Summary

The United States is the world's major provider of international food aid to low-income developing countries. This report provides three indicators of the U.S. contribution to global food aid: (1) shipments of major donors compiled by the International Grains Council (IGC), (2) U.S. contributions to the United Nations World Food Program (WFP), and (3) the U.S. commitment under the 1999 Food Aid Convention (FAC).

Data from the International Grains Council show that U.S. food aid accounted for 58% of food aid shipments by major donors during 1995/96-2008/09.

A substantial portion of U.S. food aid is channeled through the WFP. During 1996-2010, around 48% of donor contributions to the WFP came from the United States.

The Food Aid Convention (FAC), now expired, was an agreement among donor countries to provide a minimum amount of food aid to low-income developing countries. The food aid commitment agreed to by all FAC signatories in 1999 was approximately 4.9 million metric tons (mmt). The United States pledged to provide 2.5 mmt or 51% of the total commitment.

Although the Food Aid Convention has expired, member countries of the IGC's Food Aid Committee have continued to meet regularly to review food aid needs and food aid shipments. At its December 2010 meeting, Food Aid Committee member countries agreed to begin a formal process of renegotiating the convention.

International Food Aid Shipments of Major Donors

The United States is the major contributor to international food aid, supplying on average, since 1995, around 57% of the annual total food aid donated by members of the Food Aid Committee of the International Grains Council (IGC) and signatories of the 1999 Food Aid Convention (**Figure 1**).¹ U.S. contributions have averaged 5.8 mmt annually, but U.S. food aid shipments have varied from year to year (**Appendix A**).² The lowest amount shipped was 2.5 mmt in 1996/1997; the largest shipments, 7.1 mmt, were in 2001/2002. U.S. shipments of commodity food aid were 4.2 mmt in 2008/2009.

Food aid from the European Union (including food aid provided both by the European Commission and by individual EU member countries) has been more stable and averaged around 2.6 mmt or 27% of average annual food aid shipments. Japan and Canada provided 6% and 5%, respectively, of the total from major donors. Historically, the United States, the EU, Canada, Japan, and Australia have accounted for about 98% of total food aid shipments. The United States contributes U.S. commodities, while the European Union and its member countries and Canada provide a mix of cash and commodities. Japan's contributions are provided primarily as cash rather than commodities.

Because the IGC's food aid data are reported on a July/June marketing year basis, its data for U.S. food aid shipments do not correspond, for example, to fiscal year food aid data reported by the U.S. Department of Agriculture in annual budget documents or by the U.S. Agency for

¹ Information on the International Grains Council, the Food Aid Convention, and the Food Aid Committee is available at <http://www.igc.int/en/Default.aspx> and at <http://www.foodaidconvention.org/en/Default.aspx>. The member countries of the Food Aid Committee are Argentina, Australia, Canada, the European Union, Japan, Norway, Switzerland and the United States.

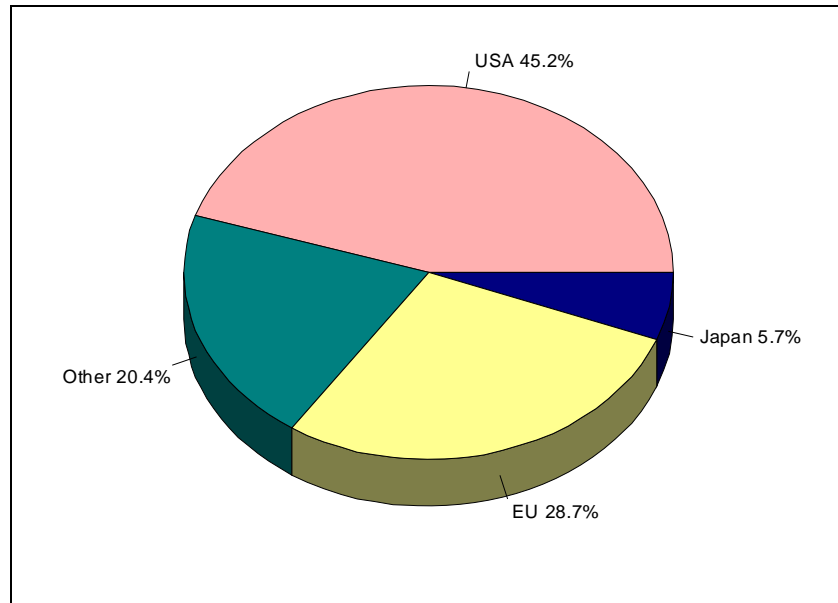

² Data on food aid shipments provided by the International Grains Council are reported on a marketing year basis (July-June).

