INTRODUCTION

The third volume of Tracking the Field continues the advancement of data collected, analyzed, and presented to build a better understanding of the environmental philanthropic field. This data is fundamental to understanding environmental philanthropy overall. This volume captures U.S. foundations' initial response to the current economic crisis that began in 2008, and includes new innovations and a more comprehensive analysis of issues, strategies and global grantmaking by Environmental Grantmakers Association (EGA) members. Tracking the Field is part of a growing body of research of environmental funding trends across the globe, which includes Europe,¹ Australia,² and Canada.³ This report focuses both on overall U.S. environmental funding, as well as a deeper exploration of the EGA membership's grantmaking. Together with the interactive database available to members through EGA's website, Tracking the Field represents an evolving and innovative tool to enhance EGA members' ability to increase knowledge, coordination, and collaboration for enhancing the field.

Building on the findings of the first two reports (in 2007 and 2009), this document analyzes nearly 9,000 grants made in 2009 by the vast majority of EGA's 200-plus members, with an added level of detail and rigor. The first report coded more than 5,000 grants by issue, provided a directory of members by issue, and listed members by asset level. The second report reviewed nearly 10,000 grants, listed the largest members by environmental giving, further honed the area taxonomy, added geographic distribution of environmental grants, listed top grant recipients, provided information outside the EGA community through a partnership with the Foundation Center, and offered a deeper analysis in select key areas. As was the case in the 2009 report, Volume 3 includes data from the Foundation Center, codes grants by issue and geography, lists the largest foundations by giving and top grant recipients, and provides deep analysis of select key areas. In addition, it provides trends in funding, adds a second level to the issue of area segmentation for a more nuanced classification, adds strategy to the coding taxonomy for additional information, reviews grants between EGA members (re-granting), and provides even more detailed information on the grantees.

The findings of this document and the full report are broken into five main areas: (1) total environmental

giving from all U.S.-based environmental grantmakers and, more specifically, EGA members; (2) giving, broken down by issue, from all U.S.-based environmental grantmakers and EGA members; (3) geographic distribution of all environmental grants and distribution for EGA members' grants; (4) strategies funded by EGA members, and re-granting within EGA (grants between EGA members). Tracking the Field, Volume 3, provides for the first time a deeper analysis of global giving by EGA members, as well as cross-sector analyses and trends gleaned from three years of grant data. The appendices provide a list of funders by issue, a breakdown of EGA members' grants by primary issue area, and distribution of grants by geographic region.

The organization of this report is a departure from past volumes. Rather than separating global grantmaking from domestic grantmaking in distinct sections, we incorporate the findings for both sectors in each area. This reflects an intentional goal to further integrate global perspectives into the fabric of EGA, whether it is in the form of events, research, or outreach. We hope that whether your grantmaking is place based, issue based, or a combination of the two, you will utilize this report in conjunction with the searchable tool on our website to gain insight into the approaches of your peers at all levels and perspectives-issue, geographic, and strategic.

The advances in Tracking the Field do not stop with the report. In the fall of 2011, EGA revamped its website to incorporate a new, rich search tool that allows access to the data in this report. Previously, Tracking the Field was only available as a printed report, but now EGA members are able to search the coded grants by primary and/or secondary issue, geography, strategy, grantor and/or grantee, or any combination thereof. In addition to access to grants, the website allows EGA members to review all grants made by a member, members' contact information, and all grants received by a grantee.

The continued evolution of the report and website are designed to further EGA's mission to work with members and partners to promote effective environmental philanthropy through knowledge sharing, debate, leadership cultivation, and collaboration, with the ultimate goal of catalyzing action. These actions will coalesce in pursuit of the ultimate goal of EGA and its members: a world with healthy, equitable, and sustainable ecosystems, communities, and economies.

EXECUTIVE SUMMARY

This report is the third edition of the Environmental Grantmakers Association's (EGA) *Tracking the Field*. It examines EGA members' environmental grants for the 2009 fiscal year, as well as the Foundation Center's data for larger U.S. foundations' environmental giving in 2009. The report includes the following key findings:

Key Findings

TOTAL GIVING

- Total philanthropic giving to environmental issues remained consistent at \$2.7 billion between 2007 and 2009.
- Environmental giving by EGA members to non-profits decreased 18%, from \$1.03 billion in 2007 to \$871.2 million in 2009.⁴
- The five non-profits that received the most environmental grant dollars from all sources, which includes re-granting, are as follows: Conservation International, Nature Conservancy, ClimateWorks Foundation, Alliance for Climate Protection, and Energy Foundation.⁵
- The five non-profits that received the most environmental grant dollars from EGA members, excluding re-granting, are: Monterey Bay Aquarium Research Institute, Nature Conservancy, Environmental Defense Fund, Resources Legacy Fund, and Conservation International.

