March, 2007

Abstract

Health and Disability Advocates and Rob Paral and Associates have developed estimates of uninsured persons in Illinois by state legislative districts. These estimates of the uninsured household population are categorized by poverty level and age.

This report presents the basic distributions by age and poverty status. A note on methodology is included at the end of this report.

Poverty status is estimated according to the federal poverty levels (FPL). In 2006, 100 percent FPL was approximately \$20,000 for a family of four and 400 percent FPL was \$80,000 for a family of four.

These estimates represent the household population in Illinois, and exclude a small percentage of the population residing in nursing homes and other group quarters.

For more information on the implications of the data, contact Stephanie Altman (saltman@hdadvocates.org), Stephani Becker (sbecker@hdadvocates.org) or Tom Yates (tyates@hdadvocates.org) of Health and Disability Advocates at (312) 223-9600.

For information on the methodology contact Rob Paral at info@robparal.com

Michael Norkewicz of Rob Paral and Associates developed the methodology on which these estimates are based.

Research Supported By:

Health & Disability Advocates is a national policy and advocacy organization that seeks to assure that low-income older adults, children and adults with disabilities lead secure and dignified lives. HDA advocates for policies that promote economic security and provide health coverage. Generous support for this project was provided by the Michael Reese Health Trust and the Chicago Community Trust. http://www.hdadvocates.org.

United Power for Action and Justice is an independent, self-funding organization of churches, synagogues, mosques, civic, neighborhood, labor, health, and ethnic institutions from across Cook County that have joined together across religious, geographic, racial and economic lines to fight for the common good on issues of shared concern. Founded in 1997, United Power has a track record of victories on issues from expanding access to healthcare to building affordable housing to developing programs to break the cycle of homelessness. United Power is an affiliate of the national Industrial Areas Foundation organizing network. https://www.united-power.org/

Heartland Alliance is a service-based, human rights organization focused on investments in and solutions for the most poor and vulnerable men, women, and children in our society. http://www.heartlandalliance.org/

Methodology for Estimating Uninsured Persons by State Legislative Districts in Illinois in 2005

The annual Current Population Survey (CPS) conducted by the U.S. Census asks a sample of Illinois residents a variety of demographic, social and economic questions including whether they have health insurance. This provides an estimate of the uninsured for the state and for major subdivisions of the state including Chicago, suburban metro Chicago and the remainder of the state.

The CPS sample is not large enough to permit estimates of the uninsured at the state legislative district level, and the survey does not provide the geographic equivalency information necessary to apportion findings into those districts. The question becomes how to use CPS findings for Chicago, suburban Chicago and downstate Illinois to estimate health insurance coverage for the legislative districts.

We begin by cross tabulating CPS findings on uninsurance to create a matrix of uninsured persons within 128 cells covering eight-specific poverty levels [under 100%, 100-149%, 150-199%, 200-249%, 250-299%, 300-349%, 350-399%, and 400% and more] for four race cohorts: White not Latino; Black not Latino; Latino; and Other Not Latino; by two age cohorts: 19-24 and 25-64; and by two employment cohorts: employed and all other. We created this matrix for downstate Illinois, suburban metro Chicago, and the city of Chicago.

The American Community Survey is conducted by the U.S. Census Bureau and ACS findings are available for Public Use Microdata Areas across the state. We use the CPS data on health insurance coverage and apply it to the same matrix of cells within each ACS PUMA.

We then apportion PUMA data into state legislative districts by using geographic equivalency files available from the Census Bureau that match blocks within state legislative districts against blocks with PUMAs. The assignation of PUMA data was done on the basis of race/Latino specific population 18 to 64 years of age.

Following is a more detailed step-by-step description of our method:

1) Review readme file at new state legislative districts file http://ftp2.census.gov/census_2000/datasets/State_Legislative_Districts/SLD_Block_Suppleme nt/Illinois/0README_SLDB.doc

Page 35

- 2) Download block equivalency file. unzip, and process in dBASE [366,137 blocks in IL at census 2000]
- http://ftp2.census.gov/census_2000/datasets/State_Legislative_Districts/SLD_Block_Suppleme_nt/Illinois/ilgeo_slb.zip
- 3) Download SF1 block data [366,137 blocks] on household population for Total [from Table P27[, under 18 years [from Table P28], and 65 years of age [from Table P30] deducting under 18 and 65 plus from Total to yield the 18 to 64 year old household population for Total; White not Latino; Latino; and Black. Apportion out Black Latino from Black based on Statewide proportion of Black population that is not Latino. Obtain Other not Latino deducting the three groups from the state total.
- 4) Index block equivalency and SF 1 files to put PUMA number and state legislative districts upper and lower house numbers on SF 1 file.
- 5) Sum block data by PUMA and state legislative lower [representative in general assembly number].
- 6) Develop Race/Latino-specific portions of each representative district in each PUMA.
- 7) Download and process American Community Survey data public use microdata samples data [123,074 records] for 2005 for the household population. [The Bureau of the Census started conducting the ACS in group quarters in 2006]. http://ftp2.census.gov/acs/downloads/pums/2005/csv_pil.zip
- 8) Tabulate number of persons at eight-specific poverty levels [under 100%, 100-149%, 150-199%, 200-249%, 250-299%, 300-349%, 350-399%, and 400% and more] for four race cohorts: White not Latino; Black not Latino; Latino; and Other Not Latino; by two age cohorts: 19-24 and 25-64; and by two employment cohorts: employed and all other for each of the 87 PUMAs in Illinois.
- 9) Apportion ACS 2005 PUMS Race/Latino-, age-, employment-, poverty- specific data based on proportion of each Race/Latino specific household population 18 to 64 years of in a state house district to the PUMA total using SF1 census from 2000. Using the ACS 2005 has the advantage of providing current demographic and socioeconomic data and removes the guesstimation of forwarding that data.
- 10) Because data in the project refer to the household population, remove 33 of the 21,410 ASEC records from 2002-2006, leaving a total of 21,377 records.

and

Page 36

- 11) Develop uninsured coverage rates from the Annual Social and Economic Supplement [ASEC, formerly March supplement to the Current Population Survey] for 2002-2006 covering calendar years 2001-2005 for three geographic areas in Illinois: Chicago, equivalent to PUMAs 03501 to 03519; suburban Chicago [suburban Cook; DuPage, Grundy, Kane, Kendall, Lake, McHenry, and Will counties], equivalent to PUMAs 03001 to 03414; and downstate [94 counties], equivalent to PUMAs 00101 to 02900. Five-years of data are used to improve reliability of the substate data.
- 12) Identify cells with zero counts for which Statewide data will be substituted, and Race/Latino-, age-, employment- groups with a now N for which Statewide data will be substituted.
- 13) Apply final uninsured rates to matrix developed in Step 9.
- 14) Sort and sum data by state house district, combine relevant house districts into state senate districts.
- 15) Review all output for reasonableness.