International Development in its budget documents or annual food aid reports. The source of the data in **Figure 1** and **Appendix A** is the annual report *Food Aid Shipments*, prepared by the Food Aid Committee of the International Grains Council, which has been renamed *Food Aid Operations*.³

Food Aid Contributions to the World Food Program

A substantial portion of U.S. food aid is channeled through the United Nations World Food Program (WFP), the intergovernmental agency that provides food aid for development projects and humanitarian relief in low income countries. More than 56 donors, mainly countries, but also some non-governmental organizations and private corporations, contribute to the WFP. The United States is the major donor, providing over the last 15 years around 45% of total WFP contributions (**Figure 2** and **Appendix B**). Over that same 15-year period, the EU (European Commission plus EU member countries' contributions) accounted for 29% of total WFP contributions. Japan, whose contributions are in cash, provided around 6%. The remaining donors combined provided 20% to WFP food aid resources. Donor contributions to the WFP are not in addition to, but are included in, the data reported in **Figure 1** and **Appendix A**.

Commitments under the Food Aid Convention

The Food Aid Convention (FAC), first agreed to in 1967 during the Kennedy Round of multilateral trade negotiations held under the auspices of the General Agreements on Tariffs and Trade (GATT), was an international agreement that constituted a framework of cooperation on food aid between major donors. The food aid commitment under the FAC was a minimum commitment and was intended to be a guarantee of food security for low-income developing countries. The signatories of the FAC were Argentina, Australia, Canada, the European Union and its member countries, Japan, Norway, Switzerland, and the United States. Signatories could provide more than their minimum commitment. The current FAC was negotiated in 1999 and expired in 2003.

Under the FAC, the donors could express their annual food aid commitments in either tonnage or in value. Other donors—the EU, Canada, and Japan—use a mix of commodities and cash. The total commitment under the most recent FAC (1999-2003) was 4.9 mmt (see **Figure 3** and **Appendix B**). The United States made the largest commitment, 2.5 mmt or 51% of the total. The combined EU commitment (Commission and member countries) was around 27%. Commitments by Canada, Japan, and Australia were, respectively, 8.6%, 6.1%, and 5.1% (**Table 1**).

(% of total commitment)

Source: International Grains Council Food Aid Committee, Food Aid Convention.

Although the FAC expired in 2003, a working committee of the IGC was established to prepare for its renegotiation.⁴ The Food Aid Committee of the IGC continues to meet periodically to review donor food aid contributions in relation to commitments under the 1999 FAC and to global food needs and has agreed to periodic extensions of the 1999 FAC. Concurrently, trade-related aspects of food aid are being negotiated in the multilateral trade round known as the Doha

⁴ IGC-FAC Press Release, 8 December 2004, viewed at <http://www.igc.org.uk/press/pr041208.htm>.

Development Agenda (DDA). Renegotiation of the FAC has been on hold pending completion of DDA trade negotiations. However, at their biennial meeting in December 2010, members of the Food Aid Committee agreed to begin the formal process of renegotiating the Food Aid Convention.⁵

Notes: These figures refer to the wheat equivalent of actual shipments completed during the years shown, including EU value commitments (as estimated by the IGC Secretariat). They are not adjusted for any product limits under Article IV of the Food Aid Convention 1999 and do not necessarily represent the performance of members in relation to their annual commitments.

- a. And EU member States. Shipments include estimated tonnage under FAC “value” contributions.
- b. Includes contributions under IEFR Immediate Response Account (IRA), as reported by WFP.
