)(2) of the Act and our regulations at § 488.8(a) require that our findings concerning review and approval of a national accrediting organization's Requirements consider, among other factors, the applying accrediting organization's: Requirements for accreditation; survey procedures; resources for conducting required surveys; capacity to furnish information for use in enforcement activities; monitoring procedures for provider entities found not in compliance with the conditions or requirements; and ability to provide the Secretary with the necessary data for validation.

Section 1865(a)(3)(A) of the Act further requires that the Secretary publish, within 60 days of receipt of an organization's complete application, a notice identifying the national accrediting body making the request, describing the nature of the request, and providing at least a 30-day public comment period. The Secretary has 210 days from the receipt of a complete application to publish notice of approval or denial of the application.

The purpose of this proposed notice is to inform the public of AAAASF's request for deeming authority for organizations providing OPT services. This notice also solicits public comment on whether AAAASF's requirements meet or exceed the Medicare conditions for participation for such organizations.

III. Evaluation of Deeming Authority Request

AAAASF submitted all the necessary materials to enable us to make a determination concerning its request for approval as a deeming organization for organizations providing OPT services. This application was determined to be complete on October 15, 2010. Under Section 1865(a)(2) of the Act and our regulations at § 488.8 (Federal review of accrediting organizations), our review and evaluation of AAAASF will be conducted in accordance with, but not necessarily limited to, the following factors:

- The equivalency of AAAASF's standards for an organization providing OPT services, as compared with CMS' OPT organizations' conditions of participation.
- AAAASF's survey process to determine the following:

—The composition of the survey team, surveyor qualifications, and the ability of the organization to provide continuing surveyor training.

—The comparability of AAAASF's processes to those of State agencies, including survey frequency, and the ability to investigate and respond appropriately to complaints against accredited facilities.

—AAAASF's processes and procedures for monitoring OPTs found out of compliance with the AAAASF's program requirements. These monitoring procedures are used only when AAAASF identifies noncompliance. If noncompliance is identified through validation reviews, the State survey agency will monitor corrections as specified at § 488.7(d).

—AAAASF's capacity to report deficiencies to the surveyed facilities and respond to the facility's plan of correction in a timely manner.

—AAAASF's capacity to provide the Secretary with electronic data and reports necessary for effective validation and assessment of the organization's survey process.

—The adequacy of AAAASF's staff and other resources, and its financial viability.

—AAAASF's capacity to adequately fund required surveys.

—AAAASF's policies with respect to whether surveys are announced or unannounced, to assure that surveys are unannounced.

—AAAASF's agreement to provide us with a copy of the most current accreditation survey together with any other information related to the survey as we may require (including corrective action plans).

IV. Response to Comments

Because of the large number of public comments we normally receive on **Federal Register** documents, we are not able to acknowledge or respond to them individually. We will consider all comments we receive by the date and time specified in the **DATES** section of this preamble, and, when we proceed with a subsequent document, we will respond to the comments in the preamble to that document.

Upon completion of our evaluation, including evaluation of comments received as a result of this notice, we will publish a final notice in the **Federal Register** announcing the result of our evaluation.

V. Collection of Information Requirements

This document does not impose information collection and recordkeeping requirements. Consequently, it need not be reviewed by the Office of Management and Budget under the authority of the Paperwork Reduction Act of 1995 (44 U.S.C. 35).

VI. Regulatory Impact Statement

In accordance with the provisions of Executive Order 12866, the Office of Management and Budget did not review this proposed notice.

In accordance with Executive Order 13132, we have determined that this proposed notice would not have a significant effect on the rights of States, local or tribal governments.

Medicare Program; Listening Session on Development of Additional Imaging Efficiency Measures for Use in the Hospital Outpatient Quality Data Reporting Program

AGENCY: Centers for Medicare & Medicaid Services (CMS), HHS.

ACTION: Notice of meeting.

SUMMARY: This notice announces a listening session to receive comments regarding the development of additional imaging efficiency measures for use in the Hospital Outpatient Quality Data Reporting Program (HOP QDRP), which is authorized under section 1833(t)(17) of the Social Security Act. The purpose of this listening session is to solicit input from stakeholders to identify additional potential imaging efficiency measures that CMS could consider. Measure developers, hospitals, medical specialty societies, medical professionals, and other interested stakeholders are invited to participate either in person or via teleconference. The meeting is open to the public, but attendance is limited to space and teleconference lines available.

DATES: *Meeting Date:* The Listening Session announced in this notice will be held on Monday, January 31, 2011 from 1 p.m. to 5 p.m. Eastern Standard Time (E.S.T.).

Deadline for Meeting Registration and Request for Special Accommodations: Registration opens on January 7, 2011. For security reasons, registration must be completed by 5 p.m. E.S.T. on January 25, 2011. Requests for special accommodations must be received by 5 p.m. E.S.T. on January 25, 2011.

Deadline for Submission of Written Comments or Statements: Written comments or statements on the issues that were discussed at the listening session may be sent via mail, fax, or electronically to the address specified in the **ADDRESSES** section of this notice and must be received by 5 p.m. E.S.T. on February 10, 2011.

ADDRESSES: *Meeting Location:* The Listening Session will be held in the main auditorium of the Central Building of the Centers for Medicare and Medicaid Services, 7500 Security Boulevard, Baltimore, MD 21244–1850.

Registration and Special Accommodations: Persons interested in attending the meeting or participating by teleconference must register by completing the on-line registration. For in person attendance registration is available via the Web site at *http://www.cms.gov/apps/events/event.asp?id=622.* Individuals who require special accommodations should send a request via e-mail to *imagingmeasures@cms.hhs.gov* or by regular mail to Imaging Measures/OCSQ/QMHAG at Centers for Medicare & Medicaid Services, Mail Stop S3–02–01, 7500 Security Boulevard, Baltimore, MD 21244–1850. For individuals interested in participating via teleconference, registration is available via the Web site at *https://www.magnetmail.net/events?cf4db6967a514fb681832e700ee3e5b0a.* Individuals are encouraged to register early as there are a limited number of spaces available for in person attendance, as well as a limited number of conference call lines for the listening session.

Written Comments or Statements: Any interested party may send written comments or statements by mail to Imaging Measures/OCSQ/QMHAG, Centers for Medicare & Medicaid Services, Mail Stop S3–02–01, 7500 Security Boulevard, Baltimore, MD 21244–1850; by e-mail to *imagingmeasures@cms.hhs.gov*; or by fax to 410–786–8532.

We will accept written testimony, questions, or other statements, not to exceed 5 single-spaced, typed pages, before the meeting, and up until 5 p.m. E.S.T. on February 10, 2011. Submitters of suggestions for new measures are requested to provide references to the evidence base supporting the suggested measures.

FOR FURTHER INFORMATION CONTACT: Susan Arday, (410) 786–3141. Eva Fung, (410) 786–7539.

You may also send inquiries about this listening session via e-mail to *susan.arday@cms.hhs.gov* or *eva.fung@cms.hhs.gov*

SUPPLEMENTARY INFORMATION:

I. Background

Section 1833(t)(17) of the Social Security Act (Act) requires that hospitals submit outpatient quality measures data to CMS in order to receive the full annual payment update factor applicable to Outpatient Prospective Payment System (OPPS) services furnished by hospitals in outpatient settings. Section 1833(t)(17)(E) of the Act further mandates that CMS make this data available to the public. CMS, therefore, has established the Hospital Outpatient Quality Data Reporting Program (HOP QDRP). Beginning with the CY 2010 OPPS payment update, CMS adopted the following four claims-based imaging measures—(1) OP–8: MRI Lumbar Spine for Low Back Pain; (2) OP–9: Mammography Follow-up Rates; (3) OP–10: Abdomen CT Use of Contrast Material; and (4) OP–11: Thorax CT Use of Contrast Material.

These measures are claims-based and are calculated using Medicare claims data without imposing upon hospitals the burden of having to abstract the data from charts.

In the CY 2011 OPPS/ASC final rule published on November 24, 2010 (75 FR 71800) for the CY 2012 payment determination and subsequent payment determinations, CMS adopted three additional imaging efficiency measures—(1) Cardiac Imaging for Preoperative Risk Assessment for Non-Cardiac Low-Risk Surgery; (2) Simultaneous Use of Brain Computed Tomography (CT) and Sinus Computed Tomography (CT); and (3) Use of Brain Computed Tomography (CT) in the Emergency Department for Atraumatic Headache.

Public reporting of imaging efficiency measures are important because of the health risks and financial implications associated with the use of imaging procedures in the Medicare beneficiary population. Research shows that a significant portion of imaging services received by patients may be inappropriate; and immoderate use of diagnostic imaging also contributes to inflated medical technology costs. The imaging efficiency measures fill a significant gap in the availability of imaging efficiency measures at the hospital outpatient facility level and are a seminal step in the promotion of more efficient imaging services provided to Medicare beneficiaries.

This listening session will be hosted to solicit input from professionals and other interested parties on the development of additional imaging efficiency measures for the HOP QDRP program. Potential topics for consideration will include:

- Other imaging procedures that would be appropriate candidates for imaging efficiency measures;
- Data sources appropriate for imaging efficiency measures, *e.g.* claims data, chart abstracted data, EHRs, use of registries, *etc.;*
- Other settings appropriate for imaging efficiency measures, in addition to outpatient hospitals; and
- Development of imaging measures using a diagnosis or condition based approach versus measures developed using a procedure specific basis.

Relevant recommendations should include feedback on the integration of the imaging efficiency measures into the overall HOP QDRP program.

II. Listening Session Format

The listening session will be held on January 31, 2011. Measure developers, hospitals, medical specialty societies, medical professionals, and other interested stakeholders are invited to participate in person or by teleconference. The session will begin at 1 p.m. E.S.T. with an overview of objectives for the session. The remainder of the meeting will be devoted to receiving input on additional imaging efficiency measures and their integration into the overall HOP QDRP program. The meeting will conclude by 5 p.m. E.S.T.

Participants will be permitted to speak in the order in which they sign up. Participants are encouraged to provide references to the evidence base supporting their suggested measures. Comments from individuals not registered to speak will be heard after scheduled statements only if time permits.

III. Registration Instructions

For security reasons, any persons wishing to attend this meeting must register by the date listed in the **DATES** section of this notice. Persons interested in attending the meeting must register by completing the on-line registration via the designated Web site *http://www.cms.gov/apps/events/event.asp?id=622.*

The on-line registration system will generate a confirmation page to indicate the completion of your registration. Please print this page as your registration receipt.

Individuals may also participate in the listening session by teleconference. For individuals interested in participating via teleconference, registration is available via the Web site at *https://www.magnetmail.net/events?cf4db6967a514fb681832e700ee3e5b0a.* Registration is required as the number of call-in lines will be limited.

Background information on the listening session will be posted on the QualityNet Web site at *http://www.qualitynet.org* prior to the session. The information will be posted under the tab for "Hospitals Outpatient," then select "Imaging Efficiency Measures" from the drop-down menu. We anticipate posting an audio download and/or transcript of the listening session in the same location on *http://www.qualitynet.org* after completion of the listening session.

Individuals requiring sign language interpretation or other special accommodations must contact the staff via the contact information specified in the **FOR FURTHER INFORMATION CONTACT** section of this notice by the date listed in the **DATES** section of this notice.

IV. Security, Building, and Parking Guidelines

This meeting will be held in a Federal government building; therefore, Federal security measures are applicable. The on-site check-in for visitors will begin at 12 noon E.S.T. We recommend that confirmed registrants arrive reasonably early, but no earlier than 45 minutes prior to the start of the meeting, to allow additional time to clear security. Security measures include the following:

- Presentation of government-issued photographic identification to the Federal Protective Service or Guard Service personnel.
- Inspection of vehicle's interior and exterior (this includes engine and trunk inspection) at the entrance to the grounds. Parking permits and instructions will be issued after the vehicle inspection.
- Inspection, via metal detector or other applicable means, of all persons entering the building. We note that all items brought into CMS, whether personal or for the purpose of presentation or to support a presentation, including items such as laptops, cell phones, and palm pilots, are subject to physical inspection. We cannot assume responsibility for coordinating the receipt, transfer, transport, storage, set-up, safety, or timely arrival of any personal belongings or items used for a presentation.

We note that individuals who are not registered in advance will not be permitted to enter the building and will be unable to attend the meeting. The public may not enter the building earlier than 60 minutes prior to the convening of the meeting.

All visitors must be escorted in areas other than the lower and first floor levels in the Central Building.

(Catalog of Federal Domestic Assistance Program No. 93.773, Medicare—Hospital Insurance; and Program No. 93.774, Medicare—Supplementary Medical Insurance Program)

Dated: November 18, 2010.

Donald M. Berwick,

Administrator, Centers for Medicare and Medicaid Services.

BILLING CODE 4120–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

[CMS–1342–N]

Medicare Program; Town Hall Meeting on the Fiscal Year 2012 Applications for Add-on Payments for New Medical Services and Technologies Under the Hospital Inpatient Prospective Payment System and Informational Workshop on the Application Process and Criteria for Add-on Payments for New Medical Services and Technologies Under the Inpatient and Outpatient Prospective Payment Systems

AGENCY: Centers for Medicare & Medicaid Services (CMS), HHS.

ACTION: Notice of meeting.

SUMMARY: This notice announces a Town Hall meeting in accordance with section 1886(d)(5)(K)(viii) of the Social Security Act (the Act) to discuss fiscal year (FY) 2012 applications for add-on payments for new medical services and technologies under the hospital inpatient prospective payment system (IPPS). Interested parties are invited to this meeting to present their comments, recommendations, and data regarding whether the FY 2012 new medical services and technologies applications meet the substantial clinical improvement criterion.

Additionally, we will hold an Informational Workshop for all interested parties on the application process and criteria for add-on payments for new medical services and technologies under the IPPS and the application processes for the outpatient prospective payment system (OPPS) transitional pass-through payment for drugs, biological, and devices and new technology ambulatory payment classification (APC) group assignments for new services.

DATES: *Meeting Date:* Both the Town Hall Meeting and Informational Workshop announced in this notice will be held on Wednesday, February 2, 2011. The Informational Workshop will begin at 9 a.m., and check-in will begin at 8:30 a.m. eastern standard time (e.s.t.). The Town Hall Meeting will begin at 1 p.m. e.s.t. and check-in will begin at 12:30 p.m. e.s.t. Only one check-in is required to enter the building. Participants attending the Informational Workshop will be able to attend the Town Hall meeting without an additional check-in unless they exit the building. In this case, a participant will need to repeat the security

procedures and check-in again for the Town Hall Meeting.

Deadline for Registration of Presenters of the Town Hall Meeting: All presenters for the Town Hall Meeting, whether attending in person or by phone, must register and submit their agenda item(s) by January 19, 2011.

Deadline for Registration of All Other Participants for the Town Hall Meeting and the Informational Workshop and Submitting Requests for Special Accommodations: All other participants must register by January 24, 2011. Requests for special accommodations must be received no later than 5 p.m., e.s.t. on January 24, 2011.

Deadline for Submission of Agenda Item(s) or Written Comments for the Town Hall Meeting: Written comments and agenda items for discussion at the Town Hall Meeting must be received by January 19, 2011. In addition to materials submitted for discussion at the Town Hall Meeting, individuals may submit other written comments, as specified in the **ADDRESSES** section of this notice, on whether the service or technology represents a substantial clinical improvement. These comments must be received by February 16, 2011, for consideration before publication of the FY 2012 IPPS proposed rule.

ADDRESSES: *Meeting Location:* The Town Hall Meeting and Informational Workshop will both be held in the main Auditorium in the central building of the Centers for Medicare and Medicaid Services, 7500 Security Boulevard, Baltimore, MD 21244–1850.

Registration and Special Accommodations: Individuals wishing to participate in the meeting must register by following the on-line registration instructions located in section III. of this notice or by contacting staff listed in the **FOR FURTHER INFORMATION CONTACT** section of this notice. Individuals who need special accommodations should contact staff listed in the **FOR FURTHER INFORMATION CONTACT** section of this notice. Registration information and special accommodation requests may also be mailed to the address listed in the **ADDRESSES** section of this notice.

Submission of Agenda Item(s) or Written Comments for the Town Hall Meeting: Each presenter must submit an agenda item(s) regarding whether a FY 2012 application meets the substantial clinical improvement criterion. Agenda items, written comments, questions or other statements must not exceed three single-spaced typed pages and may be sent via e-mail to *newtech@cms.hhs.gov* or sent via regular mail to:

Division of Acute Care, New Technology Team, Mailstop C4–08–06, Centers for Medicare and Medicaid Services, 7500 Security Boulevard, Baltimore Maryland 21244–1850, Attention: Michael Treitel or Celeste Beauregard.

FOR FURTHER INFORMATION CONTACT: Michael Treitel, (410) 786–4552, *michael.treitel@cms.hhs.gov,* or Celeste Beauregard, (410) 786–8102, *celeste.beauregard@cms.hhs.gov.* Alternatively, you may forward your requests via e-mail to *newtech@cms.hhs.gov* or regular mail as specified in the **ADDRESSES** section of this notice.

SUPPLEMENTARY INFORMATION:

I. Background on the Add-On Payments for New Medical Services and Technologies Under the IPPS

Sections 1886(d)(5)(K) and (L) of the Social Security Act (the Act) require the Secretary to establish a process of identifying and ensuring adequate payments to acute care hospitals for new medical services and technologies under Medicare. Effective for discharges beginning on or after October 1, 2001, section 1886(d)(5)(K)(i) of the Act requires the Secretary to establish (after notice and opportunity for public comment) a mechanism to recognize the costs of new services and technologies under the inpatient hospital prospective payment system (IPPS). In addition, section 1886(d)(5)(K)(vi) of the Act specifies that a medical service or technology will be considered "new" if it meets criteria established by the Secretary (after notice and opportunity for public comment). (See the FY 2002 proposed rule (66 FR 22693, May 4, 2001) and final rule (66 FR 46912, September 7, 2001) for a more detailed discussion.)

In the September 7, 2001 final rule (66 FR 46914), we noted that we evaluate a request for special payment for a new medical service or technology against the following criteria in order to determine if the new technology meets the substantial clinical improvement requirement:

- The device offers a treatment option for a patient population unresponsive to, or ineligible for, currently available treatments.
- The device offers the ability to diagnose a medical condition in a patient population where that medical condition is currently undetectable or offers the ability to diagnose a medical condition earlier in a patient population than allowed by currently available methods. There must also be evidence that use of the device to make a diagnosis affects the management of the patient.
- Use of the device significantly improves clinical outcomes for a patient population as compared to currently available treatments. Some examples of outcomes that are frequently evaluated in studies of medical devices are the following:

++ Reduced mortality rate with use of the device.

++ Reduced rate of device-related complications.

++ Decreased rate of subsequent diagnostic or therapeutic interventions (for example, due to reduced rate of recurrence of the disease process).

++ Decreased number of future hospitalizations or physician visits.

++ More rapid beneficial resolution of the disease process treatment because of the use of the device.

++ Decreased pain, bleeding, or other quantifiable symptoms.

++ Reduced recovery time.

In addition, we indicated that the requester is required to submit evidence that the technology meets one or more of these criteria.

Section 503 of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) amended section 1886(d)(5)(K)(viii) of the Act to revise the process for evaluating new medical services and technology applications by requiring the Secretary to do the following:

- Provide for public input regarding whether a new service or technology represents an advance in medical technology that substantially improves the diagnosis or treatment of Medicare beneficiaries before publication of a proposed rule.
- Make public and periodically update a list of all the services and technologies for which an application is pending.
- Accept comments, recommendations, and data from the public regarding whether the service or technology represents a substantial improvement.
- Provide for a meeting at which organizations representing hospitals, physicians, manufacturers and any other interested party may present comments, recommendations, and data to the clinical staff of CMS as to whether the service or technology represents a substantial improvement before publication of a proposed rule.

The opinions and alternatives provided during this meeting will assist us as we evaluate the new medical services and technology applications for FY 2012. In addition, they will help us to evaluate our policy on the IPPS new technology add-on payment process before the publication of the FY 2012 IPPS proposed rule.

II. Town Hall Meeting and Informational Workshop Formats and Conference Calling Information

A. Format of the Town Hall Meeting

As noted in section I. of this notice, we are required to provide for a meeting at which organizations representing hospitals, physicians, manufacturers and any other interested party may present comments, recommendations, and data to the clinical staff of CMS concerning whether the service or technology represents a substantial improvement. This meeting will allow for a discussion of the substantial clinical improvement criteria on each of the FY 2012 new medical services and technology add-on payment applications. Information regarding the applications can be found on our Web site at *http://www.cms.hhs.gov/AcuteInpatientPPS/08_newtech.asp#TopOfPage.*

The majority of the meeting will be reserved for presentations of comments, recommendations, and data from registered presenters. The time for each presenter's comments will be approximately 10 to 15 minutes and will be based on the number of registered presenters. Presenters will be scheduled to speak in the order in which they register and grouped by new technology applicant. Therefore, individuals who would like to present must register and submit their agenda item(s) to the address specified in the **ADDRESSES** section of this notice by the date specified in the **DATES** section of this notice. Comments from participants will be heard after scheduled statements if time permits. Once the agenda is completed, it will be posted on the CMS IPPS Web site at *http://www.cms.hhs.gov/AcuteInpatientPPS/08_newtech.asp#TopOfPage.*

In addition, written comments will also be accepted and presented at the meeting if they are received at the address specified in the **ADDRESSES** section of this notice by the date specified in the **DATES** section of this notice. Written comments may also be submitted after the meeting for our consideration. If the comments are to be considered before the publication of the proposed rule, the comments must be received at the address specified in the **ADDRESSES** section of this notice by the date specified in the **DATES** section of this notice.

B. Informational Workshop Format

In addition to the statutorily-required Town Hall Meeting on whether an IPPS new technology application meets the substantial clinical improvement criteria, we will be holding an Informational Workshop on applying for special payment for new medical services and technologies under the IPPS and OPPS. Specifically, for new technology add-on payments under the IPPS, we will discuss each criterion in detail along with other information that will be helpful in guiding an applicant through the new technology add-on payment process. We will also discuss the processes of diagnosis-related group (DRG) assignment and requesting new ICD–9–CM codes under the IPPS. (Information on DRGs can be found on the IPPS Web site at *http://www.cms.hhs.gov/AcuteInpatientPPS/01_overview.asp#TopOfPage* and information on ICD–9–CM coding can be found on our Web site at *http://www.cms.hhs.gov/ICD9ProviderDiagnosticCodes/.*

In addition, to facilitate the public's knowledge of the OPPS application processes for transitional pass-through status of drugs, biologicals, and devices and assignment of new services to new technology ambulatory payment classification (APC) groups, the Informational Workshop will also include information on several processes for applying for special payment under the OPPS. One topic concerns the process for applying for a new category of devices for pass-through payment and criteria for evaluation. Interested parties may apply for a new device category, in accordance with section 1833(t)(6) of the Act. As background information, we have posted application and process background information on our Web site at *http://www.cms.hhs.gov/HospitalOutpatientPPS/04_passthrough_payment.asp#TopOfPage.*

Furthermore, under section 1833(t)(6) of the Act interested parties may also apply for transitional pass-through payment for certain new drugs and biologicals. As background information, we have posted application and process background information on our Web site at *http://www.cms.hhs.gov/HospitalOutpatientPPS/04_passthrough_payment.asp#TopOfPage.*

Finally, we provide the opportunity for the public to apply for new services to be placed in new technology APC groups in the OPPS, in accordance with our criteria and discussion in our November 30, 2001 final rule (66 FR 9897 through 59903). As background information, we have posted application and process background information on our Web site at *http://www.cms.hhs.gov/HospitalOutpatientPPS/04_passthrough_payment.asp#TopOfPage.* We plan to discuss all three of these OPPS application processes at the Informational Workshop that will be held on February 2, 2011.

The Informational Workshop is open to all interested parties including organizations representing hospitals, physicians, and manufacturers. We encourage all interested parties to attend, especially those who are not familiar with these processes. Individuals who want to attend this Informational Workshop must register by the date specified in the **DATES** section of this notice. Registration information is available below.

C. Conference Call Information

For participants who cannot come to CMS for the Informational Workshop or the Town Hall Meeting, an open toll-free phone line, (877) 267–1577, has been made available. The conference code is "0400."

III. Registration Instructions

The Division of Acute Care in CMS is coordinating the meeting registration for both the Town Hall Meeting and the Informational Workshop. While there is no registration fee, individuals must register to attend the Town Hall Meeting on substantial clinical improvement and for the Informational Workshop (two separate registrations).

Registration may be completed on-line at the following Web address: *http://www.cms.hhs.gov/AcuteInpatientPPS/08_newtech.asp#TopOfPage.* Select the link at the bottom of the page "Register to Attend the New Technology Town Hall Meeting" or "Register to Attend the New Technology Informational Workshop". After completing the registration, on-line registrants should print the confirmation page(s) and bring it with them to the meeting(s).

If you are unable to register on-line, you may register by sending an e-mail to the contacts listed in the **FOR FURTHER INFORMATION CONTACT** section of this notice. Please include your name, address, telephone number, e-mail address and fax number. If seating capacity has been reached, you will be notified that the meeting has reached capacity.

IV. Security, Building, and Parking Guidelines

Because these meetings will be located on Federal property, for security reasons, any persons wishing to attend these meetings must register by close of business by the date listed in the **DATES** section of this notice. Please allow sufficient time to go through the security checkpoints. It is suggested that you arrive at 7500 Security Boulevard no later than 8:30 a.m. e.s.t. if you are

attending the Informational Workshop and no later than 12:30 p.m. e.s.t. if you are attending the Town Hall Meeting so that you will be able to arrive promptly at the appropriate meeting.

Security measures include the following:

- Presentation of government-issued photographic identification to the Federal Protective Service or Guard Service personnel.
- Interior and exterior inspection of vehicles (this includes engine and trunk inspection) at the entrance to the grounds. Parking permits and instructions will be issued after the vehicle inspection.
- Passing through a metal detector and inspection of items brought into the building. We note that all items brought to CMS, whether personal or for the purpose of demonstration or to support a demonstration, are subject to inspection. We cannot assume responsibility for coordinating the receipt, transfer, transport, storage, set-up, safety, or timely arrival of any personal belongings or items used for demonstration or to support a demonstration.

Note: Individuals who are not registered in advance will not be permitted to enter the building and will be unable to attend the meetings. The public may not enter the building earlier than 45 minutes prior to the convening of the meeting(s).

All visitors must be escorted in areas other than the lower and first floor levels in the Central Building. Seating capacity is limited to the first 250 registrants.

Authority: Section 503 of Pub. L. 108–173.

(Catalog of Federal Domestic Assistance Program No. 93.773, Medicare—Hospital Insurance; and Program No. 93.774, Medicare—Supplementary Medical Insurance Program)

Dated: November 18, 2010.

Donald M. Berwick,

Administrator, Centers for Medicare & Medicaid Services.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

[CMS–3237–N]

Medicare Program; Meeting of the Medicare Evidence Development and Coverage Advisory Committee—January 19, 2011

AGENCY: Centers for Medicare & Medicaid Services (CMS), HHS.

ACTION: Notice of meeting.

SUMMARY: This notice announces that a public meeting of the Medicare Evidence Development & Coverage Advisory Committee (MEDCAC) (“Committee”) will be held on Wednesday, January 19, 2011. The Committee generally provides advice and recommendations concerning the adequacy of scientific evidence needed to determine whether certain medical items and services can be covered under the Medicare statute. This meeting will focus on the currently available evidence regarding the effects of Erythropoiesis Stimulating Agents (ESAs) on health outcomes in adult chronic kidney disease (CKD) patients (pre-dialysis and dialysis). This meeting is open to the public in accordance with the Federal Advisory Committee Act (5 U.S.C. App. 2, section 10(a)).

DATES: *Meeting Date:* The public meeting will be held on Wednesday, January 19, 2011 from 7:30 a.m. until 4:30 p.m., Eastern Standard Time (EST).

Deadline for Submission of Written Comments: Written comments must be received at the address specified in the **ADDRESSES** section of this notice by 5 p.m. EST, Monday, December 20, 2010. Once submitted, all comments are final.

Deadlines for Speaker Registration and Presentation Materials: The deadline to register to be a speaker and to submit powerpoint presentation materials and writings that will be used in support of an oral presentation, is 5 p.m., EST on Monday, December 20, 2010. Speakers may register by phone or via e-mail by contacting the person listed in the **FOR FURTHER INFORMATION CONTACT** section of this notice. Presentation materials must be received at the address specified in the **ADDRESSES** section of this notice.

Deadline for All Other Attendees Registration: Individuals may register online at *http://www.cms.gov/apps/events/upcomingevents.asp?strOrderBy=1&type=3,* or by phone by contacting the person listed in the **FOR FURTHER INFORMATION CONTACT** section of this notice by 5 p.m. EST, Wednesday, January 12, 2011.

We will be broadcasting the meeting via Webinar. You must register for the Webinar portion of the meeting at *https://webinar.cms.hhs.gov/esamedcac119/event/registration.html* by 5 p.m. EST, Thursday, January 13, 2011.

Deadline for Submitting a Request for Special Accommodations: Persons attending the meeting who are hearing or visually impaired, or have a condition that requires special assistance or accommodations, are asked to contact the Executive Secretary as specified in the **FOR FURTHER INFORMATION CONTACT** section of this notice no later than 5 p.m., EST Friday, January 7, 2011.

ADDRESSES: *Meeting Location:* The meeting will be held in the main auditorium of the Centers for Medicare & Medicaid Services, 7500 Security Boulevard, Baltimore, MD 21244.

Submission of Presentations and Comments: Presentation materials and written comments that will be presented at the meeting must be submitted via e-mail to *MedCACpresentations@cms.hhs.gov* or by regular mail to the contact listed in the **FOR FURTHER INFORMATION CONTACT** section of this notice by the date specified in the **DATES** section of this notice.

FOR FURTHER INFORMATION CONTACT: Maria Ellis, Executive Secretary for MEDCAC, Centers for Medicare & Medicaid Services, Office of Clinical Standards and Quality, Coverage and Analysis Group, C1–09–06, 7500 Security Boulevard, Baltimore, MD 21244 or contact Ms. Ellis by phone (410–786–0309) or via e-mail at *Maria.Ellis@cms.hhs.gov* .

SUPPLEMENTARY INFORMATION:

I. Background

MEDCAC, formerly known as the Medicare Coverage Advisory Committee (MCAC), provides advice and recommendations to CMS regarding clinical issues. (For more information on MCAC, see the December 14, 1998 **Federal Register** (63 FR 68780).) This notice announces the January 19, 2011, public meeting of the Committee. During this meeting, the Committee will discuss the evidence that is currently available regarding the effects of Erythropoiesis Stimulating Agents (ESAs) on health outcomes in adult chronic kidney disease (CKD) patients (pre-dialysis and dialysis). Background information about this topic, including panel materials, is available at *http://www.cms.hhs.gov/center/coverage.asp.*

We encourage the participation of appropriate organizations with expertise in the use of ESAs for treatment of anemia in adults with CKD including patients on dialysis and patients not on dialysis.

II. Meeting Format

This meeting is open to the public. The Committee will hear oral presentations from the public for approximately 45 minutes. The Committee may limit the number and duration of oral presentations to the time available. Your comments should focus on issues specific to the list of topics that we have proposed to the Committee. The list of research topics to be discussed at the meeting will be available on the following Web site prior to the meeting: *http://www.cms.hhs.gov/mcd/index_list.asp?list_type=mcac.* We require that you declare at the meeting whether you have any financial involvement with manufacturers (or their competitors) of any items or services being discussed.

The Committee will deliberate openly on the topics under consideration. Interested persons may observe the deliberations, but the Committee will not hear further comments during this time except at the request of the chairperson. The Committee will also allow a 15-minute unscheduled open public session for any attendee to address issues specific to the topics under consideration. At the conclusion of the day, the members will vote and the Committee will make its recommendation(s) to CMS.

III. Registration Instructions

CMS' Coverage and Analysis Group is coordinating the meetings registration process. While there is no registration fee, individuals must register to attend. You may register online at *http://www.cms.gov/apps/events/upcomingevents.asp?strOrderBy=1&type=3* or by phone by contacting the person listed in the **FOR FURTHER INFORMATION CONTACT** section of this notice by the deadline listed in the **DATES** section of this notice. Please provide your full name (as it appears on your government—issued photographic identification), address, organization, telephone, fax number(s), and e-mail address. You will receive a registration confirmation with instructions for your arrival at the CMS complex or you will be notified the seating capacity has been reached.

You must register for the Webinar portion of the meeting at *https://webinar.cms.hhs.gov/esamedcac119/event/registration.html* by the deadline listed in the **DATES** section of this notice.

IV. Security, Building, and Parking Guidelines

This meeting will be held in a Federal government building; therefore, Federal security measures are applicable. We recommend that confirmed registrants arrive reasonably early, but no earlier than 45 minutes prior to the start of the meeting, to allow additional time to clear security. Security measures include the following:

- Presentation of government-issued photographic identification to the Federal Protective Service or Guard Service personnel.
- Inspection of vehicle's interior and exterior (this includes engine and trunk inspection) at the entrance to the grounds. Parking permits and instructions will be issued after the vehicle inspection.
- Inspection, via metal detector or other applicable means of all persons brought entering the building. We note that all items brought into CMS, whether personal or for the purpose of presentation or to support a presentation, are subject to inspection. We cannot assume responsibility for coordinating the receipt, transfer, transport, storage, set-up, safety, or timely arrival of any personal belongings or items used for presentation or to support a presentation.

Note: Individuals who are not registered in advance will not be permitted to enter the building and will be unable to attend the meeting. The public may not enter the building earlier than 45 minutes prior to the convening of the meeting. All visitors must be escorted in areas other than the lower and first floor levels in the Central Building.

Authority: 5 U.S.C. App. 2, section 10(a).

(Catalog of Federal Domestic Assistance Program No. 93.773, Medicare—Hospital Insurance; and Program No. 93.774, Medicare—Supplementary Medical Insurance Program)

BILLING CODE 4120–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

Privacy Act of 1974; Report of New System of Records

AGENCY: Centers for Medicare & Medicaid Services (CMS), Department of Health and Human Services (HHS).

ACTION: Notice of a New System of Records.

SUMMARY: In accordance with the requirements of the Privacy Act of 1974, CMS is establishing a new system of records (SOR) titled, "Medicare and Medicaid Electronic Health Record (EHR) Incentive Program National Level Repository" System No. 09–70–0587. The final rule for the Medicare and Medicaid EHR Incentive Program implements the provisions of the American Recovery and Reinvestment Act of 2009 (the Recovery Act) (Pub. L. 111–5). Specifically, Title IV of Division B of the Recovery Act amends Titles XVIII and XIX of the Social Security Act (the Act) by establishing incentive payments to eligible professionals (EPs), eligible hospitals and critical access hospitals (CAHs) and Medicare Advantage (MA) Organizations participating in Medicare and Medicaid programs that adopt and successfully demonstrate meaningful use of certified electronic health record (EHR) technology. These Recovery Act provisions, together with Title XIII of Division A of the Recovery Act, may be cited as the "Health Information Technology for Economic and Clinical Health Act," or the "HITECH Act."

The final rule specified the initial criteria EPs, eligible hospitals and CAHs, and MA Organizations must meet in order to qualify for an incentive payment; calculation of the incentive payment amounts; payment adjustments under Medicare for covered professional services and inpatient hospital services provided by EPs, eligible hospitals and CAHs failing to demonstrate meaningful use of certified EHR technology beginning in 2015; and other program participation requirements. Also, the Office of the National Coordinator for Health Information Technology (ONC) issued a closely related final rule that specified the initial set of standards, implementation specifications, and certification criteria for certified EHR technology. ONC has also issued a separate final rule on the establishment of certification programs for health information technology (HIT).

To register for the Medicare and Medicaid EHR Incentive Program, EPs,

eligible hospitals and CAHs, and MA Organizations will be required to provide the following information: Name, National Provider Identifier (NPI), business address and business phone for each EP, eligible hospital or CAH; Taxpayer Identification Number (TIN) to which the EP, eligible hospital or CAH wants the incentive payment to be made; For EPs, whether they choose to participate in the Medicare EHR Incentive Program or the Medicaid EHR Incentive Program; For eligible hospitals and CAHs, their CMS Certification Number (CCN); and other information as specified by CMS. EPs, eligible hospitals and CAHs will also have the option to provide their e-mail address at the time of registration. MA Organizations will be required to provide their contract number on behalf of their MA-affiliated EPs and hospitals. At this time, participation in the Medicare and Medicaid EHR Incentive Programs is voluntary for EPs, eligible hospitals and CAHs.

Per section 1886(n)(4)(B) of the Act, as added by section 4102(c) of the HITECH Act, the Secretary will post on the Internet Web site of the Centers for Medicare & Medicaid Services, in an easily understandable format, a list of the names, business addresses, and business phone numbers of the Medicare EPs, eligible hospitals and CAHs who are meaningful EHR users in the Medicare EHR Incentive Program. Sections 1853(m)(5) and 1853(l)(7) of the Act, as added by sections 4101(c) and 4102(c) of the HITECH Recovery Act, require the Secretary to post the same information for EPs and eligible hospitals participating in the MA program as would be required if they were in the Medicare FFS program. Additionally, the Secretary must post the names of the qualifying MA Organizations receiving the incentive payment or payments. The routine uses established with this system contain a proper explanation as to the need for the disclosure provisions and provide clarity to CMS' intention to disclose provider-specific information contained in this system.

The primary purpose of this system, called the National Level Repository or NLR, is to collect, maintain, and process information that is required for the Medicare and Medicaid EHR Incentive Program. Information in this system will also be disclosed to: (1) Support regulatory, incentive payments and policy functions such as evaluation and reporting, whether performed by the Agency or by an Agency contractor or consultant; (2) assist another Federal and/or state agency, agency of a state government, or an agency established by state law; (3) assist in making the individual physician-level participation data available through an Agency website and by various other means of data dissemination; (4) assist the Department's Office of the National Coordinator of Health Information Technology's (ONC's) grantees for the purpose of supporting "eligible professional" (EP) adoption and meaningful use of certified EHR technology; (5) support litigation involving the Agency; (6) combat fraud, waste, and abuse in certain health benefits programs, and (7) assist in a response to a suspected or confirmed breach of the security or confidentiality of information. We have provided background information about this new system in the "Supplementary Information" section below. Although the Privacy Act requires only that CMS provide an opportunity for interested persons to comment on the proposed routine uses, CMS invites comments on all portions of this notice. See "Effective Dates" section for information about the comment period.

DATES: *Effective Dates:* CMS filed a new system report with the Chair of the House Committee on Government Reform and Oversight, the Chair of the Senate Committee on Homeland Security & Governmental Affairs, and the Administrator, Office of Information and Regulatory Affairs, Office of Management and Budget (OMB) on November 29, 2010. To ensure that all parties have adequate time in which to comment, the new system, including routine uses, will become effective 30 days from the publication of the notice, or 40 days from the date it was submitted to OMB and Congress, whichever is later, unless CMS receives comments that require alterations to this notice.

ADDRESSES: The public should address comments to: CMS Privacy Officer, Division of Information Security and Privacy Management, Enterprise Architecture and Strategy Group, Office of Information Services, CMS, Room N1–24–08, 7500 Security Boulevard, Baltimore, Maryland 21244–1850. Comments received will be available for review at this location, by appointment, during regular business hours, Monday through Friday from 9 a.m.—3 p.m., eastern time zone.

FOR FURTHER INFORMATION CONTACT: Rachel Maisler, Health Insurance Specialist, Office of E–Health Standards and Services, CMS, 7500 Security Boulevard, Mail-stop: S2–26–17, Baltimore, MD 21244–1850. Office: 410–786–5754, Facsimile: 410–786–1347, E-mail address: *rachel.maisler@cms.gov.*

SUPPLEMENTARY INFORMATION: Sections 4101(a), 4102(a) and 4102(a)(2) of the HITECH Act respectively add sections 1848(o), 1886(n) and 1814(l)(A)(3) to the Act to limit incentive payments in the Medicare Fee-for-service (FSS) EHR incentive program to an EP, eligible hospital or CAH that is a "meaningful EHR user." Sections 4101(c) and 4102(c) of the HITECH Act respectively adds sections 1853(l) and 1853(m) which outline the application of incentive payments for certain MA-affiliated EPs and MA-affiliated hospitals. Section 4201(a)(2) of the HITECH Act added section 1903(t) to the Act to limit incentive payments in the Medicaid context to EPs, as defined at section 1903(t)(2)(A), who meet the requirements of 1903(t). As described in our final rule discussed below, these eligible professionals can receive an incentive payment for adoption or utilization of, or upgrade to, certified EHR technology in 2011, and can receive incentive payments in certain subsequent years if they demonstrate meaningful use of certified EHR technology.

In sections 1848(o)(2)(A) and 1886(n)(3) of the Act, the Congress specified three types of requirements for meaningful use in the Medicare context: (1) Use of certified EHR technology in a meaningful manner; (2) that the certified EHR technology is connected in a manner that provides for the electronic exchange of health information to improve the quality of care; and (3) that, in using certified EHR technology, the provider submits to the Secretary information on clinical quality measures and such other measures selected by the Secretary.

In our final rule on the EHR incentive program, we stated that we are not limited to collecting only information pertaining to Medicare and Medicaid beneficiaries. Therefore, in our final rule, we require that, in order to demonstrate meaningful use, an EP, eligible hospital or CAH, or MA Organization must report aggregate information on clinical quality measures for all patients to whom clinical quality measures apply. As explained in the final rule for EHR incentive payments, for the 2011 payment year, we use an attestation methodology for the submission of summary information on clinical quality measures as a condition of demonstrating meaningful use of certified EHR technology.

For the Medicaid incentive program, as stated in our final rule, for their first year of payment, providers are not required to demonstrate meaningful use, and may receive an incentive payment by demonstrating adoption,

implementation, or upgrade to certified EHR technology. We expect that, for 2011, the majority of Medicaid providers will receive an incentive payment through this pathway. In their second, third, fourth, fifth and sixth payment year, Medicaid EPs and hospitals will be required to demonstrate meaningful use of certified EHR technology to qualify for an incentive payment.

As stated in our final rule, we will use a phased approach for meaningful use criteria, based on currently available technology capabilities and provider practice experience. We refer to the initial meaningful use criteria as "Stage 1." In the final rule, we require that EPs, eligible hospitals and CAHs, including MA-affiliated EPs and hospitals, demonstrate that they satisfy all the required meaningful use objectives and associated measures of the Stage 1 criteria during the reporting period for 2011 through attestation in order to receive incentive payments. In addition, we require that EPs, eligible hospitals and CAHs, and MA Organizations attest to the accuracy and completeness of the numerators and denominators for each of the applicable measures, and that the information submitted includes information on all patients to whom the measure applies.

To qualify as a meaningful EHR user for 2011, we require that EPs, eligible hospitals, or CAHs demonstrate that they meet all of the required meaningful use objectives and the associated measures using certified EHR technology. In order to receive an incentive payment, all EPs, eligible hospitals and CAHs must register for the program in the NLR and then attest that they have successfully demonstrated meaningful use of certified EHR technology after the completion of their EHR reporting period, which is defined at 75 FR 44566.

Section 1848(o)(3)(D) of the Act requires the Secretary to list, in an easily understandable format, the names, business addresses, and business phone numbers of the Medicare EPs for being meaningful EHR users under the Medicare FFS program on the Internet web site of CMS. Section 1886(n)(4)(B) of the Act requires the Secretary to list, in an easily understandable format, the names and other relevant data as determined appropriate, of eligible hospitals and CAHs who are meaningful EHR users under the Medicare FFS program, on the CMS Internet web site. Sections 1853(m)(5) and 1853(I)(7) of the Act require the Secretary to post the same information for EPs and eligible hospitals in the MA program as would be required if they were in the Medicare FFS program. Therefore, we collect the information necessary to post the name, business address and business phone numbers of all EPs, eligible hospitals and CAHs participating in the Medicare FFS and MA EHR Incentive Program,, and post this information on our Internet web site. The routine uses established with this system contain a proper explanation as to the need for the disclosure provisions and provide clarity to CMS' intention to disclose provider-specific information contained in this system.

I. Description of the Proposed System of Records

A. Statutory and Regulatory Basis for System

Authority for the collection, maintenance, and disclosures from this system is provided under §§ 1848(o), 1886(m), 1848(l), and 1853(m) of the Social Security Act which were added by the HITECH Act, respectively authorize incentive payments for EPs, eligible hospitals, CAHs and MA Organizations that successfully demonstrate meaningful use of certified EHR technology. Sections 1903(a)(3) and 1903(t) of the Social Security Act provides authority for the Medicaid EHR Incentive Program. These provisions are implemented by 75 FR 44314 and 42 CFR parts 412, 413, 422, collectively known as the Medicare and Medicaid Programs; Electronic Health Record Incentive Program; Final Rule.

B. Collection and Maintenance of Data in the System

The National Level Repository (NLR) contains information on eligible professionals who receive Medicare incentives as meaningful users of certified EHR technology. Information in the NLR will be populated from other CMS systems, including the Provider Enrollment, Chain, and Ownership System (PECOS) and the National Plan & Provider Enumeration System (NPPES). The NLR will contain provider name, National Provider Identifier (NPI), business address and phone number, Taxpayer Identification Number (TIN) to which the EP, eligible hospital or CAH, or MA Organization wants the incentive payment to be made, and, for EPs, whether they choose to participate in the Medicare EHR Incentive Program or the Medicaid EHR Incentive Program. For eligible hospitals and CAHs, their CCN will also be included. For MA Organizations, their CMS contract number will be included. For providers participating in the Medicaid EHR Incentive Program, it will include the State in which they choose to participate. Additionally, EPs, eligible hospitals and CAHs will have the option to provide an e-mail address for inclusion in the system. At this time, participation in the Medicare and Medicaid EHR Incentive Program is voluntary for EPs, eligible hospitals and CAHs.

II. Agency Policies, Procedures, and Restrictions On Routine Uses

A. The Privacy Act permits us to disclose information without an individual's consent if the information is to be used for a purpose that is compatible with the purpose(s) for which the information was collected. Any such disclosure of data is known as a "routine use." The government will only release information collected in the NLR that can be associated with an individual EP as provided for under "Section III. Proposed Routine Use Disclosures of Data in the System." Identifiable data may be disclosed under a routine use.

We will only disclose the minimum provider-level data necessary to achieve the purpose of the Medicare and Medicaid EHR Incentive Program. CMS has the following policies and procedures concerning disclosures of information that will be maintained in the system. These policies do not apply to Routine Use No. 3 for this system. In general, disclosure of information from the system will be approved only for the minimum information necessary to accomplish the purpose of the disclosure and only after CMS:

1. Determines that the use or disclosure is consistent with the reason that the data is being collected, *e.g.,* to collect, maintain, and process information promoting the nationwide health information technology infrastructure that allows for the electronic use and exchange of information.

2. Determines that:

a. The purpose of the disclosure can only be accomplished if the record is provided in an individually identifiable form;

b. The purpose for which the disclosure is to be made is of sufficient importance to warrant the effect and/or risk on the privacy of the individual provider that additional exposure of the record might bring; and

c. There is a strong probability that the proposed use of the data would in fact accomplish the stated purpose(s).

3. Requires the information recipient to:

a. Establish administrative, technical, and physical safeguards to prevent unauthorized use of disclosure of the record;

b. Remove or destroy at the earliest time all individually-identifiable information; and

c. Agree to not use or disclose the information for any purpose other than the stated purpose under which the information was disclosed.

4. Determines that the data are valid and reliable.

III. Proposed Routine Use Disclosures of Data In the System

A. Entities Who May Receive Disclosures under Routine Use

These routine uses specify circumstances, in addition to those provided by statute in the Privacy Act of 1974, under which CMS may release information from the Medicare and Medicaid EHR Incentive Program without the consent of the individual to whom such information pertains. Each proposed disclosure of information under these routine uses will be evaluated to ensure that the disclosure is legally permissible, including but not limited to ensuring that the purpose of the disclosure is compatible with the purpose for which the information was collected. We propose to establish the following routine use disclosures of information maintained in the system:

1. To support Agency contractors or consultants who have been engaged by the Agency to assist in accomplishment of a CMS function relating to the purposes for this SOR and who need to have access to the records in order to assist CMS.

We contemplate disclosing information under this routine use only in situations in which CMS may enter into a contractual or similar agreement with a third party to assist in accomplishing a CMS function relating to purposes for this SOR.

CMS occasionally contracts out certain of its functions when doing so would contribute to effective and efficient operations. CMS must be able to give a contractor or consultant whatever information is necessary for the contractor or consultant to fulfill its duties. In these situations, safeguards are provided in the contract prohibiting the contractor or consultant from using or disclosing the information for any purpose other than that described in the contract and requires the contractor or consultant to return or destroy all information at the completion of the contract.

2. To assist another Federal or state agency, agency of a state government, or an agency established by state law pursuant to agreements with CMS to:

a. Contribute to the accuracy of CMS's proper incentive payment to Medicare and Medicaid EHR Incentive Program participants, and

b. Assist Federal/state Medicaid programs which may require Medicare and Medicaid EHR Incentive Program information for purposes related to this system.

c. Assist other Federal agencies that have the authority to perform collection of debts owed to the Federal government.

Other Federal or state agencies in their administration of a Federal health program may require EHR Incentive Program information in order to support evaluations and monitoring of various aspects of the Medicare and Medicaid EHR Incentive payments.

2. To assist in making the information for EPs, eligible hospitals and CAHs, and MA Organizations that receive Medicare EHR incentive payments through the new payment contractor, available through a public web site. If local websites are used by a local or regional collaborative, CMS would have links to these Web sites on its main Web site.

This information would be posted for the purpose of, and in a manner that would promote the use of EHRs by EPs, eligible hospitals and CAHs, and MA Organizations to Medicare and Medicaid beneficiaries.

3. To assist the Department's Office of the National Coordinator of Health Information Technology's (ONC's) grantees for the purpose of supporting "eligible professional" (EP) adoption and meaningful use of certified EHR technology.

We contemplate disclosing information under this routine use only in situations in which CMS may be asked to provide necessary information to ONC grantees, also referred to as Health Information Technology Regional Extension Centers (RECs) to assist in accomplishing an ONC function relating to support for "eligible professional" (EP) adoption of, meaningful use of certified EHR technology, and provider support.

4. To support the Department of Justice (DOJ), court, or adjudicatory body when:

a. The Agency or any component thereof, or

b. Any employee of the Agency in his or her official capacity, or

c. Any employee of the Agency in his or her individual capacity where the DOJ has agreed to represent the employee, or

d. The United States Government, is a party to litigation or has an interest in such litigation, and by careful review, CMS determines that the records are both relevant and necessary to the litigation and that the use of such records by the DOJ, court or adjudicatory body is compatible with the purpose for which the agency collected the records.

Whenever CMS is involved in litigation, or occasionally when another party is involved in litigation and CMS's policies or operations could be affected by the outcome of the litigation, CMS would be able to disclose information to the DOJ, court, or adjudicatory body involved.

5. To assist a CMS contractor (including, but not limited to Medicare Administrative Contractors, fiscal intermediaries, and carriers) that assists in the administration of a CMS-administered health benefits program, or to a grantee of a CMS-administered grant program, when disclosure is deemed reasonably necessary by CMS to prevent, deter, discover, detect, investigate, examine, prosecute, sue with respect to, defend against, correct, remedy, or otherwise combat fraud, waste or abuse in such program.

We contemplate disclosing information under this routine use only in situations in which CMS may enter into a contract or grant with a third party to assist in accomplishing CMS functions relating to the purpose of combating fraud, waste or abuse.

CMS occasionally contracts out certain of its functions when doing so would contribute to effective and efficient operations. CMS must be able to give a contractor or grantee whatever information is necessary for the contractor or grantee to fulfill its duties. In these situations, safeguards are provided in the contract prohibiting the contractor or grantee from using or disclosing the information for any purpose other than that described in the contract or grant and requiring the contractor or grantee to return or destroy all information.

6. To assist another Federal agency or to an instrumentality of any governmental jurisdiction within or under the control of the United States (including any state or local governmental agency), that administers, or that has the authority to investigate potential fraud, waste or abuse in a health benefits program funded in whole or in part by Federal funds, when disclosure is deemed reasonably necessary by CMS to prevent, deter, discover, detect, investigate, examine, prosecute, sue with respect to, defend against, correct, remedy, or otherwise combat fraud, waste or abuse in such programs.

Other agencies may require Medicare and Medicaid EHR Incentive Program information for the purpose of

combating fraud, waste or abuse in such Federally-funded programs.

7. To assist appropriate Federal agencies and Department contractors that have a need to know the information for the purpose of assisting the Department's efforts to respond to a suspected or confirmed breach of the security or confidentiality of information maintained in this system of records, and the information disclosed is relevant and unnecessary for the assistance.

Other Federal agencies and contractors may require EHR Incentive Program information for the purpose of assisting in a respond to a suspected or confirmed breach of the security or confidentiality of information.

IV. Safeguards

CMS has safeguards in place for authorized users and monitors such users to ensure against unauthorized use. Personnel having access to the system have been trained in the Privacy Act and information security requirements. Employees who maintain records in this system are instructed not to release data until the intended recipient agrees to implement appropriate management, operational and technical safeguards sufficient to protect the confidentiality, integrity and availability of the information and information systems and to prevent unauthorized access.

This system will conform to all applicable Federal laws and regulations and Federal, HHS, and CMS policies and standards as they relate to information security and data privacy. These laws and regulations include but are not limited to: The Privacy Act of 1974; the Federal Information Security Management Act of 2002; the Computer Fraud and Abuse Act of 1986; the E–Government Act of 2002, the Clinger-Cohen Act of 1996; the Medicare Modernization Act of 2003, and the corresponding implementing regulations. OMB Circular A–130, Management of Federal Resources, Appendix III, Security of Federal Automated Information Resources also applies. Federal, HHS, and CMS policies and standards include but are not limited to: All pertinent National Institute of Standards and Technology publications; the HHS Information Systems Program Handbook and the CMS Information Security Handbook.

V. Effects of the New System On the Rights of Individuals

CMS proposes to establish this system in accordance with the principles and requirements of the Privacy Act and will collect, use, and disseminate information only as prescribed therein. We will only disclose the minimum personal data necessary to achieve the purpose of the data collection and the routine uses contained in this notice. Disclosure of information from the system will be approved only to the extent necessary to accomplish the purpose of the disclosure. CMS has assigned a higher level of security clearance for the information maintained in this system in an effort to provide added security and protection of data in this system.

CMS will take precautionary measures to minimize the risks of unauthorized access to the records and the potential harm to individual privacy or other personal or property rights. CMS will collect only that information necessary to perform the system's functions. In addition, CMS will make disclosure from the proposed system only with consent of the subject individual, or his/her legal representative, or in accordance with an applicable exception provision of the Privacy Act. CMS, therefore, does not anticipate an unfavorable effect on individual privacy as a result of the disclosure of information relating to individuals.

Dated: November 16, 2010.

Michelle Snyder,

Deputy Chief Operating Officer, Centers for Medicare & Medicaid Services.

SYSTEM No. 09–70–0587

SYSTEM NAME:

"Medicare and Medicaid Electronic Health Record (EHR) Incentive Program National Level Repository" HHS/CMS/OESS.

SECURITY CLASSIFICATION:

Level Three Privacy Act Sensitive.

SYSTEM LOCATION:

CMS Data Center, 7500 Security Boulevard, North Building, First Floor, Baltimore, Maryland 21244–1850 and at various contractor sites.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

The National Level Repository (NLR) contains information on eligible professionals who receive Medicare incentives as meaningful users of certified EHR technology.

CATEGORIES OF RECORDS IN THE SYSTEM:

The NLR will contain provider name, National Provider Identifier (NPI), business address and phone number, Taxpayer Identification Number (TIN) to which the EP, eligible hospital or CAH, or MA Organization wants the incentive payment to be made, and, for EPs, whether they choose to participate in the Medicare EHR Incentive Program or the Medicaid EHR Incentive Program. For eligible hospitals and CAHs, their CCN will also be included. For MA Organizations, their CMS contract number will be included. For providers participating in the Medicaid EHR Incentive Program, it will include the State in which they choose to participate. Additionally, EPs, eligible hospitals and CAHs will have the option to provide an e-mail address for inclusion in the system. At this time, participation in the Medicare and Medicaid EHR Incentive Program is voluntary for EPs, eligible hospitals and CAHs.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

Authority for the collection, maintenance, and disclosures from this system is provided under §§ 1848(o), 1886(m), 1848(l), and 1853(m) of the Social Security Act which were added by the HITECH Act, respectively authorize incentive payments for EPs, eligible hospitals, CAHs and MA Organizations that successfully demonstrate meaningful use of certified EHR technology. Sections 1903(a)(3) and 1903(t) of the Social Security Act provides authority for the Medicaid EHR Incentive Program. These provisions are implemented by 75 FR 44314 and 42 CFR parts 412, 413, 422, collectively known as the Medicare and Medicaid Programs; Electronic Health Record Incentive Program; Final Rule.

PURPOSE(S) OF THE SYSTEM:

The primary purpose of this system, called the National Level Repository or NLR, is to collect, maintain, and process information that is required for the Medicare and Medicaid EHR Incentive Program. Information in this system will also be disclosed to: (1) Support regulatory, incentive payments and policy functions such as evaluation and reporting, whether performed by the Agency or by an Agency contractor or consultant; (2) assist another Federal and/or state agency, agency of a state government, or an agency established by state law; (3) assist in making the individual physician-level participation data available through an Agency website and by various other means of data dissemination; (4) assist the Department's Office of the National Coordinator of Health Information Technology's (ONC's) grantees for the purpose of supporting "eligible professional" (EP) adoption and meaningful use of certified EHR technology; (5) support litigation involving the Agency; (6) combat fraud, waste, and abuse in certain health

benefits programs, and (7) assist in a response to a suspected or confirmed breach of the security or confidentiality of information.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OR USERS AND THE PURPOSES OF SUCH USES:

A. ENTITIES WHO MAY RECEIVE DISCLOSURES UNDER ROUTINE USE

These routine uses specify circumstances, in addition to those provided by statute in the Privacy Act of 1974, under which CMS may release information from the EHRI without the consent of the individual to whom such information pertains. Each proposed disclosure of information under these routine uses will be evaluated to ensure that the disclosure is legally permissible, including but not limited to ensuring that the purpose of the disclosure is compatible with the purpose for which the information was collected. We propose to establish the following routine use disclosures of information maintained in the system:

1. To support Agency contractors, consultants, or CMS grantees who have been engaged by the Agency to assist in accomplishment of a CMS function relating to the purposes for this SOR and who need to have access to the records in order to assist CMS.

2. To assist another Federal or state agency, agency of a state government, or an agency established by state law pursuant to agreements with CMS to:

a. Contribute to the accuracy of CMS's proper incentive payment to Medicare and Medicaid EHR Incentive Program participants, and

b. Assist Federal/state Medicaid programs which may require Medicare and Medicaid EHR Incentive Program information for purposes related to this system.

c. Assist other Federal agencies that have the authority to perform collection of debts owed to the Federal government.

3. To assist in making the information for EPs, eligible hospitals and critical access hospitals (CAHs), who receive EHR incentive payments through the new payment contractor, available through a public website. If local Web sites are used by a local or regional collaborative, CMS would have links to these websites on its main website.

4. To assist the Department's Office of the National Coordinator of Health Information Technology's (ONC's) grantees for the purpose of supporting "eligible professional" (EP) adoption and meaningful use of certified EHR technology.

5. To support the Department of Justice (DOJ), court, or adjudicatory body when:

a. The Agency or any component thereof, or

b. Any employee of the Agency in his or her official capacity, or

c. Any employee of the Agency in his or her individual capacity where the DOJ has agreed to represent the employee, or

d. The United States Government, is a party to litigation or has an interest in such litigation, and by careful review, CMS determines that the records are both relevant and necessary to the litigation and that the use of such records by the DOJ, court or adjudicatory body is compatible with the purpose for which the agency collected the records.

6. To assist a CMS contractor (including, but not limited to fiscal intermediaries and carriers) that assists in the administration of a CMS-administered health benefits program, or to a grantee of a CMS-administered grant program, when disclosure is deemed reasonably necessary by CMS to prevent, deter, discover, detect, investigate, examine, prosecute, sue with respect to, defend against, correct, remedy, or otherwise combat fraud, waste or abuse in such program.

7. To assist another Federal agency or to an instrumentality of any governmental jurisdiction within or under the control of the United States (including any state or local governmental agency), that administers, or that has the authority to investigate potential fraud, waste or abuse in a health benefits program funded in whole or in part by Federal funds, when disclosure is deemed reasonably necessary by CMS to prevent, deter, discover, detect, investigate, examine, prosecute, sue with respect to, defend against, correct, remedy, or otherwise combat fraud, waste or abuse in such programs.

8. To assist appropriate Federal agencies and Department contractors that have a need to know the information for the purpose of assisting the Department's efforts to respond to a suspected or confirmed breach of the security or confidentiality of information maintained in this system of records, and the information disclosed is relevant and necessary for the assistance.

POLICIES AND PRACTICES FOR STORING, RETRIEVING, ACCESSING, RETAINING, AND DISPOSING OF RECORDS IN THE SYSTEM:

STORAGE:

Records are stored on both tape cartridges (magnetic storage media) and in a DB2 relational database management environment (DASD data storage media).

RETRIEVABILITY:

Information is most frequently retrieved by provider number (facility, physician, IDs), service dates, and prescriber identification number.

SAFEGUARDS:

CMS has safeguards in place for authorized users and monitors such users to ensure against unauthorized use. Personnel having access to the system have been trained in the Privacy Act and information security requirements. Employees who maintain records in this system are instructed not to release data until the intended recipient agrees to implement appropriate management, operational and technical safeguards sufficient to protect the confidentiality, integrity and availability of the information and information systems and to prevent unauthorized access.

This system will conform to all applicable Federal laws and regulations and Federal, HHS, and CMS policies and standards as they relate to information security and data privacy. These laws and regulations include but are not limited to: the Privacy Act of 1974; the Federal Information Security Management Act of 2002; the Computer Fraud and Abuse Act of 1986; the E–Government Act of 2002, the Clinger-Cohen Act of 1996; the Medicare Modernization Act of 2003, and the corresponding implementing regulations. OMB Circular A–130, Management of Federal Resources, Appendix III, Security of Federal Automated Information Resources also applies. Federal, HHS, and CMS policies and standards include but are not limited to: All pertinent National Institute of Standards and Technology publications; the HHS Information Systems Program Handbook and the CMS Information Security Handbook.

RETENTION AND DISPOSAL:

Records are maintained with identifiers for all transactions after they are entered into the system for a period of 10 years. Records are housed in both active and archival files. All claims-related records are encompassed by the document preservation order and will be retained until notification is received from the Department of Justice.

SYSTEM MANAGER AND ADDRESS:

Director, Office of E–Health Standards and Services, Centers for Medicare & Medicaid Services, 7500 Security Blvd, Mail-stop: S2–26–17, Baltimore, MD 21244–1850.

NOTIFICATION PROCEDURE:

For purpose of notification, the subject individual should write to the system manager who will require the system name, and the retrieval selection criteria (*e.g.,* Provider number, SSN, etc.).

RECORD ACCESS PROCEDURE:

For purpose of access, use the same procedures outlined in Notification Procedures above. Requestors should also reasonably specify the record contents being sought. (These procedures are in accordance with Department regulation 45 CFR 5b.5(a)(2)).

CONTESTING RECORD PROCEDURES:

The subject individual should contact the system manager named above, and reasonably identify the record and specify the information to be contested. State the corrective action sought and the reasons for the correction with supporting justification. (These procedures are in accordance with Department regulation 45 CFR 5b.7).

RECORD SOURCE CATEGORIES:

Information in the National Level Repository will be populated from other CMS systems of records, including the Provider Enrollment, Chain, and Ownership System (PECOS) and the National Plan & Provider Enumeration System (NPPES).

SYSTEMS EXEMPTED FROM CERTAIN PROVISIONS OF THE ACT:

None.

BILLING CODE 4120–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Children and Families

Proposed Information Collection Activity; Comment Request

Title: Evaluation of Pregnancy Prevention Approaches and Teen Pregnancy Prevention Evaluation.

OMB No.: 0970–0360.

Description: The Administration for Children and Families (ACF), the Office of the Assistant Secretary for Planning and Evaluation (ASPE), and the Office of the Assistant Secretary for Health (ASH), 13.5. Department of Health and Human Services (HHS), are proposing a data collection activity to be undettaken by two related studies—the Evaluation of Pregnancy Prevention Approaches study and the Teen Pregnancy Prevention Evaluation. Both studies are sponsored by ASH and will use the same data collection instruments; ACF is facilitating the Evaluation of Pregnancy Prevention Approaches, while ASPE is facilitating the Teen Pregnancy Prevention Evaluation.

These two studies will assess the effectiveness of a range of programs designed to prevent or reduce sexual risk behavior and pregnancy among older adolescents. Knowing what types of programs are effective will enhance programmatic decisions by policymakers and practitioners.

The proposed activity involves the collection of information from observations of program activities and interviews with a range of experts and persons involved with programs about various aspects of existing prevention programs and topics the experts view as important to address through evaluation. These data will be used to help enhance decisions about the types of programs to be evaluated in the studies.

Respondents: Researchers and policy experts, program directors, program staff, or school administrators.

ANNUAL BURDEN ESTIMATES

Instrument	Annual number of respondents	Number of responses per respondent	Average burden hours per response	Estimated annual burden hours
Discussion Guide for Use with Researchers and Policy Experts	30	1	1	30
Discussion Guide for Use with Program Directors	30	2	2	120
Discussion Guide for Use with Program Staff	60	1	2	120
Focus Group Discussion Guide for Use with Program Participants	300	1	1.5	450
Discussion Guide for Use with School Administrators	200	1	1	200

Estimated Total Annual Burden Hours: 920.

In compliance with the requirements of section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, the Administration for Children and Families is soliciting public comment on the specific aspects of the information collection described above. Copies of the proposed collection of information can be obtained and comments may be forwarded by writing to the Administration for Children and Families, Office of Planning, Research and Evaluation, 370 L'Enfant Promenade, SW., Washington, DC 20447, Attn: OPRE Reports Clearance Officer. E-mail address: *OPREinfocollection@acf.hhs.gov.* All requests should be identified by the title of the information collection.

The Department specifically requests comments on (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Consideration will be given to comments and suggestions submitted within 60 days of this publication.

Dated: November 22, 2010.

Steven Hanmer,

OPRE Reports Clearance Officer.

BILLING CODE 4184–01–M

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2010–N–0601]

Agency Information Collection Activities; Proposed Collection; Comment Request; Current Good Manufacturing Practice Regulations for Medicated Feeds

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing an opportunity for public comment on the proposed collection of certain information by the Agency. Under the Paperwork Reduction Act of 1995 (the PRA), Federal Agencies are required to

publish notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, and to allow 60 days for public comment in response to the notice. This notice solicits comments on the recordkeeping requirements for manufacturers of medicated animal feeds.

DATES: Submit either electronic or written comments on the collection of information by January 28, 2011.

ADDRESSES: Submit electronic comments on the collection of information to *http://www.regulations.gov*. Submit written comments on the collection of information to the Division of Dockets Management (HFA–305), Food and Drug Administration, 5630 Fishers Lane, rm. 1061, Rockville, MD 20852. All comments should be identified with the docket number found in brackets in the heading of this document.

FOR FURTHER INFORMATION CONTACT: Johnny Vilela, Office of Information Management, Food and Drug Administration, 1350 Piccard Dr., PI50–400B, Rockville, MD 20850, 301–796–7651, *juanmanuel.vilela@fda.hhs.gov*.

SUPPLEMENTARY INFORMATION: Under the PRA (44 U.S.C. 3501–3520), Federal Agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. "Collection of information" is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes Agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA (44 U.S.C. 3506(c)(2)(A)) requires Federal Agencies to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, FDA is publishing notice of the proposed collection of information set forth in this document.

With respect to the following collection of information, FDA invites comments on these topics: (1) Whether the proposed collection of information is necessary for the proper performance of FDA's functions, including whether the information will have practical utility; (2) the accuracy of FDA's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques, when appropriate, and other forms of information technology.

Current Good Manufacturing Practice Regulations for Medicated Feeds—21 CFR Part 225 (OMB Control Number 0910–0152)—Extension

Under section 501 of the Federal Food, Drug, and Cosmetic Act (the FD&C Act) (21 U.S.C. 351), FDA has the statutory authority to issue current good manufacturing practice (cGMP) regulations for drugs, including medicated feeds. Medicated feeds are administered to animals for the prevention, cure, mitigation, or treatment of disease, or growth promotion and feed efficiency. Statutory requirements for cGMPs have been codified under part 225 (21 CFR part 225). Medicated feeds that are not manufactured in accordance with these regulations are considered adulterated under section 501(a)(2)(B) of the FD&C Act. Under part 225, a manufacturer is required to establish, maintain, and retain records for a medicated feed, including records to document procedures required during the manufacturing process to assure that proper quality control is maintained. Such records would, for example, contain information concerning receipt and inventory of drug components, batch production, laboratory assay results (*i.e.,* batch and stability testing), labels, and product distribution.

This information is needed so that FDA can monitor drug usage and possible misformulation of medicated feeds to investigate violative drug residues in products from treated animals and to investigate product defects when a drug is recalled. In addition, FDA will use the cGMP criteria in part 225 to determine whether or not the systems and procedures used by manufacturers of medicated feeds are adequate to assure that their feeds meet the requirements of the FD&C Act as to safety and also that they meet their claimed identity, strength, quality, and purity, as required by section 501(a)(2)(B) of the FD&C Act.

A license is required when the manufacture of a medicated feed involves the use of a drug or drugs that FDA has determined requires more control because of the need for a withdrawal period before slaughter or because of carcinogenic concerns. Conversely, a license is not required and the recordkeeping requirements are less demanding for those medicated feeds for which FDA has determined that the drugs used in their manufacture need less control. Respondents to this collection of information are commercial feed mills and mixer-feeders.

FDA estimates the burden of this collection of information as follows:

TABLE 1—ESTIMATED ANNUAL RECORDKEEPING BURDEN (REGISTERED LICENSED COMMERCIAL FEED MILLS) [1]

21 CFR Section	No. of record-keepers	Annual frequency per recordkeeping	Total annual records	Hours per record	Total hours
225.42(b)(5) through (b)(8)	1,004	260	261,040	1	261,040
225.58(c) and (d)	1,004	45	45,180	.5	22,590
225.80(b)(2)	1,004	1,600	1,606,400	.12	192,768
225.102(b)(1)	1,004	7,800	7,831,200	.08	626,496
225.110(b)(1) and (b)(2)	1,004	7,800	7,831,200	.015	117,468
225.115(b)(1) and (b)(2)	1,004	5	5,020	.12	602
Total					1,220,964

[1] There are no capital costs or operating and maintenance costs associated with this collection of information.

TABLE 2—ESTIMATED ANNUAL RECORDKEEPING BURDEN (REGISTERED LICENSED MIXER-FEEDERS) [1]

21 CFR Section	No. of recordkeepers	Annual frequency per recordkeeping	Total annual records	Hours per record	Total hours
225.42(b)(5) through (b)(8)	100	260	26,000	.15	3,900
225.58(c) and (d)	100	36	3,600	.5	1,800
225.80(b)(2)	100	48	4,800	.12	576
225.102(b)(1)	100	260	26,000	.4	10,400
Total					16,676

[1] There are no capital costs or operating and maintenance costs associated with this collection of information.

TABLE 3—ESTIMATED ANNUAL RECORDKEEPING BURDEN (NONREGISTERED UNLICENSED COMMERCIAL FEED MILLS) [1]

21 CFR Section	No. of recordkeepers	Annual frequency per recordkeeping	Total annual records	Hours per record	Total hours
225.142	8,000	4	32,000	1	32,000
225.158	8,000	1	8,000	4	32,000
225.180	8,000	96	768,000	.12	92,160
225.202	8,000	260	2,080,000	.65	1,352,000
Total					1,508,160

[1] There are no capital costs or operating and maintenance costs associated with this collection of information.

TABLE 4—ESTIMATED ANNUAL RECORDKEEPING BURDEN (NONREGISTERED UNLICENSED MIXER-FEEDERS) [1]

21 CFR Section	No. of recordkeepers	Annual frequency per recordkeeping	Total annual records	Hours per record	Total hours
225.142	45,000	4	180,000	1	180,000
225.158	45,000	1	45,000	4	180,000
225.180	45,000	32	1,440,000	.12	172,800
225.202	45,000	260	11,700,000	.33	3,861,000
Total					4,393,800

[1] There are no capital costs or operating and maintenance costs associated with this collection of information.

The estimate of the times required for record preparation and maintenance is based on Agency communications with industry. Other information needed to finally calculate the total burden hours (*i.e.,* number of recordkeepers, number of medicated feeds being manufactured, etc.) is derived from Agency records and experience.

Dated: November 23, 2010.

Leslie Kux,

Acting Assistant Commissioner for Policy.

BILLING CODE 4160–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2010–N–0600]

Agency Information Collection Activities; Proposed Collection; Comment Request; Animal Drug User Fee Cover Sheet, Form 3546

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing an opportunity for public comment on the proposed collection of certain information by the Agency. Under the Paperwork Reduction Act of 1995 (the PRA), Federal Agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, and to allow 60 days for public comment in response to the notice. This notice solicits comments on burden hours necessary to complete FDA Form 3546, Animal Drug User Fee Act (ADUFA) Cover Sheet.

DATES: Submit either electronic or written comments on the collection of information by January 28, 2011.

ADDRESSES: Submit electronic comments on the collection of information to *http://www.regulations.gov.* Submit written comments on the collection of information to the Division of Dockets Management (HFA–305), Food and Drug Administration, 5630 Fishers Lane, rm. 1061, Rockville, MD 20852. All comments should be identified with the docket number found in brackets in the heading of this document.

FOR FURTHER INFORMATION CONTACT: Johnny Vilela, Office of Information Management, Food and Drug Administration, 1350 Piccard Dr., PI50–400B, Rockville, MD 20850, 301–796–7651, *juanmanuel.vilela@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION: Under the PRA (44 U.S.C. 3501–3520), Federal

Agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. "Collection of information" is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes Agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA (44 U.S.C. 3506(c)(2)(A)) requires Federal Agencies to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, FDA is publishing notice of the proposed collection of information set forth in this document.

With respect to the following collection of information, FDA invites comments on these topics: (1) Whether the proposed collection of information is necessary for the proper performance of FDA's functions, including whether the information will have practical utility; (2) the accuracy of FDA's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques, when appropriate, and other forms of information technology.

Animal Drug User Fee Cover Sheet; FDA Form 3546 (OMB Control Number 0910–0539)—Extension

Under section 740 of the Federal Food, Drug, and Cosmetic Act (the FD&C Act) (21 U.S.C. 379j–12), as amended by ADUFA, FDA has the authority to assess and collect for certain animal drug user fees. Because the submission of user fees concurrently with applications and supplements is required, review of an application cannot begin until the fee is submitted. The types of fees that require a cover sheet are certain animal drug application fees and certain supplemental animal drug application fees. The cover sheet (FDA Form 3546) is designed to provide the minimum necessary information to determine whether a fee is required for the review of an application or supplement, to determine the amount of the fee required, and to assure that each animal drug user fee payment and each animal drug application for which payment is made is appropriately linked to the payment that is made. The form, when completed electronically, will result in the generation of a unique payment identification number used in tracking the payment. FDA will use the information collected to initiate administrative screening of new animal drug applications and supplements to determine if payment has been received.

FDA estimates the burden of this collection of information as follows:

TABLE 1—ESTIMATED ANNUAL REPORTING BURDEN [1]

Section of the FD&C Act as amended by ADUFA	Number of respondents	Annual frequency per response	Total annual responses	Hours per response	Total hours
740(a)(1), FDA Form 3546 (Cover Sheet)	76	1	76	1	76
Total					76

[1] There are no capital costs or operating and maintenance costs associated with this collection of information.

Respondents to this collection of information are new animal drug applicants or manufacturers. Based on FDA's database system, there are an estimated 140 manufacturers of products or sponsors of new animal drugs potentially subject to ADUFA. However, not all manufacturers or sponsors will have any submissions in a given year and some may have multiple submissions. The total number of annual responses is based on the number of submissions received by FDA in fiscal year 2008. The estimated hours per response are based on past FDA experience with the various submissions. The hours per response are based on the average of these estimates.

Dated: November 22, 2010.

Leslie Kux,

Acting Assistant Commissioner for Policy.

[Docket No. FDA–2010–N–0547]

Clinical Development Programs for Sedation Products; Request for Assistance

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is seeking information on a variety of issues related to the clinical development and use of sedation products in adult and pediatric age groups. FDA is inviting any interested party, or parties, to facilitate an evaluation of critical fundamentals of the science related to sedation products by conducting and managing a coordination of activities that will bring together experts in the field, including from academia, patient organizations, and industry. The first step in this process would be for the party or parties to plan and hold one or more public meetings to discuss these issues. FDA intends to take into account the information provided from these activities as we develop FDA guidance on clinical development programs for sedation products. We intend to submit to the docket all the information received in response to this notice so that interested parties may be fully informed.

DATES: Submit electronic or written comments on this notice by January 28, 2011.

ADDRESSES: Submit electronic comments on this notice to *http://www.regulations.gov.* Submit written comments to the Division of Dockets Management (HFA–305), Food and Drug Administration, 5630 Fishers Lane, rm. 1061, Rockville, MD 20852.

FOR FURTHER INFORMATION CONTACT: Sara E. Stradley, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 22, rm. 3162, Silver Spring, MD 20993–0002, 301–796–1298, FAX:*301–796–9713, e-mail: sara.stradley@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

Because of the need for more information on the development of products intended to be used in humans for sedation in hospital and outpatient settings, FDA is requesting assistance from the public in conducting scientific analyses for the purpose of further understanding the physiology of sedation and clinical trial design issues related to the development of sedation products.

II. Request for Assistance

FDA is inviting any interested group or consortium of interested groups from academia, industry, practitioners, as well as patients and their representatives to conduct and manage the coordination of a critical evaluation of certain fundamentals of the science related to sedation products. Initially, the party or parties would organize and hold one or more public meetings or workshops to discuss relevant questions associated with the spectrum of sedation, particularly as it relates to procedural and intensive care unit (ICU) sedation, as well as associated clinical trial design issues. FDA believes that a public meeting would help solicit feedback from all parties leading to conceptual advances and a discussion of such advances in a concept paper. This discussion would take into account challenges involved in assessment of sedation and emphasize the rationale for various approaches to key clinical trial design issues involving sedation products. The effort would ultimately lead to developing a draft guidance that would be issued by FDA for broad public comment before finalization, consistent with FDA's good guidance practices regulation (21 CFR 10.115).

III. Suggestions

FDA welcomes other suggestions of activities that could be undertaken as part of this guidance development effort.

IV. Possible Questions/Issues o Be Considered

To provide a starting point for discussion, FDA has developed a list of some key concepts that the interested parties may want to consider for discussion at the meeting as follows:

1. Currently, sedation is studied primarily in the procedural and ICU settings. Procedural sedation may involve an outpatient setting, and may require the institution of Monitored Anesthesia Care (MAC). There is great interest among health care providers with varied medical backgrounds in sedation for surgical and diagnostic procedures in the outpatient setting. What generally constitutes MAC, and what qualifies a product for MAC? How should the need for MAC be assessed in clinical trials involving sedation products?

2. Assessment of procedural sedation involves conducting clinical trials in a wide range of diagnostic and surgical procedures. What surgical and diagnostic procedures are of particular value in assessing the procedural sedation indication? Are there certain procedures that should be evaluated for every product that seeks the procedural sedation indication, or can the range of trials be governed by the pharmacologic profile of the product? Should the scope of the sedation guidance apply to settings other than procedural or ICU sedation?

3. There are patient subgroups in which the use of sedation products should be particularly evaluated. For example, pediatric and geriatric age groups often require dose adjustment because of varying metabolic needs and other clinical parameters. In addition, dose adjustment may be required in patients with renal and hepatic impairment. Are there other patient subgroups that require specific evaluation in clinical trials involving sedation products?

4. Sedation products usually are used as infusions that are titrated to achieve the desired sedation effect. What are optimal trial designs for sedation products? Should clinical trials involving sedation products be placebo-controlled or active-controlled? Currently, Midazolam, Propofol, Ketamine, and Dexmedetomidine are commonly used sedation products. Of these, Midazolam is the most commonly used active comparator in sedation product trial designs. Is it possible to accurately predict the actual size of the treatment effect based on use of Midazolam or other commonly used sedation products? Although trial designs involving these products are believed to be predictive, it may not be possible to generalize from them. If active- and placebo-controlled product trial designs are not optimal, what alternative designs can be used to support sedation claims? Would dose-escalation comparative trial designs be useful in studying sedation products?

5. How is sedation defined and what are appropriate outcome measures to assess sedation? At present, there is diverse opinion among health care providers regarding the definition of sedation. For example, is the assessment of anxiolysis and agitation a separate entity or is it contained within the spectrum of sedation itself? Should this depend upon the known pharmacologic profile of the product? Currently, the primary efficacy endpoint in sedation clinical trials is usually assessed using sedation scales. Commonly used sedation scales include the Ramsey Sedation Scale, Richmond Agitation and Sedation Scale, and Mean Observer's Assessment of Agitation/Sedation Scale. How appropriate is the use of such sedation scales in clinical trials involving sedation products? Should all sedation scales be standardized and validated?

6. Sedation scales are used for assessing the primary efficacy endpoint for sedation products. What are meaningful secondary efficacy endpoints in such trials? Are subjective and objective assessments of memory, recall, anxiety, agitation, delirium, among others, appropriate as efficacy endpoints? Which of these efficacy endpoints should be considered clinically significant? If so, what outcome measures and trial designs should be used? Specifically, how should anxiolysis and agitation be assessed within the realm of products primarily indicated for sedation purposes and not to treat an anxiety disorder or agitation? Should there be different scales for assessing each component, or can the assessment be contained within the spectrum of sedation using an appropriate scale? Further, is an accurate assessment of anxiolysis feasible given the multiple variables that can affect anxiety in a procedural sedation setting that would have to be standardized (*e.g.,* physician and practice setting profile, pre-procedure anticipatory patient prepping, individual thresholds for anxiety)?

7. ICU sedation products are often used for periods longer than 24 hours. Should an ICU sedation indication include a short-term (less than 24 hours) and long-term (more than 24 hours) use assessment for purposes of efficacy and safety? Long-term use may be associated with tolerance/tachyphylaxis and a dose-related increase in adverse effects. What should the size and duration of exposure of the safety database be for sedation products?

