DOE/OR/22012--T12

STANDARD REPORT FORM

STATIC RENEWAL TESTS USING PIMEPHALES PROMELAS
(FATHEAD MINNOWS) AND CERIODAPHNIA DUBIA (DAPHNIDS)

Test Title: Clinch River - Environmental Restoration Program (CR-ERP) Study, Ambient Water Toxicity

Principal Investigator: Cynthia L. Russell

Starting Date: July 22, 1993

Ending Date: July 29, 1993

1.0 EXECUTIVE SUMMARY

Clinch River - Environmental Restoration Program (CR-ERP) personnel and Tennessee Valley Authority (TVA) personnel conducted a study during the week of July 22-29, 1993, as described in the Statement of Work (SOW) document. [1] The organisms specified for testing were larval fathead minnows, Pimephales promelas, and the daphnid, Ceriodaphnia dubia. Surface water samples were collected by TVA Field Engineering personnel from Clinch River Mile 19.0 and Mile 22.0 on July 21, 23, and 26. Samples were split and provided to the CR-ERP and TVA toxicology laboratories for testing.

Exposure of test organisms to these samples resulted in no toxicity (survival, growth, or reproduction) to either species in testing conducted by TVA.

2.0 SAMPLE COLLECTION/TREATMENTS

2.1 Test Sample Identification (Chemical/Effluent/Elutriate, etc.): Samples were collected for biomonitoring at the following two sites: Clinch River Mile 19.0, downstream of the mouth of White Oak Creek and upstream of Grubb Island, and Clinch River Mile 22.0, downstream of Melton Hill Dam and upstream of White Oak Creek. Clinch River samples were collected at approximately mid-channel.

2.2 Control and/or Dilution Water: Laboratory culture medium consisting of moderately hard reconstituted water was used as control and dilution water for toxicity tests. The water used for daphnid testing was enriched with 10 percent filtered Tennessee River water and selenium as described in Section 3.2.2.

2.3 Sample Dates and Times: Test samples were collected on July 21, 23, and 26, 1993. Collection times were between 0900 and 1200 CDT.

DISCLAIMER

2.4 Sampling Method: All samples were collected using an Isco peristaltic pump with the inlet tubing lowered to approximately 1.0-1.5 meters below the surface. Pumping rate was approximately two liters per minute. A 20 L composite was collected at each station and partitioned (split) according to the workplan for shipping to the TVA Aquatic Research Laboratory (ARL) at Browns Ferry Nuclear Plant site or direct transfer to ORNL (DOE) personnel in the field.

2.5 Pertinent Site Conditions: Weather conditions were clear and sunny during sampling on July 21, 23, and 26.

2.6 Sample Storage/Handling: All samples were placed on ice in ice chests after partitioning. Zero headspace was established in each container by filling full and expressing any air bubbles before sealing. Samples remained on ice until shipped or transferred directly to ORNL (DOE) personnel. Excess composite sample was discarded. Samples were stored in refrigerators at 4°C $\pm$ 1°C after arrival at the Aquatic Research Laboratory (ARL).

2.7 Sample Transport: Samples collected on July 21, 23, and 26 were transported to Browns Ferry Nuclear Plant by overnight TVA mail courier. Personnel from ARL picked up samples from the mailroom and transported them to ARL.

2.8 Sample Pretreatment: Sample temperature was raised to 25°C in a warm water bath and samples were aerated as necessary to bring DO levels down to near 100 percent saturation. Adequate water for use in test initiation or daily renewal was filtered through a 100 µm nylon mesh filter into 2000 mL beakers, and appropriate dilutions were prepared where applicable.

2.9 Test Treatments: Samples from Clinch River Mile 19.0 and Mile 22.0 were tested at 100 percent (undiluted) and diluted to 50 percent using the appropriate culture media.

3.0 TEST ORGANISMS/CULTURING CONDITIONS

3.1 Species: Pimephales promelas, Fathead minnow

3.1.1 Source: ARL inhouse culture

3.1.2 Culture Water: Culture medium consisted of 50 percent dechlorinated tap water and 50 percent moderately hard reconstituted water. Dechlorination was achieved by activated carbon filtration and verified by DPD titration. Reagents for reconstituted water were added to reverse osmosis product water.