ISSUE AREA

- Climate & Atmosphere and Energy each received a bigger piece of the total environmental philanthropic giving, growing from 9.6% to 20.8% from all funders.⁶ This growth was more pronounced among EGA members, whose giving in these categories increased from 13.7% to 31.9%.
- Biodiversity & Species Preservation made up 35% of all environmental philanthropic giving, compared to 8% of EGA members' giving.⁷ When EGA members' grants are further broken down into the secondary issue area, Biodiversity & Species Preservation was the leading area, making up 14% of all grants.
- EGA members provided proportionally more funding to Sustainable Communities and Sustainable Agriculture & Food Systems (6.4%, or \$55.61 million) than to total environmental philanthropy (1.7%, or \$26.17 million).
- Five out of 17 issue areas accounted for 66% (\$576.08 million) of total giving by EGA members. These five, in order, are: Climate & Atmosphere (\$157.57 million), Energy (\$120.84 million), Terrestrial Ecosystems & Land Use (\$113.31 million), Coastal & Marine Ecosystems (\$111.78 million), and Biodiversity & Species Preservation (\$72.56 million).

Internationally, those five issue areas accounted for 71.1% (\$214.16 million) of grantmaking by EGA members. They are, in descending order: Climate & Atmosphere (\$63.09 million), Terrestrial Ecosystems & Land Use (\$49.04 million), Biodiversity & Species Preservation (\$38.44 million), Energy (\$33.61 million), and Coastal & Marine Ecosystems (\$29.96 million).

GEOGRAPHIC DISTRIBUTION

- Of the 196 EGA members captured in EGA's *Tracking the Field* database for 2009, 136 granted globally for a total of \$300.9 million, or 29% of total grant dollars in the database.
- Most of the global grants supported by EGA members were granted to U.S.-based organizations. The top five grantees were all U.S. based.
- Only 16 EGA member foundations contributed 86.5% of members' total global giving individually, equaling \$260.5 million.
- While Pacific Coast and East Coast regions both saw a significant drop in 2009 funding, they continued to receive the most domestic grants of any specific region.

GRANTMAKING STRATEGIES

- Advocacy / Organizing / Movement Building was the number one strategy used by EGA members in their grantmaking initiatives (37%, or \$326.59 million).
- Communications / Media and Litigation were the lowest ranked strategies in EGA members' grantmaking, with only 3% for Communications / Media (\$22.32 million) and 1% of grants going to Litigation (\$6.3 million).
- Globally, funding sources had the same top strategies as overall funding, but with a slightly different prioritization: Advocacy / Organizing / Movement Building led with \$126.0 million, followed by Stewardship / Acquisition / Preservation at \$68.67 million. Capacity Building / General Operating totaled \$34.24 million, and Public Policy (\$33.85 million) ranked next in order.

RE-GRANTING

- Re-granting is defined in this report as a grant from one EGA member to another EGA member. EGA members re-granted \$172 million in 2009.
- 80% (\$136.93 million) of all re-grants focused primarily on Climate & Atmosphere and Energy issues, and 82% used the strategies of Advocacy / Organizing / Movement Building.
- **63%** (\$104 million) of re-grants were for global work, with 30% going to Asia.
- Only 36% of re-grants were domestic, with the majority (86%) of these domestic grants directed to the federal level.

METHODOLOGY

To create the 2009 Tracking the Field report, the Environmental Grantmakers Association created a database and categorized the environmental grants of 196 EGA member foundations for 2009. This included recording 8,847 grants and categorizing them respectively with the following information: issuing the foundation's name; the city and state in which the foundation is headquartered; the amount given (in U.S. dollars); the recipient's name, city, and state; the year the grant was made; and the primary and secondary environmental issue area, strategy, and geographic region the grant affected. When available, the grant's description, grantee's mission statement, and grantee's website were also recorded. In coding the data, the researchers used a form that included a list of environmental issues, strategies, and geographic regions, based on a taxonomy that EGA created with similar organizations from across the globe.