V. Comments

Interested persons should submit comments and expressions of interest in conducting and managing a critical evaluation to the Division of Dockets Management (*see* **ADDRESSES**). It is only necessary to send one set of comments. It is no longer necessary to send two copies of mailed comments. Identify comments with the docket number

found in brackets in the heading of this document. Received comments may be seen in the Division of Dockets Management between 9 a.m. and 4 p.m., Monday through Friday.

Dated: November 17, 2010.

Leslie Kux,

Acting Assisitant Commissioner for Policy.

Draft Guidance for Industry and Food and Drug Administration Staff; Establishing the Performance Characteristics of In Vitro Diagnostic Devices for the Detection of Clostridium difficile; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing the availability of the draft guidance document entitled "Establishing the Performance Characteristics of *In Vitro* Diagnostic Devices for the Detection of *Clostridium difficile*." This draft guidance document describes FDA's recommendations concerning 510(k) submissions for various types of in vitro diagnostic devices (IVDs) intended to be used for detecting *Clostridium difficile* (*C. difficile*). This draft guidance is not final nor is it in effect at this time.

DATES: Although you can comment on any guidance at any time (*see* 21 CFR 10.115(g)(5)), to ensure that the Agency considers your comment on this draft guidance before it begins work on the final version of the guidance, submit written or electronic comments on the draft guidance by February 28, 2011.

ADDRESSES: Submit written requests for single copies of the draft guidance document entitled "Establishing the Performance Characteristics of *In Vitro* Diagnostic Devices for the Detection of *Clostridium difficile*" to the Division of Small Manufacturers, International, and Consumer Assistance, Center for Devices and Radiological Health, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 66, Rm. 4613, Silver Spring, MD 20993–0002. Send one self-addressed adhesive label to assist that office in processing your request, or fax your request to 301–847–8149. *See* the **SUPPLEMENTARY INFORMATION** section for information on electronic access to the guidance.

Submit electronic comments on the draft guidance to *http://www.regulations.gov.* Submit written comments to the Division of Dockets Management, Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852. Identify comments with the docket number found in brackets in the heading of this document.

FOR FURTHER INFORMATION CONTACT: Stephen Lovell, Center for Devices and Radiological Health, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 66, Rm. 4435, Silver Spring, MD 20993–0002, 301–796–6968.

SUPPLEMENTARY INFORMATION:

I. Background

This draft guidance includes recommendations concerning 510(k) submissions for various types of (IVDs) intended to be used for detecting *C. difficile.* The document is a revision of "Review Criteria for Assessment of Laboratory Tests Directed at Assisting in the Diagnosis of *C. difficile* Associated Disease" issued on May 31, 1990. It is updated to include new issues and technologies identified since the 1990 guidance. Such methods include detection of *C. difficile* nucleic acids (*e.g., C. difficile* toxin B gene by nucleic acid amplification methods such as the Real-Time Polymerase Chain Reaction technique).

II. Significance of Guidance

This draft guidance is being issued consistent with FDA's good guidance practices regulation (21 CFR 10.115). The draft guidance, when finalized will represent the Agency's current thinking on establishing the performance characteristics of in vitro diagnostic devices for the detection of *C. difficile.* It does not create or confer any rights for or on any person and does not operate to bind FDA or the public. An alternative approach may be used if such approach satisfies the requirements of the applicable statute and regulations.

III. Electronic Access

Persons interested in obtaining a copy of the draft guidance may do so by using the Internet. A search capability for all CDRH guidance documents is available at *http://www.fda.gov/MedicalDevices/DeviceRegulationandGuidance/GuidanceDocuments/default.htm.* Guidance documents are also available at *http://www.regulations.gov.* To receive "Establishing the Performance Characteristics of *In Vitro* Diagnostic Devices for the Detection of *Clostridium difficile,*" you may either send an e-mail request to *dsmica@fda.hhs.gov* to receive an electronic copy of the document or send a fax request to 301–847–8149 to receive a hard copy. Please use the document number 1715 to identify the guidance you are requesting.

IV. Paperwork Reduction Act of 1995

This draft guidance refers to previously approved collections of information found in FDA regulations and guidance documents. These collections of information are subject to review by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520). The collections of information in 21 CFR part 807 subpart E have been approved under OMB control number 0910–0120; the collections of information in 21 CFR part 812 have been approved under OMB control number 0910–0078; the collections of information in 42 CFR section 493.15 have been approved under OMB control number 0910–0598; the collections of information in 21 CFR section 50.23 have been approved under OMB control number 0910–0586; and the collections of information in 21 CFR section 56.115 have been approved under OMB control number 0910–0130.

V. Comments

Interested persons may submit to the Division of Dockets Management (*see* **ADDRESSES**) either electronic or written comments regarding this document. It is only necessary to send one set of comments. It is no longer necessary to send two copies of mailed comments. Identify comments with the docket number found in brackets in the heading of this document. Received comments may be seen in the Division of Dockets Management between 9 a.m. and 4 p.m., Monday through Friday.

Dated: November 22, 2010.

Leslie Kux,

Acting Assistant Commissioner for Policy.

Draft Guidance for Industry on Hospital-Acquired Bacterial Pneumonia and Ventilator-Associated Bacterial Pneumonia: Developing Drugs for Treatment; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing the availability of a draft guidance for industry entitled "Hospital-Acquired Bacterial Pneumonia and Ventilator-Associated Bacterial Pneumonia: Developing Drugs for Treatment." The purpose of this draft guidance is to assist clinical trial sponsors and investigators in the development of antimicrobial drugs for the treatment of hospital-acquired bacterial pneumonia (HABP) and ventilator-associated bacterial pneumonia (VABP). The science of clinical trial design and our understanding of these diseases have advanced in recent years, and this draft guidance, when finalized, will inform sponsors of the recommendations for clinical development.

DATES: Although you can comment on any guidance at any time (*see* 21 CFR 10.115(g)(5)), to ensure that the agency considers your comment on this draft guidance before it begins work on the final version of the guidance, submit either electronic or written comments on the draft guidance by February 28, 2011.

ADDRESSES: Submit written requests for single copies of the draft guidance to the Division of Drug Information, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 51, rm. 2201, Silver Spring, MD 20993–0002. Send one self-addressed adhesive label to assist that office in processing your requests. *See* the **SUPPLEMENTARY INFORMATION** section for electronic access to the draft guidance document.

Submit electronic comments on the draft guidance to *http://www.regulations.gov.* Submit written comments to the Division of Dockets Management (HFA–305), Food and Drug Administration, 5630 Fishers Lane, rm. 1061, Rockville, MD 20852.

FOR FURTHER INFORMATION CONTACT: Joseph G. Toerner, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 22, rm. 6244, Silver Spring, MD 20993–0002, 301–796–1300.

SUPPLEMENTARY INFORMATION:

I. Background

FDA is announcing the availability of a draft guidance for industry entitled "Hospital-Acquired Bacterial Pneumonia and Ventilator-Associated Bacterial Pneumonia: Developing Drugs for Treatment." The purpose of this draft guidance is to assist clinical trial sponsors and investigators in the development of antimicrobial drugs for the treatment of HABP and VABP. This guidance revises and replaces the draft guidance regarding nosocomial pneumonia published in 1998. The guidance also addresses the clinical development of new drugs to treat drug-resistant bacterial pathogens implicated in HABP/VABP.

The issues in HABP/VABP clinical trials were discussed at a 2009 workshop co-sponsored by FDA and professional societies. The science of clinical trial design and our understanding of these diseases have advanced in recent years, and this draft guidance informs sponsors of the changes in our recommendations. Specifically, the guidance defines a primary efficacy endpoint of all-cause mortality and provides a justification for a noninferiority margin for the design of active-controlled clinical trials that can be used to provide evidence of efficacy for the treatment of HABP/VABP.

This draft guidance is being issued consistent with FDA's good guidance practices regulation (21 CFR 10.115). The draft guidance, when finalized, will represent the agency's current thinking on this topic. It does not create or confer any rights for or on any person and does not operate to bind FDA or the public. An alternative approach may be used if such approach satisfies the requirements of the applicable statutes and regulations.

II. The Paperwork Reduction Act of 1995

This guidance refers to previously approved collections of information that are subject to review by the Office of Management and Budget under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520). The collections of information in 21 CFR part 312 have been approved under 0910–0014, the collections of information in 21 CFR part 314 have been approved under 0910–0001, and the collections of information referred to in the guidance "Establishment and Operation of Clinical Trial Data Monitoring Committees" have been approved under 0910–0581.

III. Comments

Interested persons may submit to the Division of Dockets Management (*see* **ADDRESSES**) either electronic or written comments regarding this document. It is only necessary to send one set of comments. It is no longer necessary to send two copies of mailed comments. Identify comments with the docket number found in brackets in the heading of this document. Received comments may be seen in the Division of Dockets Management between 9 a.m. and 4 p.m., Monday through Friday.

IV. Electronic Access

Persons with access to the Internet may obtain the document at either *http://www.fda.gov/Drugs/GuidanceComplianceRegulatoryInformation/Guidances/default.htm* or *http://www.regulations.gov.*

Dated: November 22, 2010.

Leslie Kux,

Acting Assistant Commissioner for Policy.

Food and Drug Administration

[Docket No. FDA–2010–D–0590]

Guidance for Industry and Food and Drug Administration Staff; Blood Lancet Labeling; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing the availability of the guidance entitled "Guidance for Industry and Food and Drug Administration Staff; Blood Lancet Labeling." FDA is issuing this guidance with labeling recommendations because of concerns that both healthcare providers and patients may be unaware of the serious adverse health risks associated with using the same blood lancet device for assisted withdrawal of blood from more than one patient, even when the lancet blade is changed for each blood draw. FDA recommends that all blood lancet devices be labeled for use only on a single patient. A statement limiting use to a single patient should also appear on the label attached to the device, if possible. The guidance document is immediately in effect, but it remains subject to comment in

accordance with the Agency's good guidance practices.

DATES: Submit either electronic or written comments on this guidance at any time. General comments on Agency guidance documents are welcome at any time.

ADDRESSES: Submit written requests for single copies of the guidance document entitled "Guidance for Industry and Food and Drug Administration Staff; Blood Lancet Labeling" to the Division of Small Manufacturers, International, and Consumer Assistance, Center for Devices and Radiological Health, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 66, Rm. 4613, Silver Spring, MD 20993–0002. Send one self-addressed adhesive label to assist that office in processing your request, or fax your request to 301–847–8149. *See* the **SUPPLEMENTARY INFORMATION** section for information on electronic access to the guidance.

Submit electronic comments on the guidance to *http://www.regulations.gov.* Submit written comments to the Division of Dockets Management (HFA–305), Food and Drug Administration, 5630 Fishers Lane, rm. 1061, Rockville, MD 20852. Identify comments with the docket number found in brackets in the heading of this document.

FOR FURTHER INFORMATION CONTACT: Shelia Murphey, Center for Devices and Radiological Health, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 66, Rm. 2510, Silver Spring, MD 20993–0002, 301–796–6302.

SUPPLEMENTARY INFORMATION:

I. Background

On August 26, 2010, the FDA and Centers for Disease Control and Prevention (CDC) issued a joint Initial Communications warning that the use of fingerstick devices (blood lancets) to obtain blood from more than one patient poses a risk of transmitting bloodborne pathogens. The Agencies recommended that blood lancet devices should never be used to obtain blood samples from more than one person.

CDC has noted a progressive increase in reports of bloodborne pathogen transmission (primarily hepatitis B) resulting from the use of a blood lancet in multiple patients in various healthcare provision settings. These settings include acute care hospitals, long term care facilities and assisted living facilities as well as non-residential care settings.

Blood lancet devices may be unsafe when used to draw blood from more than one patient for several reasons. Improper device design, device malfunction, or user error may leave the blood from one patient on the reusable lancet device base and in a position to contaminate a new lancet blade. Healthcare users of blood lancets may have difficulty ensuring that all blood contamination has been successfully removed from a reusable lancet base device. The cleaning and disinfection instructions provided with reusable lancet devices may not be adequately validated for efficacy or followed in their entirety. FDA recommends that all blood lancet devices be labeled for use only on a single patient. A statement limiting use to a single patient should also appear on the label attached to the device, if possible.

FDA is making this guidance document immediately available because prior public participation is not appropriate. Due to the urgent public health need to support the joint Initial Communications issued by CDC and FDA concerning the risk of hepatitis transmission caused by the use of blood lancets on more than one patient, FDA believes that current lancet labeling which does not restrict the use of lancets to a single patient must be corrected as quickly as possible. FDA believes that this guidance will provide significant assistance to lancet manufacturers as they work to improve their labeling as recommended.

II. Significance of Guidance

This guidance is being issued consistent with FDA's good guidance practices regulation (21 CFR 10.115). The guidance represents the Agency's current thinking on blood lancet labeling. It does not create or confer any rights for or on any person and does not operate to bind FDA or the public. An alternative approach may be used if such approach satisfies the requirements of the applicable statute and regulations.

III. Electronic Access

Persons interested in obtaining a copy of the guidance may do so by using the Internet. A search capability for all CDRH guidance documents is available at *http://www.fda.gov/MedicalDevices/DeviceRegulationandGuidance/GuidanceDocuments/default.htm.* Guidance documents are also available at *http://www.regulations.gov.* To receive "Guidance for Industry and Food and Drug Administration Staff; Blood Lancet Labeling," you may either send an e-mail request to *dsmica@fda.hhs.gov* to receive an electronic copy of the document or send a fax request to 301–847–8149 to receive a hard copy. Please use the document number 1732 to identify the guidance you are requesting.

IV. Paperwork Reduction Act of 1995

This guidance contains information collection provisions that are subject to review by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520). The collection of information in this guidance was approved under OMB control number 0910–0485.

V. Comments

Interested persons may submit to the Division of Dockets Management (*see* **ADDRESSES**), either electronic or written comments regarding this document. It is only necessary to send one set of comments. It is no longer necessary to send two copies of mailed comments. Identify comments with the docket number found in brackets in the heading of this document. Received comments may be seen in the Division of Dockets Management between 9 a.m. and 4 p.m., Monday through Friday.

Dated: November 22, 2010.

Food and Drug Administration

[Docket No. FDA–2010–D–0584]

Guidance for Industry on Abbreviated New Drug Applications: Impurities in Drug Products; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing the availability of a guidance for industry entitled "ANDAs: Impurities in Drug Products." This guidance updates recommendations regarding degradation products and updates the draft guidance "ANDAs: Impurities in Drug Products" announced in December 1998 in conformance with the revision of the International Conference on Harmonisation (ICH) guidance for industry "Q3B(R) Impurities in New Drug Products," which was announced in August 2006.

DATES: Submit either electronic or written comments on Agency guidances at any time.

ADDRESSES: Submit written requests for single copies of this guidance to the Division of Drug Information, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New

Hampshire Ave., Bldg. 51, rm. 2201, Silver Spring, MD 20993–0002. Send one self-addressed adhesive label to assist that office in processing your requests. *See* the **SUPPLEMENTARY INFORMATION** section for electronic access to the guidance document.

Submit electronic comments on the guidance to *http://www.regulations.gov.* Submit written comments to the Division of Dockets Management (HFA–305), Food and Drug Administration, 5630 Fishers Lane, rm. 1061, Rockville, MD 20852.

FOR FURTHER INFORMATION CONTACT: Devinder Gill, Center for Drug Evaluation and Research (HFD–630), Food and Drug Administration, 7500 Standish Pl., Rockville, MD 20855, 240–276–8483.

SUPPLEMENTARY INFORMATION:

I. Background

FDA is announcing the availability of a guidance for industry entitled "ANDAs: Impurities in Drug Products." In December 1998, FDA issued the draft guidance "ANDAs: Impurities in Drug Products," and in August 2005, FDA revised it in conformance with the "Q3B(R) Impurities in New Drug Products" guidance for industry that was announced in August 2006.

We are issuing the final guidance to: (1) Update information on listing of degradation products, setting acceptance criteria, and qualifying degradation products (thresholds and procedures) in abbreviated new drug applications (ANDAs) in conformance with the revision of the guidance for industry on Q3B(R) and (2) remove those sections of the 1998 draft guidance containing recommendations that are no longer needed because they are addressed in the more recent Q3B(R). The Q3B(R) was developed by the ICH to provide guidance on impurities in drug products for new drug applications (NDAs). However, the Agency believes that many of the recommendations provided on impurities in NDAs also apply to ANDAs.

This guidance is being issued consistent with FDA's good guidance practices regulation (21 CFR 10.115). The guidance represents the Agency's current thinking on impurities in drug products submitted as ANDAs. It does not create or confer any rights for or on any person and does not operate to bind FDA or the public. An alternative approach may be used if such approach satisfies the requirements of the applicable statutes and regulations.

II. Comments

Interested persons may submit to the Division of Dockets Management (see **ADDRESSES**) either electronic or written comments regarding this document. It is only necessary to send one set of comments. It is no longer necessary to send two copies of mailed comments. Identify comments with the docket number found in brackets in the heading of this document. Received comments may be seen in the Division of Dockets Management between 9 a.m. and 4 p.m., Monday through Friday.

III. Electronic Access

Persons with access to the Internet may obtain the document at either *http://www.fda.gov/Drugs/GuidanceComplianceRegulatoryInformation/Guidances/default.htm* or *http://www.regulations.gov.*

Dated: November 22, 2010.

Food and Drug Administration

[Docket No. FDA–2007–D–0150; Formerly Docket No. 2007D–0367]

Guidance for Industry on Antibacterial Drug Products: Use of Noninferiority Trials to Support Approval; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing the availability of a guidance for industry entitled "Antibacterial Drug Products: Use of Noninferiority Trials to Support Approval." The purpose of this guidance is to provide information on FDA's current thinking regarding appropriate use of noninferiority (NI) clinical trial designs to evaluate antibacterial drug products. The Agency's thinking in this area has evolved in recent years in response to a number of public discussions on the use of active-controlled trials designed to show NI as the basis for approval of antibacterial drug products. This guidance finalizes the draft guidance published in the **Federal Register** of October 15, 2007.

DATES: Submit either electronic or written comments on Agency guidances at any time.

ADDRESSES: Submit written requests for single copies of this guidance to the Division of Drug Information, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 51, rm. 2201, Silver Spring, MD 20993–0002. Send one self-addressed adhesive label to assist that office in processing your requests. *See* the **SUPPLEMENTARY INFORMATION** section for electronic access to the guidance document.

Submit electronic comments on the guidance to *http://www.regulations.gov.* Submit written comments to the Division of Dockets Management (HFA–305), Food and Drug Administration, 5630 Fishers Lane, rm. 1061, Rockville, MD 20852.

FOR FURTHER INFORMATION CONTACT: Joseph G. Toerner, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 22, rm. 6244, Silver Spring, MD 20993–0002, 301–796–1300.

SUPPLEMENTARY INFORMATION:

I. Background

FDA is announcing the availability of a guidance for industry entitled "Antibacterial Drug Products: Use of Noninferiority Trials to Support Approval." The purpose of this guidance is to inform industry, sponsors, applicants, researchers, and the public on the appropriate uses of NI clinical trial designs to evaluate antibacterial drug products and to amend ongoing or completed trials accordingly. In the **Federal Register** of October 15, 2007 (72 FR 58312), FDA announced a notice of availability of the draft guidance for industry entitled "Antibacterial Drug Products: Use of Noninferiority Studies to Support Approval" in response to numerous public discussions that focused primarily on the following indications: Acute bacterial sinusitis, acute bacterial exacerbation of chronic bronchitis, and acute bacterial otitis media. Since FDA issued the draft guidance, there have been public discussions on consistent and reliable estimates of the efficacy of active treatment to placebo for other infectious disease indications for the NI trial design. The public comments received on the draft guidance have been considered and the guidance has been revised as appropriate. The guidance emphasizes that adequate scientific evidence should be provided to support the proposed NI margin for any indication being studied in any proposed, ongoing, or completed active-controlled trial designed to show NI.

This guidance is being issued consistent with FDA's good guidance practices regulation (21 CFR 10.115).

The guidance represents the Agency's current thinking on this topic. It does not create or confer any rights for or on any person and does not operate to bind FDA or the public. An alternative approach may be used if such approach satisfies the requirements of the applicable statutes and regulations.

II. The Paperwork Reduction Act of 1995

This guidance refers to previously approved collections of information that are subject to review by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520). The collections of information in 21 CFR parts 312 and 314 have been approved under OMB control numbers 0910–0014 and 0910–0001, respectively, and the collection of information under the guidance for industry "Special Protocol Assessment" has been approved under OMB control number 0910–0470.

III. Comments

Interested persons may submit to the Division of Dockets Management (*see* **ADDRESSES**) either electronic or written comments regarding this document. It is only necessary to send one set of comments. It is no longer necessary to send two copies of mailed comments. Identify comments with the docket number found in brackets in the heading of this document. Received comments may be seen in the Division of Dockets Management between 9 a.m. and 4 p.m., Monday through Friday.

IV. Electronic Access

Persons with access to the Internet may obtain the document at either *http://www.fda.gov/Drugs/GuidanceComplianceRegulatoryInformation/Guidances/default.htm* or *http://www.regulations.gov.*

Dated: November 22, 2010.

Leslie Kux,

Acting Assistant Commissioner for Policy.

BILLING CODE 4160–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Health Resources and Services Administration

Health Center Program

AGENCY: Health Resources and Services Administration, HHS.

ACTION: Notice of Noncompetitive Replacement Awards to Upper Room AIDS Ministry, Inc.

SUMMARY: The Health Resources and Services Administration (HRSA) will transfer Health Center Program (section 330 of the Public Health Service Act) Increased Demand for Services (IDS) and Capital Improvement Project (CIP) funds, awarded under the American Recovery and Reinvestment Act (ARRA), originally awarded to Harlem United Community AIDS Center, Inc. (HUCAC) to Upper Room AIDS Ministry, Inc. to ensure the provision of critical primary health care services and continuity of services to low-income, underserved homeless patients in New York City.

SUPPLEMENTARY INFORMATION:

Former Grantee of Record: Harlem United Community AIDS Center, Inc.

Original Period of Grant Support: March 27, 2009, to March 26, 2011 (IDS) and June 29, 2009, to June 28, 2011 (CIP).

Replacement Awardee: Upper Room AIDS Ministry, Inc.

Amount of Replacement Award: $103,317 (IDS) and $262,740 (CIP).

Period of Replacement Award: The period of support for the replacement awards is March 27, 2009 to March 26, 2011 (IDS) and June 29, 2009 to June 28, 2011 (CIP).

Authority: Section 330(h) of the Public Health Service Act, 42 U.S.C. 245b.

CDFA Number: 93.703

Justification for Exception to Competition: Under the original grant applications approved by HRSA, Harlem United Community AIDS Center, Inc. (HUCAC) was identified as the grantee of record. HUCAC had a subrecipient agreement in place with Upper Room AIDS Ministry, Inc., a HUCAC-subsidiary organization. Through this arrangement, Upper Room AIDS Ministry, Inc. provided all services and carried out the full scope of project for the homeless program. Instead of continuing this agreement, both organizations decided that Upper Room AIDS Ministry, Inc. should become the direct grantee recipient for the ARRA IDS and CIP grants. Upper Room AIDS Ministry, Inc. competed successfully for fiscal year 2010 Service Areas Competition funding and has become the direct grant recipient of the health center homeless grant. HUCAC and the Upper Room AIDS Ministry, Inc. requested that full responsibility for the grants be transferred from HUCAC to Upper Room AIDS Ministry. Upper Room AIDS Ministry has provided documentation to HRSA that it meets Section 330 statutory and regulatory requirements as well as applicable grant management requirements.

The transfer of these grants will ensure critical primary health care services continue and remain available to low income, underserved homeless populations with no interruption in services to the target population. Transferring the funds to Upper Room AIDS Ministry, Inc. does not materially change the projects as originally proposed and funded. Upper Room AIDS Ministry, Inc. will fulfill the expectations of the former grantee's originally funded IDS and CIP grant applications. In order to ensure that critical primary health care services continue to be available to the original target population in a timely manner, these ARRA CIP and IDS awards will not be competed.

FOR FURTHER INFORMATION, CONTACT: Marquita Cullom-Stott via e-mail at *MCullom-Stott@hrsa.gov* or 301–594–4300.

Dated: November 19, 2010.

Mary K. Wakefield,

Administrator.

BILLING CODE 4165–15–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Health Resources and Services Administration

Part C Early Intervention Services Grant under the Ryan White HIV/AIDS Program

AGENCY: Health Resources and Services Administration (HRSA), HHS.

ACTION: Notice of a non-competitive one-time replacement award from Ryan White HIV/AIDS Program, Part C funds for the Louisiana State University, Health Sciences Center, Viral Disease Clinic in Shreveport, Department of Medicine, Shreveport, Louisiana.

SUMMARY: HRSA will be giving a non-competitive one-time replacement award to support comprehensive primary care services for persons living with HIV/AIDS, including primary medical care, laboratory testing, oral health care, outpatient mental health and substance abuse treatment, specialty and subspecialty care, referrals for health and support services and adherence monitoring/education services to the Louisiana State University, Health Sciences Center, Viral Disease Clinic to ensure continuity of critical HIV medical care and treatment services, to clients in Shreveport, Louisiana.

SUPPLEMENTARY INFORMATION:

Grantee of record: Premier Care and Learning Center, Shreveport, Louisiana.

Intended recipient of the award: Louisiana State University, Health Sciences Center, Shreveport, Louisiana.

Amount of the award: $268,377 to ensure ongoing clinical services to the target population.

Authority: Section 2651 of the Public Health Service Act, 42 U.S.C. 300ff-51.

CFDA Number: 93.918.

Project period: July 1, 2010, to June 30, 2011. The period of support for this non-competitive one-time replacement award is from July 1, 2010, to June 30, 2011.

Justification for the Exception to Competition

Critical funding for HIV medical care and treatment services to clients in Shreveport, Louisiana, will be continued through a non-competitive replacement award to an existing grant award to the Louisiana State University, Health Sciences Center, Viral Disease Clinic. This is a non-competitive one-time replacement award because the previous grant recipient serving this population notified HRSA that it would not continue in the program after the fiscal year (FY) 2010 award was made. Louisiana State University, Health Sciences Center, Viral Disease Clinic is the best qualified grantee for this supplement, since it serves many of the former grantee's patients and is the closest Part C Program to the former grantee. Further funding beyond

June 30, 2011, for this service area will be competitively awarded during the Part C HIV Early Intervention Service competing application process for FY 2011.

FOR FURTHER INFORMATION CONTACT: Kathleen Treat, by e-mail *ktreat@hrsa.gov,* or by phone, 301–443–7602.

Dated: November 19, 2010.

Mary K. Wakefield,

Administrator.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Submission for OMB Review; Comment Request; Customer and Other Partners Satisfaction Surveys

SUMMARY: In compliance with the requirement of Section 3507(A)(1)(D) of the Paperwork Reduction Act of 1995 for the opportunity for pubic comment on the proposed data collection projects, the Clinical Center (CC) of the National Institutes of Health, (NIH) has submitted to the Office of Management and Budget (OMB) a request to review and approve the information collection listed below. This proposed information collection was previously published in the **Federal Register** on September 21, 2010, pages 57470–57472 and allowed 60 days for public comments. One comment regarding the use of government resources to conduct surveys was received during the 60-day comment period. The purpose of this notice is to provide an additional 30 days for public comment.

5 CFR 1320.5 Respondents to this request for information collection should not respond unless the request displays a currently valid OMB control number.

Proposed Collection: Title: Generic Clearance for Satisfaction Surveys of Customer and Other Partners. *Type of Information Collection Request:* Extension (OMB Control Number: 0925–0458). *Need and Use of Information Collection:* The information collected in these surveys will be used by Clinical Center personnel: (1) To evaluate the satisfaction of various Clinical Center customers and other partners with Clinical Center services; (2) to assist with the design of modifications of these services, based on customer input; (3) to develop new services, based on customer need; and (4) to evaluate the satisfaction of various Clinical Center customers and other partners with implemented service modifications. These surveys will almost certainly lead to quality improvement activities that will enhance and/or streamline the Clinical Center's operations. The major mechanisms by which the Clinical Center will request customer input is through surveys and focus groups. The surveys will be tailored specifically to each class of customer and to that class of customer's needs. Surveys will either be collected as written documents, as faxed documents, mailed electronically or collected by telephone from customers. Information gathered from these surveys of Clinical Center customers and other partners will be presented to, and used directly by, Clinical Center management to enhance the services and operations of our organization. *Frequency of Response:* The participants will respond yearly. *Affected Public:* Individuals and households, businesses and other for profit, small businesses and organizations. *Types of Respondents:* These surveys are designed to assess the satisfaction of the Clinical Center's major internal and external customers with the services provided. These customers include, but are not limited to, the following groups of individuals: Clinical Center patients, family members of Clinical Center patients, visitors to the Clinical Center, NIH intramural collaborators, private physicians or organizations who refer patients to the Clinical Center, volunteers, vendors and collaborating commercial enterprises, small businesses, regulators, and other organizations. The annual reporting burden is as follows:

Customer	Number of respondents	Frequency of response	Average time per response	Annual hour burden
FY 2010				
Clinical Center Patients	5000	1	.5	2500
Family Members of Patients	2000	1	.5	1000
Visitors to the Clinical Center	1000	1	.17	170
NIH Intramural Collaborators	2000	1	.17	340
Vendors and Collaborating Commercial Enterprises	2500	1	.33	833
Professionals and Organizations Referring Patients	2000	1	.33	833
Regulators	30	1	.33	10
Volunteers	275	1	.5	138
Total	14,805			5,824

Customer	Number of respondents	Frequency of response	Average time per response	Annual hour burden
FY 2011				
Clinical Center Patients	5000	1	.5	2500
Family Members of Patients	3000	1	.5	1500
Visitors to the Clinical Center	1500	1	.17	255
NIH Intramural Collaborators	1500	1	.25	375
Vendors and Collaborating Commercial Enterprises	1000	1	.25	250
Professionals and Organizations Referring Patients	3000	1	.33	1000
Regulators	30	1	.33	10
Volunteers	275	1	.33	92
Total	15,305			5,982
FY 2012				
Clinical Center Patients	5000	1	.5	2500
Family Members of Patients	2000	1	.5	1000
Visitors to the Clinical Center	1000	1	.17	170
NIH Intramural Collaborators	1000	1	.17	170
Vendors and Collaborating Commercial Enterprises	2500	1	.25	625
Professionals and Organizations Referring Patients	3000	1	.33	1000
Regulators	25	1	.25	6
Volunteers	300	1	.25	75
Total	14,825			5,546

Estimated costs to the respondents consists of their time; time is estimated using a rate of $10.00 per hour for patients and the public; $30.00 for vendors, regulators, organizations and $55.00 for health care professionals. The estimated annual costs to respondents for each year for which the generic clearance is requested is $127,885 for 2010, $126,895 for 2011, and $120,730 for 2012. Estimated Capital Costs are $7,000. Estimated Operating and Maintenance costs are $75,000.

Requests for Comments: Written comments and/or suggestions from the public and affected agencies are invited on one or more of the following points: (1) Whether the proposed collection of information is necessary for the proper performance of the functions of the Clinical Center and the agency, including whether the information shall have practical utility; (2) The accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) Ways to enhance the quality, utility, and clarity of the information to be collected; and (4) Ways to minimize the burden of the collection of information on those who are to respond, including the use of automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Direct Comments to OMB: Written comments and/or suggestions regarding the item(s) contained in this notice, especially regarding the estimated public burden and associated response time, should be directed to the: Office of Management and Budget, Office of Regulatory Affairs, *OIRA_submission@omb.eop.gov* or by fax to 202–395–6974, *Attention:* Desk Officer for NIH. To request more information on the proposed project or to obtain a copy of the data collection plans and instruments, contact: Dr. David K. Henderson, Deputy Director for Clinical Care, National Institutes of Health Clinical Center, Building 10, Room 6–1480, 10 Center Drive, Bethesda, Maryland 20892, or call non-toll free: 301–496–3515, or e-mail your request or comments, including your address to: *dkh@nih.gov*.

Comments Due Date: Comments regarding this information collection are best assured of having their full effect if received within 30 days of the date of this publication.

Dated: November 22, 2010.

David K. Henderson,

Deputy Director for Clinical Care, CC, National Institutes of Health.

BILLING CODE 4140–01–P

HEALTH AND HUMAN SERVICES

National Institutes of Health

National Institute of Environmental Health Sciences; Notification of Request for Emergency Clearance; GuLF Study: Gulf Long-term Follow-up Study for Oil Spill Clean-Up Workers and Volunteers

In accordance with Section 3507(j) of the Paperwork Reduction Act of 1995, the National Institutes of Health (NIH) hereby publishes notification of request for Emergency Clearance for the information collection related to the GuLF Study: Gulf Long-term Follow-up Study for Oil Spill Clean-Up Workers and Volunteers.

This information collection is essential to the mission of NIEHS (42 U.S.C. 285l), which is to conduct and support research, training, health information dissemination, and other programs with respect to factors in the environment that affect human health, directly or indirectly. Through this mission, the NIEHS has a mandate to study the environmental impact on individuals of natural and man-made catastrophes and the long term health effects of these incidents. The Deepwater Horizon disaster, with its release of approximately 5 million barrels (~ 680,000 tons) of crude oil into the Gulf of Mexico, represents the largest oil spill in U.S. history. Given the magnitude of this spill and the scope of the potential exposures—over 100,000 persons have completed safety training in preparation for participation

in clean-up activities related to the spill—study of the human health effects of this spill is urgently needed to monitor gulf clean-up workers and to understand the adverse consequences of oil spills in general.

Close ongoing community engagement will enhance scientific validity of the study, make it more broadly relevant from a public health perspective, and expand its benefits to the affected communities. We have established contacts with community organizations, representative worker organizations, advocacy groups, and State and local governments to identify the primary health issues of concern locally and to discuss study implementation issues across the five State area. Further, we will identify Community Outreach Coordinators to organize and implement outreach activities in each of the Gulf States. In addition to the continuing efforts with public health and community group representatives, we have been conducting and will continue webinars, dockside chats, and phone and in-person briefings with key stakeholder groups and health departments.

NIEHS cannot reasonably comply with the normal clearance procedures to initiate this information collection, because the use of normal procedures will delay the collection and hinder the agency in accomplishing its mission, to the detriment of the public good. Compelling reason exists to collect the required information at the earliest opportunity in order to capture information that may be lost with passage of time and to initiate contact with the workers and populations exposed to the effects of the spill.

The information to be obtained by this survey will provide the NIEHS, the U.S. government and the private sector with information on potential short- and long-term human health effects associated with clean-up and disposal activities surrounding the Deepwater Horizon oil spill in the Gulf of Mexico. Health areas of interest include, but are not limited to, respiratory, cardiovascular, hematologic, dermatologic, neurologic, cancer, reproductive, mental health, substance abuse, immunologic, hepatic, and renal effects. The study will investigate biomarkers of potentially adverse biological effect, including DNA damage, aberrant epigenetic profiles, and alterations in gene expression, some of which have been observed in previous studies of oil spill clean-up workers. The study will create a resource for additional collaborative research on specific scientific hypotheses or on subgroups of interest, and work with external scientists to facilitate nested sub-studies within the existing cohort to examine outcomes and exposure subgroups of interest; and create a resource to better understand the short and long-term human health effects of oil and oil dispersants in the environment.

Proposed Collection: Title: GuLF Study: Gulf Long-term Follow-up Study for Oil Spill Clean-Up Workers and Volunteers. *Type of Information Collection Request:* Emergency. *Need and Use of Information Collection:* The purpose of the GuLF Study is to investigate potential short- and long-term health effects associated with oil spill clean-up activities and exposures surrounding the Deepwater Horizon disaster; and to create a resource for additional collaborative research on focused hypotheses or subgroups. Over 55,000 persons participating in oil-spill clean-up activities have been exposed to a range of known and suspected toxins in crude oil, burning oil, and dispersants, to excessive heat, and possibly to stress due to widespread economic and lifestyle disruption. Exposures range from negligible to potentially significant, however, potential long-term human health consequences are largely unknown due to insufficient research in this area. Participants will be recruited from across job/exposure groups of primarily English, Spanish, or Vietnamese speaking adults (accommodations for other languages developed as appropriate) who performed oil-spill clean-up-related work ("exposed") and similar persons who did not ("unexposed" controls), and followed in either an *Active Follow-up Cohort* (N~27,000) or a *Passive Follow-up Cohort* (N~28,000). Exposures will be estimated using detailed job-exposure matrices developed from data from monitoring performed by different agencies and organizations during the crisis, information obtained by interview, and the available scientific literature. We will investigate acute health effects among all cohort members via self-report from the enrollment interview, and via clinical measures and biological samples from Active Follow-up Cohort members only. All cohort members will be followed for development of a range of health outcomes through record linkage (*e.g.,* cancer, mortality) and possibly through linkage with routinely collected health surveillance data (collected by health departments and the CDC) or with electronic medical records. Recruitment of subjects should begin in late 2010, with telephone interviews and the baseline home visits conducted within 18 months.

Frequency of Response: Participation will include one enrollment telephone interview (0.5 hr); collection of biological and environmental samples, basic clinical measurements, and GPS coordinates (2.75 hr) from the Active Follow-up Cohort only; annual contact information update (0.25; Active and Passive) or biennial follow-up telephone or Web interviews (0.5 hr; Active only) for 10 years or more. We also anticipate screening 25,000 ineligible respondents. *Affected Public:* Individuals or households. *Type of Respondents:* Workers involved in Deepwater Horizon disaster clean-up, and similar individuals not involved in clean-up effort. The annual reporting burden is as follows: *Estimated Number of Respondents:* Active Follow-up Cohort (N~27,000) and Passive Follow-up Cohort (N~28,000). *Estimated Number of Responses per Respondent: See* table.

Activity (3-yrs)	Estimated number of respondents	Estimated responses per respondent	Burden hours per response	Total burden hours per respondent	Estimated total burden hours
Ineligible respondents	25,000	1	0.25	0.25	6,250
Enrollment interview (All)	55,000	1	0.50	0.50	27,500
Home Visit (Active)	27,000	1	2.75	2.75	74,250
Annual Contact Info Update (Passive)	28,000	3	0.25	0.75	21,000
Annual Contact Info Update (Active)	27,000	2	0.25	0.50	13,500
Biennial interview (Active)	27,000	1	0.50	0.50	13,500
Passive Cohort Total responses & hrs		4		1.25	
Active Cohort Total responses & hrs		5		4.25	
Total responses & avg hrs per response		9		0.58	156,000
Average per year					52,000

Average Burden Hours per Response: 0.58 hour; and *Estimated Total Burden Hours Requested:* 156,000 (over 3 years). The average annual burden hours requested is 52,000. The annualized cost to respondents is estimated at $11.60 (assuming $20 hourly wage × 0.58 hour). There are no Capital Costs to report. There are no Operating or Maintenance Costs to report.

Request for Comments: Written comments and/or suggestions from the public and affected agencies should address one or more of the following points: (1) Evaluate whether the proposed collection of information is necessary for the proper performance of the function of the agency, including whether the information will have practical utility; (2) Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) Enhance the quality, utility, and clarity of the information to be collected; and (4) Minimize the burden of the collection of information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Direct Comments to OMB: Written comments and/or suggestions regarding the item(s) contained in this notice, especially regarding the estimated public burden and associated response time, should be directed to the: Office of Management and Budget, Office of Regulatory Affairs, New Executive Office Building, Room 10235, Washington, DC 20503, Attention: Desk Officer for NIH. To request more information on the proposed project or to obtain a copy of the data collection plans and instruments, contact: Dr. Dale P. Sandler, Chief, Epidemiology Branch, NIEHS, Rall Building A3–05, PO Box 12233, Research Triangle Park, NC 27709; non-toll-free number 919–541–4668 or E-mail *sandler@niehs.nih.gov.* Include your address.

By publication of this request of this request for emergency review, the NIEHS is requesting the approval for this collection. In view of the urgent public priority to initiate the study at the earliest opportunity in the wake of a public emergency, NIEHS requests that the collection of information be approved within 14 days of the publication of the **Federal Register** notice. This will allow sufficient time for public comment.

Comments Due Date: Comments regarding this information collection are best assured of having their full effect if received within 10 days of the date of this publication.

Dated: November 18, 2010.

W. Christopher Long,

NIEHS, Acting Associate Director for Management, National Institutes of Health.

Center for Scientific Review; Notice of Closed Meetings

Pursuant to section 10(d) of the Federal Advisory Committee Act, as amended (5 U.S.C. App.), notice is hereby given of the following meetings.

The meetings will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: Center for Scientific Review Special Emphasis Panel, Member Conflict: BMIT/CMIP/MEDI Imaging Applications.

Date: December 17, 2010.

Time: 1 p.m. to 5 p.m.

Agenda: To review and evaluate grant applications.

Place: National Institutes of Health, 6701 Rockledge Drive, Bethesda, MD 20892. (Telephone Conference Call).

Contact Person: Dharam S. Dhindsa, DVM, PhD, Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 5110, MSC 7854, Bethesda, MD 20892. (301) 435–1174. *dhindsad@csr.nih.gov.*

Name of Committee: Center for Scientific Review Special Emphasis Panel, Topics in Microbiology.

Date: December 28–29, 2010.

Time: 8 a.m. to 5 p.m.

Agenda: To review and evaluate grant applications.

Place: National Institutes of Health, 6701 Rockledge Drive, Bethesda, MD 20892. (Virtual Meeting).

Contact Person: Fouad A. El-Zaatari, PhD, Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 3206, MSC 7808, Bethesda, MD 20814–9692. (301) 435–1149. *elzaataf@csr.nih.gov.*

Name of Committee: Risk, Prevention and Health Behavior Integrated Review Group, Psychosocial Risk and Disease Prevention Study Section.

Date: January 27–28, 2011.

Time: 8 a.m. to 5:30 p.m.

Agenda: To review and evaluate grant applications.

Place: Serrano Hotel, 405 Taylor Street, San Francisco, CA 94102.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

National Institute of Mental Health; Notice of Meeting

Pursuant to section 10(a) of the Federal Advisory Committee Act, as amended (5 U.S.C.

App.), notice is hereby given of an Interagency Autism Coordinating Committee (IACC) meeting.

The purpose of the IACC meeting is to discuss plans for the annual update of the IACC Strategic Plan for Autism Spectrum Disorder Research. The meeting will be open to the public and will be accessible by webcast and conference call.

Name of Committee: Interagency Autism Coordinating Committee (IACC).

Type of meeting: Open Meeting.

Date: December 14, 2010.

Time: 10 a.m. to 5 p.m. *Eastern Time*—Approximate end time.

Agenda: The IACC will discuss plans for the annual update of the IACC Strategic Plan for Autism Spectrum Disorder Research.

Place: The Bethesda Marriott, 5151 Pooks Hill Road, Bethesda, MD 20814.

Conference Call: Dial: 888–577–8995. Access code: 1991506.

Cost: The meeting is free and open to the public.

Webcast Live: http://videocast.nih.gov/.

Registration: http://www.acclaroresearch.com/oarc/12-14-10. Pre-registration is recommended to expedite check-in. Seating in the meeting room is limited to room capacity and on a first come, first served basis.

Deadlines: Notification of intent to present oral comments: December 6th by 5 p.m. ET *Submission of written/electronic statement for oral comments:* December 7th by 5:00 p.m. ET.

Submission of written comments: December 10th by 5 p.m. ET.

Access: Medical Center Metro (Red Line)—1½ miles from the hotel On-site parking with parking validation available.

Contact Person: Ms. Lina Perez, Office of Autism Research Coordination, National Institute of Mental Health, NIH, 6001 Executive Boulevard, NSC, Room 8185a, Rockville, MD 20852. *Phone:* (301) 443–6040. *E-mail: IACCPublicInquiries@mail.nih.gov.*

Please Note: Any member of the public interested in presenting oral comments to the Committee must notify the Contact Person listed on this notice by 5 p.m. ET on Monday, December 6, 2010 with their request to present oral comments at the meeting. Interested individuals and representatives of organizations must submit a written/electronic copy of the oral statement/comments including a brief description of the organization represented by 5 p.m. ET on Tuesday, December 7, 2010. Statements submitted will become a part of the public record. Only one representative of an organization will be allowed to present oral comments, and presentations will be limited to three to five minutes per speaker, depending on number of speakers to be accommodated within the allotted time. Speakers will be assigned a time to speak in the order of the date and time when their request to speak is received, along with the required submission of the written/electronic statement by the specified deadline.

In addition, any interested person may submit written comments to the IACC prior to the meeting by sending the comments to the Contact Person listed on this notice by 5 p.m. ET, Friday, December 10, 2010. The comments should include the name and, when applicable, the business or professional affiliation of the interested person. All written comments received by the deadlines for both oral and written public comments will be provided to the IACC for their consideration and will become part of the public record.

The meeting will be open to the public through a conference call phone number and webcast live on the Internet. Members of the public who participate using the conference call phone number will be able to listen to the meeting but will not be heard. If you experience any technical problems with the conference call, please e-mail *IACCTechSupport@acclaroresearch.com.*

To access the webcast live on the Internet the following computer capabilities are required: (A) Internet Explorer 5.0 or later, Netscape Navigator 6.0 or later or Mozilla Firefox 1.0 or later; (B) Windows® 2000, XP Home, XP Pro, 2003 Server or Vista; (C) Stable 56k, cable modem, ISDN, DSL or better Internet connection; (D) Minimum of Pentium 400 with 256 MB of RAM (Recommended); (E) Java Virtual Machine enabled (Recommended).

Individuals who participate in person or by using these electronic services and who need special assistance, such as captioning of the conference call or other reasonable accommodations, should submit a request to the Contact Person listed on this notice at least 7 days prior to the meeting.

As a part of security procedures, attendees should be prepared to present a photo ID at the meeting registration desk during the check-in process. Pre-registration is recommended. Seating will be limited to the room capacity and seats will be on a first come, first served basis, with expedited check-in for those who are pre-registered. Please note: Online pre-registration will close by 5 p.m. Eastern Time the day before the meeting. After that time, registration will have to be done onsite the day of the meeting.

Schedule is subject to change.

Information about the IACC is available on the Web site: *http://www.iacc.hhs.gov.*

Dated: November 19, 2010.

Jennifer S. Spaeth,

Director, Office of Federal Advisory Committee Policy.

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

[Docket No. USCG–2008–0333]

Delaware River and Bay Oil Spill Advisory Committee; Meetings

AGENCY: Coast Guard, DHS.

ACTION: Notice of advisory committee meetings.

SUMMARY: The Delaware River and Bay Oil Spill Advisory Committee (DRBOSAC) will meet in Philadelphia, Pennsylvania, to discuss and approve DRBOSAC's report on oil spill prevention and response strategies for the Delaware River and Bay. These meetings will be open to the public.

DATES: The Committee will meet on Thursday December 16, 2010 and possibly Friday December 17th, 2010 from 10 a.m. to 4 p.m. These meetings may close early if all business is finished. Written material, requests to make oral presentations, and requests to have a copy of your material distributed to each member of the committee should reach the Coast Guard on or before Friday December 10, 2010.

ADDRESSES: The Committee will meet at Coast Guard Sector Delaware Bay, 1 Washington Ave., Philadelphia, Pennsylvania 19147. Send written material and requests to make oral presentations to Gerald Conrad, Liaison to the Designated Federal Officer (DFO) of the DRBOSAC, at the address above. This notice and any documents identified in the **SUPPLEMENTARY INFORMATION** section as being available in the docket may be viewed online, at *http://www.regulations.gov,* using docket number USCG–2008–0333.

FOR FURTHER INFORMATION CONTACT: Gerald Conrad, Liaison to the DFO of the DRBOSAC, telephone 215–271–4824.

SUPPLEMENTARY INFORMATION: Notice of this meeting is given under the Federal Advisory Committee Act, 5 U.S.C. App. 2 (Pub. L. 92–463). The Coast Guard Authorization Act of 2010 (Pub. L. 111–281) extended the statutory authorization for the Committee until Dec 31, 2010.

Agenda of the Meetings

The agenda for the December 16 & 17, 2010 Committee meetings are as follows:

(1) Opening comments.
(2) Administrative announcements.
(3) Introductions and roll call.
(4) Presentations from the public.
(5) Debriefs from: Response, Prevention, Recovery/Mitigation subcommittees.
(6) Public comments.
(7) Committee's report recommendation(s), discussion and votes.
(8) Closing.

More information and details on the meetings will be available at the committee Web site, located at *https://home&port.uscg.mil/drbosac,* or on the Federal Docket Management System (FDMS) at *http://www.Regulations.gov.* To locate documents related to this Committee on FDMS, search *http://www.Regulations.gov* for the docket number USCG–2008–0333. Additional details may be added to the agenda up to December 10, 2010.

Procedural

These meetings are open to the public. All persons entering the building will have to present identification and may be subject to screening. Please note that the meetings may close early if all business is finished.

The public will be able to make oral presentations, for a length of time as decided by the Chair, when given the opportunity, as noted in the agenda. Members of the public wishing to make an oral presentation to the committee are encouraged to contact the Coast Guard at the contacts listed above no later than December 10, 2010. The public may file written statements with the committee; written material should reach the Coast Guard no later than December 10, 2010. If you would like a copy of your material distributed to each member of the committee, please submit 35 copies to the Liaison to the DFO no later than December 10, 2010, and indicate that the material is to be distributed to committee members at the December 16 and 17, 2010 meetings.

Please register your attendance with the Liaison to the DFO no later than December 10, 2010.

Information on Services for Individuals With Disabilities

For information on facilities or services for individuals with disabilities or to request special assistance at the meetings, contact the Liaison to the DFO as soon as possible.

Dated: November 23, 2010.

Joseph M. Re,

Captain, U.S. Coast Guard, Office of Performance Management (CG–0954).

DEPARTMENT OF HOMELAND SECURITY

Federal Emergency Management Agency

[Docket ID: FEMA–2007–0008]

National Advisory Council Teleconference Meeting

AGENCY: Federal Emergency Management Agency, DHS.

ACTION: Notice of teleconference meeting.

SUMMARY: The National Advisory Council (NAC) will be holding a teleconference meeting for the purpose of discussing and gathering feedback on the National Disaster Housing Task Force's Practitioners' Guide to Disaster Housing.

DATES: *Meeting Date:* Thursday, December 16, 2010 from approximately 2 p.m. EST to 4 p.m. EST.

Comment Date: Written comments must be received by Thursday, December 9, 2010.

ADDRESSES: The meeting will be held via teleconference only. Members of the public who wish to obtain the listen-only call-in number, access code, and other information for the public teleconference may contact Alyson Price as listed in the **FOR FURTHER INFORMATION CONTACT** section by Thursday, December 9, 2010. All written comments must be received by Thursday, December 9, 2010. All submissions received must include the Docket ID FEMA–2007–0008 and may be submitted by any one of the following methods:

Federal Rulemaking Portal: http://www.regulations.gov. Follow the instructions for submitting comments on the Web site.

E-mail: FEMA–RULES@dhs.gov. Include Docket ID FEMA–2007–0008 in the subject line of the message.

Facsimile: (703) 483–2999.

Mail: FEMA, Office of Chief Counsel, 500 C Street, SW., Room 840, Washington, DC 20472–3100.

Hand Delivery/Courier: FEMA, Office of Chief Counsel, 500 C Street, SW., Room 840, Washington, DC 20472–3100.

Instructions: All submissions received must include the Docket ID: FEMA–2007–0008. Comments received will also be posted without alteration at *http://www.regulations.gov,* including any personal information provided. You may want to read the Privacy Act Notice, which is found via the Privacy Notice link in the footer of *http://www.regulations.gov.*

Docket: For access to the docket to read documents or comments received by the National Advisory Council, go to *http://www.regulations.gov.*

FOR FURTHER INFORMATION CONTACT: Alyson Price, Designated Federal Officer, FEMA, 500 C Street, SW., Room 832, Washington, DC 20472–3100, telephone 202–646–3746, fax 202–646–3930, and e-mail *FEMA–NAC@dhs.gov.* The NAC Web site is located at: *http://www.fema.gov/about/nac/.*

SUPPLEMENTARY INFORMATION: Notice of this meeting is required under the Federal Advisory Committee Act (FACA), Public Law 92–463, as amended (5 U.S.C. App. 1, *et seq.*).

The National Disaster Housing Task Force (NDHTF) provides a full-time, multi-agency focus on disaster housing related issues and seeks to elevate the significance of disaster housing preparedness in all jurisdictions. FEMA will conduct a public teleconference with the National Advisory Council (NAC) to brief them and gather feedback on the NDHTF Practitioners' Guide to Disaster Housing (Practitioners' Guide) document currently under development by the NDHTF.

The Practitioners' Guide will provide guidance for State, Tribal, territory, and local disaster housing assistance practitioners to develop disaster housing strategies that improve responsiveness. It emphasizes the cooperative efforts required to provide disaster housing assistance by encouraging the involvement of private sector and non-governmental agencies.

The meeting is open to the public. Persons with disabilities who require special assistance should advise the Designated Federal Officer of their anticipated special needs as early as possible. Although members of the public will not be allowed to comment orally during the meeting, they may file a written statement with the NAC before the date of the meeting. For those wishing to submit written comments, please follow the procedure described in the **ADDRESSES** section.

Dated: November 22, 2010.

W. Craig Fugate,

Administrator, Federal Emergency Management Agency.

BILLING CODE 9111–48–P

DEPARTMENT OF HOMELAND SECURITY

Transportation Security Administration

New Agency Information Collection Activity Under OMB Review: Pipeline Corporate Security Review

AGENCY: Transportation Security Administration, DHS.

ACTION: 30-day notice.

SUMMARY: This notice announces that the Transportation Security Administration (TSA) has forwarded the new Information Collection Request (ICR) abstracted below to the Office of Management and Budget (OMB) for review and approval under the Paperwork Reduction Act. The ICR describes the nature of the information collection and its expected burden. TSA published a **Federal Register** notice, with a 60-day comment period soliciting comments, of the following collection of information on August 20, 2009, 74 FR 42086. The collection encompasses interviews and site visits with pipeline operators regarding company security planning and implementation.

DATES: Send your comments by December 29, 2010. A comment to OMB is most effective if OMB receives it within 30 days of publication.

ADDRESSES: Interested persons are invited to submit written comments on the proposed information collection to the Office of Information and Regulatory Affairs, Office of Management and Budget. Comments should be addressed to Desk Officer, Department of Homeland Security/TSA, and sent via electronic mail to *oira_submission@omb.eop.gov* or faxed to (202) 395–6974.

FOR FURTHER INFORMATION CONTACT: Joanna Johnson, TSA Paperwork Reduction Act (PRA) Officer, Office of Information Technology (OIT), TSA–40, Transportation Security Administration, 601 South 12th Street, Arlington, VA 20598–6040; telephone (571) 227–3651; e-mail *TSAPRA@dhs.gov.*

SUPPLEMENTARY INFORMATION:

Comments Invited

In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number. The ICR documentation is available at *http://www.reginfo.gov.* Therefore, in preparation for OMB review and approval of the following information collection, TSA is soliciting comments to—

(1) Evaluate whether the proposed information requirement is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) Evaluate the accuracy of the agency's estimate of the burden;

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of the collection of information on those who are to respond, including using appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Information Collection Requirement

Title: Pipeline Corporate Security Review (PCSR).

Type of Request: New collection.

OMB Control Number: Not yet assigned.

Form(s): Pipeline Corporate Security Review (PCSR) Protocol Form.

Affected Public: Hazardous Liquids and Natural Gas Pipeline Industry.

Abstract: Under the Aviation and Transportation Security Act (ATSA) and delegated authority from the Secretary of Homeland Security, TSA is tasked with developing policies, strategies and plans for dealing with transportation security. TSA carries out this responsibility in the pipeline mode by assessing current industry security practices by way of its Pipeline Corporate Security Review (PCSR) program. The information will be collected during a voluntary, face-to-face visit with the pipeline operator, during which TSA will discuss the operator's security plan and also complete the PCSR Form. The PCSR Form asks approximately 218 questions concerning the operator's security planning and program, covering security topics such as threat assessments, criticality, vulnerability, credentialing, training, physical security countermeasures, and exercises and drills. TSA will use the information collected during the PCSR process to determine baseline security standards and areas of security weakness in the pipeline mode.

Number of Respondents: 2,200 potential respondents; likely 12 annual respondents.

Estimated Annual Burden Hours: An estimated 100 hours annually, based on TSA conducting 12 PCSR visits a year, each lasting 8 hours.

Issued in Arlington, Virginia, on November 23, 2010.

Joanna Johnson,

Paperwork Reduction Act Officer, Office of Information Technology.

[FR Doc. 2010–29988 Filed 11–26–10; 8:45 am]

BILLING CODE 9110–05–P

DEPARTMENT OF HOMELAND SECURITY

U.S. Customs and Border Protection

Agency Information Collection Activities: Andean Trade Preferences

AGENCY: U.S. Customs and Border Protection (CBP), Department of Homeland Security.

ACTION: 60-Day notice and request for comments; Extension of an existing information collection: 1651–0091.

SUMMARY: As part of its continuing effort to reduce paperwork and respondent burden, CBP invites the general public and other Federal agencies to comment on an information collection requirement concerning the Andean Trade Preferences. This request for comment is being made pursuant to the Paperwork Reduction Act of 1995 (Pub. L. 104–13; 44 U.S.C. 3505(c)(2)).

DATES: Written comments should be received on or before January 28, 2011, to be assured of consideration.

ADDRESSES: Direct all written comments to U.S. Customs and Border Protection, Attn: Tracey Denning, Regulations and Rulings, Office of International Trade, 799 9th Street, NW., 5th Floor, Washington, DC. 20229–1177.

FOR FURTHER INFORMATION CONTACT: Requests for additional information should be directed to Tracey Denning, U.S. Customs and Border Protection, Regulations and Rulings, Office of International Trade, 799 9th Street, NW., 5th Floor, Washington, DC. 20229–1177, at 202–325–0265.

SUPPLEMENTARY INFORMATION: CBP invites the general public and other Federal agencies to comment on proposed and/or continuing information collections pursuant to the Paperwork Reduction Act of 1995 (Pub. L. 104–13; 44 U.S.C. 3505(c)(2)). The comments should address: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimates of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden including the use of automated collection techniques or the use of other forms of information technology; and (e) estimates of capital or start-up costs and costs of operations, maintenance, and purchase of services to provide information. The comments that are submitted will be summarized and included in the request for Office of Management and Budget (OMB) approval. All comments will become a matter of public record. In this document the CBP is soliciting comments concerning the following information collection:

Title: Andean Trade Preferences.

OMB Number: 1651–0091.

Form Number: CBP Form 449.

Abstract: The information is to be used by CBP officers to document preferential tariff treatment under the provisions of the Andean Trade Preferences Act (ATPA) and the Andean Trade Promotion and Drug Eradication Act (ATPDEA), as codified in 19 U.S.C. 3201 through 3206. The ATPA Certificate of Origin format is found under the CBP Regulations, 19 CFR 10.201–10.207. The type of information collected includes the processing operations performed on articles, the material produced in a beneficiary country or in the U.S., and a description of those processing operations. The ATPDEA regulations are found in 19 CFR 10.251–10.257. Claims under ATPDEA are submitted using CBP Form 449. This form can be used only when claiming ATPDEA preferential treatment on the goods listed on the back of the form. CBP Form 449 can be found at: *http://forms.cbp.gov/pdf/CBP_Form_449.pdf.*

Current Actions: This submission is being made to extend the expiration date with no change to information collected or to CBP Form 449.

Type of Review: Extension (without change).

Affected Public: Businesses.

ATPA Certificate of Origin:

Estimated Number of Respondents: 2,133.

Estimated Number of Annual Responses per Respondent: 2.

Estimated Number of Total Annual Responses: 4,266.

Estimated Time per Response: 10 minutes.

Estimated Total Annual Burden Hours: 712.

ATPDEA Certificate of Origin:

Estimated Number of Respondents: 233.

Estimated Number of Annual Responses per Respondent: 7.

Estimated Number of Total Annual Responses: 1,631.

Estimated Time per Response: 30 minutes.

Estimated Total Annual Burden Hours: 815.

Dated: November 23, 2010.

Tracey Denning,

Agency Clearance Officer, U.S. Customs and Border Protection.

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

[FWS–R9–IA–2010–N263; 96300–1671–0000–P5]

Information Collection Sent To the Office of Management and Budget (OMB) for Approval; OMB Control Number 1018–0093; Federal Fish and Wildlife Permit Applications and Reports—Management Authority

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice; request for comments.

SUMMARY: We (U.S. Fish and Wildlife Service) have sent an Information Collection Request (ICR) to OMB for review and approval. We summarize the ICR below and describe the nature of the collection and the estimated burden and cost. This ICR is scheduled to expire on November 30, 2010. We may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. However, under OMB regulations, we may continue to conduct or sponsor this information collection while it is pending at OMB.

DATES: You must submit comments on or before December 29, 2010.

ADDRESSES: Send your comments and suggestions on this information collection to the Desk Officer for the Department of the Interior at OMB–OIRA at (202) 395–5806 (fax) or *OIRA_DOCKET@OMB.eop.gov* (e-mail). Please provide a copy of your comments to the Service Information Collection Clearance Officer, U.S. Fish and Wildlife Service, MS 222–ARLSQ, 4401 North Fairfax Drive, Arlington, VA 22203 (mail), or *infocol@fws.gov* (e-mail).

FOR FURTHER INFORMATION CONTACT: To request additional information about this ICR, contact Hope Grey at the addresses above or by telephone at (703) 358–2482. You may review the ICR online at *http://www.reginfo.gov.* Follow the instructions to review Department of the Interior collections under review by OMB.

SUPPLEMENTARY INFORMATION: *OMB Control Number:* 1018–0093.

Title: Federal Fish and Wildlife Permit Applications and Reports—Management Authority, 50 CFR 13, 15, 16, 17, 18, 21, and 23.

Service Form Number(s): 3–200–19 through 3–200–37, 3–200–39 through 3–200–44, 3–200–46 through 3–200–53, 3–200–58, 3–200–61, 3–200–64 through 3–200–66, 3–200–69 to 3–200–70, 3–200–73 through 3–200–76, 3–200–80, and 3–200–85 through 3–200–87.

Type of Request: Revision of currently approved collection.

Description of Respondents: Individuals; biomedical companies; circuses; zoological parks; botanical gardens; nurseries; museums; universities; antique dealers; exotic pet industry; hunters; taxidermists; commercial importers/exporters of wildlife and plants; freight forwarders/brokers; and State, Tribal, local, and Federal governments.

Respondent's Obligation: Required to obtain or retain a benefit.

Frequency of Collection: On occasion.

Estimated Annual Number of Respondents: 10,314.

Estimated Annual Number of Responses: 13,055.

Estimated Completion Time per Response: Varies from 6 minutes to 85 hours depending on activity.

Estimated Annual Number of Burden Hours: 9,525.

Estimated Nonhour Cost Burden: $982,751 associated with application fees.

Abstract: This information collection covers permit applications and reports that our Division of Management Authority uses to determine the eligibility of applicants for permits requested in accordance with the criteria in various Federal wildlife conservation laws and international treaties, including:

- Endangered Species Act (16 U.S.C. 1531 *et seq.*).
- Migratory Bird Treaty Act (16 U.S.C. 703 *et seq.*).
- Lacey Act (16 U.S.C. 3371 *et seq.*).
- Bald and Golden Eagle Protection Act (16 U.S.C. 668).
- Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES) (27 U.S.T. 1087).
- Marine Mammal Protection Act (16 U.S.C. 1361–1407 *et seq.*).
- Wild Bird Conservation Act (16 U.S.C. 4901–4916 *et seq.*).

Service regulations implementing these statutes and treaties are in Chapter I, Subchapter B of Title 50, Code of Federal Regulations (CFR). These regulations stipulate general and specific requirements that when met allow us to issue permits to authorize activities that are otherwise prohibited.

In addition to the forms and reports currently approved under OMB Control No. 1018–0093, this revised ICR includes:

- FWS Forms 3–200–74 (Single-Use Export Permits Under a Master File or Annual Program File) and 3–200–75 (Registration of a Production Facility for Export of Certain Native Species). These forms are currently approved under OMB Control Number 1018–0137. If OMB approves this ICR, we will discontinue 1018–0137.
- Four new forms that we believe will reduce burden on applicants, improve customer service, and allow us to process applications and issue CITES documents quickly:

(1) FWS Form 3–200–80 (Export of Fertilized Live Eggs, Caviar, or Meat from Aquacultured Paddlefish or Sturgeon (CITES)). Applicants currently use FWS Form 3–200–24 or 3–200–76 for this activity.

(2) FWS Form 3–200–85 (Master File for the Export of Live Captive-bred Animals (CITES)). Applicants currently use FWS Form 3–200–24 for this activity.

(3) FWS Form 3–200–86 (Photography of Marine Mammals for Educational or Commercial Purposes (MMPA)). Applicants currently use FWS Form 3–200–43 for this activity.

(4) FWS Form 3–200–87 (Transfer of Live Captive-held Marine Mammals (MMPA)). Applicants currently submit letters for notification or authorization.

Comments: On August 31, 2010, we published in the **Federal Register** (75 FR 53328) a notice of our intent to request that OMB approve this information collection. In that notice, we solicited comments for 60 days, ending on November 1, 2010. We received one comment. The comment did not address issues surrounding the proposed collection of information or the cost and hour burden estimates, but did object to other aspects of our permitting program and the killing of wildlife. We have not made any changes to this collection as a result of the comment. The commenter did question the groups that we included under the heading "Affected Public" in our previous **Federal Register** notice and stated that the entire U.S. public and animal protection groups are affected by this information collection. The groups listed under this heading were potential respondents. To ensure clarity, we have changed the heading title to "Description of Respondents."

We again invite comments concerning this information collection on:

- Whether or not the collection of information is necessary, including whether or not the information will have practical utility;
- The accuracy of our estimate of the burden for this collection of information;
- Ways to enhance the quality, utility, and clarity of the information to be collected; and
- Ways to minimize the burden of the collection of information on respondents.

Comments that you submit in response to this notice are a matter of public record. Before including your address, phone number, e-mail address, or other personal identifying information in your comment, you should be aware that your entire comment, including your personal identifying information, may be made publicly available at any time. While you can ask OMB in your comment to withhold your personal identifying information from public review, we cannot guarantee that it will be done.

Dated: November 22, 2010.

Hope Grey,

Information Collection Clearance Officer, Fish and Wildlife Service.

[FWS–R9–R–2010–N265; 93261–1263–0000–4A]

Proposed Information Collection; OMB Control Number 1018–0102; Applications for Special Use Permits on National Wildlife Refuges

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice; request for comments.

SUMMARY: We (U.S. Fish and Wildlife Service) will ask the Office of Management and Budget (OMB) to approve the information collection (IC) described below. As required by the Paperwork Reduction Act of 1995 and as part of our continuing efforts to reduce paperwork and respondent burden, we invite the general public and other Federal agencies to take this opportunity to comment on this IC. This IC is scheduled to expire on April 30, 2011. We may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

DATES: To ensure that we are able to consider your comments on this IC, we must receive them by January 28, 2011.

ADDRESSES: Send your comments on the IC to the Service Information Collection Clearance Officer, Fish and Wildlife Service, MS 222–ARLSQ, 4401 North Fairfax Drive, Arlington, VA 22203 (mail); or *infocol@fws.gov* (e-mail).

FOR FURTHER INFORMATION CONTACT: To request additional information about this IC, contact Kevin Kilcullen by e-mail at *Kevin_Kilcullen@fws.gov* or by telephone at (703) 358–2382.

SUPPLEMENTARY INFORMATION:

I. Abstract

The National Wildlife Refuge System Administration Act of 1966 (16 U.S.C. 668dd–668ee) (Administration Act) and the Refuge Recreation Act of 1962 (16 U.S.C. 460k–460k–4) (Recreation Act) govern the administration and uses of national wildlife refuges and wetland management districts. The Administration Act consolidated all of the different refuge areas into a single National Wildlife Refuge System (System). It also authorizes us to permit public accommodations, including commercial visitor services, on lands of the System when we find that the activity is compatible and appropriate with the purpose for which the refuge was established. The Recreation Act allows the use of refuges for public recreation when it is not inconsistent or does not interfere with the primary purpose(s) of the refuge.

In our general refuge regulations, we provide for public entry for specialized purposes, including economic activities such as the operation of guiding and other visitor services on refuges by concessionaires or cooperators under the appropriate legal instrument or special use permits (50 CFR 25.41, 25.61, 26.36, 27.71, 27.91, 27.97, 29.1, 29.2, 30.11, 31.2, 31.13, 31.14, 31.16, 32.2(1), 36.31, 36.32, 36.33, 36.37, 36.39, and 36.41, and 43 CFR 5). These regulations provide the authorities and procedures for allowing permits on refuges.

Previously, we used FWS Form 3–1383 (Special Use Application and Permit) for all activities. However, experience has indicated that some types of activities, such as commercial use or research, require that we collect detailed information on the specific activity so that we can more effectively manage the numerous uses being conducted on System lands.

We are proposing to use three forms as applications for Special Use Permits:

(1) FWS Form 3–1383. We will use this form for the majority of activities including, but not limited to:

- Special events, such as fishing tournaments.
- Personal events, such as weddings.
- Beneficial management activities, such as wood cutting or rotational grazing, that we use to provide the best habitat possible on some refuges.
- Group visits and other one-time events.

(2) FWS Form 3–XXXX (Commercial Special Use Application and Permit). We will use this form for commercial activities including, but not limited to:

- Recreational visitor service operations.
- Commercial filming.
- Agricultural activities.
- Guiding for fishing, hunting, wildlife education, and interpretation.
- Building and using cabins to support subsistence or commercial activities (in Alaska).

(3) FWS Form 3–YYYY (Research Special Use Application and Permit). We will use this form to authorize research and monitoring activities on a refuge.

We plan to collect the following information. However, not all information will have to be provided, depending on the permit and specific activity:

- Type of activity/project.
- Identifying data (such as, name, business, or principal investigator, title, organization or affiliation, address, telephone number, and e-mail address).
- Whether the request is for a new permit or renewal or modification of an existing permit.
- Description, frequency and time line of the activity/project.
- Location/map.
- Assistants/subpermittees.
- Description of how the activity/project will help the refuge fulfill its purpose (FWS Form 3–YYYY).
- Insurance coverage.
- Licenses/permits required.
- Support/subcontractors used to support the activity.
- Equipment/gear and materials.
- Whether or not the activity requires overnight stay.
- Transportation logistics and requirements.
- Descriptions of work and living accommodations.
- Number of clients and/or participants.
- Certifications.
- Tax ID number or Social Security Number (FWS Form 3–XXXX).
- Whether or not an applicant or subpermittee has been convicted of a felony, or issued a national wildlife refuge notice of violation. If yes, applicant must provide details and court action taken (FWS Form 3–XXXX).
- Trip schedule(s).
- Curriculum Vitae or resume of principal researcher (FWS Form 3–YYYY).
- Relationship of principal researcher to affiliation/organization (such as professor, staff, student, etc) (FWS Form 3–YYYY).
- Full proposal of the planned research (FWS Form 3–YYYY).
- Description of how project will benefit the management of the refuge including how the project may benefit the management of threatened or endangered species (FWS Form 3–YYYY).

Some permits may require submission of:

- Interim and final reports.
- Safety plans.
- Operational plans.
- Minimum Requirements Decision Assessment for activities/projects requested in wilderness areas.
- Assurance of Animal Care Form (or equivalent) for research involving animals.
- Before and after photograph of site.

II. Data

OMB Control Number: 1018–0102.

Title: Applications for Special Use Permits on National Wildlife Refuges, 50 CFR 25.41, 25.61, 26.36, 27.71, 27.91, 27.97, 29.1, 29.2, 30.11, 31.2, 31.13, 31.14, 31.16, 32.2(1), 36.31, 36.32, 36.33, 36.37, 36.39, and 36.41.

Service Form Number(s): 3–1383, 3–XXXX, and 3–YYYY.

Type of Request: Revision of a currently approved collection.

Description of Respondents: Individuals and households; business and other for-profit organizations; nonprofit institutions; farms; and State, local, or Tribal governments.

Respondent's Obligation: Required to obtain or retain a benefit.

Frequency of Collection: On occasion.

Activity	Number of respondents	Number of responses	Completion time per response	Total annual burden hours
FWS Form 3–1383	13,500	13,500	1 hour	13,500

Activity	Number of respondents	Number of responses	Completion time per response	Total annual burden hours
FWS Form 3–XXXX	1,200	1,200	4 hours	4,800
FWS Form 3–YYYY	300	300	4 hours	1,200
Totals	15,000	15,000		19,500

III. Comments

We invite comments concerning this information collection on:

- Whether or not the collection of information is necessary, including whether or not the information will have practical utility;
- The accuracy of our estimate of the burden for this collection of information;
- Ways to enhance the quality, utility, and clarity of the information to be collected; and
- Ways to minimize the burden of the collection of information on respondents.

Comments that you submit in response to this notice are a matter of public record. We will include or summarize each comment in our request to OMB to approve this IC. Before including your address, phone number, e-mail address, or other personal identifying information in your comment, you should be aware that your entire comment, including your personal identifying information, may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Dated: November 23, 2010.

Hope Grey,

Information Collection Clearance Officer, Fish and Wildlife Service.

Bandon Marsh, Nestucca Bay, and Siletz Bay National Wildlife Refuges, Coos, Tillamook, and Lincoln Counties, OR; Comprehensive Conservation Plan and Environmental Assessment

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of Intent; announcement of three public open house meetings; request for comments.

SUMMARY: We, the U.S. Fish and Wildlife Service (Service), intend to prepare a comprehensive conservation plan (CCP) for the Bandon Marsh, Nestucca Bay, and Siletz Bay National Wildlife Refuges (NWRs), in or near the towns of Bandon, Pacific City, Neskowin, and Lincoln City, Oregon. We will also prepare an environmental assessment (EA) to evaluate the potential effects of various CCP alternatives. We provide this notice in compliance with our CCP policy to advise other Federal and State agencies, Tribes, and the public of our intentions and to obtain suggestions and information on the scope of issues to consider during the planning process. We are also announcing public meetings and requesting public comments.

DATES: To ensure consideration, please send your written comments by December 31, 2010. We will hold public meetings to begin the CCP planning process; *see Public Meetings* under **SUPPLEMENTARY INFORMATION** for dates, times, and locations.

ADDRESSES: Send your comments or requests for more information by any of the following methods:

E-mail: oregoncoastCCP@fws.gov. Include "Bandon Marsh, Nestucca Bay, and Siletz Bay CCP" in the subject line of the message.

Fax: Attn: Project Leader, 541–867–4551.

U.S. Mail: Oregon Coast National Wildlife Refuge Complex, 2127 SE. Marine Science Drive, Newport, OR 97365.

In-Person Drop-off: You may drop off comments during regular business hours at the above address.

FOR FURTHER INFORMATION CONTACT: Roy W. Lowe, Project Leader, Oregon Coast National Wildlife Refuge Complex, 2127 SE. Marine Science Drive, Newport, OR 97365; phone (541) 867–4550, and fax (541) 867–4551.

SUPPLEMENTARY INFORMATION:

Introduction

With this notice, we initiate our process for developing a CCP for Bandon Marsh, Nestucca Bay, and Siletz Bay National Wildlife Refuges in Coos, Tillamook, and Lincoln Counties, Oregon. This notice complies with our CCP policy to (1) advise other Federal and State agencies, Tribes, and the public of our intention to conduct detailed planning on these refuges, and (2) obtain suggestions and information on the scope of issues to consider in the environmental document and during development of the CCP.

Background

The CCP Process

The National Wildlife Refuge System Administration Act of 1966 (16 U.S.C. 668dd–668ee) (Refuge Administration Act), as amended by the National Wildlife Refuge System Improvement Act of 1997, requires us to develop a CCP for each national wildlife refuge. The purpose for developing a CCP is to provide refuge managers with a 15-year plan for achieving refuge purposes and contributing toward the mission of the National Wildlife Refuge System, consistent with sound principles of fish and wildlife management, conservation, legal mandates, and our policies. We will review and update the CCP at least every 15 years in accordance with the Refuge Administration Act.

Each unit of the National Wildlife Refuge System was established for specific purposes. These purposes are the foundation for developing and prioritizing the conservation and management goals and objectives for each refuge within the National Wildlife Refuge System, and determining compatible public uses for each refuge. The planning process is a way for us and the public to evaluate management goals and objectives for refuge wildlife, plant, and habitat conservation, while providing for wildlife-dependent recreation opportunities that are compatible with the refuge's establishing purposes and the mission of the National Wildlife Refuge System.

Our CCP process provides participation opportunities for Tribal, State, and local governments; agencies; organizations; and the public. At this time we encourage input in the form of issues, concerns, ideas, and suggestions for the future management of Bandon Marsh, Nestucca Bay, and Siletz Bay Refuges.

We will conduct an environmental review of this project and prepare an EA in accordance with the requirements of the National Environmental Policy Act of 1969, as amended (NEPA) (42 U.S.C.

4321 *et seq.*); NEPA regulations (40 CFR parts 1500–1508); other appropriate Federal laws and regulations; and our policies and procedures for compliance with those laws and regulations.

Bandon Marsh, Nestucca Bay, and Siletz Bay National Wildlife Refuges

Bandon Marsh NWR was established in 1983, with the acquisition of 289 acres of salt marsh, mudflats, and tidal sloughs. The Bandon Marsh Unit is located near the mouth of the Coquille River, with approximately 75 percent of the Unit within the city limits of Bandon, Oregon. The 582-acre Ni-les'tun Unit, established in 2000, includes 400 acres of historic salt marsh that is currently being restored to tidal action. The Ni-les'tun Unit is located on the east side of Highway 101 on the north bank of the Coquille River. The total land base of Bandon Marsh NWR is 889 acres.

The purpose for establishing Bandon Marsh NWR was "for the preservation and enhancement of the highly significant wildlife habitat of the area known as Bandon Marsh, in the estuary of the Coquille River * * * for the protection of migratory waterfowl, numerous species of shorebirds, and fish, including Chinook and silver salmon, and to provide opportunity for wildlife-oriented recreation and nature study on the marsh * * *" (95 Stat. 1709, dated Dec 29, 1981). The Ni-les'tun Unit was added to Bandon Marsh NWR in order to (1) protect and restore intertidal marsh, freshwater marsh, and riparian areas to provide a diversity of habitats for migratory birds, including waterfowl, shorebirds, wading birds, and songbirds; (2) restore intertidal marsh habitat for anadromous fish such as the threatened coho salmon, chinook, chum salmon, steelhead, and cutthroat trout; (3) protect and restore habitat for species listed under the Endangered Species Act as threatened or endangered; and (4) provide wildlife-dependent public use opportunities compatible with refuge purposes.

Nestucca Bay NWR is located near Pacific City and Neskowin in Tillamook County, Oregon. The refuge was established in 1991 with the acquisition of a 384-acre dairy farm, and has since expanded to 818.5 acres. The primary need for establishing Nestucca Bay NWR was to protect high-quality coastal habitats for dusky Canada geese and threatened Aleutian Canada geese (delisted in 2001); other endangered and threatened species; and a variety of other migratory waterfowl, shorebirds, raptors, songbirds, anadromous fish, and other wildlife while preserving part of Oregon's biodiversity. In 2002, the refuge was expanded to include the Neskowin Marsh Unit (222.6 acres acquired), located about 2.5 miles south of the Nestucca Bay Refuge Unit near the community of Neskowin, Oregon. Neskowin Marsh incorporates unique freshwater wetland and bog habitats and wildlife resources not found within the initial refuge boundary.

Siletz Bay NWR is located near Lincoln City on the central coast of Oregon. The refuge was established in 1991 with a donation of 46 acres of tidally muted salt marsh. The approved acquisition refuge boundary totals 1,936 acres and encompasses the northern tip of the Siletz spit, vegetated and unvegetated tidelands of the bay, and a portion of the diked former tidelands of the Siletz River floodplain. Approximately 1,060 acres within the authorized boundary are State-owned tidelands. Currently, refuge lands total 568 acres. The primary need for establishing this refuge was to protect coastal wetland habitats and upland buffers for a variety of waterfowl, shorebirds, marine mammals, endangered species, raptors, songbirds, fish, and other wildlife. The refuge serves to protect the remaining coastal wetlands and uplands adjacent to Siletz Bay from rapidly encroaching development, and management emphasis has been to enhance and restore wetland and upland habitats for a variety of estuarine-dependent fish and wildlife species.

Scoping: Preliminary Issues, Concerns, and Opportunities

We have identified preliminary issues, concerns, and opportunities that we may address in the CCP. We have briefly summarized these issues below. During public scoping, we may identify additional issues.

Bandon Marsh NWR Preliminary Issues: What actions should the Service take to sustain and restore priority species and habitats on this refuge over the next 15 years? Based upon the refuge's priority fish and wildlife species, which habitats would be monitored and managed to control invasive species? What management options should the refuge consider for restoration of the degraded upland forest and grassland? What possibilities exist for enhancing existing or adding additional wildlife-dependent recreational opportunities, including wildlife observation trails and/or photography points? Which areas/habitats of the refuge should be managed as undisturbed wildlife sanctuary areas (closed to the public) and which areas should be open to public use? Should the refuge consider changes to the Bandon Marsh NWR waterfowl hunting program? Would allowing hunting and other wildlife-dependent recreational uses in new areas (*e.g.,* Ni-les'tun Unit) have detrimental effects on the refuge's ability to provide adequate undisturbed quality wintering habitat for waterfowl and other wildlife? Is there enough use of the refuge by migrating waterfowl to provide a quality hunting program?

Nestucca Bay NWR Preliminary Issues: What actions should the Service take to sustain and restore priority species and habitats on this refuge over the next 15 years? Based upon the refuge's priority fish and wildlife species, which are the priority habitats to monitor for invasive species, and what is the range of Integrated Pest Management strategies that should be considered to reduce the incidence and spread of invasive species? Should the Service consider restoring some pastures at Nestucca Bay NWR to tidal marsh, and what effect would this have on the refuge's ability to provide wintering habitat for geese and reduce goose depredation on neighboring private lands? Should the Cannery Hill Unit at Nestucca Bay NWR be managed specifically to restore former coastal prairie, and if so, how much emphasis should be placed on specific needs of the threatened Oregon silverspot butterfly within a larger coastal prairie restoration plan? What options should be considered for the old roadbed through Neskowin Marsh (tsunami escape route) if it is found to be impacting water flows through Neskowin Marsh? Should the Service consider designating Neskowin Marsh as a Research Natural Area? What possibilities exist for adding or enhancing existing wildlife-dependent recreational opportunities on Nestucca Bay NWR? Are existing refuge access points and uses adequate and do they provide a quality experience? Should the refuge consider establishing waterfowl hunting programs at Nestucca Bay NWR? Can the level of migrating waterfowl use on Nestucca Bay NWR support a quality hunting program?