Both waters were passed through a pack column degasser to bring dissolved gases to saturation. Culture medium was continuously aerated to help ensure aseptic conditions. Total hardness was approximately 95 mg/L as $CaCO_3$.

3.1.3 Temperature of Culture: 25°C ± 1°C

3.1.4 General Maintenance: Adult fathead minnows are maintained in glass aquaria in a flow through recirculating system. Flow rate to aquaria used for spawning is one aquarium volume per hour.

Approximately 20 percent of the water volume is replaced twice weekly. Adults are fed three times daily. Sexually mature fish are placed in 21-L glass aquaria (one male, four females) and reproduction is checked and recorded daily. Spawns are removed from aquaria and incubated in 1-L glass beakers under aeration to the proper stage of development for the target test.

Fish health is monitored regularly and corrective action is taken if necessary. Spawning frequency from individual aquaria is tracked and sexually spent individuals are replaced as necessary. Every 4-6 months a group of the same age fish from at least three spawns is reared to adults for replacement spawners.

3.1.5 Spawn Date: July 17, 1993

3.1.6 Hatch Date/Time: July 21, 1993/1015 CDT - July 22, 1993/0645 CDT

3.1.7 Culture/Acclimation Water: Moderately hard reconstituted water

3.1.8 Acclimation Temperature: 25°C ± 1°C

3.1.9 Mean Dry Weight at Start of Test: 0.06 mg

3.1.10 Diseases and Treatment: None.

3.1.11 Food and Feeding: Larvae were fed brine shrimp (Artemia) nauplii <24-h old twice daily beginning after hatching to ensure food availability if larvae began feeding prior to test initiation.

3.2 Species: Ceriodaphnia dubia, daphnids

3.2.1 Source: Inhouse culture, TVA, Aquatic Research Laboratory

3.2.2 Culture Water: Moderately hard reconstituted water containing 10 percent filtered Tennessee River water and 1.0 ppb selenium. [2] Total hardness was approximately 95 mg $CaCO_3$/L.

3.2.3 Temperature of Culture: 25°C ± 1°C

3.2.4 General Maintenance: Adults used to produce neonates for test initiation are selected as neonates from broods as described below on 2 or 3 consecutive days 6-10 days prior to test initiation. (Adults up to 14 days old may be used for neonate production.) These animals are raised individually (a brood may be raised as a group until Day 3 at which time animals are transferred to

individual cups), and a record is made of their reproduction. Their fourth brood is generally the second brood with 8 or more young and is the earliest brood used for test initiation.

Mass cultures may also be maintained in 8-L glass battery jars in light and temperature controlled incubators. New cultures are started weekly (7-10 days) with approximately 50 neonates. These neonates are selected from the third or fourth brood of the adult, from broods containing 8 or more young.

3.2.5 Food and Feeding: Food used for Ceriodaphnia cultures and this study was obtained from a commercial source (Aquastar) and consists of YCT and Selenastrum prepared according to EPA requirements. Individual animals contained in cups with 15 mL medium were fed 0.1 mL food and algae at renewal.

4.0 TEST METHODS

4.1 Fathead Minnow (Pimephales promelas) Larval Survival and Growth Test, EPA Test Method 1000.0. [3]

4.1.1 Modification/Amendments to Method 1000.0:

4.1.1.1 A 100-micron mesh nylon screen was used to filter samples rather than a 60-micron mesh as described in EPA methods.

4.1.1.2 The Clinch River Mile 19.0 sample storage temperature on Day 6 and the Clinch River Mile 22.0 sample storage temperature on Day 1 were below the prescribed 4°C ± 1°. These temperatures were 2.8°C and 2.5°C, respectively. Temperatures of samples received on ice ranged from 1.7°C to 3.7°C.