The data-collection team used member websites' grant lists or IRS Form 990 to identify EGA members' fiscal year 2009 grants. For those foundations for which researchers were unable to find grant data, each was asked directly to provide a list of its 2009 grants. EGA was unable to obtain a 2009 grant list from seven of the 209 member foundations. These seven members were not included in the report.

When categorizing grants, the data researchers looked at the grant description and grantee's website for mission statements and program descriptions. In most cases, the researcher was able to determine the information necessary to categorize the grants based on the mission statement and the grantee's program areas as described on the website. If the grant description did not provide the information necessary to define the issue area and the information on the grantee's website was too broad to allow the researcher to identify a specific environmental issue area, the grant was categorized as General Environment / Multi-issue Work. Recognizing that environmental grantmaking is highly interrelated (that is, any one grant could conceivably cover several issue areas), the research and data coordinator instructed researchers to use their discretion to select

the environmental issue area that best corresponded to the subject of the grant. EGA worked to fully capture all of our member's grants. The data collectors recorded all grants regardless of size, except those given to individuals or described as association fees. The database, therefore, may also include grants committed, but not distributed, in 2009.

Many steps were taken to collect the most accurate data possible. One person, the knowledge and program manager, trained each of the data researchers and merged the data to ensure that each collector was using the same methodology. After the data were collected, two additional team members reviewed each grant. Once the grant list was finalized, it was loaded into a customized relational database. This database was used to filter and group the data for analysis by EGA staff and to obtain relevant data for this report. Next, EGA staff loaded the data into a customized CiviCRM database that matched inconsistencies in grantees names to provide accurate totals. This searchable database was made available to the EGA membership for two months before the data was aggregated for this report, giving members the opportunity to review their own grants and re-categorize them to reflect the intentions of the program officer.

To put the EGA memberships' giving into perspective, EGA partnered with the Foundation Center to gather data on environmental giving by larger U.S. foundations. All numbers included in this report, which represent environmental giving by U.S. foundations, were provided by the Foundation Center. The Foundation Center data focuses on patterns of giving based on all grants of \$10,000 or more awarded by a sample of 1,384 large grantmaking private (independent, corporate, and grantmaking operating) foundations in 2009. The foundations in the database made 154,644 grants totaling 22.14 billion, representing roughly half of the grant dollars awarded to organizations by all U.S. private and community foundations in 2009. Environmental giving by foundations in the sample also accounted for well over half of estimated environmental giving by the nation's foundations overall.

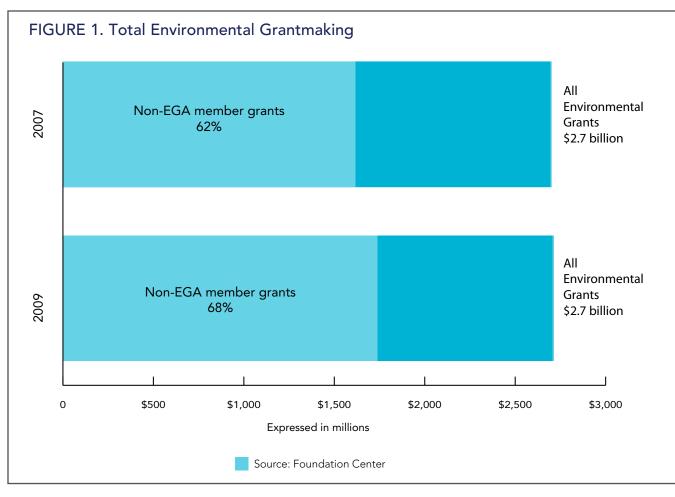

FINDINGS

Total Giving

In 2009, the more than 76,000 U.S.-based grantmaking foundations gave \$42.8 billion in grants to all philanthropic issues, representing a decrease of 2.1% from 2008.⁸ Overall, foundation giving decreased approximately \$1 billion from \$46.8 billion.⁹ U.S. environmental grantmaking increased by less than 1% between 2007 and 2009, remaining consistent at \$2.7 billion total¹⁰ (see Figure 1). This shows a significant prioritization of environmental issues, even in the face of a 17.2% overall loss (\$117.3 billion) in foundations' assets in 2008.¹¹ Between 2007 and 2009, grantmaking by EGA members, however, was more representative of the overall drop in funding, showing a 17.8%, or \$155 million, decrease in grants.