Siletz Bay NWR Preliminary Issues: What actions should the Service take to sustain and restore priority species and habitats on this refuge over the next 15 years? Based upon the refuge's priority fish and wildlife species, which habitats are most important to monitor for invasive species? What partnering possibilities exist for treatment of aquatic invasive species such as smooth cordgrass and New Zealand mud snail? Can wetlands currently hampered by fish passage barriers and other issues be restored, and if so, how should the

Service prioritize them? What opportunities exist for adding or enhancing existing wildlife-dependent recreational opportunities and access points? Which areas of the refuge should be managed as undisturbed sanctuary areas and which areas should be considered for public access? Should the refuge consider establishing a waterfowl hunting program at Siletz Bay NWR? Would waterfowl hunting and other wildlife-dependent recreational activities have detrimental effects on the refuge's ability to provide adequate undisturbed quality wintering habitat for waterfowl? Is there enough use of the refuge by migrating waterfowl to support a quality hunting program? Should the refuge consider enhancing the currently offered seasonal opportunities to observe wildlife via guided canoe/kayak excursion through the refuge?

Public Meetings

We will hold the following public meetings. For more information, contact the person under **FOR FURTHER INFORMATION CONTACT**.

Date	Time	Location
November 29, 2010	6–9 p.m. ..	Lincoln City Community Center, 2150 NE. Oar Place, Lincoln City, OR 97367.
November 30, 2010	6–9 p.m. ..	Kiawanda Community Center, 34600 Cape Kiawanda Drive, Pacific City, OR 97135.
December 2, 2010	6–9 p.m. ..	Bandon Community Center, 1200 11th Street SW., Bandon, OR 97411.

Public Availability of Comments

Before including your address, phone number, e-mail address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Dated: October 28, 2010.

Theresa E. Rabot,

Acting Regional Director, Region 1, Portland, Oregon.

[LLCO–921000–L13200000–EL0000–LVELC10CC770; COC–74219]

Notice of Correction to Notice of Availability of the Environmental Assessment and Notice of Public Hearing for the Sage Creek Holdings, LLC, Federal Coal Lease Application, COC–74219

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of Correction.

SUMMARY: The Bureau of Land Management (BLM) is correcting the Notice of Availability of the Environmental Assessment (EA) and Notice of Public Hearing for the Sage Creek Holdings, LLC, Federal Coal Lease Application, COC–74219 published in the **Federal Register** on August 13, 2010 [75 FR 49512]. The BLM incorrectly stated that the EA was complete and available for release. The BLM subsequently determined that additional information should have been included in the cumulative impact section of the EA. The BLM will be issuing a revised EA, which will be available for a 30-day comment period upon completion. After the end of the comment period, the BLM will hold a public hearing on the EA, the fair market value and the maximum economic recovery of the proposed leased tract.

DEPARTMENT OF THE INTERIOR

National Park Service

[2462–PYB]

Information Collection Sent to the Office of Management and Budget (OMB) for Approval; OMB Control Number 1024–0022; Backcountry Use Permit

AGENCY: National Park Service, Interior.

ACTION: Notice; request for comments.

SUMMARY: We (National Park Service, NPS) have sent an Information Collection Request (ICR) to OMB for review and approval. We summarize the ICR below and describe the nature of the collection and the estimated burden and cost. This ICR is scheduled to expire on November 30, 2010. We may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. However, under OMB regulations, we may continue to conduct or sponsor this information collection while it is pending at OMB.

DATES: You must submit comments on or before December 29, 2010.

ADDRESSES: Send your comments and suggestions on this information collection to the Desk Officer for the Department of the Interior, Office of Information and Regulatory Affairs, OMB, at (202) 395–5806 (fax) or *OIRA_DOCKET@OMB.eop.gov* (e-mail). Please provide a copy of your comments to Garry Oye, Chief of Wilderness Stewardship Division, National Park Service, 1201 Eye Street NW., (Room 1004), Washington DC 20005; via fax at (202) 371–6623; or via e-mail at *Garry_Oye@nps.gov.*

FOR FURTHER INFORMATION CONTACT: To request additional information about this ICR, contact Garry Oye by mail, fax, or e-mail (*see* **ADDRESSES**) or by phone at (202) 513–7090.

SUPPLEMENTARY INFORMATION:

OMB Control Number: 1024–0022.

Title: Backcountry Use Permit (36 CFR 1.5, 1.6, and 2.10).

Form Number: 10–404A.

Type of Request: Extension of a currently approved collection.

Description of Respondents: Individuals wishing to use backcountry areas within national parks.

Respondent's Obligation: Required to obtain or retain a benefit.

Frequency of Collection: On occasion.

Estimated Number of Respondents: 285,000.

Estimated Number of Responses: 285,000.

Completion Time per Response: 0.083 hours.

Estimated Annual Burden Hours: 23,750.

Estimated Annual Nonhour Burden Cost: None.

Abstract: The Backcountry Use Permit (Form 10–404A) is used to implement a backcountry reservation system and provide access into backcountry zones where registration is required or limits are imposed in accordance with regulations. Such permitting enhances the ability of the NPS to issue hazard warnings, to conduct search and rescue efforts, and to provide resource protection.

The objectives of the permit system are to ensure: (1) Requests by backcountry users are evaluated by park managers in accordance with applicable statutes and NPS regulations; (2) use of consistent standards and permitting criteria throughout the agency; and (3) to the extent possible, use of a single permitting document.

Comments: On July 19, 2010, we published in the **Federal Register** (75 FR 41879) a notice of our intent to request that OMB renew this information collection. In that notice, we solicited comments for 60 days, ending on September 17, 2010. We did not receive any comments in response to that notice.

We again invite comments concerning this information collection on:

- Whether or not the collection of information is necessary, including whether or not the information will have practical utility;
- The accuracy of our estimate of the burden for this collection of information;
- Ways to enhance the quality, utility, and clarity of the information to be collected; and
- Ways to minimize the burden of the collection of information on respondents.

Comments that you submit in response to this notice are a matter of public record. Before including your address, phone number, e-mail address, or other personal identifying information in your comment, you should be aware that your entire comment, including your personal identifying information, may be made publicly available at any time. While you can ask OMB in your comment to withhold your personal identifying information from public review, we cannot guarantee that it will be done.

Dated: November 22, 2010.

Robert Gordon,

NPS, Information Collection Clearance Officer.

AGENCY: National Park Service, Interior.

ACTION: Notice; request for comments.

SUMMARY: We (National Park Service) have sent an Information Collection Request (ICR) to OMB for review and approval. We summarize the ICR below and describe the nature of the collection and the estimated burden and cost, and request public comment on this collection request. This information collection is scheduled to expire on November 30, 2010. We may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. However, under OMB regulations, we may continue to conduct or sponsor this information collection while it is pending at OMB.

DATES: You must submit comments on or before December 29, 2010.

ADDRESSES: Send your comments and suggestions on this information collection to the Desk Officer for the Department of the Interior, Office of Information and Regulatory Affairs, OMB, at (202) 395–5806 (fax) or *OIRA_DOCKET@OMB.eop.gov* (e-mail). Please provide a copy of your comments to Dr. John G. Dennis, Natural Resources (MIB 3130), National Park Service, 1849 C Street, NW., Washington, DC 20240; Voice: 202–513–7174; or via Fax at: 202–371–2131; or by E-mail: *WASO_NRSS_researchcoll@nps.gov.*

FOR FURTHER INFORMATION CONTACT: Dr. John G. Dennis, Natural Resources (MIB 3130), National Park Service, 1849 C Street, NW., Washington, DC 20240; *Voice:* 202–513–7174; *Fax:* 202–371–2131; *E-mail: WASO_NRSS_researchcoll@nps.gov.* If you comment to NPS via electronic mail, please submit your comments as an attached ASCII or MSWord file and avoid the use of special characters and any form of encryption. Please also include "*Attn:* NPS Research Permit and Reporting System" and your name and return address in your e-mail message. If you would like, but do not receive, a confirmation from the system that we have received your e-mail message, contact us directly at the NPS phone number given here.

SUPPLEMENTARY INFORMATION: *OMB Control Number:* 1024–0236.

Title: National Park Service Research Permit and Reporting Systems Applications and Reports.

Form Number: 10–741A & B, 10–226.

Type of Request: Extension of a currently approved collection.

Description of Respondents: Individual scientific investigators, science educators, research organizations, and science education organizations who apply for a permit.

Respondent's Obligation: Required to obtain or retain a benefit.

Frequency of Collection: On occasion.

Estimated Number of Responses: 10–741A—4,980; 10–741B—415; 10–226—5,395.

Completion Time Per Response: 10–741A—1.375; 10–741B—1.00; 10–226—0.25.

Estimated Annual Burden Hours: 10–741A—6,872; 10–741B—415; 10–226—1,349.

Estimated Annual Nonhour Burden Cost: None.

Abstract: The NPS regulates scientific research, studies and science education activities inside park boundaries under regulations codified at 36 CFR Part 2, Section 2.5. The NPS administers these regulations to provide for scientific research while also protecting park resources and other park uses from adverse impacts that could occur if inappropriate scientific research and collecting studies or science education activities were to be conducted within park boundaries.

NPS uses the collected information for managing the use and preservation of park resources and for reporting to the public the status of permitted research and collecting activities. NPS is requesting that OMB renew its approval of the current Application for a Scientific Research and Collecting Permit, Application for a Science Education Permit, and Investigator's Annual Report collection of information forms.

Comments: On July 21, 2010, we published in the **Federal Register** (75 FR 42459) a notice of our intent to request that OMB renew this information collection. In that notice, we solicited comments for 60 days, ending on September 20, 2010. NPS received one comment on this notice. The one comment stated that the commenter has "no problems with the current permitting system for full-scale research projects in the National Parks. However, I would like to recommend a simplified and rapid permitting process

for limited and targeted collecting of arthropods." NPS found that this comment did not indicate any clear reasons for changing any of the three forms.

We again invite comments concerning this information collection on:

- Whether or not the collection of information is necessary, including whether or not the information will have practical utility;
- The accuracy of our estimate of the burden for this collection of information;
- Ways to enhance the quality, utility, and clarity of the information to be collected; and
- Ways to minimize the burden of the collection of information on respondents.

Comments that you submit in response to this notice are a matter of public record. Before including your address, phone number, e-mail address, or other personal identifying information in your comment, you should be aware that your entire comment, including your personal identifying information, may be made publicly available at any time. While you can ask OMB in your comment to withhold your personal identifying information from public review, we cannot guarantee that it will be done.

Dated: November 23, 2010.

Robert Gordon,

NPS, Information Collection Clearance Officer.

Information Collection Sent to the Office of Management and Budget (OMB) for Approval; OMB Control Number 1024–0233; National Park Service Leasing Program

AGENCY: National Park Service, Interior.

ACTION: Notice; request for comments.

SUMMARY: We (National Park Service) have sent an Information Collection Request (ICR) to OMB for review and approval. We summarize the ICR below and describe the nature of the collection and the estimated burden and cost. This ICR is scheduled to expire on November 30, 2010. We may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. However, under OMB regulations, we may continue to conduct or sponsor this information collection while it is pending at OMB.

DATES: You must submit comments on or before December 29, 2010.

ADDRESSES: Send your comments and suggestions on this information collection to the Desk Officer for the Department of the Interior, Office of Information and Regulatory Affairs, OMB, at (202) 395–5806 (fax) or *OIRA_DOCKET@OMB.eop.gov* (e-mail). Please provide a copy of your comments to Jo A. Pendry, Chief, Commercial Services Program, National Park Service, 1201 Eye Street, NW., 11th Floor, Washington, DC 20005, via fax at (202) 371–2090; at via e-mail at *jo_pendry@nps.gov.*

FOR FURTHER INFORMATION CONTACT: To request additional information about this ICR contact Erica Chavis, Concessions Assistant, National Park Service, by mail at 1201 Eye Street, NW, 11th Floor, Washington, DC 20005, via fax at (202) 371–2090, via e-mail at *Erica_chavis@nps.gov,* or by telephone at (202) 513–7144.

SUPPLEMENTARY INFORMATION:

OMB Control Number: 1024–0233.

Title: National Park Service Leasing Program.

Form Number: None.

Type of Request: Revision of a currently approved collection.

Description of Respondents: Individuals seeking to lease or in current lease agreements for National Park Service-controlled public property and facilities.

Respondent's Obligation: Required to obtain or retain a benefit.

Frequency of Collection: On occasion.

Estimated Number of Respondents: 327.

Estimated Number of Responses: 327.

Completion Time per Response: 4.62 hours.

Estimated Annual Burden Hours: 1,512.

Estimated Annual Nonhour Burden Cost: None.

Abstract: The National Park Service leasing program allows the public to lease property located within the boundaries of the park system. Information is collected from anyone who wishes to submit a bid or proposal in response to a Request for Bids or a Request for Proposals; or from current lease holders who wish to sublet a leased property or assign the lease to a new lessee, construct or demolish portions of a leased property, amend a lease to change the type of activities permitted under the lease, or encumber (mortgage) the leased premises. The information collected will be used to evaluate offers, proposed subleases or assignments, proposed construction or demolition, the merits of proposed lease amendments, and proposed encumbrances.

Comments: On July 24, 2010, we published in the **Federal Register** (75 FR 40849) a notice of our intent to request that OMB renew this information collection. In that notice, we solicited comments for 60 days, ending on June 4, 2010. We did not receive any comments in response to that notice.

We again invite comments concerning this information collection on:

- Whether or not the collection of information is necessary, including whether or not the information will have practical utility;
- The accuracy of our estimate of the burden for this collection of information;
- Ways to enhance the quality, utility, and clarity of the information to be collected; and
- Ways to minimize the burden of the collection of information on respondents.

Comments that you submit in response to this notice are a matter of public record. Before including your address, phone number, e-mail address, or other personal identifying information in your comment, you should be aware that your entire comment, including your personal identifying information, may be made publicly available at any time. While you can ask OMB in your comment to withhold your personal identifying information from public review, we cannot guarantee that it will be done.

Dated: *November 22, 2010.*

Robert Gordon,

NPS, Information Collection Clearance Officer.

DEPARTMENT OF THE INTERIOR

National Park Service

[2330–RYY]

Proposed Information Collection; National Park Service Visitor Survey Card

AGENCY: National Park Service, Interior.

ACTION: Notice; request for comments.

SUMMARY: Under the provisions of the Paperwork Reduction Act of 1995 and 5 CFR part 1320, Reporting and Record Keeping Requirements, the National Park Service (NPS) invites public comments on renewal of an information

collection approved under OMB Control Number 1024–0216.

DATES: Public comments on this Information Collection Request (ICR) will be accepted on or before December 29, 2010.

ADDRESSES: Please send your comments and suggestions on this ICR to the Desk Officer for the Department of the Interior at OMB–OIRA at (202) 395–5806 (fax) or *OIRA_DOCKET@OMB.eop.gov* (e-mail). Please also send a copy of your comments on the ICR to Dr. Bruce Peacock, NPS Social Science Division, 1201 Oakridge Drive, Fort Collins, CO 80525; or at *Bruce_Peacock@nps.gov* (e-mail).

FOR FURTHER INFORMATION CONTACT: Jennifer Hoger-Russell, Park Studies Unit, College of Natural Resources, University of Idaho, P.O. Box 441139, Moscow, ID 83844–1139; *Phone:* (208) 885–4806; *Fax:* (208) 885–4216; *jhoger@uidaho.edu* (e-mail).

SUPPLEMENTARY INFORMATION:

I. Abstract

The National Park Service Act of 1916, 38 Stat 535, 16 U.S.C. 1, *et seq.,* requires that the NPS preserve national parks for the use and enjoyment of present and future generations. At the field level, this means resource preservation, public education, facility maintenance and operation, and physical developments as are necessary for public use, health, and safety. Other Federal mandates (National Environmental Policy Act and NPS Management Policies) require visitor use data in the impact assessment of development on users and resources as part of each park's general management plan. The Government Performance and Results Act (GPRA) of 1993 (Pub. L. 103–62) requires that the NPS develop goals to improve program effectiveness and public accountability and to measure performance related to these goals. The Visitor Survey Card (VSC) project measures performance toward those goals through a short visitor survey card. The project is an element of the NPS Strategic Plan and the Department of the Interior (DOI) Strategic Plan.

The NPS has used the VSC to conduct surveys at approximately 330 National Park Service units annually since 1998. The purpose of the VSC is to measure visitors' opinions about park facilities, services, and recreational opportunities in each park unit and System-wide. This effort is required by GPRA and other NPS and DOI strategic planning efforts. Data from the proposed survey is needed to assess performance regarding NPS GPRA goals IIa1A and IIb1.

In addition, the survey collects data to support the DOI Strategic Plan goal on visitor satisfaction with the value for entrance fees paid to access public lands managed by the DOI. NPS performance on all goals measured in this study will contribute to DOI Department-wide performance reports. Results of the VSC will also be used by park managers to improve visitor services at the approximately 330 units of the National Park System where the survey is administered.

The VSC is a component of the Visitor Services Project, which is funded by the NPS through a cooperative agreement with the Park Studies Unit at the University of Idaho, and has been in use since 1998.

II. Data

OMB Number: 1024–0216.

Title: National Park Service Visitor Survey Card.

Type of Request: This is a renewal of a currently approved collection.

Respondent Obligation: Voluntary.

Frequency of Collection: One-time per respondent.

Description of respondents: Visitors to approximately 330 NPS units.

Estimated average number of respondents: 132,000 visitors who accept the survey card (92,400 non-respondents and 39,600 respondents) and 1,188 visitors who refuse to take the survey card but are willing to answer the two demographic questions and the overall satisfaction question.

Estimated average burden hours per response: 1 minute for non-respondents, 3 minutes for respondents, and 2 minutes for visitors who refuse to take the survey card but are willing to answer the two demographic questions and the overall satisfaction question.

Estimated annual reporting burden: 3,540 hours.

III. Request for Comments

We are inviting comments concerning this ICR on: (a) Whether the proposed collection of information is necessary for the agency to perform its duties, including whether the information is useful; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, usefulness, and clarity of the information to be collected; and (d) ways to minimize the burden on the respondents, including the use of automated collection techniques or other forms of information technology.

Comments that you submit in response to this notice are a matter of public record. Before including your address, phone number, e-mail address or other personal identifying information in your comment, you should be aware that your entire comment including your personal identifying information, may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Dated: November 23, 2010.

Robert Gordon,

Information Collection Clearance Officer, National Park Service.

[FR Doc. 2010–29974 Filed 11–26–10; 8:45 am]

BILLING CODE 4312–52–P

INTERNATIONAL TRADE COMMISSION

[Investigation No. 337–TA–687]

Certain Video Displays, Components Thereof, and Products Containing Same; Notice of Commission Determination to Review a Final Initial Determination in Part and Set a Schedule for Filing Written Submissions on the Issues Under Review and on Remedy, the Public Interest, and Bonding

AGENCY: U.S. International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that the U.S. International Trade Commission has determined to review in part the final initial determination ("ID") issued by the presiding administrative law judge ("ALJ") on September 17, 2010, in the above-captioned investigation.

FOR FURTHER INFORMATION CONTACT: Michael Liberman, Office of the General Counsel, U.S. International Trade Commission, 500 E Street, SW., Washington, DC 20436, telephone (202) 205–3116. Copies of non-confidential documents filed in connection with this investigation are or will be available for inspection during official business hours (8:45 a.m. to 5:15 p.m.) in the Office of the Secretary, U.S. International Trade Commission, 500 E Street, SW., Washington, DC 20436, telephone (202) 205–2000. General information concerning the Commission may also be obtained by accessing its Internet server at *http://www.usitc.gov.* The public record for this investigation may be viewed on the Commission's electronic docket (EDIS) at *http://edis.usitc.gov.* Hearing-impaired

persons are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on (202) 205–1810.

SUPPLEMENTARY INFORMATION: This investigation was instituted on September 16, 2009, based on a complaint filed by LG Electronics, Inc. ("LG"), alleging a violation of section 337 in the importation, sale for importation, and sale within the United States after importation of certain video displays, components thereof, or products containing same that infringe one or more of claims 24 and 25 of U.S. Patent No. 5,790,096; claims 1–9 of U.S. Patent No. 5,537,612; claim 1 of U.S. Patent No. 5,459,522; claims 1–5 and 7–16 of U.S. Patent No. 7,154,564. 74 FR 47616 (2009) Complainant named Funai Electric Company, Ltd. of Osaka, Japan, Funai Corporation, Inc. of Rutherford, New Jersey, P&F USA, Inc. of Alpharetta, Georgia (collectively, "Funai"), and Vizio, Inc. of Irvine, California ("Vizio") as respondents. On January 8, 2010, the presiding ALJ issued an ID granting Complainant's motion for leave to file a second amended complaint and amend the Notice of Investigation to, *inter alia,* add AmTran Technology Co. Ltd. and AmTran Logistics, Inc. as respondents to the investigation. Order No. 12 (unreviewed by the Commission). Subsequently, respondents Funai Electric Company, Ltd., Funai Corporation, Inc., and P&F USA, Inc. were terminated from the investigation based on a settlement agreement.

The evidentiary hearing on violation of Section 337 was held from June 9, 2010 through June 21, 2010. On September 17, 2010, the ALJ issued his final ID finding a violation of section 337. All the parties to the investigation, including the Commission investigative attorney (IA), filed timely petitions for review of various portions of the final ID, as well as timely responses to the petitions.

Having examined the record in this investigation, including the ALJ's final ID, the petitions for review, and the responses thereto, the Commission has determined to review the ID in part. In particular, the Commission has determined to review: (1) The ID's finding that dependent claims 4, 6, and 7 of the '612 patent are not invalid as anticipated or obvious; (2) the ID's findings and conclusions with respect to independent claim 5 of the '564 patent. The Commission has determined not to review the remainder of the final ID.

On review, the Commission requests briefing on the above-listed issues based on the evidentiary record. The Commission is particularly interested in responses to the following questions:

(1) With respect to the '612 patent:

(a) Does the record evidence show, clearly and convincingly, that claim 4 is anticipated by: (i) The CableData HTU device (RPX–4); (ii) U.S. Patent No. 4,896,354 ("the '354 patent"); and (iii) U.S. Patent No. 4,930,160 ("the '160 patent")?

(b) Does the record evidence show, clearly and convincingly, that claim 4 is obvious in view of any of the above prior art references alleged to anticipate claim 4?

(c) Does the record evidence show, clearly and convincingly, that claim 6 is anticipated by: (i) the '160 patent; (ii) U.S. Patent No. 4,510,623 ("the '623 patent"); (iii) U.S. Patent No. 5,033,085 ("the '085 patent"); and (iv) the '354 patent?

(d) Does the record evidence show, clearly and convincingly, that claim 6 is obvious in view of any of the above prior art references alleged to anticipate claim 6?

(e) Does the record evidence show, clearly and convincingly, that claim 7 is anticipated by: (i) The '160 patent; (ii) the '623 patent; (iii) the '085 patent; and (iv) the '354 patent?

(f) Does the record evidence show, clearly and convincingly, that claim 7 is obvious in view of any of the above prior art references alleged to anticipate claim 7?

(2) With respect to the '564 patent:

(a) Does the record evidence show that claim 5 is infringed?

In connection with the final disposition of this investigation, the Commission may (1) issue an order that could result in the exclusion of the subject articles from entry into the United States, and/or (2) issue one or more cease and desist orders that could result in the respondent being required to cease and desist from engaging in unfair acts in the importation and sale of such articles. Accordingly, the Commission is interested in receiving written submissions that address the form of remedy, if any, that should be ordered. If a party seeks exclusion of an article from entry into the United States for purposes other than entry for consumption, the party should so indicate and provide information establishing that activities involving other types of entry either are adversely affecting it or are likely to do so. For background, see *In the Matter of Certain Devices for Connecting Computers via Telephone Lines,* Inv. No. 337–TA–360, USITC Pub. No. 2843 (Dec. 1994) (Commission Opinion).

If the Commission contemplates some form of remedy, it must consider the effects of that remedy upon the public interest. The factors the Commission will consider include the effect that an exclusion order and/or cease and desist orders would have on (1) the public health and welfare, (2) competitive conditions in the U.S. economy, (3) U.S. production of articles that are like or directly competitive with those that are subject to investigation, and (4) U.S. consumers. The Commission is therefore interested in receiving written submissions that address the aforementioned public interest factors in the context of this investigation.

If the Commission orders some form of remedy, the U.S. Trade Representative, as delegated by the President, has 60 days to approve or disapprove the Commission's action. See Presidential Memorandum of July 21, 2005. 70 FR 43251 (July 26, 2005). During this period, the subject articles would be entitled to enter the United States under bond, in an amount determined by the Commission. The Commission is therefore interested in receiving submissions concerning the amount of the bond that should be imposed.

Written Submissions: The parties to the investigation are requested to file written submissions on the issues under review. The submissions should be concise and thoroughly referenced to the record in this investigation. Parties to the investigation, interested government agencies, and any other interested parties are encouraged to file written submissions on the issues of remedy, the public interest, and bonding. Such submissions should address the recommended determination by the ALJ on remedy and bonding. Complainant and the Commission investigative attorney are also requested to submit proposed remedial orders for the Commission's consideration. Complainant is further requested to provide the expiration date of the involved patents and state the HTSUS numbers under which the accused articles are imported. The written submissions and proposed remedial orders must be filed no later than the close of business on December 3, 2010. Reply submissions must be filed no later than the close of business on December 10, 2010. No further submissions on these issues will be permitted unless otherwise ordered by the Commission.

Persons filing written submissions must file the original document and 12 true copies thereof on or before the deadlines stated above with the Office of the Secretary. Any person desiring to submit a document (or portion thereof) to the Commission in confidence must

request confidential treatment unless the information has already been granted such treatment during the proceedings. All such requests should be directed to the Secretary of the Commission and must include a full statement of the reasons why the Commission should grant such treatment. *See* section 201.6 of the Commission's Rules of Practice and Procedure, 19 CFR 201.6. Documents for which confidential treatment by the Commission is sought will be treated accordingly. All nonconfidential written submissions will be available for public inspection at the Office of the Secretary.

The authority for the Commission's determination is contained in section 337 of the Tariff Act of 1930, as amended (19 U.S.C. 1337), and in sections 210.42-.46 of the Commission's Rules of Practice and Procedure (19 CFR 210.42-.46).

Issued: November 19, 2010.

By order of the Commission.

Marilyn R. Abbott,

Secretary to the Commission.

[FR Doc. 2010–29911 Filed 11–26–10; 8:45 am]

BILLING CODE 7020–02–P

INTERNATIONAL TRADE COMMISSION

[Investigation No. 337–TA–690]

Certain Printing and Imaging Devices and Components Thereof; Notice of Commission Determination To Review-in-Part a Final Determination Finding a Violation of Section 337; Schedule for Filing Written Submissions on the Issues Under Review and on Remedy, the Public Interest, and Bonding

AGENCY: U.S. International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that the U.S. International Trade Commission has determined to review a portion of the final initial determination ("ID") issued by the presiding administrative law judge ("ALJ") on September 23, 2010 finding a violation of section 337 and to request briefing on the issues under review and on remedy, the public interest, and bonding.

FOR FURTHER INFORMATION CONTACT: Daniel E. Valencia, Office of the General Counsel, U.S. International Trade Commission, 500 E Street, SW., Washington, DC 20436, telephone (202) 205–1999. Copies of non-confidential documents filed in connection with this investigation are or will be available for inspection during official business hours (8:45 a.m. to 5:15 p.m.) in the Office of the Secretary, U.S. International Trade Commission, 500 E Street, SW., Washington, DC 20436, telephone (202) 205–2000. General information concerning the Commission may also be obtained by accessing its Internet server at *http://www.usitc.gov.* The public record for this investigation may be viewed on the Commission's electronic docket (EDIS) at *http://edis.usitc.gov.* Hearing-impaired persons are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on (202) 205–1810.

SUPPLEMENTARY INFORMATION: The Commission instituted this investigation on October 26, 2009, based on a complaint filed by Ricoh Company, Ltd. of Tokyo, Japan; Ricoh Americas Corporation of West Caldwell, New Jersey; and Ricoh Electronics, Inc. of Tustin, California (collectively "Ricoh"). 74 FR 55065 (Oct. 26, 2009). The complaint alleged, *inter alia,* violations of section 337 in the importation into the United States, the sale for importation, and the sale within the United States after importation of certain printing and imaging devices and components thereof by reason of infringement of U.S. Patent Nos. 6,209,048 ("the '048 patent"); 6,212,343 ("the '343 patent"); 6,388,771 ("the '771 patent"); 5,764,866 ("the '866 patent); and 5,863,690 ("the '690 patent"). The complaint named Oki Data Corporation of Tokyo, Japan and Oki Data Americas, Inc. of Mount Laurel, New Jersey (collectively "Oki") as respondents.

On September 23, 2010, the ALJ issued his final ID finding that Oki violated section 337 in the importation into the United States, the sale for importation, and the sale within the United States after importation of certain printing and imaging devices and components thereof by reason of infringement of several claims in the '690 patent. The ALJ found that Oki has not violated section 337 with respect to the '048, '343, '771, and '866 patents. Along with the ID, the ALJ issued a recommended determination on remedy and bonding ("RD"). Complainant Ricoh, respondent Oki, and the Commission investigative attorney ("IA") filed petitions for review of the ID on October 6, 2010. Ricoh, Oki, and the IA each filed responses to the petitions for review on October 14, 2010.

Having examined the record of this investigation, including the ALJ's final ID, the petitions for review, and the responses thereto, the Commission has determined to review the final ID in part. In particular, the Commission has determined to review all findings and conclusions relating to whether a violation of section 337 has occurred with respect to the '343 and '690 patents.

The parties are requested to brief their positions on the issues under review with reference to the applicable law and the evidentiary record. In connection with its review, the Commission is particularly interested in responses to the following questions:

The '343 Patent

(1) The Commission has determined to review all findings relating to the limitation "a direction orthogonal to a longitudinal direction of the developing roller," as recited in the asserted claims of the '343 patent.

(a) Please state your position on the meaning of "a longitudinal direction of the developing roller," as recited in the asserted claims. How does your position differ from the ALJ's construction?

(b) Specifically, does "a longitudinal direction" include any line extending parallel to the central axis of the roller? Or, does this refer to the central axis itself?

(c) Please state your position on the meaning of "a direction orthogonal to a longitudinal direction of the developing roller." Please take into account that the planar blade is bent along its entire width, and do not confine your analysis to two-dimensional cross-sections.

(d) Assuming "a longitudinal direction" can include any line extending parallel to the central axis of the roller, can "a direction orthogonal" refer to a direction that is not perpendicular to the surface of the roller, *i.e.,* a tangent extending through the surface of the roller?

(e) Given the planar shape of the blade contacts the roller in three dimensions along the entire width of the blade, and is bent along the entire width of the blade, is there any bend that would not meet the "direction orthogonal" limitation?

(f) How does your answer to (d) comport with the preferred embodiment of the '343 patent shown in Figures 8A and 8B? Is the blade 17 shown in Figures 8A and 8B bent in "a direction orthogonal to a longitudinal direction of the developing roller?"

(g) How do your answers to (a) through (e) affect the ALJ's findings regarding infringement, validity, and domestic industry?

(2) The Commission has determined to review the ALJ's construction of "a lower edge," as recited in the asserted claims of the '343 patent. The asserted claims of the '343 patent recite, among other things:

wherein the blade includes a wide-width part * * * and *a narrow-width part * * * configured * * * to be [sic] bend in a direction orthogonal* to a longitudinal direction of the developing roller * * * and the narrow-width part is disposed *downstream of the contact point of the blade and the roller part* * * * in the rotation direction.

JX–4 ('343 patent), col. 25, ll. 16–30 (emphasis added).

(a) Please explain whether the language emphasized above informs the meaning of "a lower edge."

(b) Can the claimed "a lower edge" refer to an edge of the "narrow-width part," an edge of the "wide-width part," or both?

(c) If the narrow-width part of the blade is bent away from the roller such that the edge opposite the boundary between the wide-width part and the narrow-width part does not contact the roller, as shown in Figures 8A, 8B, and 12, how should "a lower edge" be construed?

(d) Can "a lower edge thereof contacts the roller part of the developing roller" refer to contact between the roller and an area extending from the lower edge of the blade to a point on the blade slightly above the lower edge?

(e) How do your answers to (a) through (d) affect the ALJ's findings regarding infringement, validity, and domestic industry?

The '690 Patent

(1) The Commission has determined to review the ALJ's determination of the level of ordinary skill in the art of the '690 patent. See ID at 99. Please comment on what the level of ordinary skill in the art is with respect to the '690 patent. Please provide specific citations to the record and testimony. Although the parties are invited to brief their respective positions generally on this issue, the Commission is specifically interested in answers to the following questions:

(a) Would it be appropriate for the Commission to modify the ALJ's determination to add the fields of applied rheology and/or applied material science to the types of experience that would satisfy the three-year minimum requirement in the ALJ's determination?

(b) Would it be appropriate for the Commission to modify or remove the ALJ's determination to remove the three-year minimum experience requirement altogether?

(c) Would it be appropriate for the Commission to modify the ALJ's familiarity requirement by, for example, requiring familiarity with at least one (as opposed to all) of the following technological areas: heat transfer, fuser roller design and technology, toner rheology, toner adhesion, release agent management, nip geometry, image fixing, paper path geometry, contact angle and surface roughness characteristics and testing of xerographic user rollers?

(d) Would it be appropriate for the Commission to modify the ALJ's familiarity requirement to remove any technological areas not directly related to the interaction between a toner and a fuser roller?

(2) The Commission has determined to review the ALJ's determination that the asserted claims of the '690 patent are not anticipated.

(a) What are the "above-mentioned surface physical properties" mentioned in column 6, lines 4–5 of the '690 patent?

(b) Please comment on whether examples 1 and 2 of the '690 patent inform the patent's statement in column 6 that PTFE (polytetrafkuoroethylene) and polytetrafluoroethylene/perfluoralkylvinylether (PFA) are "[s]pecific examples of materials for the fixing member which easily satisfy the above-mentioned surface physical properties."

(c) Under what circumstances (if any) would a PTFE fuser roller not have an adhesion constant ratio of less than about 8.0 when measuring receding and static contact angles using 2-nitropropane and n-heptane, respectively, as set forth in the '690 patent?

(d) To what extent is the adhesion constant ratio dependent on the surface roughness of the fuser roller and composition of the toner? How does the subject matter of dependent claims 9–16 inform your response, if at all?

(e) Is it appropriate under current legal precedent to consider the asserted patent's disclosure in determining what would be inherent in the prior art?

(f) Please comment on whether the dependent claims of the '690 patent are anticipated or obvious, assuming claim 1 of the '690 patent is found to be anticipated.

(g) What materials are the OL 400 rollers and OL 1200 rollers coated with? Has this material changed since the critical date of the '690 patent?

(3) Please state your position with respect to contributory infringement by Oki of the asserted claims of the '690 patent.

(4) Please provide a summary of Ricoh's annual labor costs associated with the C200 domestic product. Please isolate costs by year and indicate any possible trends.

(5) Are the C200 MFP's "articles protected by the ['690] patent" under section 337(a)(2)?

As to the '048, '771, and '866 patents, the Commission has determined that Oki did not violate section 337. The Commission has determined to review and take no position on the following findings and conclusions in the ID, however:

(1) The finding that the Taylor reference ("A Telerobot on the World Wide Web") (RX–281) does not anticipate or render obvious claims 19–21 and 23 of the '048 patent;

(2) The finding that U.S. Patent Nos. 5,657,448 and 5,784,622 do not anticipate or render obvious the asserted claims of the '048 patent;

(3) The ALJ's determination not to construe the following claim terms in the '048 patent: "descriptor," "resource identifier defining a resource and its location," "command," and "interconnected, on-line documents";

(4) The construction of "communications mechanism" in claim 19 of the '048 patent and associated findings on the issues of infringement, domestic industry, and validity;

(5) The finding that Japanese Published Application No. JP H07–306934 does not anticipate or render obvious the asserted claims of the '771 patent; and

(6) The finding that claim 13 of the '771 patent is infringed.

The Commission has determined to review the ALJ's findings that the claim terms "scan means," "print means," "copy means," and "test means" of the '866 patent, and the claim terms "scanning means," "means for setting an operation code," and "a code unit for setting an operation code" of the '771 patent do not render the asserted claims indefinite. Upon review, the Commission has determined that the terms at issue are not indefinite under the relevant standard set forth in *Aristocrat Technologies.* v. *International Game Technology,* 521 F.3d 1328, 1337 (Fed. Cir. 2008). The Commission adopts the ALJ's substantive analysis of these issues set forth in his Order No. 29 (May 4, 2010).

In connection with the final disposition of this investigation, the Commission may (1) issue an order that could result in the exclusion of the subject articles from entry into the United States, and/or (2) issue one or more cease and desist orders that could result in the respondent(s) being required to cease and desist from engaging in unfair acts in the importation and sale of such articles. Accordingly, the Commission is

interested in receiving written submissions that address the form of remedy, if any, that should be ordered. If a party seeks exclusion of an article from entry into the United States for purposes other than entry for consumption, the party should so indicate and provide information establishing that activities involving other types of entry either are adversely affecting it or likely to do so. For background, *see In the Matter of Certain Devices for Connecting Computers via Telephone Lines,* Inv. No. 337–TA–360, USITC Pub. No. 2843 (December 1994) (Commission Opinion).

If the Commission contemplates some form of remedy, it must consider the effects of that remedy upon the public interest. The factors the Commission will consider include the effect that an exclusion order and/or cease and desist orders would have on (1) the public health and welfare, (2) competitive conditions in the U.S. economy, (3) U.S. production of articles that are like or directly competitive with those that are subject to investigation, and (4) U.S. consumers. The Commission is therefore interested in receiving written submissions that address the aforementioned public interest factors in the context of this investigation.

If the Commission orders some form of remedy, the U.S. Trade Representative, as delegated by the President, has 60 days to approve or disapprove the Commission's action. *See* Presidential Memorandum of July 21, 2005, 70 FR 43251 (July 26, 2005). During this period, the subject articles would be entitled to enter the United States under bond, in an amount determined by the Commission and prescribed by the Secretary of the Treasury. The Commission is therefore interested in receiving submissions concerning the amount of the bond that should be imposed if a remedy is ordered.

Written Submissions: The parties to the investigation are requested to file written submissions on the issues identified in this notice. Parties to the investigation, interested government agencies, and any other interested parties are encouraged to file written submissions on the issues of remedy, the public interest, and bonding. Such submissions should address the ALJ's recommendation on remedy and bonding set forth in the RD. Complainants and the IA are also requested to submit proposed remedial orders for the Commission's consideration. Complainants are also requested to state the date that the '690 and '343 patents expire and the HTSUS numbers under which the accused products are imported. The written submissions and proposed remedial orders must be filed no later than close of business on Thursday December 9, 2010. Reply submissions must be filed no later than the close of business on Friday December 17, 2010. No further submissions on these issues will be permitted unless otherwise ordered by the Commission.

Persons filing written submissions must file the original document and 12 true copies thereof on or before the deadlines stated above with the Office of the Secretary. Any person desiring to submit a document to the Commission in confidence must request confidential treatment unless the information has already been granted such treatment during the proceedings. All such requests should be directed to the Secretary of the Commission and must include a full statement of the reasons why the Commission should grant such treatment. *See* 19 CFR 210.6. Documents for which confidential treatment by the Commission is sought will be treated accordingly. All nonconfidential written submissions will be available for public inspection at the Office of the Secretary.

The authority for the Commission's determination is contained in section 337 of the Tariff Act of 1930, as amended (19 U.S.C. 1337), and in sections 210.42–46 and 210.50 of the Commission's Rules of Practice and Procedure (19 CFR 210.42–46 and 210.50).

Issued: November 22, 2010.

By order of the Commission.

Marilyn R. Abbott,

Secretary to the Commission.

[FR Doc. 2010–29910 Filed 11–26–10; 8:45 am]

BILLING CODE 7020–02–P

DEPARTMENT OF JUSTICE

Notice of Lodging of Consent Decree and Environmental Settlement under the Comprehensive Environmental Response, Compensation and Liability Act, and the Resource Conservation and Recovery Act

Notice is hereby given that on November 23, 2010, a proposed Consent Decree and Environmental Settlement Agreement ("Settlement Agreement") in the matter of In re: Tronox Incorporated, *et al.,* Case No.09–10156 (ALG) (Jointly Administered), was lodged with the United States Bankruptcy Court for the Southern District of New York.

The parties to the proposed Settlement Agreement are Tronox Incorporated, and fourteen of its affiliates (collectively, "Tronox" or "Debtors"), the United States, the Navajo Nation, twenty-two states, and several municipalities (collectively, the "Governmental Environmental Claimants"). The proposed Settlement Agreement creates five environmental response trusts and provides for Tronox to pay $270 million and certain other consideration to the environmental response trusts and Governmental Environmental Claimants. Additionally, Tronox is to assign its rights in a pending fraudulent conveyance lawsuit against its former parent, Kerr-McGee Corporation, and Anadarko Petroleum Corporation, which purchased Kerr-McGee, to a litigation trust that will pay 88% of its net recoveries to the environmental response trusts and Governmental Environmental Claimaints. The fraudulent conveyance lawsuit alleges that Kerr-McGee and Anadarko defrauded Tronox and its creditors, including the United States, by imposing on Tronox all of Kerr-McGee's environmental liabilities without sufficient means to satisfy those liabilities.

The Settlement Agreement resolves certain environmental liabilities of the Debtors to the Governmental Environmental Claimants at more than 2000 sites and indicates the amount of cash and percentage of net recoveries from the fraudulent conveyance action that will be provided by site. Among the sites included in the settlement are:

The Mobile Pigment Complex, Mobile, AL
The former Petroleum Terminal Site, Birmingham, AL
The Jacksonville AgChem Site, Jacksonville, FL
The former titanium dioxide Plant, Savannah, GA
The Rare Earths Facility, W. Chicago, IL
The Kress Creek and Residential Areas Sites, W. Chicago, IL
The Lindsay Light Thorium Sites, Chicago, IL
The former wood treating facility, Madison, IL
The Soda Springs Vanadium Plant, Soda Springs, ID
The former wood treating facility, Columbus, MS
The former wood treating facility, Hattiesburg, MS
The Navassa wood treating Site, Wilmington, NC
The Henderson Facility, Henderson, NV
The former wood treating facility, Bossier City, LA
The Calhoun Gas Plant Site, Calhoun, LA
The Fireworks Site, Hanover, MA
The former nuclear fuels facility, Cimarron, OK
The Cleveland Refinery Site, Cleveland, OK

The Cushing Refinery Sites, Cushing, OK
The Corpus Christi Petrol Terminal Site, CC, TX
The former wood treating facility, Texarkana, TX
The former wood treating facility, Kansas City, MO
The former wood treating facility, Springfield, MO
The former wood treating facility, Rome, NY
The former wood treating facility, Avoca, PA
The Riley Pass Mine Site, Harding County, SD
The former wood treating facility, Indianapolis, IN more than 50 former uranium mines and mills, including Shiprock, Churchrock, and Ambrosia Lake on and in the vicinity of Navajo Nation, NM, AZ
The White King/Lucky Lass mine site, Lakeview, OR
The Toledo Tie Site, Toledo, OH
The Welsbach Gas and Mantle Site, Camden, NJ
The former Federal Creosote facility, Manville, NJ
The former Moss American Site, Milwaukee, WI more than 1800 current and former service stations in twenty-four states

The Department of Justice will receive for a period of thirty (30) days from the date of this publication comments relating to the Consent Decree and Settlement Agreement. Comments should be addressed to the Assistant Attorney General, Environment and Natural Resources Division, and either e-mailed to *pubcomment-ees.enrd@usdoj.gov* or mailed to P.O. Box 7611, U.S. Department of Justice, Washington, DC 20044–7611, and should refer to In re Tronox, Incorporated *et al.,* D.J. Ref. 90–11–3–09688. Commenters may request an opportunity for a public meeting in the affected area, in accordance with section 7003(d) of RCRA,42 U.S.C. 6973(d).

The Consent Decree and Settlement Agreement may be examined at the Office of the United States Attorney, 86 Chambers Street—3rd Floor, New York, New York 10007. During the public comment period, the Consent Decree and Settlement Agreement may also be examined on the following Department of Justice Web site: *http://www.usdoj.gov/enrd/Consent_Decrees.html.* A copy of the Consent Decree and Settlement Agreement may also be obtained by mail from the Consent Decree Library, P.O. Box 7611, U.S. Department of Justice, Washington, DC 20044–7611 or by faxing or e-mailing a request to Tonia Fleetwood (*tonia.fleetwood@usdoj.gov*), fax no. (202) 514–0097, phone confirmation number (202) 514–1547. In requesting a copy from the Consent Decree Library, please enclose a check in the amount of $53.25 (213 pages, exclusive of signature pages and attachments; 25 cents per page reproduction cost) or $123.75 (495 pages, including signatures and attachments) payable to the U.S. Treasury or, if by e-mail or fax, forward a check in that amount to the Consent Decree Library at the stated address.

Maureen M. Katz,

Assistant Chief, Environmental Enforcement Section, Environment and Natural Resources Division.

BILLING CODE 4410–CW–P

DEPARTMENT OF LABOR

Employment and Training Administration

[TA–W–70,599]

Innovion Corporation, Gresham, OR; Notice of Negative Determination on Reconsideration

On March 31, 2010, the Department of Labor issued an Affirmative Determination Regarding Application for Reconsideration for the workers and former workers of Innovion Corporation, Gresham, Oregon (subject firm). The notice was published in the **Federal Register** on April 19, 2010 (75 FR 20382). The workers supply ion implantation services for firms in the semiconductor industry.

The initial investigation resulted in a negative determination based on the finding that there was no shift to/acquisition from a foreign country by the workers' firm of services like or directly competitive with the ion implantation services supplied by the subject firm and no increased import by either the subject firm or its major declining customers of services like or directly competitive with the ion implantation services supplied by the subject firm [Section 222(a)]. Further, the workers are not eligible to apply for Trade Adjustment Assistance (TAA) as adversely affected secondary workers [Section 222(c)] or workers of a firm identified by the International Trade Commission as a member of a domestic industry injured under a provision of the Tariff Act of 1930 [Section 222(f)].

The initial investigation concluded that worker separations were attributable to a customer's decision to perform ion implantation services in-house instead of using the subject firm.

During the reconsideration investigation, the Department sought clarification from the subject firm's headquarters and conducted an expanded customer survey of the subject firm's major declining customers, including those identified in the request for reconsideration.

Information provided during the reconsideration investigation confirmed no shift to/acquisition from another country by the subject firm in the supply of ion implantation services, and no increased imports of ion implantation services, or like or directly competitive services, by the subject firm during the relevant period.

The customer survey conducted during the reconsideration investigation showed that, during the relevant time period, the three largest declining customers of the subject firm did not import services like or directly competitive with the ion implantation services provided by the subject workers.

Together, the surveyed customers accounted for 92 percent of subject firm sales in 2007, 89 percent of subject firm sales in 2008, and 84 percent of subject firm sales during the first four months of 2009. Those customers also accounted for 109 percent of the sales decline of the subject firm from 2007 to 2008 and 97 percent of the subject firm's sales decline during the first four months of 2009 as compared with the same period of 2009.

The assertion that the subject firm should be certified as a result of the certification of customer LSI Logic (TA–W–55,958; certified on November 3, 2003) was not investigated on reconsideration because a shift to a foreign country by a customer cannot be a basis of certification absent under Section 222(a), which requires that there has been a shift to a foreign country by the subject firm. Further, the certification of the Chandler, Arizona facility (TA–W–71,648) cannot be the basis of certification of workers of the Gresham, Oregon facility as adversely affected secondary workers because the certification of the Chandler, Arizona facility was based on the satisfaction of Section 222(c) and Section 222(c) requires that the primary firm be certified under Section 222(a).

Conclusion

After reconsideration, I affirm the original notice of negative determination of eligibility to apply for worker adjustment assistance for workers and former workers of Innovion Corporation, Gresham, Oregon.

Signed in Washington, DC, this 15th day of November 2010.

Del Min Amy Chen,

Certifying Officer, Office of Trade Adjustment Assistance.

DEPARTMENT OF LABOR

Employment and Training Administration

[TA–W–70,910]

Sypris Technologies, Sypris Solutions Division, Kenton, OH; Notice of Revised Determination on Reconsideration

On October 7, 2010, the Department of Labor issued a Notice of Affirmative Determination Regarding Application for Reconsideration applicable to the request for administrative reconsideration filed by the United Steel Workers, Local 1–109, on behalf of workers and former workers of Sypris Technologies, Sypris Solutions Division, Kenton, Ohio (subject firm). The Department's Notice was published in the **Federal Register** on October 25, 2010 (75 FR 65514).

The initial investigation resulted in a negative determination that was based on the findings that increased imports did not contribute importantly to worker separations at the subject firm and no shift in production to a foreign country occurred.

During the reconsideration investigation, the Department conducted an expanded survey of the subject firm's major declining customers to supplement the information gathered during the initial investigation. The survey revealed increased customer reliance on imported trailer axle beams and that the increased imports had contributed importantly to worker separations at the subject firm.

Conclusion

After careful review of the additional facts obtained during the reconsideration investigation, I determine that workers of Sypris Technologies, Sypris Solutions Division, Kenton, Ohio, who are engaged in employment related to the production of trailer axle beams, meet the worker group certification criteria under Section 222(a) of the Act, 19 U.S.C. 2272(a). In accordance with Section 223 of the Act, 19 U.S.C. 2273, I make the following certification:

"All workers of Sypris Technologies, Sypris Solutions Division, Kenton, Ohio, who became totally or partially separated from employment on or after May 18, 2008, through two years from the date of this certification, and all workers in the group threatened with total or partial separation from employment on date of certification through two years from the date of certification, are eligible to apply for adjustment assistance under Chapter 2 of Title II of the Trade Act of 1974, as amended."

Signed in Washington, DC, this 16th day of November, 2010.

Del Min Amy Chen,

Certifying Officer, Office of Trade Adjustment Assistance.

BILLING CODE 4510–FN–P

NATIONAL FOUNDATION FOR THE ARTS AND THE HUMANITIES

Notice of Proposed Information Collection Requests: Public Demand for Museum and Library Services (PDMLS) Survey

AGENCY: Institute of Museum and Library Services, The National Foundation for the Arts and the Humanities.

ACTION: Notice, request for comments, collection of information.

SUMMARY: The Institute of Museum and Library Services (IMLS), as part of its continuing effort to reduce paperwork and respondent burden, conducts a pre-clearance consultation program to provide the general public and Federal agencies with an opportunity to comment on proposed and/or continuing collections of information in accordance with the Paperwork Reduction Act (44 U.S.C. Chapter 35). This pre-clearance consultation program helps to ensure that requested data can be provided in the desired format, reporting burden (time and financial resources) is minimized, collection instruments are clearly understood, and the impact of collection requirements on respondents can be properly assessed. By this notice, IMLS is soliciting comments concerning a proposed survey to collect information to monitor the use, expectations of and satisfaction with cultural programs and services, most especially library and museum services.

A copy of the proposed information collection request can be obtained by contacting the individual listed below in the **ADDRESSES** section of this notice.

DATES: Written comments must be submitted to the office listed in the addressee section below on or before January 22, 2011.

IMLS is particularly interested in comments that help the agency to:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated electronic, mechanical, or other technological collection techniques, or other forms of information technology, e.g., permitting electronic submissions of responses.

ADDRESSES: Send comments to: Carlos Manjarrez, Associate Deputy for Research and Statistics, Institute of Museum and Library Services, 1800 M St., NW., 9th Floor, Washington, DC 20036. Mr. Manjarrez can be reached by Telephone: 202–653–4671, Fax: 202–653–4600, or by e-mail at *cmanjarrez@imls.gov,* or by teletype (TTY/TDD) for persons with hearing difficulty at 202–653–4614.

SUPPLEMENTARY INFORMATION:

I. Background

The Institute of Museum and Library Services is the primary source of Federal support for the Nation's 123,000 libraries and 17,500 museums. The Institute's mission is to create strong libraries and museums that connect people to information and ideas. The Institute works at the national level and in coordination with State and local organizations to sustain heritage, culture, and knowledge; enhance learning and innovation; and support professional development. IMLS is responsible for identifying national needs for, and trends of, museum and library services funded by IMLS; reporting on the impact and effectiveness of programs conducted with funds made available by IMLS in addressing such needs; and identifying, and disseminating information on, the best practices of such programs. (20 U.S.C. Chapter 72, 20 U.S.C. 9108).

II. Current Actions

Libraries and museums help create vibrant, energized learning communities. Our achievement as individuals and our success as a democratic society depend on learning continually, adapting to change readily, and evaluating information critically.

As stewards of cultural heritage, information and ideas, museums and libraries have traditionally played a vital role in helping us experience, explore, discover and make sense of the world. That role is now more essential than ever. Through building technological infrastructure and strengthening community relationships, libraries and museums can offer the public unprecedented access to and expertise in transforming information overload into knowledge. IMLS provides leadership and funding for the nation's museums and libraries, to help them fulfill their mission of becoming centers of life-long learning crucial to achieving personal fulfillment, a productive workforce and an engaged citizenry.

Consistent with this (20 U.S.C. Chapter 72, 20 U.S.C. 9108), the intention of the PDMLS is to monitor expectations of and satisfaction with library and museum services. A wide range of topics will be covered, with a small number of questions about each topic included on the survey.

The purpose of this survey is to determine attitudes, assess awareness of issues related to library and museum services, and tracking trends. The survey will be used to gather information on a wide range of library and museum services. The design of the PDMLS will be a random digital dial ("RDD") telephone survey of the adult, non-institutionalized U.S. population which will yield a minimum of 3,000 cases.

The PDMLS will include a core set of demographic questions (*e.g.,* age, gender, race, geographic area) as well as a core set of questions that are based on critical information needs within IMLS (*e.g.,* satisfaction with the library and museum services as a whole; frequency of utilization of various services; physical and virtual access to services). In addition to these core questions, supplemental questions may also be included. The telephone survey is projected to average 18 to 20 minutes to complete.

Agency: Institute of Museum and Library Services.

Title: Public Demand for Museum and Library Services Survey.

OMB Number: To Be Determined.

Frequency: Anticipated for Every Three Years.

Affected Public: The target population for the Public Demand for Museum and Library Services Survey is the noninstitutionalized population, aged 18 and older, who live in the United States. A national probability sample of households generated using list-assisted random digit dialing (RDD) methodology will be employed by the survey. Individual survey respondents within selected households will be chosen at random.

Number of Respondents: 3,000.

Estimated Average Burden per Response: The burden per respondent is estimated to be an average of 18 minutes based on the size of the questionnaire.

Estimated Total Annual Burden: 900 hours (that is 18 minutes times 3,000 respondents equals 54,000) minutes or 900 hours).

Total Annualized Capital/Startup Costs: n/a.

Total Annual Costs: To be determined.

Public Comments Invited: Interested parties are invited to send comments regarding any aspect of this information collection, including, but not limited to: (1) The necessity and utility of the information collection for the proper performance of the functions of IMLS; (2) the accuracy of the estimated burden; (3) ways to enhance the quality, utility, and clarity of the collected information; and (4) ways to minimize the collection burden without reducing the quality of the collected information. Comments submitted in response to this notice will be summarized and/or included in the request for OMB's clearance of this information collection.

FOR FURTHER INFORMATION CONTACT: Carlos Manjarrez, Associate Deputy for Research and Statistics, Institute of Museum and Library Services, 1800 M St., NW., 9th Floor, Washington, DC 20036. Mr. Manjarrez can be reached by *Telephone:* 202–653–4671, Fax: 202–653–4600, or by e-mail at *cmanjarrez@imls.gov,* or by teletype (TTY/TDD) for persons with hearing difficulty at 202/653–4614. Office hours are from 8:30 a.m. to 5 p.m., E.T., Monday through Friday, except Federal holidays.

Dated: November 22, 2010.

Kim Miller,

Management Analyst.

[FR Doc. 2010–29876 Filed 11–26–10; 8:45 am]

BILLING CODE 7036–01–P

NUCLEAR REGULATORY COMMISSION

[Docket No. NRC–2010–0338]

Agency Information Collection Activities: Proposed Collection; Comment Request

AGENCY: U.S. Nuclear Regulatory Commission (NRC).

ACTION: Notice of pending NRC action to submit an information collection request to the Office of Management and Budget (OMB) and solicitation of public comment.

SUMMARY: The NRC invites public comment about our intention to request the OMB's approval for renewal of an existing information collection that is summarized below. We are required to publish this notice in the **Federal Register** under the provisions of the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35).

Information pertaining to the requirement to be submitted:

1. *The title of the information collection:* "DOE/NRC Form 741 (Nuclear Material Transaction Report) and Associated Instructions (NUREG/BR–0006)"

2. *Current OMB approval number:* 3150–0003.

3. *How often the collection is required:* Form 741 is submitted when specified events occur (nuclear material or source material transfers, receipts, or inventory changes).

4. *Who is required or asked to report:* Persons licensed to possess specified quantities of special nuclear material or source material. Any licensee who ships, receives, or otherwise undergoes an inventory change of special nuclear or source material is required to submit a Form 741 to document the change.

5. *The number of annual respondents:* For DOE/NRC Form 741, there are approximately 400 respondents annually.

6. *The number of hours needed annually to complete the requirement or request:* 20,616 hours.

7. *Abstract:* NRC is required to collect nuclear material transaction information for domestic safeguards use and to make it available to the International Atomic Energy Agency (IAEA). Licensees use Form 741 to make inventory and accounting reports for certain source or special nuclear material, or for transfer or receipt of 1 kilogram or more of source material. This form enables NRC to collect, retrieve, analyze, and submit the data to IAEA to fulfill its reporting responsibilities.

Submit, by January 28, 2011, comments that address the following questions:

1. Is the proposed collection of information necessary for the NRC to properly perform its functions? Does the information have practical utility?

2. Is the burden estimate accurate?

3. Is there a way to enhance the quality, utility, and clarity of the information to be collected?

4. How can the burden of the information collection be minimized, including the use of automated collection techniques or other forms of information technology?

A copy of the draft supporting statement may be viewed free of charge at the NRC Public Document Room, One White Flint North, 11555 Rockville Pike, Room O–1 F21, Rockville, MD 20852. OMB clearance requests are available at the NRC worldwide Web site: *http://www.nrc.gov/public-involve/doc-comment/omb/index.html.* The document will be available on the NRC home page site for 60 days after the signature date of this notice. Comments submitted in writing or in electronic form will be made available for public inspection. Because your comments will not be edited to remove any identifying or contact information, the NRC cautions you against including any information in your submission that you do not want to be publicly disclosed. Comments submitted should reference Docket No. NRC–2010–0338. You may submit your comments by any of the following methods. Electronic comments: Go to *http://www.regulations.gov* and search for Docket No. NRC–2010–0338. Mail comments to NRC Clearance Officer, Tremaine Donnell (T–5 F53), U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001. Questions about the information collection requirements may be directed to the NRC Clearance Officer, Tremaine Donnell (T–5 F53), U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001, by telephone at 301–415–6258, or by e-mail to *INFOCOLLECTS.Resource@NRC.GOV.*

Dated at Rockville, Maryland this 19th day of November 2010.

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

[Docket Nos. 50–335 and 50–389; NRC–2010–0363]

Florida Power and Light Company, St. Lucie Plant, Units 1 and 2; Environmental Assessment and Finding of No Significant Impact

The U.S. Nuclear Regulatory Commission (NRC or the Commission) is considering issuance of an exemption from Title 10 of the *Code of Federal Regulations* (10 CFR) Part 26, Section 26.9, for Facility Operating License Nos. DPR–67 and NPF–16, issued to Florida Power and Light Company, *et al.* (the licensee), for operation of St. Lucie Plant, Units 1 and 2, located on Hutchinson Island in St. Lucie County, Florida. Therefore, as required by 10 CFR 51.21, the NRC performed an environmental assessment. Based on the results of the environmental assessment, the NRC is issuing a finding of no significant impact.

Environmental Assessment

Identification of the Proposed Action

The proposed action would consider approval of an exemption for St. Lucie Plant, Units 1 and 2, from certain requirements of 10 CFR Part 26, "Fitness-for-Duty Rule." Specifically, the licensee requests approval of an exemption from the requirements of 10 CFR 26.205(c), "Work hours scheduling," and (d), "Work hour controls."

The licensee states that during severe weather conditions, for example, tropical storms or hurricane force winds, adherence to all work hour controls requirements could impede the licensee's ability to use whatever staff resources may be necessary to prepare the site for a pending severe weather event and ensure that the plant reaches and maintains a safe and secure status.

The exemption would only apply to severe weather conditions where tropical storm or hurricane force winds are predicted onsite requiring severe weather preparations, and activation and sequestering of the St. Lucie storm crew.

The proposed exemption will allow the licensee to not meet the requirements of 10 CFR 26.205(c) and (d), from the time severe weather site preparation begins until exit conditions are satisfied. The exemption would only apply to individuals on the storm crew who perform duties identified in 10 CFR 26.4(a)(1) through (a)(5). When storm crew sequestering exit conditions are met, full compliance with 10 CFR 26.205(c) and (d) will be required.

The proposed action does not involve any physical changes to the reactor, fuel, plant, structures, support structures, water, or land at the St. Lucie Plant, Units 1 and 2, site.

The proposed action is in accordance with the licensee's application dated October 16, 2009.

The Need for the Proposed Action

Proposed action is needed because the licensee is unable to meet the requirements of 10 CFR 26.205(c) and (d) during declarations of severe weather conditions that could result due to prevailing tropical storm or hurricane force winds impacting the facility.

Compliance with work hour control requirements could impede the licensee's ability to use whatever staff resources may be necessary to respond to a plant emergency and ensure that the plant reaches and maintains a safe and secure status.

Environmental Impacts of the Proposed Action

The NRC staff has completed its environmental assessment of the proposed exemption. The NRC staff has concluded that the proposed exemption from the implementation of the requirements of 10 CFR 26.205(c) and (d) during declaration of severe weather conditions, would not significantly affect plant safety and would not have a significant adverse affect on the probability of occurrence of an accident.

The proposed action would not result in any increased radiological hazards beyond those previously evaluated by the NRC staff in the Safety Evaluation Reports, dated November 8 and November 7, 1974, related to operation of St. Lucie Plant, Units 1 and 2, respectively. No changes are being made in the types of effluents that may be released offsite. There is no significant increase in the amount of any effluent released offsite. There is no significant increase in occupational or public radiation exposure. Therefore, there are no significant radiological environmental impacts associated with the proposed action.

The proposed action does not result in changes to land use or water use, or result in changes to the quality or quantity of non-radiological effluents. No changes to the National Pollution Discharge Elimination System permit are needed. No effects on the aquatic or terrestrial habitat in the vicinity or the plant, or to threatened, endangered, or protected species under the Endangered Species Act, or impacts to essential fish habitat covered by the Magnuson-Stevens Act are expected. There are no impacts to the air or ambient air quality. There are no impacts to historical and cultural resources. There would be no noticeable effect on socioeconomic conditions in the region. Therefore, no changes or different types of non-radiological environmental impacts are expected as a result of the proposed action. Accordingly, the NRC concludes that there are no significant environmental impacts associated with the proposed action.

The licensee currently maintains a Hurricane Plan that provides directions for activation of the storm crew. The storm crew is activated upon the direction of the Emergency Coordinator, typically the site Plant General Manager or designee. This individual is qualified as an Emergency Coordinator during a

declared emergency. The Plan provides specific entry conditions for the start of the emergency and specific conditions that will terminate the emergency. The licensee states that the impact on personnel manning for implementation of the site hurricane staffing and severe weather preparations is similar to entering the Emergency Plan. Although the proposed exemption would allow the licensee not to meet work hour controls during storm crew activation, sufficient numbers of management and supervision will be available during storm crew manning and activation to ensure that public health and safety is adequately protected.

The details of the staff's safety evaluation will be provided in the exemption that will be issued as part of the letter to the licensee approving the exemption to the regulation, if granted.

Environmental Impacts of the Alternatives to the Proposed Action

As an alternative to the proposed action, the staff considered denial of the proposed action (*i.e.*, the "no-action" alternative). Denial of the exemption request would result in no change in current environmental impacts. If the proposed action were denied, the licensee would have to comply with the fatigue rules in 10 CFR 26.205(c) and (d). This would cause unnecessary burden on the licensee, without a significant benefit in environmental impacts. The environmental impacts of the proposed exemption and the "no action" alternative are similar.

Alternative Use of Resources

The action does not involve the use of any different resources than those considered in the Final Environmental Statement related to the St. Lucie Plant, Unit 1, dated June 1973; the Final Environmental Statement related to the operation of St. Lucie Plant, Unit 2 (NUREG–0842), dated April 1982; and, the plant-specific Supplement 11 to NUREG–1437, "Generic Environmental Impact Statement for License Renewal of Nuclear Power Plants" (GEIS). Supplement 11 of the GEIS, issued on May 16, 2003, addresses the renewal of operating licenses DPR–67 and NPF–16 for St. Lucie Plant, Units 1 and 2, for an additional 20 years of operation.

Agencies and Persons Consulted

In accordance with its stated policy, on September 7, 2010, the NRC staff consulted with the Florida State official, William A Passetti of the Bureau of Radiation Control, regarding the environmental impact of the proposed action. The State official had no comments.

Finding of No Significant Impact

On the basis of the environmental assessment, the NRC concludes that the proposed action will not have a significant effect on the quality of the human environment. Accordingly, the NRC has determined not to prepare an environmental impact statement for the proposed action.

For further details with respect to the proposed action, see the licensee's letter dated October 16, 2009 (Agencywide Documents Access and Management System (ADAMS) Accession No. ML092990394). Documents may be examined, and/or copied for a fee, at the NRC's Public Document Room (PDR), located at One White Flint North, Public File Area O1–F21, 11555 Rockville Pike (first floor), Rockville, Maryland. Publicly available records will be accessible electronically from the ADAMS Public Electronic Reading Room on the Internet at the NRC Web site, *http://www.nrc.gov/reading-rm/adams.html*. Persons who do not have access to ADAMS or who encounter problems in accessing the documents located in ADAMS should contact the NRC PDR Reference staff by telephone at 800–397–4209 or 301–415–4737, or send an e-mail to *pdr.resource@nrc.gov*.

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

[Docket Nos. 50–348 and 50–364; NRC–2009–0375]

Southern Nuclear Operating Company, Inc. Joseph M. Farley Nuclear Plant, Environmental Assessment and Finding of No Significant Impact

The U.S. Nuclear Regulatory Commission (NRC) is considering issuance of an Exemption, pursuant to Title 10 of the Code of Federal Regulations (10 CFR) Section 73.5, "Specific exemptions," from 10 CFR Part 73, "Physical protection of plants and materials," for Facility Operating License Nos. NPF–2 and NPF–8, issued to Southern Nuclear Operating Company, Inc. (SNC, the licensee), for operation of the Joseph M. Farley Nuclear Plant, Units 1 and 2 (FNP), located in Houston County, Alabama. In accordance with 10 CFR 51.21, the NRC prepared an environmental assessment documenting its finding. The NRC concluded that the proposed actions will have no significant environmental impact.

Environmental Assessment

Identification of the Proposed Action

The proposed action would exempt the FNP from the required implementation date of March 31, 2010, for several new requirements of 10 CFR Part 73. Specifically, FNP would be granted an exemption from being in full compliance with certain new requirements contained in 10 CFR 73.55 by the March 31, 2010, deadline. Instead, the licensee has proposed an alternate full compliance implementation date of July 15, 2011. The proposed action, an extension of the schedule for completion of certain actions required by the revised 10 CFR Part 73, does not involve any physical changes to the reactor, fuel, plant structures, support structures, water, or land at the FNP site.

The proposed action is in accordance with the licensee's application dated September 10, 2010, as supplemented by letter dated October 5, 2010.

The Need for the Proposed Action

The proposed action is needed to provide the licensee with additional time to perform the required upgrades to the FNP security system due to resource and logistical constraints. Previously, by letters dated June 9 and July 31, 2009, SNC submitted a request for an exemption from the compliance date identified in 10 CFR 73.55 for three specific requirements of 10 CFR 73.55. The NRC staff reviewed the request and by letter dated August 27, 2009, granted an exemption to the March 31, 2010, compliance date for the 3 specific requirements identified within the SNC exemption request until December 15, 2010. Subsequently, by letters dated September 10 and October 5, 2010, SNC submitted an additional request for an exemption to the compliance date identified in 10 CFR 73.55. The licensee has requested a further exemption from the March 31, 2010, compliance date stating that a number of issues, including unforeseen growth in the amount of design work required, design product loss due to computer hardware failures, and weather-related construction delays, will present a significant challenge to timely completion of the project related to certain requirements in 10 CFR 73.55. Specifically, the request is to extend the compliance date for three specific requirements from the current March

31, 2010 deadline, as extended for this specific licensee to December 15, 2010, by the exemption granted on August 27, 2009, until July 15, 2011. Being granted this exemption for these items will allow the licensee to complete the modifications designed to update equipment and incorporate state-of-the-art technology to meet the noted regulatory requirement.

Environmental Impacts of the Proposed Action

The NRC staff has completed its environmental assessment of the proposed exemption and has concluded that the proposed action to extend the implementation deadline would not significantly affect plant safety and would not have a significant adverse effect on the probability of an accident occurring. The proposed action would not result in an increased radiological hazard beyond those previously analyzed. There will be no change to radioactive effluents that effect radiation exposures to plant workers and members of the public. The proposed action does not involve a change to plant buildings or land areas on the FNP site. Therefore, no changes or different types of radiological impacts are expected as a result of the proposed exemption.

The proposed action does not result in changes to land use or water use, or result in changes to the quality or quantity of non-radiological effluents. No changes to the National Pollution Discharge Elimination System permit are needed. No effects on the aquatic or terrestrial habitat in the vicinity of the plant, or to threatened, endangered, or protected species under the Endangered Species Act, or impacts to essential fish habitat covered by the Magnuson-Steven's Act are expected. There are no impacts to the air or ambient air quality.

There are no impacts to historical and cultural resources. There would be no impact to socioeconomic resources. Therefore, no changes to or different types of non-radiological environmental impacts are expected as a result of the proposed exemption. Accordingly, the NRC staff concludes that there are no significant environmental impacts associated with the proposed action.

The licensee currently maintains a security system acceptable to the NRC and the NRC expects that the licensee will continue to maintain the effectiveness of the overall physical protection program and protective strategy for the duration of this exemption. Therefore, the extension of the implementation date of the new requirements of 10 CFR Part 73 to July 15, 2011, would not have any significant environmental impacts.

The NRC staff's safety evaluation will be provided in the exemption that will be issued as part of the letter to the licensee approving the exemption to the regulation.

Environmental Impacts of the Alternatives to the Proposed Action

As an alternative to the proposed actions, the NRC staff considered denial of the proposed actions (*i.e.,* the "no-action" alternative). Denial of the exemption request would result in no change in current environmental impacts. The environmental impacts of the proposed exemption and technical specification change and the "no action" alternative are similar.

Alternative Use of Resources

The action does not involve the use of any different resources than those considered in the Final Environmental Statement for the FNP, as supplemented through the "Generic Environmental Impact Statement for License Renewal of Nuclear Plants: Joseph M. Farley Nuclear Plant, Units 1 and 2—Final Report (NUREG—1437, Supplement 18)."

Agencies and Persons Consulted

In accordance with its stated policy, on November 15, 2010, the NRC staff consulted with the Alabama State official, Mr. David Walters of the Alabama Department of Public Health, regarding the environmental impact of the proposed action. The State official had no comments.

Finding of No Significant Impact

On the basis of the environmental assessment, the NRC staff concludes that the proposed action will not have a significant effect on the quality of the human environment. Accordingly, the NRC staff has determined not to prepare an environmental impact statement for the proposed action.

For further details with respect to the proposed action, see the licensee's letters dated September 10, 2010 and October 5, 2009. The licensee has provided a redacted version of the September 10, 2010 letter that is publically available and the October 5, 2010 transmittal letter is publically available. The edition of the September 10, 2010 letter and its enclosure and the enclosure to the October 5, 2010 letter that contains proprietary security-related information is not available to the public. Other parts of these documents may be examined, and/or copied for a fee, at the NRC's Public Document Room (PDR), located at One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852. Publicly available records will be accessible electronically from the Agencywide Document Access and Management System (ADAMS) Public Electronic Reading Room on the Internet at the NRC Web site: *http://www.nrc.gov/reading-rm/adams.html.*

Persons who do not have access to ADAMS or who encounter problems in accessing the documents located in ADAMS should contact the NRC PDR Reference staff by telephone at 1–800–397–4209 or 301–415–4737, or send an e-mail to *pdr@nrc.gov.*

SECURITIES AND EXCHANGE COMMISSION

Proposed Collection; Comment Request

Upon Written Request, Copies Available From: Securities and Exchange Commission, Office of Investor Education and Advocacy, Washington, DC 20549–0213.

Extension:

Rule 701, OMB Control No. 3235–0522, SEC File No. 270–306.

Notice is hereby given that, pursuant to the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), the Securities and Exchange Commission ("Commission") is soliciting comments on the collection of information summarized below. The Commission plans to submit this existing collection of information to the Office of Management and Budget for extension and approval.

Rule 701 (17 CFR 230.701) under the Securities Act of 1933 ("Securities Act") (15 U.S.C. 77a *et seq.*) provides an exemption for certain issuers from the registration requirements of the Securities Act for limited offerings and sales of securities issued under compensatory benefit plans or contracts. The purpose of Rule 701 is to ensure that a basic level of information is available to employees and others when substantial amounts of securities are issued in compensatory arrangements. Approximately 300 companies annually rely on the Rule 701 exemption. The Rule 701 disclosure takes an estimated 2 hours per response to prepare for a total annual burden of 600 hours. We estimate that 25% of the 2 hours per response (0.5 hours) is prepared by the company for a total annual reporting burden of 150 hours (0.5 hours per response × 300 responses).

Written comments are invited on: (a) Whether this collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (b) the accuracy of the agency's estimate of the burden imposed by the collection of information; (c) ways to enhance the quality, utility, and clarity of the information collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Consideration will be given to comments and suggestions submitted in writing within 60 days of this publication.

Please direct your written comments to Thomas Bayer, Chief Information Officer, Securities and Exchange Commission, C/O Remi Pavlik-Simon, 6432 General Green Way, Alexandria, Virginia 22312; or send an e-mail to: *PRA_Mailbox@sec.gov.*

Dated: November 22, 2010.

Elizabeth M. Murphy,

Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–63363; File No. S7–04–09]

Order Extending Temporary Conditional Exemption for Nationally Recognized Statistical Rating Organizations From Requirements of Rule 17g–5 Under the Securities Exchange Act of 1934 and Request for Comment

November 23, 2010.

I. Introduction

On May 19, 2010, the Securities and Exchange Commission ("Commission") conditionally exempted, with respect to certain credit ratings and until December 2, 2010, nationally recognized statistical rating organizations ("NRSROs") from certain requirements in Rule 17g–5(a)(3) [1] under the Securities Exchange Act of 1934 ("Exchange Act"), which had a compliance date of June 2, 2010.[2] Pursuant to the Order, an NRSRO is not required to comply with Rule 17g–5(a)(3) until December 2, 2010 with respect to credit ratings where: (1) The issuer of the structured finance product is a non-U.S. person; and (2) the NRSRO has a reasonable basis to conclude that the structured finance product will be offered and sold upon issuance, and that any arranger linked to the structured finance product will effect transactions of the structured finance product after issuance, only in transactions that occur outside the U.S. ("covered transactions").[3] The Commission is extending the temporary conditional exemption exempting NRSROs from complying with Rule 17g–5(a)(3) with respect to rating covered transactions until December 2, 2011.

II. Background

Rule 17g–5 identifies, in paragraphs (b) and (c) of the rule, a series of conflicts of interest arising from the business of determining credit ratings.[4] Paragraph (a) of Rule 17g–5 [5] prohibits an NRSRO from issuing or maintaining a credit rating if it is subject to the conflicts of interest identified in paragraph (b) of Rule 17g–5 unless the NRSRO has taken the steps prescribed in paragraph (a)(1) (*i.e.,* disclosed the type of conflict of interest in Exhibit 6 to Form NRSRO in accordance with Section 15E(a)(1)(B)(vi) of the Exchange Act [6] and Rule 17g–1) [7] and paragraph (a)(2) (*i.e.,* established and is maintaining and enforcing written policies and procedures to address and manage conflicts of interest in accordance with Section 15E(h) of the Exchange Act).[8] Paragraph (c) of Rule 17g–5 specifically prohibits seven types of conflicts of interest. Consequently, an NRSRO is prohibited from issuing or maintaining a credit rating when it is subject to these conflicts regardless of whether it had disclosed them and established procedures reasonably designed to address them.

In December 2009, the Commission adopted subparagraph (a)(3) to Rule 17g–5. This provision requires an NRSRO that is hired by an arranger to determine an initial credit rating for a structured finance product to take

[1] *See* 17 CFR 240.17g–5(a)(3).

[2] *See* Securities Exchange Act Release No. 62120 (May 19, 2010), 75 FR 28825 (May 24, 2010) ("Order").

[3] *See id.* at 28827–28 (setting forth conditions of relief).

[4] 17 CFR 240.17g–5(b) and (c).

[5] 17 CFR 240.17g–5(a).

[6] 15 U.S.C. 78o–7(a)(1)(B)(vi).

[7] 17 CFR 240.17g–1.

[8] 15 U.S.C. 78o–7(h).

certain steps designed to allow an NRSRO that is not hired by the arranger to nonetheless determine an initial credit rating—and subsequently monitor that credit rating—for the structured finance product.[9] In particular, under Rule 17g–5(a)(3), an NRSRO is prohibited from issuing or maintaining a credit rating when it is subject to the conflict of interest identified in paragraph (b)(9) of Rule 17g–5 (*i.e.,* being hired by an arranger to determine a credit rating for a structured finance product)[10] unless it has taken the steps prescribed in paragraphs (a)(1) and (2) of Rule 17g–5 (discussed above) and the steps prescribed in new paragraph (a)(3) of Rule 17g–5.[11] Rule 17g–5(a)(3), among other things, requires that the NRSRO must:

- Maintain on a password-protected Internet Web site a list of each structured finance product for which it currently is in the process of determining an initial credit rating in chronological order and identifying the type of structured finance product, the name of the issuer, the date the rating process was initiated, and the Internet Web site address where the arranger represents the information provided to the hired NRSRO can be accessed by other NRSROs;
- Provide free and unlimited access to such password-protected Internet Web site during the applicable calendar year to any NRSRO that provides it with a copy of the certification described in paragraph (e) of Rule 17g–5 that covers that calendar year; [12] and
- Obtain from the arranger a written representation that can reasonably be relied upon that the arranger will, among other things, disclose on a password-protected Internet web site the information it provides to the hired NRSRO to determine the initial credit rating (and monitor that credit rating) and provide access to the web site to an NRSRO that provides it with a copy of the certification described in paragraph (e) Rule 17g–5.[13]

The Commission stated in the Adopting Release that subparagraph Rule 17g–5(a)(3) is designed to address conflicts of interest and improve the quality of credit ratings for structured finance products by making it possible for more NRSROs to rate structured finance products.[14] For example, the Commission noted that when an NRSRO is hired to rate a structured finance product, some of the information it relies on to determine the rating is generally not made public.[15] As a result, structured finance products frequently are issued with ratings from only the one or two NRSROs that have been hired by the arranger, with the attendant conflict of interest that creates.[16] The Commission stated that subparagraph Rule 17g–5(a)(3) was designed to increase the number of credit ratings extant for a given structured finance product and, in particular, to promote the issuance of credit ratings by NRSROs that are not hired by arrangers.[17] The Commission's goal in adopting the rule was to provide users of credit ratings with more views on the creditworthiness of structured finance products.[18] In addition, the Commission stated that Rule 17g–5(a)(3) was designed to reduce the ability of arrangers to obtain better than warranted ratings by exerting influence over NRSROs hired to determine credit ratings for structured finance products.[19] Specifically, by opening up the rating process to more NRSROs, the Commission intended to make it easier for the hired NRSRO to resist such pressure by increasing the likelihood that any steps taken to inappropriately favor the arranger could be exposed to the market through the credit ratings issued by other NRSROs.[20]

Rule 17g–5(a)(3) became effective on February 2, 2010, and the compliance date for Rule 17g–5(a)(3) was June 2, 2010.

III. Extension of Conditional Temporary Extension

In the Order, the Commission requested comment generally, but also on a number of specific issues.[21] The Commission received six comments in response to this solicitation of comment.[22] The commenters continue

[9] *See* 17 CFR 240.17g–5(a)(3); *see also* Securities Exchange Act Release No. 61050 (November 23, 2009), 74 FR 63832 ("Adopting Release") at 63844–45.

[10] Paragraph (b)(9) of Rule 17g–5 identifies the following conflict of interest: issuing or maintaining a credit rating for a security or money market instrument issued by an asset pool or as part of any asset-backed or mortgage-backed securities transaction that was paid for by the issuer, sponsor, or underwriter of the security or money market instrument. 17 CFR 240.17g–5(b)(9).

[11] 17 CFR 240.17g–5(a)(3).

[12] Paragraph (e) of Rule 17g–5 requires that an NRSRO seeking to access the hired NRSRO's Internet website during the applicable calendar year must furnish the Commission with the following certification:

The undersigned hereby certifies that it will access the Internet Web sites described in 17 CFR 240.17g–5(a)(3) solely for the purpose of determining or monitoring credit ratings. Further, the undersigned certifies that it will keep the information it accesses pursuant to 17 CFR 240.17g–5(a)(3) confidential and treat it as material nonpublic information subject to its written policies and procedures established, maintained, and enforced pursuant to section 15E(g)(1) of the Act (15 U.S.C. 78o–7(g)(1)) and 17 CFR 240.17g–4. Further, the undersigned certifies that it will determine and maintain credit ratings for at least 10% of the issued securities and money market instruments for which it accesses information pursuant to 17 CFR 240.17g–5(a)(3)(iii), if it accesses such information for 10 or more issued securities or money market instruments in the calendar year covered by the certification. Further, the undersigned certifies one of the following as applicable: (1) In the most recent calendar year during which it accessed information pursuant to 17 CFR 240.17g–5(a)(3), the undersigned accessed information for [Insert Number] issued securities and money market instruments through Internet Web sites described in 17 CFR 240.17g–5(a)(3) and determined and maintained credit ratings for [Insert Number] of such securities and money market instruments; or (2) The undersigned previously has not accessed information pursuant to 17 CFR 240.17g–5(a)(3) 10 or more times during the most recently ended calendar year.