4.1.2 Date/Time Test Initiated: July 22, 1993/1010 CDT

4.1.3 Date/Time Test Terminated: July 29, 1993/0930 CDT

4.1.4 Test Chamber: 600-mL borosilicate glass beakers
Volume per chamber: 350 mL

4.1.5 Number of Test Organisms per Chamber: 10

4.1.6 Number of Replicates per Treatment: 4

4.1.7 Dilution Water/Control Water: Moderately hard reconstituted water

4.1.8 Renewal Period: 24-h

4.1.9 Test Temperature: 25.0°C ± 1°C

4.1.10 Feeding Regime During Test: Fathead minnow larvae were fed brine shrimp (Artemia) nauplii <24-h old 3 times daily ad libitum.

4.1.11 Physical and Chemical Parameters Measured: Parameters measured daily (initially) on test solutions and control waters were temperature (temperature was adjusted to equal "final" temperature before renewal), DO, pH and conductivity. In addition, alkalinity, hardness, and total residual chorine were measured on each new sample at the time of first use (7/22, 7/24 and 7/27).

Final measurements taken daily before renewal were temperature and DO in every test beaker and pH and conductivity in one replicate per treatment. Mean values and ranges are reported in section 6.3.

4.1.12 Statistics:

Revised statistical procedures contained in the second edition of EPA's short-term chronic toxicity methods require a decision process for testing statistical assumptions before selecting a specific test method to determine toxicity endpoints. [3] Decision processes followed for testing survival and sublethal (growth) effects are shown in sections 6.1.2.2 and 6.1.3.1. Based on tests for normal distribution and homogenous variance of data, the statistical test used for endpoint determination of survival data was Steel's Many-one Rank Test and for growth data was Dunnett's Test.

4.2 Ceriodaphnia Survival and Reproduction Test, EPA Test Method 1002.0. [3]

4.2.1 Modifications/Deviations to Method 1002.0:

4.2.1.1 Enriched culture medium (see Section 3.2.2.).

4.2.1.2 A 100-micron mesh nylon screen was used to filter samples rather than a 60-micron mesh as described in EPA methods.

4.2.1.3 The Clinch River Mile 19.0 sample storage temperature on Day 6 and the Clinch River Mile 22.0 sample storage temperature on Day 1 were below the prescribed 4°C $\pm$ 1°. These temperatures were 2.8°C and 2.5°C, respectively. Temperatures of samples received on ice ranged from 1.7°C to 3.7°C.

4.2.2 Date/Time Test Initiated: July 22, 1993/1045 CDT

4.2.3 Date/Time Test Terminated: July 29, 1993/1000 CDT

4.2.4 Test Chamber: 1-ounce plastic cups (Plastics, Inc., #P.I.-1)
Volume per Chamber: 15 mL

4.2.5 Number of test organisms per chamber: 1

4.2.6 Number of replicates per treatment: 10

4.2.7 Dilution Water/Control Water: Enriched moderately hard reconstituted water

4.2.8 Renewal Period: 24 hours

4.2.9 Test Temperature: 25.0°C ± 1°C

4.2.10 Feeding Regime During Test: Each organism was fed 0.1 mL of prepared food and algae concentrate daily (added to renewal water before introduction of test organism).

4.2.11 Physical and Chemical Parameters Measured: Parameters measured daily ("initial") on test solutions and control waters were temperature (temperature was adjusted to equal "final" temperature before renewal), DO, pH and conductivity. In addition, alkalinity, hardness, and total residual chlorine were measured on each new sample at the time of first use (7/22, 7/24, and 7/27).

"Final" measurements of temperature were made in 10 randomly selected cups when the tray was removed from the incubator. DO and pH were measured daily in 1 cup per treatment following renewal. Mean values and ranges are reported in section 6.3.

4.2.12 Statistics:

Revised statistical procedures contained in the second edition of EPA's short-term chronic toxicity methods require decision process for testing statistical assumptions before selecting a specific statistical test to determine toxicity endpoints. [3] Fisher's Exact Test was used to evaluate Ceriodaphnia survival effects during the study. Statistical evaluation of daphnid reproduction was not required because all treatment values were greater than the control.