Giving for the environment and animals by the nation's more than 76,000 grantmaking private and community foundations totaled an estimated \$2.93 billion in

2009.12 This figure represents just over 7% of overall foundation giving. Using a modified grants classification scheme-based on EGA's definition of "environmental"-resulted in a slightly lower estimate of \$2.71 billion in giving for the environment in 2009.¹³ This modified definition of "environmental" negates grants to organizations such as the American Society for the Prevention of Cruelty to Animals (ASPCA), which does not fall under EGA's purview. However, this definition shows a 0.7% (\$20 million) increase in overall environmental funding between 2007 and 2009. Environmental giving by EGA members to non-profits decreased 17.8% from \$1.03 billion in 2007 to \$871.2 million in 2009 (See Figure 1). This decrease from 2007 was most likely an outcome of the economic crisis and a small decrease in the number of foundations analyzed (down from 202 to 196). The average grant

Total Giving, Continued

by EGA members decreased by \$4,272, while the number of grants awarded decreased 13%. These findings most likely reflect reductions in giving resulting from the impact of the economic crisis on foundation assets.

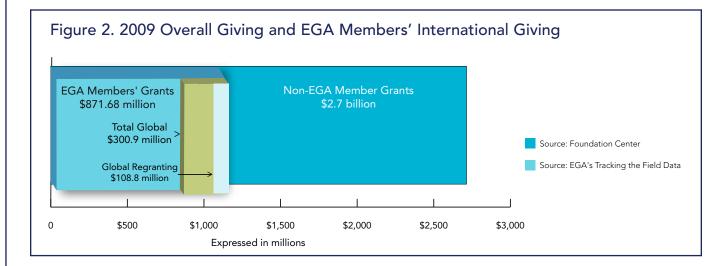

Tracking the Field, Volume 3, examines re-granting by EGA members for the first time. In 2009, EGA members granted \$172 million to other members. Including re-granting, EGA members gave \$1.04 billion in environmental grants in 2009, constituting 38% of all environmental giving by U.S. foundations.

A significant portion of the EGA community engages in global and cross-border grantmaking. Of the 196 EGA members tracked in our *Tracking the Field* database, 136 are engaged in global grantmaking at some level. A total of \$300.94 million, or 29% of all grants, issued in 2009 (excluding re-grants) went outside the U.S. border.

The diversity of EGA's membership base is reflected in the wide range of dollar amounts distributed by its members. The median grant by EGA members was \$25,000 and the largest was over \$35.3 million. While grants for over \$1 million only represent 1% of the number of grants given, grants of this size represent 34% of the total dollar amount donated by EGA members in 2009 (see Table 1). Large grants given by a foundation could either indicate a strategic decision to maximize impact by giving large grants to fewer organizations, or this trend could represent the shrinking capacity¹⁴ of foundations to administer a large number of grants.¹⁵

TABLE 1. EGA Members' Environmental Funding by Grant Size

Environmental Grant Levels	Amount (\$)	Proportion of Giving	No. of Grants	Proportion of Grants
\$1 - \$10,000	\$12,729,054	1%	2,824	32%
\$10,001 - \$50,000	\$98,333,010	11%	3,238	37%
\$50,001 - \$10,0000	\$102,312,485	12%	1,274	14%
\$100,001 - \$500,000	\$284,525,331	33%	1,301	15%
\$500,001 - \$1 million	\$78,831,120	9%	107	1%
\$1 million and up	\$294,951,051	34%	101	1%
TOTAL	\$871,682,051		8,845	

Largest Foundations

In 2009, EGA's 50 largest foundations gave \$780 million in grants for environmental issues, accounting for 90% of all environmental giving by EGA members. EGA's ten largest foundations, seven of which are located in California, gave 55% of EGA members' total contributions. This high proportion shows the great influence that a small number of foundations have on the amount given in individual categories. While most of the ten largest foundations focus on a range of environmental issues, three of them focus exclusively of climate related issues. The number of grants given by these ten foundations ranged from 601 individual grants, which were given by the Energy Foundation and totaled \$83.6 million, to 59 grants, which were awarded by Walton Family Foundation and totaled \$52 million. The \$742,352 difference in average grant size by these two foundations exemplifies that the size of grant is not based exclusively on a foundation's total giving. It also illustrates that some of the largest foundations give many comparably smaller grants.

community that engages in global grantmaking, there is a vast difference in the amounts granted. The top 16 EGA member foundations that gave internationally contributed 86.5% (\$260.5 million) of EGA members' total global grants. There are 120 members, or 88.24% of all global and cross border grantors, that provide less than 1% each, making up 13.4% of the total global and cross-border giving from EGA members.