[13] In particular, under paragraph (a)(3)(iii) of Rule 17g–5, the arranger must represent to the hired NRSRO that it will:

(1) Maintain the information described in paragraphs (a)(3)(iii)(C) and (a)(3)(iii)(D) of Rule 17g–5 available at an identified password-protected Internet Web site that presents the information in a manner indicating which information currently should be relied on to determine or monitor the credit rating;

(2) Provide access to such password-protected Internet Web site during the applicable calendar year to any NRSRO that provides it with a copy of the certification described in paragraph (e) of Rule 17g–5 that covers that calendar year, provided that such certification indicates that the nationally recognized statistical rating organization providing the certification either: (i) Determined and maintained credit ratings for at least 10% of the issued securities and money market instruments for which it accessed information pursuant to paragraph (a)(3)(iii) of Rule 17g–5 in the calendar year prior to the year covered by the certification, if it accessed such information for 10 or more issued securities or money market instruments; or (ii) has not accessed information pursuant to paragraph (a)(3) of Rule 17g–5 10 or more times during the most recently ended calendar year.

(3) Post on such password-protected Internet Web site all information the arranger provides to the NRSRO, or contracts with a third party to provide to the NRSRO, for the purpose of determining the initial credit rating for the security or money market instrument, including information about the characteristics of the assets underlying or referenced by the security or money market instrument, and the legal structure of the security or money market instrument, at the same time such information is provided to the NRSRO; and

(4) Post on such password-protected Internet Web site all information the arranger provides to the NRSRO, or contracts with a third party to provide to the NRSRO, for the purpose of undertaking credit rating surveillance on the security or money market instrument, including information about the characteristics and performance of the assets underlying or referenced by the security or money market instrument at the same time such information is provided to the NRSRO.

[22] Letter from Masamichi Kono, Vice Commissioner for International Affairs, Financial Services Agency, Japan, to Elizabeth Murphy, Secretary, Commission, dated Nov. 12, 2010 ("Japan FSA Letter"); Letter from Masaru Ono, Executive Director, Securitization Forum of Japan, to Elizabeth Murphy, Secretary, Commission, dated

to express concern that the extraterritorial application of Rule 17g–5(a)(3) could, in the commenter's view, among other things, disrupt local securitization markets,[23] inhibit the ability of local firms to raise capital,[24] and conflict with local laws.[25] Several commenters also requested that the conditional temporary exemption be extended or made permanent.[26] Given the continued concerns about potential disruptions of local securitization markets, and because the Commission's consideration of the issues raised will benefit from additional time to engage in further dialogue with interested parties and to monitor market and regulatory developments, the Commission believes extending the conditional temporary exemption until December 2, 2011 is necessary or appropriate in the public interest, and is consistent with the protection of investors.

IV. Request for Comment

The Commission believes that it would be useful to continue to provide interested parties opportunity to comment. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/exorders.shtml*); or
- Send an e-mail to *rule-comments@sec.gov.* Please include File Number S7–04–09 on the subject line; or
- Use the Federal eRulemaking Portal (*http://www.regulations.gov*). Follow the instructions for submitting comments.

Paper Comments

- Send paper comments in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F St., NE., Washington, DC 20549–1090.

All submissions should refer to File Number S7–04–09. This file number should be included on the subject line if e-mail is used. To help us process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet website (*http://www.sec.gov/rules/exorders.shtml*). Comments are also available for website viewing and printing in the Commission's Public Reference Room, 100 F St. NE., Washington, DC 20549 on official business days between the hours of 10 a.m. and 3 p.m. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly.

V. Conclusion

For the foregoing reasons, the Commission believes it would be necessary or appropriate in the public interest and consistent with the protection of investors to extend the conditional temporary exemption exempting NRSROs from complying with Rule 17g–5(a)(3) with respect to rating covered transactions until December 2, 2011.

Accordingly

It is hereby ordered, pursuant to Section 36 of the Exchange Act, that a nationally recognized statistical rating organization is exempt until December 2, 2011 from the requirements in Rule 17g–5(a)(3) (17 CFR 240.17g–5(a)(3)) for credit ratings where:

(1) The issuer of the security or money market instrument is not a U.S. person (as defined under Securities Act Rule 902(k)); and

(2) The nationally recognized statistical rating organization has a reasonable basis to conclude that the structured finance product will be offered and sold upon issuance, and that any arranger linked to the structured finance product will effect transactions of the structured finance product after issuance, only in transactions that occur outside the U.S.

By the Commission.

Elizabeth M. Murphy,

Secretary.

SECURITIES AND EXCHANGE COMMISSION

Sunshine Act Meeting

Notice is hereby given, pursuant to the provisions of the Government in the Sunshine Act, Public Law 94–409, that the Securities and Exchange Commission will hold a Closed Meeting on Thursday, December 2, 2010 at 2 p.m.

Commissioners, Counsel to the Commissioners, the Secretary to the Commission, and recording secretaries will attend the Closed Meeting. Certain staff members who have an interest in the matters also may be present.

The General Counsel of the Commission, or his designee, has certified that, in his opinion, one or more of the exemptions set forth in 5 U.S.C. 552b(c)(3), (5), (7), 9(B) and (10) and 17 CFR 200.402(a)(3), (5), (7), 9(ii) and (10), permit consideration of the scheduled matters at the Closed Meeting.

Commissioner Casey, as duty officer, voted to consider the items listed for the Closed Meeting in a closed session.

The subject matter of the Closed Meeting scheduled for Thursday, December 2, 2010 will be:

Institution and settlement of injunctive actions;

Institution and settlement of administrative proceedings;

An adjudicatory matter; and

Other matters relating to enforcement proceedings.

At times, changes in Commission priorities require alterations in the scheduling of meeting items.

For further information and to ascertain what, if any, matters have been added, deleted or postponed, please contact:

The Office of the Secretary at (202) 551–5400.

Dated: November 24, 2010.

Elizabeth M. Murphy,

Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–63351; File No. SR–Phlx–2010–154]

Self-Regulatory Organizations; NASDAQ OMX PHLX, Inc.; Notice of Filing and Immediate Effectiveness of Proposed Rule Change Relating to Fees for the PHOTO Historical Data Product

November 19, 2010.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the "Act")[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on November 8, 2010, NASDAQ OMX PHLX, Inc. ("Phlx" or the "Exchange") filed with the Securities and Exchange Commission (the "Commission") the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend its fee schedule by establishing fees for a new market data product, PHLX Options Trade Outline ("PHOTO") Historical Data. PHOTO Historical Data provides subscribers with historical information about the past activity on the Exchange during a particular calendar month, broken down by each option series traded on the Exchange.[3] The proposed fees would become effective on and after November 15, 2010. PHOTO Historical Data is available only for internal use and distribution by subscribers.

The text of the proposed rule change is available on the Exchange's Web site at *http://nasdaqtrader.com/micro.aspx?id=PHLXfilings,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The purpose of the proposed rule change is to establish fees for the PHOTO Historical Data market data product.

PHOTO

In September 2010, the Exchange established fees for its PHOTO market data product.[4] PHOTO is a market data product offered by the Exchange that is designed to provide proprietary electronic trade data to subscribers. PHOTO is available as either an "End-of-Day" data product or an "Intra-Day" data product, as described more fully below. PHOTO Historical Data will permit a subscriber to select a particular prior calendar month or months and receive the "End of Day" or "Intra-Day" data for each trading session conducted during the calendar month(s) selected. Like PHOTO, the PHOTO Historical Data product is available to any person who wishes to subscribe to it, regardless of whether or not they are a member of the Exchange. The fees for the PHOTO Historical Data product are uniform for all subscribers.

PHOTO Historical Data

PHOTO Historical Data provides information about the past activity of all option series for each trading session conducted during a particular prior calendar month, as selected by the subscriber. PHOTO Historical Data subscribers will receive the following data:

- Aggregate number of buy and sell transactions in the affected series for each trading session conducted during the specified calendar month(s);
- Aggregate volume traded electronically on the Exchange in the affected series for each trading session conducted during the specified calendar month(s);
- Aggregate number of trades effected on the Exchange to open a position[5] for each trading session conducted during the specified calendar month(s);
- Aggregate number of trades effected on the Exchange to close a position[6] for each trading session conducted during the specified calendar month(s);
- Origin of the orders involved in trades on the Exchange in the affected series for each trading session conducted during the specified calendar month(s), specifically aggregated in the following categories of participants: Customers, broker-dealers, market makers (including specialists, Registered Options Traders ("ROTs"), Streaming Quote Traders ("SQTs")[7] and Remote Streaming Quote Traders ("RSQTs")[8]), and professionals.[9]

---

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] PHOTO Historical Data will be available for the month of August 2010 and for each calendar month dating back to January 2009. PHOTO Historical Data will not be available for any calendar month prior to January 2009.

[4] *See* Securities Exchange Act Release No. 62887 (September 10, 2010), 75 FR 57092 (September 17, 2010) (SR–Phlx–2010–121).

[5] PHOTO Historical Data will provide subscribers with the aggregate number of "opening purchase transactions" in the affected series for each trading session conducted during the calendar month(s) selected. An opening purchase transaction is an Exchange options transaction in which the purchaser's intention is to create or increase a long position in the series of options involved in such transaction. *See* Exchange Rule 1000(b)(24). PHOTO Historical Data will also provide subscribers with the aggregate number of "opening writing transactions" in the affected series for each trading session conducted during the calendar month(s) selected. An opening writing transaction is an Exchange options transaction in which the seller's (writer's) intention is to create or increase a short position in the series of options involved in such transaction. *See* Exchange Rule 1000(b)(25).

[6] PHOTO Historical Data will provide subscribers with the aggregate number of "closing purchase transactions" in the affected series for each trading session conducted during the calendar month(s) selected. A closing purchase transaction is an Exchange options transaction in which the purchaser's intention is to reduce or eliminate a short position in the series of options involved in such transaction. *See* Exchange Rule 1000(b)(27). PHOTO Historical Data will also provide subscribers with the aggregate number of "closing sale transactions" in the affected series for each trading session conducted during the calendar month(s) selected. A closing sale transaction is an Exchange options transaction in which the seller's intention is to reduce or eliminate a long position in the series of options involved in such transaction. *See* Exchange Rule 1000(b)(26).

[7] An SQT is an Exchange Registered Options Trader ("ROT") who has received permission from the Exchange to generate and submit option quotations electronically in options to which such SQT is assigned. *See* Exchange Rule 1014(b)(ii)(A).

[8] An RSQT is an ROT that is a member or member organization with no physical trading floor presence who has received permission from the Exchange to generate and submit option quotations electronically in options to which such RSQT has been assigned. An RSQT may only submit such quotations electronically from off the floor of the Exchange. *See* Exchange Rule 1014(b)(ii)(B).

[9] The term "professional" means any person or entity that (i) is not a broker or dealer in securities, and (ii) places more than 390 orders in listed options per day on average during a calendar month for its own beneficial account(s). A professional will be treated in the same manner as an off-floor broker-dealer for purposes of Rules 1014(g) (except with respect to all-or-none orders, which will be treated like customer orders), 1033(e), 1064.02 (except professional orders will be considered customer orders subject to facilitation), and 1080.08 as well as Options Floor Procedure Advices B–6, B–11 and F–5. Member organizations must indicate whether orders are for professionals. *See* Exchange Rule 1000(b)(14).

End of Day Product

The End-of-Day product includes the aggregate data described above representing the entire trading session. It is calculated during an overnight process after each trading session and is available to subscribers for download the following morning at approximately 7 a.m., ET. PHOTO Historical Data will provide this data for each trading session conducted during the calendar month(s) selected by the subscriber.

The fee for the PHOTO Historical Data End of Day product for subscribers is $400.00 per calendar month selected.[10]

Intra-Day Product

The Intra-Day product includes periodic, cumulative data for a particular trading session. The Intra-Day product is produced and updated every ten minutes during the trading day. Data is captured in "snapshots" taken every 10 minutes throughout the trading day and is available to subscribers within 5 minutes of the conclusion of each 10-minute period. For example, subscribers to the Intra-Day product will receive the first calculation of intra-day data at 9:44 a.m. ET, which represents data captured from 9:30 a.m. to 9:39 a.m. Subscribers will receive the next update at 9:54 a.m., representing the data previously provided together with data captured from 9:40 a.m. through 9:49 a.m., and so forth. Each update will represent the aggregate data captured from the current "snapshot" and all previous "snapshots."

PHOTO Historical Data will provide this regularly updated data for each trading session conducted during the specified calendar month(s) selected by the subscriber. The fee for the PHOTO Historical Data Intra-Day product subscribers is $750.00 per calendar month selected.[11]

PHOTO Historical Data provides subscribers data that should enhance their ability to analyze option trade and volume data, to evaluate historical trends in the trading activity of a particular option series, and to create and test trading models and analytical strategies. The Exchange believes that PHOTO Historical Data is a valuable tool that subscribers can use to gain comprehensive insight into the trading activity in a particular series.

2. Statutory Basis

PHLX believes that the proposed rule change is consistent with the provisions of Section 6 of the Act,[12] in general, and with Section 6(b)(4) of the Act,[13] in particular, in that it provides an equitable allocation of reasonable fees among users and recipients of PHLX data. In adopting Regulation NMS, the Commission granted self-regulatory organizations and broker-dealers increased authority and flexibility to offer new and unique market data to the public. It was believed that this authority would expand the amount of data available to consumers, and also spur innovation and competition for the provision of market data.

The Commission concluded that Regulation NMS—by deregulating the market in proprietary data—would itself further the Act's goals of facilitating efficiency and competition:

> "[E]fficiency is promoted when broker-dealers who do not need the data beyond the prices, sizes, market center identifications of the NBBO and consolidated last sale information are not required to receive (and pay for) such data. The Commission also believes that efficiency is promoted when broker-dealers may choose to receive (and pay for) additional market data based on their own internal analysis of the need for such data."[14]

By removing "unnecessary regulatory restrictions" on the ability of exchanges to sell their own data, Regulation NMS advanced the goals of the Act and the principles reflected in its legislative history. If the free market should determine whether proprietary data is sold to broker-dealers at all, it follows that the price at which such data is sold should be set by the market as well. PHOTO is precisely the sort of market data product that the Commission envisioned when it adopted Regulation NMS.

On July 21, 2010, President Barak Obama signed into law H.R. 4173, the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 ("Dodd-Frank Act"), which amended Section 19 of the Act. Among other things, Section 916 of the Dodd-Frank Act amended paragraph (A) of Section 19(b)(3) of the Act by inserting the phrase "on any person, whether or not the person is a member of the self-regulatory organization" after "due, fee or other charge imposed by the self-regulatory organization." As a result, all SRO rule proposals establishing or changing dues, fees, or other charges are immediately effective upon filing regardless of whether such dues, fees, or other charges are imposed on members of the SRO, non-members, or both. Section 916 further amended paragraph (C) of Section 19(b)(3) of the Exchange Act to read, in pertinent part, "At any time within the 60-day period beginning on the date of filing of such a proposed rule change in accordance with the provisions of paragraph (1) [of Section 19(b)], the Commission summarily may temporarily suspend the change in the rules of the self-regulatory organization made thereby, if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of this title. If the Commission takes such action, the Commission shall institute proceedings under paragraph (2)(B) [of Section 19(b)] to determine whether the proposed rule should be approved or disapproved."

PHLX believes that these amendments to Section 19 of the Act reflect Congress' intent to allow the Commission to rely upon the forces of competition to ensure that fees for market data are reasonable and equitably allocated. Although Section 19(b) had formerly authorized immediate effectiveness for a "due, fee or other charge imposed by the self-regulatory organization," the Commission adopted a policy and subsequently a rule stipulating that fees for data and other products available to persons that are not members of the self-regulatory organization must be approved by the Commission after first being published for comment. At the time, the Commission supported the adoption of the policy and the rule by pointing out that unlike members, whose representation in self-regulatory organization governance was mandated by the Act, non-members should be given the opportunity to comment on fees before being required to pay them, and that the Commission should specifically approve all such fees.

PHLX believes that the amendment to Section 19 reflects Congress' conclusion that the evolution of self-regulatory organization governance and competitive market structure have rendered the Commission's prior policy on non-member fees obsolete.

Specifically, many exchanges have evolved from member-owned not-for-profit corporations into for-profit investor-owned corporations (or subsidiaries of investor owned

[10] For example, a subscriber who requests End of Day PHOTO Historical Data for the month of March, 2009 would be charged $400.00. A subscriber who requests End of Day PHOTO Historical Data for the months of March, 2009 and April, 2009 would be charged $400.00 for the March, 2009 End of Day PHOTO Historical Data and $400.00 for the April, 2009 End of Day PHOTO Historical Data, for a total of $800.00, etc.

[11] For example, a subscriber who requests Intra-Day PHOTO Historical Data for the Month of March, 2009 would be charged $750.00. A subscriber who requests Intra-Day PHOTO Historical Data for the months of March, 2009 and April, 2009 would be charged $750.00 for the March, 2009 Intra-Day PHOTO Historical Data and $750.00 for the April, 2009 Intra-Day PHOTO Historical Data, for a total of $1,500.00, etc.

[12] 15 U.S.C. 78f.

[13] 15 U.S.C. 78f(b)(4).

[14] *See* Securities Exchange Act Release No. 51808 (June 9, 2005), 70 FR 37496 (June 29, 2005).

corporations). Accordingly, exchanges no longer have narrow incentives to manage their affairs for the exclusive benefit of their members, but rather have incentives to maximize the appeal of their products to all customers, whether members or nonmembers, so as to broaden distribution and grow revenues. Moreover, we believe that the change also reflects an endorsement of the Commission's determinations that reliance on competitive markets is an appropriate means to ensure equitable and reasonable prices. Simply put, the change reflects a presumption that all fee changes should be permitted to take effect immediately, since the level of all fees are constrained by competitive forces.

The recent decision of the *United States Court of Appeals for the District of Columbia Circuit in NetCoaliton [sic]* v. *SEC, No. 09–1042 (DC Cir. 2010),* although reviewing a Commission decision made prior to the effective date of the Dodd-Frank Act, upheld the Commission's reliance upon competitive markets to set reasonable and equitably allocated fees for market data. "In fact, the legislative history indicates that the Congress intended that the market system 'evolve through the interplay of competitive forces as unnecessary regulatory restrictions are removed' and that the SEC wield its regulatory power 'in those situations where competition may not be sufficient,' such as in the creation of a 'consolidated transactional reporting system.' " [15]

The court's conclusions about Congressional intent are therefore reinforced by the Dodd-Frank Act amendments, which create a presumption that exchange fees, including market data fees, may take effect immediately, without prior Commission approval, and that the Commission should take action to suspend a fee change and institute a proceeding to determine whether the fee change should be approved or disapproved only where the Commission has concerns that the change may not be consistent with the Act.

B. Self-Regulatory Organization's Statement on Burden on Competition

PHLX does not believe that the proposed rule change will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act, as amended. Notwithstanding its determination that the Commission may rely upon competition to establish fair and equitably allocated fees for market data, the NetCoaltion [sic] court found that the Commission had not, in that case, compiled a record that adequately supported its conclusion that the market for the data at issue in the case was competitive.

For the reasons discussed above, PHLX believes that the Dodd-Frank Act amendments to Section 19 materially alter the scope of the Commission's review of future market data filings, by creating a presumption that all fees may take effect immediately, without prior analysis by the Commission of the competitive environment.

Even in the absence of this important statutory change, however, PHLX believes that a record may readily be established to demonstrate the competitive nature of the market in question.

There is intense competition between trading platforms that provide transaction execution and routing services and proprietary data products. Transaction execution and proprietary data products are complementary in that market data is both an input and a by-product of the execution service. In fact, market data and trade execution are a paradigmatic example of joint products with joint costs. The decision whether and on which platform to post an order will depend on the attributes of the platform where the order can be posted, including the execution fees, data quality and price and distribution of its data products. Without the prospect of a taking order seeing and reacting to a posted order on a particular platform, the posting of the order would accomplish little.

Without trade executions, exchange data products cannot exist. Data products are valuable to many end users only insofar as they provide information that end users expect will assist them or their customers in making trading decisions.

The costs of producing market data include not only the costs of the data distribution infrastructure, but also the costs of designing, maintaining, and operating the exchange's transaction execution platform and the cost of regulating the exchange to ensure its fair operation and maintain investor confidence. The total return that a trading platform earns reflects the revenues it receives from both products and the joint costs it incurs. Moreover, an exchange's customers view the costs of transaction executions and of data as a unified cost of doing business with the exchange. A broker-dealer will direct orders to a particular exchange only if the expected revenues from executing trades on the exchange exceed net transaction execution costs and the cost of data that the broker-dealer chooses to buy to support its trading decisions (or those of its customers). The choice of data products is, in turn, a product of the value of the products in making profitable trading decisions. If the cost of the product exceeds its expected value, the broker-dealer will choose not to buy it. Moreover, as a broker-dealer chooses to direct fewer orders to a particular exchange, the value of the product to that broker-dealer decreases, for two reasons. First, the product will contain less information, because executions of the broker-dealer's orders will not be reflected in it. Second, and perhaps more important, the product will be less valuable to that broker-dealer because it does not provide information about the venue to which it is directing its orders. Data from the competing venue to which the broker-dealer is directing orders will become correspondingly more valuable.

Thus, a super-competitive increase in the fees charged for either transactions or data has the potential to impair revenues from both products. "No one disputes that competition for order flow is 'fierce'." [16] However, the existence of fierce competition for order flow implies a high degree of price sensitivity on the part of broker-dealers with order flow, since they may readily reduce costs by directing orders toward the lowest-cost trading venues. A broker-dealer that shifted its order flow from one platform to another in response to order execution price differentials would both reduce the value of that platform's market data and reduce its own need to consume data from the disfavored platform. Similarly, if a platform increases its market data fees, the change will affect the overall cost of doing business with the platform, and affected broker-dealers will assess whether they can lower their trading costs by directing orders elsewhere and thereby lessening the need for the more expensive data.

Analyzing the cost of market data distribution in isolation from the cost of all of the inputs supporting the creation of market data will inevitably underestimate the cost of the data. Thus, because it is impossible to create data without a fast, technologically robust, and well-regulated execution system, system costs and regulatory costs affect the price of market data. It would be equally misleading, however, to attribute all of the exchange's costs to the market data portion of an exchange's

[15] NetCoaltion [sic], at 15 (quoting H.R. Rep. No. 94–229, at 92 (1975), as reprinted in 1975 U.S.C.C.A.N. 321, 323).

[16] NetCoalition at 24.

joint product. Rather, all of the exchange's costs are incurred for the unified purposes of attracting order flow, executing and/or routing orders, and generating and selling data about market activity. The total return that an exchange earns reflects the revenues it receives from the joint products and the total costs of the joint products.

Competition among trading platforms can be expected to constrain the aggregate return each platform earns from the sale of its joint products, but different platforms may choose from a range of possible, and equally reasonable, pricing strategies as the means of recovering total costs. For example, some platforms may choose to pay rebates to attract orders, charge relatively low prices for market information (or provide information free of charge) and charge relatively high prices for accessing posted liquidity. Other platforms may choose a strategy of paying lower rebates (or no rebates) to attract orders, setting relatively high prices for market information, and setting relatively low prices for accessing posted liquidity. In this environment, there is no economic basis for regulating maximum prices for one of the joint products in an industry in which suppliers face competitive constraints with regard to the joint offering. This would be akin to strictly regulating the price that an automobile manufacturer can charge for car sound systems despite the existence of a highly competitive market for cars and the availability of aftermarket alternatives to the manufacturer-supplied system.

The market for market data products is competitive and inherently contestable because there is fierce competition for the inputs necessary to the creation of proprietary data and strict pricing discipline for the proprietary products themselves. Numerous exchanges compete with each other for listings, trades, and market data itself, providing virtually limitless opportunities for entrepreneurs who wish to produce and distribute their own market data. This proprietary data is produced by each individual exchange, as well as other entities, in a vigorously competitive market. Broker-dealers currently have numerous alternative venues for their order flow, including ten self-regulatory organization ("SRO") markets, as well as internalizing broker-dealers ("BDs") and various forms of alternative trading systems ("ATSs"), including dark pools and electronic communication networks ("ECNs"). Each SRO market competes to produce transaction reports via trade executions, and two FINRA regulated Trade Reporting Facilities ("TRFs") compete to attract internalized transaction reports. Competitive markets for order flow, executions, and transaction reports provide pricing discipline for the inputs of proprietary data products. For example, the Exchange notes that at least one other U.S. options exchange offers a market data product that is substantially similar to the PHOTO Historical Data product, which the PHLX must consider in its pricing discipline in order to compete for listings, trades, and the market data itself.[17]

The large number of SROs, TRFs, BDs, and ATSs that currently produce proprietary data or are currently capable of producing it provides further pricing discipline for proprietary data products. Each SRO, TRF, ATS, and BD is currently permitted to produce proprietary data products, and many currently do or have announced plans to do so, including PHLX, NASDAQ, NYSE, NYSE Amex, NYSEArca, and BATS.

Any ATS or BD can combine with any other ATS, BD, or multiple ATSs or BDs to produce joint proprietary data products. Additionally, order routers and market data vendors can facilitate single or multiple broker-dealers' production of proprietary data products. The potential sources of proprietary products are virtually limitless.

The fact that proprietary data from ATSs, BDs, and vendors can by-pass SROs is significant in two respects. First, non-SROs can compete directly with SROs for the production and sale of proprietary data products, as BATS and Arca did before registering as exchanges by publishing proprietary book data on the Internet. Second, because a single order or transaction report can appear in an SRO proprietary product, a non-SRO proprietary product, or both, the data available in proprietary products is exponentially greater than the actual number of orders and transaction reports that exist in the marketplace.

Market data vendors provide another form of price discipline for proprietary data products because they control the primary means of access to end users. Vendors impose price restraints based upon their business models. For example, vendors such as Bloomberg and Reuters that assess a surcharge on data they sell may refuse to offer proprietary products that end users will not purchase in sufficient numbers. Internet portals, such as Yahoo, impose a discipline by providing only data that will enable them to attract "eyeballs" that contribute to their advertising revenue. Retail broker-dealers, such as Schwab and Fidelity, offer their customers proprietary data only if it promotes trading and generates sufficient commission revenue. Although the business models may differ, these vendors' pricing discipline is the same: They can simply refuse to purchase any proprietary data product that fails to provide sufficient value. PHLX and other producers of proprietary data products must understand and respond to these varying business models and pricing disciplines in order to market proprietary data products successfully.

In addition to the competition and price discipline described above, the market for proprietary data products is also highly contestable because market entry is rapid, inexpensive, and profitable. The history of electronic trading is replete with examples of entrants that swiftly grew into some of the largest electronic trading platforms and proprietary data producers: Archipelago, Bloomberg Tradebook, Island, RediBook, Attain, TracECN, BATS Trading and Direct Edge. A proliferation of dark pools and other ATSs operate profitably with fragmentary shares of consolidated market volume.

Regulation NMS, by deregulating the market for proprietary data, has increased the contestability of that market. While broker-dealers have previously published their proprietary data individually, Regulation NMS encourages market data vendors and broker-dealers to produce proprietary products cooperatively in a manner never before possible. Multiple market data vendors already have the capability to aggregate data and disseminate it on a profitable scale, including Bloomberg, and Thomson-Reuters.

The court in NetCoalition concluded that the Commission had failed to demonstrate that the market for market data was competitive based on the reasoning of the Commission's NetCoalition order because, in the court's view, the Commission had not adequately demonstrated that the depth-of-book data at issue in the case is used to attract order flow. PHLX believes, however, that evidence not before the

[17] The International Securities Exchange, Inc. ("ISE") Open/Close Trade Profile and the ISE Open/Close Trade Profile Intra-Day contain substantially similar data to that included in PHOTO End of Day and PHOTO Intra-Day. *See* Securities Exchange Act Release No. 56254 (August 15, 2007), 72 FR 47104 (August 22, 2007) (SR–ISE–2007–70). ISE currently sells the ISE Open/Close Trade Profile with historical data available back to May 2005, and sells the ISE Open/Close Trade Profile Intraday with historical data available separately back to October 2009. *See* Securities Exchange act Release No. 61317 (January 8, 2010), 75 FR 2915 (January 19, 2010) (SR–ISE–2009–103).

court clearly demonstrates that availability of depth data attracts order flow.

Competition among platforms has driven PHLX continually to improve its platform data offerings and to cater to customers' data needs. For example, PHLX offers front end applications such as its Top of PHLX Options ("TOPO") and TOPO Plus Orders data products to help customers utilize data.

For the foregoing reasons, PHLX does not believe that the proposed rule change will result in any burden on competition that is not necessary or appropriate in furtherance of the purpose of the Act.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act.[18] At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an e-mail to *rule-comments@sec.gov*. Please include File Number SR–Phlx–2010–154 on the subject line.

Paper Comments

- Send paper comments in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street, NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–Phlx–2010–154. This file number should be included on the subject line if e-mail is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–Phlx–2010–154 and should be submitted on or before December 20, 2010.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[19]

Elizabeth M. Murphy,

Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–63357; File No. SR–ISE–2010–110]

Self-Regulatory Organizations; International Securities Exchange, LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change Relating to the Extension of a Pilot Program for Directed Orders

November 22, 2010.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the "Exchange Act"),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on November 16, 2010, the International Securities Exchange, LLC (the "Exchange" or the "ISE") filed with the Securities and Exchange Commission the proposed rule change, as described in Items I and II below, which items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The ISE is proposing to extend the pilot period for the system change that identifies to a Directed Market Maker ("DMM") the identity of the firm entering a Directed Order until May 31, 2011.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The self-regulatory organization has prepared summaries, set forth in sections A, B and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

On January 5, 2006, the ISE initiated a system change to identify to a DMM the identity of the firm entering a Directed Order. The ISE filed this system change on a pilot basis under Section 19(b)(3)(A) of the Exchange Act of 1934 (the "Exchange Act") and Rule 19b–4(f)(5) thereunder[3] so that it would be effective while the Commission considered a separate proposed rule change filed under Section 19(b)(2) of the Exchange Act to amend the ISE's rules to reflect the system change on a permanent basis (the "Permanent Rule Change").[4] The current pilot expires on

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] *See* Securities Exchange Act Release No. 53104 (Jan. 11, 2006), 71 FR 2142 (Jan. 19, 2006) (Notice of Filing and Immediate Effectiveness of SR–ISE–2006–02).

[4] *See* Securities Exchange Act Release No. 53103 (Jan. 11, 2006), 71 FR 3144 (Jan. 19, 2006) (Notice of Filing of SR–ISE–2006–01).

November 30, 2010,[5] but the Commission has not yet taken action with respect to the Permanent Rule Change. Accordingly, the Exchange proposes to extend the pilot for an additional six months, until May 31, 2011, so that the system change will remain in effect while the Commission continues to evaluate the Permanent Rule Change.[6]

2. Basis

The basis under the Exchange Act for this proposed rule change is found in Section 6(b)(5), in that the proposed rule change is designed to promote just and equitable principles of trade, remove impediments to and perfect the mechanisms of a free and open market and a national market system and, in general, to protect investors and the public interest. Extension of the pilot program will allow the Exchange to continue operating under the pilot while the Commission considers the Permanent Rule Change.

B. Self-Regulatory Organization's Statement on Burden on Competition

The proposed rule change does not impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Exchange Act.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants or Others

The Exchange has not solicited, and does not intend to solicit, comments on this proposed rule change. The Exchange has not received any written comments from members or other interested parties.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The proposed rule change has become effective pursuant to Section 19(b)(3)(A) of the Exchange Act[7] and Rule 19b–4(f)(5)[8] thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Exchange Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an E-mail to *rule-comments@sec.gov.* Please include File No. SR–ISE–2010–110 in the subject line.

Paper Comments

- Send paper comments in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street, NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–ISE–2010–110. This file number should be included on the subject line if e-mail is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commissions Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street, NE., Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of such filing also will be available for inspection and copying at the principal office of the ISE. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–ISE–2010–110 and should be submitted by December 20, 2010.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[9]

Elizabeth M. Murphy,

Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–63349; File No. SR–NYSEArca–2010–103]

Self-Regulatory Organizations; NYSE Arca, Inc.; Notice of Filing of Proposed Rule Change Relating to the Listing and Trading of the Jefferies S&P 500® VIX Short-Term Futures ETF

November 19, 2010.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act")[1] and Rule 19b–4 thereunder,[2] notice is hereby given that, on November 9, 2010, NYSE Arca, Inc. ("Exchange" or "NYSE Arca") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to list and trade shares of the Jefferies S&P 500® VIX Short-Term Futures ETF under NYSE Arca Equities Rule 8.200. The text of the proposed rule change is available at the Exchange, the Commission's Public Reference Room, and *http://www.nyse.com.*

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

NYSE Arca Equities Rule 8.200, Commentary .02, permits the trading of Trust Issued Receipts ("TIRs") either by listing or pursuant to unlisted trading privileges ("UTP").[3] The Exchange proposes to list and trade shares ("Shares") of the Jefferies S&P 500® VIX Short-Term Futures ETF ("Fund") pursuant to NYSE Arca Equities Rule 8.200.[4] The Fund is a commodity pool and a Delaware statutory trust.[5]

Overview of the Fund

According to the Registration Statement, the Fund seeks to track changes, whether positive or negative, in the level of the S&P 500 VIX Short-Term Futures™ Index ER ("VIX Futures Index" or "Index") over time.[6] The Fund will pursue its investment objective primarily by maintaining long futures positions corresponding to the futures contracts underlying the VIX Futures Index which trade on the CBOE Futures Exchange ("CFE") ("VIX Futures Contracts"),[7] with an aggregate notional amount equal to the Fund's total capital. In certain circumstances, as described below, the Fund may invest in one or more forward agreements or swaps ("Futures-Linked Investments"). The Fund is also intended to reflect the excess, if any, of its interest income from its investment in U.S. Treasury bills, generally with a maturity of less than one year, and other high credit quality short-term fixed-income securities, over its expenses.[8]

Jefferies Commodity Investment Services, LLC, a Delaware limited liability company, is the Fund's promoter, and will serve as Managing Owner of the Fund. The Managing Owner will serve as the commodity pool operator and commodity trading advisor of the Fund. The Managing Owner is registered as a commodity pool operator and commodity trading advisor with the Commodity Futures Trading Commission and is a member of the National Futures Association. The Bank of New York Mellon ("Administrator") will be the administrator, custodian and transfer agent of the Fund.

According to the Registration Statement, the Index is designed to provide an exposure to one or more maturities of futures contracts on the CBOE Volatility Index ("Volatility Index"), which reflect implied volatility in the S&P 500® Index at various points along the volatility forward curve. The Volatility Index is calculated based on the prices of put and call options on the S&P 500® Index. The VIX Futures Index is intended to reflect the returns that are potentially available through an unleveraged investment in the relevant futures contract or contracts on the Volatility Index.

The Index measures the return from a daily rolling long position in the first and second month VIX Futures Contracts, targeting a constant weighted average futures maturity of one month. The Fund will acquire and roll long positions in the first and second month VIX Futures Contracts with a view to tracking the level of the Index over time. The Fund will both roll and rebalance its holdings of VIX Futures Contracts in a manner consistent with the method described in the Registration Statement.

The Index is comprised of, and the value of the Shares will be based on, VIX Futures Contracts. VIX Futures Contracts are measures of the market's expectation of the level of the Volatility Index at certain points in the future, and may diverge from current, or spot, Volatility Index values. The Fund is not linked to the Volatility Index, and the value of the Index and the Shares may diverge significantly from the Volatility Index.

The Fund does not intend to outperform the Index. The Managing Owner will seek to cause the net asset value ("NAV") of the Fund to track the Index during periods in which the Index is flat or declining as well as when the Index is rising.

According to the Registration Statement, the Fund seeks to achieve its investment objective by investing under normal market conditions in VIX Futures Contracts. In the event the Fund reaches its position accountability rules with respect to VIX Futures Contracts, the Managing Owner, may, in its commercially reasonable judgment, cause the Fund to invest in a Futures-Linked Investment referencing the particular VIX Futures Contracts, or invest in other futures contracts or a Futures-Linked Investment not based on the particular VIX Futures Contracts if such instruments tend to exhibit trading prices or returns that correlate with the VIX Futures Index or any VIX Futures Contract and will further the investment objective of the Fund.[9] The Fund may also invest in Futures-Linked Investments if the market for a specific futures contract experiences emergencies (*e.g.,* natural disaster, terrorist attack or an act of God) or disruptions (*e.g.,* a trading halt or a flash crash) to prevent the Fund from obtaining the appropriate amount of investment exposure to the affected VIX Futures Contract directly or other futures contract.[10]

The Fund will hold a portfolio of VIX Futures Contracts as well as cash and U.S. Treasury bills, generally with a maturity of less than one year, and other high credit quality short-term fixed-income securities for deposit with the Fund's Clearing Broker as margin. The Fund's portfolio will be traded with a view to tracking the Index, whether the Index is rising, falling or flat over any particular period. The Fund is not

[3] Commentary .02 to NYSE Arca Equities Rule 8.200 applies to TIRs that invest in "Financial Instruments." The term "Financial Instruments," as defined in Commentary .02(b)(4) to NYSE Arca Equities Rule 8.200, means any combination of investments, including cash; securities; options on securities and indices; futures contracts; options on futures contracts; forward contracts; equity caps, collars and floors; and swap agreements.

[4] The Commission previously has approved listing on the Exchange under Commentary .02 to NYSE Arca Equities Rule 8.200 of certain securities issuers. *See, e.g.,* Securities Exchange Act Release Nos. 58457 (September 3, 2008), 73 FR 52711 (September 10, 2008) (SR–NYSEArca–2008–91) (order granting accelerated approval to list on NYSE Arca of 14 ProShares funds); and 58983 (November 20, 2008), 73 FR 73368 (December 2, 2008) (SR–NYSEArca–2008–126) (order granting accelerated approval to list on NYSE Arca the GreenHaven Continuous Commodity Index Fund). *See also* Securities Exchange Act Release No. 58968 (November 17, 2008), 73 FR 71082 (November 24, 2008) (SR–NYSEArca–2008–111) (order granting accelerated approval of proposed rule change to amend NYSE Arca Equities Rule 5.2(j)(6)(v) to add CBOE Volatility Index Futures to the definition of Futures Reference Asset).

[5] The Fund has filed a Pre-Effective Amendment No. 3 to Form S–1 registration statement under the Securities Act of 1933, dated August 17, 2010 (File No. 333–166283) ("Registration Statement"). The description of the Fund and the Shares contained herein are based on the Registration Statement.

[6] The VIX Futures Index was created by Standard & Poor's Financial Services, LLC ("Index Sponsor"). The VIX Futures Index is the excess return version of the S&P 500 VIX Short-Term Futures™ Index. The Index Sponsor has implemented procedures designed to prevent the use and dissemination of material, non-public information regarding the Index.

[7] As of June 14, 2010, there was VIX Futures Contracts open interest of 88,366 contracts with a contract price of $25.55 and value of open interest of $2,257,751,300. Total CFE trading volume in 2009 in VIX Futures Contracts was 1,143,612 contracts, with average daily volume of 4538 contracts. Total volume year-to-date (through May 31, 2010) is 1,399,709 contracts, with average daily volume of 13,458 contracts. (*Source:* Bloomberg and CBOE).

[8] Terms relating to the Fund, the Shares and the Index referred to, but not defined, herein are defined in the Registration Statement.

[9] To the extent practicable, the Fund will invest in swaps cleared through the facilities of a centralized clearing house.

[10] According to the Registration Statement, the Managing Owner will also attempt to mitigate the Fund's credit risk by transacting only with large, well-capitalized institutions using measures designed to determine the creditworthiness of a counterparty. The Managing Owner will take various steps to limit counterparty credit risk, as described in the Registration Statement.

"managed" by traditional methods, which typically involve effecting changes in the composition of the Fund's portfolio on the basis of judgments relating to economic, financial and market considerations with a view to obtaining positive results under all market conditions.

According to the Registration Statement, the Shares are designed to reflect as closely as possible the changes, whether positive or negative, in the level of the VIX Futures Index over time, through the Fund's portfolio of VIX Futures Contracts, and/or, if applicable, Futures-Linked Investments that reference the VIX Futures Index. The value of the Shares relates directly to the changes in market value, whether positive or negative, of the Fund's portfolio of VIX Futures Contracts and the value of the Fund's portfolio of U.S. Treasury bills, generally with a maturity of less than one year, and other high credit quality short-term fixed-income securities, less the liabilities (including estimated accrued but unpaid expenses) of the Fund.

The Volatility Index

According to the Registration Statement, the Volatility Index is a benchmark index designed to estimate expected volatility in large cap U.S. stocks over 30 days in the future by averaging the weighted prices of certain put and call options on the S&P 500® Index. During periods of market instability, the implied level of volatility of the S&P 500® Index typically increases and, consequently, the prices of options linked to the S&P 500® Index typically increase (assuming all other relevant factors remain constant or have negligible changes). This, in turn, causes the level of the Volatility Index to increase. Because the Volatility Index may increase in times of uncertainty, the Volatility Index is commonly known as the "fear gauge" of the broad U.S. equities market. The Volatility Index has historically had negative correlations to the S&P 500® Index.

The calculation of the Volatility Index involves a formula that uses the prices of a weighted series of out-of-the money put and call options on the level of the S&P 500® Index ("SPX Options"), with two adjacent expiry terms to derive a constant 30-day forward measure of market volatility. The Volatility Index is calculated independent of any particular option pricing model and in doing so seeks to eliminate any biases which may otherwise be included in using options pricing methodology based on certain assumptions.

According to the Registration Statement, although the Volatility Index measures the 30-day forward volatility in the S&P 500® Index as implied by the SPX Options, 30-day options are only available once a month. To arrive at the Volatility Index level, a broad range of out-of-the money SPX Options expiring on the two closest nearby months ("near term options" and "next term options," respectively) are selected in order to bracket a 30-day calendar period. SPX Options having a maturity of less than eight days are excluded at the outset and, when the near term options have eight days or less left to expiration, the Volatility Index rolls to the second and third contract months in order to minimize pricing anomalies that occur close to expiration. The model-free implied volatility using prices of the near term options and next term options are then calculated on a strike price weighted-average basis in order to arrive at a single average implied volatility value for each month. The results of each of the two months are then interpolated to arrive at a single value with a constant maturity of 30 days to expiration. Futures on the Volatility Index were first launched for trading by the CBOE in 2004. Volatility Index futures have expirations ranging from the front month consecutively out to the tenth month.

The VIX Futures Index is composed of one or more futures contracts on the Volatility Index. OTC derivatives and various types of electronic trading facilities and markets may offer investments linked to the Volatility Index. At present, all of the contracts included in the VIX Futures Index are exchange-traded futures contracts.

The VIX Futures Index is a rolling Index, which rolls on a daily basis. One of the effects of daily rolling is to maintain a constant weighted average maturity for the underlying futures contracts. The VIX Futures Index is composed of rolling first and second month futures contracts on the Volatility Index. Unlike equities, which typically entitle the holder to a continuing stake in a corporation, futures contracts normally specify a certain date for the delivery of the underlying asset or financial instrument or, in the case of futures contracts relating to indices such as the Volatility Index, a certain date for payment in cash of an amount determined by the level of the underlying index. The VIX Futures Index operates by selling futures contracts on the Volatility Index on a daily basis, specifying cash settlement on a nearby date and purchasing futures contracts on the Volatility Index on a daily basis specifying cash settlement on a later date. The roll for each VIX Futures Contract occurs on each index business day according to a pre-determined schedule that has the effect of keeping constant the weighted average maturity of the relevant VIX Futures Contract. This process is known as "rolling" a futures position, and the VIX Futures Index is a "rolling index." The constant weighted average maturity for the futures contracts underlying the VIX Futures Index is one month.[11]

Because the Index incorporates this process of rolling futures positions on a daily basis, and the Fund, in general, also rolls its positions on a daily basis, the daily roll is not anticipated to be a significant source of tracking error between the Fund and its Index. The Index is based on VIX Futures Contracts and not the Volatility Index, and as such neither the Fund nor the Index are expected to track the Volatility Index.

Creation and Redemption of Shares

The Fund creates and redeems Shares from time-to-time in one or more Baskets. A Basket is a block of 20,000 Shares. Baskets may be created or redeemed only by Authorized Participants, except that the initial Baskets in the Fund will be created by the Initial Purchaser. Except when aggregated in Baskets, the Shares are not redeemable securities. Authorized Participants pay a transaction fee in connection with each order to create or redeem a Basket.

The total cash payment required to create each Basket is the NAV of 20,000 Shares on the purchase order date.[12] Baskets are issued as of noon, E.T., on the business day immediately following the purchase order date at the applicable NAV per Share on the purchase order date, but only if the required payment has been timely received. Purchase and redemption orders must be placed by noon, E.T.

The procedures by which an Authorized Participant can redeem one or more Baskets mirror the procedures for the creation of Baskets. On any business day, an Authorized Participant may place an order with the Managing Owner to redeem one or more Baskets.

[11] It is anticipated that, near expiration, the performance of a VIX Futures Contract will be close to that of the Volatility Index, while longer term futures (not close to expiration) reflect the long term expectations of the value of the Volatility Index plus a risk premium and may not closely track the performance of the Volatility Index. The Exchange notes that the Fund seeks results that match the performance of the VIX Futures Index and should not be expected to match the performance of the Volatility Index.

[12] E-mail from Michael Cavalier, Chief Counsel, NYSE Euronext, to Edward Y. Cho, Special Counsel, Division of Trading and Markets, Commission, dated November 15, 2010 ("Exchange Confirmation").

The redemption proceeds from the Fund consist of the cash redemption amount. The cash redemption amount is equal to the NAV of the number of Baskets of the Fund requested in the Authorized Participant's redemption order on the redemption order date.

Availability of Information Regarding the Shares

The NAV for the Fund will be calculated by the Administrator once a day at or after 4:15 p.m., E.T., and will be disseminated daily to all market participants at the same time.[13] The Exchange will make available on its Web site daily trading volume of each of the Shares, closing prices of such Shares, and number of Shares outstanding.

The closing prices and settlement prices of VIX Futures Contracts are also readily available from the Web sites of the CFE, automated quotation systems, published or other public sources, or on-line information services such as Bloomberg or Reuters. Complete real-time data for VIX Futures Contracts is available by subscription from Reuters and Bloomberg. The CFE also provides delayed futures information on current and past trading sessions and market news free of charge on its Web site (*http://www.cfe.cboe.com*). The specific contract specifications for VIX Futures Contracts are also available on such Web sites, as well as other financial informational sources. Quotation and last-sale information regarding the Shares will be disseminated through the facilities of the CTA. In addition, the Fund's Web site at *http://www.jamfunds.com/jcis* will display the end of day closing Index levels and NAV. The level of the Volatility Index as calculated by CBOE, updated every 15 seconds from 9:30 a.m. to 4:15 p.m., E.T., is disseminated on the CBOE Web site at *http://www.cboe.com* and through major market data vendors.

The Fund will provide Web site disclosure of portfolio holdings daily and will include, as applicable, the names and value (in U.S. dollars) of VIX Futures Contracts, Futures-Linked Investments and other futures contracts, if any, and characteristics of such investments and cash equivalents, and amount of cash held in the portfolio of the Fund. This Web site disclosure of the portfolio composition of the Fund will occur at the same time as the disclosure by the Managing Owner of the portfolio composition to Authorized Participants so that all market participants are provided portfolio composition information at the same time. Therefore, the same portfolio information will be provided on the public Web site as well as in electronic files provided to Authorized Participants. Accordingly, each investor will have access to the current portfolio composition of the Fund through the Fund's Web site.

Dissemination of Indicative Trust Value and Index Value

In addition, in order to provide updated information relating to the Fund for use by investors and market professionals, an updated Indicative Trust Value ("ITV") will be calculated. The ITV is calculated by using the prior day's closing NAV per share of the Fund as a base and updating that value throughout the NYSE Arca Core Trading Session of 9:30 a.m. to 4 p.m. E.T. each trading day to reflect current changes in the value of VIX Futures Contracts held by the Fund, as well as the value of any swap or forward contracts and other futures contracts held by the Fund. The ITV disseminated during the Core Trading Session should not be viewed as an actual real-time update of the NAV, which is calculated only once a day.

The ITV will be disseminated on a per-Share basis by one or more major market data vendors every 15 seconds during the Core Trading Session. In addition, the end-of-day NAV of the Fund will be disseminated once a day.

The Exchange believes that dissemination of the ITV provides additional information regarding the Fund that is not otherwise available to the public and is useful to professionals and investors in connection with the related Shares trading on the Exchange or the creation or redemption of such Shares.

The Index Sponsor will publish the daily closing level of the VIX Futures Index as of the close of the NYSE Arca Core Trading Session. The Managing Owner will publish the NAV of the Fund and the NAV per Share daily. The Index Sponsor will publish the intra-day level of the VIX Futures Index updated every 15 seconds during the NYSE Arca Core Trading Session on the consolidated tape, Reuters and/or Bloomberg, and the Managing Owner will publish the ITV per Share once every 15 seconds during the NYSE Arca Core Trading Session on the Managing Owner's Web site at *http://www.jamfunds.com/jcis*.[14]

The current trading price per Share will be published continuously as trades occur during the NYSE Arca Core Trading Session on the consolidated tape, Reuters and/or Bloomberg and on the Managing Owner's Web site. The most recent end-of-day Index closing level will be published as of the close of the NYSE Arca Core Trading Session each trading day on the consolidated tape, Reuters and/or Bloomberg and on the Managing Owner's Web site. The most recent end-of-day NAV of the Fund will be published on Reuters and/or Bloomberg and on the Managing Owner's Web site. In addition, the most recent end-of-day NAV of the Fund will be published the following morning on the consolidated tape. All of the foregoing information with respect to the VIX Futures Index will also be published at *http://www.cfe.cboe.com.*

Additional information regarding the Fund and the Shares, including investment strategies, risks, creation and redemption procedures, fees, portfolio holdings disclosure policies, distributions and taxes is included in the Registration Statement.

Trading Rules

The Exchange deems the Shares to be equity securities, thus rendering trading in the Shares subject to the Exchange's existing rules governing the trading of equity securities. Shares will trade on the NYSE Arca Marketplace from 4 a.m. to 8 p.m. E.T. The Exchange has appropriate rules to facilitate transactions in the Shares during all trading sessions. As provided in NYSE Arca Equities Rule 7.6, Commentary .03, the minimum price variation ("MPV") for quoting and entry of orders in equity securities traded on the NYSE Arca Marketplace is $0.01, with the exception of securities that are priced less than $1.00 for which the MPV for order entry is $0.0001.

The trading of the Shares will be subject to NYSE Arca Equities Rule 8.200, Commentary .02(e), which sets forth certain restrictions on ETP Holders acting as registered Market Makers in Trust Issued Receipts to facilitate surveillance. See "Surveillance" below for more information.

With respect to trading halts, the Exchange may consider all relevant factors in exercising its discretion to halt or suspend trading in the Shares. Trading may be halted because of market conditions or for reasons that, in the view of the Exchange, make trading in the Shares inadvisable. These may

[13] According to the Registration Statement, net asset value means the total assets of the Fund including, but not limited to, all cash and cash equivalents or other debt securities less total liabilities of the Fund, each determined on the basis of generally accepted accounting principles in the United States, consistently applied under the accrual method of accounting.

[14] *See* Exchange Confirmation, *supra* note 12.

include: (1) The extent to which trading is not occurring in the underlying futures contracts; or (2) whether other unusual conditions or circumstances detrimental to the maintenance of a fair and orderly market are present. In addition, trading in Shares will be subject to trading halts caused by extraordinary market volatility pursuant to the Exchange's "circuit breaker" rule [15] or by the halt or suspension of trading of the underlying futures contracts.

The Exchange represents that the Exchange may halt trading during the day in which the interruption to the dissemination of the ITV, the VIX Futures Index, the Volatility Index or the value of the underlying futures contracts occurs. If the interruption to the dissemination of the ITV, the VIX Futures Index, the Volatility Index or the value of the underlying futures contracts persists past the trading day in which it occurred, the Exchange will halt trading no later than the beginning of the trading day following the interruption. In addition, if the Exchange becomes aware that the NAV with respect to the Shares is not disseminated to all market participants at the same time, it will halt trading in the Shares until such time as the NAV is available to all market participants.

The Fund will meet the initial and continued listing requirements applicable to Trust Issued Receipts in NYSE Arca Equities Rule 8.200 and Commentary .02 thereto. With respect to application of Rule 10A–3 under the Act,[16] the Trust relies on the exception contained in Rule 10A–3(c)(7).[17] A minimum of 100,000 Shares of the Fund will be outstanding as of the start of trading on the Exchange.

Surveillance

The Exchange intends to utilize its existing surveillance procedures applicable to derivative products, including Trust Issued Receipts, to monitor trading in the Shares. The Exchange represents that these procedures are adequate to properly monitor Exchange trading of the Shares in all trading sessions and to deter and detect violations of Exchange rules and applicable Federal securities laws.

The Exchange's current trading surveillances focus on detecting securities trading outside their normal patterns. When such situations are detected, surveillance analysis follows and investigations are opened, where appropriate, to review the behavior of all relevant parties for all relevant trading violations. The Exchange is able to obtain information regarding trading in the Shares, or options, futures or options on futures on, Shares through ETP Holders, in connection with such ETP Holders' proprietary or customer trades through ETF Holders which they effect on any relevant market. The Exchange can obtain market surveillance information, including customer identity information, with respect to transactions occurring on the exchanges that are members of the Intermarket Surveillance Group ("ISG"), including CBOE and CFE. A list of ISG members is available at *http://www.isgportal.org.*[18]

In addition, with respect to Fund components traded on exchanges, not more than 10% of the weight of such components in the aggregate shall consist of components whose principal trading market is not a member of ISG or is a market with which the Exchange does not have a comprehensive surveillance sharing agreement.

The Exchange also has a general policy prohibiting the distribution of material, non-public information by its employees.

Information Bulletin

Prior to the commencement of trading, the Exchange will inform its ETP Holders in an Information Bulletin of the special characteristics and risks associated with trading the Shares. Specifically, the Information Bulletin will discuss the following: (1) The risks involved in trading the Shares during the Opening and Late Trading Sessions when an updated ITV will not be calculated or publicly disseminated; (2) the procedures for purchases and redemptions of Shares in Creation Baskets and Redemption Baskets (and that Shares are not individually redeemable); (3) NYSE Arca Equities Rule 9.2(a), which imposes a duty of due diligence on its ETP Holders to learn the essential facts relating to every customer prior to trading the Shares; (4) how information regarding the ITV is disseminated; (5) the requirement that ETP Holders deliver a prospectus to investors purchasing newly issued Shares prior to or concurrently with the confirmation of a transaction; and (6) trading information.

In addition, the Information Bulletin will advise ETP Holders, prior to the commencement of trading, of the prospectus delivery requirements applicable to the Fund. The Exchange notes that investors purchasing Shares directly from the Fund will receive a prospectus. ETP Holders purchasing Shares from the Fund for resale to investors will deliver a prospectus to such investors. The Information Bulletin will also discuss any exemptive, no-action and interpretive relief granted by the Commission from any rules under the Act.

In addition, the Information Bulletin will reference that the Fund is subject to various fees and expenses described in the Registration Statement. The Information Bulletin will also reference that the CFTC has regulatory jurisdiction over futures contracts traded on U.S. markets.

The Information Bulletin will also disclose the trading hours of the Shares of the Fund and that the NAV for the Shares is calculated after 4 p.m. E.T. each trading day. The Bulletin will disclose that information about the Shares of the Fund is publicly available on the Fund's Web site.

2. Statutory Basis

The proposed rule change is consistent with Section 6(b) of the Act,[19] in general, and furthers the objectives of Section 6(b)(5),[20] in particular, in that it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, and to remove impediments to and perfect the mechanism of a free and open market and a national market system. The Exchange believes that the proposed rule change will permit the listing of an additional issuance of Trust Issued Receipts on the Exchange that will enhance competition among market participants, to the benefit of investors and the marketplace. In addition, the listing and trading criteria set forth in Rule 8.200 are intended to protect investors and the public interest.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

[15] *See* NYSE Arca Equities Rule 7.12.

[20] 15 U.S.C. 78f(b)(5).

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or within such longer period up to 90 days (i) as the Commission may designate if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) By order approve or disapprove the proposed rule change, or

(B) Institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an e-mail to *rule-comments@sec.gov*. Please include File Number SR–NYSEArca–2010–103 on the subject line.

Paper Comments

- Send paper comments in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street, NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–NYSEArca–2010–103. This file number should be included on the subject line if e-mail is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street, NE., Washington, DC 20549–1090 on official business days between 10 a.m. and 3 p.m. Copies of the filing will also be available for inspection and copying at the Exchange's principal office. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–NYSEArca–2010–103 and should be submitted on or before December 20, 2010.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[21]

Elizabeth M. Murphy,

Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–63350; File No. SR–Phlx–2010–156]

Self-Regulatory Organizations; NASDAQ OMX PHLX, Inc.; Notice of Filing and Immediate Effectiveness of Proposed Rule Change Relating to the Extension of a Pilot Program Concerning Disseminated Quotations

November 19, 2010.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act")[1], and Rule 19b–4[2] thereunder, notice is hereby given that on November 10, 2010, NASDAQ OMX PHLX, Inc. ("Phlx" or "Exchange") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I, II, and III, below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend Exchange Rules 1017, Openings in Options, and 1082, Firm Quotations, to extend, through March 31, 2011, a pilot program (the "pilot") under which the Exchange's rules describe the manner in which the PHLX XL® automated options trading system[3] disseminates quotations when (i) there is an opening imbalance in a particular series, and (ii) there is a Quote Exhaust (as described below) or a Market Exhaust (as described below) quote condition present in a particular series.

The current pilot is scheduled to expire November 30, 2010.

The text of the proposed rule change is available on the Exchange's Web site at *http://www.nasdaqtrader.com/micro.aspx?id=PHLXRulefilings,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The purpose of the proposed rule change is to extend the pilot through March 31, 2011.

Background

In June, 2009, the Exchange added several significant enhancements to its automated options trading platform (now known as PHLX XL), and adopted rules to reflect those enhancements.[4] As part of the system enhancements, the Exchange proposed to disseminate a "non-firm" quote condition on a bid or offer whose size is exhausted in certain situations. The non-exhausted side of

[21] 17 CFR 200.30–3(a)(12).

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] This proposal refers to "PHLX XL" as the Exchange's automated options trading system. In May 2009 the Exchange enhanced the system and adopted corresponding rules referring to the system as "Phlx XL II." *See* Securities Exchange Act Release No. 59995 (May 28, 2009), 74 FR 26750 (June 3, 2009) (SR–Phlx–2009–32). The Exchange intends to submit a separate technical proposed rule change that would change all references to the system from "Phlx XL II" to "PHLX XL" for branding purposes.

[4] *See* Securities Exchange Act Release No. 59995 (May 28, 2009), 74 FR 26750 (June 3, 2009) (SR–Phlx–2009–32).

the Exchange's disseminated quotation would remain firm up to its disseminated size. Currently, however, the Options Price Reporting Authority ("OPRA") only disseminates option quotations for which both sides of the quotation are marked "non-firm." OPRA currently does not disseminate a "non-firm" condition for one side of a quotation while the other side of the quotation remains firm.[5]

Accordingly, the Exchange proposed, for a pilot period scheduled to expire November 30, 2009, and later extended through September 30, 2010,[6] to disseminate quotations in such a circumstance with (i) a bid price of $0.00, with a size of one contract if the remaining size is a seller, or (ii) an offer price of $200,000, with a size of one contract if the remaining size is a buyer.

The Exchange subsequently modified the manner in which the PHLX XL system disseminates quotes when one side of the quote is exhausted but the opposite side still has marketable size at the disseminated price, as described in detail below.[7]

On October 7, 2010, the U.S. options exchanges, as participants in the OPRA Plan, voted to make technological changes that would enable OPRA to support a one-sided non-firm quote condition. These technological changes require OPRA and the participants to design, test, and deploy modifications to their systems, and to establish connectivity with quotation vendors, that will support the one-sided non-firm quote condition. The Exchange set a target date for its completion of the changes by the end of January, 2011. The Exchange is proposing to extend the current pilot through March 31, 2011, in order to account for the time required to complete the changes, and to account for the possibility that issues could arise that might delay the process beyond the end of January target date.

Opening Imbalance

An opening "imbalance" occurs when all opening marketable size cannot be completely executed at or within an established Opening Quote Range ("OQR") for the affected series.[8] Currently, pursuant to Exchange Rule 1017(l)(v)(C)(7), any unexecuted contracts from the opening imbalance not traded or routed are displayed in the Exchange quote at the opening price for a period not to exceed ten seconds, and subsequently, cancelled back to the entering participant if they remain unexecuted and priced through the opening price, unless the member that submitted the original order has instructed the Exchange in writing to re-enter the remaining size, in which case the remaining size will be automatically submitted as a new order. During this display time period, the PHLX XL system disseminates, if the imbalance is a buy imbalance, an offer of $0.00, with a size of zero contracts or, if the imbalance is a sell imbalance, a bid of $0.00, with a size of zero contracts, on the opposite side of the market from remaining unexecuted contracts.

The purpose of this provision is to indicate that the Exchange has exhausted all marketable interest, at or within the OQR, on one side of the market during the opening process yet has remaining unexecuted contracts on the opposite side of the market that are firm at the disseminated price and size.

Rule 1017(l)(v)(C)(7) is subject to the pilot, which is scheduled to expire November 30, 2010. The Exchange proposes to extend the pilot through March 31, 2011.

Quote Exhaust

Quote Exhaust occurs when the market at a particular price level on the Exchange includes a quote, and such market is exhausted by an inbound contra-side quote or order ("initiating quote or order"), and following such exhaustion, contracts remain to be executed from the initiating quote or order.[9]

Rather than immediately executing at the next available price, the PHLX XL system employs a timer (a "Quote Exhaust Timer"), not to exceed one second, in order to allow market participants to refresh their quotes. During the Quote Exhaust Timer, PHLX XL currently disseminates the "Reference Price" (the most recent execution price) for the remaining size, provided that such price does not lock an away market, in which case, the Exchange currently disseminates a bid and offer that is one Minimum Price Variation ("MPV") from the away market price. During the Quote Exhaust Timer, the Exchange disseminates: (i) A bid price of $0.00, with a size of zero contracts if the remaining size is a seller, or (ii) an offer price of $0.00, with a size of zero contracts if the remaining size is a buyer.

Currently, Exchange Rules 1082(a)(ii)(B)(3)(g)(iv)(A)(3), 1082(a)(ii)(B)(3)(g)(iv)(A)(4), 1082(a)(ii)(B)(3)(g)(iv)(B)(2), and 1082(a)(ii)(B)(3)(g)(iv)(C) describe various scenarios under which the PHLX XL system trades, routes, or posts unexecuted contracts after determining the "Best Price" following a Quote Exhaust. These rules permit an up to 10 second time period during which participants may revise their quotes prior to the PHLX XL system taking action. In all of these scenarios, during the up to 10 second time period, the PHLX XL system currently disseminates an offer of $0.00, with a size of zero contracts if the remaining size is a buyer or, if the remaining size is a seller, a bid of $0.00, with a size of zero contracs, on the opposite side of the market from remaining unexecuted contracts.

Exchange Rules 1082(a)(ii)(B)(3)(g)(iv)(A)(3), 1082(a)(ii)(B)(3)(g)(iv)(A)(4), 1082(a)(ii)(B)(3)(g)(iv)(B)(2), and 1082(a)(ii)(B)(3)(g)(iv)(C) are subject to the pilot, which is scheduled to expire November 30, 2010. The Exchange proposes to extend the pilot through March 31, 2011.

Current Rule 1082(a)(ii)(B)(3)(g)(vi) describes what the PHLX XL system does if, after trading at the PHLX and/or routing, there are unexecuted contracts from the initiating order that are still marketable. In this situation, remaining contracts are posted for a period of time not to exceed 10 seconds and then cancelled after such period of time has elapsed, unless the member that submitted the original order has instructed the Exchange in writing to re-enter the remaining size, in which case the remaining size will be automatically submitted as a new order. During the up to 10 second time period, the Exchange will disseminate, on the opposite side of the market from remaining unexecuted contracts: (i) A bid price of $0.00, with a size of zero contracts if the remaining size is a seller, or (ii) an offer price of $0.00, with a size of zero contracts if the remaining size is a buyer.

Rule 1082(a)(ii)(B)(3)(g)(vi) is subject to the pilot. The Exchange proposes to extend the pilot through March 31, 2011.

Market Exhaust

Market Exhaust occurs when there are no PHLX XL participant quotations in the Exchange's disseminated market for a particular series and an initiating

[5] Currently, there is no mechanism for the Options Price Reporting Authority ("OPRA") to identify only one side of a quote as non-firm. The Exchange has approached OPRA to attempt to develop the capability to identify and implement such functionality.

[6] *See supra* note 4.

[7] *See* Securities Exchange Act Release No. 63024 (September 30, 2010), 75 FR 61799 (October 6, 2010) (SR–Phlx–2010–134).

[8] Where there is an imbalance at the price at which the maximum number of contracts can trade that is also at or within the lowest quote bid and highest quote offer, the PHLX XL system will calculate an OQR for a particular series, outside of which the PHLX XL system will not execute. *See* Exchange Rule 1017(l)(iii) and (iv).

[9] *See* Exchange Rule 1082(a)(ii)(B)(3).

order in the series is received. In such a circumstance, the PHLX XL system initiates a "Market Exhaust Auction" for the initiating order.[10]

In this situation, the PHLX XL system will first determine if the initiating order, or a portion thereof, can be executed on the PHLX. Thereafter, if there are unexecuted contracts remaining in the initiating order the PHLX XL system will initiate a Market Exhaust Timer. During the Market Exhaust Timer, the Exchange disseminates any unexecuted size of the initiating order at the "Reference Price," which is the execution price of a portion of the initiating order, or one MPV from a better-priced away market price if the Reference Price would lock the away market. The PHLX XL system currently disseminates, on the opposite side of the market from the remaining unexecuted contracts: (i) A bid price of $0.00, with a size of zero contracts if the remaining size is a seller, or (ii) an offer price of $0.00, with a size of zero contracts if the remaining size is a buyer. This provision is subject to the pilot. The Exchange proposes to extend the pilot through March 31, 2011.

Provisional Auction

Exchange Rule 1082(a)(ii)(B)(4)(d)(iv)(E) describes what PHLX XL does after it has explored all alternatives and there still remain unexecuted contracts. During the "Provisional Auction," any unexecuted contracts from the initiating order are displayed in the Exchange quote for the remaining size for a brief period not to exceed ten seconds and subsequently cancelled back to the entering participant if they remain unexecuted, unless the member that submitted the original order has instructed the Exchange in writing to re-enter the remaining size, in which case the remaining size will be automatically submitted as a new order. During the brief period, the PHLX XL system currently disseminates, on the opposite side of the market from remaining unexecuted contracts: (i) A bid price of $0.00, with a size of zero contracts if the remaining size is a seller, or (ii) an offer price of $0.00, with a size of zero contracts if the remaining size is a buyer.

Rule 1082(a)(ii)(B)(4)(d)(iv)(E) is subject to the pilot. The Exchange proposes to extend the pilot through March 31, 2011.

The Exchange believes that the pilot benefits customers and the marketplace as a whole by enabling PHLX to effectively reflect the market interest the Exchange has that is firm and executable, while at the same time indicating the other side of the Exchange market is not firm and therefore not executable. This allows the Exchange to protect orders on its book and attempt to attract interest to execute against such order.

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act[11] in general, and furthers the objectives of Section 6(b)(5) of the Act[12] in particular, in that it is designed to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general to protect investors and the public interest.

The Exchange further believes that the proposal is consistent with the SEC Quote Rule's provisions regarding non-firm quotations.[13] Specifically, Rule 602(a)(3)(i) provides that if, at any time a national securities exchange is open for trading, the exchange determines, pursuant to rules approved by the Commission, that the level of trading activities or the existence of unusual market conditions is such that the exchange is incapable of collecting, processing, and making available to vendors the data for a subject security required to be made available in a manner that accurately reflects the current state of the market on such exchange, such exchange shall immediately notify all specified persons of that determination and, upon such notification, the exchange is relieved of its obligations under paragraphs (a)(1) and (2) of Rule 602 relating to collecting and disseminating quotations, subject to certain other provisions of Rule 602(a)(3).

By disseminating a bid of $0.00 for a size of zero contracts, or an offer of $0.00 for a size of zero contracts in certain situations delineated above in the Exchange's rules, the Exchange believes that it is adequately communicating that it is non-firm on that side of the market in compliance with the Quote Rule.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

II. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Pursuant to Section 19(b)(3)(A) of the Act[14] and Rule 19b–4(f)(6)[15] thereunder, the Exchange has designated this proposal as one that effects a change that: (i) Does not significantly affect the protection of investors or the public interest; (ii) does not impose any significant burden on competition; and (iii) by its terms, does not become operative for 30 days after the date of the filing, or such shorter time as the Commission may designate if consistent with the protection of investors and the public interest. The Exchange believes that the current pilot is "non-controversial" and therefore appropriate for filing pursuant to Rule 19b–4(f)(6).

Rule 19b–4(f)(6) requires a self-regulatory organization to give the Commission written notice of its intent to file the proposed rule change at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement. Furthermore, a proposed rule change filed pursuant to Rule 19b–4(f)(6) under the Act[16] normally does not become operative for 30 days after the date of its filing. However, Rule 19b–4(f)(6)[17] permits the Commission to designate a shorter time if such action is consistent with the protection of investors and the public interest.

The Exchange has requested that the Commission waive the 30-day operative delay. The Commission believes that waiving the 30-day operative delay is consistent with the protection of investors and the public interest. The Commission notes the instant proposed rule change does not involve any substantive change to the Exchange's rules. Rather, the proposed rule change only seeks to extend the current pilot to allow time for OPRA to make technological changes that would enable OPRA to support a one-sided non-firm quote condition and allow the Exchange time to make corresponding changes to its systems. Thus, the Commission believes that the proposed rule change

[10] *See* Exchange Rule 1082(a)(ii)(B)(4)(b).

[11] 15 U.S.C. 78f(b).

[12] 15 U.S.C. 78f(b)(5).

[13] *See* 17 CFR 242.602(a)(3)(i) and (ii).

[14] 15 U.S.C. 78s(b)(3)(A).

[15] 17 CFR 240.19b–4(f)(6).

[16] 17 CFR 240.19b–4(f)(6).

[17] 17 CFR 240.19b–4(f)(6).

does not raise any new regulatory issues.[18]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an e-mail to *rule-comments@sec.gov*. Please include File Number SR–Phlx–2010–156 on the subject line.

Paper Comments

- Send paper comments in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street, NE., Washington, DC 20549–1090.

All submissions should refer to File Number SR–Phlx–2010–156. This file number should be included on the subject line if e-mail is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street, NE., Washington, DC. 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of such filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR–Phlx–2010–156 and should be submitted on or before December 20, 2010.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[19]

Elizabeth M. Murphy,

Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–63359; File No. SR–BATS–2010–033]

Self-Regulatory Organizations; BATS Exchange, Inc.; Notice of Filing and Immediate Effectiveness of Proposed Rule Change by BATS Exchange, Inc. to Modify the Minor Rule Violation Plan for BATS Options

November 22, 2010.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the "Act"),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on November 18, 2010, BATS Exchange, Inc. (the "Exchange" or "BATS") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Exchange has designated this proposal as a "non-controversial" proposed rule change pursuant to Section 19(b)(3)(A) of the Act [3] and Rule 19b–4(f)(6)(iii) thereunder,[4] which renders it effective upon filing with the Commission. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange is proposing to amend BATS Rule 25.3, entitled "Penalty for Minor Rule Violations", to expand the list of violations eligible for disposition under the Exchange's Minor Rule Violation Plan ("MRVP") as it relates to the equity options platform operated by the Exchange ("BATS Options").

The text of the proposed rule change is available at the Exchange's Web site at *http://www.batstrading.com*, at the principal office of the Exchange, on the Commission's Web site at *http://www.sec.gov* and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in Sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The purpose of the proposed rule change is to amend Rule 25.3, entitled "Penalty for Minor Rule Violations", to expand the list of violations eligible for disposition under the Exchange's Minor Rule Violation Plan ("MRVP") as it relates to options in order to improve the consistency of the Exchange's MRVP with other options exchanges. All options exchanges have entered into a plan pursuant to Rule 17d–2 of the Act (the "Plan") under which the exchanges have agreed to allocate regulatory responsibility for certain rules common to all options exchanges, which Plan is administered by a committee known as the Options Surveillance Group (the "OSG"). Adding the proposed rules to the MRVP makes the Exchange's MRVP more consistent with the minor rule violation plans of other self-regulatory organizations, including with respect to rules that are classified as common rules pursuant to the Plan (the "OSG 17d–2"). The Exchange believes that its MRVP with respect to violations of rules that are common rules pursuant to the OSG 17d–2 should be consistent with the other options exchanges that are parties to the OSG 17d–2.

Consistent with the goal of improved consistency between the Exchange's

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] 15 U.S.C. 78s(b)(3)(A).

[4] 17 CFR 240.19b–4(f)(6)(iii).

MRVP and the MRVPs of other options exchanges, the proposed additions include Rules 18.9, 18.10, 23.1(a) through (k), 23.1(l), and 24.4, each of which is described below.

• Rule 18.9 provides that no Options Member may directly or indirectly exceed exercise limits established by the Chicago Board Options Exchange, BATS Options, or another exchange, as the limits apply to options trading on BATS Options.

• Rule 18.10 provides the requirements for accurately reporting position and account information to the Exchange.

• Rule 23.1(a) through (k) relates to expiring exercise declarations and the timely submission of "Advice Cancel" or exercise instruction relating to the exercise or non-exercise of non-cash-settled equity options.

• Rule 23.1(l) relates to the failure to submit an Exercise Advice; the submission of an advice and no subsequent exercise; the submission of an Exercise Advice after the designated cut-off time; the submission of an Exercise Advice for an amount different than the amount exercised; and the time-stamping of an advice or exercise instruction memorandum prior to purchasing contracts.

• Lastly, Rule 24.4 covers requests by the Exchange for submission of trade data.

The proposed changes would allow the Exchange to impose a fine of at least $500 per violation of the above-listed rules, with a maximum fine amount of $5,000. By promptly imposing a meaningful financial penalty for such violations, the MRVP focuses on correcting conduct before it gives rise to more serious enforcement action. The MRVP provides a reasonable means of addressing rule violations that do not necessarily rise to the level of requiring formal disciplinary proceedings, while also providing a greater flexibility in handling certain violations. Adopting a provision that would allow the Exchange to sanction violators under the MRVP by no means minimizes the importance of compliance with these rules. The Exchange believes that the violation of any of its rules is a serious matter. The addition of a sanction under the MRVP simply serves to add an additional method for disciplining violators of the additional rules. The Exchange will continue to conduct surveillance with due diligence and make its determination, on a case by case basis, whether a violation of these additional rules should be subject to formal disciplinary proceedings.

In addition to the changes proposed above, the Exchange proposes to modify its MRVP sanction for a violation of Exchange position limit rules (Rule 18.7) in order to conform to the sanctions imposed by a majority of other options exchanges. The Exchange's current MRVP sanction for violations of position limits differs depending on whether a violation occurs in an Options Member's account or a customer account, a distinction not present in the rules of most other options exchanges. Furthermore, the Exchange's current MRVP sanction for violations of position limits is based on a per contract amount, whereas most options exchanges would impose a flat amount as the fine. Consistent with the other changes proposed above, the Exchange believes that conforming changes are appropriate, especially due to the fact that position limit rules are subject to the OSG 17d–2.

Finally, the Exchange also proposes modifying the headings of the sub-parts in its existing Rule 25.3 to correct typographical errors. Specifically, in each heading the "Number of Cumulative Violations Within One Period" and "Fine Amount" language is currently commingled into one heading.

2. Statutory Basis

Approval of the rule change proposed in this submission is consistent with the requirements of the Act and the rules and regulations thereunder that are applicable to a national securities exchange, and, in particular, with the requirements of Section 6(b) of the Act.[5] In particular, the proposed change is consistent with Section 6(b)(5) of the Act,[6] because it would promote just and equitable principles of trade, remove impediments to, and perfect the mechanism of, a free and open market and a national market system, and, in general, protect investors and the public interest, by giving the Exchange the ability to promptly impose a meaningful financial penalty for such violations before there is a need for more serious enforcement action. The Exchange believes that the proposed rule meets these requirements in that it promotes transparency and uniformity across markets concerning enforcement of common rules contained in the OSG 17d–2.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change imposes any burden on competition.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants or Others

The Exchange has neither solicited nor received written comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) Significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A) of the Act[7] and Rule 19b–4(f)(6)(iii) thereunder.[8]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposal is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

• Use the Commission's Internet comment form (*http://www.sec.gov/rules/sro.shtml*); or

• Send an e-mail to *rule-comments@sec.gov*. Please include File No. SR–BATS–2010–033 on the subject line.

Paper Comments

• Send paper comments in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street, NE., Washington, DC 20549–1090.

All submissions should refer to File No. SR–BATS–2010–033. This file number should be included on the subject line

[5] 15 U.S.C. 78f(b).

[6] 15 U.S.C. 78f(b)(5).

[7] 15 U.S.C. 78s(b)(3)(A).

[8] 17 CFR 240.19b–4(f)(6). In addition, Rule 19b–4(f)(6) requires a self-regulatory organization to give the Commission written notice of its intent to file the proposed rule change at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Commission notes that the Exchange satisfied this five-day pre-filing requirement.

if e-mail is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street, NE., Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of such filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File No. SR–BATS–2010–033 and should be submitted on or before December 20, 2010.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[9]

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–63352; File No. SR–CBOE–2010–046]

Self-Regulatory Organizations; Chicago Board Options Exchange, Incorporated; Order Granting Approval of Proposed Rule Change To Amend Certain Rules Pertaining to Credit Options

November 19, 2010.

I. Introduction

On September 20, 2010, the Chicago Board Options Exchange, Incorporated ("CBOE" or "Exchange") filed with the Securities and Exchange Commission ("Commission"), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act")[1] and Rule 19b–4 thereunder,[2] a proposed rule change to amend its rules relating to Credit Options. The proposed rule change was published for comment in the **Federal Register** on October 7, 2010.[3] The Commission received no comments on the proposal. This order approves the proposed rule change.

II. Description of the Proposal

The Exchange proposes to amend its rules governing Credit Options[4] to make three substantive changes. First, CBOE proposes to permit the Exchange to fix the exercise settlement value for Credit Default Options, on a class-by-class basis, at $1 or $100, or at a value between those two points. Currently, the exercise settlement value is fixed at $100. Since the cash settlement amount for Credit Default Options is the product of the exercise settlement value multiplied by a contract multiplier that may be fixed by the Exchange on a class-by-class basis within a range of 1 to 1,000, this change will enable the Exchange to list a Credit Default Option contact with a cash settlement amount that could be arrived at in different ways.[5] Second, the proposal would permit the Exchange to establish the minimum price variation ("MPV") for all Credit Options, which is currently $0.05, on a class-by-class basis, at an increment no less than $0.01, which would permit more pricing points, such as when lower exercise settlement values are designated. Third, the proposal would give the Exchange authority to list Credit Options that contemplate only a single credit event. Currently, CBOE rules for Credit Options enumerate several potential credit events, the occurrence of any one of which could allow the Credit Option to be exercised. For example, a failure-to-pay default will always be a designated credit event for each class, and the Exchange may, on a class-by-class basis, specify other events of default or a restructuring.[6] The Exchange proposes to amend its rules to permit it to list Credit Options designating a single credit event, such as a failure-to-pay default, another event of default, or a restructuring. The Exchange also proposes to make a technical, non-substantive change to one of its rules governing Credit Options, Rule 29.3.

III. Discussion and Commission's Findings

After careful consideration, the Commission finds that the proposed rule change is consistent with the requirements of the Act and the rules and regulations thereunder applicable to a national securities exchange.[7] In particular, the Commission finds that the proposed rule change is consistent with the requirements of Section 6(b)(5) of the Act,[8] which requires, among other things, that the Exchange's rules be designed to prevent fraudulent and manipulative acts and practices; to promote just and equitable principles of trade; to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities; to remove impediments to and perfect the mechanism of a free and open market and a national market system; and, in general, to protect investors and the public interest.

The Commission believes that the proposal to authorize the Exchange to list Credit Options that contemplate only a single credit event is consistent with the Act. In addition, the Commission believes that the proposal to allow the Exchange flexibility to fix the exercise settlement value for Credit Default Options within a range of $1 to $100 is consistent with the Act. With this change, the Exchange could list a contract with a cash settlement value of $10,000 with a multiplier of 1,000 and an exercise settlement amount of $10, or with a multiplier of 100 and an exercise settlement amount of $100. There could be concerns if the Exchange were to seek to list Credit Default Options having the same cash settlement value but with different combinations of multiplier and cash settlement amount.

[9] 17 CFR 200.30–3(a)(12).

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] *See* Securities Exchange Act Release No. 63026 (October 1, 2010), 75 FR 62167 ("Notice").

[4] Credit Options include Credit Default Options and Credit Default Basket Options. Credit Default Options are cash-settled binary options that are automatically exercised upon the occurrence of specified credit events or expire worthless. *See* CBOE Rule 29.1(b); Securities Exchange Act Release No. 55871 (June 6, 2007), 72 FR 32372 (June 12, 2007) (SR–CBOE–2006–84) (order approving CBOE's proposed rules to list and trade Credit Default Options). Credit Default Basket Options are cash-settled binary options based on a basket of at least two reference entities. *See* CBOE Rule 29.1(h); Securities Exchange Act Release No. 56275 (August 17, 2007), 72 FR 47097 (August 22, 2007) (SR–CBOE–2007–26) (order approving CBOE's proposed rules to list and trade Credit Default Basket Options).

[5] The Exchange has represented that it will not list more than one Credit Default Option contract with a cash settlement amount arrived at in different ways. *See* Notice at note 8 and accompanying text.

[6] *See* CBOE Rules 29.2 and 29.2A.

[7] In approving this proposed rule change, the Commission notes that it has considered the proposed rule's impact on efficiency, competition, and capital formation. *See* 15 U.S.C. 78c(f).

[8] 15 U.S.C. 78f(b)(5).

This could fragment the market and dilute the liquidity of economically identical products. The Exchange has represented, however, that it will not list more than one Credit Default Option contract with a cash settlement value that has been arrived at in multiple ways.[9] The Commission's approval of this aspect of the proposal incorporates that representation.[10]

Finally, the Commission believes that the proposal to use an MPV of as little as $0.01 for all Credit Options is consistent with the Act. With exercise settlement values as low as $1, the ability to set the MPV at $0.01 would make available 100 price points for quoting bids and offers in the range of $0 to $1, as opposed to only 20 price points under the current MPV of $0.05. The CBOE has represented that it has analyzed its capacity and believes that it and the Options Price Reporting Authority have the necessary systems capacity to handle the additional traffic associated with the ability to designate $0.01 as the MPV for Credit Options; and that the Exchange believes that the change will not lead to a proliferation of quotes and thus do not have multiple series with different strike prices, because Credit Options do not have strike prices.[11]

IV. Conclusion

It is therefore ordered, pursuant to Section 19(b)(2) of the Act,[12] that the proposed rule change (SR–CBOE–2010–046), be, and it hereby is, approved.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[13]

Elizabeth M. Murphy,

Secretary.