5.0 QUALITY ASSURANCE

5.1 Toxicity Test Methods: All phases of the study including, but not limited to, sample collection, handling and storage; glassware preparation; test organism culturing/acquisition and acclimation; test organism handling during test; and maintaining appropriate test conditions were conducted according to the protocol as described in this report and EPA/600/4-89/001. [3] Any known deviations were noted during the study and are reported herein.

5.2 Physical and Chemical Methods

5.2.1 Reagents, Titrants, Buffers, etc.: All chemicals were certified products used before expiration dates (where applicable). All ARL chemicals are recorded in a bound Laboratory Chemical Logbook and specific chemicals used were documented on a chemical record sheet contained in the study notebook.

5.2.2 Instruments: All identification, service, calibration, and standardization information pertaining to ARL laboratory instruments is contained in bound Laboratory Instrument Logbooks and specific instruments used were documented on an instrument record sheet contained in the study notebook.

5.2.3 Temperature was measured using glass mercury thermometers. The instrument was standardized and inspected with readings made according to TVA procedure DS-42.11. [4]

5.2.4 Dissolved oxygen was measured using a YSI Model 57 oxygen meter. The instrument was standardized (using the Winkler method) and readings were taken according to TVA procedures S&F DS-43.6 and DS-42.4, respectively. [4]

5.2.5 The pH was measured using an Orion Model SA250 meter equipped with an Orion Ross combination electrode. The instrument was standardized and readings were made according to TVA procedures DS-43.7 and DS-42.8, respectively. [4]

5.2.6 Conductance was measured using a YSI Model 32 SCT meter. The instrument was standardized and readings were taken according to TVA procedures DS-43.3 and DS-42.3, respectively. [4]

5.2.7 Alkalinity was measured by titration of 100 mL samples with 0.02 N H_2SO_4 to an end point of 4.5 according to TVA procedure DS-42.1. [4]

5.2.8 Hardness was determined by titration of 50 mL samples with EDTA to a colorimetric endpoint using an indicator (Instructions provided by Reagent Manufacturer [Calgon]), Schwarzenbach Method.

5.2.9 Total residual chlorine (TRC) was determined using the DPD Titrimetric Method according to TVA procedure DS-42.9, Rev. 0. [4]

5.3 Reference Toxicant Tests

5.3.1 Test Type: Fish - 7-day chronic (NOEC)

Daphnids - 7-day chronic (NOEC)

5.3.2 Standard Toxicants Used:

Copper Sulfate Reference Toxicant Solution - fish and daphnids
Source/Brand: EPA

5.3.3 Dilution Water Used: Moderately hard reconstituted water (enriched for daphnids) - fish and daphnid chronic.

5.3.4 Statistics: Chronic Test, FH Survival/Growth and Ceriodaphnia Reproduction, NOEC - Dunnett's Test or Steel's Many-one Rank Test, EPA Bootstrap Procedure - IC_{25}

Ceriodaphnia Survival - Fisher's Exact Test

6.0 RESULTS

6.1 Fathead Minnow Larval Survival and Growth Test

6.1.1 Summary of Results: No survival or growth effects were demonstrated in fathead minnows exposed to Clinch River Mile 19.0 or Mile 22.0 samples during the CR-ERP Ambient Water Toxicity Study conducted from July 22-29, 1993.

6.1.2 Results, Survival Data:

6.1.2.1 Daily Percent Survival Summary for Fathead Minnow Larval Survival Test, CR-ERP Study, July 22-29, 1993.

Treatment	Total Daily % Survival						
Day	1	2	3	4	5	6	7
Medium	100	100	100	100	100	100	100
CRM 19.0-50%	100	100	100	100	100	100	100

6.3 Physical/Chemical Parameters

6.3.1 Overall Test Temperature

6.3.1.1 Fathead Minnow: 24.9°C (24.5°-25.2°C)

6.3.1.2 Ceriodaphnia: 25.3°C (25.1°-25.6°C)

6.3.2 Water chemistry summary for CR-ERP Study, July 22-29, 1993.

See: Appendix A Water Chemistry Mean Values and Ranges for Fathead Minnow and Ceriodaphnia Tests, CR-ERP Study, July 22-29, 1993

6.4 Reference Toxicant Tests

6.4.1 Summary of Results:

Reference toxicant tests conducted prior to CR-ERP Study showed chronic results consistent with ARL control chart ranges for fathead minnows and daphnids.