The Foundation Center discovered that of foundations that gave to environmental causes, the 50 largest U.S. foundations granted \$1.15 billion in 2009¹⁶ (see Table 2). This amount comprises 43% of all U.S. environmental grantmaking. The number of grants given by these foundations ranged greatly: from only two grants by the Eugene B. Casey Foundation (totaling \$35 million) to 176 grants by the Seattle Foundation (totaling \$10 million).¹⁷ The largest decline in environmental funding from an individual foundation was that of the Bill & Melinda Gates Foundation; that foundation's environmental funding dropped from \$254 million in 2007 to \$33 million in 2009.¹⁸

While there is a large percentage of the EGA

Top Grant Recipients

In 2009, there were 16 organizations that receive more than \$10 million each in support from environmental foundations, twice the number of organizations that received this amount of support in 2007¹⁹ (see Table 3). Conservation International received the most support (\$75.52 million), followed by the Nature Conservancy (\$66.68 million).²⁰ Nature Conservancy and National Resource Defense Council both received more than 80 environmental grants.²¹ All of the top five recipients of grants are located near Washington, DC, or San Francisco, CA, but work on both the federal and international levels.

EGA members' grantmaking was also focused toward large organizations that have programs across the U.S. and internationally. Overall, the top recipients of EGA members' grants continue to be ecosystem and conservation focused organizations (see Appendix D: Table 1). The Green Tech Action Fund,²² a new organization joining the top ten list, represents an increased focus on energy efficiency and climate issues. Due to one very large grant by the David and Lucile Packard Foundation, the Monterey Bay Aquarium Research Institute (\$35 million) received the most funding by an EGA member in 2009. Audubon Society (with 141 grants totaling \$5.98 million), Natural Resource Defense Council (with 108 grants for \$20.71 million), and Nature Conservancy (101 grants reaching \$27.84 million) all received more than 100 grants from EGA members, including those grants given to local chapters.²³ Conservation International Foundation, which had received the most grants from EGA members in 2007, received half as many grants in 2009.

Most of the grants given for global issues were provided to U.S.-based organizations (see Appendix D: Table 2). The top five grant recipients are all based in the U.S., and totaled almost a quarter of all funds (22.4%) given.

ISSUE AREA

Issue Key Findings

Five out of 17 issue areas accounted for 66% (\$576.08 million) of total grantmaking by EGA members: Climate & Atmosphere (\$157.57 million), Energy (\$120.84 million), Terrestrial Ecosystems & Land Use (\$113.31 million), Coastal & Marine Ecosystems (\$111.78 million), and Biodiversity & Species Preservation (\$72.56 million). The share of funding for Climate & Atmosphere and Energy leaped from 13.7% in 2007 to 31.9% in 2009, reflecting the huge investment in climate legislation domestically, and treaties at the global level.

This marks a shift away from funding for Terrestrial Ecosystems & Land Use and Coastal & Marine Ecosystems by EGA members, which moved from the number one and two most-funded issue areas in 2007, to the third and fourth in 2009 (see Table 5). When breaking down EGA members' grants further to the secondary issue area, Biodiversity & Species Preservation, however, was the leading area, making up 14% of grants (see Figure 3). EGA members provided 6.4% of total funding for Sustainable Communities and Sustainable Agriculture & Food Systems (\$55.6 million). With only 0.1% of funding for Population and 1% for Material Consumption & Waste Management, these two categories remained the least-funded issue areas by EGA members (see Figure 6).

Biodiversity & Species Preservation was by far the issue most funded by environmental philanthropy overall. Funders allocated \$559.10 million (35%) to this issue area, followed by Climate & Atmosphere, which received \$215.51 million (14%), and Terrestrial Ecosystems & Land Use with \$201.51 million (13%).²⁴ Climate & Atmosphere received more support overall in 2009 than it did in 2007, and moved from the seventh most granted issue (at 9.6% in 2007) to the second most granted issue (at 20.8% in 2009), all while still receiving proportionally less from the philanthropic community as a whole than it received from EGA members.