BILLING CODE 4710–10–P

DEPARTMENT OF STATE

[Public Notice 7249]

Bureau of Western Hemisphere Affairs; Executive Order 11423, as Amended; Notice of Receipt of Application for a Presidential Permit To Renovate and Expand the San Ysidro Land Port of Entry on the U.S.-Mexico Border at San Diego, CA and Tijuana, Baja CA, Mexico

AGENCY: Department of State.

ACTION: Notice.

SUMMARY: The Department of State hereby gives notice that, on November 10, 2010, it received an application for a Presidential Permit to authorize the renovation and expansion of the San Ysidro border crossing facility on the U.S.-Mexico border at San Diego, California and Tijuana, Baja California, Mexico. The General Services Administration (GSA) filed this application and is acting as the project's sponsor. The Department of State's jurisdiction over this application is based upon Executive Order 11423 of August 16, 1968, as amended. As provided in E.O. 11423, the Department is circulating this application to relevant federal and state agencies for review and

[9] *See supra* note 5.

[10] The Commission also notes that the CBOE currently has the flexibility to set the exercise settlement value for binary options listed on the Exchange on a class-by-class basis. *See* CBOE Rule 22.1(e). *See also* Notice at note 9 and accompanying text.

[11] *See* Notice. The Commission also notes that the Exchange has the discretion to establish the MPV on a class-by-class basis for binary options at an increment no less than $0.01. *See* CBOE Rule 22.13(b).

[Public Notice: 7247]

The Designation of Falah-i-Insaniat (and Other Aliases) as a Specially Designated Global Terrorist Pursuant to Section 1(b) of Executive Order 13224, as Amended

Acting under the authority of and in accordance with section 1(b) of Executive Order 13224 of September 23, 2001, as amended by Executive Order 13268 of July 2, 2002, Executive Order 13284 of January 23, 2003, and Executive Order 13372 of February 16, 2005, I hereby determine that the organization known as Falah-i-Insaniat (and other aliases) has committed, or poses a significant risk of committing, acts of terrorism that threaten the security of U.S. nationals or the national security, foreign policy, or economy of the United States.

Consistent with the determination in section 10 of Executive Order 13224 that "for those persons * * * determined to be subject to the order who might have a constitutional presence in the United States * * * prior notice to such persons of measures to be taken pursuant to this order would render these measures ineffectual," I determine that no prior notice needs to be provided to any person subject to this determination who might have a constitutional presence in the United States, because to do so would render ineffectual the measures authorized in the Order.

This notice shall be published in the **Federal Register**.

Dated: September 28, 2010.

Hillary Rodham Clinton,

Secretary of State, Department of State.

[FR Doc. 2010–29872 Filed 11–26–10; 8:45 am]

BILLING CODE 4710–10–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

Agency Information Collection Activities: Requests for Comments; Clearance of Renewed Approval of Information Collection: Certification: Mechanics, Repairmen, and Parachute Riggers, FAR 65

AGENCY: Federal Aviation Administration, DOT.

ACTION: Notice and request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, FAA invites public comments about our intention to request the Office of Management and Budget (OMB) approval to renew an information collection. The **Federal Register** Notice with a 60-day comment period soliciting comments on the following collection of information was published on August 27, 2010, vol. 75, no. 166, page 52802. FAR part 65 prescribes requirements for mechanics, repairmen, parachute riggers, and inspection authorizations. The information collected shows applicant eligibility for certification.

DATES: Written comments should be submitted by December 29, 2010.

FOR FURTHER INFORMATION CONTACT: Carla Scott on (202) 267–9895, or by e-mail at: *Carla.Scott@faa.gov.*

SUPPLEMENTARY INFORMATION: *OMB Control Number:* 2120–0022.

Title: Certification: Mechanics, Repairmen, and Parachute Riggers, FAR 65.

Form Numbers: FAA Forms 8610–1, 8610–2.

Type of Review: Renewal of an information collection.

Background: FAR Part 65 prescribes, among other things, rules governing the issuance of certificates and associated rating for mechanic, repairman, parachute riggers, and issuance of inspection authorizations. The information collected on the forms submitted for renewal is used for evaluation by the FAA, which is necessary for issuing a certificate and/or rating. Certification is necessary to ensure qualifications of the applicant.

Respondents: An estimated 66,153 mechanics, repairmen, and parachute riggers.

Frequency: Information is collected on occasion.

Estimated Average Burden per Response: 20 minutes.

Estimated Total Annual Burden: 44,841 hours.

ADDRESSES: Interested persons are invited to submit written comments on the proposed information collection to the Office of Information and Regulatory Affairs, Office of Management and Budget. Comments should be addressed to the attention of the Desk Officer, Department of Transportation/FAA, and sent via electronic mail to *oira_submission@omb.eop.gov,* or faxed to (202) 395–6974, or mailed to the Office of Information and Regulatory Affairs, Office of Management and Budget, Docket Library, Room 10102, 725 17th Street, NW., Washington, DC 20503.

Public Comments Invited: You are asked to comment on any aspect of this information collection, including (a) whether the proposed collection of information is necessary for FAA's performance; (b) the accuracy of the estimated burden; (c) ways for FAA to enhance the quality, utility and clarity of the information collection; and (d) ways that the burden could be minimized without reducing the quality of the collected information. The agency will summarize and/or include your comments in the request for OMB's clearance of this information collection.

Issued in Washington, DC on November 19, 2010.

Carla Scott,

FAA Information Collection Clearance Officer, IT Enterprises Business Services Division, AES–200.

[FR Doc. 2010–29900 Filed 11–26–10; 8:45 am]

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

Executive Committee of the Aviation Rulemaking Advisory Committee; Meeting

AGENCY: Federal Aviation Administration, DOT.

ACTION: Notice of meeting.

SUMMARY: The FAA is issuing this notice to advise the public of a meeting of the Executive Committee of the Aviation Rulemaking Advisory Committee.

DATES: The meeting will be held on December 16, 2010, at 10 a.m.

ADDRESSES: The meeting will take place at the Federal Aviation Administration, 800 Independence Avenue, SW., Washington, DC 20591, 10th floor, MacCracken Room.

FOR FURTHER INFORMATION CONTACT: Renee Butner, Federal Aviation Administration, 800 Independence Avenue, SW., Washington, DC 20591, telephone (202) 267- 5093; fax (202) 267–5075; e-mail *Renee.Butner@faa.gov.*

SUPPLEMENTARY INFORMATION: Under section 10(a)(2) of the Federal Advisory Committee Act (5 U.S.C. App. 2), we are giving notice of a meeting of the Executive Committee of the Aviation Rulemaking Advisory Committee taking place on December 16, 2010, at the Federal Aviation Administration, 800 Independence Avenue, SW., Washington, DC, 20591. The Agenda includes:

1. Updates on:
   a. Commercial Air Tour Maintenance (CATM) Working Group
   b. Process Improvement Working Group (PIWG)
   c. Charter Renewal
   d. "One Stop Shopping" Web Site
   e. Committee Manual Revisions
2. Issue Area Status Reports from Assistant Chairs
3. Remarks from other EXCOM members

Attendance is open to the interested public but limited to the space available. The FAA will arrange teleconference service for individuals wishing to join in by teleconference if we receive notice by December 7. Arrangements to participate by teleconference can be made by contacting the person listed in the **FOR FURTHER INFORMATION CONTACT** section. Callers outside the Washington metropolitan area are responsible for paying long-distance charges.

The public must arrange by December 7 to present oral statements at the meeting. The public may present written statements to the executive committee by providing 25 copies to the Executive Director, or by bringing the copies to the meeting.

If you are in need of assistance or require a reasonable accommodation for this meeting, please contact the person listed under the heading **FOR FURTHER INFORMATION CONTACT**.

Issued in Washington, DC on November 22, 2010.

Dennis Pratte,

Acting Deputy Director, Office of Rulemaking.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

[Docket No. FRA–2000–7257; Notice No. 64]

Railroad Safety Advisory Committee; Notice of Meeting

AGENCY: Federal Railroad Administration (FRA), Department of Transportation (DOT).

ACTION: Announcement of Railroad Safety Advisory Committee (RSAC) Meeting.

SUMMARY: FRA announces the forty-third meeting of the RSAC, a Federal advisory committee that develops railroad safety regulations through a consensus process. The RSAC meeting topics will include opening remarks from the FRA Administrator, and status reports will be provided by the Passenger Hours of Service, Training Standards, Track Safety Standards, Passenger Safety, and Medical Standards Working Groups. Further discussions will also be held on the previously accepted RSAC Task 10–02 regarding the Development, Use, and Implementation of Rail Safety Technology in Dark Territory. This agenda is subject to change, including the possible addition of further proposed tasks under the Rail Safety Improvement Act of 2008.

DATES: The meeting of the RSAC is scheduled to commence at 9:30 a.m. on Tuesday, December 14, 2010, and will adjourn by 4:30 p.m.

ADDRESSES: The RSAC meeting will be held at the National Association of Home Builders National Housing Center, 1201 15th Street, NW., Washington, DC 20005. The meeting is open to the public on a first-come, first-served basis, and is accessible to individuals with disabilities. Sign and oral interpretation can be made available if requested 10 calendar days before the meeting.

FOR FURTHER INFORMATION CONTACT: Larry Woolverton, RSAC Administrative Officer/Coordinator, FRA, 1200 New Jersey Avenue, SE., Mailstop 25, Washington, DC 20590, (202) 493–6212; or Robert Lauby, Deputy Associate Administrator for Regulatory and Legislative Operations, FRA, 1200 New Jersey Avenue, SE., Mailstop 25, Washington, DC 20590, (202) 493–6474.

SUPPLEMENTARY INFORMATION: Pursuant to Section 10(a)(2) of the Federal Advisory Committee Act (Pub. L. 92–463), FRA is giving notice of a meeting of the RSAC. The RSAC was established to provide advice and recommendations to FRA on railroad safety matters. The RSAC is composed of 54 voting representatives from 31 member organizations, representing various rail industry perspectives. In addition, there are non-voting advisory representatives from the agencies with railroad safety regulatory responsibility in Canada and Mexico, the National Transportation Safety Board, and the Federal Transit Administration. The diversity of the Committee ensures the requisite range of views and expertise necessary to discharge its responsibilities. *See* the RSAC Web site for details on prior RSAC activities and pending tasks at: *http://rsac.fra.dot.gov/.* Please refer to the notice published in the **Federal Register** on March 11, 1996 (61 FR 9740), for additional information about the RSAC.

Issued in Washington, DC, on November 22, 2010.

Robert C. Lauby,

Deputy Associate Administrator for Regulatory and Legislative Operations.

[FR Doc. 2010–29870 Filed 11–26–10; 8:45 am]

BILLING CODE 4910–06–P

DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

[Docket Number FRA–2010–0027]

Notice of Petition for Waiver of Compliance; Notice of Petition for Statutory Exemption

In accordance with 49 U.S.C. 21102(b), Cargill Incorporated (CI), on behalf of its employees performing work governed by the hours of service law (HSL) (49 U.S.C. Chapter 211) at its Channelview, TX, facility, has petitioned the Federal Railroad Administration (FRA) for an exemption from certain provisions of the HSL. Specifically, CI requests an exemption from the requirements of 49 U.S.C. 21103(a)(1) and 21103(a)(4) as it applies to employees at its Channelview facility. In a separate petition, which CI requests that FRA consider in the event that FRA

denies its exemption petition, CI seeks a waiver from the requirements of 49 U.S.C. 21103(a)(1) as it applies to employees performing covered service at its Channelview facility, for the purpose of conducting a pilot project. Both petitions may be viewed at *http://www.regulations.gov* under the docket number listed above.

CI's Petition for Statutory Exemption

In its petition for statutory exemption, CI seeks an exemption from the statutory requirement contained in 49 U.S.C. 21103(a)(1), limiting train employees to a total of 276 on-duty hours per calendar month, awaiting or in deadhead transportation from a duty assignment to a place of final release, and in any other mandatory service for a railroad carrier, and from 49 U.S.C. 21103(a)(4), which requires railroads to provide train employees 48 hours of rest after an employee has initiated an on-duty period on 6 consecutive days and 72 hours of rest after an employee has initiated an on-duty period on 7 consecutive days. In support of its exemption request, CI states that its Channelview facility has 15 or fewer employees covered by the HSL and that the facility is operated independently of other CI facilities. CI further explains that its employees subject to the HSL spend the majority of their on-duty time performing non-covered service (e.g., unloading grain from stationery railcars, general housekeeping duties in accordance with the Occupational Safety and Health Administration's combustible dust standards) and that covered service accounts for less than 12 percent of covered employees' monthly hours worked. CI also explains that with certain seasonal exceptions, employees at its Channelview facility generally work in two shifts that rotate every 2 weeks; from 7 a.m.–3 p.m. and from 3 p.m.–11 p.m. (extended to 3 a.m. if needed). CI asserts that the employees' current work schedules ensure safe operations by providing the employees greater control over rest periods and the scheduling of personal affairs and that the statutory restrictions of 49 U.S.C. 21103(a)(1) and 21103(a)(4) unnecessarily lower the earning potential of employees subject to the HSL as compared to other workers at the facility.

CI's Petition for Waiver

In its petition for waiver, in lieu of using a calendar month for measuring the on-duty hours of an employee pursuant to 49 U.S.C. 21103(a)(1), CI proposes to implement a pilot program for establishing an alternative calculation period for the 276-hour monthly limitation. CI and its employees propose a pilot program that would divide a "calendar month" into two measuring periods or groups. The first group would calculate its time toward the 276-hour monthly limitation from the first day of each month to the last day of each month. The second group would calculate its time toward the 276-hour monthly limitation from the 15th day of a month to the 14th day of the following month. By staggering the calculation of the 276-hour monthly limitation, CI notes that the pilot program would ensure that not all employees reach the monthly limitation at the same time.

CI included with its petitions, documentation indicating that its employees supported the request for relief. (49 U.S.C. 21103(a)(1) and 21103 (a)(4)). As previously stated, the requests for relief are specially limited to CI's Channelview, TX, facility and, as such, the other facilities of CI are not covered by the requests.

Interested parties are invited to participate in these proceedings by submitting written views, data, or comments. FRA does not anticipate scheduling a public hearing in connection with these proceedings since the facts do not appear to warrant a hearing. If any interested party desires an opportunity for oral comment, they should notify FRA, in writing, before the end of the comment period and specify the basis for their request.

All communications concerning these proceedings should identify the appropriate docket number (*e.g.,* Waiver Petition Docket Number FRA–2010–0027) and may be submitted by any of the following methods:

- *Web site: http://www.regulations.gov*. Follow the online instructions for submitting comments.
- *Fax:* 202–493–2251.
- *Mail:* Docket Operations Facility, U.S. Department of Transportation, 1200 New Jersey Avenue, SE., W12–140, Washington, DC 20590.
- *Hand Delivery:* 1200 New Jersey Avenue, SE., Room W12–140, Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

Communications received within 45 days of the date of this notice will be considered by FRA before final action is taken. Comments received after that date will be considered as far as practicable. All written communications concerning these proceedings are available for examination during regular business hours (9 a.m.–5 p.m.) at the above facility. All documents in the public docket are also available for inspection and copying on the Internet at the docket facility's Web site at *http://www.regulations.gov*.

Anyone is able to search the electronic form of any written communications and comments received into any of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, *etc.*). You may review DOT's complete Privacy Act Statement in the **Federal Register** published on April 11, 2000 (Volume 65, Number 70; Pages 19477–78).

Issued in Washington, DC, on November 22, 2010.

Robert C. Lauby,

Deputy Associate Administrator for Regulatory and Legislative Operations.

[FR Doc. 2010–29826 Filed 11–26–10; 8:45 am]

BILLING CODE 4910–06–P

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

[Docket No. NHTSA–2010–0153; Notice 1]

Continental Tire North America, Inc., Receipt of Petition for Decision of Inconsequential Noncompliance

Continental Tire North America, Inc., (Continental),[1] has determined that certain passenger car replacement tires manufactured in 2009 do not fully comply with paragraph S5.5(b) of Federal Motor Vehicle Safety Standard (FMVSS) No. 139, *New Pneumatic Radial Tires for Light Vehicles.* Continental has filed an appropriate report pursuant to 49 CFR Part 573, *Defect and Noncompliance Responsibility and Reports,* dated August 10, 2010.

Pursuant to 49 U.S.C. 30118(d) and 30120(h) (see implementing rule at 49 CFR part 556), Continental has petitioned for an exemption from the notification and remedy requirements of 49 U.S.C. Chapter 301 on the basis that this noncompliance is inconsequential to motor vehicle safety.

This notice of receipt of Continental's petition is published under 49 U.S.C. 30118 and 30120 and does not represent any agency decision or other exercise of judgment concerning the merits of the petition.

Affected are approximately 17,121 size 235/45ZR17 94W Continental brand Extremecontact DWS model passenger car tires manufactured from March 2009

[1] Continental Tire North America, Inc. (Continental) is a replacement equipment manufacturer and importer that is incorporated in the State of Ohio.

to October 2009 at Continental's plant located in Camaçari- BA, Brasil. A total of approximately 16,325 of these tires have been delivered to Continental's customers in the United States and Canada.

NHTSA notes that the statutory provisions (49 U.S.C. 30118(d) and 30120(h)) that permit manufacturers to file petitions for a determination of inconsequentiality allow NHTSA to exempt manufacturers only from the duties found in sections 30118 and 30120, respectively, to notify owners, purchasers, and dealers of a defect or noncompliance and to remedy the defect or noncompliance. Therefore, these provisions only apply to the 16,325 [2] tires that have already passed from the manufacturer to an owner, purchaser, or dealer.

Paragraph S5.5(b) of FMVSS No. 139 requires in pertinent part:

S5.5 Tire markings. Except as specified in paragraphs (a) through (i) of S5.5, each tire must be marked on each sidewall with the information specified in S5.5(a) through (d) and on one sidewall with the information specified in S5.5(e) through (i) according to the phase-in schedule specified in S7 of this standard. The markings must be placed between the maximum section width and the bead on at least one sidewall, unless the maximum section width of the tire is located in an area that is not more than one-fourth of the distance from the bead to the shoulder of the tire. If the maximum section width falls within that area, those markings must appear between the bead and a point one-half the distance from the bead to the shoulder of the tire, on at least one sidewall. The markings must be in letters and numerals not less than 0.078 inches high and raised above or sunk below the tire surface not less than 0.015 inches* * *

(b) The tire size designation as listed in the documents and publications specified in S4.1.1 of this standard;

Continental explains that the noncompliance is that, due to a mold labeling error, the sidewall marking on the reference side of the tires incorrectly identifies the tire size code as "658R 3VR" when in fact it should be identified as "658P 3VR" in the tread area of the tires as required by paragraph S5.5(b).

Continental also explains that while the non-compliant tires are mislabeled, all of the tires included in this petition meet or exceed the performance requirements of FMVSS No. 139.

Continental argues that this noncompliance is inconsequential to motor vehicle safety because the noncompliant sidewall marking does not create an unsafe condition and all other labeling requirements have been met.

Continental points out that NHTSA has previously granted similar petitions for non-compliances in sidewall marking.

Continental additionally states that it has corrected the affected tire molds and all future production will have the correct material shown on the sidewall.

In summation, Continental believes that the described noncompliance of its tires to meet the requirements of FMVSS No. 139 is inconsequential to motor vehicle safety, and that its petition, to exempt from providing recall notification of noncompliance as required by 49 U.S.C. 30118 and remedying the recall noncompliance as required by 49 U.S.C. 30120, should be granted.

NHTSA notes that the statutory provisions (49 U.S.C. 30118(d) and 30120(h)) that permit manufacturers to file petitions for a determination of inconsequentiality allow NHTSA to exempt manufacturers only from the duties found in sections 30118 and 30120, respectively, to notify owners, purchasers, and dealers of a defect or noncompliance and to remedy the defect or noncompliance.

Interested persons are invited to submit written data, views, and arguments on this petition. Comments must refer to the docket and notice number cited at the beginning of this notice and be submitted by any of the following methods:

a. *By mail addressed to:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue, SE., Washington, DC 20590.

b. By hand delivery to U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue, SE., Washington, DC 20590. The Docket Section is open on weekdays from 10 a.m. to 5 p.m. except Federal Holidays.

c. *Electronically:* By logging onto the Federal Docket Management System (FDMS) Web site at *http://www.regulations.gov/.* Follow the online instructions for submitting comments. Comments may also be faxed to 1–202–493–2251.

Comments must be written in the English language, and be no greater than 15 pages in length, although there is no limit to the length of necessary attachments to the comments. If comments are submitted in hard copy form, please ensure that two copies are provided. If you wish to receive confirmation that your comments were received, please enclose a stamped, self-addressed postcard with the comments. Note that all comments received will be posted without change to *http://www.regulations.gov,* including any personal information provided.

Documents submitted to a docket may be viewed by anyone at the address and times given above. The documents may also be viewed on the Internet at *http://www.regulations.gov* by following the online instructions for accessing the dockets. DOT's complete Privacy Act Statement is available for review in the **Federal Register** published on April 11, 2000, (65 FR 19477–78).

The petition, supporting materials, and all comments received before the close of business on the closing date indicated below will be filed and will be considered. All comments and supporting materials received after the closing date will also be filed and will be considered to the extent possible. When the petition is granted or denied, notice of the decision will be published in the **Federal Register** pursuant to the authority indicated below.

Comment closing date: December 29, 2010.

Authority: 49 U.S.C. 30118, 30120: delegations of authority at CFR 1.50 and 501.8.

Issued on: November 19, 2010.

Claude H. Harris,

Acting Associate Administrator for Enforcement.

[FR Doc. 2010–29879 Filed 11–26–10; 8:45 am]

BILLING CODE 4910–59–P

[2] Continental's petition, which was filed under 49 CFR Part 556, requests an agency decision to exempt Continental as a replacement equipment manufacturer from the notification and recall responsibilities of 49 CFR Part 573 for the 16,325 tires that were delivered to its customers in the United States. However, the agency cannot relieve Continental distributors of the prohibitions on the sale, offer for sale, or introduction or delivery for introduction into interstate commerce of the noncompliant tires under their control after Continental recognized that the subject noncompliance existed. Those tires must be brought into conformance, exported, or destroyed. In addition, any of the affected tires that Continental has not delivered to its customers must be brought into compliance, exported or destroyed.

DEPARTMENT OF TRANSPORTATION

Pipeline and Hazardous Materials Safety Administration

[Docket No. PHMSA–2010–0354]

Pipeline Safety: Information Collection Activities

AGENCY: Pipeline and Hazardous Materials Safety Administration, DOT.

ACTION: Notice and request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995,

PHMSA invites comments on an information collection under Office of Management and Budget (OMB) Control No. 2137–0578, titled "Reporting Safety-Related Conditions on Gas, Hazardous Liquid, and Carbon Dioxide Pipelines and Liquefied Natural Gas Facilities." PHMSA is preparing to request approval from OMB for a renewal of the current information collection.

DATES: Interested persons are invited to submit comments on or before January 28, 2011.

ADDRESSES: Comments may be submitted in the following ways:

E-Gov Web Site: http://www.regulations.gov. This site allows the public to enter comments on any **Federal Register** notice issued by any agency.

Fax: 1–202–493–2251.

Mail: Docket Management Facility; U.S. DOT, 1200 New Jersey Avenue, SE., West Building, Room W12–140, Washington, DC 20590–0001.

Hand Delivery: Room W12–140 on the ground level of the West Building, 1200 New Jersey Avenue, SE., Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

Instructions: Identify the docket number, PHMSA–2010–0354, at the beginning of your comments. Note that all comments received will be posted without change to *http://www.regulations.gov*, including any personal information provided. You should know that anyone is able to search the electronic form of all comments received into any of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, *etc.*). Therefore, you may want to review DOT's complete Privacy Act Statement in the **Federal Register** published on April 11, 2000 (65 FR 19477) or visit *http://www.regulations.gov* before submitting any such comments.

Docket: For access to the docket or to read background documents or comments, go to *http://www.regulations.gov* at any time or to Room W12–140 on the ground level of the West Building, 1200 New Jersey Avenue, SE., Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. If you wish to receive confirmation of receipt of your written comments, please include a self-addressed, stamped postcard with the following statement: "Comments on PHMSA–2010–0354." The Docket Clerk will date stamp the postcard prior to returning it to you via the U.S. mail. Please note that due to delays in the delivery of U.S. mail to Federal offices in Washington, DC, we recommend that persons consider an alternative method (Internet, fax, or professional delivery service) of submitting comments to the docket and ensuring their timely receipt at DOT.

FOR FURTHER INFORMATION CONTACT: Cameron Satterthwaite by telephone at 202–366–1319, by fax at 202–366–4566, or by mail at U.S. DOT, PHMSA, 1200 New Jersey Avenue, SE., PHP–30, Washington, DC 20590–0001.

SUPPLEMENTARY INFORMATION: Section 1320.8(d), Title 5, Code of Federal Regulations requires PHMSA to provide interested members of the public and affected agencies an opportunity to comment on information collection and recordkeeping requests. This notice identifies an information collection request that PHMSA will be submitting to OMB for renewal and extension. The information collection expires February 28, 2011, and is identified under Control No. 2137–0578, titled: "Reporting Safety-Related Conditions on Gas, Hazardous Liquid, and Carbon Dioxide Pipelines and Liquefied Natural Gas Facilities." The Pipeline Safety Laws (49 U.S.C. 60132) require each operator of a pipeline facility (except master meter operators) to submit to DOT a written report on any safety-related condition that causes or has caused a significant change or restriction in the operation of a pipeline facility or a condition that is a hazard to life, property or the environment. The following information is provided for this information collection: (1) Title of the information collection; (2) OMB control number; (3) Type of request; (4) Abstract of the information collection activity; (5) Description of affected public; (6) Estimate of total annual reporting and recordkeeping burden; and (7) Frequency of collection. PHMSA will request a three-year term of approval for this information collection activity.

PHMSA requests comments on the following information collection:

Title: Reporting Safety-Related Conditions on Gas, Hazardous Liquid, and Carbon Dioxide Pipelines and Liquefied Natural Gas Facilities.

OMB Control Number: 2137–0578.

Type of Request: Renewal of a currently approved information collection.

Abstract: Each operator of a pipeline facility (except master meter operators) must submit to DOT a written report on any safety-related condition that causes or has caused a significant change or restriction in the operation of a pipeline facility or a condition that is a hazard to life, property or the environment.

Affected Public: Operators of pipeline facilities (except master meter operators).

Estimated number of responses: 142.

Estimated annual burden hours: 852 hours.

Frequency of collection: On occasion.

Comments are invited on:

(a) The need for the proposed collection of information for the proper performance of the functions of the agency, including whether the information will have practical utility;

(b) The accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

(c) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(d) Ways to minimize the burden of the collection of information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques.

Issued in Washington, DC on November 23, 2010.

Linda Daugherty,

Deputy Associate Administrator for Policy and Programs.

DEPARTMENT OF TRANSPORTATION

Surface Transportation Board

[Docket No. AB 384 (Sub–No. 2X)]

Delta Southern Railroad, Inc.—Abandonment Exemption—In East Carroll Parish, LA

Delta Southern Railroad, Inc. (DSR) filed a verified notice of exemption under 49 CFR pt. 1152 subpart F–*Exempt Abandonments* to abandon 8 miles of rail line extending from milepost 463.0, near Shelburn, to milepost 471.0, which is approximately a mile south of Lake Providence, in East Carroll Parish, La.[1] The line traverses United States Postal Service Zip Code 71254.

DSR has certified that: (1) No local traffic has moved over the line for at least 2 years; (2) there is no overhead traffic on the line to be rerouted; (3) no formal complaint filed by a user of rail service on the line (or by a State or local government entity acting on behalf of such user) regarding cessation of service over the line either is pending with the Surface Transportation Board (Board) or

[1] On November 16, 2010, DSR supplemented its notice of exemption.

with any U.S. District Court or has been decided in favor of complainant within the 2-year period; and (4) the requirements at 49 CFR 1105.7(c) (environmental report), 49 CFR 1105.11 (transmittal letter), 49 CFR 1105.12 (newspaper publication), and 49 CFR 1152.50(d)(1) (notice to governmental agencies) have been met.

As a condition to this exemption, any employee adversely affected by the abandonment shall be protected under *Oregon Short Line—Abandonment Portion Goshen Branch Between Firth & Ammon, in Bingham & Bonneville Counties, Idaho,* 360 I.C.C. 91 (1979). To address whether this condition adequately protects affected employees, a petition for partial revocation under 49 U.S.C. 10502(d) must be filed.

Provided no formal expression of intent to file an offer of financial assistance (OFA) has been received, this exemption will be effective on December 29, 2010, unless stayed pending reconsideration. Petitions to stay that do not involve environmental issues,[2] formal expressions of intent to file an OFA under 49 CFR 1152.27(c)(2),[3] and trail use/rail banking requests under 49 CFR 1152.29 must be filed by December 9, 2010. Petitions to reopen or requests for public use conditions under 49 CFR 1152.28 must be filed by December 20, 2010, with the Surface Transportation Board, 395 E Street, SW., Washington, DC 20423–0001.

A copy of any petition filed with the Board should be sent to DSR's representative: Thomas F. McFarland, P.C., 208 South LaSalle Street, Suite 1890, Chicago, IL 60604–1112.

If the verified notice contains false or misleading information, the exemption is void *ab initio.*

DSR has filed a combined environmental and historic report which addresses the effects, if any, of the abandonment on the environment and historic resources. OEA will issue an environmental assessment (EA) by December 3, 2010. Interested persons may obtain a copy of the EA by writing to OEA (Room 1100, Surface Transportation Board, Washington, DC 20423–0001) or by calling OEA, at (202) 245–0305. Assistance for the hearing impaired is available through the Federal Information Relay Service (FIRS) at 1–800–877–8339. Comments on environmental and historic preservation matters must be filed within 15 days after the EA becomes available to the public.

Environmental, historic preservation, public use, or trail use/rail banking conditions will be imposed, where appropriate, in a subsequent decision.

Pursuant to the provisions of 49 CFR 1152.29(e)(2), DSR shall file a notice of consummation with the Board to signify that it has exercised the authority granted and fully abandoned the line. If consummation has not been effected by DSR's filing of a notice of consummation by November 29, 2011, and there are no legal or regulatory barriers to consummation, the authority to abandon will automatically expire.

Board decisions and notices are available on our Web site at *http://www.stb.dot.gov.*

Decided: November 22, 2010.

By the Board.

Rachel D. Campbell,

Director, Office of Proceedings.

Andrea Pope-Matheson,

Clearance Clerk.

BILLING CODE 4915–01–P

[2] The Board will grant a stay if an informed decision on environmental issues (whether raised by a party or by the Board's Office of Environmental Analysis (OEA) in its independent investigation) cannot be made before the exemption's effective date. *See Exemption of Out-of-Serv. Rail Lines,* 5 I.C.C.2d 377 (1989). Any request for a stay should be filed as soon as possible so that the Board may take appropriate action before the exemption's effective date.

[3] Each OFA must be accompanied by the filing fee, which is currently set at $1,500. *See* 49 CFR 1002.2(f)(25).

DEPARTMENT OF THE TREASURY

Submission for OMB Review; Comment Request

November 19, 2010.

The Department of the Treasury will submit the following public information collection requirements to OMB for review and clearance under the Paperwork Reduction Act of 1995, Public Law 104–13 on or after the date of publication of this notice. A copy of the submissions may be obtained by calling the Treasury Bureau Clearance Officer listed. Comments regarding these information collections should be addressed to the OMB reviewer listed and to the Treasury PRA Clearance Officer, Department of the Treasury, 1750 Pennsylvania Avenue, NW., Suite 11010, Washington, DC 20220.

DATES: Written comments should be received on or before December 29, 2010 to be assured of consideration.

Internal Revenue Service (IRS)

OMB Number: 1545–1614.

Type of Review: Extension without change to a currently approved collection.

Title: REG–106177–97 (NPRM) Qualified State Tuition Programs.

Abstract: Respondents are States and eligible educational institutions that establish and maintain qualified State tuition programs. Respondents include distributes who receive benefits under the programs. Information verifies that programs are qualified and that distribution are used for qualified educational expenses.

Respondents: State, Local, and Tribal Governments.

Estimated Total Burden Hours: 4,258,260 hours.

OMB Number: 1545–21.75.

Type of Review: Extension without change to a currently approved collection.

Title: Form 8942—Application for Certification of Qualified Investments Eligible for Credits; Notice 2010–45—Qualifying Therapeutic Discovery Project Credit.

Abstract: On March 23, 2010, the President signed the Patient Protection and Affordable Care Act (Act) (Pub. L. 111–148). Section 9023(a) of the Act adds section 48D to the Internal Revenue Code. Section 48D provides a 50-percent nonrefundable investment tax credit, and corresponding grant in lieu of a tax credit, for qualified investments in qualifying therapeutic discovery projects. The credit and grant are designed to encourage investments in new therapies relating to diseases. Form 8942 will be used to apply for certification and credit.

Respondents: Businesses or other for-profits.

Estimated Total Burden Hours: 14,545 hours.

OMB Number: 1545–0029.

Type of Review: Extension without change of a currently approved collection.

Title: Employer's Quarterly Federal Tax Return.

Form: 941 series and schedules.

Abstract: Form 941 is used by employers to report payments made to employees subject to income and social security/Medicare taxes and the amounts of these taxes. Form 941–PR is used by employers in Puerto Rico to report social security and Medicare taxes only. Form 941–SS is used by employers in the U.S. possessions to report social security and Medicare taxes only. Schedule B is used by employers to record their employment tax liability.

Respondents: Private sector: Businesses or other for-profits.

Estimated Total Burden Hours: 388,256,964 hours.

OMB Number: 1545–2173.

Type of Review: Extension without change to a currently approved collection.

Title: Hiring Incentives to Restore Employment (HIRE) Act Employee Affidavit.

Abstract: This form was created in response to the Hiring Incentives to Restore Employment (HIRE) Act, which was signed on March 18, 2010. The form was developed as a template for the convenience of employers who must collect affidavits from qualifying employees. The form is not filed, rather an employer must retain the affidavit in order to justify claiming certain HIRE Act benefits. A model form is needed as soon as possible so that employers can begin confidently claiming payroll exemptions. The useful life of the form is only from March 18, 2010 to December 31, 2010.

Respondents: Businesses or other for-profits.

Estimated Total Burden Hours: 227,000 hours.

OMB Number: 1545–2174.

Type of Review: Extension without change to a currently approved collection.

Title: Form 14134, Application for Certificate of Subordination of Federal Tax Lien, and Form 14135, Application for Certificate of Discharge of Property from Federal Tax Lien.

Form: 14134, 14135.

Abstract: The collection of information is required by 26 CFR 301.6325–1(b)(5) for consideration of the United States discharging property from the Federal tax lien and is required by 26 CFR 301.6325–1(d)(4) for consideration that the United States subordinate its interest in property. These forms will provide guidance to ensure proper documentation is submitted to the Agency.

Respondents: Businesses or other for-profits, farms, not-for-profit institutions.

Estimated Total Burden Hours: 22,665 hours.

OMB Number: 1545–2090.

Type of Review: Extension without change to a currently approved collection.

Title: REG–143797–06 (Final), Health Savings Plan Notice.

Abstract: The information is needed in cases where an employee establishes an HSA after the end of the calendar year but before the last day of February and will be used by employees for purposes of making up HSA contributions to those employees. the respondents are employees of employers who contribute to employees' HSAs.

Respondents: Businesses or other for-profits and not-for-profit institutions.

Estimated Total Burden Hours: 1,250,000 hours.

OMB Number: 1545–1892.

Type of Review: Extension without change to a currently approved collection.

Title: REG–153841–02 (TD 9208) (Final), Election Out of GST Deemed Allocations.

Abstract: The information collected will be used by the IRS to identify the trusts to which the election or termination of election will apply. The collection of information in this proposed regulation is in sections 26.2632–1(b)(2)(ii), 26.2632–1(b)(2)(iii), and 26.2632–1(b)(2). This information is required by the IRS for taxpayers who elect to have the automatic allocation rules not apply to the current transfer and/or to future transfers to the trust or to terminate such election. This information is also required by the IRS for taxpayers who elect to treat trusts described in section 2632(c)(3)(B)(i) through (vi) as GST trusts or to terminate such election.

Respondents: Individuals or households.

Estimated Total Burden Hours: 12,500 hours.

OMB Number: 1545–1430.

Type of Review: Extension without change to a currently approved collection.

Title: Form 945 and 945V: Annual Return of Withheld Federal Income Tax/ Voucher; Form 945–A: Annual Record of Federal Tax Liability; Form 945–X Annual Return of Withheld Federal Income Tax, Claim, Refund.

Form: 945, 945V, 945–X.

Abstract: Form 945 is used to report income tax withholding on nonpayroll payments including backup withholding and withholding on pensions, annuities, IRA's military retirement and gambling winnings. Form 945–V, Payment Voucher, is used if you are making a payment with Form 945, Annual Return of Withheld Federal Income Tax. Form 945–A is used to report nonpayroll tax liabilities. Form 945–X is used to correct errors made on Form 945, Annual Return of Withheld Federal Income Tax, for one year only.

Respondents: Businesses or other for-profits.

Estimated Total Burden Hours: 3,596,690 hours.

OMB Number: 1545–1081.

Type of Review: Extension without change to a currently approved collection.

Title: Application for Extension of Time to File Information Returns.

Form: 8809.

Abstract: Form 8809 is used to request an extension of time to file Forms W–2, W–2G, 1042–S, 1097, 1098, 1099, 3921, 3922, 5498, and 8027. The IRS reviews the information contained on the form to determine whether an extension should be granted.

Respondents: Businesses or other for-profits, farms, not-for-profit institutions.

Estimated Total Burden Hours: 192,000 hours.

OMB Number: 1545–0985.

Type of Review: Extension without change to a currently approved collection.

Title: PS–128–86, PS–127–86, and PS–73–88 (Final)(TD 8644) Generation-Skipping Transfer Tax.

Abstract: This regulation provides rules relating to the effective date, return requirements, definitions, and certain special rules covering the generation-skipping transfer tax. The information required by the regulation will require individuals and/or fiduciaries to report information on Form 706NA, 706, 706GS (D), 706GS(D–1), 706GS(T), 709 and 843 in connection with the generation skipping transfer tax. The information will facilitate the assessment of the tax and taxpayer examinations.

Respondents: Individuals or households.

Estimated Total Burden Hours: 3,750 hours.

Bureau Clearance Officer: Allan M. Hopkins, Internal Revenue Service, 1111 Constitution Avenue, NW., Room 6129, Washington, DC 20224; (202) 622–3634.

OMB Reviewer: Shagufta Ahmed, Office of Management and Budget, New Executive Office Building, Room 10235, Washington, DC 20503; (202) 395–7873.

Celina Elphage,

Treasury PRA Clearance Officer.

OMB Number: 1545–0035.

Type of Review: Extension without change to a currently approved collection.

Title: Employer's Annual Tax Return for Agricultural Employees.

Form: 943, 943–PR, 943–A, 943A–PR, 943–X, 943 X–PR.

Abstract: Sections 3101(a) and (b), and 3111(a) and (b), 3402(p), and 6011(a) and (b) of the Internal Revenue Code and sections 31.6011(a)–1 and 31.6011(a)–4 of the Employment Tax Regulations require agricultural employers to report (a) The employees' and employers' FICA taxes on wages and (b) the amounts withheld for income tax. Form 943 is used for this purpose. Sections 3101(a) and (b), 3111(a) and (b), and 6011(a) and (b) of the Internal Revenue Code and section 31.6011(a)–1 of the Employment Tax Regulations require agricultural employers in Puerto Rico to report the employees' and employers' FICA taxes on wages. Form 943–PR is used for this purpose. Section 6302(c) of the Internal Revenue Code and section 31.6302–l(g) of the Employment Tax Regulations require agricultural employers who are semiweekly depositors to deposit the taxes accumulated during the semiweekly period within 3 banking days of the end of the period. Section 31.6302–l(c)(3) of the Employment Tax Regulations requires that agricultural employers, who on any day within a deposit period accumulate $100,000 or more of employment taxes, must deposit them by the close of the next banking day. Forms 943–A and 943A–PR are optional forms that may be used by agricultural employers to show their tax liabilities for the semiweekly periods and $100,000 one-day rule. Form 943–X is used to correct errors made on Form 943, Employer's Annual Federal Tax Return for Agricultural Employees, for one year only. Form 943–X–PR, for use in Puerto Rico, is used to correct errors made on Form 943, Employer's Annual Federal Tax Return for Agricultural Employees, for one year only.

Respondents: Businesses or other for-profits and Farms.

Alcohol and Tobacco Tax and Trade Bureau

Proposed Information Collections; Comment Request

AGENCY: Alcohol and Tobacco Tax and Trade Bureau, Treasury.

ACTION: Notice and request for comments.

SUMMARY: As part of our continuing effort to reduce paperwork and respondent burden, and as required by the Paperwork Reduction Act of 1995, we invite comments on the proposed or continuing information collections listed below in this notice.

DATES: We must receive your written comments on or before January 28, 2011.

ADDRESSES: You may send comments to Mary A. Wood, Alcohol and Tobacco Tax and Trade Bureau, at any of these addresses:

- P.O. Box 14412, Washington, DC 20044–4412;
- 202–453–2686 (facsimile); or
- *formcomments@ttb.gov* (e-mail).

Please send separate comments for each specific information collection listed below. You must reference the information collection's title, form or recordkeeping requirement number, and OMB number (if any) in your comment. If you submit your comment via facsimile, send no more than five 8.5 x 11 inch pages in order to ensure electronic access to our equipment.

FOR FURTHER INFORMATION CONTACT: To obtain additional information, copies of the information collection and its instructions, or copies of any comments received, contact Mary A. Wood, Alcohol and Tobacco Tax and Trade Bureau, P.O. Box 14412, Washington, DC 20044–4412; or telephone 202–453–2265.

SUPPLEMENTARY INFORMATION:

Request for Comments

The Department of the Treasury and its Alcohol and Tobacco Tax and Trade Bureau (TTB), as part of their continuing effort to reduce paperwork and respondent burden, invite the general public and other Federal agencies to comment on the proposed or continuing information collections listed below in this notice, as required by the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

Comments submitted in response to this notice will be included or summarized in our request for Office of Management and Budget (OMB) approval of the relevant information collection. All comments are part of the public record and subject to disclosure. Please not do include any confidential or inappropriate material in your comments.

We invite comments on: (a) Whether this information collection is necessary for the proper performance of the agency's functions, including whether the information has practical utility; (b) the accuracy of the agency's estimate of the information collection's burden; (c) ways to enhance the quality, utility, and clarity of the information collected; (d) ways to minimize the information collection's burden on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide the requested information.

Information Collections Open for Comment

Currently, we are seeking comments on the following forms and recordkeeping requirements:

Title: Notice of Change in Status of Plant.

OMB Control Number: 1513–0044.

TTB Form Numbers: 5110.34.

Abstract: TTB F 5110.34 is necessary to show the use of the distilled spirits plant (DSP) premises for other activities or by alternating proprietors. It describes proprietor's use of plant premises and other information to show that the change in plant status is in conformity with law and regulations. It also shows what bond covers the activities of the DSP at a given time.

Current Actions: We are submitting this information collection for extension purposes only. The information collection, estimated number of respondents, and estimated total annual burden hours remain unchanged.

Type of Review: Extension of a currently approved collection.

Affected Public: Business or other for-profit.

Estimated Number of Respondents: 100.

Estimated Total Annual Burden Hours: 1,000.

Title: Tax Deferral Bond—Distilled Spirits (Puerto Rico).

OMB Control Number: 1513–0050.

TTB Form Number: 5110.50.

Abstract: TTB F 5110.50 is the bond to secure payment of excise taxes on distilled spirits shipped from Puerto Rico to the U.S. on deferral of the tax. The form identifies the principal, the surety, purpose of bond, and allocation of the penal sum among the principal's locations.

Current Actions: We are submitting this information collection for extension purposes only. The information collection, estimated number of respondents, and estimated total annual burden hours remain unchanged.

Type of Review: Extension of a currently approved collection.

Affected Public: Business or other for-profit.

Estimated Number of Respondents: 10.

Estimated Total Annual Burden Hours: 10.

Title: Tobacco Products Manufacturers—Supporting Records for Removal for the Use of the United States.

OMB Number: 1513–0069.

TTB Recordkeeping Requirement Number: 5210/6.

Abstract: Tobacco products have historically been a major source of excise tax revenues for the Federal Government. In order to safeguard these taxes, tobacco products manufacturers are required to maintain a system of records designed to establish accountability over the tobacco products and cigarette papers and tubes produced. However, these items can be removed without the payment of tax if they are for the use of the United States. Records must be retained by the manufacturer for 3 years following the close of the year covered therein and must be made available for inspection by any TTB officer upon his/her request.

Current Actions: We are submitting this information collection for extension purposes only. The information collection, estimated number of respondents, and estimated total annual burden hours remain unchanged.

Type of Review: Extension of a currently approved collection.

Affected Public: Business or other for-profit.

Estimated Number of Respondents: 101.

Estimated Total Annual Burden Hours: 505.

Titles: Statement of Ultimate Vendor.

Exemption Certificate (Use on Certain Vessels or Aircraft).

Exemption Certificate (Use by State or local Governments).

Statement of Manufacturer's Vendee (For Export).

Statement of Manufacturer's Vendee (Use in Further Manufacture).

OMB Control Number: 1513–0128.

TTB Form Numbers: 5600.33, 5600.34, 5600.35, 5600.36, 5600.37, respectively.

Abstract: Title 27, CFR, part 53 requires that, in some cases, persons who sell firearms or ammunition tax-free use specific exemption certificates

or statements to support the tax-free sales. In addition, 27 CFR part 53 requires a specific statement from the ultimate vendor to support claims for certain tax refunds or credits. Although the regulations require firearms and ammunition excise taxpayers to design and reproduce these certificates or statements as specified in the regulations, in order to promote uniformity among excise taxpayers and compliance with regulations, these certificates and statements are needed.

Current Actions: We are submitting this information collection request for extension purposes only. The information collection, estimated number of respondents, and estimated total annual burden hours remain unchanged.

Type of Review: Extension of a currently approved collection.

Affected Public: Business or other for-profit; individuals or households; State or Local Governments.

Estimated Number of Respondents: 7,000.

Estimated Total Annual Burden Hours: 52,500.

Dated: November 19, 2010.

Gerald Isenberg,

Director, Regulations and Rulings Division.

DEPARTMENT OF THE TREASURY

Internal Revenue Service

Art Advisory Panel—Closed Meeting

AGENCY: Internal Revenue Service, Treasury.

ACTION: Notice of Closed Meeting of Art Advisory Panel for Decorative Art.

SUMMARY: A closed meeting of the Art Advisory Panel will be held in Washington, DC.

DATES: The meeting will be held December 8, 2010.

ADDRESSES: The closed meeting of the Art Advisory Panel for Decorative Art will be held on December 8, 2010, in the Appeals Media Center beginning at 9:30 a.m., Franklin Court Building, 1099 14th Street, NW., Washington, DC 20005.

FOR FURTHER INFORMATION CONTACT: Joseph E. Bothwell, C:AP:PV:ART, 1099 14th Street, NW., Washington, DC 20005. Telephone (202) 435–5611 (not a toll free number).

SUPPLEMENTARY INFORMATION: Notice is hereby given pursuant to section 10(a)(2) of the Federal Advisory Committee Act, 5 U.S.C. App., that a closed meeting of the Art Advisory Panel for Decorative Art will be held on December 8, 2010, beginning at 9:30 a.m., in room 4112, Appeals Large Conference Room, Franklin Court Building, 1099 14th Street, NW., Washington, DC 20005.

The agenda will consist of the review and evaluation of the acceptability of fair market value appraisals of works of art involved in Federal income, estate, or gift tax returns. This will involve the discussion of material in individual tax returns made confidential by the provisions of 26 U.S.C. 6103.

A determination as required by section 10(d) of the Federal Advisory Committee Act has been made that this meeting is concerned with matters listed in section 552b(c)(3), (4), (6), and (7), and that the meeting will not be open to the public.

Diane S. Ryan,

Chief, Appeals.

AGENCY: Internal Revenue Service, Treasury.

ACTION: Notice.

SUMMARY: Publication of the tier 2 tax rates for calendar year 2011 as required by section 3241(d) of the Internal Revenue Code (26 U.S.C. section 3241). Tier 2 taxes on railroad employees, employers, and employee representatives are one source of funding for benefits under the Railroad Retirement Act.

DATES: The tier 2 tax rates for calendar year 2011 apply to compensation paid in calendar year 2011.

FOR FURTHER INFORMATION CONTACT: Kathleen Edmondson, CC:TEGE:EOEG:ET1, Internal Revenue Service, 1111 Constitution Avenue, NW., Washington, DC 20224, Telephone Number (202) 622–0047 (not a toll-free number).

TIER 2 TAX RATES: The tier 2 tax rate for 2011 under section 3201(b) on employees is 3.9 percent of compensation. The tier 2 tax rate for 2011 under section 3221(b) on employers is 12.1 percent of compensation. The tier 2 tax rate for 2011 under section 3211(b) on employee representatives is 12.1 percent of compensation.

Dated: November 17, 2010.

Nancy Marks,

Division Counsel/Associate Chief Counsel (Tax Exempt and Government Entities).

BILLING CODE 4830–01–P

DEPARTMENT OF VETERANS AFFAIRS

[OMB Control No. 2900–0060]

Agency Information Collection (Claim for One Sum Payment (Government Life Insurance)) Activities under OMB Review

AGENCY: Veterans Benefits Administration, Department of Veterans Affairs.

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act (PRA) of 1995 (44 U.S.C. 3501–3521), this notice announces that the Veterans Benefits Administration (VBA), Department of Veterans Affairs, will submit the collection of information abstracted below to the Office of Management and Budget (OMB) for review and comment. The PRA submission describes the nature of the information collection and its expected cost and burden; it includes the actual data collection instrument.

DATES: Comments must be submitted on or before December 29, 2010.

ADDRESSES: Submit written comments on the collection of information through *http://www.Regulations.gov*; or to VA's OMB Desk Officer, OMB Human Resources and Housing Branch, New Executive Office Building, Room 10235, Washington, DC 20503 (202) 395–7316. Please refer to "OMB Control No. 2900–0060" in any correspondence.

FOR FURTHER INFORMATION CONTACT: Denise McLamb, Enterprise Records Service (005R1B), Department of Veterans Affairs, 810 Vermont Avenue, NW., Washington, DC 20420, (202) 461–7485, fax (202) 273–0443 or e-mail *denise.mclamb@mail.va.gov.* Please refer to "OMB Control No. 2900–0060."

SUPPLEMENTARY INFORMATION:

Titles:

a. Claim for One Sum Payment (Government Life Insurance), VA Form 29–4125.

b. Claim for Monthly Payments (National Service Life Insurance), VA Form 29–4125a.

c. Claim for Monthly Payments (United States Government Life Insurance, (USGLI)), VA Form 29–4125k.

OMB Control Number: 2900–0060.

Type of Review: Extension of a currently approved collection.

Abstract: Beneficiaries of deceased veterans must complete VA Form 29–4125 to apply for proceeds of the veteran's Government Insurance policies. If the beneficiary desires monthly installment in lieu of one lump payment he or she must complete VA Forms 29–4125a and 29–4125k. VA uses the information to determine the claimant's eligibility for payment of insurance proceeds and to process monthly installment payments.

An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. The **Federal Register** Notice with a 60-day comment period soliciting comments on this collection of information was published on September 16, 2010, at page 56664.

Affected Public: Individuals or households.

Estimated Annual Burden:

a. VA Form 29–4125—8,200 hours.

b. VA Form 29–4125a—185 hours.

c. VA Form 4125k—125 hours.

Estimated Average Burden per Respondents:

a. VA Form 29–4125—6 minutes.

b. VA Form 29–4125a—6 minutes.

c. VA Form 4125k—15 minutes.

Frequency of Response: On occasion.

Estimated Number of Respondents:

a. VA Form 29–4125—82,000.

b. VA Form 29–4125a—1,850.

c. VA Form 4125k—500.

Dated: November 23, 2010.

By direction of the Secretary.

Denise McLamb,

Program Analyst, Enterprise Records Service.

DEPARTMENT OF VETERANS AFFAIRS

[OMB Control No. 2900–0613]

Proposed Information Collection (Recordkeeping at Flight Schools); Comment Request

AGENCY: Veterans Benefits Administration, Department of Veterans Affairs.

ACTION: Notice.

SUMMARY: The Veterans Benefits Administration (VBA), Department of Veterans Affairs (VA), is announcing an opportunity for public comment on the proposed collection of certain information by the agency. Under the Paperwork Reduction Act (PRA) of 1995, Federal agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of a currently approved collection, and allow 60 days for public comment in response to this notice. This notice solicits comments on the information needed to determine if courses offered by a flight school should be approved.

DATES: Written comments and recommendations on the proposed collection of information should be received on or before January 28, 2011.

ADDRESSES: Submit written comments on the collection of information through Federal Docket Management System (FDMS) at *http://www.Regulations.gov* or to Nancy J. Kessinger, Veterans Benefits Administration (20M35), Department of Veterans Affairs, 810 Vermont Avenue, NW., Washington, DC 20420 or e-mail *nancy.kessinger@va.gov*. Please refer to "OMB Control No. 2900–0613" in any correspondence. During the comment period, comments may be viewed online through the FDMS.

FOR FURTHER INFORMATION CONTACT: Nancy J. Kessinger at (202) 461–9769 or FAX (202) 275–5947.

SUPPLEMENTARY INFORMATION: Under the PRA of 1995 (Pub. L. 104–13; 44 U.S.C. 3501–3521), Federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. This request for comment is being made pursuant to Section 3506(c)(2)(A) of the PRA.

With respect to the following collection of information, VBA invites comments on: (1) Whether the proposed collection of information is necessary for the proper performance of VBA's functions, including whether the information will have practical utility; (2) the accuracy of VBA's estimate of the burden of the proposed collection of information; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or the use of other forms of information technology.

Title: Recordkeeping at Flight Schools (38 U.S.C. 21.4263 (h)(3).

OMB Control Number: 2900–0613.

Type of Review: Extension of a previously approved collection.

Abstract: Flight schools are required to maintain records on students to support continued approval of their courses. VA uses the data collected to determine whether the courses and students meet the requirements for flight training benefits and to properly pay students.

Affected Public: Business or other for-profit and Not -for-profit institutions.

Estimated Annual Burden: 274 hours.

Estimated Average Burden Per Respondent: 20 minutes.

Frequency of Response: On occasion.

Estimated Number of Respondents: 394.

Estimated Annual Responses: 821.

Dated: November 23, 2010.

By direction of the Secretary.

Denise McLamb,

Program Analyst, Enterprise Records Services.

DEPARTMENT OF VETERANS AFFAIRS

[OMB Control No. 2900–0180]

Proposed Information Collection (Compliance Report of Proprietary Institutions) Activity: Comment Request

AGENCY: Veterans Benefits Administration, Department of Veterans Affairs.

ACTION: Notice.

SUMMARY: The Veterans Benefits Administration (VBA), Department of Veterans Affairs (VA), is announcing an opportunity for public comment on the proposed collection of certain information by the agency. Under the Paperwork Reduction Act (PRA) of 1995, Federal agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of a currently approved collection, and allow 60 days for public comment in response to the notice. This notice solicits comments for information needed to determine whether proprietary schools receiving Federal financial assistance from VA and the Department of Education are in compliance with equal opportunity laws.

DATES: Written comments and recommendations on the proposed collection of information should be received on or before January 28, 2011.

ADDRESSES: Submit written comments on the collection of information through the Federal Docket Management System (FDMS) at *http://www.Regulations.gov;* or to Nancy J. Kessinger, Veterans Benefits Administration (20M35), Department of Veterans Affairs, 810 Vermont Avenue, NW., Washington, DC

20420 or e-mail *nancy.kessinger@va.gov.* Please refer to "OMB Control No. 2900–0180" in any correspondence. During the comment period, comments may be viewed online through FDMS.

FOR FURTHER INFORMATION CONTACT: Nancy J. Kessinger at (202) 461–9769 or FAX (202) 275–5947.

SUPPLEMENTARY INFORMATION: Under the PRA of 1995 (Pub. L. 104–13; 44 U.S.C. 3501–3521), Federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. This request for comment is being made pursuant to Section 3506(c)(2)(A) of the PRA.

With respect to the following collection of information, VBA invites comments on: (1) Whether the proposed collection of information is necessary for the proper performance of VBA's functions, including whether the information will have practical utility; (2) the accuracy of VBA's estimate of the burden of the proposed collection of information; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or the use of other forms of information technology.

Title: Compliance Report of Proprietary Institutions, VA Form 20–4274.

OMB Control Number: 2900–0180.

Type of Review: Extension of a currently approved collection.

Abstract: VA Form 20–4274 is used to determine whether proprietary educational institutions receiving Federal financial assistance comply with applicable civil rights statute and regulations. The collected information is used to identify areas that may indicate, statistically, disparate treatment of minority group members.

Affected Public: Business or other for-profit.

Estimated Annual Burden: 155 hours.

Estimated Average Burden per Respondent: 75 minutes.

Frequency of Response: On occasion.

Estimated Number of Respondents: 124.

Dated: November 23, 2010.

By direction of the Secretary.

[CMS–1503–FC]

RIN 0938–AP79

Medicare Program; Payment Policies Under the Physician Fee Schedule and Other Revisions to Part B for CY 2011

AGENCY: Centers for Medicare & Medicaid Services (CMS), HHS.

ACTION: Final rule with comment period.

SUMMARY: This final rule with comment period addresses changes to the physician fee schedule and other Medicare Part B payment policies to ensure that our payment systems are updated to reflect changes in medical practice and the relative value of services. It finalizes the calendar year (CY) 2010 interim relative value units (RVUs) and issues interim RVUs for new and revised procedure codes for CY 2011. It also addresses, implements, or discusses certain provisions of both the Affordable Care Act (ACA) and the Medicare Improvements for Patients and Providers Act of 2008 (MIPPA). In addition, this final rule with comment period discusses payments under the Ambulance Fee Schedule (AFS), the Ambulatory Surgical Center (ASC) payment system, and the Clinical Laboratory Fee Schedule (CLFS), payments to end-stage renal disease (ESRD) facilities, and payments for Part B drugs. Finally, this final rule with comment period also includes a discussion regarding the Chiropractic Services Demonstration program, the Competitive Bidding Program for durable medical equipment, prosthetics, orthotics, and supplies (CBP DMEPOS), and provider and supplier enrollment issues associated with air ambulances.

DATES: *Effective date:* These regulations are effective on January 1, 2011.

Comment date: To be assured consideration, comments must be received at one of the addresses provided below, no later than 5 p.m. on January 3, 2011.

ADDRESSES: In commenting, please refer to file code CMS–1503–FC. Because of staff and resource limitations, we cannot accept comments by facsimile (FAX) transmission.

You may submit comments in one of four ways (please choose only one of the ways listed):

1. *Electronically.* You may submit electronic comments on this regulation to *http://www.regulations.gov*. Follow the instructions for "submitting a comment."

2. *By regular mail.* You may mail written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, *Attention:* CMS–1503–FC, P.O. Box 8013, Baltimore, MD 21244–8013.

Please allow sufficient time for mailed comments to be received before the close of the comment period.

3. *By express or overnight mail.* You may send written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, *Attention:* CMS–1503–FC, Mail Stop C4–26–05, 7500 Security Boulevard, Baltimore, MD 21244–1850.

4. *By hand or courier.* If you prefer, you may deliver (by hand or courier) your written comments before the close of the comment period to either of the following addresses: a. For delivery in Washington, DC—Centers for Medicare & Medicaid Services, Department of Health and Human Services, Room 445–G, Hubert H. Humphrey Building, 200 Independence Avenue, SW., Washington, DC 20201

(Because access to the interior of the Hubert H. Humphrey Building is not readily available to persons without Federal government identification, commenters are encouraged to leave their comments in the CMS drop slots located in the main lobby of the building. A stamp-in clock is available for persons wishing to retain a proof of filing by stamping in and retaining an extra copy of the comments being filed.)

b. For delivery in Baltimore, MD—Centers for Medicare & Medicaid Services, Department of Health and Human Services, 7500 Security Boulevard, Baltimore, MD 21244–1850.

If you intend to deliver your comments to the Baltimore address, please call telephone number (410) 786–9994 in advance to schedule your arrival with one of our staff members.

Comments mailed to the addresses indicated as appropriate for hand or courier delivery may be delayed and received after the comment period.

FOR FURTHER INFORMATION CONTACT:

Sara Vitolo, (410) 786–5714, for issues related to malpractice RVUs.

Erin Smith, (410) 786–0763, for issues related to end-stage renal disease-related services for home dialysis.

Michael Moore, (410) 786–6830, for issues related to geographic practice cost indices.

Ken Marsalek, (410) 786–4502, for issues related to the physician practice information survey, the multiple procedure payment reduction, and payment for the technical component of pathology services.

Regina Walker-Wren, (410) 786–9160, for issues related to outpatient mental health add-on provision and increased payment for certified nurse-midwife services.

Elizabeth Truong, (410) 786–6005, or Sara Vitolo, (410) 786–5714, for issues related to potentially misvalued services.

Elizabeth Truong, (410) 786–6005, for issues related to the sustainable growth rate or anesthesia or physician fee schedule conversion factors.

Dorothy Shannon, (410) 786–3396, for issues related to outpatient therapy services.

Pamela West, (410) 786–2302, for issues related to payment for diabetes self-management training programs and kidney disease education services.

Ryan Howe, (410) 786–3355, for issues related to direct practice expense inputs and telehealth services.

Sara Vitolo, (410) 786–5714, for issues related to pulmonary rehabilitation services, application of skin substitutes, canalith repositioning, intranasal/oral immunization, and the refinement panel.

Roberta Epps, (410) 786–4503, for issues related to portable x-ray and bone density tests.

Chava Sheffield, (410) 786–2298, for issues related to equipment utilization rate assumption for advanced imaging services.

Chava Sheffield, (410) 786–2298, or Larry Chan, (410) 786–6864, for issues related the physician fee schedule practice expense methodology.

Stephanie Frilling, (410) 786–4507, or Erin Smith, (410) 786–0763, for issues related to the incentive payment programs for primary care and general surgery services, and payment for the annual wellness visit and preventive services.

Cheryl Gilbreath, (410) 786–5919, for issues related to payment for covered outpatient drugs and biologicals.

Roechel Kujawa, (410) 786–9111, for issues related to ambulance services.

Glenn McGuirk, (410) 786–5723, for clinical laboratory issues.

Randall Ricktor, (410) 786–4632, for Federally Qualified Health Center Issues.

Pauline Lapin, (410) 786–6883, for issues related to the chiropractic services demonstration BN issue.

Troy Barsky, (410) 786–8873, or Kristin Bohl, (410) 786–8680, for issues related to physician self-referral.

Troy Barsky, (410) 786–8873, or Fred Grabau (410) 786–0206, for issues related to timely filing rules.
Henry Richter, (410) 786–4562, or Lisa Hubbard, (410) 786–5472, for issues related to renal dialysis provisions and payments for end-stage renal disease facilities.
Diane Stern, (410) 786–1133, for issues related to the physician quality reporting initiative and incentives for e-prescribing.
Sheila Roman, (410) 786–6004, or Pamela Cheetham, 410–786–2259, for issues related to the Physician Resource Use Feedback Program and value-based purchasing.
Joel Kaiser, (410) 786–4499, for issues related to the DME provisions.
Sandra Bastinelli, (410) 786–3630, for issues related to provider and supplier enrollment issues.
Rebecca Cole, (410) 786–4497, for issues related to physician payment not identified above.

SUPPLEMENTARY INFORMATION: *Comment Subject Areas:* We will consider comments on the following subject areas discussed in this final rule with comment period that are received by the date and time indicated in the **DATES** section of this final rule with comment period:

(1) The interim final work, practice expense, and malpractice RVUs (including the direct practice expense (PE) inputs and the equipment utilization rate assumption, and the applicability of a multiple procedure payment reduction (MPPR)), for new and revised CY 2011 HCPCS codes. These codes and their CY 2011 interim final RVUs are listed in Addendum C to this final rule with comment period.

(2) The physician self-referral designated health services codes listed in Tables 98 and 99.

Inspection of Public Comments: All comments received before the close of the comment period are available for viewing by the public, including any personally identifiable or confidential business information that is included in a comment. We post all comments received before the close of the comment period on the following Web site as soon as possible after they have been received: *http://www.regulations.gov*. Follow the search instructions on that Web site to view public comments.

Comments received timely will also be available for public inspection as they are received, generally beginning approximately 3 weeks after publication of a document, at the headquarters of the Centers for Medicare & Medicaid Services, 7500 Security Boulevard, Baltimore, Maryland 21244, Monday through Friday of each week from 8:30 a.m. to 4 p.m. To schedule an appointment to view public comments, phone 1–800–743–3951.

Table of Contents

To assist readers in referencing sections contained in this preamble, we are providing a table of contents. Some of the issues discussed in this preamble affect the payment policies, but do not require changes to the regulations in the Code of Federal Regulations (CFR). Information on the regulations impact appears throughout the preamble and, therefore, is not discussed exclusively in section XI. of this final rule with comment period.

CPT (Current Procedural Terminology) Copyright Notice

Throughout this final rule with comment period, we use CPT codes and descriptions to refer to a variety of services. We note that CPT codes and descriptions are copyright 2010 American Medical Association. All Rights Reserved. CPT is a registered trademark of the American Medical Association (AMA). Applicable FARS/DFARS apply.

I. Background

Since January 1, 1992, Medicare has paid for physicians' services under section 1848 of the Social Security Act (the Act), "Payment for Physicians' Services." The Act requires that payments under the physician fee schedule (PFS) are based on national uniform relative value units (RVUs) based on the relative resources used in furnishing a service. Section 1848(c) of the Act requires that national RVUs be established for physician work, practice expense (PE), and malpractice expense. Before the establishment of the resource-based relative value system, Medicare payment for physicians' services was based on reasonable charges. We note that throughout this final rule with comment period, unless otherwise noted, the term "practitioner" is used to describe both physicians and eligible nonphysician practitioners (such as physician assistants, nurse practitioners, clinical nurse specialists, certified nurse-midwives, psychologists, or social workers) that are permitted to furnish and bill Medicare under the PFS for the services under discussion.

A. Development of the Relative Value System

1. Work RVUs

The concepts and methodology underlying the PFS were enacted as part of the Omnibus Budget Reconciliation Act (OBRA) of 1989 (Pub. L. 101–239), and OBRA 1990, (Pub. L. 101–508). The final rule, published on November 25, 1991 (56 FR 59502), set forth the fee schedule for payment for physicians' services beginning January 1, 1992. Initially, only the physician work RVUs were resource-based, and the PE and malpractice RVUs were based on average allowable charges.

The physician work RVUs established for the implementation of the fee schedule in January 1992 were developed with extensive input from the physician community. A research team at the Harvard School of Public Health developed the original physician work RVUs for most codes in a cooperative agreement with the Department of Health and Human Services (DHHS). In constructing the code-specific vignettes for the original physician work RVUs, Harvard worked with panels of experts, both inside and outside the Federal government, and obtained input from numerous physician specialty groups.

Section 1848(b)(2)(B) of the Act specifies that the RVUs for anesthesia services are based on RVUs from a uniform relative value guide, with appropriate adjustment of the conversion factor (CF), in a manner to assure that fee schedule amounts for anesthesia services are consistent with those for other services of comparable value. We established a separate CF for anesthesia services, and we continue to utilize time units as a factor in determining payment for these services. As a result, there is a separate payment methodology for anesthesia services.

We establish physician work RVUs for new and revised codes based on our review of recommendations received from the American Medical Association's (AMA) Specialty Society Relative Value Update Committee (RUC).

2. Practice Expense Relative Value Units (PE RVUs)

Section 121 of the Social Security Act Amendments of 1994 (Pub. L. 103–432), enacted on October 31, 1994, amended section 1848(c)(2)(C)(ii) of the Act and required us to develop resource-based PE RVUs for each physicians' service beginning in 1998. We were to consider general categories of expenses (such as office rent and wages of personnel, but excluding malpractice expenses) comprising PEs.

Section 4505(a) of the Balanced Budget Act of 1997 (BBA) (Pub. L. 105–33), amended section 1848(c)(2)(C)(ii) of the Act to delay implementation of the resource-based PE RVU system until January 1, 1999. In addition, section 4505(b) of the BBA provided for a 4-year transition period from charge-based PE RVUs to resource-based RVUs.

We established the resource-based PE RVUs for each physicians' service in a final rule, published November 2, 1998 (63 FR 58814), effective for services furnished in 1999. Based on the requirement to transition to a resource-based system for PE over a 4-year period, resource-based PE RVUs did not become fully effective until 2002.

This resource-based system was based on two significant sources of actual PE data: the Clinical Practice Expert Panel (CPEP) data; and the AMA's Socioeconomic Monitoring System (SMS) data. The CPEP data were collected from panels of physicians, practice administrators, and nonphysicians (for example, registered nurses (RNs)) nominated by physician specialty societies and other groups. The CPEP panels identified the direct inputs required for each physicians' service in both the office setting and out-of-office setting. We have since refined and revised these inputs based on recommendations from the RUC. The AMA's SMS data provided aggregate specialty-specific information on hours worked and PEs.

Separate PE RVUs are established for procedures that can be performed in both a nonfacility setting, such as a physician's office, and a facility setting, such as a hospital outpatient department (HOPD). The difference between the facility and nonfacility RVUs reflects the fact that a facility typically receives separate payment from Medicare for its costs of providing the service, apart from payment under the PFS. The nonfacility RVUs reflect all of the direct and indirect PEs of providing a particular service.

Section 212 of the Balanced Budget Refinement Act of 1999 (BBRA) (Pub. L. 106–113) directed the Secretary of Health and Human Services (the Secretary) to establish a process under which we accept and use, to the maximum extent practicable and consistent with sound data practices, data collected or developed by entities and organizations to supplement the data we normally collect in determining the PE component. On May 3, 2000, we published the interim final rule (65 FR 25664) that set forth the criteria for the submission of these supplemental PE survey data. The criteria were modified in response to comments received, and published in the **Federal Register** (65 FR 65376) as part of a November 1, 2000 final rule. The PFS final rules published in 2001 and 2003, respectively, (66 FR 55246 and 68 FR 63196) extended the period during which we would accept these supplemental data through March 1, 2005.

In the calendar year (CY) 2007 PFS final rule with comment period (71 FR 69624), we revised the methodology for calculating direct PE RVUs from the top-down to the bottom-up methodology beginning in CY 2007 and provided for a 4-year transition for the new PE RVUs under this new methodology. This transition ended in CY 2010 and direct PE RVUs are calculated in CY 2011 using this methodology, unless otherwise noted.

In the CY 2010 PFS final rule with comment period, we updated the PE/hour (HR) data that are used in the

calculation of PE RVUs for most specialties (74 FR 61749). For this update, we used the Physician Practice Information Survey (PPIS) conducted by the AMA. The PPIS is a multispecialty, nationally representative, PE survey of both physicians and nonphysician practitioners (NPPs) using a survey instrument and methods highly consistent with those of the SMS and the supplemental surveys used prior to CY 2010. We note that in CY 2010, for oncology, clinical laboratories, and independent diagnostic testing facilities (IDTFs), we continued to use the supplemental survey data to determine PE/HR values (74 FR 61752).

3. Resource-Based Malpractice (MP) RVUs

Section 4505(f) of the BBA amended section 1848(c) of the Act requiring us to implement resource-based malpractice (MP) RVUs for services furnished on or after CY 2000. The resource-based MP RVUs were implemented in the PFS final rule published November 2, 1999 (64 FR 59380). The MP RVUs were based on malpractice insurance premium data collected from commercial and physician-owned insurers from all the States, the District of Columbia, and Puerto Rico.

4. Refinements to the RVUs

Section 1848(c)(2)(B)(i) of the Act requires that we review all RVUs no less often than every 5 years. The first Five-Year Review of the physician work RVUs was published on November 22, 1996 (61 FR 59489) and was effective in 1997. The second Five-Year Review was published in the CY 2002 PFS final rule with comment period (66 FR 55246) and was effective in 2002. The third Five-Year Review of physician work RVUs was published in the CY 2007 PFS final rule with comment period (71 FR 69624) and was effective on January 1, 2007. (**Note:** Additional codes relating to the third Five-Year Review of physician work RVUs were addressed in the CY 2008 PFS final rule with comment period (72 FR 66360).) The fourth Five-Year Review of physician work RVUs was initiated in the CY 2010 PFS final rule with comment period where we solicited candidate codes from the public for this review (74 FR 61941). Changes due to the fourth Five-Year Review of physician work RVUs will be effective January 1, 2012.

In 1999, the AMA RUC established the Practice Expense Advisory Committee (PEAC) for the purpose of refining the direct PE inputs. Through March 2004, the PEAC provided recommendations to CMS for over 7,600 codes (all but a few hundred of the codes currently listed in the AMAs Current Procedural Terminology (CPT) codes). As part of the CY 2007 PFS final rule with comment period (71 FR 69624), we implemented a new bottom-up methodology for determining resource-based PE RVUs and transitioned the new methodology over a 4-year period. A comprehensive review of PE was undertaken prior to the 4-year transition period for the new PE methodology from the top-down to the bottom-up methodology, and this transition was completed in CY 2010. In CY 2010, we also incorporated the new PPIS data to update the specialty-specific PE/HR data used to develop PE RVUs. Therefore, the next Five-Year Review of PE RVUs will be addressed in CY 2014.

In the CY 2005 PFS final rule with comment period (69 FR 66236), we implemented the first Five-Year Review of the MP RVUs (69 FR 66263). Minor modifications to the methodology were addressed in the CY 2006 PFS final rule with comment period (70 FR 70153). The second Five-Year Review and update of resource-based malpractice RVUs was published in the CY 2010 PFS final rule with comment period (74 FR 61758) and was effective in CY 2010.

5. Adjustments to RVUs Are Budget Neutral

Section 1848(c)(2)(B)(ii)(II) of the Act provides that adjustments in RVUs for a year may not cause total PFS payments to differ by more than $20 million from what they would have been if the adjustments were not made. In accordance with section 1848(c)(2)(B)(ii)(II) of the Act, if revisions to the RVUs cause expenditures to change by more than $20 million, we make adjustments to ensure that expenditures do not increase or decrease by more than $20 million.

For CY 2010, we adopted a number of new payment policies for which we estimated the potential for a redistributive effect under the PFS, including the use of the new PPIS data to develop the specialty-specific PE/HR used for the PE RVUs (74 FR 61749 through 61752) and the elimination of the reporting of all CPT consultation codes in order to allow for correct and consistent coding and appropriate payment for evaluation and management services under the PFS (74 FR 61767 through 61775). In the CY 2011 PFS proposed rule (75 FR 40047), we acknowledged that clinical experience with these new PFS policies has been growing over the first 6 months of CY 2010 and noted that as we seek to improve future PFS payment accuracy for services, we were interested in public comments on the perspectives of physicians and nonphysician practitioners caring for Medicare beneficiaries under the current PFS coding and payment methodologies for physicians' services.

Comment: Many commenters expressed various concerns regarding new Medicare coding and payment methodologies adopted for CY 2010 and continuing in CY 2011. Some commenters indicated that the effects of using PPIS data to develop the specialty-specific practice expense per hour (PE/HR) significantly reduced the payment for certain services and procedures. Commenters were concerned that the reductions in practice costs reflected in the PPIS data were inaccurate and that CMS reliance on the PPIS data caused undue hardship to certain specialties. Some commenters requested that CMS utilize new PE survey data for specific specialties.

A number of commenters were also particularly concerned with the decision by CMS to no longer recognize the CPT consultation codes for Part B payment of evaluation and management (E/M) services beginning in CY 2010. Many commenters recommended resuming payment for consultation codes under the PFS to recognize the unique physician work and practice expenses when consultation services are furnished at the request of other practitioners. Several commenters argued that consultation services were especially important to ensuring high-quality, coordinated care for complex patients and to prevent unnecessary, expensive tests. Based on findings from a survey of affected specialties, these commenters expressed concern that CMS policy decision to no longer recognize the CPT consultation codes for PFS payment purposes resulted in: (1) A reduction in the number of new Medicare patients seen by specialists; (2) a reduction in overall specialist time spent with individual Medicare patients; (3) a reduction in the number of consultations provided to hospital inpatients; (4) diminished continuity and coordination of care; and (5) the elimination of physicians' office staff and postponement of physicians purchasing new equipment because of practice cost concerns. Finally, other commenters requested that, in the absence of recognition of the CPT consultation codes for PFS payment, CMS should revise the current prolonged services and new patient definitions in order to allow for higher payments for services that, prior to CY 2010, would have been billed using the CPT consultation codes. Specifically,

the commenters believe that CMS should adopt the current CPT policy of identifying patients seen by physicians in a different subspecialty within a group practice as "new" patients, rather than continuing to use the same physician specialty as the decision point. In addition, some commenters encouraged CMS to adopt the CPT inpatient setting guidelines for determining whether a service meets the prolonged service criteria, which allow physicians to include time spent on a patients floor or unit performing tasked related to the patients care, rather than just face-to-face time as specified under current CMS policy.

Response: We appreciate the concerns of the commenters regarding current PFS coding and payment methodologies. We welcome the perspective of physicians and nonphysician practitioners caring for Medicare beneficiaries. We understand that in some cases, recent policy changes under the PFS reduced payments for certain professional services, albeit with the goal of providing payment for services that appropriately reflects their relative value in the context of PFS payment for all other services. It is in the nature of any budget neutral payment system for changes, such as the use of PPIS data and the elimination of PFS payment for the CPT consultation codes, to have a somewhat differential impact on various groups of physicians and/or nonphysician practitioners. Furthermore, we note that all physicians benefited from the budget neutral increase in the payment levels for the other evaluation and management (E/M) CPT codes that resulted from the consultation code policy change.

For CY 2010, we adopted the PPIS data for developing the PE RVUs as the most recent data on physicians office practice expenses that used a consistent survey instrument across all specialty and healthcare professional groups. The PPIS was a nationally representative survey providing the most up-to-date and comprehensive data available from 51 specialties, using a survey instrument that was carefully designed, tested, and implemented. As discussed in the CY 2010 PFS final rule with comment period (75 FR 61751), because we recognized that some specialties would likely experience significant payment reductions with the use of the PPIS data, we adopted a 4-year transition from the previous PE RVUs to the PE RVUs developed using the new PPIS data in order to allow physicians and others time to adjust to the payment changes. We note that CY 2010 was the first year of the transition, with payment based upon 75 percent of the previous PE RVUs and 25 percent of the PE RVUs using the new PPIS data. This blend will move to 50/50 in CY 2011, and we intend to continue to closely monitor Medicare PFS utilization data to detect any emerging issues that may be of concern during this transition period, such as access problems for Medicare beneficiaries. To date, we have identified no specific problems that would warrant our proposal of a change with respect to the final CY 2010 policy regarding development of the PE RVUs based on the PPIS data. Going forward, as discussed further in section II.A.2.f. of this final rule with comment period, we remain interested in the thoughts of stakeholders regarding the MedPAC comment that "CMS should consider alternatives to collecting specialty-specific cost data or options to decrease the reliance on such data." We encourage interested parties to contact us at any time if they have information to share or discuss in this regard.

In response to extensive public comment on the CY 2010 PFS proposal to eliminate payment for the CPT consultation codes, we explained our rationale in detail in the CY 2010 PFS final rule with comment period (75 FR 61767 through 61775). Prior to the CY 2010 PFS rulemaking cycle, we had made numerous attempts to resolve issues related to the reporting of the CPT consultation codes, including developing and implementing relevant guidance and educating physicians regarding documentation, transfer of care, and consultation policy. Despite these efforts, there was still substantial disagreement and inconsistency within the physician community regarding these issues. In addition, we believe that in most cases there is no substantial difference in physician work between E/M visits and services that would otherwise be reported with CPT consultation codes. Therefore, we continue to believe that E/M services that could previously have been reported using the CPT consultation codes may now be appropriately reported and paid using other E/M codes, specifically office and other outpatient, initial hospital and nursing facility care, and subsequent hospital and nursing facility care E/M codes. This policy allows for correct and consistent coding for E/M services furnished by physicians and nonphysician practitioners, as well as provides for appropriate payment for the specific services that were previously billed using the CPT consultation codes.

While we continue to believe that promoting effective coordination of care must be an essential goal of our payment systems, we are currently not aware of any evidence that the CY 2010 policy change to no longer recognize the CPT consultation codes is creating problems regarding care coordination and communication among physicians that negatively impact the health of Medicare beneficiaries. As we stated in the CY 2010 PFS final rule with comment period in response to similar hypothetical concerns expressed by some commenters (75 FR 61774), if we become aware of such evidence in the future, we would certainly consider whether there is an appropriate policy response to promote more effective coordination of care. However, we continue to believe it is premature to consider what the appropriate responses might be unless specific evidence of an issue affecting the health of Medicare beneficiaries comes to our attention. We will continue to be attentive to any concerns that develop about the effects of the policy on the goal of promoting effective coordination of care.

In the CY 2010 PFS final rule with comment period (75 FR 61772), we explained that, although we estimated that there would be redistributional effects among specialties, we did not believe the estimated impacts of the change in consultation code policy were disproportionate to the goals we sought to achieve in finalizing the proposal. While we understand that commenters are concerned with the effects of this policy change and that these comments were submitted after only a half year's experience with the revised policy, the commenters on the CY 2011 proposed rule did not fundamentally address the underlying issues that led to our decision to no longer recognize the consultation codes for PFS payment purposes.

We appreciate the suggestions of the commenters regarding policy changes to the definitions of new patients and prolonged services. Regarding the definition of "new" patient, we note that we continue to consider requests on an ongoing basis for new Medicare physician specialty codes and may establish new codes upon evaluating the submissions based on the criteria listed in the Medicare Claims Processing Manual, Pub. 100–04, chapter 26, section 10.8. In fact, we have approved four new Medicare physician specialty codes in the past 2 years. These additions allow more patients of those subspecialties to be considered new based on the narrower range of services provided by the subspecialty within a broader specialty group practice. We encourage interested stakeholders to submit requests for new specialty codes

if they desire a specific code for a different medical specialty or subspecialty. We do not believe it is necessary to change our current policy to one that would routinely adopt the CPT policy of identifying patients seen by physicians in a different subspecialty as "new" patients because our current criteria for establishing new Medicare physician specialty codes already accounts for many of these scenarios. Medicare physician specialty codes describe the unique types of medicine that physicians practice. Therefore, we believe our current definition of "new" for reporting office visits to a group practice appropriately relies upon the Medicare definition of a different specialty so that that the differential physician resources required to care for a patient who is truly new to the physician's unique type of medical practice are appropriately recognized.