6.4.2 Fathead Minnows

6.4.2.1 Date/Time of Most Recent Test:
July 6, 1993/1055 CDT to July 13, 1993/1000 CDT

6.4.2.2 LOEC: 0.02 mg Cu/L
NOEC: 0.008 mg Cu/L
IC_{25}: 0.012 mg Cu/L

6.4.2.3 Control Chart Information:

Number of standard tests completed by laboratory: 45

LOEC Range: 0.008–0.02 mg Cu/L (one concentration increment)
NOEC Range: 0.003–0.008 mg Cu/L (one concentration increment)
IC_{25} Range: 0.004–0.012 mg Cu/L

6.4.3 Ceriodaphnia

6.4.3.1 Date/Time of most recent test:

July 12, 1993/0935 CDT to July 18, 1993/1028 CDT

6.4.3.2 LOEC: 0.05 mg Cu/L
NOEC: 0.02 mg Cu/L
IC_{25}: 0.026 mg Cu/L

6.4.3.3 Control Chart Information:

Number of standard tests completed by laboratory: 43

LOEC Range: 0.008–0.05 mg Cu/L (two concentration increments)
NOEC Range: 0.003–0.02 mg Cu/L (two concentration increments)
IC_{25} Range: 0.011–0.030 mg Cu/L

7.0 CONCLUSION

Tests conducted using Clinch River Mile 19.0 and Mile 22.0 samples collected on July 21, 23, and 26 showed no toxicity (survival, growth, or reproduction effects) to fathead minnows or Ceriodaphnia.

PROJECT REAGENT RECORD SHEET

Project/Study: DOE July 93
Personnel: OH

Beginning Date: 7-22-93
Ending Date: 7-29-93

WINKLER TITRATION METHOD

Alkaline-Iodide-Azide:
Brand Fisher
Lot # 910067-24
Exp. Feb 93

Manganous Sulfate:
Brand Fisher
Lot # 910067-24
Exp. April 93

Sodium Thiosulfate:
Brand RICCA
Lot # A267
Exp. April 94

Sulfuric Acid:
Brand Fisher
Lot # 854507
Exp. Indef

Thyodene:
Brand Fisher
Lot # 912254
Exp. Indef.

pH BUFFER SOLUTIONS

pH 4:
Brand Spectrum
Lot # HH150
Exp. Sept 93

pH 7:
Brand Mallinckrodt
Lot # 0098KIAN
Exp. 6-94

pH 10:
Brand Mallinckrodt
Lot # 0099KJXJ
Exp. 12-93

pH ____:
Brand N/A
Lot #
Exp.

CONDUCTIVITY STANDARD SOLUTIONS

200 µmhos:
Brand Beckman
Lot # J302C
Exp. 11-94

720 µmhos:
Brand Beckman
Lot # E052H
Exp. 5-94

____ µmhos:
Brand N/A
Lot #
Exp.

ALKALINITY TITRATION

Sulfuric Acid Solution N/50:
Brand Mallinckrodt
Lot # H366KHKJ
Exp. Indef

HARDNESS TITRATION

Hardness Titrating Solution:
Brand CALGON
Lot # R237700
Exp. Indef.

Hardness Indicator:
Brand Calgon
Lot # 01E93
Exp. Indef

Hardness Buffer Solution:
Brand CALGON
Lot # 266-63
Exp. Indef

CHLORINE TITRATION

DPD Powder Pillows:
Brand HACH
Lot # 03CM
Exp. Indef

Potassium Iodide:
Brand Fisher
Lot # 863184A
Exp. Indef

FAS:
Brand RICCA
Lot # E238
Exp. 8-20-93

PLARC501-632