Finally, we note that our prolonged service criterion that allows counting only of face-to-face time for inpatients, as it does for outpatients, is longstanding. Given that the highest level initial hospital care E/M visit by a physician typically extends for 70 minutes, in order to report the prolonged physician service CPT code in the inpatient setting, a physician would need to spend at least an additional 30 minutes caring for the patient. We are uncertain whether many inpatient E/M services that would otherwise be reported as CPT consultation codes extend beyond 100 minutes, even if we were to consider adopting a policy change to allow counting of unit/floor time in addition to face-to-face time. If we were to consider such a policy change in the counting of physician time, we are also concerned that available documentation in the medical record could make evaluating the medical necessity of a prolonged service especially problematic. Therefore, we do not believe it would be appropriate to modify our interpretation of the counting of time for purposes of reporting the prolonged service inpatient codes. In most cases, we believe that the additional time that may be required for an E/M visit to a hospital inpatient that would otherwise be reported by a CPT consultation code may be appropriately paid through the Medicare payment for the level of initial or subsequent hospital care E/M code that is reported that takes into consideration the face-to-face time the consulting physician spends with the patient.

We appreciate the commenters' varied perspectives on caring for Medicare beneficiaries under the recent PFS coding and payment changes adopted for CY 2010 and continuing in CY 2011. While we did not make CY 2011 proposals to modify our established policies regarding the use of the PPIS data to calculate the PE RVUs or the reporting of E/M visits that would otherwise be reported under the CPT consultation codes, and we are not modifying them for CY 2011, we will continue to monitor the impact of these policies. We look forward to continuing our dialogue with stakeholders regarding these and future policy changes under the PFS.

B. Components of the Fee Schedule Payment Amounts

To calculate the payment for every physician's service, the components of the fee schedule (physician work, PE, and MP RVUs) are adjusted by a geographic practice cost index (GPCI). The GPCIs reflect the relative costs of physician work, PE, and malpractice expense in an area compared to the national average costs for each component.

RVUs are converted to dollar amounts through the application of a CF, which is calculated by CMS Office of the Actuary (OACT).

The formula for calculating the Medicare fee schedule payment amount for a given service and fee schedule area can be expressed as:

Payment = [(RVU work × GPCI work) + (RVU PE × GPCI PE) + (RVU malpractice × GPCI malpractice)] × CF.

C. Most Recent Changes to the Fee Schedule

The CY 2010 PFS final rule with comment period (74 FR 61738) implemented changes to the PFS and other Medicare Part B payment policies. It also finalized some of the CY 2009 interim RVUs and implemented interim RVUs for new and revised codes for CY 2010 to ensure that our payment systems are updated to reflect changes in medical practice and the relative value of services. The CY 2010 PFS final rule with comment period also addressed other policies, as well as certain provisions of the MIPPA.

As required by the statute at the time of its issuance on October 30, 2009, the CY 2010 PFS final rule with comment period announced the following for CY 2010: The PFS update of −21.2 percent; the initial estimate for the sustainable growth rate of −8.8 percent; and the CF of $28.4061.

On December 10, 2009, we published a correction notice (74 FR 65449) to correct several technical and typographical errors that occurred in the CY 2010 PFS final rule with comment period. This correction notice announced a revised CF for CY 2010 of $28.3895.

On December 19, 2009, the Department of Defense Appropriations Act, 2010 (Pub. L. 111–118) was signed into law. Section 1011 of Public Law 111–118 provided a 2-month zero percent update to the CY 2010 PFS effective only for dates of service from January 1, 2010 through February 28, 2010.

On March 2, 2010, the Temporary Extension Act of 2010 (Pub. L. 111–144) was signed into law. Section 2 of Public Law 111–144 extended through March 31, 2010 the zero percent update to the PFS that was in effect for claims with dates of service from January 1, 2010 through February 28, 2010.

In addition, on April 15, 2010, the Continuing Extension Act of 2010 (Pub. L. 111–157) was signed into law. Section 4 of Public Law 111–157 extended through May 31, 2010 the zero percent update to the PFS that was in effect for claims with dates of services from January 1, 2010 through March 31, 2010. The provision was retroactive to April 1, 2010.

In the May 11, 2010 **Federal Register** (75 FR 26350), we published a subsequent correction notice to correct several technical and typographical errors that occurred in the CY 2010 PFS final rule with comment period and the December 10, 2009 correction notice. The May 11, 2010 correction notice announced a revised CF for CY 2010 of $28.3868.

On June 25, 2010, the Preservation of Access to Care for Medicare Beneficiaries and Pension Relief Act of 2010 (Pub. L. 111–192) was signed into law. This law required application of a 2.2 percent update to the PFS for claims with dates of services from June 1, 2010 through November 30, 2010. As a result of this change, the PFS conversion factor was revised to $36.8729 for services furnished during this time period.

On March 23, 2010 the Patient Protection and Affordable Care Act (Pub. L. 111–148) was signed into law. Shortly thereafter, on March 30, 2010, the Health Care and Education Reconciliation Act of 2010 (Pub. L. 111–152) was signed into law. These two laws are discussed in this final rule with comment period and are collectively referred to as the "Affordable Care Act" (ACA) throughout this final rule with comment period.

D. Public Comments Received in Response to the CY 2011 PFS Proposed Rule

We received approximately 8,500 timely pieces of correspondence containing multiple comments on the CY 2011 PFS proposed rule. We note that we received some comments that were outside the scope of the CY 2011 PFS proposed rule, including public comments on new CY 2011 HCPCS codes that were not presented in the CY 2011 PFS proposed rule and existing CY 2010 HCPCS codes with final values for which we made no proposals for CY 2011. These comments are not addressed in this CY 2011 PFS final rule with comment period. New and revised CY 2011 HCPCS codes and their CY 2011 interim PFS work, malpractice, and PE RVUs are displayed in Addendum C to this final rule with comment period, and these values are open to public comment on this final rule with comment period. Summaries of the public comments that are within the scope of the proposals and our responses to those comments are set for the in the various sections of this final rule with comment period under the appropriate headings.

II. Provisions of the Final Rule for the Physician Fee Schedule

A. Resource-Based Practice Expense (PE) Relative Value Units (RVUs)

1. Overview

Practice expense (PE) is the portion of the resources used in furnishing the service that reflects the general categories of physician and practitioner expenses, such as office rent and personnel wages but excluding malpractice expenses, as specified in section 1848(c)(1)(B) of the Act. Section 121 of the Social Security Amendments of 1994 (Pub. L. 103–432), enacted on October 31, 1994, required CMS to develop a methodology for a resource-based system for determining PE RVUs for each physician's service. We develop PE RVUs by looking at the direct and indirect physician practice resources involved in furnishing each service. Direct expense categories include clinical labor, medical supplies, and medical equipment. Indirect expenses include administrative labor, office expense, and all other expenses. The sections that follow provide more detailed information about the methodology for translating the resources involved in furnishing each service into service-specific PE RVUs. In addition, we note that section 1848(c)(2)(B)(ii)(II) of the Act provides that adjustments in RVUs for a year may not cause total PFS payments to differ by more than $20 million from what they would have been if the adjustments were not made. Therefore, if revisions to the RVUs cause expenditures to change by more than $20 million, we make adjustments to ensure that expenditures do not increase or decrease by more than $20 million. We refer readers to the CY 2010 PFS final rule with comment period (74 FR 61743 through 61748) for a more detailed history of the PE methodology.

2. Practice Expense Methodology

a. Direct Practice Expense

We use a bottom-up approach to determine the direct PE by adding the costs of the resources (that is, the clinical staff, equipment, and supplies) typically required to provide each service. The costs of the resources are calculated using the refined direct PE inputs assigned to each CPT code in our PE database, which are based on our review of recommendations received from the American Medical Association's (AMA's) Relative Value Update Committee (RUC). For a detailed explanation of the bottom-up direct PE methodology, including examples, we refer readers to the Five-Year Review of Work Relative Value Units Under the PFS and Proposed Changes to the Practice Expense Methodology proposed notice (71 FR 37242) and the CY 2007 PFS final rule with comment period (71 FR 69629).

b. Indirect Practice Expense per Hour Data

We use survey data on indirect practice expenses incurred per hour worked (PE/HR) in developing the indirect portion of the PE RVUs. Prior to CY 2010, we primarily used the practice expense per hour (PE/HR) by specialty that was obtained from the AMA's Socioeconomic Monitoring Surveys (SMS). These surveys were conducted from 1995 through 1999. For several specialties that collected additional PE/HR data through supplemental surveys, we incorporated these data in developing the PE/HR values used annually.

While the SMS was not specifically designed for the purpose of establishing PE RVUs, we found these data to be the best available at the time. The SMS was a multispecialty survey effort conducted using a consistent survey instrument and method across specialties. The survey sample was randomly drawn from the AMA Physician Master file to ensure national representativeness. The AMA discontinued the SMS survey in 1999.

As required by the Balanced Budget Refinement Act of 1999 (BBRA) (Pub. L. 106–113), we also established a process by which specialty groups could submit supplemental PE data. In the May 3, 2000 **Federal Register**, we issued the Medicare Program; Criteria for Submitting Supplemental Practice Expense Survey Data interim final rule (65 FR 25664) in which we established criteria for acceptance of supplemental data. The criteria were modified in the CY 2001 and CY 2003 PFS final rules with comment period (65 FR 65380 and 67 FR 79971, respectively). In addition to the SMS, we previously used supplemental survey data for the following specialties: Cardiology; dermatology; gastroenterology; radiology; cardiothoracic surgery; vascular surgery; physical and occupational therapy; independent laboratories; allergy/immunology; independent diagnostic testing facilities (IDTFs); radiation oncology; medical oncology; and urology.

Because the SMS data and the supplemental survey data were from different time periods, we historically inflated them by the Medicare Economic Index (MEI) to put them on as comparable a time basis as we could when calculating the PE RVUs. This MEI proxy was necessary in the past due to the lack of contemporaneous, consistently collected, and comprehensive multispecialty survey data.

The AMA administered a new survey in CY 2007 and CY 2008, the Physician Practice Expense Information Survey (PPIS), which was expanded (relative to the SMS) to include nonphysician practitioners (NPPs) paid under the PFS. The PPIS was designed to update the specialty-specific PE/HR data used to develop PE RVUs. The AMA and the CMS contractor, The Lewin Group (Lewin), analyzed the PPIS data and calculated the PE/HR for physician and nonphysician specialties, respectively. The AMA's summary worksheets and Lewin's final report are available on the CMS Web site at *http://www.cms.gov/PhysicianFeeSched/PFSFRN/itemdetail.asp?filterType=none&filterByDID=-99&sortByDID=4&sortOrder=descending&itemID=CMS1223902&intNumPerPage=10.* (*See* downloads labeled AMA PPIS Worksheets 1–3 and Physician Practice Expense non MDDO Final Report)

The PPIS is a multispecialty, nationally representative, PE survey of both physicians and NPPs using a consistent survey instrument and methods highly consistent with those used for the SMS and the supplemental surveys. The PPIS gathered information

from 3,656 respondents across 51 physician specialty and healthcare professional groups.

We believe the PPIS is the most comprehensive source of PE survey information available to date. Therefore, we used the PPIS data to update the PE/HR data for almost all of the Medicare-recognized specialties that participated in the survey for the CY 2010 PFS. When we changed over to the PPIS data beginning in CY 2010, we did not change the PE RVU methodology itself or the manner in which the PE/HR data are used in that methodology. We only updated the PE/HR data based on the new survey. Furthermore, as we explained in the CY 2010 PFS final rule with comment period (74 FR 61751), because of the magnitude of payment reductions for some specialties resulting from the use of the PPIS data, we finalized a 4-year transition (75/25 for CY 2010, 50/50 for CY 2011, 25/75 for CY 2012, and 0/100 for CY 2013) from the previous PE RVUs to the PE RVUs developed using the new PPIS data.

Section 303 of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) (Pub. L. 108–173) added section 1848(c)(2)(H)(i) of the Act, which requires us to use the medical oncology supplemental survey data submitted in 2003 for oncology drug administration services. Therefore, the PE/HR for medical oncology, hematology, and hematology/oncology reflects the continued use of these supplemental survey data.

We do not use the PPIS data for reproductive endocrinology, sleep medicine, and spine surgery since these specialties are not separately recognized by Medicare, and we do not know how to blend these data with Medicare-recognized specialty data.

Supplemental survey data on independent labs, from the College of American Pathologists, were implemented for payments in CY 2005. Supplemental survey data from the National Coalition of Quality Diagnostic Imaging Services (NCQDIS), representing IDTFs, were blended with supplementary survey data from the American College of Radiology (ACR) and implemented for payments in CY 2007. Neither IDTFs nor independent labs participated in the PPIS. Therefore, we continue to use the PE/HR that was developed from their supplemental survey data.

Finally, consistent with our past practice, the previous indirect PE/HR values from the supplemental surveys for medical oncology, independent laboratories, and IDTFs were updated to CY 2006 using the MEI to put them on a comparable basis with the PPIS data. In the CY 2010 PFS final rule with comment period (74 FR 61753), we miscalculated the indirect PE/HR for IDTFs as part of this update process. Therefore, for CY 2011, we are using a revised indirect PE/HR of $479.81 for IDTFs, consistent with our final policy to update the indirect PE/HR values from prior supplemental survey data that we are continuing to use in order to put these data on a comparable basis with the PPIS data. This revision changes the IDTF indirect percentage from 51 percent to 50 percent for CY 2011.

Previously, we had established PE/HR values for various specialties without SMS or supplemental survey data by crosswalking them to other similar specialties to estimate a proxy PE/HR. For specialties that were part of the PPIS for which we previously used a crosswalked PE/HR, we instead use the PPIS-based PE/HR. We continue previous crosswalks for specialties that did not participate in the PPIS. However, beginning in CY 2010 we changed the PE/HR crosswalk for portable x-ray suppliers from radiology to IDTF, a more appropriate crosswalk because these specialties are more similar to each other with respect to physician time.

In the CY 2010 PFS final rule with comment period (74 FR 61752), we agreed that, under the current PE methodology, the PPIS data for registered dieticians should not be used in the calculation of PE RVUs since these dieticians are paid 85 percent of what a physician would be paid for providing the service. To include their survey data in the PE calculation would influence the ratesetting by incorporating what the services would be paid if performed by registered dieticians and not strictly what the payment rates would be if provided by physicians. We further stated that we would utilize the "All Physicians" PE/HR, as derived from the PPIS, in the calculation of resource-based PE RVUs in lieu of the PE/HR associated with registered dieticians. In the resource-based PE methodology for CY 2010, while we removed the specialty of registered dieticians from the ratesetting step we did not assign the "All Physicians" PE/HR to services furnished by registered dieticians. Instead, we allowed the PE/HR for those services to be generated by a weighted average of all the physician specialties that also furnished the services. This method was consistent with our policy to not use the registered dietician PPIS PE/HR in calculating the PE RVUs for services furnished by registered dieticians but we did not actually crosswalk the specialty of registered dietician to the "All Physicians" PE/HR data as we had intended according to the final policy. Nevertheless, we are affirming for CY 2011 that the final resource-based PE RVUs have been calculated in accordance with the final policy adopted in the CY 2010 PFS final rule with comment period (74 FR 61752) for registered dietician services that crosswalks the specialty to the "All Physicians" PE/HR data.

As provided in the CY 2010 PFS final rule with comment period (74 FR 61751), CY 2011 is the second year of the 4-year transition to the PE RVUs calculated using the PPIS data. Therefore, in general, the CY 2011 PE RVUs are a 50/50 blend of the previous PE RVUs based on the SMS and supplemental survey data and the new PE RVUS developed using the PPIS data as described above. Note that the reductions in the PE RVUs for expensive diagnostic imaging equipment attributable to the change to an equipment utilization rate assumption of 75 percent (*see* 74 FR 61753 through 61755 and section II.A.3. of this final rule with comment period) are not subject to the transition.

CMS' longstanding policy in a PFS transition payment year is that if the CPT Editorial Panel creates a new code for that year, the new code would be paid at its fully implemented PFS amount and not at a transition rate for that year. Consistent with this policy, all new CY 2011 CPT codes will not be paid based on transitional PE RVUs in CY 2011. Instead, we will pay these services based on the fully implemented PE RVUs in CY 2011. Additionally, existing CPT codes for which the global period has changed in CY 2011 will not be subject to the PPIS PE RVU transition. We believe that changing the global period of a code results in the CPT code describing a different service to which the previous PE RVUs would no longer be relevant when the code is reported for a service furnished in CY 2011. The five CY 2011 existing CPT codes with global period changes from CY 2010 to CY 2011 are: 11043 (Debridement, muscle, and/or fascia (includes epidermis, dermis, and subcutaneous tissue, if performed); first 20 sq cm or less); 11044 (Debridement, bone (includes epidermis, dermis, subcutaneous tissue, muscle and/or fascia, if performed); first 20 sq cm or less); 57155 (Insertion of uterine tandems and/or vaginal ovoids for clinical brachytherapy); 97597 (Debridement (e.g., high pressure waterjet with/without suction, sharp selective debridement with scissors,

scalpel and forceps), open wound, (e.g., fibrin, devitalized epidermis and/or dermis, exudate, debris, biofilm), including topical application(s), wound assessment, use of a whirlpool, when performed and instruction(s) for ongoing care, per session, total wound(s) surface area; first 20 square centimeters or less); and 97598 (Debridement (e.g., high pressure waterjet with/without suction, sharp selective debridement with scissors, scalpel and forceps), open wound, (e.g., fibrin, devitalized epidermis and/or dermis, exudate, debris, biofilm), including topical application(s), wound assessment, use of a whirlpool, when performed and instructions(s) for ongoing care, per session, total wound(s) surface area; each additional 20 square centimeters, or part thereof (List separately in addition to code for primary procedure)).

c. Allocation of PE to Services

To establish PE RVUs for specific services, it is necessary to establish the direct and indirect PE associated with each service.

(i) *Direct costs.* The relative relationship between the direct cost portions of the PE RVUs for any two services is determined by the relative relationship between the sum of the direct cost resources (that is, the clinical staff, equipment, and supplies) typically required to provide the services. The costs of these resources are calculated from the refined direct PE inputs in our PE database. For example, if one service has a direct cost sum of $400 from our PE database and another service has a direct cost sum of $200, the direct portion of the PE RVUs of the first service would be twice as much as the direct portion of the PE RVUs for the second service.

(ii) *Indirect costs.* Section II.A.2.b. of this final rule with comment period describes the current data sources for specialty-specific indirect costs used in our PE calculations. We allocate the indirect costs to the code level on the basis of the direct costs specifically associated with a code and the greater of either the clinical labor costs or the physician work RVUs. We also incorporate the survey data described earlier in the PE/HR discussion. The general approach to developing the indirect portion of the PE RVUs is described below.

- For a given service, we use the direct portion of the PE RVUs calculated as described above and the average percentage that direct costs represent of total costs (based on survey data) across the specialties that perform the service to determine an initial indirect allocator. For example, if the direct portion of the PE RVUs for a given service were 2.00 and direct costs, on average, represented 25 percent of total costs for the specialties that performed the service, the initial indirect allocator would be 6.00 since 2.00 is 25 percent of 8.00.
- We then add the greater of the work RVUs or clinical labor portion of the direct portion of the PE RVUs to this initial indirect allocator. In our example, if this service had work RVUs of 4.00 and the clinical labor portion of the direct PE RVUs was 1.50, we would add 6.00 plus 4.00 (since the 4.00 work RVUs are greater than the 1.50 clinical labor portion) to get an indirect allocator of 10.00. In the absence of any further use of the survey data, the relative relationship between the indirect cost portions of the PE RVUs for any two services would be determined by the relative relationship between these indirect cost allocators. For example, if one service had an indirect cost allocator of 10.00 and another service had an indirect cost allocator of 5.00, the indirect portion of the PE RVUs of the first service would be twice as great as the indirect portion of the PE RVUs for the second service.
- We next incorporate the specialty-specific indirect PE/HR data into the calculation. As a relatively extreme example for the sake of simplicity, assume in our example above that, based on the survey data, the average indirect cost of the specialties performing the first service with an allocator of 10.00 was half of the average indirect cost of the specialties performing the second service with an indirect allocator of 5.00. In this case, the indirect portion of the PE RVUs of the first service would be equal to that of the second service.

d. Facility and Nonfacility Costs

For procedures that can be furnished in a physician's office, as well as in a hospital or facility setting, we establish two PE RVUs: Facility and nonfacility. The methodology for calculating PE RVUs is the same for both the facility and nonfacility RVUs, but is applied independently to yield two separate PE RVUs. Because Medicare makes a separate payment to the facility for its costs of furnishing a service, the facility PE RVUs are generally lower than the nonfacility PE RVUs.

e. Services With Technical Components (TCs) and Professional Components (PCs)

Diagnostic services are generally comprised of two components: A professional component (PC) and a technical component (TC), each of which may be performed independently or by different providers, or they may be performed together as a "global" service. When services have PC and TC components that can be billed separately, the payment for the global component equals the sum of the payment for the TC and PC. This is a result of using a weighted average of the ratio of indirect to direct costs across all the specialties that furnish the global components, TCs, and PCs; that is, we apply the same weighted average indirect percentage factor to allocate indirect expenses to the global components, PCs, and TCs for a service. (The direct PE RVUs for the TC and PC sum to the global under the bottom-up methodology.)

f. Alternative Data Sources and Public Comments on Final Rule for 2010

In the CY 2010 PFS final rule with comment period (74 FR 61749 through 61750), we discussed the Medicare Payment Advisory Commission's (MedPAC's) comment that in the future, "CMS should consider alternatives to collecting specialty-specific cost data or options to decrease the reliance on such data." We agreed with MedPAC that it would be appropriate to consider the future of the PE RVUs moving forward. We sought comments from other stakeholders on the issues raised by MedPAC for the future. In particular, we requested public comments regarding MedPAC's suggestion that we consider alternatives for collecting specialty-specific cost data or options to decrease the reliance on such data. We noted MedPAC's comment that, "CMS should consider if Medicare or provider groups should sponsor future data collection efforts, if participation should be voluntary (such as surveys) or mandatory (such as cost reports), and whether a nationally representative sample of practitioners would be sufficient for either a survey or cost reports." MedPAC also stated that one option for decreasing the reliance on specialty-specific cost data would be the elimination of the use of indirect PE/HR data in the last step of establishing the indirect cost portion of the PE RVUs as described previously.

Almost all of the commenters on the CY 2010 PFS final rule with comment period that addressed this issue expressed a general willingness to work with CMS on methodological improvements or future data collection efforts. Although no commenters detailed a comprehensive overall alternative methodology, several commenters did provide suggestions regarding future data collection efforts

and specific aspects of the current methodology.

The commenters on the CY 2010 PFS final rule with comment period that addressed the issue of surveys supported the use of surveys if they yielded accurate PE information. The few commenters that addressed the issue of cost reports were opposed to physician cost reports. The commenters varied with respect to their opinions regarding whether data collection efforts should be led by organized medicine, individual specialty societies, or CMS. Several commenters that addressed the issue of voluntary versus mandatory data collection efforts supported voluntary data collection efforts and opposed mandatory data collection efforts.

Some commenters recommended no changes to the methodology or PE data in the near future. Other commenters indicated that the methodology and data changes needed to be made for CY 2011. Although most commenters did not directly address the use of the indirect PE/HR data, those that did predominately opposed the elimination of the use of these data.

Many commenters addressed specifics of the PE methodology (as further described in section II.A.2.c. of this final rule with comment period). Some were opposed to the scaling factor applied in the development of the direct PE portion of the PE RVUs so that in the aggregate the direct portion of the PE RVUs do not exceed the proportion indicated by the survey data (See Step 4 in g.(ii) below). Several of these commenters advocated the elimination of this direct scaling factor, while others indicated that the issue should be examined more closely.

A few commenters recommended that physician work not be used as an allocator in the development of the indirect portion of the PE RVUs as described earlier in this section. A few indicated that physician time, but not physician work, should be used in the allocation. Other commenters suggested that indirect costs should be allocated solely on the basis of direct costs.

We note that many of the issues raised by commenters on the CY 2010 PFS final rule with comment period are similar to issues raised in the development of the original resource-based PE methodology and in subsequent revisions to the methodology, including the adoption of the bottom-up methodology. While we did not propose a broad methodological change or broad data collection effort in the CY 2011 PFS proposed rule, we invited comments on our summary of the issues raised by the commenters on the CY 2010 PFS final rule with comment period, as discussed in the CY 2011 PFS proposed rule (75 FR 40050). The complete public comments on the CY 2010 PFS final rule with comment period are available for public review at *http://www.regulations.gov* by entering "CMS–1413–FC" in the search box on the main page.

Comment: A number of commenters believe the PPIS data are flawed and, therefore, should not be used to set the PE RVUs for all or certain categories of PFS services. Other commenters supported the adoption of the PPIS data and, whether ultimately favoring the adoption of the PPIS data or not, many commenters stated that the 4-year transition adopted by CMS is important to physicians and Medicare beneficiaries to ensure access to care. The commenters explained that the transition gives physician specialty societies the opportunity to collect new and more detailed data where appropriate for refinement and CMS the opportunity to more carefully analyze the new data and its appropriateness. Although once again the commenters did not provide specific recommendations on alternatives to a comprehensive survey of practice expenses or options to decrease the PFS reliance on specialty-specific cost data, the commenters offered the following suggestions regarding future practice expense data collection.

- Select a reputable company with experience in health care market research.
- Base changes on a comprehensive data source with adequate participation rates.
- Have data independently reviewed in order to ensure accuracy.
- Make data publicly available in time to allow for review and comment by stakeholders.

Several commenters emphasized the administrative complexity and burden if CMS were to require all physicians to submit cost reports. One commenter supported a limited study of practice costs estimated by cost reports to determine if the current PE RVUs were appropriately paying physicians for the physician's office costs of services. The commenter believes that cost reports would be more accurate than the PPIS methodology. Finally, several commenters indicated a willingness to engage CMS in more detailed discussion about potential refinements to the current PE/HR data.

Response: We appreciate the commenters' recommendations regarding factors we should consider in developing future practice expense data collection efforts in order to improve the accuracy of the information. While we are continuing the transition that was adopted in the CY 2010 PFS final rule with comment period (74 FR 61751) under the CY 2011 PFS to full implementation of the PPIS data for the CY 2013 PFS PE RVUs, we continue to remain interested in the thoughts of stakeholders regarding the MedPAC comment that "CMS should consider alternatives to collecting specialty-specific cost data or options to decrease the reliance on such data." More specifically, we encourage stakeholders to contact us at any time if they encounter additional information to share, develop further ideas or analyses that could inform our ongoing consideration of physicians' practice expenses, or otherwise would like to discuss this topic further as part of an open dialogue with us. While to date, no stakeholders have presented a comprehensive overall alternative methodology, we remain interested in potential novel or refined approaches. We also continue to welcome more limited suggestions for improvements to our current PE methodology or future practice expense information collection activities.

g. PE RVU Methodology

For a more detailed description of the PE RVU methodology, we refer readers to the CY 2010 PFS final rule with comment period with comment period (74 FR 61745 through 61746).

(1) Setup File

First, we create a setup file for the PE methodology. The setup file contains the direct cost inputs, the utilization for each procedure code at the specialty and facility/nonfacility place of service level, and the specialty-specific PE/HR data from the surveys.

(2) Calculate the Direct Cost PE RVUs

Sum the costs of each direct input.

Step 1: Sum the direct costs of the inputs for each service. Apply a scaling adjustment to the direct inputs.

Step 2: Calculate the current aggregate pool of direct PE costs. This is the product of the current aggregate PE (aggregate direct and indirect) RVUs, the CF, and the average direct PE percentage from the survey data.

Step 3: Calculate the aggregate pool of direct costs. This is the sum of the product of the direct costs for each service from Step 1 and the utilization data for that service.

Step 4: Using the results of Step 2 and Step 3 calculate a direct PE scaling adjustment so that the aggregate direct cost pool does not exceed the current aggregate direct cost pool and apply it

to the direct costs from Step 1 for each service.

Step 5: Convert the results of Step 4 to an RVU scale for each service. To do this, divide the results of Step 4 by the CF. Note that the actual value of the CF used in this calculation does not influence the final direct cost PE RVUs, as long as the same CF is used in Step 2 and Step 5. Different CFs will result in different direct PE scaling factors, but this has no effect on the final direct cost PE RVUs since changes in the CFs and changes in the associated direct scaling factors offset one another.

(3) Create the Indirect Cost PE RVUs

Create indirect allocators.

Step 6: Based on the survey data, calculate direct and indirect PE percentages for each physician specialty.

Step 7: Calculate direct and indirect PE percentages at the service level by taking a weighted average of the results of Step 6 for the specialties that furnish the service. Note that for services with TCs and PCs, the direct and indirect percentages for a given service do not vary by the PC, TC, and global components.

Step 8: Calculate the service level allocators for the indirect PEs based on the percentages calculated in Step 7. The indirect PEs are allocated based on the three components: The direct PE RVUs, the clinical PE RVUs, and the work RVUs.

For most services the indirect allocator is: Indirect percentage * (direct PE RVUs/direct percentage) + work RVUs.

There are two situations where this formula is modified:

- If the service is a global service (that is, a service with global, professional, and technical components), then the indirect allocator is: Indirect percentage (direct PE RVUs/direct percentage) + clinical PE RVUs + work RVUs.
- If the clinical labor PE RVUs exceed the work RVUs (and the service is not a global service), then the indirect allocator is: Indirect percentage (direct PE RVUs/direct percentage) + clinical PE RVUs.

Note: For global services, the indirect allocator is based on both the work RVUs and the clinical labor PE RVUs. We do this to recognize that, for the PC service, indirect PEs will be allocated using the work RVUs, and for the TC service, indirect PEs will be allocated using the direct PE RVUs and the clinical labor PE RVUs. This also allows the global component RVUs to equal the sum of the PC and TC RVUs.)

For presentation purposes in the examples in Table 2, the formulas were divided into two parts for each service.

- The first part does not vary by service and is the indirect percentage (direct PE RVUs/direct percentage).
- The second part is either the work RVUs, clinical PE RVUs, or both depending on whether the service is a global service and whether the clinical PE RVUs exceed the work RVUs (as described earlier in this step).

Apply a scaling adjustment to the indirect allocators.

Step 9: Calculate the current aggregate pool of indirect PE RVUs by multiplying the current aggregate pool of PE RVUs by the average indirect PE percentage from the survey data.

Step 10: Calculate an aggregate pool of indirect PE RVUs for all PFS services by adding the product of the indirect PE allocators for a service from Step 8 and the utilization data for that service.

Step 11: Using the results of Step 9 and Step 10, calculate an indirect PE adjustment so that the aggregate indirect allocation does not exceed the available aggregate indirect PE RVUs and apply it to indirect allocators calculated in Step 8.

Calculate the indirect practice cost index.

Step 12: Using the results of Step 11, calculate aggregate pools of specialty-specific adjusted indirect PE allocators for all PFS services for a specialty by adding the product of the adjusted indirect PE allocator for each service and the utilization data for that service.

Step 13: Using the specialty-specific indirect PE/HR data, calculate specialty-specific aggregate pools of indirect PE for all PFS services for that specialty by adding the product of the indirect PE/HR for the specialty, the physician time for the service, and the specialty's utilization for the service across all services performed by the specialty.

Step 14: Using the results of Step 12 and Step 13, calculate the specialty-specific indirect PE scaling factors.

Step 15: Using the results of Step 14, calculate an indirect practice cost index at the specialty level by dividing each specialty-specific indirect scaling factor by the average indirect scaling factor for the entire PFS.

Step 16: Calculate the indirect practice cost index at the service level to ensure the capture of all indirect costs. Calculate a weighted average of the practice cost index values for the specialties that furnish the service. (*Note:* For services with TCs and PCs, we calculate the indirect practice cost index across the global components, PCs, and TCs. Under this method, the indirect practice cost index for a given service (for example, echocardiogram) does not vary by the PC, TC, and global component.)

Step 17: Apply the service level indirect practice cost index calculated in Step 16 to the service level adjusted indirect allocators calculated in Step 11 to get the indirect PE RVUs.

(4) Calculate the Final PE RVUs

Step 18: Add the direct PE RVUs from Step 6 to the indirect PE RVUs from Step 17 and apply the final PE budget neutrality (BN) adjustment, MEI rebasing adjustment, and multiple procedure payment reduction (MPPR) adjustment.

The final PE BN adjustment is calculated by comparing the results of Step 18 (prior to the MEI rebasing and MPPR adjustments) to the current pool of PE RVUs. This final BN adjustment is required primarily because certain specialties are excluded from the PE RVU calculation for ratesetting purposes, but all specialties are included for purposes of calculating the final BN adjustment. (*See* "Specialties excluded from ratesetting calculation" below in this section.)

As discussed in section II.E.5. of this final rule with comment period, we are rebasing and revising the Medicare Economic Index (MEI) for CY 2011. As discussed in section II.C.4. of this final rule with comment period, section 1848(c)(2)(K) of the Act (as added by section 3134 of the ACA) specifies that the Secretary shall identify potentially misvalued codes by examining multiple codes that are frequently billed in conjunction with furnishing a single service. There is inherent duplication in the PE associated with those services which are frequently furnished together, so reducing PFS payment for the second and subsequent services to account for the efficiencies in multiple service sessions may be appropriate. Consistent with this provision of the ACA, we are adopting a limited expansion of the current MPPR policy for imaging services for CY 2011 and a new MPPR policy for therapy services.

(5) Setup File Information

- Specialties excluded from ratesetting calculation: For the purposes of calculating the PE RVUs, we exclude certain specialties, such as certain nonphysician practitioners paid at a percentage of the PFS and low-volume specialties, from the calculation. These specialties are included for the purposes of calculating the BN adjustment. They are displayed in Table 1.

TABLE 1—SPECIALTIES EXCLUDED FROM RATESETTING CALCULATION

Specialty code	Specialty description
42	Certified nurse midwife.
49	Ambulatory surgical center.
50	Nurse practitioner.
51	Medical supply company with certified orthotist.
52	Medical supply company with certified prosthetist.
53	Medical supply company with certified prosthetist-orthotist.
54	Medical supply company not included in 51, 52, or 53.
55	Individual certified orthotist.
56	Individual certified prosthestist.
57	Individual certified prosthetist-orthotist.
58	Individuals not included in 55, 56, or 57.
59	Ambulance service supplier, e.g., private ambulance companies, funeral homes, etc.
60	Public health or welfare agencies.
61	Voluntary health or charitable agencies.
73	Mass immunization roster biller.
74	Radiation therapy centers.
87	All other suppliers (e.g., drug and department stores).
88	Unknown supplier/provider specialty.
89	Certified clinical nurse specialist.
95	Competitive Acquisition Program (CAP) Vendor.
96	Optician.
A0	Hospital.
A1	SNF.
A2	Intermediate care nursing facility.
A3	Nursing facility, other.
A4	HHA.
A5	Pharmacy.
A6	Medical supply company with respiratory therapist.
A7	Department store.
1	Supplier of oxygen and/or oxygen related equipment.
2	Pedorthic personnel.
3	Medical supply company with pedorthic personnel.

• Crosswalk certain low volume physician specialties: Crosswalk the utilization of certain specialties with relatively low PFS utilization to the associated specialties.

• Physical therapy utilization: Crosswalk the utilization associated with all physical therapy services to the specialty of physical therapy.

• Identify professional and technical services not identified under the usual TC and 26 modifiers: Flag the services that are PC and TC services, but do not use TC and 26 modifiers (for example, electrocardiograms). This flag associates the PC and TC with the associated global code for use in creating the indirect PE RVUs. For example, the professional service, CPT code 93010 (Electrocardiogram, routine ECG with at least 12 leads; interpretation and report only), is associated with the global service, CPT code 93000 (Electrocardiogram, routine ECG with at least 12 leads; with interpretation and report).

• Payment modifiers: Payment modifiers are accounted for in the creation of the file. For example, services billed with the assistant at surgery modifier are paid 16 percent of the PFS amount for that service; therefore, the utilization file is modified to only account for 16 percent of any service that contains the assistant at surgery modifier.

• Work RVUs: The setup file contains the work RVUs from this final rule with comment period.

(6) Equipment Cost Per Minute

The equipment cost per minute is calculated as:

*(1/(minutes per year * usage)) * price * ((interest rate/(1 − (1/((1 + interest rate) ∧ life of equipment)))) + maintenance)*

Where:

minutes per year = maximum minutes per year if usage were continuous (that is, usage = 1); generally 150,000 minutes.

usage = equipment utilization assumption; 0.75 for certain expensive diagnostic imaging equipment (*see* 74 FR 61753 through 61755 and section II.A.3. of this final rule with comment period) and 0.5 for others.

price = price of the particular piece of equipment.

interest rate = 0.11.

life of equipment = useful life of the particular piece of equipment.

maintenance = factor for maintenance; 0.05.

Note: The use of any particular conversion factor (CF) in Table 2 to illustrate the PE calculation has no effect on the resulting RVUs.

Note:
PE RVUs in Table 2, row 29, may not match the values in Addendum B due to rounding.
* The direct adj = [current pe rvus * CF * avg dir pct]/[sum direct inputs] = [Step 2]/[Step 3].
** The indirect adj = [current pe rvus * avg ind pct]/[sum of ind allocators] = [Step 9]/[Step 10].

3. PE Revisions for CY 2011

a. Equipment Utilization Rate

As part of the PE methodology associated with the allocation of equipment costs for calculating PE RVUs, we currently use an equipment utilization rate assumption of 50 percent for most equipment, with the exception of expensive diagnostic imaging equipment (which is equipment priced at over $1 million, for example, computed tomography (CT) and magnetic resonance imaging (MRI) scanners), for which we adopted a 90 percent utilization rate assumption and provided for a 4-year transition beginning in CY 2010 (74 FR 61755). Therefore, CY 2010 is the first transitional payment year. Payment is made in CY 2010 for the diagnostic services listed in Table 3 (those that include expensive diagnostic imaging equipment in their PE inputs) of the CY 2011 PFS proposed rule (75 FR 40054) based on 25 percent of the new PE RVUs and 75 percent of the prior PE RVUs for those services.

Section 1848(b)(4)(C) of the Act (as added by section 3135(a) of the ACA) requires that with respect to fee schedules established for CY 2011 and subsequent years, in the methodology for determining PE RVUs for expensive diagnostic imaging equipment under the CY 2010 PFS final rule with comment period, the Secretary shall use a 75 percent assumption instead of the utilization rates otherwise established in that rule. The provision also requires that the reduced expenditures attributable to this change in the utilization rate for CY 2011 and subsequent years shall not be taken into account when applying the budget neutrality limitation on annual adjustments described in section 1848(c)(2)(B)(ii)(II) of the Act.

As a result, the 75 percent equipment utilization rate assumption will be applied to expensive diagnostic imaging equipment in a non-budget neutral manner for CY 2011, and the resulting changes to PE RVUs will not be transitioned over a period of years. We will apply the 75 percent utilization rate assumption in CY 2011 to all of the services to which we currently apply the transitional 90 percent equipment utilization rate assumption in CY 2010. These services are listed in a file on the CMS Web site that is posted under downloads for the CY 2010 PFS final rule with comment period at *http://www.cms.gov/physicianfeesched/downloads/CODES_SUBJECT_TO_90PCT_USAGE_RATE.zip.* These codes are also displayed in Table 3 at the end of this section.

Comment: Several commenters argued that the 75 percent utilization rate assumption should not be applied because of the imprecise data on which the policy was based. The commenters explained that based on an independent survey, actual equipment utilization rates are close to 50 percent. In addition, the commenters postulated that rural imaging centers would be adversely affected by the change due to lower equipment utilization rates than non-rural centers. The commenters requested that CMS base equipment utilization rate assumptions on actual utilization data rather than assumptions.

Several other commenters supported the implementation of the 75 percent utilization rate assumption, and MedPAC recommended that CMS explore increasing the equipment utilization rate assumption for diagnostic imaging equipment that costs less than $1 million. Finally, several commenters clarified that certain procedures were not subject to the provision, including nuclear cardiology services and therapeutic interventional radiology.

Response: Section 1848(b)(4)(C) of the Act (as added by section 3135(a) of the ACA) requires that with respect to fee schedules established for CY 2011 and subsequent years, in the methodology for determining PE RVUs for expensive diagnostic imaging equipment under the CY 2010 PFS final rule with comment period, the Secretary shall use a 75 percent assumption instead of the utilization rates otherwise established in that rule. We acknowledge that further data regarding actual equipment utilization in the physician's office setting may be informative, but our use of such data to set the equipment utilization rate assumption for expensive diagnostic imaging equipment at a value other than 75 percent would require a statutory change.

We did not propose to expand the 75 percent equipment utilization rate assumption for CY 2011 to other procedures beyond those that use CT and MRI scanners as listed in Table 4 of the CY 2011 PFS proposed rule (75 FR 40055) and Table 3 at the end of this section. Any future changes in equipment utilization rate assumptions, including any expansion of the 75 percent equipment utilization rate assumption to additional expensive diagnostic imaging equipment, would be made through the annual PFS notice and comment rulemaking cycle. Furthermore, any changes in equipment utilization rate assumptions for less costly diagnostic imaging equipment (less than $1 million) or for therapeutic imaging or other equipment would not be subject to the statutory provision that specifies a 75 percent assumption. We note that we are constantly reassessing our methodology for developing the PE RVUs and would propose any changes to the equipment utilization rate assumptions for these types of equipment through the annual PFS rulemaking cycle if we determine such changes could be appropriate.

After consideration of the public comments we received, we are finalizing our CY 2011 proposal without modification. The 75 percent equipment utilization rate assumption will be applied to expensive diagnostic imaging equipment in a non-budget neutral manner for CY 2011, and the changes to the PE RVUs will not be transitioned over a period of years. We will apply the 75 percent utilization rate assumption in CY 2011 to all of the services to which we currently apply the transitional 90 percent utilization rate assumption in CY 2010. The CY 2011 codes are displayed in Table 3 at the end of this section that lists all the codes to which the 75 percent equipment utilization rate assumption applies for CY 2011. In addition, the codes subject to this policy are posted under the downloads for the CY 2011 PFS final rule with comment period on the CMS Web site at *http://www.cms.gov/PhysicianFeeSched/PFSFRN/list.asp#TopOfPage.*

Additionally, for CY 2011, we proposed to expand the list of services to which the higher equipment utilization rate assumption applies to include all other diagnostic imaging services that utilize similar expensive CT and MRI scanners. The additional 24 CPT codes (listed in Table 4 of the CY 2011 PFS proposed rule (75 FR 40055)) to which we proposed to apply the 75 percent equipment utilization rate assumption also have expensive diagnostic imaging equipment (priced at over $1 million) included in their PE inputs. These services are predominantly diagnostic computed tomographic angiography (CTA) and magnetic resonance angiography (MRA) procedures that include similar expensive CT and MRI scanners in their direct PE inputs. We indicated in the CY 2010 PFS final rule with comment period (74 FR 61754) that we were persuaded by PPIS data on angiography that the extrapolation of MRI and CT data (and their higher equipment utilization rate) may be inappropriate. However, this reference was limited to those procedures that include an angiography room in the direct PE inputs, such as CPT code 93510 (Left heart catheterization, retrograde, from

the brachial artery, axillary artery or femoral artery; percutaneous). In contrast, CTA and MRA procedures include a CT room or MRI room, respectively, in the direct PE inputs, and the PPIS data confirm that a higher assumed utilization rate than 50 percent would be appropriate. The PPIS angiography room data that reflected a 56 percent equipment utilization rate would not specifically apply to CTA and MRA procedures. Thus, on further review, we believe it is appropriate to include CTA and MRA procedures in the list of procedures for which we assume a 75 percent equipment utilization rate, and we proposed to do so beginning in CY 2011.

Consistent with section 1848(c)(2)(B)(v)(III) of the Act (as amended by section 3135 of the ACA), the reduced expenditures attributable to this change in the utilization rate assumption applicable to CY 2011 shall not be taken into account when applying the budget neutrality limitation on annual adjustments described in section 1848(c)(2)(B)(ii)(II) of the Act.

As provided in the CY 2010 PFS final rule with comment period (74 FR 61751), CY 2011 is the second year of the 4-year transition to the PE RVUs calculated using the PPIS data. We note that the reductions in the PE RVUs for expensive diagnostic imaging equipment attributable to the change to an equipment utilization rate assumption of 75 percent for CY 2011 are not subject to the transition.

Comment: Several commenters urged CMS not to finalize the proposed expansion of the list of procedures to which the 75 percent equipment utilization rate assumption would apply, pending further evaluation of equipment utilization data. While noting the statutory requirement of section 1848(b)(4)(C) of the Act (as added by section 3135(a) of the ACA), the commenters believe that CMS is not required to add additional services to the policy for CY 2011. Other commenters, including MedPAC, supported the proposed increase in the equipment utilization rate assumption from 50 percent to 75 percent for the 24 additional services that use diagnostic imaging equipment priced at over $1 million.

Response: No commenters presented a rationale for not including the proposed 24 additional services to the 75 percent equipment utilization rate assumption, when the proposed additions use the same diagnostic CT or MRI imaging equipment as the current codes to which the policy applies. We note that the 90 percent equipment utilization rate assumption that we finalized in the CY 2010 PFS final rule with comment period (74 FR 61755) applies to CT and MRI scanners when used as diagnostic imaging equipment, one of these two pieces of equipment is listed as a direct PE input for the proposed MRA and CTA services, and no commenters recommended that we remove the CT or MRI equipment inputs from the additional codes. Therefore, we continue to believe that it is appropriate to apply the 75 percent equipment utilization rate assumption beginning in CY 2011 to MRA and CTA procedures, as we proposed.

After consideration of the public comments we received, we are finalizing our CY 2011 proposal to include CTA and MRA procedures in the 75 percent equipment utilization rate assumption policy because they include expensive CT and MRI scanners that cost more than $1 million as direct PE inputs for these diagnostic imaging procedures. We are modifying our proposal, however, and will not include CPT code 77079 (Computed tomography, bone mineral density study, 1 or more sites; appendicular skeleton (peripheral) (e.g., radius, wrist, heel)) because, upon further analysis for this final rule with comment period, we noted that the procedure does not include a CT room in its direct PE inputs.

For CY 2011, we are also adding to the 75 percent equipment utilization rate assumption policy three new CY 2011 CPT codes for diagnostic imaging procedures that include a CT room in their direct PE inputs, specifically CPT codes 74176 (Computed tomography, abdomen and pelvis; without contrast material); 74177 (Computed tomography, abdomen and pelvis; with contrast material); and 74178 (Computed tomography, abdomen and pelvis; without contrast material in one or both body regions, followed by with contrast material(s) and further sections in one or both body regions). As new codes for CY 2011, the work, PE, and malpractice RVUs for these CPT codes that are displayed in Addendum C to this final rule with comment period are interim final values that are open to comment. Similarly, the assignment of the 75 percent equipment utilization rate assumption to these CPT codes, which contributes to the development of their PE RVUs, is being made on an interim final basis. We refer readers to section V.C. of this final rule with comment period for further discussion of the establishment of interim final RVUs for CY 2011 new and revised codes.

As a result of the CY 2011 changes, the 75 percent equipment utilization rate assumption will be applied to all diagnostic imaging procedures with nationally established rates under the PFS in CY 2011 and which include a CT or MRI scanner in their direct PE, consistent with the statutory requirement of section 1848(b)(4)(C) of the Act (as added by section 3135(a) of the ACA).

Consistent with section 1848(c)(2)(B)(v)(III) of the Act (as amended by section 3135 of the ACA), the reduced expenditures attributable to the change in the utilization rate assumption applicable to CY 2011 (from the CY 2011 transitional rate for the 90 percent equipment utilization rate assumption for expensive diagnostic imaging equipment costing over $1 million (CT and MRI scanners) that would have applied under the final policy established in the CY 2010 PFS final rule with comment period to the 75 percent rate required under section 1848(b)(4)(C) of the Act) shall not be taken into account when applying the budget neutrality limitation on annual adjustments described in section 1848(c)(2)(B)(ii)(II) of the Act.

Table 3 below lists the codes to which the 75 percent equipment utilization rate assumption applies for CY 2011. The codes subject to this policy are also posted under the downloads for the CY 2011 PFS final rule with comment period on the CMS Web site at *http://www.cms.gov/PhysicianFeeSched/PFSFRN/list.asp#TopOfPage.*

77084	Magnetic image, bone marrow.

b. HCPCS Code-Specific PE Issues

In this section, we discuss other specific CY 2011 proposals and changes related to direct PE inputs. The changes that follow were proposed in the CY 2011 PFS proposed rule and included in the proposed CY 2011 direct PE database, which is available on the CMS Web site under the downloads for the CY 2011 PFS proposed rule at *http://www.cms.gov/PhysicianFeeSched/*. The final direct PE database for CY 2011 is available under the downloads for the CY 2011 PFS final rule with comment period at the same location.

(1) Biohazard Bags

We identified 22 codes for which the supply item "biohazard bag" (SM004) is currently considered a direct PE input. The item is already properly accounted for in the indirect PE because it is not attributable to an individual patient service. Therefore, we proposed to remove the biohazard bag from the CY 2011 direct PE database and noted that the changes in direct PE inputs for the associated services were reflected in the proposed CY 2011 direct PE database.

We did not receive any public comments on our proposal to remove biohazard bags as a supply input. Therefore, we are finalizing our CY 2011 proposal to remove the supply item as a direct PE input for the associated services. This change is reflected in the final CY 2011 direct PE database.

(2) PE Inputs for Professional Component (PC) Only and Technical Component (TC) Only Codes Summing to Global Only Codes

In the case of certain diagnostic tests, different but related CPT codes are used to describe global, professional, and technical components of a service. These codes are unlike the majority of other diagnostic test CPT codes where modifiers may be used in billing a single CPT code in order to differentiate professional and technical components. When different but related CPT codes are used to report the components of these services, the different CPT codes are referred to as "global only," "professional component (PC) only," and "technical component (TC) only" codes. Medicare payment systems are programmed to ensure that the PE RVUs for global only codes equal the sum of the PE RVUs for the PC and TC only codes. However, it came to our attention that the direct PE inputs for certain global only codes do not reflect the appropriate summation of their related TC only and PC only component code PE inputs as they appear in the direct PE database. While the PFS payment calculations have been programmed to apply the correct PE RVUs for the global only code based on a summation of component code PE RVUs, the direct PE database has reflected incorrect inputs that are overridden by the payment system. Therefore, we proposed to correct the direct PE inputs for the global only codes so that the inputs reflect the appropriate summing of the PE inputs for the associated PC only and TC only codes. The proposed CY 2011 direct PE database included PE

corrections to the 14 CPT codes listed in Table 4.

TABLE 4—GROUPS OF RELATED CPT CODES WITH PROPOSED CHANGES TO PE INPUTS SO THAT INPUTS FOR PROFESSIONAL COMPONENT (PC) ONLY AND TECHNICAL COMPONENT (TC) ONLY CODES SUM TO GLOBAL ONLY CODES

CPT Code	Long descriptor
93224	Wearable electrocardiographic rhythm derived monitoring for 24 hours by continuous original waveform recording and storage, with visual superimposition scanning; includes recording, scanning analysis with report, physician review and interpretation.
93225	Wearable electrocardiographic rhythm derived monitoring for 24 hours by continuous original waveform recording and storage, with visual superimposition scanning; recording (includes connection, recording, disconnection).
93226	Wearable electrocardiographic rhythm derived monitoring for 24 hours by continuous original waveform recording and storage, with visual superimposition scanning; scanning analysis with report.
93230	Wearable electrocardiographic rhythm derived monitoring for 24 hours by continuous original waveform recording and storage without superimposition scanning utilizing a device capable of producing a full miniaturized printout; including recording, microprocessor-based analysis with report, physician review and interpretation.
93231	Wearable electrocardiographic rhythm derived monitoring for 24 hours by continuous original waveform recording and storage without superimposition scanning utilizing a device capable of producing a full miniaturized printout; recording (includes connection, recording, and disconnection).
93232	Wearable electrocardiographic rhythm derived monitoring for 24 hours by continuous original waveform recording and storage without superimposition scanning utilizing a device capable of producing a full miniaturized printout; microprocessor-based analysis with report.
93268	Wearable patient activated electrocardiographic rhythm derived event recording with presymptom memory loop, 24-hour attended monitoring, per 30 day period of time; includes transmission, physician review and interpretation.
93270	Wearable patient activated electrocardiographic rhythm derived event recording with presymptom memory loop, 24-hour attended monitoring, per 30 day period of time; recording (includes connection, recording, and disconnection).
93271	Wearable patient activated electrocardiographic rhythm derived event recording with presymptom memory loop, 24-hour attended monitoring, per 30 day period of time; monitoring, receipt of transmissions, and analysis.
93720	Plethysmography, total body; with interpretation and report.
93721	Plethysmography, total body; tracing only, without interpretation and report.
93784	Ambulatory blood pressure monitoring, utilizing a system such as magnetic tape and/or computer disk, for 24 hours or longer; including recording, scanning analysis, interpretation and report.
93786	Ambulatory blood pressure monitoring, utilizing a system such as magnetic tape and/or computer disk, for 24 hours or longer; recording only.
93788	Ambulatory blood pressure monitoring, utilizing a system such as magnetic tape and/or computer disk, for 24 hours or longer; scanning analysis with report.

Comment: A number of commenters expressed support for CMS' proposal to ensure that the direct PE inputs for certain global only codes reflect the appropriate summation of their related TC only and PC only component code PE inputs as they appear in the direct PE database. One commenter questioned why the prior clinical labor time for the global only codes in the PE database did not match the direct PE inputs that must have been used in CY 2010 to generate the PE RVUs, given that the PE RVUs for the global only codes were the sum of the PE RVUs for the component codes.

Response: We appreciate the commenters' support for the proposal, and we are finalizing our correction of the direct PE inputs for the global only codes so that the inputs reflect the appropriate summing of the PE inputs for the associated PC only and TC only codes. In response to the commenter who questioned why prior clinical labor time for the global only codes in the PE database did not match the direct PE inputs that must have been used to generate the PE RVUs for payment, we note that Medicare payment systems are programmed to ensure that the PE RVUs for global only codes equal the sum of the PE RVUs for the PC and TC only codes. Therefore, rather than relying upon the direct PE inputs for the global only codes to determine the PE RVUs, which would have not resulted in values that equaled the summation of the component code PE RUVs, our PFS system was programmed so that the PE RVUs for the global only codes were set as the sum of the PE RVUS for the component codes. We expect the corrections to the inputs as incorporated in the direct PE database to alleviate any confusion caused by the prior inclusion of inputs associated with the global only codes that were not actually used to generate the PE RVUs.

After consideration of the public comments we received, we are finalizing our CY 2011 proposal to correct the direct PE inputs for the global only codes so that the inputs reflect the appropriate summing of the PE inputs for the associated PC only and TC only codes. The final CY 2011 direct PE database includes PE corrections to the 14 CPT codes listed in Table 4.

(3) Equipment Time Inputs for Certain Diagnostic Tests

In the CY 2011 PFS proposed rule (75 FR 40056), we stated that we had recently identified equipment time PE inputs that we believed were incorrect for four CPT codes associated with certain diagnostic tests (each is displayed in Table 4):

- CPT code 93225 is the TC only code that includes the connection, recording, and disconnection of the holter monitor (CMS Equipment Code EQ127) used in 24-hour continuous electrocardiographic rhythm derived monitoring. The CY 2010 equipment time input for the holter monitor is 42 minutes, which parallels the intra-service clinical labor input time for the CPT code. However, we believed that the equipment time should reflect the 24 hours of continuous monitoring in which the device is used exclusively by the patient. Therefore, we proposed to change the monitor equipment time for CPT code 93225 to 1440 minutes, the number of minutes in 24 hours.
- CPT code 93226 is the TC only code that includes the scanning analysis with report. We believed that the number of minutes the monitor (CMS Equipment

Code EQ127) is used in this service should parallel the intra-service clinical labor input time of 52 minutes during which the monitor is in use, instead of the CY 2010 equipment time of 1440 minutes, because this code does not represent 24 hours of device use. Therefore, we proposed to change the monitor equipment time for CPT code 93226 to 52 minutes.

- CPT 93224 is the global only code that includes the connection, recording, and disconnection of the monitor (CMS Equipment Code EQ127) and the scanning analysis with report, as well as the physician review and interpretation. We proposed direct PE inputs for CPT code 93224 to include 1492 total minutes of monitor time (which represents the total monitor time we proposed for CPT codes 93225 and 93226).
- CPT code 93788 is the TC only code that describes the scanning analysis with report for ambulatory blood pressure monitoring. We believed that the equipment time input for the blood pressure monitor should parallel the 10 minutes of clinical labor input for the CPT code since that is the time during which the monitor is in use. In CY 2010, the equipment time input for the monitor is 1440 minutes, which is appropriate only for CPT code 93786, the code that describes the 24 hours of ambulatory blood pressure monitoring recording. Therefore, we proposed to correct the equipment time input for the ambulatory blood pressure monitor in CPT code 93788 to 10 minutes.
- CPT code 93784 is the global only code that includes the recording, the scanning analysis with report, and the physician interpretation and report for ambulatory blood pressure monitoring. We proposed to establish the direct PE inputs for CPT code 93784 to include 1450 total minutes of time for the ambulatory blood pressure monitor (which represents the proposed total amount of monitor time included in CPT codes 93786 and 93788).

The proposed CY 2011 direct PE database reflected these changes.

Comment: Several commenters pointed out that the prior assignment of the 1440 minutes of holter monitor equipment time to CPT code 93226 stemmed from discussions between CMS and provider groups that resulted in PE policies initially implemented in CY 2007 (72 FR 18910). The commenters recommended that CMS retain the 1440 minutes of holter monitor equipment for CPT code 93326, consistent with current policy, rather than reassign the 1440 minutes of holter monitor equipment time as proposed to CPT code 93226.

Response: We agree with the commenters that it would be most appropriate to maintain our established policy for the equipment times associated with CPT codes 93225 and 93226, based upon further description of the direct practice expenses experienced by the current providers that typically furnish these services to Medicare beneficiaries. Therefore, we are not adopting the equipment time changes that we proposed for CPT codes 93225 and 93226. However, we are revising the direct PE inputs for CPT code 93224, a global only code, to include the total equipment time for the holter monitor that is incorporated in component codes CPT codes 93225 and 93226, as discussed in section II.A.3.b.(2). of this final rule with comment period. The PE inputs for CPT code 93224 did not previously correctly reflect the summation of the direct PE inputs for the component codes.

Comment: One commenter supported the proposed changes to the direct PE inputs for CPT codes 93784 through 93788. However, the commenter was confused about why 1440 minutes of equipment time were assigned to CPT code 93786, which the commenter stated is used only for the technical component of scanning the data rather than recording the data.

Response: As we stated in our proposal, we believe that the direct PE inputs for CPT code 93786 are currently correct because the code describes the recording of the data. We believe that the commenter may have inadvertently referred to CPT code 93786 instead of CPT code 93788, which is the technical component code that describes the scanning rather than the recording of the data. We proposed to remove the 1440 minutes associated with the scanning analysis from the inputs for CPT code 93788, not CPT code 93786.

After consideration of the public comments we received, we are finalizing our CY 2011 proposals to change the ambulatory blood pressure monitor equipment times included as direct PE inputs for CPT codes 938784 and 93788, while maintaining the current equipment time direct PE input for CPT code 93786. However, we are not finalizing our proposals to change the holter monitor equipment times included as direct PE inputs for CPT codes 93225 and 93226, but instead will maintain the inputs for CPT codes 93225 and 93226 as they were for CY 2010. We are also revising the direct PE inputs for CPT code 93224 to include the total equipment time for the holter monitor that is incorporated in CPT codes 93225 and 93226. The equipment times in the final CY 2011 direct PE database reflect these decisions.

(4) Cobalt-57 Flood Source

Stakeholders requested that CMS reevaluate the useful life of the Cobalt-57 flood source (CMS Equipment Code ER001), given their estimate of approximately 271 days for the source's half-life. The CY 2010 useful life input in the CY 2010 direct PE database for the Cobalt-57 flood source is 5 years. Using publicly available catalogs, we found that the Cobalt-57 flood source is marketed with a useful life of 2 years. Therefore, we proposed to change the useful life input from the current 5 years to 2 years. The Cobalt-57 flood source was included with the revised useful life input for 96 HCPCS codes in the proposed CY 2011 direct PE database.

Comment: One commenter supported the proposal to change the useful life input from 5 years to 2 years for the Cobalt-57 flood source.

Response: We appreciate the commenter's support for our proposal.

After consideration of the public comment we received, we are finalizing our CY 2011 proposal to change the useful life input in the direct PE database for the Cobalt-57 flood source from 5 years to 2 years. This change is included in the final CY 2011 direct PE database.

(5) Venom Immunotherapy

One stakeholder provided updated price information for the venoms used for the five venom immunology CPT codes, specifically 95145 (Professional services for the supervision of preparation and provision of antigens for allergen immunotherapy (specify number of doses); single stinging insect venom); 95146 (Professional services for the supervision of preparation and provision of antigens for allergen immunotherapy (specify number of doses); 2 single stinging insect venoms); 95147 (Professional services for the supervision of preparation and provision of antigens for allergen immunotherapy (specify number of doses); 3 single stinging insect venoms); 95148 (Professional services for the supervision of preparation and provision of antigens for allergen immunotherapy (specify number of doses); 4 single stinging insect venoms); 95149 (Professional services for the supervision of preparation and provision of antigens for allergen immunotherapy (specify number of doses); 5 single stinging insect venoms).

In the CY 2004 PFS final rule with comment period (68 FR 63206), we adopted a pricing methodology that utilizes the average price of a 1 milliliter

dose of venom and adds that price per dose as direct PE inputs for CPT codes 95145 and 95146. When a patient requires three stinging insect venoms, as for CPT code 95147, the price input for a 3-vespid mix is used. This 3-vespid mix price is also used to value CPT codes 95148 (four venoms) and 96149 (five venoms), with the single venom price added once to CPT code 97148 and twice to CPT code 97149.

As requested by the stakeholder, we updated the price inputs for the 1-milliliter dose of venom to $16.67 and for the 3-vespid mix to $30.22 in the proposed CY 2011 direct PE database.

Comment: One commenter supported the proposal to update the price inputs for the venoms used for venom immunotherapy.

Response: We appreciate the information provided by stakeholders regarding the price inputs for venom immunotherapy supplies, consistent with our interest in utilizing accurate market prices as the direct PE inputs for these items.

After consideration of the public comment we received, we are finalizing our CY 2011 proposals to update the price inputs for the 1-milliliter dose of venom to $16.67 and for the 3-vespid mix to $30.22 in the CY 2011 direct PE database. These changes are included in the final CY 2011 direct PE database.

(6) Equipment Redundancy

Stakeholders recently brought to our attention that the ECG, 3-channel (with SpO2, NIBP, temp, resp) (CMS Equipment Code EQ011) incorporates all of the functionality of the pulse oximeter with printer (CMS Equipment Code EQ211). Therefore, in HCPCS codes where CMS Equipment Code EQ011 is present, CMS Equipment Code EQ211 is redundant. On this basis, we proposed to remove the pulse oximeter with printer (CMS Equipment Code EQ211) as an input for the 118 codes that also contain the ECG, 3-channel (with SpO2, NIBP, temp, resp) (CMS Equipment Code EQ011). We made these adjustments in the proposed CY 2011 direct PE database.

We received no public comments regarding this proposal to address the pulse oximeter equipment redundancy. Therefore we are finalizing our CY 2011 proposal without modification. We have made these adjustments in the final CY 2011 direct PE database.

(7) Equipment Duplication

We recently identified a number of CPT codes with duplicate equipment inputs in the PE database. We proposed to remove the duplicate equipment items and modified the proposed CY 2011 direct PE database accordingly as detailed in Table 5.

TABLE 5—CPT CODES WITH PROPOSED REMOVAL OF DUPLICATE EQUIPMENT ITEMS IN THE DIRECT PE DATABASE

CPT Code		CMS equipment code for duplicate equipment	Description of equipment
19302	P-mastectomy w/1n removal	EF014	light, surgical.
		ED005	camera, digital system, 12 megapixel (medical grade).
19361	Breast reconstr w/lat flap	EF031	table, power.
		EQ168	light, exam.
44157	Colectomy w/ileoanal anast	EF031	table, power.
		EQ168	light, exam.
44158	Colectomy w/neo-rectum pouch	EF031	table, power.
		EQ168	light, exam.
56440	Surgery for vulva lesion	EF031	table, power.
		EQ170	light, fiberoptic headlight w-source.
57296	Revise vag graft, open abd	EF031	table, power.
		EQ170	light, fiberoptic headlight w-source.
58263	Vag hyst w/t/o & vag repair	EF031	table, power.
59610	Vbac delivery	EF031	table, power.
67228	Treatment of retinal lesion	EL005	lane, exam (oph).
		EQ230	slit lamp (Haag-Streit), dedicated to laser use.
76813	Ob us nuchal meas, 1 gest	ED024	film processor, dry, laser.
77371	Srs, multisource	EQ211	pulse oximeter w-printer.
		ED018	computer workstation, cardiac cath monitoring.
		EL011	room, angiography.
93540	Injection, cardiac cath	EQ011	ECG, 3-channel (with SpO_2, NIBP, temp, resp).
		EQ032	IV infusion pump.
		EQ088	contrast media warmer.
		EQ211	pulse oximeter w-printer.
93542	Injection for heart x-rays	ED018	computer workstation, cardiac cath monitoring.
		EL011	room, angiography.
		EQ011	ECG, 3-channel (with SpO_2, NIBP, temp, resp).
		EQ032	IV infusion pump.
		EQ088	contrast media warmer.
		EQ211	pulse oximeter w-printer.

Comment: One commenter pointed out that the equipment duplication issue for CPT codes 93540 and 93542 is irrelevant because these codes would no longer be reported for Medicare in CY 2011. The commenter stated that the codes are being replaced by a new set of diagnostic cardiac catheterization CPT codes.

Response: We agree with the commenter's assessment that our proposal for these codes is not relevant for CY 2011 because these codes are being deleted.

Comment: One commenter reviewed the duplicate inputs and offered a correction regarding CPT code 19302 (Mastectomy, partial (eg, lumpectomy,

tylectomy, quadrantectomy, segmentectomy); with axillary lymphadenectomy). The commenter pointed out that one of the line-items erroneously duplicated (light, surgical, EF014) for that code should have originally been applied to CPT code 19304 (Mastectomy, subcutaneous).

Response: We appreciate the commenter bringing this error to our attention and we agree with the commenter's assessment.

After consideration of the public comments we received, we are finalizing our CY 2011 proposal to remove the duplicate equipment items from the CY 2011 direct PE database as detailed in Table 5, with modification to transfer the duplicate surgical light input from CPT code 19302 to CPT code 19304. These changes are reflected in the final CY 2011 direct PE database.

(8) Establishing Overall Direct PE Supply Price Inputs Based on Unit Prices and Quantities

In the CY 2011 PFS proposed rule (75 FR 40057), we stated that we had identified minor errors in total price inputs for a number of supply items due to mathematical mistakes in multiplying the item unit price and the quantity used in particular CPT codes for the associated services. We proposed to modify the direct PE database to appropriately include the overall supply price input for a supply item as the product of the unit price and the quantity of the supply item used in the CPT code. Most of the overall supply price input changes were small, and we adjusted the proposed CY 2011 direct PE database accordingly. The CPT and Level II HCPCS codes and associated supplies for nonfacility and facility settings that were subject to these corrections are displayed in Tables 6 and 7, respectively.

BILLING CODE 4120–01–P

Table 6: Overall Supply Price Calculation Corrections for Nonfacility Settings

CPT/ HCPCS Code	Short Descriptor	CMS Supply Code with Overall Price Corrections	Description of Supply
11952	Therapy for contour defects	SC029	needle, 18-27g
11954	Therapy for contour defects	SC029	needle, 18-27g
15820	Revision of lower eyelid	SA082	pack, ophthalmology visit (w-dilation)
15821	Revision of lower eyelid	SA082	pack, ophthalmology visit (w-dilation)
15822	Revision of upper eyelid	SA082	pack, ophthalmology visit (w-dilation)
17311	Mohs, 1 stage, h/n/hf/g	SG078	tape, surgical occlusive 1in (Blenderm)
17312	Mohs addl stage	SG078	tape, surgical occlusive 1in (Blenderm)
17313	Mohs, 1 stage, t/a/l	SG078	tape, surgical occlusive 1in (Blenderm)
17314	Mohs, addl stage, t/a/l	SG078	tape, surgical occlusive 1in (Blenderm)
21011	Exc face les sc < 2 cm	SH046	lidocaine 1% w-epi inj (Xylocaine w-epi)
21013	Exc face tum deep < 2 cm	SH046	lidocaine 1% w-epi inj (Xylocaine w-epi)
21073	Mnpj of tmj w/anesth	SG079	tape, surgical paper 1in (Micropore)
21076	Prepare face/oral prosthesis	SL047	dental stone powder
21081	Prepare face/oral prosthesis	SK024	film, dental
21310	Treatment of nose fracture	SB034	mask, surgical, with face shield
23075	Exc shoulder les sc < 3 cm	SG056	gauze, sterile 4in x 4in (10 pack uou)
		SH021	bupivacaine 0.25% inj (Marcaine)
24075	Exc arm/elbow les sc < 3 cm	SG056	gauze, sterile 4in x 4in (10 pack uou)
		SH021	bupivacaine 0.25% inj (Marcaine)
25075	Exc forearm les sc < 3 cm	SG056	gauze, sterile 4in x 4in (10 pack uou)
		SH021	bupivacaine 0.25% inj (Marcaine)
26115	Exc hand les sc < 1.5 cm	SG056	gauze, sterile 4in x 4in (10 pack uou)
		SH021	bupivacaine 0.25% inj (Marcaine)
27327	Exc thigh/knee les sc < 3 cm	SG056	gauze, sterile 4in x 4in (10 pack uou)
27618	Exc leg/ankle tum < 3 cm	SG056	gauze, sterile 4in x 4in (10 pack uou)
28039	Exc foot/toe tum sc > 1.5 cm	SG056	gauze, sterile 4in x 4in (10 pack uou)
28043	Exc foot/toe tum sc < 1.5 cm	SG056	gauze, sterile 4in x 4in (10 pack uou)
28045	Exc foot/toe tum deep <1.5cm	SG056	gauze, sterile 4in x 4in (10 pack uou)
28306	Incision of metatarsal	SA048	pack, minimum multi-specialty visit
28307	Incision of metatarsal	SA048	pack, minimum multi-specialty visit
28310	Revision of big toe	SA048	pack, minimum multi-specialty visit
28312	Revision of toe	SA048	pack, minimum multi-specialty visit
28313	Repair deformity of toe	SA048	pack, minimum multi-specialty visit
28315	Removal of sesamoid bone	SA048	pack, minimum multi-specialty visit
28340	Resect enlarged toe tissue	SA048	pack, minimum multi-specialty visit
28344	Repair extra toe(s)	SA048	pack, minimum multi-specialty visit
28345	Repair webbed toe(s)	SA048	pack, minimum multi-specialty visit
28496	Treat big toe fracture	SA048	pack, minimum multi-specialty visit
28755	Fusion of big toe joint	SA048	pack, minimum multi-specialty visit
28820	Amputation of toe	SA048	pack, minimum multi-specialty visit
28890	High energy eswt, plantar f	SC051	syringe 10-12ml
29870	Knee arthroscopy, dx	SG079	tape, surgical paper 1in (Micropore)
32553	Ins mark thor for rt perq	SB034	mask, surgical, with face shield
36475	Endovenous rf, 1st vein	SC074	iv pressure infusor bag
36592	Collect blood from picc	SG050	gauze, non-sterile 2in x 2in
41530	Tongue base vol reduction	SD009	canister, suction
41805	Removal foreign body, gum	SD134	tubing, suction, non-latex (6ft) with Yankauer tip (1)

CPT/ HCPCS Code	Short Descriptor	CMS Supply Code with Overall Price Corrections	Description of Supply
41806	Removal foreign body,jawbone	SD134	tubing, suction, non-latex (6ft) with Yankauer tip (1)
42107	Excision lesion, mouth roof	SD009	canister, suction
46505	Chemodenervation anal musc	SD009	canister, suction

BILLING CODE 4120–01–C

Comment: Several commenters agreed that the overall supply price inputs should be equal to the product of the supply price and the quantity associated with each code. Some commenters pointed out that for many of the supply items displayed in Tables 6 and 7, the overall supply prices remained incorrect in the proposed CY 2011 direct PE database. The commenters speculated that an underlying programming error may have led to incorrect calculations.

Response: In constructing the proposed CY 2011 direct PE database posted on the CMS web site, we inadvertently retained a display column of data that reflected our previous calculation error, despite our correct calculation of the values for PFS ratesetting purposes. We have corrected the underlying process error that led to the incorrect display. We have modified the direct PE database for the CY 2011 PFS final rule with comment period to appropriately display the overall supply price input for a supply item as the product of the unit price and the quantity of the supply item used in the CPT code.

After consideration of the public comments we received, we are finalizing our CY 2011 proposal to modify the direct PE database to include the overall supply price input for a supply item as the product of the unit price and the quantity of the supply item used in the CPT code. We have modified the display column within the publicly available database to reflect the proper calculation. These changes are reflected in the final CY 2011 direct PE database.

c. AMA RUC Recommendations in CY 2010 for Changes to Direct PE Inputs

In a March 2010 letter, the AMA RUC made specific PE recommendations that we considered in the CY 2011 PFS proposed rule (75 FR 40062 through 40063). The proposed changes that follow were included in the proposed CY 2011 direct PE database, which is available on the CMS Web site under the downloads for the CY 2011 PFS proposed rule at *http://www.cms.gov/PhysicianFeeSched/*. The final direct PE database for CY 2011 is available under the downloads for the CY 2011 PFS final rule with comment period at the same location.

(1) Electrogastrography and Esophageal Function Test

We proposed to accept the AMA RUC recommendations for the CY 2011 PE inputs for the following CPT codes: 91132 (Electrogastrography, diagnostic, transcutaneous); 91133 (Electrogastrography, diagnostic, transcutaneous; with provocative testing); 91038 (Esophageal function test, gastroesophageal reflux test with nasal catheter intraluminal impedance electrode(s) placement, recording, analysis and interpretation; prolonged (greater than 1 hour, up to 24 hours)). For CPT code 91038, we assumed a useful life of 5 years for the equipment item "ZEPHR impedance/pH reflux monitoring system with data recorder, software, monitor, workstation and cart," based on its entry in the AHA's publication, "Estimated Useful Lives of Depreciable Hospital Assets," which we use as a standard reference. The proposed CY 2011 direct PE database was changed accordingly.

(2) 64-Slice CT Scanner and Software

The AMA RUC submitted an updated recommendation regarding the correct pricing of the 64-slice CT scanner and its accompanying software. Based on the documentation accompanying the recommendation, we accepted this recommendation and proposed to update the price input for the 64-slice scanner and software. This affected the following four CPT codes that use either the scanner, the software, or both: 75571 (computed tomography, heart, without contrast material, with quantitative evaluation of coronary calcium); 75572 (Computed tomography, heart, with contrast material, for evaluation of cardiac structure and morphology (including 3D image postprocessing, assessment of cardiac function, and evaluation of venous structures, if performed)); 75573 (Computed tomography, heart, with contrast material, for evaluation of cardiac structure and morphology in the setting of congenital heart disease (including 3D image postprocessing, assessment of LV cardiac function, RV structure and function and evaluation of venous structures, if performed)); and 75574 (Computed tomographic angiography, heart, coronary arteries and bypass grafts (when present), with contrast material, including 3D image post processing (including evaluation of cardiac structure and morphology, assessment of cardiac function, and evaluation of venous structure, if performed)). The proposed CY 2011 direct PE database was modified accordingly.

(3) Breath Hydrogen Test

The AMA RUC provided recommendations regarding the PE inputs for CPT code 91065 (breath

hydrogen test (e.g., for detection of lactase deficiency, fructose intolerance, bacterial overgrowth, or oro-cecal gastrointestinal transit). We accepted the recommendations with two modifications. We folded the two pieces of equipment listed as "quinGas Table-Top Support Stand, 3 Tank" and "Drying Tube, Patient Sample" into the "BreathTrackerDigital SC Instrument" and summed their inputs into one equipment line-item, since these equipment items are used together specifically for the service in question. We increased the useful life input of the "BreathTrackerDigital SC Instrument" from 7 to 8 years based on our use of the American Hospital Association (AHA)'s publication entitled, "Estimated Useful Lives of Depreciable Hospital Assets" as a standard reference. Additionally, because the AMA RUC did not include equipment times in their recommendations for this CPT code, we used 53 minutes as the total time for all equipment items based on the total intra-service period for the clinical labor, consistent with our general policy for establishing equipment times. These modifications were reflected in the proposed CY 2011 direct PE database.

(4) Radiographic Fluoroscopic Room

A recent AMA RUC review of services that include the radiographic fluoroscopic room (CMS Equipment Code EL014) as a direct PE input revealed that the use of the item is no longer typical for certain services in which it is specified within the current direct cost inputs. The AMA RUC recommended to CMS that the radiographic fluoroscopic room be deleted from CPT codes 64420 (Injection, anesthetic agent; intercostal nerve, single); 64421 (Injection, anesthetic agent; intercostal nerves, multiple, regional block); and 64620 (Destruction by neurolytic agent, intercostal nerve). We accepted these recommendations and, therefore, these changes were included in the proposed CY 2011 direct PE database.

Comment: Several commenters generally expressed support for our acceptance of these AMA RUC-recommended direct PE inputs with the stated refinements. The AMA RUC expressed appreciation for CMS' acceptance of the committee's recommendations.

Response: We appreciate the assistance of stakeholders in our efforts to utilize the most accurate direct PE inputs for PFS services. We also appreciate the judicious work of the AMA RUC in providing these recommendations in time for us to respond to them and include our proposals in the CY 2011 proposed rule.

Comment: One commenter expressed concern about these recommendations on the basis of the flawed professional composition of the AMA RUC. The commenter stated that without fair representation by all specialties, including nonphysician practitioners who may bill Part B directly under the PFS, CMS' reliance on the AMA RUC as representing the professional views and knowledge of all healthcare specialties for purposes of establishing the direct PE inputs for services paid under the PFS is deeply flawed.

Response: As we have stated previously (69 FR 66243), because the AMA RUC is an independent committee, we are not in a position to set the requirements for AMA RUC membership. Concerned stakeholders should communicate directly with the AMA RUC regarding its professional composition. We note that we alone are responsible for all decisions about the direct PE inputs for purposes of PFS payment so, while the AMA RUC provides us with recommendations for new and revised CPT codes in the context of what we believe is its broad expertise, we ultimately remain responsible for determining the direct PE inputs for all new or revised services.

After consideration of the public comments we received, we are finalizing our CY 2011 proposals to accept the AMA RUC recommendations, with certain changes described above, regarding the direct PE inputs for electrogastrography and esophageal function tests, the 64-slice CT scanner and software, the breath hydrogen test, and certain procedures that no longer require a radiographic fluoroscopic room. These decisions are reflected in the final CY 2011 direct PE database.

(5) Cystometrogram

The AMA RUC recently identified a rank order anomaly regarding CPT code 51726 (Complex cystometrogram (i.e., calibrated electronic equipment)). Currently, this procedure has higher PE RVUs, despite being less resource-intensive than the three CPT codes for which it serves as the base: 51727 (Complex cystometrogram (i.e., calibrated electronic equipment); with urethral pressure profile studies (i.e., urethral closure pressure profile), any technique); 51728 (Complex cystometrogram (i.e., calibrated electronic equipment); with voiding pressure studies (that is, bladder voiding pressure), any technique); and 51729 (Complex cystometrogram (i.e., calibrated electronic equipment); with voiding pressure studies (that is, bladder voiding pressure) and urethral pressure profile studies (that is, urethral closure pressure profile), any technique).

Since the AMA RUC's general view is that CPT codes with a 0-day global period do not have pre-service time associated with the code, the AMA RUC recommended removing the nonfacility pre-service clinical labor time from the PE inputs for 51726. Additionally, the AMA RUC recommended that the nonfacility clinical intra-service staff time for CPT code 51276 be reduced from the 118 minutes of intra-service clinical labor time currently assigned to the code to 85 minutes of intra-service clinical labor time. These changes would resolve the rank order anomaly and bring the PE inputs for CPT code 51726 into alignment with the other three codes. Finally, and for the reasons stated above, the AMA RUC recommended that CMS remove the 23 minutes of pre-service nonfacility clinical labor time from CPT code 51725 (Simple cystometrogram (CMG) (for example, spinal manometer)). We agreed with the AMA RUC recommendations, proposed to accept these recommendations for CY 2011 and, therefore, changed the direct PE inputs for CPT codes 51725 and 51726 in the nonfacility setting in the proposed CY 2011 direct PE database.

Comment: Some commenters argued that the rank order anomaly resulted from clinical labor inputs that were too low in the more complex codes, rather than too high in the base codes. These commenters stated that the AMA RUC and CMS had addressed the wrong "end" of the rank order anomaly in making the changes to the clinical labor minutes assigned to CPT codes 51725 and 51726. Several commenters on the CY 2010 PFS final rule with comment period, where new CY 2011 CPT code 51727, 51728, and 51729 were assigned interim direct PE inputs, also argued that CPT codes 51727, 51728, and 51729 should have additional clinical labor inputs, including a greater number of minutes during the intra-service period and minutes during the pre-service period.

Response: We have reviewed the direct PE inputs for all five CPT codes in this series and continue to agree with the AMA RUC's recommendations regarding changes for CY 2011. Specifically, we believe the pre-service nonfacility clinical labor time for the 0-day global period CPT codes 51725 and 51726 should be removed and the intra-service clinical labor time for CPT code 51726 should also be reduced, consistent with the usual treatment of

other 0-day global codes. We believe the AMA RUC provided recommendations to us regarding the direct PE inputs for these four cystometrogram services that accurately reflect the costs of the resources (that is, the clinical labor, equipment, and supplies) typically required to furnish these services to Medicare beneficiaries.

Comment: Several commenters requested that CMS change the supply inputs included in the direct PE database for the complex cystometrogram services. For example, the commenters requested that single dual sensor catheters replace the single sensor catheters currently included as direct PE inputs for these codes. The commenters stated that both the catheters and their price inputs are outdated. In other cases, the commenters explained that certain supplies in the database were not those typically used by certain physician specialties in performing the services.

Response: We rely on our review of recommendations received from the AMA RUC in order to make changes to the clinical labor, supply, and equipment inputs for CPT codes within the direct PE database. We have no reason to believe that the supplies used in the complex cystometrogram procedures described by CPT codes 51727, 51728, and 51729 are outdated because these were new codes for CY 2010 and the AMA RUC recently addressed their direct PE inputs when initially recommending values for the services. We believe the AMA RUC's extensive expertise and broad perspective generally allows it to accurately identify the direct PE inputs for new and revised CPT codes. We encourage stakeholders who believe that enhancements in technology or changes in medical practice have resulted in changes in the supplies or equipment typically used in furnishing a particular service to address these concerns with the AMA RUC.

As we discuss further in section II.A.3.e. of this final rule with comment period with respect to our proposal regarding updating supply and equipment price inputs, we welcome public requests for updates to supply price and equipment price and useful life inputs associated with existing codes through the process we are adopting beginning in CY 2011.

After consideration of the public comments we received, we are finalizing our CY 2011 proposal to accept the recommendations of the AMA RUC regarding the revised direct PE inputs for CPT codes 51725 and 52726. The final direct PE inputs are included in the final CY 2011 direct PE database.

d. Referral of Existing CPT Codes for AMA RUC Review

As part of our review of high cost supplies, we conducted a clinical review of the procedures associated with high cost supplies to confirm that those supplies currently are used in the typical case described by the CPT codes. While we confirmed that most high cost supplies could be used in the procedures for which they are currently direct PE inputs, we noted that one of the high cost supplies, fiducial screws (CMS Supply Code SD073) with a current price of $558, is included as a direct PE input for two CPT codes, specifically 77301 (Intensity modulated radiotherapy plan, including dose-volume histograms for target and critical structure partial tolerance specifications) and 77011 (Computed tomography guidance for stereotactic localization). The documentation used in the current pricing of the supply item describes a kit that includes instructions, skull screws, a drill bit, and a collar for the TALON® System manufactured by Best nomos. Best nomos' literature describes the insertion of the screws into the patient's skull to ensure accurate set-up. When CPT codes 77301 and 77011 were established in CY 2002 and CY 2003, respectively, we accepted the AMA RUC recommendations to include fiducial screws in the PE for these services. Upon further review, while we understand why this supply may still be considered a typical PE input for CPT code 77011, we do not now believe that fiducial screws, as described in the Best nomos literature, would typically be used in CPT code 77301, where the most common clinical scenario would be treatment of prostate cancer.

Therefore, in order to ensure that CPT codes 77301 and 77011 are appropriately valued for CY 2011 through the inclusion or exclusion of fiducial screws in their PE, in the CY 2011 PFS proposed rule (75 FR 40063), we asked the AMA RUC to review these CPT codes with respect to the inclusion of fiducial screws in their PE. We requested that the AMA RUC make recommendations to us regarding whether this supply should be included in the PE or removed from the PE for CPT codes 77301 and 77011 in a timeframe that would allow us to adopt interim values for these codes for CY 2011, should the AMA RUC recommend a change. Were the AMA RUC to continue to recommend the inclusion of fiducial screws in the PE for CPT code 77301 and/or 77011 for CY 2011, we requested that the AMA RUC provide us with a detailed rationale for the inclusion of this specialized supply in the PE for the typical case reported under the relevant CPT code. We also requested that the AMA RUC furnish updated pricing information for the screws if they were to continue to recommend the screws as a PE input for one or both of these CPT codes in CY 2011.

Comment: The AMA RUC recommended that CMS remove the fiducial screws as a direct PE input from both CPT codes 77011 and 77301. Several commenters also agreed that the fiducial screws would not typically be used with CPT code 77301. Additionally, multiple commenters pointed out that the fiducial screws may now be reported using HCPCS supply code A4648 (Tissue marker, implantable, any type, each) when the markers are implanted.

Response: We appreciate the responsiveness of the AMA RUC to our request and the interest of the other commenters in this issue.

After consideration of the public comments we received and the AMA RUC recommendation following publication of the CY 2011 PFS proposed rule, for CY 2011, we are accepting the AMA RUC's recommendation and removing fiducial screws from the direct PE database as inputs for CPT codes 77011 and 77301. Because the direct PE inputs for these codes are being revised on an interim final basis for CY 2011, the changes are subject to public comment on this final rule with comment period.

e. Updating Equipment and Supply Price Inputs for Existing Codes

Historically, we have periodically received requests to change the PE price inputs for supplies and equipment in the PE database. In the past, we have considered these requests on an *ad hoc* basis and updated the price inputs as part of quarterly or annual updates if we believed them to be appropriate. In the CY 2011 PFS proposed rule (75 FR 49963), we proposed to establish a regular and more transparent process for considering public requests for changes to PE database price inputs for supplies and equipment used in existing codes.

We proposed to act on public requests to update equipment and supply price inputs annually through rulemaking by following a regular and consistent process as discussed in the following paragraphs. We proposed to use the annual PFS proposed rule released in the summer and the final rule with comment period released on or about

November 1 each year as the vehicle for making these changes.

We would accept requests for updating the price inputs for supplies and equipment on an ongoing basis; requests must be received no later than December 31 of each calendar year to be considered for inclusion in the next proposed rule. In that next proposed rule, we would present our review of submitted requests to update price inputs for specific equipment or supplies and our proposals for the subsequent calendar year. We would then finalize changes in the final rule with comment period for the upcoming calendar year. Our review of the issues and consideration of public comments may result in the following outcomes that would be presented in the final rule with comment period:

- Updating the equipment or supply price inputs, as requested.
- Updating the equipment or supply price inputs, with modifications.
- Rejecting the new price inputs.
- Declining to act on the request pending a recommendation from the AMA RUC.

To facilitate our review and preparation of issues for the proposed rule, at a minimum, we would expect that requesters would provide the following information:

- Name and contact information for the requestor.
- The name of the item exactly as it appears in the direct PE database under downloads for the most recent PFS final rule with comment period, available on the CMS Web site at *http://www.cms.gov/PhysicianFeeSched/PFSFRN/list.asp#TopOfPage.*

In order to best evaluate the requests in the context of our goal of utilizing accurate market prices for these items as direct PE inputs, we also would expect requestors to provide multiple invoices from different suppliers/manufacturers. In some cases, multiple sources may not be available, whereupon a detailed explanation should be provided to support the request. When furnishing invoices, requestors should take into consideration the following parameters:

++ May be either print or electronic but should be on supplier and/or manufacturer stationery (for example, letterhead, billing statement, etc.)

++ Should be for the typical, common, and customary version of the supply or equipment that is used to furnish the services.

++ Price should be net of typical rebates and/or any discounts available, including information regarding the magnitude and rationale for such rebates or discounts.

++ If multiple items are presented on the same invoice, relevant item(s) should be clearly identified.

We solicited public comments on this process, including the information that requestors should furnish to facilitate our full analysis in preparation for the next calendar year's rulemaking cycle.

Comment: Several commenters supported establishing a regular and more transparent process for considering public requests for changes to the direct PE price inputs for supplies and equipment used in existing codes. However, other commenters were concerned that the process might prevent CMS from making timely corrections to the database that are brought to the attention of the agency by specialty societies or other stakeholders. These commenters suggested creating an expedited process whereby mistakes could be corrected.

Response: We appreciate the broad support for the proposal. We believe that this process, though regular, would not limit our ability to correct technical errors that are discovered by the agency or brought to our attention by stakeholders. On these occasions, we would continue to correct errors and issue correction notices to final rules when appropriate. The regular process for updating supply and equipment prices is intended to reflect significant changes in the market prices of supplies and equipment that are used in the direct PE database. It would not substitute for the timely correction of technical errors.

Comment: Some commenters were concerned that the proposed process would necessitate a 12- to 24-month delay between CMS' acknowledgement of a price update and the resulting change in PE RVU calculations. The commenters pointed out that the current ad hoc process has historically resulted in a fairly timely response from the agency in most circumstances and were concerned that the formalization of the process might result in unnecessary delays. One commenter suggested creating a process for quarterly updates to the supply and equipment price inputs.

Response: We understand that some commenters are concerned about the timelines for price updates. However, we believe that the value of the transparency of the proposed process outweighs its potential for slowing the previous ad hoc process. Additionally, it is important to acknowledge that in most previous cases, price input updates would not have been immediately effective since such updates have always required CMS' review, concurrence, and processing through the rate setting methodology prior to any change in Medicare payment rates. Additionally, many stakeholders already provide public comments to CMS regarding specific issues addressed in our annual rate setting for the PFS through the notice and comment rulemaking process. Therefore, we believe that the annual process offers both an economic use of stakeholders' resources, as well as the best opportunity for broad public input into proposed price changes. These are qualities any accelerated alternative, such as quarterly updates, would lack.

We believe that an annual update process most effectively promotes both timeliness and transparency, while also allowing for public comment and input regarding our proposals before the adoption of pricing changes that could have a significant effect on payment for services under the PFS.

Comment: Some commenters asserted that it may be more difficult to obtain invoices for some supplies that are not frequently used and there should be acceptable alternative sources of information, including price lists or other information from the manufacturer. One commenter suggested that in the case of items that are not used in high volumes in physicians' office, volume or other discounts are unlikely for physicians' practices.

Response: Even though the direct PE inputs should reflect the resource costs required for typical cases, we understand that there may be circumstances in which updated invoices or invoices that reflect volume or other discounts may be difficult to obtain. As stated in our proposal, we will consider a detailed written explanation in support of requests submitted without the documentation usually required.

Comment: One commenter urged that the updating of supply and equipment prices be only for "like" items and not for "newer technology" items. The commenter requested that CMS refer the initial review of new supply and equipment inputs to the AMA RUC Practice Expense Subcommittee for review and recommendation back to CMS. Other commenters made specific requests for additions, deletions, or substitutions of supply and equipment items associated with particular codes.

Response: We appreciate the opportunity to clarify that this regular and consistent process would only apply to the price inputs for supply and equipment items. As part of our review of equipment price inputs, we will also consider updates to the useful life of equipment insofar as that information is

supported by similar documentation. However, we will continue to encourage stakeholders who believe that there should be additions, deletions, or substitutions of direct PE inputs associated with particular codes to address these concerns through the AMA RUC, including when a stakeholder believes that enhanced technology has replaced older technology in the typical case of a particular service. We believe the AMA RUC recommendations are an efficient and effective mechanism to inform our review of changes to the clinical labor, supply, and equipment inputs within the direct PE database.

Comment: One commenter was concerned about the potential for CMS to reject the requested price input outright and suggested that CMS be required to explain its rejection of the request for an updated price input.

Response: We appreciate the concerns of the commenter and consider this perspective as providing additional support for instituting such a regular and transparent process. As we stated in the CY 2011 proposed rule (75 FR 40063), we would present our review of submitted requests to update price inputs for specific equipment or supplies and our proposals for the subsequent calendar year in the annual proposed rule. This process would provide CMS an annual opportunity to explain our review and decisions regarding public requests for changes in direct PE price inputs.

After consideration of the public comments we received, we are finalizing our CY 2011 proposal to act on public requests to update equipment and supply price inputs annually through rulemaking by following a regular and consistent process as discussed in the preceding paragraphs. We will use the annual PFS proposed rule released in the summer and the final rule with comment period released on or about November 1 each year as the vehicle for making these changes. In order to make the most effective use of the rulemaking process and be responsive to the concerns of stakeholders that we consider the most recent evidence available, we ask that requests for updates to supply price inputs or equipment price or useful life inputs be submitted as comments to the PFS final rule with comment period each year, subject to the deadline for public comments applicable to that rule. Alternatively, stakeholders may submit requests to CMS on an ongoing basis throughout a given calendar year to CMS *PE_Price_Input_Update@cms.hhs.gov*. Requests received by the end of a calendar year will be considered in rulemaking during the following year. For example, requests received by December 31, 2010 will be considered in conjunction with the CY 2012 PFS rulemaking cycle. We refer readers to the description earlier in this section of the minimum information we are requesting that stakeholders provide in order to facilitate our review and preparation of issues for the proposed rule.

In the CY 2012 PFS proposed rule, scheduled to be released in the summer of CY 2011, we will present a review of any timely requests we receive to update supply price inputs or equipment price or useful life inputs. After reviewing the issues and responding to the public comments, we will finalize our decision as one of the outcomes listed below for each request in the final rule with comment period for CY 2012.

- Updating the equipment or supply price inputs, as requested.
- Updating the equipment or supply price inputs, with modifications.
- Rejecting the new price inputs.
- Declining to act on the request pending a recommendation from the AMA RUC.

f. Other Issues

We received other public comments on matters related to direct PE inputs that were not the subject of proposals in the CY 2011 PFS proposed rule. We thank the commenters for sharing their views and suggestions. Because we did not make any proposals regarding these matters, we do not generally summarize or respond to such comments in this final rule with comment period. However, we are summarizing and responding to several of the public comments in order to reiterate or clarify certain information.

Comment: Several commenters stated that the clinical labor minutes for CPT code 37210 (Uterine fibroid embolization (UFE, embolization of the uterine arteries to treat uterine fibroids, leiomyomata), percutaneous approach inclusive of vascular access, vessel selection, embolization, and all radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance necessary to complete the procedure) are inconsistent with recommendations forwarded to CMS by the AMA RUC for CY 2007 and accepted by CMS in the CY 2007 PFS final rule with comment period (71 FR 69643). The commenters indicated that 10 minutes of clinical labor time were erroneously not attributed to this CPT code in the proposed CY 2011 direct PE database.

Response: We agree with the commenters' assessment and appreciate being informed of the error. The 10 minutes of clinical labor time missing from the direct PE inputs for CPT code 37210 have been incorporated and this change is reflected in the final CY 2011 direct PE database.

Comment: Several commenters expressed concerns regarding the current direct PE inputs for various services. One commenter submitted extensive information regarding a perceived disparity between the equipment inputs for echocardiography services and those for other ultrasound services. Another commenter requested that CMS ask the AMA RUC to establish nonfacility RVUs for the placement or insertion of high dose rate brachytherapy catheters/applicators because it is common practice, especially in gynecology, for physicians to perform such procedures in their offices or in freestanding clinics. One commenter stated that the proposed PE RVUs do not provide sufficient payment to cover the cost of prothrombin time (PT)/international normalized ratio (INR) home monitoring services and recommended that CMS alter the direct PE inputs for those services. Another commenter requested that CMS alter direct PE inputs for holter monitoring based on changes to the language in CPT code descriptors from the current "24 hours" to "up to 48 hours," even when the AMA RUC did not recommend such changes.

Response: We did not propose CY 2011 changes to the direct PE inputs for any of those services referenced by the commenters and, therefore, their direct PE inputs have already been finalized in a prior year's PFS rulemaking. As we have previously stated in this section, we encourage stakeholders who believe a change is required in the direct PE inputs associated with a particular service in the typical case that is furnished in the facility or nonfacility setting to address these concerns with the AMA RUC with respect to codes that have been reviewed by the AMA RUC. The direct PE inputs for existing services paid under the PFS have all been adopted through rulemaking that has allowed for public notice and comment, so their current direct PE inputs are final unless we would make a proposal to change them in a future year. In most cases, we like to receive and review recommendations from the AMA RUC for new and revised codes or other codes for which another review has been conducted in order to assist us in determining whether we should make changes to the clinical labor, supply, and equipment inputs within the direct

PE database and, if so, what revisions should be made.

Additionally, throughout the year we meet with parties who want to share their views on topics of interest to them. These discussions may provide us with information regarding changes in medical practice and afford opportunities for the public to bring to our attention issues they believe we should consider for future rulemaking. Thus, we encourage stakeholders to contact us at any time if there are topics related to the direct PE inputs for physicians' services that they would like to discuss.

B. Malpractice Relative Value Units (RVUs)

1. Background

Section 1848(c) of the Act requires that each service paid under the PFS be comprised of three components: Work, PE, and malpractice. From 1992 to 1999, malpractice RVUs were charge-based, using weighted specialty-specific malpractice expense percentages and 1991 average allowed charges. Malpractice RVUs for new codes after 1991 were extrapolated from similar existing codes or as a percentage of the corresponding work RVU. Section 4505(f) of the BBA required us to implement resource-based malpractice RVUs for services furnished beginning in 2000. Therefore, initial implementation of resource-based malpractice RVUs occurred in 2000.

The statute also requires that we review, and if necessary adjust, RVUs no less often than every 5 years. The first review and update of resource-based malpractice RVUs was addressed in the CY 2005 PFS final rule with comment period (69 FR 66263). Minor modifications to the methodology were addressed in the CY 2006 PFS final rule with comment period (70 FR 70153). In the CY 2010 PFS final rule with comment period, we implemented the second review and update of malpractice RVUs. For a discussion of the second review and update of malpractice RVUs see the CY 2010 PFS proposed rule (74 FR 33537) and final rule with comment period (74 FR 61758).

2. Malpractice RVUs for New and Revised Services Effective Before the Next 5-Year Review

Currently, malpractice RVUs for new and revised codes effective before the next 5-Year Review (for example, effective CY 2011 through CY 2014) are determined by a direct crosswalk to a similar "source" code or a modified crosswalk to account for differences in work RVUs between the new/revised code and the source code. For the modified crosswalk approach, we adjust the malpractice RVUs for the new/revised code to reflect the difference in work RVUs between the source code and the AMA RUC's recommended work value (or the work value we are applying as an interim final value under the PFS) for the new code. For example, if the interim final work RVUs for the new/revised code are 10 percent higher than the work RVUs for the source code, the malpractice RVUs for the new/revised code would be increased by 10 percent over the source code RVUs. This approach presumes the same risk factor for the new/revised code and source code but uses the work RVUs for the new/revised code to adjust for risk-of-service. The assigned malpractice RVUs for new/revised codes effective between updates remain in place until the next 5-Year Review.

For CY 2011, we explained that we will continue our current approach for determining malpractice RVUs for new/revised codes that become effective before the next 5-Year Review and update. Under this approach we crosswalk the new/revised code to the RVUs of a similar source code and adjust for differences in work (or, if greater, the clinical labor portion of the fully implemented PE RVUs) between the source code and the new/revised code. Additionally, we stated that we would publish a list of new/revised codes and the analytic crosswalk(s) used for determining their malpractice RVUs in the CY 2011 final rule with comment period, which we have not previously done. We also explained that the CY 2011 malpractice RVUs for new/revised codes would be implemented as interim final values in the CY 2011 PFS final rule with comment period, where they would be subject to public comment, and finalized in the CY 2012 PFS final rule with comment period.

Comment: Several commenters supported the continuation of our current approach to determining malpractice RVUs for new/revised codes that become effective before the next 5-Year Review and update. The commenters stated that publication of the new/revised codes and the analytic crosswalk(s) used for determining their malpractice RVUs in the final rule is a move toward greater transparency. A few commenters requested that CMS provide the rationale used for selecting crosswalks for new/revised codes and subject the rationale to public comment.

Response: For purposes of determining malpractice RVUs for the CY 2011 new/revised codes, we accepted all source code recommendations submitted by the AMA RUC. We understand that the AMA RUC-recommended source codes for new/revised codes were based on the expected similar specialty mix of practitioners furnishing the source code and the new/revised code. In other words, the medical specialties furnishing a source code were expected to be similar to the specialty mix furnishing the new/revised code. In adopting all of the AMA RUC's source code recommendations for CY 2011, we agree with its assessment of these similarities in each new/revised code case. If we were to disagree with the AMA RUC's malpractice source code recommendations in a future year for any new/revised codes, we would provide the rationale for both our difference of opinion and the alternative source code we select for purposes of establishing the interim final malpractice RVUs.

After consideration of the public comments we received, we are continuing our current approach of assigning the interim final malpractice RVUs for new/revised codes based on the methodology described earlier in this section. We adjusted the malpractice RVUs of the CY 2011 new/revised codes for differences in work RVUs (or, if greater, the clinical labor portion of the fully implemented PE RVUs) between the source code and the new/revised code to reflect the specific risk-of-service for the new/revised code. The source code crosswalks for the CY 2011 new/revised codes are being adopted on an interim final basis and are subject to public comment on this CY 2011 final rule with comment period, as are the CY 2011 malpractice RVUs of the new/revised codes that are listed in Addendum C to this final rule with comment period. The malpractice RVUs for the CY 2011 new/revised codes will be finalized in the CY 2012 PFS final rule with comment period, where we will also respond to the public comments received on the values that are included in this CY 2011 final rule with comment period.

Table 8 lists the CY 2011 new/revised codes and their respective source codes for determining the interim final CY 2011 malpractice RVUs. We are also posting this crosswalk on the CMS Web site under the downloads for the CY 2011 PFS final rule with comment period at: *http://www.cms.gov/PhysicianFeeSched/PFSFRN/list.asp#TopOfPage*.

BILLING CODE 4120–01–C

3. Revised Malpractice RVUs for Selected Disc Arthroplasty Services

As discussed in the CY 2010 PFS proposed rule (74 FR 33539), we assign malpractice RVUs to each service based upon a weighted average of the risk factors of all specialties that furnish the service. For the CY 2010 review of malpractice RVUs, we used CY 2008 Medicare payment data on allowed services to establish the frequency of a service by specialty. CPT code 22856 (Total disc arthroplasty (artificial disc), anterior approach, including discectomy with end plate preparation (includes osteophytectomy for nerve root or spinal cord decompression and microdissection), single interspace, cervical) had zero allowed services for CY 2008. Therefore, our contractor initially set the level of services to 1, and assigned a risk factor according to the average risk factor for all services that do not explicitly have a separate technical or professional component. We proposed to adopt our contractor's initial malpractice RVUs for CPT code 22856 in the CY 2010 proposed rule. Application of the average physician risk factor would have resulted in a significant decrease in malpractice RVUs for CPT code 22856 in CY 2010.

Several commenters on the CY 2010 PFS proposed rule expressed concern regarding the proposed malpractice RVUs for CPT code 22856, which represented a proposed reduction of more than 77 percent. The commenters stated that this service is predominantly furnished by neurosurgeons and orthopedic surgeons. Given the high risk factors associated with these specialty types and the changes in malpractice RVUs for comparable services, the commenters stated that a reduction in the malpractice RVUs of this magnitude for CPT code 22856 could not be correct.

After consideration of the public comments, for CY 2010, we set the risk factor for CPT code 22856 as the weighted average risk factor of six comparable procedures mentioned by the commenters: CPT code 22554 (Arthrodesis, anterior interbody technique, including minimal discectomy to prepare interspace (other than for decompression); cervical below C2); CPT code 22558 (Arthrodesis, anterior interbody technique, including minimal discectomy to prepare interspace (other than for decompression); lumbar); CPT code 22857 (Total disc arthroplasty (artificial disc), anterior approach, including discectomy to prepare interspace (other than for decompression), single interspace, lumbar); CPT code 22845 (Anterior instrumentation; 2 to 3 vertebral segments (list separately in addition to code for primary procedure)); CPT code 63075 (Discectomy, anterior, with decompression of spinal cord and/or nerve root(s), including osteophytectomy; cervical, single interspace); and CPT code 20931 (Allograft for spine surgery only; structural (list separately in addition to code for primary procedure)). The weighted average risk factor for these services is 8.4.

Since publication of the CY 2010 PFS final rule with comment period, stakeholders have mentioned that we made significant changes to the malpractice RVUs for CPT code 22856 in CY 2010. The commenters also brought to our attention that other services are clinically similar to CPT code 22856 and have similar work RVUs and, therefore, some stakeholders believe these services should all have similar malpractice RVUs. Services mentioned by the stakeholders that are clinically similar to CPT code 22856 include CPT code 22857; CPT code 22861 (Revision including replacement of total disc arthroplasty (artificial disc), anterior approach, single interspace;

cervical); CPT code 22862 (Revision including replacement of total disc arthroplasty (artificial disc) anterior approach, lumbar); CPT code 22864 (Removal of total disc arthroplasty (artificial disc), anterior approach, single interspace; cervical); and CPT code 22865 (Removal of total disc arthroplasty (artificial disc), anterior approach, single interspace; lumbar).

After further review of this issue, for CY 2011 we proposed to apply the same risk factor used for CPT code 22856 to certain other services within this family of services (CPT codes 22857 through 22865) for which there were no allowed services in CY 2008. CPT codes 22861 and 22864 had zero allowed services in CY 2008 and our contractor initially set their malpractice RVUs in the same way as it did for CPT code 22856. Therefore, for CY 2011 we proposed to assign the weighted average risk factor used for CPT code 22856 (that is, the weighted average of the risk factors for CPT codes 20931, 22554, 22558, 22845, 22857, and 63075) to CPT codes 22861 and 22864. However, CPT codes 22857, 22862, and 22865 are low volume services (allowed services under 100). Our policy for low volume services is to apply the risk factor of the dominant specialty as indicated by our claims data. Thus, for CY 2011 we proposed to continue to apply our policy for low volume services to CPT codes 22857, 22862, and 22865.

Comment: A few commenters expressed support for the proposed changes in malpractice RVUs for disc arthroplasty services that are similar to CPT code 22856. One commenter urged CMS to finalize the proposal in the CY 2011 PFS final rule.

Response: We appreciate the commenters' support for our proposal.

After consideration of the public comments we received, we are finalizing our CY 2011 proposal to apply the same risk factor used for CPT code 22856 to CPT codes 22861 and 22864 for purposes of setting the malpractice RVUs for these codes prior to the next 5-Year Review of malpractice RVUs.

C. Potentially Misvalued Services Under the Physician Fee Schedule

1. Valuing Services Under the PFS

As discussed in section I. of this final rule with comment period, in order to value services under the PFS, section 1848(c) of the Act requires the Secretary to determine relative values for physicians' services based on three components: The work, practice expense (PE), and malpractice components. Section 1848(c)(1)(A) of the Act defines the work component to include "the portion of the resources used in furnishing the service that reflects physician time and intensity in furnishing the service." Additionally, the statute provides that the work component shall include activities that occur before and after direct patient contact. Furthermore, the statute specifies that with respect to surgical procedures, the valuation of the work component for the code would reflect a "global" concept in which pre-operative and post-operative physicians' services related to the procedure would also be included.

In addition, section 1848(c)(2)(C)(i) of the Act specifies that "the Secretary shall determine a number of work relative value units (RVUs) for the service based on the relative resources incorporating physician time and intensity required in furnishing the service." As discussed in detail in sections I.A.2. and I.A.3. of this final rule with comment period, the statute also defines the PE and malpractice components and provides specific guidance in the calculation of the RVUs for each of these components. Section 1848(c)(1)(B) of the Act defines the PE component as "the portion of the resources used in furnishing the service that reflects the general categories of expenses (such as office rent and wages of personnel, but excluding malpractice expenses) comprising practice expenses."

Section 1848(c)(2)(C)(ii) of the Act specifies that the "Secretary shall determine a number of practice expense relative value units for the services for years beginning with 1999 based on the relative practice expense resources involved in furnishing the service." Furthermore, section 1848(c)(2)(B) of the Act directs the Secretary to conduct a periodic review, not less often than every 5 years, of the RVUs established under the PFS. Finally, on March 23, 2010, the ACA was enacted, further requiring the Secretary to periodically review and identify potentially misvalued codes and make appropriate adjustments to the relative values of those services identified as being potentially misvalued. Section 3134(a) of the ACA added a new section 1848(c)(2)(K) of the Act which requires the Secretary to periodically identify potentially misvalued services using certain criteria, and to review and make appropriate adjustments to the relative values for those services. Section 3134(a) of the ACA also added a new section 1848(c)(2)(L) of the Act which requires the Secretary to develop a validation process to validate the RVUs of potentially misvalued codes under the PFS and make appropriate adjustments.

As discussed in section I.A.1. of this final rule with comment period, we establish physician work RVUs for new and revised codes based on our review of recommendations received from the AMA RUC. The AMA RUC also provides recommendations to CMS on the values for codes that have been identified as potentially misvalued. To respond to concerns expressed by MedPAC, the Congress, and other stakeholders regarding accurate valuation of services under the PFS, the AMA RUC created the Five-Year Review Identification Workgroup in 2006. In addition to providing recommendations to CMS for work RVUs, the AMA RUC's Practice Expense Subcommittee reviews direct PE (clinical labor, medical supplies, and medical equipment) for individual services and examines the many broad methodological issues relating to the development of PE RVUs.

In accordance with section 1848(c) of the Act, we determine appropriate adjustments to the RVUs, taking into account the recommendations provided by the AMA RUC and MedPAC, and publish the explanation for the basis of these adjustments in the PFS proposed and final rules. We note that section 1848(c)(2)(A)(ii) of the Act authorizes the use of extrapolation and other techniques to determine the RVUs for physicians' services for which specific data are not available, in addition to taking into account the results of consultations with organizations representing physicians.

2. Identifying, Reviewing, and Validating the RVUs of Potentially Misvalued Services Under the PFS

a. Background

In its March 2006 Report to Congress, MedPAC noted that "misvalued services can distort the price signals for physicians' services as well as for other health care services that physicians order, such as hospital services." In that same report MedPAC postulated that physicians' services under the PFS can become misvalued over time for a number of reasons: "For example, when a new service is added to the physician fee schedule, it may be assigned a relatively high value because of the time, technical skill, and psychological stress that are required to perform it. Over time, skill, and stress involved may decline as physicians become more familiar with the service and more efficient at providing it. The amount of physician work needed to furnish an existing service may decrease when new technologies are incorporated. Services

can also become overvalued when practice expenses decline. This can happen when the costs of equipment and supplies fall, or when equipment is used more frequently, reducing its cost per use. Likewise, services can become undervalued when physician work increases or practice expenses rise." In the ensuing years since MedPAC's 2006 report, additional groups of potentially misvalued services have been identified by Congress, CMS, MedPAC, the AMA RUC, and other stakeholders.

In recent years CMS and the AMA RUC have taken increasingly significant steps to address potentially misvalued codes. As MedPAC noted in its March 2009 Report to Congress, in the intervening years since MedPAC made the initial recommendations, "CMS and the AMA RUC have taken several steps to improve the review process." Most recently, section 1848(c)(2)(K)(ii) of the Act (as added by section 3134 of the ACA) directed the Secretary to specifically examine potentially misvalued services in seven categories as follows:

(1) Codes and families of codes for which there has been the fastest growth.

(2) Codes or families of codes that have experienced substantial changes in practice expenses.

(3) Codes that are recently established for new technologies or services.

(4) Multiple codes that are frequently billed in conjunction with furnishing a single service.

(5) Codes with low relative values, particularly those that are often billed multiple times for a single treatment.

(6) Codes which have not been subject to review since the implementation of the RBRVS (the so-called "Harvard-valued codes").

(7) Other codes determined to be appropriate by the Secretary.

Section 1848(c)(2)(K)(iii) of the Act (as added by section 3134 of the ACA) also specifies that the Secretary may use existing processes to receive recommendations on the review and appropriate adjustment of potentially misvalued services. In addition, the Secretary may conduct surveys, other data collection activities, studies, or other analyses as the Secretary determines to be appropriate to facilitate the review and appropriate adjustment of potentially misvalued services. This section authorizes the use of analytic contractors to identify and analyze potentially misvalued codes, conduct surveys or collect data, and make recommendations on the review and appropriate adjustment of potentially misvalued services. Finally, section 1848(c)(2)(K)(iii)(V) of the Act (as added by section 3134 of the ACA) specifies that the Secretary may make appropriate coding revisions (including using existing processes for consideration of coding changes) which may include consolidation of individual services into bundled codes for payment under the physician fee schedule.

b. Progress in Identifying and Reviewing Potentially Misvalued Codes

Over the last several years, CMS, in conjunction with the AMA RUC, has identified and reviewed numerous potentially misvalued codes in all seven of the categories specified in section 1848(c)(2)(K)(ii) (as added by section 3134 of the ACA), and we plan to continue our work examining potentially misvalued codes in these areas over the upcoming years, consistent with the new legislative mandate on this issue. In the current process, the AMA RUC reviews potentially misvalued codes that are identified either by CMS or through its own processes and recommends revised work RVUs and/or direct PE inputs for those codes to CMS. CMS then assesses the recommended revised work RVUs and/or direct PE inputs and, in accordance with section 1848(c) of the Act, we determine if the recommendations constitute appropriate adjustments to the RVUs under the PFS. Since CY 2009, CMS and the AMA RUC have identified over 700 potentially misvalued codes.

For example, in regard to the first category (codes and families of codes for which there has been the fastest growth), for CY 2009 CMS identified over 100 potentially misvalued codes for which an analysis of the utilization data showed an annual growth in allowed services of 10 percent (or more) for 3 consecutive years (73 FR 38586). Each of these codes had allowed charges of $1 million or more in CY 2007. We published this list in the CY 2009 PFS proposed rule (73 FR 38586 through 38589) and requested that the AMA RUC immediately begin a review of the codes on this list. Meanwhile, in parallel with CMS' efforts, the AMA RUC also initiated processes to identify and review potentially misvalued codes on an ongoing basis using certain screens, including screens for "CMS fastest growing procedures" and "high volume growth." Both of these AMA RUC screens are applicable to the first category of potentially misvalued codes specified in the ACA. We plan to continue to analyze Medicare claims data over future years to identify additional services that exhibit rapid growth and high Medicare expenditures for referral to the AMA RUC for review as potentially misvalued codes.

Pertaining to the second category specified in section 1848(c)(2)(K)(ii) of the Act (as added by section 3134 of the ACA) (codes or families of codes that have experienced substantial changes in practice expenses), in CY 2009 we requested that the AMA RUC continue its review of direct PE inputs, focusing particularly on high-volume codes where the PE payments are increasing significantly under the transition to the new PE methodology (73 FR 38589). The AMA RUC has responded by sending CMS recommendations for revised direct PE inputs for codes identified for PE review on an ongoing basis.

Additionally in CY 2009, we began an initiative to review and update the prices for high-cost supplies in order to ensure the accuracy and completeness of the direct PE inputs. We discuss our most recent efforts in refining the process to update the prices of high-cost supplies in section II.C.5. of this final rule with comment period.

For the third category of potentially misvalued codes identified in section 1848(c)(2)(K)(ii) (as added by section 3134 of the ACA) (codes that are recently established for new technologies or services), the AMA RUC routinely identifies such codes through a screen based on 3 years of Medicare claims data, and sends CMS recommendations for revised work RVUs and/or direct PE inputs for these codes on an ongoing basis. The AMA RUC may determine that a code for a new service requires reevaluation or does not require reevaluation, or it may conclude, on a case-by-case basis, that more than 3 years of claims data are necessary before the code can be reviewed. In that case, it would determine the appropriate future timeframe for review.

We also note that in its June 2008 Report to Congress entitled "Reforming the Health Care System" and in the context of a discussion about primary care, MedPAC acknowledges, "* * * Efficiency can improve more easily for other types of services, such as procedures, with advances in technology, technique, and other factors. Ideally, when such efficiency gains are achieved, the fee schedule's relative value units (RVUs) for the affected services should decline accordingly, while budget neutrality would raise the RVUs for the fee schedule's primary care services." (page 27). Section II.C.5. of this final rule with comment period includes a discussion regarding periodic updates to the costs of high-cost supplies. This discussion is highly relevant to new technology services, where growth in volume of a

service as it diffuses into clinical practice may lead to a decrease in the cost of expensive supplies. We also expect that other efficiencies in physician work and PE may be achieved after an initial period of relative inefficiency that reflects the "learning curve." We plan to pay particular attention to the work values and direct PE inputs for these new services and the AMA RUC's periodic review process to ensure that any efficiencies are captured under the PFS over time, recognizing that the appropriate timing for revaluing these services needs to be considered on a case-by-case basis depending on the growth rate in service volume.

We have also addressed the fourth category (multiple codes that are frequently billed in conjunction with furnishing a single service) in rulemaking prior to the enactment of the ACA. As discussed in the CY 2009 PFS proposed rule (73 FR 38586), we have a longstanding policy of reducing payment for multiple surgical procedures performed on the same patient, by the same physician, on the same day. Over the ensuing years, the multiple procedure payment reduction (MPPR) policy has been extended to a number of nuclear diagnostic and diagnostic imaging procedures. We continue our work to recognize efficiencies in this area with a new CY 2011 policy to expand the MPPR policy to additional combinations of imaging services and to therapy services for CY 2011 as described in section II.C.4. of this final rule with comment period.

We note the AMA RUC has also established a screen to identify services performed by the same physician on the same date of service 95 percent of the time or more. Over the past 2 years, the CPT Editorial Panel has established new bundled codes to describe a comprehensive service for certain combinations of these existing services that are commonly furnished together, and the AMA RUC has recommended work values and direct PE inputs to CMS for these comprehensive service codes that recognize the associated efficiencies. We look forward to working with the AMA RUC in this joint effort to examine codes commonly reported together and more appropriately value common combinations services.

We address the fifth category of potentially misvalued codes (codes with low relative values, particularly those that are often billed multiple times for a single treatment) in section II.C.3.b. of this final rule with comment period. That is, we have provided a list of services with low work RVUs that are commonly reported with multiple units in a single encounter and requested that the AMA RUC review these codes that we have identified as potentially misvalued.

The sixth category (codes which have not been subject to review since the implementation of the RBRVS (the so-called "Harvard-valued codes")) also continues to be addressed by CMS and the AMA RUC on an ongoing basis. As we noted in the CY 2009 PFS proposed rule (73 FR 38589), there were at that time approximately 2,900 codes, representing $5 billion in annual spending, that were originally valued using Harvard data and had not subsequently been evaluated by the AMA RUC. Consequently, in CY 2009, we requested that the AMA RUC engage in an ongoing effort to review the remaining Harvard-valued codes, focusing first on the high-volume, low-intensity codes (73 FR 38589). In response to our request, the AMA RUC initially conducted an analysis of Harvard-valued services with utilization above 10,000 services per year, which resulted in a list of 296 distinct services (73 FR 69883). The AMA RUC, in its public comment on the CY 2009 proposed rule, stated that it believes it would be effective to limit any review to these 296 services and also noted that of the 296 services identified, 23 had already been identified by another screen and were in the process of being reviewed (73 FR 69883). To date, the AMA RUC has reviewed and submitted to CMS recommendations for revised work RVUs and/or direct PE inputs for a number of Harvard-valued codes, prioritizing those codes with utilization of over 1 million services. The AMA RUC and CMS intend to continue our ongoing assessment of Harvard-valued codes, next targeting codes with utilization of over 100,000 services.

Finally, the seventh category of potentially misvalued codes in section 1848(c)(2)(K)(ii) (as added by section 3134 of the ACA) is all other codes determined to be appropriate by the Secretary. In this category, CMS has previously proposed policies and requested that the AMA RUC review codes for which there have been shifts in the site-of-service (site-of-service anomalies), as well as codes that qualify as "23-hour stay" outpatient services. The policies for valuation of both the site-of-service anomaly codes and the "23-hour stay" codes are developed further in sections II.C.3.d. and e., respectively, of this final rule with comment period. For CY 2011, we have also identified codes with low work RVUs but that are high volume based on claims data as another category of potentially misvalued codes and referred these codes to the AMA RUC for review, as discussed in section II.C.3.b. of this final rule with comment period. In addition, for CY 2011 we have newly targeted key codes that the AMA RUC uses as reference services for valuing other services, termed "multispecialty points of comparison" services, and referred these to the AMA RUC for review as potentially misvalued codes as described in section II.C.3.a. of this final rule with comment period. Finally, we note the AMA RUC has also established screens to identify potentially misvalued codes in additional categories, including codes with a high intra-service work per unit of time (IWPUT) and codes representing services that had been surveyed by one specialty, but are now performed by a different specialty. We will continue to review AMA RUC recommendations for revised work RVUs and/or direct PE inputs for codes that fall into these categories.

As a result of the combined efforts of CMS and the AMA RUC to address potentially misvalued codes, for CY 2009 the AMA RUC recommended revised work values and/or PE inputs for 204 misvalued services (73 FR 69883). For CY 2010, an additional 113 codes were identified as misvalued and the AMA RUC provided new recommendations for revised work RVUs and/or PE inputs to CMS as discussed in the CY 2010 PFS final rule with comment period (74 FR 61778). Upon review of the AMA RUC-recommended work RVUs, CMS accepted the majority of the values as appropriate adjustments to the RVUs under the PFS, in accordance with section 1848(c) of the Act. However, for a number of codes, mainly the site-of-service anomaly codes, we indicated that although we would accept the AMA RUC valuations for these codes on an interim basis through CY 2010, we had ongoing concerns about the methodology used by the AMA RUC to review these services (73 FR 69883 and 74 FR 61776 through 61778, respectively). In the CY 2010 PFS final rule with comment period, we requested that the AMA RUC reexamine the site-of-service anomaly codes and use the building block methodology to revalue the services (74 FR 61777). In that same rule, we also stated that we would continue to examine these codes and consider whether it would be appropriate to propose additional changes in future rulemaking. We discuss our CY 2011 proposals with respect to these codes in section II.C.3.d. of this final rule with comment period.

c. Validating RVUs of Potentially Misvalued Codes

In addition to identifying and reviewing potentially misvalued codes, section 1848(c)(2)(L) (as added by section 3134 of the ACA) specifies that the Secretary shall establish a formal process to validate relative value units under the PFS. The validation process may include validation of work elements (such as time, mental effort and professional judgment, technical skill and physical effort, and stress due to risk) involved with furnishing a service and may include validation of the pre-, post-, and intra-service components of work. The Secretary is directed to validate a sampling of the work RVUs of codes identified through any of the seven categories of potentially misvalued codes specified by section 1848(c)(2)(K)(ii) of the Act (as added by section 3134 of the ACA). Furthermore, the Secretary may conduct the validation using methods similar to those used to review potentially misvalued codes, including conducting surveys, other data collection activities, studies, or other analyses as the Secretary determines to be appropriate to facilitate the validation of RVUs of services. Currently, while CMS does assess the AMA RUC-recommended work RVUs to determine if the recommendations constitute appropriate adjustments to the RVUs under the PFS, we intend to establish a more extensive validation process of RVUs in the future in accordance with the requirements of section 1848(c)(2)(L) of the Act (as added by section 3134 of the ACA). Therefore, in the CY 2011 PFS proposed rule (75 FR 40068), we solicited public comments on possible approaches and methodologies that we should consider for a validation process. We were interested in public comments regarding approaches, including the use of time and motion studies, to validate estimates of physician time and intensity that are factored into the work RVUs for services with rapid growth in Medicare expenditures, one of the categories that the statute specifically directs CMS to examine. We indicated that we plan to discuss the validation process in a future PFS rule once we have considered the matter further in conjunction with any public comments and other input from stakeholders that we receive.

Comment: Some commenters were skeptical that there could be viable alternative methods to the existing AMA RUC code review process for validating physician time and intensity that would preserve the appropriate relativity of specific physician's services under the current payment system. These commenters generally urged CMS to rely solely on the AMA RUC to provide valuations for services under the PFS. A number of commenters expressed the belief that since CMS has reviewed the AMA RUC recommendations for codes and generally accepted these valuations in the past, these actions constitute a "CMS validation process." The commenters asserted that this current "CMS validation process" more than meets the requirement of section 1848(c)(2)(L) of the Act (as added by section 3134 of the ACA).

In addition, a number of commenters opposed the approach of using time and motion studies to validate estimates of physician time and intensity, stating that properly conducted time and motion studies are extraordinarily expensive and, given the thousands of codes paid under the PFS, it would be unlikely that all codes could be studied. The commenters generally opposed applying different methodologies to valuing different services under the PFS and supported using a consistent methodology for all codes. Some commenters observed that it would be extremely difficult for CMS to establish a process by which to validate a sample of work RVUs under the PFS because of the relative nature of the system. Specifically, one commenter noted that the "advantages of a relative system are considerable—they allow scaling based on available funds and make it far easier for a payer such as Medicare to set rates for multiple services with a single adjustment to the conversion factor. However, one disadvantage of a relative system is that it cannot be externally validated unless all components are included in the validation. Services cannot be examined for absolute accuracy, only for relative precision. If we identify some component of the calculation used to generate the RVU that is incorrect, it is impossible to know whether this is a systemic error or an issue with an individual code. If it is a systemic error, then it does not invalidate the relative value system, which merely must operate on an even playing field." That is, many commenters believe that as long as appropriate relativity is maintained in the work RVUs for services valued under the PFS, the specific methodology for valuing services is less important. Accordingly, many commenters expressed support for the AMA RUC's use of "magnitude estimation" to develop the recommended value for a service and urged CMS to accept the AMA RUC's recommendations as the most informed and best estimation of the true value of physician work for a service.

In contrast, some commenters declared that "the flaws inherent in the RUC system are the lack of accountability and transparency." These commenters believe that the AMA RUC's composition as a professional panel puts cognitive services at a disadvantage and suggested that "the composition of the RUC needs to be modified to more accurately reflect the desired workforce composition. At present primary care specialties are under-represented which we [the commenters] believe contributes to the overvaluation of procedural codes and undervaluation of cognitive codes." Similarly, other commenters noted that while certified registered nurse anesthetists (CRNAs) furnished approximately 32 million anesthesia services in the United States annually and can bill Medicare directly for their services, "the AMA RUC excludes CRNAs from directly participating in its deliberations because CRNAs are not physicians." These commenters noted that "without fair representation by all specialties that bill Part B directly, CMS' reliance on the AMA–RUC as representing the professional views and knowledge of all healthcare specialties is deeply flawed." The commenters also advised that "while the RUC relies on persuasion and brokering deals, RVUs need to be validated empirically." In general, these commenters believe that since section 1848(c)(2)(L) of the Act (as added by section 3134 of the ACA) expressly specifies that CMS has the authority to conduct surveys and studies and collect data, CMS should develop a process that uses empirical evidence as the basis for validation of work RVUs.

Response: We agree with the commenters that the work before us to develop a formal validation process as specified by section 1848(c)(2)(L) of the Act (as added by section 3134 of the ACA) will be a challenging but worthwhile effort to ensure accurate valuation of physician work under the PFS. While we have reviewed AMA RUC recommendations for codes and frequently accepted these valuations in the past, we disagree with the commenters' assertion that these actions constitute a formal CMS validation process as envisioned by section 1848(c)(2)(L) of the Act (as added by section 3134 of the ACA). Section 1848(c)(2)(L) of the Act (as added by section 3134 of the ACA) clearly specifies a new requirement that "the Secretary shall establish a process to validate relative value units under the fee schedule." While we solicited

comments on the possibility of using time and motion studies to support a future validation process, we understand that these studies would require significant resources and we remain open to suggestions for other approaches to developing a validation process.

In response to the commenters who raised the issue of the AMA RUC's most commonly used approach for valuing codes, referred to as "magnitude estimation," we note that the AMA RUC does not rely on a single consistent methodology to value codes. Based on our historical and current review of the AMA RUC recommendation summaries which accompany the work RVU recommendations for each code newly valued or revalued by the AMA RUC each year, we have noticed that the AMA RUC appears to use a variety of methodologies in its valuation process. For some codes, the AMA RUC uses magnitude estimation in conjunction with survey data from surveys conducted by the specialty societies to support the values. For other codes, the AMA RUC uses magnitude estimation to override the results of the survey data, recommending to CMS a value that is not based on survey data, but rather, justified in terms of its appropriate relativity within the system to other similar services. The AMA RUC may also elect to use a crosswalk approach in valuing a code by applying a work value from a currently valued code to the code under review based on the clinical similarity of the procedures or explicit considerations of pre-, intra-, and post-service time. In some instances, we note that the AMA RUC has asserted that it uses the building block methodology to value the code, a methodology we have historically supported (74 FR 61777). Since the AMA RUC uses a variety of methodologies for valuing codes, not just magnitude estimation supported by survey data, or our recommended methodology of valuation based on building blocks, we foresee that validation of the work RVUs will be complex, perhaps requiring an initial study of the all the possible valuation methodologies currently being employed by the AMA RUC so that we can better understand how relativity between services under the PFS has developed and been maintained over the years.

As we have stated previously (69 FR 66243), because the AMA RUC is an independent committee, we are not in a position to set the requirements for AMA RUC membership regarding primary care specialties or other types of practitioners. Concerned stakeholders should communicate directly with the AMA RUC regarding its professional composition. We note that we alone are responsible for all decisions about establishing the RVUs for purposes of PFS payment so, while the AMA RUC provides us with recommendations regarding the work and direct PE inputs for new and revised CPT codes in the context of its broad expertise, we determine the interim final RVUs for all new or revised services. Additionally, the interim RVUs are subject to public comment and we respond to those comments in a final rule when we adopt the final RVUs for the new and revised CPT codes. We believe that the formal validation process will further complement the ongoing work of the AMA RUC to provide recommendations to us regarding the valuation of PFS services.

Comment: While a number of commenters strongly opposed CMS' plans to develop a formal validation process, many other commenters expressed support for the development and establishment of a system-wide validation process of the work RVUs under the PFS. The commenters commended CMS for seeking new approaches to validation, as well as being open to suggestions from the public on this process. A number of commenters submitted technical advice and offered their time and expertise as resources for CMS to draw upon in any examination of possible approaches to developing a formal validation process.

Furthermore, MedPAC advised that a formal validation process should include validating the fee schedule's estimates of physician time. MedPAC noted that "Contract research for CMS and the Assistant Secretary for Planning and Evaluation has shown that some of the time estimates are likely too high. In addition, the Government Accountability Office has found that the fee schedule does not adequately account for efficiencies occurring when a physician furnishes multiple services for the same patient on the same day." Finally, MedPAC suggested that CMS should consider alternative approaches, "such as collecting data on a recurring basis from a cohort of practices and other facilities where physicians and nonphysician clinical practitioners work."

Some commenters noted that "involving RUC experts, those who are most intimately acquainted with and possess the deepest level of expertise and experience makes the most sense" and stated that these individuals "are also those best equipped to provide insights and guidance to help shape an independent validation system." A number of commenters asked CMS to confirm that stakeholders would be given the opportunity to comment on any specific proposals for a validation process that CMS plans to implement.

Response: We thank the many commenters who generously offered to help and provided technical suggestions, including the use of statistical modeling and possible sources of data that we should consider in developing a validation process. We will review MedPAC's suggestions to examine physician time in the formal validation process. We will also consider the commenters' recommendation that we include the AMA RUC and other professional groups who also have a stake in ensuring appropriate payment for practitioners' services. As we stated previously, we intend to establish a more extensive validation process of RVUs in the future in accordance with the requirements of section 1848(c)(2)(L) of the Act (as added by section 3134 of the ACA). We note that MedPAC, in providing comments to the CY 2011 PFS proposed rule, "strongly supports efforts to improve the accuracy of the fee schedule's RVUs." We plan to discuss the validation process in more detail in a future PFS rule once we have considered the matter further in conjunction with the public comments that we have received in response to our solicitation in the CY 2011 proposed rule as well as other input from stakeholders. Moreover, we note that any proposals we would make on the formal validation process would be subject to public comment, and we would consider those comments before finalizing any policies.

3. CY 2011 Identification and Review of Potentially Misvalued Services

In this section, we discuss codes that may be potentially misvalued according to five different criteria:

- Codes on the multi-specialty points of comparison list;
- Codes with low work RVUs commonly billed in multiple units per single encounter;
- Codes with high volume and low work RVUs;
- Codes with site-of-service anomalies; and
- Codes that qualify as "23-hour stay" outpatient services.

a. Codes on the Multispecialty Points of Comparison List

The AMA RUC uses a scale referred to as the multispecialty points of comparison (MPC) to evaluate the reasonableness of a specialty society's recommended RVU value for a service.

The MPC list contains reference codes of established comparison services that are used in the valuation of new codes. The current MPC list consists of 316 codes which the AMA RUC may use to compare and contrast the relativity of codes under review to existing relative values. Since the AMA RUC may use the values on the MPC list as a basis for relativity when determining the values for new, revised, and newly reviewed codes (including potentially misvalued codes), it is essential that the services on the MPC list be appropriately valued since any codes misvalued on the MPC list could contribute to the misvaluing of other codes under review. While we believe that the entire MPC list should be assessed to ensure that services are paid appropriately under the PFS, we prioritized the review of the MPC list, ranking the codes by allowed service units and charges based on CY 2009 claims data. We proposed to refer the codes in Table 9 to the AMA RUC for review in CY 2011.

TABLE 9—CODES ON THE MPC LIST REFERRED FOR AMA RUC REVIEW

CPT code	Short descriptor
66984	Cataract surg w/iol, 1 stage.
97110	Therapeutic exercises.
43239	Upper GI endoscopy, biopsy.
20610	Drain/inject, joint/bursa.
78815	Pet image w/ct, skull-thigh.
45385	Lesion removal colonoscopy.
45380	Colonoscopy and biopsy.
11721	Debride nail, 6 or more.
17000	Destruct premalg lesion.
92980	Insert intracoronary stent.
74160	Ct abdomen w/dye.
71020	Chest x-ray.
11100	Biopsy, skin lesion.
66821	After cataract laser surgery.
52000	Cystoscopy.
92083	Visual field examination(s).
73721	Mri jnt of lwr extre w/o dye.
93010	Electrocardiogram report.
77334	Radiation treatment aid(s).
92250	Eye exam with photos.
95810	Polysomnography, 4 or more.
77003	Fluoroguide for spine inject.
11056	Trim skin lesions, 2 to 4.
76700	Us exam, abdom, complete.
77290	Set radiation therapy field.
77300	Radiation therapy dose plan.
43235	Uppr gi endoscopy, diagnosis.
71275	Ct angiography, chest.
95900	Motor nerve conduction test.
31231	Nasal endoscopy, dx.
95165	Antigen therapy services.
94060	Evaluation of wheezing.
31575	Diagnostic laryngoscopy.

Comment: While some commenters agreed with CMS that the entire MPC list should be assessed to ensure that services are paid appropriately under the PFS, and supported the proposal that the AMA RUC review the services listed in Table 9, a number of other commenters expressed surprise that CMS seemed to be suggesting that any code on the MPC list could be classified as potentially misvalued. Many commenters noted that the MPC list of codes is considered the "gold standard" within the PFS and it is used to help judge the appropriate relativity of procedures across specialties. A number of commenters assured CMS that the codes on the MPC list have been thoroughly vetted and, therefore, these commenters took issue with CMS for implying that the codes could somehow be considered potentially misvalued. Specifically, one commenter noted, "[t]he assumption of the specialties, the RUC and CMS has been that these services are appropriately valued and well established." Another commenter expressed the concern as follows: "[c]hallenging the rank order of the MPC list essentially negates 20 years of RUC work. Obtaining new data to validate the old data inevitably leads to the problem of what should be done if the data yield different results. Is there any reason to believe that a newer survey is a more accurate survey, or that the data analysis and subsequent opinion of the current or future RUCs will be more valid than that of previous RUCs? Admittedly data collection methods have become more refined in the past 20 years, but that neither means nor implies that relativity amongst physician services has changed." Some commenters reminded CMS that the AMA RUC is already planning to review some codes on the MPC list in the coming year, while other commenters noted that some of the codes on the MPC list have been reviewed by the AMA RUC within the past 6 years. Some commenters did not believe that some of the well-established services on the MPC list would need another review and that the resources required to re-review such services could be better used elsewhere. Furthermore, some commenters believe that if a code has been surveyed as part of the potentially misvalued services initiative during the last 5 years and it is identified again using a different screen, that it need not be resurveyed again.

Finally, several commenters noted that while reviewing all the codes on the MPC list would "be a substantial undertaking for the RUC, properly valuing these services will help restore equity in the physician payment system." The commenters further suggested that CMS should specify to the AMA RUC what it considers good survey methodology, including the use of peer review and time studies.

Response: We note that the vast majority of commenters, whether they supported or opposed our proposal, acknowledged the significant and central role that the MPC list plays in the valuation of services under the PFS. Because it is currently the "gold standard" to which other codes, across specialties, are compared, we agree with the commenters who suggested that codes on this list should be vetted, though we disagree that we should assume this has been done or occurs automatically and systematically. We also acknowledge that the AMA RUC recently has reviewed some of the codes and is planning to review more codes on the MPC list. Our proposal suggested prioritizing the review of the codes by ranking them according to utilization which, in our view, would potentially provide the most immediate benefit to the system.

If a code on the MPC list has not been reviewed recently—certainly more recently than 6 years ago—we believe that the code is vulnerable to being potentially misvalued and that the misvaluation of an MPC code could disproportionately affect the correct valuation of other related services under the PFS. Given the rapid changes in medical practice, we have no reason to believe that the relativity of the MPC codes would not have changed over the past 20 years and we would expect that more recent survey data would more accurately reflect the physician work in current medical practice. If the codes are resurveyed and newer more accurate data are available, we would support using the most recent available data to value physician work under the PFS, which is consistent with our general policy to use the most current data whenever possible and practicable to update the PFS.

Given the evolving review process of the AMA RUC over the past several years, CMS' strong interest in ensuring current and appropriate physician work values for PFS services, and the increased emphasis on revaluing established services that are potentially misvalued, we are requesting that the AMA RUC provide a current and comprehensive recommendation on the appropriate physician work value, including describing and affirming the methodology for the recommended work value, for all of the codes listed in Table 9. To the extent the AMA RUC chooses to limit its work in reexamining MPC codes that have recently been evaluated, consistent with our usual practice, we will consider the context when we evaluate the AMA RUC's recommendation for the value of the code.

Although valuation is ultimately our responsibility, the AMA RUC and CMS remain partners in ensuring the appropriate valuation of physician work for services under the PFS and we believe our proposal serves to enhance this process. Accordingly, after consideration of the public comments we received, we are finalizing our CY 2011 proposal and we look forward to receiving the AMA RUC's recommendations for the codes listed in Table 9.

b. Codes With Low Work RVUs Commonly Billed in Multiple Units Per Single Encounter

Consistent with section 1848(c)(2)(K)(ii) of the Act (as added by section 3134 of the ACA) which identifies categories of potentially misvalued codes for our review, we believe services with low work RVUs that are commonly billed with multiple units in a single encounter are an additional appropriate category for identifying potentially misvalued codes. An example of a high multiple/low work RVU service is CPT code 95004 (Percutaneous tests (scratch, puncture, prick) with allergenic extracts, immediate type reaction, including test interpretation and report by a physician, specify number of tests). For purposes of compiling a list of the high multiple/low work RVU services, we defined a high multiple service as one that is commonly performed in multiples of 5 or more per day. Then, we selected from high multiple services with work RVUs of less than or equal to 0.5 RVUs. We note that in selecting 5 per day as the minimum threshold for the number of common services performed in a multiple service encounter, we intended to establish a meaningful threshold which, in conjunction with the threshold for work RVUs of 0.5 RVUs or less, would produce a reasonable number of services for the RUC to review that have substantial total work RVUs for the comprehensive service furnished during a single treatment. That is, as a general example, with a work RVU threshold of 0.5 RVUs and a multiple threshold of 5 per day, the total work RVUs for a typical treatment would equate to 2.5 RVUs, which is approximately comparable to a high level office visit, an interpretation of a complex imaging procedure, or a minor surgical procedure.

In the CY 2011 PFS proposed rule (75 FR 40069), we requested that the AMA RUC review the codes in Table 10.

TABLE 10—CODES WITH LOW WORK RVUS THAT ARE COMMONLY BILLED IN MULTIPLE UNITS REFERRED FOR AMA RUC REVIEW

CPT code	Short descriptor
95904	Sense nerve conduction test.
17003	Destruct premalg les, 2–14.
95004	Percut allergy skin tests.
11101	Biopsy, skin add-on.
95024	Id allergy test, drug/bug.
76000	Fluoroscope examination.
95144	Antigen therapy services.
95010	Percut allergy titrate test.
88300	Surgical path, gross.
95027	Id allergy titrate—airborne.
95015	Id allergy titrate—drug/bug.
95148	Antigen therapy services.

c. Codes With High Volume and Low Work RVUs

We believe that codes that have low work RVUs but are high volume based on claims data are another category of potentially misvalued codes. Although these codes have low work RVUs (less than or equal to 0.25 RVUs), the high utilization of these codes represents significant expenditures under the PFS such that their appropriate valuation is especially important. Table 11 contains a list of such codes and we requested that the AMA RUC review these codes in the CY 2011 PFS proposed rule (75 FR 40069).

TABLE 11: CODES WITH LOW WORK RVUS THAT ARE HIGH VOLUME REFERRED FOR AMA RUC REVIEW

CPT code	Short descriptor
71010	Chest x-ray.
73510	X-ray exam of hip.
97035	Ultrasound therapy.
88313	Special stains group 2.
73630	X-ray exam of foot.
72100	X-ray exam of lower spine.
73030	X-ray exam of shoulder.
73562	X-ray exam of knee, 3.
73560	X-ray exam of knee, 1 or 2.
94010	Breathing capacity test.
77052	Comp screen mammogram add-on.
88304	Tissue exam by pathologist.
73564	X-ray exam, knee, 4 or more.
72170	X-ray exam of pelvis.
74000	X-ray exam of abdomen.
73610	X-ray exam of ankle.
11719	Trim nail(s).
73620	X-ray exam of foot.
92567	Tympanometry.
73110	X-ray exam of wrist.
73130	X-ray exam of hand.
93701	Bioimpedance, cv analysis.
72040	X-ray exam of neck spine.
92543	Caloric vestibular test.

Comment: A number of commenters agreed with CMS' proposal for the AMA RUC to review codes with low work RVUs that are commonly billed with multiple units, and codes with high volume and low work RVUs. Other commenters did not support these proposals based on a belief that just because a code has low work RVUs, the conclusion should not necessarily be drawn that the code is potentially misvalued.

Response: While we do not believe that low work RVUs automatically indicate that the code is misvalued, we believe that some codes in this category may be vulnerable to being potentially misvalued because they have not been subject to review recently, there are particular challenges associated with establishing appropriate low work RVUs for services, and these services would not likely be subject to AMA RUC revaluation without CMS' recommendation. Accordingly, after consideration of the public comments we received, we are finalizing our CY 2011 proposal and we look forward to receiving the AMA RUC's recommendation for the codes listed in Tables 10 and 11.

d. Codes With Site-of-Service-Anomalies

In previous years, we requested that the AMA RUC review codes that, according to the Medicare claims database, have experienced a change in the typical site of service since the original valuation of the code. For example, we have found services that originally were furnished in the inpatient setting but for which current claims data show the typical case has shifted to being furnished outside the inpatient setting. Since the procedures were typically performed in the inpatient setting when the codes were originally valued, the work RVUs for these codes would have been valued to include the inpatient physician work furnished, as well as to reflect the intensive care and follow-up normally associated with an inpatient procedure. If the typical case for the procedure has shifted from the inpatient setting to an outpatient or physician's office setting, it is reasonable to expect that there have been changes in medical practice, and that such changes would represent a decrease in physician time or intensity or both. The AMA RUC reviewed and recommended to CMS revised work RVUs for 29 codes for CY 2009 and 11 codes for CY 2010 that were identified as having site-of-service anomalies.

In the CY 2010 PFS proposed and final rules with comment period (74 FR 33556 and 74 FR 61777, respectively), we encouraged the AMA RUC to utilize the building block methodology when revaluing services with site-of-service

anomalies. Specifically, where the AMA RUC has determined in its review that changes in the inclusion of inpatient hospital days, office visits, and hospital discharge day management services (that is, the "building blocks" of the code) are warranted in the revaluation of the code, we asked the AMA RUC to adjust the site-of-service anomaly code for the work RVUs associated with those changes.

Additionally, we suggested that in cases where the AMA RUC has adjusted the pre-service, intra-service and post-service times of the code under review, the AMA RUC should also make associated work RVU adjustments to account for those changes. However, we remained concerned that in the AMA RUC's recommendations of the work RVUs for the CYs 2009 and 2010 site-of-service anomaly codes, the AMA RUC may have determined that eliminating or reallocating pre-service and post-service times, hospital days, office visits, and hospital discharge day management services was appropriate to reflect the typical case that is now occurring in a different setting, but the work RVUs associated with those changes may not have been systematically extracted or reallocated from the total work RVU value for the service.

In the CYs 2009 and 2010 PFS final rules with comment period (73 FR 69883 and 74 FR 61776 through 61778, respectively), we indicated that although we would accept the AMA RUC valuations for these site-of-service anomaly codes on an interim basis through CY 2010, we had ongoing concerns about the methodology used by the AMA RUC to review these services. We requested that the AMA RUC reexamine the site-of-service anomaly codes and use the building block methodology to revalue the services (74 FR 61777). We also stated that we would continue to examine these codes and consider whether it would be appropriate to propose additional changes in future rulemaking.

Accordingly, in preparation for CY 2011 rulemaking, we conducted a comprehensive analysis of the codes that the AMA RUC reviewed for CYs 2009 and 2010 due to site-of-service anomaly concerns. We systematically applied the reverse building block methodology to the 29 codes from CY 2009 and 11 codes from CY 2010 as follows:

- First, we obtained the original work RVU value assigned to the code (this is the "starting value") and made a list of the building block services with RVUs that were originally associated with the code (that is, before the AMA RUC reviewed the code for site-of-service anomalies).
- Next, we examined the AMA RUC-recommended changes to the building blocks of the code.
- We then deducted the RVUs associated with the AMA RUC's recommended eliminations from the code's starting RVU value.

Generally, the AMA RUC eliminated inpatient hospital visit building blocks from the value of the code since the site-of-service for the code has shifted from the inpatient setting to another setting. We noted in some cases, the AMA RUC left an inpatient hospital visit in the valuation of the code. We believe this is inconsistent with the change in the site-of-service to non-inpatient settings. Accordingly, we adhered to the methodology and deducted the RVUs associated with all inpatient hospital visits from the starting value. In cases where the AMA RUC recommended adding or substituting outpatient visits, we also added or substituted the RVUs associated with those changes to the starting value. If the AMA RUC recommended changes to the pre-, intra-, or post-service times, we calculated the incremental change in RVUs associated with that time and either added or deducted that RVU amount from the starting value. We noted that the RVU values associated with the incremental time change were calculated using the intensity associated with the particular pre-, intra-, or post-period. For the intensity of the intra-service period, we utilized the original IWPUT associated with the code. The AMA RUC generally recommended allowing only half of a hospital discharge day management service for the site-of-service anomaly codes. That is, CPT code 99238 (Hospital discharge day management; 30 minutes or less) has a work RVU value of 1.28; therefore, half the value associated with CPT code 99238 is 0.64. Accordingly, if a code had one CPT code 99238 listed as part of the original valuation, we deducted 0.64 RVUs from the starting value.

We standardized the methodology so that each of the site-of-service anomaly codes had half of a hospital discharge day management service value accounted in the valuation. Finally, we noted that while we eliminated the RVUs associated with all inpatient hospital visits built into the code's starting value, because the typical case no longer occurs in the inpatient setting, we allowed for the possibility that in some cases, some part of the work which had been furnished in the inpatient setting may continue to be furnished even in the outpatient setting. Therefore, to be conservative in our deductions of work RVUs associated with the inpatient hospital codes from the starting values, we allowed the intra-time of any inpatient hospital visits included in the original valuation to migrate to the post-service period of the code. Accordingly, while we deducted the full RVUs of an inpatient hospital visit from the starting value, we added the intra-service time of the inpatient hospital visit to the post-service time of the code and accounted for the incremental change in RVUs. The following description provides an example of our methodology.

CPT code 21025 (Excision of bone (e.g., for osteomyelitis or bone abscess); mandible) has a starting value of 11.07 RVUs. Table 12 shows the building blocks that are included in the original valuation of the code.

TABLE 12

Pre-service time	Median intra-service time	Immediate post-service time	99231	99232	99238	99211	99212	99213	Original IWPUT
75 min	120 min ..	43 min	1 visit ..... (0.76 RVUs)	1 visit ..... (1.39 RVUs)	1 visit ..... (1.28 RVUs)	2 visits ..... (0.36 RVUs)	2 visits ..... (0.96 RVUs)	2 visits ..... (1.94 RVUs)	0.0145

The AMA RUC removed two inpatient hospital visits and reduced the outpatient visits from 6 to 4 visits. Table 13 shows the building blocks that were recommended for CY 2009 by the AMA RUC after its review of the code for site-of-service anomalies.

TABLE 13

Pre-service time	Median intra-service time	Immediate post-service time	99231	99232	99238	99211	99212	99213	Original IWPUT
85 min	90 min	30 min					2 visits	2 visits	0.0530

Next we calculated the RVUs associated with the changes to the building blocks recommended by the AMA RUC. We note that the immediate post-service value of 0.38 RVUs (Table 14) includes 30 minutes of intra-service time from inpatient hospital CPT code 99231 (Level 1 subsequent hospital care, per day). Also, the median intra-service value of 0.44 RVUs (Table 14) was determined using the starting IWPUT value of 0.0145. Additionally, our methodology accounted for a half of a hospital discharge day management service (CPT code 99238) for the site-of-service anomaly code. Table 14 shows the RVU changes to the building blocks that were calculated based on the methodology discussed above.

TABLE 14

Pre-service time	Median intra-service time	Immediate post-service time	99231	99232	99238	99211	99212	99213
0.22 RVUs	−0.44 RVUs ..	0.38 RVUs	−0.76 RVUs	−1.39 RVUs	−0.64 RVUs	−0.36 RVUs	.....	

In the final step, the RVUs associated with the changes to the building blocks recommended by the AMA RUC (Table 14) were deducted from or added to the starting value of 11.07 RVUs, which resulted in the CY 2011 reverse building block value of 8.08 RVUs (11.07 + 0.22– 0.44 + 0.38 – 0.76 – 1.39 – 0.64 – 0.36 = 8.08).

The methodology discussed above was applied to each of the site-of-service anomaly codes from CYs 2009 and 2010 and the results are summarized in Tables 15 and 16.

BILLING CODE 4120–01–P

TABLE 15: CY 2009 Site-of-Service Anomaly Codes[1]

CPT Code	Short Descriptor	CY 2008 RVUs ("Starting Value")	RUC Recommended Value for CY 2009	CY 2011 Reverse Building Block Value
21025	Excision of bone, lower jaw	11.07	9.87	8.09
23415	Release of shoulder ligament	10.09	9.07	10.63

[2]We note that in this table, we have not adjusted the RVUs for these codes for the RVU changes to the evaluation and management codes that resulted from the CY 2010 elimination of the consultation codes (74 FR 61775). However, we note that we may, if appropriate, adjust the RVUs for services with global periods to account for relevant changes in the RVUs for evaluation and management services as necessary.

BILLING CODE 4120–01–C

For most codes in Tables 15 and 16, the CY 2011 reverse building block methodology produced a value that was somewhat lower than the AMA RUC-recommended value. While our results suggested that the majority of the codes with site-of-service anomalies continue to be overvalued under the AMA RUC's most recent recommendations, we also found that the methodology may produce a result that is considerably reduced or, in several cases, a negative value. We understand that in previous years, stakeholders have expressed confusion as to why the application of a building block methodology would produce negative values. We believe in some cases, the starting value, that is, the original work RVU, may have been misvalued using building block inputs that were not consistent with the service, although the overall work value of the code may have been consistent with the values for other similar services. Moreover, a number of these services are the Harvard-valued codes, for which the RVUs were established many years ago based on historical inputs that may no longer be appropriate for the code. An attempt to extract the RVUs associated with these inappropriate inputs through the reverse building block methodology could produce aberrant results. Furthermore, in some cases, we noticed that the original IWPUT of the code was negative even before the code was reviewed by the AMA RUC for a site-of-service anomaly. A negative value for the IWPUT is counterintuitive to the IWPUT concept, indicating that the code was originally misvalued at the building block level. At a minimum, we believe that in cases where the reverse building block methodology produced aberrant results, and where clinical review indicated a need for further analysis, the codes should be referred back to the AMA RUC for review and new valuation should be performed based on the building block methodology.

We noted the application of the reverse building block methodology is an objective way to account for changes in the resources resulting from the change in the site-of-service in which the typical service is furnished. However, because relative values under the PFS are "relative," that is, where work relative value units for a code are established relative to work relative value units for other codes, the recommended methodology of valuing services based on input building blocks is best applied within the context of the AMA RUC discussion. For example, we recognize that the AMA RUC looks at families of codes and may assign RVUs based on a particular code ranking within the family. This method of valuing services preserves relativity within the relative value scale for that code family. However, we have stated that we believe the relative value scale requires each service to be valued based on the resources used in furnishing the service as specified in section 1848(c)(1)(A) of the Act, which defines the physician work component to include "the portion of the resources used in furnishing the service that reflects physician time and intensity in furnishing the service." Furthermore, section 1848(c)(2)(C)(i) of the Act specifies that "the Secretary shall determine a number of work relative value units (RVUs) for the service based on the relative resources incorporating physician time and intensity required in furnishing the service." Read together, these two sections of the statute support our intention to rely on the building block methodology to determine appropriate work RVUs for codes.

We noted that we continue to rely on the extensive expertise provided by the AMA RUC to recommend appropriate input building blocks for codes. Additionally, the AMA RUC's unique infrastructure and broad perspective permits the valuation of a code within the context of relativity to the entire relative value system. Therefore, we believe that the recommended methodology of valuing services based on input building blocks is best applied within the context of the AMA RUC discussion.

Accordingly, in the CY 2011 PFS proposed rule (75 FR 40072), we requested that the AMA RUC review the CPT codes displayed in Tables 15 and 16. In addition, where the application of the CY 2011 reverse building block methodology produced an aberrant result that is clearly not a reflection of physician work for the service, we requested that the AMA RUC review the

input building blocks and recommend an appropriate RVU value that is both consistent with the building blocks of the code and appropriate relative to the values for other codes in the family. For other codes where the application of the CY 2011 reverse building block methodology produced a result that is consistent with the physician work for the service, we encouraged the AMA RUC to confirm the values and recommend these work values for CY 2011. In this way, we hoped to receive new AMA RUC recommendations for all of the codes in Tables 15 and 16 for CY 2011. Furthermore, we indicated that if the recommendations that we received from the AMA RUC were not consistent with the building block methodology and not appropriate relative to the values of other services, and the application of the CY 2011 reverse building block methodology produced a result that CMS medical advisors believe is consistent with the work for the service, we proposed to adopt the CY 2011 reverse building block methodology values that are listed in Tables 15 and 16 for CY 2011. In cases where the reverse building block methodology produced a negative work value, we suggested that the AMA RUC review and revise the building blocks of the code so that a new valuation could be determined based on the building block methodology. For such codes, if the revised recommendations that we hoped to receive from the AMA RUC were still not consistent with the building block methodology upon revision, because we could not pay for these services based on negative work RVUs, we proposed to modify the AMA RUC-recommended values for these codes as CMS determined to be clinically appropriate and adopt the CMS-modified RVUs on a interim final basis for CY 2011.

In their future work, we urged the AMA RUC to use the building block methodology when valuing services or provide CMS with extensive rationale for cases where the AMA RUC believes the building block methodology is inappropriate for a specific code. Since section 1848(c)(2)(L) of the Act (as added by section 3134 of the ACA) specifies that the Secretary shall establish a process to validate work RVUs of potentially misvalued codes under the PFS, as we have discussed earlier in this section, we believe codes that are valued using the building block methodology would be more likely to meet the standards of a systematic RVU validation process that could be developed in accordance with the requirements of the statute.

Comment: While several commenters supported CMS' recommendation to use the reverse building block methodology to value physician work for codes identified as having site-of-service anomalies, the majority of commenters strongly opposed the reverse building block methodology, expressing concern that the methodology produced very low or negative work RVUs for a number of the codes listed in Tables 14 and 15. Several letter writing campaigns by groups of providers and beneficiaries affected by some of the codes listed in Tables 14 and 15 produced scores of comments expressing confusion and alarm that CMS appeared to be on the verge of finalizing negative work RVUs. Some commenters noted that the values calculated by the application of the reverse building block methodology would result in rank order anomalies across the PFS.

Many commenters reiterated CMS' observation that some of the codes were originally Harvard-valued, for which the RVUs were established many years ago based on historical inputs that may no longer be appropriate for the code, and an attempt to extract the RVUs associated with these inappropriate inputs through the reverse building block methodology would produce aberrant (that is, very low or negative) results. Some commenters disagreed with CMS' statement that if the typical case for the procedure has shifted from the inpatient setting to an outpatient or physician's office setting, it would be reasonable to expect that there have been changes in medical practice, and that such changes would represent a decrease in physician time, or intensity, or both. These commenters believe that that this assumption is fundamentally wrong and that the reverse actually may be true. One commenter noted, "When a procedure migrates from the inpatient to the outpatient setting, the physician work and practice expense actually increase. The result is more office visits, more utilization of office staff, more consumption of office supplies, and no decrease in legal liability to the physician (and in some instances increased legal liability as functions formerly performed by hospital staff are now done by physician office staff)."

A number of commenters asserted that any mathematical or computational methodology used to value physician work is simply absurd. Many commenters stated their preference for the AMA RUC's established valuation process which the commenters believe is based on specialty society survey data. Other commenters asserted that the AMA RUC's use of magnitude estimation is the only methodology that makes sense in assigning physician work values to individual services because the PFS is a relative system and maintaining appropriate relativity between the services is paramount in valuing physician work.

Response: We acknowledge that commenters overwhelmingly objected to the proposed reverse building block methodology because, in some cases, it produced very low or negative physician work values. While we explained in the proposed rule (75 FR 40071 through 40072) the possible reasons why negative values could be generated in the application of the reverse building block methodology, the commenters generally disregarded this explanation and summarily dismissed the methodology as invalid based on the reasoning that negative work values are absurd. Responding to the commenters who were concerned that CMS was preparing to implement negative work RVUs imminently, we assure the commenters that at no time was this a possibility, as we made clear in the CY 2011 PFS proposed rule (75 FR 40072) where we acknowledge that we could not pay for services based on negative work RUVs. As we stated in the proposed rule, in cases where the reverse building block methodology produced a negative work value, we suggested that the AMA RUC review and revise the building blocks of the code so that a new valuation could be determined based on the building block methodology. We further proposed that if we did not believe the AMA RUC recommended values were consistent with the building block methodology, we would modify the recommended values as we determined to be clinically appropriate and adopt the modified RVUs on an interim final basis for CY 2011.

The AMA RUC has not provided revised work recommendations to us for these codes for CY 2011. Therefore, in light of the strong public opposition to the reverse building block methodology and since we remain convinced that the values for the codes with site-of-service anomalies listed in Tables 14 and 15 continue to be misvalued based on our clinical review of the building blocks for those services as recommended previously by the AMA RUC, we believe that the most appropriate action is to continue to await the further AMA RUC review of these codes that we requested in the CY 2011 PFS proposed rule (75 FR 40072). However, after consideration of the public comments we received, we are modifying our CY 2011 proposal and we will not apply the reverse building block methodology to value any of these codes for CY 2011 as we proposed. We

are requesting that the AMA RUC reconsider its previously recommended values that have been applied on an interim basis in CYs 2009 and 2010, as applicable, and revise the work RVUs to better reflect the intensity of the services and the revised physician times and post-procedure visits included in the valuation of these codes. As we stated in the CY 2011 PFS proposed rule (75 FR 40072), we suggest that the AMA RUC review and revise the building blocks of the codes so that a new valuation can be determined based on the building block methodology. Until we receive the revised values from the AMA RUC for CY 2012 and can make a determination regarding them, we will continue to accept the existing AMA RUC-recommended work RVUs listed in Tables 14 and 15 on an interim basis for CY 2011. We would follow our usual method of reviewing the AMA RUC recommendations in the context of the associated valuation methodologies it used for CY 2012 and would either accept the recommendations for these codes or provide alternative work values that would be adopted on an interim final basis for CY 2012 and open to public comment on the CY 2012 PFS final rule with comment period.

e. Codes With "23-hour" Stays

In the CY 2010 PFS proposed rule (74 FR 33557), we requested that the AMA RUC review services that are typically performed in the outpatient setting and require a hospital stay of less than 24 hours. We stated in the proposed rule that we believed these to be primarily outpatient services and expressed concern that the value of evaluation and management (E/M) visits for inpatients was inappropriately included in the valuation of codes that qualify as "23-hour stay" outpatient services.

We received a number of comments in response to the discussion in the CY 2010 proposed rule. The AMA RUC stated that it already values stays of less than 23 hours appropriately by reducing the hospital discharge day management service (that is, CPT code 99238), from 1 day to a half day. The AMA RUC also explained that when the AMA RUC refers to 23-hour stay services in discussions at AMA RUC meetings, it is referring primarily to services that are reported in the Medicare claims database as typically outpatient services, but where the patient is kept overnight and, on occasion, even longer in the hospital. Because the AMA RUC believes the patient stays overnight in the hospital, it believes the inclusion of inpatient E/M visits to be appropriate in the valuation of this category of codes.

We believe that the 23-hour stay issue encompasses several scenarios. The typical patient is commonly in the hospital for less than 24 hours, which often means the patient may indeed stay overnight in the hospital. On occasion, the patient may stay longer than a single night in the hospital; however, in both cases, the patient is considered for Medicare purposes to be a hospital outpatient, not an inpatient, and our claims data support that the typical 23-hour stay service is billed as an outpatient service. Accordingly, we believe that the valuation of the codes that fall into the 23-hour stay category should not reflect work that is typically associated with an inpatient service. For example, inpatient E/M visit codes such as CPT codes 99231 (Level 1 subsequent hospital care, per day); 99232 (Level 2 subsequent hospital care, per day); and 99233 (Level 3 subsequent hospital care, per day), should not be included at the full value in the valuation of 23-hour stay services.

Currently, the valuation of 23-hour stay services is conducted in a nonuniform manner by the AMA RUC. The AMA RUC has indicated that it currently includes a half hospital discharge day management service and no hospital inpatient visits for outpatient services with expected hospital stays of 23 hours or less. In contrast, for those outpatient services where the AMA RUC believes that the recovery period could be longer than 23 hours, the AMA RUC stated in its comment on the CY 2010 PFS proposed rule that it currently includes a full hospital discharge day management service and one or more inpatient E/M visits in the code's value. However, we note the typical 23-hour stay service is billed as an outpatient service and so long as the typical case continues to be billed as an outpatient service, we believe the code should not incorporate physician work values for services that are typically associated with an inpatient service. In the CY 2010 PFS proposed rule and final rule with comment period (74 FR 33556 and 74 FR 61777, respectively), we stated that we believed the use of inpatient E/M visit codes for services rendered in the post-service period for outpatient 23-hour stay procedures would result in overpayment for pre- and post-service work that would not be furnished. Accordingly, we proposed in the CY 2010 proposed rule (74 FR 33556 through 33557) not to allow any additional inpatient E/M service to be billed for care furnished during the post-procedure period when care is furnished for an outpatient service requiring less than a 24-hour hospital stay.

However, we find it is plausible that while the patient receiving the 23-hour stay service remains a hospital outpatient, the patient would typically be cared for by the physician furnishing the procedure during that post-procedure period. While we do not believe that post-procedure hospital "visits" would be at the inpatient level since the typical case is an outpatient who would be ready to be discharged from the hospital in 23 hours or less, we agree that the intra-service time of the inpatient hospital visit may be included in the valuation for the 23-hour stay code.

Accordingly, for CY 2011 we modified our proposed CY 2010 approach and suggested that in the future, when the AMA RUC reviews new and potentially misvalued codes that are identified as 23-hour stay services, the AMA RUC would apply the following methodology:

- Begin with the starting RVU value of the 23-hour stay code under review and decrease the hospital discharge day management service from one day to a half day.
- Deduct the RVUs of inpatient hospital visits from the starting RVU value.
- Reallocate the time associated with the intra-service portion of the inpatient hospital visits to the immediate post-service time of the 23-hour stay code under review.

Example: A 23-hour stay code is currently valued at 15 RVUs and has 1 hospital discharge day management service and 1 level 3 subsequent hospital care visit incorporated in this value.

- Applying step (1): $15 - 0.64^{*} = 14.36$
- Applying step (2): $14.36 - 2^{**} = 12.36$
- Applying step (3): $12.36 + (30 \text{ minutes} \times 0.0224)^{***} = 13.032$ RVUs

* Value associated with ½ hospital discharge day management service.

** Value associated with an inpatient hospital visit, CPT code 99233.

*** Value associated with the reallocated intra-service time multiplied by the post-service intensity of the 23-hour stay code.

Finally, we note that since work relative value units are established by the Secretary in the context of relativity to other codes in the system, the recommended methodology for the evaluation of 23-hour stay codes is best applied within the context of relativity. We appreciate that the AMA RUC has the ability to assess the 23-hour stay code after application of the recommended methodology to ensure

appropriate relativity of this code and other codes within the system. We strongly encourage the AMA RUC to apply the recommended methodology to ensure the consistent and appropriate valuation of the physician work for these services.

Comment: A number of commenters asserted that if a service is performed in the hospital and the patient stays overnight, the work of the physician is typically the same regardless of whether the hospital designates the patient receiving the services as an inpatient or outpatient. Other commenters supported CMS' position in that it is appropriate for physicians' services related to the post-procedure care of the patient to be recognized and the intra-service time of the inpatient hospital visit should be included in the valuation for the 23-hour stay code. Some commenters noted that recent issues associated with hospital observation care may also be impacting CPT observation care codes, and these commenters "request that any changes in the 23+ hour stay policy be deferred until after the RUC conducts its consideration of hospital observation services in February 2011."

Response: While some commenters advocated for a deferral on the issue of valuing 23-hour stay services, we note that a number of commenters supported CMS' proposed approach. As we stated in the CY 2010 PFS proposed rule (74 FR 33557) and affirmed in the CY 2011 PFS proposed rule (75 FR 40072), we believe these services, for a typical patient, would be considered for Medicare purposes to be hospital outpatient services, not inpatient services, and our claims data support that the typical 23-hour stay service is billed as an outpatient service. Furthermore, since the typical patient commonly remains in the hospital for less than 24 hours, even if the stay extends overnight, and discharge from the hospital is therefore imminent, we believe the acuity of the typical patient is less than that of a typical inpatient who is admitted to the hospital, resulting in less intensity for the physician work to care for the hospital outpatient immediately following a 23-hour stay procedure. Accordingly, we believe that the valuation of the codes that fall into the 23-hour stay category should not reflect physician work that is typically associated with an inpatient service. Furthermore, we do not believe that it would be more beneficial to suspend valuing 23-hour services in the manner we discussed in the proposed rule until after the AMA RUC's review of hospital observation care services. Even if the AMA RUC were to provide future recommendations to us for valuing surgical procedures in which hospital observation care services were substituted for hospital inpatient care visits, we believe that we should treat the valuation of the physician time in the same manner as discussed previously, that is, by valuing the intra-service time of the hospital observation care service in the immediate post-service time of the 23-hour stay code being valued.

Accordingly, in light of the support from the commenters, we are finalizing our proposed approach to valuing 23-hour stay services by allowing the intra-service portion of the subsequent hospital care visits (or observation care visits in the future if the AMA RUC were to recommend them instead as building blocks for outpatient surgical services) furnished to outpatients in the hospital post-procedure to be allocated to the immediate post-service time of the procedure to account for the physician work in these cases. We encourage the AMA RUC to apply this methodology itself in the recommendations it provides to us for valuing 23-hour stay codes, in order to ensure the consistent and appropriate valuation of the physician work for these services.

4. Expanding the Multiple Procedure Payment Reduction (MPPR) Policy to Additional Nonsurgical Services

a. Background

Medicare has a longstanding policy to reduce payment by 50 percent for the second and subsequent surgical procedures furnished to the same patient by the same physician on the same day, largely based on the presence of efficiencies in the practice expense (PE) and pre- and post-surgical physician work. Effective January 1, 1995, the MPPR policy, with the same percentage reduction, was extended to nuclear medicine diagnostic procedures (CPT codes 78306, 78320, 78802, 78803, 78806, and 78807). In the CY 1995 PFS final rule with comment period (59 FR 63410), we indicated that we would consider applying the policy to other diagnostic tests in the future.

Consistent with recommendations of MedPAC in its March 2005 Report to Congress on Medicare Payment Policy, under the CY 2006 PFS, the MPPR policy was extended to the technical component (TC) of certain diagnostic imaging procedures performed on contiguous areas of the body in a single session (70 FR 70261). The reduction recognizes that, for the second and subsequent imaging procedures, there are some efficiencies in clinical labor, supplies, and equipment time. In particular, certain clinical labor activities and supplies are not duplicated for subsequent procedures and, because equipment time and indirect costs are allocated based on clinical labor time; those would also be reduced accordingly.

The imaging MPPR policy currently applies to computed tomography (CT) and computed tomographic angiography (CTA), magnetic resonance imaging (MRI) and magnetic resonance angiography (MRA), and ultrasound services within 11 families of codes based on imaging modality and body region. When we adopted the policy in CY 2007, we stated that we believed efficiencies were most likely to occur when contiguous body areas are the focus of the imaging because the patient and equipment have already been prepared for the second and subsequent procedures, potentially yielding resource savings in areas such as clerical time, technical preparation, and supplies (70 FR 45850). Therefore, the MPPR policy currently applies only to procedures involving contiguous body areas within a family of codes, not across families, and to those procedures that are furnished in a single session. Additionally, while the MPPR policy applies to TC-only services and to the TC of global services, it does not apply to professional component (PC) services.

Under the current imaging MPPR policy, full payment is made for the TC of the highest-paid procedure, and payment is reduced by 25 percent of the TC for each additional procedure when an MPPR scenario applies. We had originally planned to phase in the MPPR policy over a 2-year period, with a 25 percent reduction in CY 2006 and a 50 percent reduction in CY 2007 (70 FR 70263). However, the Deficit Reduction Act of 2005 (DRA) (Pub. L. 109–171) capped the PFS payment amount for most imaging procedures at the amount paid under the hospital outpatient prospective payment system (OPPS). In view of the DRA, we determined that it would be prudent to retain the MPPR at 25 percent while we continued to examine the appropriate payment levels (71 FR 69659). The DRA also exempted reduced expenditures attributable to the MPPR policy from the PFS budget neutrality provision. Most recently, effective July 1, 2010, section 3135(b) of the ACA increased the MPPR on the TC of imaging services under the policy established in the CY 2006 PFS final rule with comment period from 25 to 50 percent and exempted the reduced expenditures attributable to this further change from the PFS budget neutrality provision.

In the July 2009 GAO report entitled, "Medicare Physician Payments: Fees Could Better Reflect Efficiencies Achieved when Services are Provided Together," the GAO recommended that we take further steps to ensure that fees for services paid under the PFS reflect efficiencies that occur when services are furnished by the same physician on the same beneficiary on the same day. The GAO recommended the following: (1) Expanding the existing MPPR policy to the PC to reflect efficiencies in physician work for certain imaging services; and (2) expanding the MPPR to reflect PE efficiencies that occur when certain nonsurgical, nonimaging services are furnished together. The GAO also encouraged us to focus on service pairs that have the most impact on Medicare spending.

In the March 2010 report, MedPAC noted its concerns about mispricing of services under the PFS. MedPAC indicated that it would explore whether expanding the unit of payment through packaging or bundling would improve payment accuracy and encourage more efficient use of services.

In the CYs 2009 and 2010 PFS proposed rules (73 FR 38586 and 74 FR 33554, respectively), we stated that we planned to analyze nonsurgical services commonly furnished together (for example, 60 to 75 percent of the time) to assess whether an expansion of the MPPR policy could be warranted. MedPAC encouraged us to consider duplicative physician work, as well as PE, in any expansion of the MPPR policy.

b. CY 2011 Expansion of the Imaging Technical Component MPPR Policy to Additional Combinations of Imaging Services

Over the past 2 years, the AMA RUC has examined several services billed 90 percent or more of the time together as part of the potentially misvalued service initiative and, in several cases, created one code to describe the complete service, with a value that reflects the expected efficiencies. Notwithstanding the bundling work of the RUC, there may be additional imaging and other diagnostic services that are furnished together less than 90 percent of the time where we could still expect efficiencies in the TC, and in some cases in the PC, resulting in potential overpayment for these services under current policy when furnished together.

Section 1848(c)(2)(K) of the Act (as added by section 3134 of the ACA) specifies that the Secretary shall identify potentially misvalued codes by examining multiple codes that are frequently billed in conjunction with furnishing a single service, and review and make appropriate adjustments to their relative values. As a first step in applying this provision, we proposed a limited expansion of the current imaging MPPR policy for CY 2011. We will continue to review other possible expansions of the MPPR policy to the TC and/or PC of imaging procedures or other diagnostic tests for the future. Any further changes will be addressed in future rulemaking.

In a related policy for hospital outpatient payment of imaging services, in the CY 2009 OPPS/ASC final rule with comment period (73 FR 68559 through 68569), the OPPS adopted a policy to pay for two or more CT and CTA, MRI and MRA, or ultrasound procedures furnished in the same session through a single composite ambulatory payment classification (APC) group. These composite APC payments were based on the 11 families of codes subject to the MPPR under the PFS that were collapsed into 3 imaging families for the OPPS according to their modality—1 for ultrasound, 1 for CT and CTA, and 1 for MRI and MRA services.

At that time, we stated our belief that the contiguous body area concept that was incorporated in the PFS imaging families was not necessary for potential efficiencies to be achieved in an imaging session. We provided examples to illustrate that we would not expect second and subsequent imaging services of the same modality involving noncontiguous body areas to require duplicate facility resources (comparable to the TC under the PFS) for clinical labor activities such as greeting the patient, providing education and obtaining consent, retrieving prior exams, setting up an intravenous infusion, and preparing and cleaning the room, any more than second and subsequent imaging procedures of the same modality involving contiguous body areas. While we noted that multiple imaging claims under the OPPS are generally within the same imaging modality and involve contiguous body areas the vast majority of the time, we estimated that the collapsed 3 families, as opposed to the 11 PFS families, would add 12 percent additional claims to those eligible for a single composite APC payment under the OPPS based on the provision of 2 or more imaging services in a single session, allowing us to capture additional claims with efficiencies.

Taking into consideration the OPPS policy that was adopted in the CY 2009 OPPS/ASC final rule with comment period, for CY 2011 under the PFS, we proposed to apply the MPPR regardless of family, that is, the policy would apply to multiple imaging services furnished within the same family of codes or across families. This proposal would simplify the current imaging MPPR policy in a way that is consistent with the standard PFS MPPR policy for surgical procedures that does not group procedures by body region. Therefore, the MPPR would apply to CT and CTA, MRI and MRA, and ultrasound procedures services furnished to the same patient in the same session, regardless of the imaging modality, and not limited to contiguous body areas.

Because of the different pieces of equipment used for CT/CTA, MRI/MRA, and ultrasound procedures, it would be unlikely that a single practitioner would furnish more than one imaging procedure involving 2 different modalities to one patient in a single session where the proposed MPPR policy would apply. On the other hand, while most multiple procedures furnished with a single modality in one session would involve procedures currently assigned to one of the 11 imaging families, it would not be uncommon for more than one imaging procedure of the same modality to be furnished across families and, like the scenario for hospital outpatient imaging services, we would expect efficiencies to occur in these cases. Therefore, we believe that an expansion of the current imaging MPPR policy to account for efficiencies in such situations would allow us to pay more appropriately for these multiple imaging procedure sessions, consistent with our ongoing efforts to address misvalued services.

The expansion of the imaging MPPR policy to include all of the current codes in a single family to which the standard 50 percent reduction for second and subsequent procedures would apply would reduce payment for 20 percent more services than the current MPPR policy under the PFS. Thus, in CY 2011, we would capture additional efficiencies and pay more appropriately in these cases. We note that section 1848(c)(2)B)(v)(VI) (as added by section 3135(b) of the ACA)) specifies that reduced expenditures attributable to the increase in the imaging MPPR from 25 to 50 percent in CY 2011 are excluded from the PFS budget neutrality adjustment. However, the reduced payment for code combinations that would newly be subject to the imaging MPPR policy under this proposal would be made in a budget neutral manner under the PFS, as these new combinations are not included under section 1848(b)(4)(D) (as added by section 3135(b) of the ACA), which addresses "single-session imaging to

consecutive body parts" under the established imaging MPPR policy.

We also proposed to add the CY 2010 codes displayed in Table 17 of the CY 2011 PFS proposed rule (75 FR 40075) to the list of imaging services subject to the MPPR policy in CY 2011. These four codes (CPT codes 75771 through 75774) were newly created for CY 2010 and are similar to codes currently in imaging family 2, titled CT and CTA (Chest/Thorax/Abdomen/Pelvis).

We further note that new CY 2010 CPT codes 74261 (Computed tomography (CT) colonography, diagnostic, including image postprocessing; without contrast material) and 74262 (Computed tomography (CT) colonography, diagnostic, including image postprocessing; with contrast material(s) including non-contrast images, if performed) were added to the CY 2010 MPPR policy through the July 2010 PFS quarterly update, with a retroactive effective date of January 1, 2010. These codes replaced CPT code 0067T (Computed tomographic (CT) colonography (that is, virtual colonoscopy); diagnostic) in CY 2010, which was on the list of procedures subject to the imaging MPPR policy prior to CY 2010.

As discussed earlier in this section, reduced expenditures attributable to the increase in the MPPR for multiple imaging procedures to consecutive body parts (that is, those previously designated in the same family of codes) are exempt from the budget neutrality provision of the PFS. However, the reduced expenditures attributable to the MPPR for combinations of multiple imaging procedures that we proposed for CY 2011 (the MPPR for multiple imaging procedures not involving consecutive body parts) would be subject to budget neutrality adjustment under the PFS. We note that this formulation for whether reduced expenditures are exempt from budget neutrality applies both to procedures currently subject to the imaging MPPR and to new codes that would be subject to the policy in CY 2011 and in future years. To the extent that imaging procedures described by the new codes are furnished in combination with other procedures that are subject to the imaging MPPR on consecutive body areas, the reduced expenditures attributable to the MPPR for these combinations would be exempt from the PFS budget neutrality adjustment.

Comment: With one exception, the commenters uniformly opposed the proposal to consolidate the imaging families for application of the imaging MPPR and urged CMS not to finalize the proposal. The exception was MedPAC, which supported the policy as reasonable and consistent with the hospital OPPS policy on multiple imaging and the PFS MPPR policy for multiple surgical procedures, neither of which are limited to procedures involving contiguous body areas.

Many commenters pointed out that the AMA RUC has worked to resolve any duplication in the direct PE inputs for services commonly furnished together over the past few years. The commenters stated that new bundled services were implemented in CY 2010 and speculated that additional ones would be implemented in the future and, therefore, concluded that a general MPPR to adjust PFS payment when imaging services are commonly furnished together is not necessary. The commenters argued that any duplication in the PE should be resolved at the code pair level. The AMA RUC urged CMS to continue to work within the established processes and offered for its Practice Expense Subcommittee to review specific code pairs about which CMS was concerned regarding potential PE duplication and recommend a course of action that would be fair and consistent.

Response: The imaging MPPR is not intended to supersede the AMA RUC process that values services described by CPT codes. We encourage the AMA RUC to continue examining code pairs for PE duplication based upon the typical case and appropriately valuing new comprehensive codes for bundled services that are established by the CPT Editorial Panel. However, we believe that it is necessary to address the PE duplication immediately for imaging code pairs that have not been recently reviewed or bundled into single comprehensive codes. We note that as more code combinations are bundled into a single complete service reported by one CPT code, they would no longer be subject to the MPPR. For example, there are new CY 2011 codes to describe abdominal and pelvic CT scans furnished together, specifically CPT codes 74176 (Computed tomography, abdomen and pelvis; without contrast material); 74177 (Computed tomography, abdomen and pelvis; with contrast material); and 74178 (Computed tomography, abdomen and pelvis; without contrast material in one or both body regions, followed by with contrast material(s) and further sections in one or both body regions). We are accepting the AMA RUC recommendations for the direct PE inputs for these codes for CY 2011 and, therefore, their TCs are valued accordingly. Whereas prior to CY 2011, the 50 percent imaging MPPR would have applied to the TC of the second service when an abdominal and pelvic CT were furnished in the same imaging session, this will no longer be the case in CY 2011. Instead, the TC payment for the comprehensive code will reflect the valuing of the specific services furnished in combination with one another. Thus, we believe our current and proposed MPPR formulations are consistent with the AMA RUC's work to review code pairs for potential PE duplication and to appropriately value comprehensive codes for a bundle of component services.

Comment: Numerous commenters opposed applying the MPPR to noncontiguous body area imaging services using the same modality and to combinations of imaging services involving different modalities. Many commenters indicated that there is no major duplication in clinical labor activities when two studies of noncontiguous body areas using a single imaging modality are furnished in the same session and even less duplication when imaging services are furnished in a separate session on the same day using different modalities. The commenters argued that the duplication in clinical labor activities that occurs in the pre- and post-operative periods for multiple surgical procedures does not apply to imaging services.

More specifically, several commenters observed that the minimal duplicate costs of a few minutes of technician time do not justify a 50 percent payment reduction in the TC for the second service. Some commenters also believe that the imaging MPPR creates an incentive for physicians to order separate procedures on different days, thereby discouraging efficiencies. In addition, the commenters contended that the imaging MPPR is detrimental to patient care, access, and convenience.

One commenter asserted that it is not appropriate to compare the OPPS composite ambulatory payment classification (APC) groups to office-based imaging as a justification for expanding the imaging MPPR under the PFS. The commenter cited an analysis of OPPS payment demonstrating that CMS pays hospitals for the second imaging study at nearly 100 percent of the amount paid for a single study, concluding that not until the third study would the payment be reduced from the sum of what would otherwise be paid under the OPPS if the studies were performed alone.

Another commenter agreed that the current PFS imaging families could be further collapsed to eliminate the contiguous body area concept but opposed applying the MPPR across

modalities. The commenter suggested establishing three families to parallel the modality-based APC groups used under the OPPS, that is, CT/CTA, MRI/MRA, and ultrasound. Another commenter noted that highly specialized clinics often treat complex conditions and perform multiple imaging services on noncontiguous body areas primarily for good patient care. As an example of a situation when complex imaging services are used to diagnose and treat significant medical conditions, the commenter indicated that a CT of the chest may be furnished, resulting in a diagnosis of lung cancer. In addition, the same commenter noted that appropriate treatment of the patient's neurological signs and symptoms also requires a CT of the head, because primary lung tumors account for 50 percent of all metastatic brain tumors. The commenter explained that these medically necessary combinations of imaging services are often performed in a single imaging session. Results of the initial imaging service, contended the commenter, could change the course of treatment for the patient and it would be prudent not to delay or complicate a patient's treatment plan. The commenter also pointed out that it is a convenience to the patient to have same day access for all imaging services.

Another commenter acknowledged that while some efficiencies are gained in certain situations and settings when multiple imaging services are furnished together, the expanded MPPR policy would not appropriately pay for the additional studies required for the majority of patients with significant medical conditions. The commenter explained that highly organized clinics treating these complex patients often structure patient encounters so that there are intervening consultations with multiple providers and additional tests in between imaging services.

Response: While most multiple procedures furnished with a single modality in 1 session would involve procedures currently assigned to 1 of the 11 imaging families, it would not be uncommon for more than 1 imaging procedure of the same modality to be furnished across families, and we would expect efficiencies to occur in these cases. As noted by MedPAC, the proposed PFS MPPR expansion to eliminate the concept of contiguous body areas as the basis for a payment reduction due to efficiencies is consistent with the established hospital OPPS policy on multiple imaging and the PFS MPPR policy for multiple surgical procedures, neither of which is limited to procedures involving contiguous body areas. While we acknowledge that the OPPS composite imaging APCs utilize a different payment methodology than an MPPR to reflect the level of efficiencies when multiple imaging services are furnished together, consideration of the specific body areas imaged is not an aspect of the OPPS policy. The OPPS methodology continues to distinguish among services using different imaging modalities in part because of the statutory requirement that APCs be clinically homogenous. This same limitation would not apply to an MPPR. Despite the differences in their payment methodologies, both the OPPS and the PFS strive to recognize the efficiencies in the TCs when multiple imaging services are furnished together. We continue to believe that there are significant efficiencies in the TCs when multiple imaging procedures of the same modality are furnished on noncontiguous body areas in the same imaging a session, and believe that an expanded imaging MPPR under the PFS is an important policy refinement to pay more appropriately for the comprehensive imaging service under such circumstances.

Because most of the combinations of imaging services furnished in one session that are not now subject to the imaging MPPR occur within one modality, we believe it would be unnecessarily complex to continue separate families (even if fewer than 11) for different imaging modalities to address the limited circumstances when imaging services furnished with more than one modality are performed in a single imaging session. Even in these unusual cases, we would expect certain efficiencies in the TCs, such as the establishment of venous access only one time. Finally, the more general proposed policy would provide a streamlined basis for our further consideration of other possible expansions of an MPPR policy to the TC and/or PC of imaging procedures or other diagnostic tests in the future.

Consistent with our current expectations for provider ordering practices under the established imaging MPPR policy for single modality, contiguous body area imaging studies, under an expanded MPPR we would not expect providers to order multiple imaging procedures of different modalities or for noncontiguous body areas on different days or order different imaging sessions on the same day simply to garner increased payment unless it were medically reasonable and necessary that the studies be furnished on different days or in different sessions on the same day. However, where it is medically necessary to have intervening consultations among multiple providers or other diagnostic tests furnished to a patient between imaging services on the same day to which the MPPR would otherwise apply, such cases would constitute separate imaging sessions and the MPPR would not apply.

Comment: Many commenters addressed CMS' assertion that because of the different pieces of equipment used for CT/CTA, MRI/MRA, and ultrasound procedures it would be unlikely that a single practitioner would furnish more than one imaging procedure involving two different modalities to one patient in a single session where the proposed MPPR policy would apply. While most commenters agreed with this statement, the commenters questioned why CMS would implement the proposal if this were the case. When procedures are furnished across modalities, the commenters believe them to be separate and distinct procedures with little or no overlap and argue that efficiencies cannot be achieved. The commenters asserted that CMS offered no data to support its expectation that efficiencies would occur when different imaging modalities are furnished at the same time. Many commenters requested a more rigorous analysis, validated evidence to support the proposed expansion, and an opportunity for stakeholders to comment on the analysis.

A number of the commenters agreed that specialized staff with different expertise and certification is often needed to furnish services within the different imaging modalities. When multiple imaging is necessary, the commenters explained that two appointments are created, and the patient is checked in twice, prepared and instructed twice, educated on each study independently, transported from one room to another, and furnished separate supplies such as contrast and IV tubing, following which the two rooms are cleaned.

Response: We agree with the majority of commenters that in most cases a practitioner would not furnish more than one imaging procedure involving two different modalities to one patient in a single session. While there may be some instances where the MPPR applies to two different modalities used in a single session, the MPPR would not apply in most cases because this clinical scenario is uncommon. In response to the commenters who questioned why we proposed to apply an MPPR across modalities, we believe that if, in the unusual case, more than one imaging service of different modalities were

furnished to a patient in a single session, there would be some efficiencies in the TC, such as greeting the patient only one time and setting up one intravenous line. We acknowledge that the application of a general MPPR policy to numerous imaging service combinations may result in an overestimate of the efficiencies in some cases and an underestimate in others, but this can be true for any service paid under the PFS, and we believe it is important to establish a general policy to pay appropriately for the TCs of combinations of imaging services upon which we may consider building in the future. We do not believe that it is administratively efficient or necessary for appropriate payment to maintain modality-specific imaging families given the uncommon occurrences of pairs of imaging services involving different modalities furnished by one practitioner on the same day to a single patient that we observe in our claims data.

Comment: Several commenters generally opposed the inclusion of nondiagnostic radiation oncology imaging procedures in any future expansion of the MPPR policy, given the clinical differences between radiation oncology and diagnostic imaging. In addition, one commenter noted that cardiologists commonly provide echocardiography services and peripheral vascular ultrasound tests. While both types of services use ultrasound technology that resembles the technology used in the ultrasound procedures currently subject to the imaging MPPR, the commenter reported that these services are furnished using a different machine and different staff who have different expertise so the imaging MPPR policy.

Response: We did not propose to expand the existing contiguous body area MPPR policy, which currently includes only nonobstetrical chest, abdominal, and pelvic ultrasound services, to include peripheral vascular ultrasound services or echocardiography services in CY 2011. While we explained in the CY 2011 PFS proposed rule (75 FR 40074) that we would continue to review other possible expansions of the MPPR policy to the TC and/or PC of imaging procedures or other diagnostic tests for the future, we have not proposed to do so at this time. Further changes to include services such as nondiagnostic radiation oncology imaging services or echocardiography or peripheral vascular ultrasound services would be addressed in future rulemaking.

Comment: A few commenters reported that it is often difficult for imaging providers to understand when an encounter begins and ends and, therefore, urged CMS to better define a single session. They explained that it is not always easy to identify when the use of the -59 modifier (Distinct procedural services), denoting a separate session under the current imaging MPPR policy, is appropriate. This ambiguity leaves the responsibility for determining whether imaging services are furnished in a separate session to the judgment of the imaging technologist, leading to inconsistent determinations and, therefore, variable payment for the same services furnished in similar clinical scenarios. One commenter specifically requested further parameters of a separate encounter be defined to include the same exam room, a specific timeframe, or a specific action. Another commenter noted that distinguishing separate sessions is a particular challenge for ultrasound imaging.

Response: In the CY 2006 PFS final rule with comment period (70 FR 70262), we indicated that a single imaging session is one encounter where a patient could receive one or more radiological studies. If a patient has a separate encounter on the same day for a medically necessary reason and receives a second imaging service, this would represent a separate session. Physicians would report the -59 modifier to indicate multiple sessions and the MPPR would not apply. This same policy would continue in CY 2011 under the consolidation of the imaging families to expand the imaging MPPR under the PFS. We believe that providers' 5 years of previous experience with this policy should allow them to continue to appropriately distinguish separate imaging sessions by reporting the -59 modifier, even under the expanded MPPR policy. We may provide further subregulatory guidance to providers on this issue in the future in view of our CY 2011 expanded imaging MPPR policy if specific issues arise that we believe warrant further clarification regarding the characteristics of separate imaging sessions.

After consideration of the public comments we received, we are finalizing our proposal, without modification, to apply the 50 percent imaging MPPR to all of the ultrasound, CT, CTA, MRI, and MRA services to which the current contiguous body area and modality-specific policy applies, regardless of the specific combinations of imaging services furnished to the patient in a single session. We believe this proposal is consistent with our overall strategy to pay more appropriately for services that are commonly furnished together, consistent with section 1848(c)(2)(K) of the Act (as added by section 3134 of the ACA) that instructs the Secretary to identify multiple codes that are frequently billed in conjunction with furnishing a single service, and review and make appropriate adjustments to their relative values.

As stated earlier in this section, expenditures attributable to the increase in the MPPR for multiple imaging procedures to consecutive body parts (that is, those previously designated in the same family of codes) are exempt from the budget neutrality provision of the PFS. However, the reduced expenditures attributable to the MPPR for new combinations of multiple imaging procedures that we are finalizing for CY 2011 (the MPPR for multiple imaging procedures not involving consecutive body parts) would be subject to budget neutrality adjustment under the PFS. We note that this formulation for whether reduced expenditures are exempt from budget neutrality applies both to procedures currently subject to the imaging MPPR and to new codes that are subject to the policy in CY 2011 and in future years. To the extent that imaging procedures described by the new codes are furnished in combination with other procedures that are subject to the imaging MPPR on consecutive body areas, the reduced expenditures attributable to the MPPR for these combinations would be exempt from the PFS budget neutrality adjustment.

The complete list of codes subject to the CY 2011 MPPR policy for diagnostic imaging services is included in Addendum F to this final rule with comment period and the CY 2011 code additions to the MPPR policy are listed in Table 17. The codes being added to the policy are those we proposed, as well as new CY 2011 codes or newly covered codes that are clinically similar to the imaging codes subject to the MPPR in CY 2010. The new codes include CPT codes 74176 (Computed tomography, abdomen and pelvis; without contrast material); 74177 (Computed tomography, abdomen and pelvis; with contrast material(s)); and 74178 (Computed tomography, abdomen and pelvis; without contrast material in one or both body regions, followed by contrast material(s) and further sections in one or both body regions). The newly covered codes are CPT codes 72159 (Magnetic resonance angiography, spinal canal and contents, with or without contrast material) and 73225 (Magnetic resonance angiography, upper extremity, with or without contrast material). These codes are being added on an interim final

basis and are open to public comment on this final rule with comment period. The complete list of CPT codes newly added to the diagnostic imaging MPPR for CY 2011 is displayed in Table 17 below.

TABLE 17—CPT CODE ADDITIONS TO THE DIAGNOSTIC IMAGING MPPR POLICY FOR CY 2011

CPT code	Short descriptor	Subject to comment in CY 2011 PFS final rule
72159	Mr angio spine w/o & w/dye	Yes.
73225	Mr angio upr extr w/o & w/dye	Yes.
74176	Ct abd & pelvis w/o contrast	Yes.
74177	Ct abdomen & pelvis w/contrast	Yes.
74178	Ct abd & pelv 1+ section/regns	Yes.
75571	Ct hrt w/o dye w/ca test	No.
75572	Ct hrt w/3d image	No.
75573	Ct hrt w/3d image, congen	No.
75574	Ct angio hrt w/3d image	No.

c. CY 2011 Expansion of the MPPR Policy to Therapy Services

In the July 2009 GAO report entitled, "Medicare Physician Payments: Fees Could Better Reflect Efficiencies Achieved when Services are Provided Together," the GAO found efficiencies when multiple physical therapy services were furnished in one session and concluded that an MPPR policy could be appropriate for these services. In the report, the GAO noted that officials from the AMA RUC explained that time spent on pre-service and post-service therapy activities is spread across the number of services in a typical session in order to avoid duplication of the PE for the services. Nevertheless, the GAO found that there was duplication of certain activities in the intra-service period, and provided the example of time spent testing range of motion or muscle flexibility that was duplicated in commonly observed code pairs.

In the typical clinical scenario for therapy services, we believe that therapy services are misvalued for PFS payment when multiple services are furnished to a patient in a single session because duplicate clinical labor and supplies are included in the PE of the services furnished. We believe this duplication should be accounted for under the PFS, as we currently account for efficiencies in multiple surgical and multiple diagnostic imaging procedures furnished in a single session. Over the past 2 years, the AMA RUC has examined several services billed 90 percent or more of the time together as part of its potentially misvalued service initiative and, in several cases, created one code to describe the complete service, with a value that reflects the expected efficiencies. Notwithstanding the AMA RUC's analyses, in most cases it has not created one code to describe a complete therapy service, in part because many of the core therapy CPT codes are timed codes based on increments of treatment time.

Therefore, in the CY 2011 PFS proposed rule (75 FR 40075), we proposed a further step to implement section 1848(c)(2)(K) of the Act (as added by section 3134 of the ACA) that specifies that the Secretary shall identify potentially misvalued codes by examining multiple codes that are frequently billed in conjunction with furnishing a single service. For CY 2011 we proposed an MPPR policy for the HCPCS codes listed in Table 18, specifically the separately payable "always therapy" services that are only paid by Medicare when furnished under a therapy plan of care. These services are designated "always therapy" services regardless of who furnishes them and always require therapy modifiers to be reported, specifically -GP (Services rendered under outpatient physical therapy plan of care); -GO (Services rendered under outpatient occupational therapy plan of care); or -GN (Services rendered under outpatient speech-language pathology plan of care). The therapy codes are available in a file on the CMS Web site at: *http://www.cms.gov/TherapyServices/*. We excluded both contractor-priced and bundled codes from Table 18 because, under our proposal, an MPPR would not be applicable for "always therapy" services furnished in combination with these codes. In the case of bundled codes that are not separately paid, there are no explicit efficiencies in the direct PE to be reflected in payment for the second and subsequent therapy services furnished to the patient on the same day. In the case of contractor-priced codes, there is no nationally established pricing that could be uniformly adjusted to reflect the expected efficiencies when multiple therapy services are furnished.

TABLE 18—SEPARATELY PAYABLE "ALWAYS THERAPY" SERVICES PROPOSED AS SUBJECT TO THE CY 2011 MPPR POLICY *

CPT/HCPCS code	Short descriptor
92506	Speech/hearing evaluation.
92507	Speech/hearing therapy.
92508	Speech/hearing therapy.
92526	Oral function therapy.
92597	Oral speech device eval.
92607	Ex for speech device rx, 1hr.
92608	Ex for speech device rx addl.
92609	Use of speech device service.
96125	Cognitive test by hc pro.
97001	Pt evaluation.
97002	Pt re-evaluation.
97003	Ot evaluation.
97004	Ot re-evaluation.
97010	Hot or cold packs therapy.
97012	Mechanical traction therapy.
97016	Vasopneumatic device therapy.
97018	Paraffin bath therapy.
97022	Whirlpool therapy.
97024	Diathermy eg, microwave.
97026	Infrared therapy.
97028	Ultraviolet therapy.
97032	Electrical stimulation.
97033	Electric current therapy.

TABLE 18—SEPARATELY PAYABLE "ALWAYS THERAPY" SERVICES PROPOSED AS SUBJECT TO THE CY 2011 MPPR POLICY *—Continued

CPT/ HCPCS code	Short descriptor
G0283	Elec stim other than wound.
G0329	Electromagnetic tx for ulcers.

*Excludes contractor-priced and bundled codes.

We did not propose an MPPR policy for "sometimes therapy" services, specifically those services that may be furnished under a therapy plan of care or otherwise by physicians or NPPs as medical services. We believe that the care patterns are different for the latter group of services that may sometimes be furnished as therapy services, and we noted that they are less commonly furnished with multiple services in a single session than the "always therapy" services. In the discussion that follows, our reference to therapy services means those HCPCS codes designated annually as "always therapy" services by CMS.

Based on CY 2009 PFS claims data, we identified over 500 therapy service code pairs billed for the same patient in a single session. We then reviewed a sample of the most common therapy code pairs, specifically those high volume code pairs with more than 250,000 combined services per year, to examine the potential for duplication in the PE. These code pairs represented more than half of the occurrences of therapy services billed together. While we acknowledged that the PE inputs per service for some therapy services were included in the direct PE database based on one-half of the total PE inputs required for two services furnished in a single session, which would account for some duplication, this was not the case for all combinations of therapy services. Of the high volume therapy services examined, approximately one-fourth of the code pairs were not valued based on two services. In addition, we noted that the CY 2009 PFS claims data for services paid under the PFS (excluding services furnished in facility settings that were paid at PFS rates) show that when multiple therapy services are billed on a claim for the same date of service, the median number is four services per day. Therefore, even for those clinical labor times that may reflect the allocation of total time across two units of therapy services, we believe that some elements of the current PE inputs are duplicated based on current patterns of therapy service delivery where most multiple service claims involve delivery of more than two services in a session.

In the CY 2011 proposed rule (75 FR 40076), we stated that duplicate labor activities currently included in the PE for the service period for these high volume pairs of therapy services are as follows: clean room/equipment; education/instruction/counseling/ coordinating home care; greet patient/ provide gowning; obtain measurements, for example, ROM/strength/edema; and post-treatment patient assistance. The most common duplicate supply item included in the PE was the multispecialty visit pack. Examples of duplicated and unduplicated labor activities and supplies for two sample therapy code pairs and our estimates of potential clinically appropriate time and quantity reductions for multiple service sessions (which were also included in our proposed rule) are displayed in Table 19. We note that CY 2009 PFS claims data for these sample code pairs include over 3.4 million pairs of CPT codes 97112 (Therapeutic procedure, 1 or more areas, each 15 minutes; neuromuscular reeducation of movement, balance, coordination, kinesthetic sense, posture, and/or proprioception for sitting and/or standing activities) and 97110 (Therapeutic procedure, 1 or more areas, each 15 minutes; therapeutic exercises to develop strength and endurance, range of motion and flexibility) furnished by the same practitioner on the same day and over 500,000 pairs of CPT codes 97001 (Physical therapy evaluation) and 97140 (Manual therapy techniques (eg, mobilization/ manipulation, manual lymphatic drainage, manual traction), 1 or more regions, each 15 minutes).

BILLING CODE 4120–01–C

In the CY 2011 PFS proposed rule (75 FR 40078), we did not remove minutes for clinical labor tasks that were not duplicated. For example, for CPT code pair 97001 and 97140 the following tasks were not duplicated: post treatment patient assistance; prep and position patient; and prepare room, equipment, and supplies. In addition, we did not remove any supply items that would be required for only one of the separate services because these would not be duplicated in the PE applicable to the combination of services. We estimated no reduction for equipment time, even though efficiencies would be expected for equipment that is used in both services when they are furnished together. Finally, a corresponding reduction to the indirect expenses would be appropriate since indirect costs are allocated partially based on direct costs. For five high volume therapy code pairs that each occur over 2 million times in PFS claims for multiple therapy services and account for almost half of such claims, we estimated that the resulting reduction in the PE for the lower paying code would range from 28 to 56 percent.

As we summarized in the CY 2011 PFS proposed rule (75 FR 40078), given the duplicative clinical labor activities and supplies as shown in the code combination examples, we believe it would be appropriate to extend the MPPR policy that is currently applied to surgical services and the TC of imaging services, to the PE component of certain therapy services. Specifically, we proposed to apply a 50 percent payment

reduction to the PE component of the second and subsequent therapy services for multiple "always therapy" services furnished to a single patient in a single day. Because we believed it would be difficult to determine the precise beginning and end of therapy sessions and we did not believe that beneficiaries would typically have more than one therapy session furnished in a single day, we proposed to apply the 50 percent MPPR policy to the PE component of subsequent therapy services furnished to the same patient on the same day, rather than limiting the proposed policy to services furnished in the same session.

We noted that many therapy services are time-based CPT codes, so multiple units of a single code may be billed for a single session that lasts for a longer period of time than one unit of the code. The proposed MPPR policy would apply to multiple units of the same therapy service, as well as to multiple different services, when furnished to the same patient on the same day. Therefore, we proposed that full payment would be made for the service or unit with the highest PE and payment would be made at 50 percent of the PE component for the second and subsequent procedures or units of the same service.

We proposed that the work and malpractice components of the therapy service payment would not be reduced. For therapy services furnished by an individual or group practice or "incident to" a physician's service, the MPPR would apply to all "always therapy" services furnished to a patient on the same day, regardless of whether the services are furnished in one therapy discipline or multiple disciplines, for example, physical therapy, occupational therapy, or speech-language pathology. The MPPR policy would apply to both those services paid under the PFS that are furnished in the office setting and those services paid at the PFS rates that are furnished by outpatient hospitals, home health agencies, comprehensive outpatient rehabilitation facilities (CORFs), and other entities that are paid by Medicare for outpatient therapy services. Table 20 provides a sample calculation of the current and proposed CY 2011 payment for multiple therapy services furnished in on the same day. For those services paid under the PFS, the PFS budget neutrality provision would apply so that the estimated reduced expenditures for therapy services would be redistributed to increase payment for other PFS services.

TABLE 20—SAMPLE PAYMENT CALCULATION FOR MULTIPLE THERAPY SERVICES FURNISHED TO A SINGLE PATIENT ON THE SAME DAY

	Procedure 1 Unit 1	Procedure 1 Unit 2	Procedure 2	Current total payment	Proposed CY 2011 total payment	Proposed payment calculation
Work	$7.00	$7.00	$11.00	$25.00	$25.00	no reduction
PE	$10.00	$10.00	$8.00	$28.00	$19.00	$10 + (0.5 × $10) + (0.5 × $8)
Malpractice	$1.00	$1.00	$1.00	$3.00	$3.00	no reduction
Total	$18.00	$18.00	$20.00	$56.00	$47.00	$18 + $7 + (0.5 × $10) + $1 + $11 + (0.5 × $8) + $1

In the CY 2011 PFS proposed rule (75 FR 40078), we stated that we believe the proposed therapy MPPR policy would provide more appropriate payment for therapy services that are commonly furnished together by taking into account the duplicative clinical labor activities and supplies in the PE that are not furnished more than once in the single therapy session. This approach is consistent with the statutory requirement for the Secretary to identify, review and adjust the relative values of potentially misvalued services under the PFS as specified by section 1848(c)(2)(K) of the Act (as added by section 3134 of the ACA). We also believe this proposed policy is responsive to continued concerns about significant growth in therapy spending and to MedPAC and GAO recommendations regarding the expansion of MPPR policies under the PFS to account for additional efficiencies. We observed that paying more appropriately for therapy services based on PE relative values that are adjusted for the clinical scenario under which the services are furnished would result in reduced therapy expenditures, and beneficiaries would be able to receive more medically necessary outpatient therapy services before reaching the therapy cap. For a further discussion of potential alternatives to the therapy caps, we refer readers to section III.A.2. of this final rule with comment period.

Comment: Many commenters opposed application of the proposed MPPR policy to therapy services. The commenters characterized the proposal as drastic, arbitrary, and unfair, resulting in across-the-board cuts based on flawed assumptions that would lead to therapy underpayments that would jeopardize access to necessary care and harm patients. The commenters requested that CMS withdraw the proposal, study the issue further, and share the analyses with the public.

In contrast, MedPAC supported the general direction of the proposed policy, but suggested that CMS better justify how a 50 percent reduction would capture the duplicate inputs related to multiple therapy services performed in a single session. MedPAC also recommended that CMS request that the AMA RUC review the values of all outpatient therapy codes to ensure that the practice expenses are not duplicated, regardless of whether or not the current values of those codes assume that two services are furnished during a single visit.

Numerous commenters requested a detailed justification for the proposed policy's 50 percent reduction, including an explanation of the methodology used to calculate the new payments that would result. These commenters asked CMS to work with stakeholders to finalize a policy that would not adversely impact access to care, particularly in rural and other underserved areas. The commenters further urged consideration of other payment methods and alternatives to the therapy caps that would preserve and improve access to therapy services. The commenters stated that between 80 to 90 percent of physical therapy services furnished in private practices would potentially be subject to the MPPR, concluding that the policy would result in payment decreases of 19.2 percent and 17.8 percent for physical therapy services in facilities

and offices, respectively, notably more than the CMS' impact estimate of 11 percent for the proposed rule.

The commenters provided analyses to show that the duplication of supplies is very limited and argued that a more thorough analysis of duplication based on expert clinical review would result in considerably lower estimates of duplication. For example, the AMA RUC explained that for a typical single session combination of 2 units of CPT code 97110 (Therapeutic procedure, 1 or more areas, each 15 minutes; therapeutic exercises to develop strength and endurance, range of motion and flexibility) and one unit of 97140 (Manual therapy techniques (e.g., mobilization/manipulation, manual lymphatic drainage, manual traction), 1 or more regions, each 15 minutes), a $12 PE payment reduction from the MPPR would be applied to adjust for $3.60 in potentially duplicated costs.

Before implementing an MPPR, the commenters urged CMS to take time to ensure that individual services were valued correctly based upon the resources needed to deliver them. The commenters advised CMS to conduct a more thorough analysis, taking into consideration the fact that the direct PE inputs for therapy services were already reduced to avoid duplication. The commenters alleged that CMS provided incorrect examples of duplication in the proposed rule examples by overestimating the duplication compared to the standard time allocated by the AMA RUC for certain activities. The commenters explained that PE for therapy services was valued by the AMA RUC based upon three units of service, not two units of service as stated by CMS in the proposed rule. Three units of service are typical, and the commenters contended that no duplication of PE exists when the typical three units of service are delivered using typical time allotments for clinical labor activities. The commenters submitted multiple examples of combinations of therapy services, using the most frequently billed therapy codes and providing valuations for each of the components of PE, such as pre-service and post-service physical therapy assistant activities. The commenters pointed out that in the case of single unit therapy claims, or claims with one therapeutic procedure and one modality, there would currently be underpayment based on how therapy services are valued. The commenters further argued that it would not be fair to apply the MPPR to all subsequent services when some of the code combinations are already undervalued.

Many commenters observed that the AMA RUC has worked in good faith to resolve any duplication in the PE inputs over the past few years and pointed out that CMS has historically accepted over 90 percent of the AMA RUC's recommendations. In April 2010, some commenters reported that the AMA RUC reviewed high volume therapy code pairs that included the most frequently billed therapy CPT code 97110, and the commenters conveyed the AMA RUC's conclusion that there is no duplication in the work or PE inputs for the most frequently reported therapy codes.

The commenters pointed out that single comprehensive codes for certain bundles of component services were implemented in CY 2010, and that additional ones would be created in the future. Therefore, the commenters disagreed with CMS' reasoning for proposing a general MPPR that is not code pair-specific in the context of these ongoing efforts of the CPT Editorial Panel and the AMA RUC to revise the coding and values for services that are commonly furnished together. Instead, the commenters urged CMS to continue to work within the established processes and resolve duplication, where it exists, at the code pair level rather than with payment.

Response: We appreciate the detailed information provided by the commenters regarding the historical AMA RUC process to value the therapy codes and the additional examples of the practice expenses as they apply to the many combinations of therapy services that may be reported. We understand that the AMA RUC valued many of the therapy services based on certain assumptions about the typical combinations of services furnished in a therapy session. However, as the commenters pointed out, there are numerous combinations of therapy services observed in the PFS claims data that we posted on the CMS Web site under supporting files for the CY 2011 PFS proposed rule that are commonly furnished in the physician's office setting. In the context of this large number of commonly observed combinations, we do not believe that our usual PFS methodology of valuing the typical service adequately accounts for the duplication in PE that occurs in the many possible therapy service combinations. Although they are frequent, they do not represent the typical case used by the AMA RUC in valuing the individual component services and, thus, do not fully account for duplications in PE. We proposed the therapy MPPR in order to pay more appropriately for therapy services in general by adjusting for the duplicate payment for the PE that may occur when combinations of therapy services are furnished together.

We agree with the commenters that, when considering all claims for therapy services paid under the PFS, the median number of services is three. Thus, that number may have been appropriate for the AMA RUC to use in valuing therapy services. However, the median number of four services that we presented in the CY 2011 PFS proposed rule was based upon all claims for multiple therapy services, and did not include claims for a single therapy service. It was the multiple service claims that we examined for purposes of the MPPR analysis, and it is these claims to which the MPPR would apply. Therefore, we continue to believe that the median number of four is the appropriate reference point when evaluating an MPPR. We note further that when the AMA RUC valued certain therapy services based on the assumption that a combination of three types of therapy services would be furnished to the patient, then in the case of multiple service claims where the median number of services is four, some PE duplication would clearly occur for the typical multiple service case with more than three services.

Although we continue to believe that 50 percent would generally be an appropriate level for an MPPR for the PE component of payment for therapy services, consistent with the current PFS MPPR policies for imaging and surgical services and our PE overlap analysis of certain therapy code combinations for the CY 2011 PFS proposed rule, we acknowledge there are particular challenges associated with establishing an MPPR for therapy services to account for the duplication in PE. For example, the current coding structure for therapy services relies upon timed units in many cases, and as a result, the number of commonly observed combinations is very large. The PE overlaps vary depending upon the specific combinations of services furnished to the patient, which may include evaluation services, therapeutic procedures, and therapeutic modalities. The common occurrence of such a great variety of multiple therapy code combinations contrasts with the relatively lesser number of combinations and/or frequency of combinations of surgical procedures or diagnostic imaging procedures to which the established PFS MPPR policies apply.

As the commenters pointed out, the direct PE inputs for certain therapy services were systematically established

based upon a standard AMA RUC methodology of three therapy services furnished in a session that included two therapeutic procedures and one therapeutic modality and that assigned certain PE inputs solely to the two therapeutic procedures. However, the scenarios utilized by the AMA RUC in this process are an incomplete representation of the usual combinations of services reported when therapy services are furnished in a practitioner's office. For example, the most common combination of CPT codes for therapy services in CY 2009 PFS claims data consisted of an average of 3.5 services which were comprised of some combination of one or more units of a single therapeutic procedure CPT code and one or more units of a single modality CPT code, rather than 3 total units of the services. The second most common combination was a therapeutic procedure CPT code alone, with an average of 2.8 units, while the AMA RUC relied upon 2 therapeutic procedures in a session for its assignment of certain PE inputs. Other commonly observed combinations of codes included 3.4 to 4.6 therapy services, with different numbers of therapeutic procedures and therapeutic modalities furnished to the patient than were assumed by the AMA RUC under the scenarios that were the basis for establishing the PE inputs for certain therapy CPT codes. Therefore, despite the AMA RUC's consideration of multiple services for valuation, the therapy code combinations as actually reported by practitioners would typically have some additional duplication in their PE. Thus, while the current PFS values for therapy services may reflect some efficiencies in the PE for certain code combinations based on the AMA RUC approach to valuation (to the extent we accepted the AMA RUC recommendations), the actual efficiencies are not fully recognized in the PE inputs for the most commonly reported therapy code combinations, nor are they necessarily recognized in the many other common code combinations that were not considered by the AMA RUC as the typical case.

Based on our review of the scenarios submitted by the commenters, we continue to believe that there is significant overlap in the PE when many combinations of therapy services are furnished together and that this overlap has not been adequately accounted for in the direct PE inputs that the AMA RUC has recommended to us for the component services. We believe the overlaps remain substantial and they can be potentially higher than 50 percent for some combinations while lower for others. Our analysis of five high volume therapy code pairs as noted in the CY 2011 PFS proposed rule (75 FR 40078) suggested a reduction in the PE for the lower paying code of 28 to 56 percent to account for PE duplication.

In response to the commenters who projected that the impact on physician's office payment for physical therapy services would be greater than the 11 percent reduction we modeled for the proposed rule (75 FR 40232), we note that an additional element of our analysis was the continued transition to setting the PE RVUs based on the PPIS data. The PPIS transition is expected to significantly increase payment for the PE component of therapy services in CY 2011. While we acknowledge that the estimated change in PE RVUs due to the proposed therapy MPPR alone would result in a payment decrease for the specialty of physical and occupational therapy of somewhat more than 11 percent, it is the combined consideration of all factors affecting the CY 2011 PE RVUs that resulted in the 11 percent decrease for physical and occupational therapists in the proposed rule specialty impact table (75 FR 40232). We note further that the estimated impact of all the PE RVU changes for physical and occupational therapy based upon our proposals for CY 2011 if there were no remaining transition to the new PE RVUs using the PPIS data would be −7 percent.

Any MPPR policy, such as the MPPR that currently applies to surgical services and imaging procedures, is a relatively blunt payment policy tool that improves the overall accuracy of payment when combinations of services are furnished together but is not, by its nature, a specific policy that precisely values each code combination. A general MPPR is not unlike the well-established PFS pricing methodology that relies on the typical case, where we readily acknowledge that the clinician's resources used to furnish a specific service to a specific patient on a specific day may be more or less than those used in the typical case. Similarly, while we believe that an MPPR would generally improve the accuracy of PFS payment when multiple therapy services are furnished to a single patient in a single session, we understand that for a specific combination of services for a given patient, the resources required may be more or less than those recognized for payment under the MPPR policy. In view of the requirements of section 1848(c)(2)(K) of the Act (as added by section 3134 of the ACA) which specify that the Secretary shall identify potentially misvalued codes by examining multiple codes that are frequently billed in conjunction with furnishing a single service and make RVU adjustments, we continue to believe it would be appropriate to expand the current PFS MPPR policies to address those scenarios where we conclude that combinations of services commonly furnished together are systematically overvalued.

We believe the more specific valuation of common code combinations is best conducted with input from the AMA RUC as it evaluates single new comprehensive codes for a bundle of component services when those new codes are established by the CPT Editorial Panel. In such cases where a single code is used to report a comprehensive service, an MPPR would no longer apply, which would be appropriate because the potential for PE duplication would have been explicitly considered in determining the PE inputs for the comprehensive service. As we stated earlier in this section concerning the MPPR for imaging services, the MPPR is not intended to supersede the AMA RUC process. We encourage the AMA RUC to reexamine the values and direct PE inputs for therapy services, including code pairs, for duplication in the PE, and to recommend therapy services to the CPT Editorial Panel for consideration of bundling into comprehensive codes. However, we believe it is appropriate to use an MPPR to address the PE duplication that is currently present within the PFS RVUs for the therapy codes when more than one service is furnished to a patient.

After consideration of the public comments we received, we are adopting, with modifications, our proposal to establish a MPPR policy for "always therapy" services for CY 2011. However, given the complexities involved in establishing an MPPR for the very large number of therapy codes and combinations, rather than the proposed 50 percent payment reduction to the PE component of the second and subsequent "always therapy" services billed by the same practitioner or facility on the same date of service for the same patient, we are adopting a 25 percent MPPR for "always therapy" services furnished in CY 2011. We continue to believe that a 50 percent MPPR for therapy services may be appropriate in light of our analysis of five high volume therapy code pairs that each occur over 2 million times in PFS claims for multiple therapy services and account for almost half of such claims, and for which we estimated that the resulting reduction in the PE for the lower paying code would range from 28 to 56 percent. However, we believe a 25

percent MPPR represents an appropriate and conservative first step toward eliminating payment for duplicative PE when multiple "always therapy" services are furnished to the same patient by the same therapy provider on the same date of service. We note that a 25 percent MPPR represents half the proposed reduction, and is slightly less than the lower range of the reduction suggested by our analysis of high volume code pairs. During CY 2011 and future years, we will continue to refine our analyses and consider whether further modifications to the policy would be appropriate, including the possible adoption of a 50 percent MPPR or a different payment percentage reduction. Any further changes to the MPPR for therapy services will be addressed in future rulemaking, including the possible adoption of any alternative percentage payment reduction to the 25 percent MPPR that will be in place for CY 2011. We will also closely follow the work of the CPT Editorial Panel and the AMA RUC with respect to the coding and valuation for therapy services over the next few years as we assess the potential merits of further changes to the MPPR policy. We note that the typical reductions in total PFS payment for high utilization therapy code combinations due to the MPPR alone would fall within the range of 7 to 9 percent under our final policy, but this decrease will be mitigated by the continued transition to use of the PPIS data. As displayed in Table 101 of this final rule with comment period, we estimate that the CY 2011 impact on the PE RVUs of the new therapy MPPR and continued PPIS transition is a reduction in PFS payment to physical and occupational therapists of approximately −3 percent.

The final list of CY 2011 CPT codes for "always therapy" services that are subject to the therapy MPPR is displayed in Table 21 at the end of this section.

Comment: Some commenters pointed out that CMS' analysis was based only on data from physicians and private practice therapists, which the commenters opposed as unrepresentative of the typical therapy session because the data represent only 35 percent of outpatient therapy services paid under Medicare. The commenters objected that no data from skilled nursing facilities (SNFs), rehabilitation agencies, CORFs, and hospital outpatient departments were considered in the analysis. The commenters reported that application of the MPPR policy on a per-day basis would be inconsistent with the delivery of therapy services in provider settings where multiple sessions of the same or different disciplines of therapy on the same day are commonly furnished to "captive" patients and would unfairly reduce payment for the resources used to provide these services. The commenters believe there is no duplication in the PE in such circumstances. Some commenters suggested that reductions should not be applied when there is a break in services into more than one session in the same day.

Response: With respect to payment under the PFS, according to section 1848(c)(1)(B) of the Act, the term "practice expense component" means the portion of the resources used in furnishing the service that reflects the general categories of expenses (such as office rent and wages of personnel, but excluding malpractice expenses) comprising practice expenses. Under section 1848(c)(2)(C)(ii) of the Act, we are required to determine PE RVUs based on the relative practice expense resources involved in furnishing services. We develop these resource-based PE RVUs by looking at the direct and indirect physician practice resources involved in furnishing each service. To establish the direct PE inputs for services paid under the PFS, we consider the typical clinical scenario in which those services are delivered and paid by Medicare. In the case of therapy services that are paid under the PFS, the scenarios we consider are office-based (not institutional) because these therapy services are the only ones that are actually paid under the PFS (section 1848 of the Act) and subject to all of the provisions of the PFS, including budget neutrality under section 1848(c)(2)(B)(ii)(II) of the Act. Section 1834(k)(3) of the Act then requires that we pay for all outpatient therapy services at the applicable PFS amount. Therefore, our analyses and policy development regarding the therapy MPPR were based solely on claims for office-based therapy services and, given the applicable statutory payment provisions; we do not believe it would have been appropriate for us to consider institutional patterns of care in setting PFS rates for therapy services.

We are required to establish the values for services paid under the PFS (office-based services) so that therapy services are valued appropriately in the context of all other services paid under the PFS, and that means ensuring that therapy services are appropriately valued for the office setting. In the case of other services paid under the PFS that may be furnished in both facility and nonfacility settings, we generally establish separate but related facility and nonfacility values to differentially value the services when furnished in each of the two types of settings. However, therapy services are only paid under the PFS when furnished in the office setting, so we establish the PFS values for therapy services based on patterns of care in the office setting. This approach ensures equitable and relative treatment of all services paid under the PFS with respect to the statutory provisions that apply to the PFS, including year-to-year budget neutrality. In contrast to other services paid under the PFS, the statute then specifies that we pay for therapy services furnished in facility settings at the applicable PFS amount (which, as discussed above, is established based upon our resource-based methodology for services furnished in nonfacility settings). Although the statutory payment scheme for therapy services differs from most other services, we note that this treatment ensures that Medicare payment is the same across all settings for outpatient Part B therapy services.

We acknowledge the commenters' point that multiple therapy sessions furnished to one patient by one provider (one National Provider Identifier (NPI)) in a single day are more common in facility settings than in the office setting. However, we continue to believe that in these situations there would be some overlaps in the PE, including patient education and obtaining measurements, that would be appropriately accounted for through the therapy MPPR. Furthermore, given the nature of therapy services and the associated coding, we believe it would be very challenging to determine the medical necessity of multiple therapy sessions on one date of service or the precise beginning and ending of therapy sessions if we were to exclude from the MPPR those therapy services furnished by the same provider to a single patient on the same day but in different sessions, although we acknowledge that this modification would be consistent with our established policy for the imaging MPPR.

After consideration of the public comments we received, we are finalizing our CY 2011 proposal to apply the therapy MPPR when multiple therapy services are billed on the same date of service for the same patient by the same practitioner or facility under the same NPI, regardless of whether those therapy services are furnished in separate sessions.

Comment: Many commenters objected to applying the MPPR across therapy disciplines because the commenters argued that physical therapy,

occupational therapy, and speech-language pathology (SLP) are separate and distinct interventions furnished independently by individually licensed professionals, each of which is certified to provide unique and specialized services that do not cross discipline or service lines. Several commenters explained that each discipline involves entirely different skills, equipment, supplies, and treatment goals, and separate disciplines are often located in different treatment settings. Individual plans of care, explained the commenters, are separately maintained for each therapy discipline and contain specific goals and treatments. Some commenters compared the proposal to claiming that services furnished to a single patient on the same day by a cardiologist and internal medicine specialist contain duplicative PE inputs. The same commenters described administrative contact with the patient in this scenario as distinct and separate, observing that greeting and gowning the patient, cleaning, and assistant activities are furnished independently by the second or subsequent discipline, and cannot be shared.

The large majority of commenters argued that the proposal did not make logical distinctions between therapy treatments or specialties or even properly distinguish between the skills of rehabilitation practitioners. While physical therapists and occupational therapists report the same CPT codes, the commenters noted that the codes do not represent the same service and the plan and approach to treatments differ depending on the discipline.

Response: We recognize that the therapy disciplines are separately qualified professionals who address specific impairments using separate and unique skills. However, in the office setting which is the basis for our valuing therapy services for payment under the PFS as discussed previously, although we believe it would be uncommon for services to be furnished to a single patient by different therapy disciplines and billed by a single provider (one NPI) on the same date of service, we continue to believe that there would be some overlap in the PE in this circumstance. The PE overlaps that we would anticipate include greeting the patient, obtaining vital signs, and post-visit phone calls. We do not agree with the commenters that we should accept such multiple discipline cases from the therapy MPPR that would otherwise apply.

After consideration of the public comments we received, we are finalizing our CY 2011 proposal to apply the therapy MPPR to all therapy services across the disciplines billed on the same date of service for the same patient by the same practitioner or facility under the same NPI.

Comment: Several commenters pointed out that, unlike other therapy services, many SLP services contain therapist work in their PE because SLPs have no assistants. These commenters requested that the therapy MPPR not be implemented, or at least be delayed, until the AMA RUC completes its plan to recommend moving SLP work from PE to work. In addition to bundled codes, the commenters also requested that add-on codes, such as CPT code 92608 (Evaluation for prescription for speech-generating augmentative and alternative communication device, face-to-face with the patient; each additional 30 minutes (List separately in addition to code for primary procedure)), be exempted from the therapy MPPR, since the PE inputs for add-on codes explicitly take into consideration the PE inputs for a base code that is always reported. The commenters reported that the major SLP codes include a wide variety of service types and are essentially bundled already, meaning that SLP practitioners rarely bill two different services on the same day for the same patient. The commenters expressed concern because SLP services are furnished and valued differently than physical and occupational therapy, yet the proposed rule contained no SLP examples to justify including SLP codes in the MPPR or to estimate the impact on SLP services.

Response: We note that most of the SLP codes will have been valued with therapist work in the work component of the SLP service RVUs by CY 2011, although we do not see the continued valuation of therapist work in the PE as an impediment to application of the MPPR to SLP services. Since many single SLP codes represent multiple component services that are reported using a single comprehensive code, the impact of the therapy MPPR on PFS payment for SLP services would be minimal. For those services that may occasionally be billed with more than one SLP code for a session, we see no basis for treating SLP services differently than other therapy services because we believe there would also be PE duplication in these cases.

However, we agree with the commenters that add-on codes should not be subject to the MPPR for therapy services because their PE inputs already consider that the add-on code is always furnished along with a primary service.

Therefore, after consideration of the public comments we received, we are removing add-on therapy CPT code 92608 from the list of "always therapy" services that we proposed for application of the therapy MPPR policy. In addition, we are removing CPT code 97010 (Application of a modality to 1 or more areas; hot or cold pack) which is a bundled code that was inadvertently included on the proposed list. These changes are reflected in the final list of codes subject to the therapy MPPR policy that is displayed in Table 21 at the end of this section. This policy parallels our treatment of the MPPR for surgical services, where surgical add-on codes are not subject to the surgical MPPR.

Comment: Some commenters characterized the proposed therapy MPPR as contrary to the objectives of the ACA, which the commenters believe was designed to shift care to the most effective and efficient delivery setting to ensure beneficiary access to cost-effective, high quality and coordinated care. Because therapy services do not involve expensive drugs or testing, yet they assist patients in avoiding or reducing other medical costs, many commenters believe that physical therapy is the most efficient and cost-effective treatment to return patients to independent function. The commenters contended that growing Medicare expenditures for the treatment of common musculoskeletal problems could easily be controlled by earlier access of patients to physical therapy services.

The commenters were concerned that lower therapy payments would exacerbate the shortage of therapists, lead to restricted access to therapy services, especially in rural areas, and result in patients who are more prone to injuries and functioning at a lower level. Undertreated functional impairments, argued the commenters, would lead to increased spending for medication and medical costs associated with decreased mobility, pain and falls, increased emergency room services, longer inpatient stays, quicker returns to the hospital setting, and earlier placement in nursing homes.

In addition, some commenters were concerned that the MPPR would provide an incentive to schedule patients in a manner that would be inefficient, inappropriate, and inconvenient for patients. The commenters noted that research proves therapy is more effective for many elderly patients with several visits on the same day, separated by rest. The commenters indicated that patients in rural communities prefer multiple therapy service visits to minimize lengthy commutes.

Response: Through the CY 2011 proposed rule and its associated public comment period, we have invited public involvement in the process of policy development regarding an MPPR for therapy services. We believe the therapy MPPR policy is fully consistent with section 1848(c)(2)(K) of the Act (as added by section 3134 of the ACA) which specifies that the Secretary shall identify potentially misvalued codes by examining multiple codes that are frequently billed in conjunction with furnishing a single service, and review and make appropriate adjustments to their relative values. Therefore, we do not agree with the commenters that the MPPR policy undermines the goals of the ACA but, instead, we believe the policy fulfills one of our statutory obligations by valuing more appropriately combinations of therapy services furnished to patients and paid under the PFS. We have no reason to believe that appropriately valuing services for payment under the PFS by reducing payment for duplication in the resource-based PE payment for the component services would contribute to therapist workforce shortages or limit patients' access to medically reasonable and necessary therapy services.

With respect to the ordering and scheduling of therapy services for Medicare beneficiaries, we require that Medicare-covered services be appropriate to patient needs and that a physician certifies each patient's plan of care. We would not expect the adoption of an MPPR for therapy services to result in therapy services being furnished on separate days by one provider so that the provider may garner increased therapy payment unless this pattern of care is the most clinically appropriate for the patient. We agree with the commenters that this unprofessional behavioral response on the part of practitioners would be inefficient and inappropriate and could result in patient compliance problems with the plan of care. We will continue to monitor access to care and patterns of delivery for therapy services, with particular attention focused on identifying any changes in the delivery of same day therapy services that may be inappropriate.

Comment: Several commenters noted that CMS has contracted with Computer Sciences Corporation (CSC) and RTI International to develop outpatient therapy payment alternatives and urged CMS to place a high priority on the development of an alternative payment approach for therapy services rather than applying the proposed MPPR. Many commenters supported bundled per-session codes that would vary based on the severity of the patient and the complexity of evaluation and treatment services, and some commenters believe this payment approach would be more equitable than the proposed MPPR. The commenters argued for a scientific approach to the development of alternatives to the current payment system, which the commenters believe contrasts with the analysis presented by CMS to support the MPPR. However, most commenters encouraged further study and development before implementation of any alternatives. Many commenters pledged to work with CMS in the future to further develop a bundled service approach based on episodes of care.

Response: We appreciate the effort and useful information contributed by stakeholders to the discussion and development of alternatives to the therapy caps and we refer readers to section III.A.2. of this final rule with comment period for a further discussion of the public comments and our responses on this issue. We look forward to the continued cooperation of stakeholders as we continue our work in this area over the coming years. However, we do not believe short-term alternative payment options for therapy services are sufficiently developed to warrant immediate implementation, and the commenters on the CY 2011 PFS proposed rule generally shared that view. In contrast, we believe that we can implement an appropriate MPPR for therapy services beginning in CY 2011 that would immediately provide more appropriate payment for the PE component of therapy services when multiple therapy services are furnished to one patient on one date of service by one provider. Paying more appropriately for therapy services in CY 2011 will allow patients to receive more medically necessary therapy services before reaching the therapy cap. To the extent that the therapy MPPR encourages the future bundling of therapy codes into a single comprehensive service that would be specifically valued, we support the exploration of that concept to capture the specific efficiencies associated with certain combinations of therapy services.

Comment: Several commenters asserted that the therapy MPPR proposal violated the Administrative Procedure Act (APA), alleging the proposal was arbitrary and capricious. In addition, some commenters argued that CMS did not provide sufficient information regarding the data and analysis used to develop the policy to allow the informed public input from qualified providers of therapy services.

Response: Consistent with the requirements of the APA, a full description of our analysis and the rationale we used as the basis for the proposed therapy MPPR policy was presented in the proposed rule, the public comments on our proposal have been reviewed, and our responses are provided in this final rule with comment period. Although many commenters requested that we share more data to support the proposed policy, several commenters demonstrated that they have their own access to Medicare data by submitting reports to us along with their comments in order to support their views or to refute the examples we presented in the proposed rule. We note further that we posted therapy utilization data on the CMS web site after publication of the proposed rule to provide additional information regarding the specific combinations and utilization of therapy services on PFS claims. The information was posted under downloads for the CY 2011 PFS proposed rule at: *http://www.cms.gov/PhysicianFeeSched/PFSFRN/list.asp#TopOfPage.* Therefore, we believe the final MPPR for therapy services is being adopted in compliance with the notice and comment rulemaking process under the APA.

In summary, after consideration of the public comments we received, we are adopting our CY 2011 proposal to apply an MPPR to the PE component of Medicare payment for the second and subsequent outpatient "always therapy" services, with a modification to apply a 25 percent reduction for CY 2011 rather than the 50 percent reduction we had proposed. Specifically, beginning in CY 2011 we are adopting an MPPR for "always therapy" services under which a 25 percent reduction will be applied to the PE component of payment for the second and subsequent "always therapy" service(s) (those displayed in Table 21) that are furnished to a single patient by a single provider on one date of service in all settings where outpatient therapy services are paid under Part B. This policy applies to office-based therapy services paid under the PFS as well as to institutional therapy services paid under Part B at the PFS rates. We note that the MPPR would apply only when multiple therapy services are billed on the same date of service for one patient by the same practitioner or facility under the same NPI. This policy does not apply to add-on, bundled, or contractor-priced "always therapy" codes. It does, however, apply to all "always therapy" services furnished on a single date of service by the same provider to a single

patient, including "always therapy" services furnished in different sessions or in different therapy disciplines.

For those therapy services paid under the PFS, we are required to make a budget neutrality adjustment under section 1848(c)(2)(B)(ii)(II) of the Act. As a result, the estimated reduced expenditures for therapy services due to the 25 percent MPPR will be redistributed to increased CY 2011 payments for other PFS services. We refer readers to XI.A.2. of this final rule with comment period for further discussion of the impact of this policy. The final list of CY 2011 "always therapy" CPT codes subject to the MPPR policy for therapy services is displayed in Table 21.

TABLE 21—"ALWAYS THERAPY" SERVICES SUBJECT TO THE CY 2011 MPPR POLICY*

CPT code	Short descriptor
92506	Speech/hearing evaluation.
92507	Speech/hearing therapy.
92508	Speech/hearing therapy.
92526	Oral function therapy.
92597	Oral speech device eval.
92607	Ex for speech device rx, 1 hr.
92609	Use of speech device service.
96125	Cognitive test by hc pro.
97001	Pt evaluation.
97002	Pt re-evaluation.
97003	Ot evaluation.
97004	Ot re-evaluation.
97012	Mechanical traction therapy.
97016	Vasopneumatic device therapy.
97018	Paraffin bath therapy.
97022	Whirlpool therapy.
97024	Diathermy eg, microwave.
97026	Infrared therapy.
97028	Ultraviolet therapy.
97032	Electrical stimulation.
97033	Electric current therapy.
97034	Contrast bath therapy.
97035	Ultrasound therapy.
97036	Hydrotherapy.
97110	Therapeutic exercises.
97112	Neuromuscular reeducation.
97113	Aquatic therapy/exercises.
97116	Gait training therapy.
97124	Massage therapy.
97140	Manual therapy.
97150	Group therapeutic procedures.
97530	Therapeutic activities.
97533	Sensory integration.
97535	Self care mngment training.
97537	Community/work reintegration.
97542	Wheelchair mngment training.
97750	Physical performance test.
97755	Assistive technology assess.
97760	Orthotic mgmt and training.
97761	Prosthetic training.
97762	C/o for orthotic/prosth use.
G0281	Elec stim unattend for press.
G0283	Elec stim other than wound.
G0329	Electromagntic tx for ulcers.

*Excludes contractor-priced, bundled, and add-on "always therapy" codes.

5. High Cost Supplies

a. Background

MedPAC and the AMA RUC have long recommended that CMS establish a frequent price update process for high-cost supplies that are direct PE inputs in the PE database for services paid under the PFS because of their speculation that prices for these items may decrease over time as competition increases and new technologies disseminate into medical practice. MedPAC in particular has perennially noted that it is important for CMS to update the prices of high-priced supplies on a regular basis as inaccurate prices can distort PE RVUs over time, contributing to the misvaluation of established services under the PFS.

Most of the current prices for high-cost supplies included in the direct PE database are from 2004 or earlier. There are currently 62 unique supplies with prices of $150 or more in the proposed CY 2011 PE database, which is available on the CMS Web site under the supporting data files for the CY 2011 PFS proposed rule at *http://www.cms.gov/PhysicianFeeSched/*. Finally, we note that we do not actually pay the supply prices included in the PE database but, instead, use them to develop the PE RVUs according to our standard PE methodology as described in section II.A.2. of this final rule with comment period. Payment for a procedure that uses a supply is based upon the PE RVUs that result from the PE methodology, and supplies are among the direct PE inputs for procedures. Therefore, it is the relativity of high-cost supply prices to prices for other PE items (equipment, low-cost supplies, and clinical labor) that is important.

Accordingly, in the CY 2009 PFS proposed rule (73 FR 38582), we proposed a process to update the prices for high-cost supplies priced at $150 or more that are included in the PE inputs for procedures paid under the PFS PE methodology. The CY 2009 proposed rule described a publicly transparent process in which CMS would publish a list of the high-cost supplies in the PFS proposed rule (65 supplies were included in the CY 2009 PFS proposed rule), and specialty societies or other relevant organizations would provide acceptable documentation supporting the pricing for the supplies during the 60-day public comment period. Furthermore, in that same proposed rule (73 FR 38582), we provided guidance on what constitutes valid, reliable documentation that reflects the typical price of the high-cost item in the marketplace. We outlined examples of acceptable documentation, such as a detailed description (including system components), sources, and current pricing information, confirmed by copies of catalog pages, invoices, and quotes from manufacturers, vendors, or distributors. We indicated that documentation that does not include specific pricing information such as phone numbers and addresses of manufacturers, vendors, or distributors or Web site links without pricing information would not be acceptable. We also noted that if acceptable documentation was not received within the proposed rule's 60-day public comment period, we would use prices from the Internet, retail vendors, and supply catalogs to determine the appropriate cost, and that we would use the lowest price identified by these sources (73 FR 38582). Finally, we solicited public comments on alternatives that could be used to update pricing information in the absence of acceptable documentation provided by specialty societies or other interested organizations.

In the CY 2009 PFS final rule with comment period (73 FR 69882), we indicated that we received many comments on the proposed process and, while some commenters expressed support, others believed the proposed process was flawed and burdensome. Moreover, although we received some data in response to our request for information on the 65 high-cost supplies with prices of $150 or more, much of what we received was not complete or did not represent typical market prices. In particular, we expressed concern that the submitted data often represented manufacturer list prices for the premier models of many supplies, while we believed there were less expensive alternatives. Therefore, we were unable to determine the most appropriate, typical supply prices for our PFS payment methodology that prices the typical service described by a HCPCS code. Rather than finalizing the proposed process for updating high-cost supplies and revising the prices for the 65 supplies based on inadequate pricing information, we stated in the CY 2009 PFS final rule with comment period (73 FR 69882) that we would research the possibility of using an independent contractor to assist us in obtaining accurate pricing information. Furthermore, we informed the public that we planned to study the limitations of available pricing data and determine how to revise our proposed process to elicit better data.

In the CY 2010 PFS proposed rule and final rule with comment period (74 FR 33554 and 61776, respectively), we

stated that we were continuing to examine ways to obtain accurate pricing information for high-cost supplies. We noted again in the CY 2010 PFS proposed rule that we would depend upon the cooperation of the medical community to obtain typical prices in the marketplace, and we provided stakeholders with another opportunity to submit public comments on the process. In the CY 2010 PFS final rule with comment period, we acknowledged commenters' general support for an initiative to ensure accurate pricing of high-cost supplies. In general, the commenters strongly preferred a transparent and public process, and we stated that we would consider this perspective as we explore the best way to ensure that accurate supply pricing information is used in the PFS payment methodology.

b. Future Updates to the Prices of High-Cost Supplies

In working towards refining a process to update the prices of high-cost supplies and consistent with our intention expressed in the CY 2009 PFS final rule with comment period (73 FR 69882), we contracted with an independent contractor during CY 2009 to help us study the availability of accurate pricing information. We requested that the independent contractor, L&M Policy Research, research pricing information for the 65 high-cost supplies listed in the CY 2009 proposed rule (73 FR 38583 through 38585) and determine what, if any, pricing information reflecting typical market prices could be obtained for these high-cost supplies.

We first requested that the contractor explore publicly available sources to obtain typical market prices for these supplies. The contractor utilized supply vendor catalogs and web sites and directly contacted vendors, manufacturers, group purchasing organizations (GPOs), and any other suppliers that the contractor identified in their research in order to identify prices for each of the supplies. Where more than one version of a supply item appeared to match a description of a high-cost supply and/or more than one possible vendor or manufacturer was identified, the contractor attempted to obtain prices from the multiple sources.

Upon review of the high-cost supply list, the contractor refined the list to 62 unique high-cost items with prices of $150 or more for the study. The original list only consisted of 64 items but included one item inadvertently listed twice (CMS Supply Code SD207 (suture device for vessel closure (Perclose A–T))) and one item (CMS Supply Code SH079 (collagen implant)) that was deleted from the PE database after CY 2007 because it was no longer used as an input for any codes. While the contractor was able to obtain prices for 37 of the 62 unique supplies, the contractor was unable to obtain pricing information for the remaining 25 supplies. Documentation of these prices, a requirement we discussed in the CY 2009 PFS proposed rule (73 FR 38582), was only obtained for 25 of the 36 supplies with new pricing information. For the remainder, while the contractor was given price quotes over the phone, the sales agents or customer service representatives declined to provide any form of written documentation, in some cases because company policies restricted providing pricing documentation to prospective customers without an account. Moreover, information on typical discounts was obtained for only seven products, and only one discount was documented. In the case of these products, companies disclosed the maximum available discounts, ranging from 18 percent to 45 percent. Relative to prices currently included in the PE database, the contractor found higher prices for the majority of the medical supplies that were researched, specifically 23 supplies with higher prices, 8 with lower prices, and 3 with the same price. The high-cost supplies studied by the contractor and their current database prices are displayed in Table 22.

TABLE 22: High-Cost Supplies with Prices of $150 or Greater in the PFS Direct PE Database that were Studied by the CMS Contractor

CMS Supply Code	Supply Description	Current Database Unit Price	Associated CPT Codes
	stent, ureteral, wguidewire, 3cm flexible tip	$235	52332
	probe, cryoablation, renal	$1,175	50593
	catheter, intradiscal (spineCATH)	$1,380	22526, 22527
	probe, cryoablation (Visica ICE 30 or 40)	$1,589	19105
	kit, capsule, ESO, endoscopy w-application supplies (ESO)	$450	91111
	catheter, balloon, lacrimal	$306	68816
	catheter, CVA, system, tunneled w-port, dual (LifeSite)	$1,750	36566
	stent, vascular, deployment system, Cordis SMART	$1,645	37205, 37206
	agent, embolic, 2 ml uou	$258	37210
	tube, jejunostomy	$98	49441, 49446, 49451, 49452
SA005	kit, capsule endoscopy w-application supplies (M2A)	$450	91110
SA010	kit, CVA catheter, tunneled, without portpump	$308	36557, 36558, 36581
SA011	kit, CVA catheter, tunneled, with subcut port	$495	36560, 36561, 36563, 36582, 36583
SA015	kit, for percutaneous thrombolytic device (Trerotola)	$488	36870, 37184, 37186, 37187, 37188
SA020	kit, loop snare (Microvena)	$275	36595, 37203
SA022	kit, percutaneous neuro test stimulation	$305	63610, 64561
SA024	kit, photopheresis procedure	$858	36522

BILLING CODE 4120–01–P

CMS Supply Code	Supply Description	Current Database Unit Price	Associated CPT Codes
SA025	kit, PICC with subcut port	$586	36570, 36571, 36585
SA036	kit, transurethral microwave thermotherapy	$1,149	53850
SA037	kit, transurethral needle ablation (TUNA)	$1,050	53852
SA038	kit, transurethral waterinduced thermotherapy	$650	53853

SD215	probe, endometrial cryoablation (Her Option)	$1,250	58356
SD216	catheter, balloon, esophageal or rectal (graded distention test)	$165	91040, 91120
SD218	stent, ureteral, without guidewire	$162	50382, 50384, 50385
SF028	laser tip (single use)	$290	30117, 52214, 52224, 52317
SF029	laser tip, bare (single use)	$150	46917, 46924
SF030	laser tip, diffuser fiber	$850	52647, 52648
SL055	DNA stain kit (per test)	$150 (10 pack)	88358
SL209	array kit, Genosensor	$2,121	88386
SL225	gas, nitogen, ultra-high purity (compressed) grade 5.0	$190	88385, 88386

Next, we directed the contractor to access the United States General Services Administration (GSA) medical supply schedule to augment the results obtained through review of vendor materials and direct contact with vendors, manufacturers, and GPOs. We note that the GSA establishes long-term government-wide contracts with commercial firms for many products, negotiating contracts and determining prices to be fair and reasonable prior to placing them on schedule. Included on the schedule are thousands of medical supplies at prices that, in most cases, are established through competition. The GSA schedule is an open solicitation and a business of any size, if it is stable and financially sound, can request to be included on the schedule. GSA's vendors usually are nationwide

vendors with substantial non-government sales, and products on the schedule must be manufactured in the U.S. or in a nation with a trade agreement with the United States. Submissions for the schedule are received 365 days per year, vendor contracts can be of varying lengths, and vendors can add or delete products from the schedule. Depending on the aggregate cost estimate associated with the vendor's supply items, the time to achieve inclusion on the schedule can vary from as short as several months to as long as 2 years. The GSA has delegated authority to the Department of Veterans Affairs (VA) to procure medical supplies under the VA Federal Supply Schedules Program.

Using the GSA general search engine under the category "Laboratory, Scientific, & Medical" available at *https://www.gsaadvantage.gov/advgsa/advantage/main/start_page.do*, the contractor obtained nine prices for items similar to the high-cost supplies in the PE database and that are displayed in Table 20 from the publicly available information on the Internet, including pricing for one product for which its prior work did not yield an updated price. We believe that additional items that are similar to the high-cost supplies in the PE database and that may be used with the same procedures may be on the GSA schedule but we are still working through the crosswalk between our supplies and the way the supplies are presented on the GSA schedule. In the proposed rule (75 FR 40081), we stated that examples of high-cost supplies in the PE database that the contractor located on the GSA schedule include: (1) Kit, capsule, ESO, endoscopy w-application supplies (ESO), priced at $450 in the PE database and $444 on the GSA schedule; and (2) tube, jejunostomy, priced at $195 the PE database and $60 to $83 on the GSA schedule, depending on the characteristics of the tube. We note that the price of the "jejunostomy" tube that we included in the proposed rule was incorrect. The actual price of that supply item in the PE database is $97.50, a lower value that is still substantially higher than the price range on the GSA schedule.