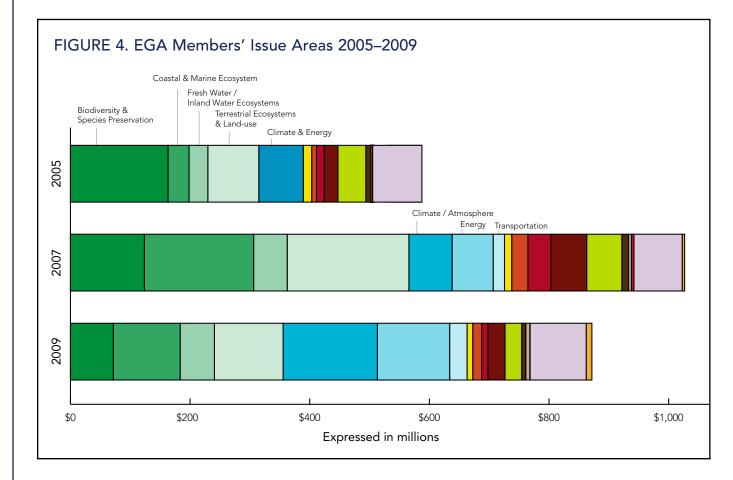

Issue Key Findings, continued

EGA members decreased their funding in "traditional" environmental issues: ecosystems and species preservation (Terrestrial Ecosystems & Land Use, Fresh Water / Inland Water Ecosystems, Coastal & Marine Ecosystems, and Biodiversity & Species Preservation) in 2009 (see Figure 5). Biodiversity & Species Preservation has seen a continuous drop in funding from 2005 to 2009, decreasing by \$90.57 million over four years. EGA's additional collection of secondary issue areas shows that while Biodiversity & Species Preservation received less funding as a primary issue area in 2009, it is the secondary issue of the most members' environmental grants. Terrestrial Ecosystems & Land Use saw the largest loss in funding, from \$203 million in 2007 to \$113 million in 2009, which is a shift back to 2005 funding levels. Coastal & Marine Ecosystems also saw nearly a 40% drop in funding in 2009, following a large increase in 2007. Even with this dramatic drop in funding, EGA members continue to fund Coastal & Marine Ecosystems at a much higher rate than general environmental philanthropy.

Support for Transportation experienced the most dramatic increase (384.6%) in funding with a jump from \$10.5 million in 2007 to \$51.2 million in 2009.25 EGA's members mirrored this trend with Transportation funding more than doubling between 2007 and 2009.

EGA members continued to provide greater funding to public health issues than the larger philanthropic community. Environmental Health, Environmental Justice, and Toxics received more than \$36 million from EGA members (4%) while receiving only 1% of all environmental grant dollars (see Figure 6).

Issue Area, continued

The same primary issues emerge globally as they do for EGA members overall. The five most common issue areas received 71% of all international grantmaking by EGA members. The issue that received the most grants and grant dollars (21%) internationally was Climate & Atmosphere,

which like many environmental issues is inherently global. Material Consumption & Waste Management and Population continued to be the least funded issue areas internationally, as they are domestically.

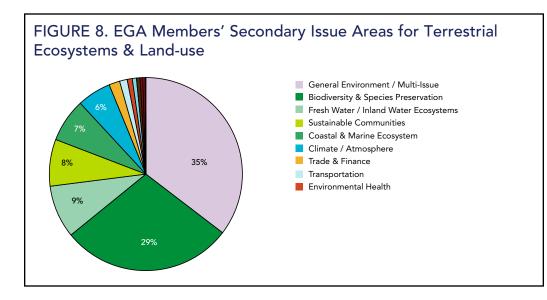

Secondary Issue Areas

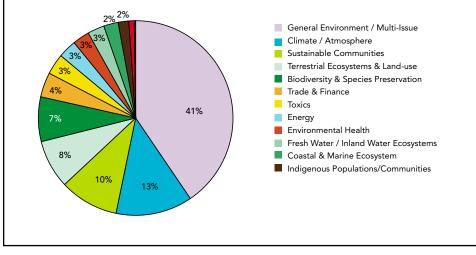

Exploring the secondary issue areas of EGA members' grants allows us to see the intersections in environmental philanthropy and how often more than one issue area is addressed by a specific grant.

Grants where the primary issue area was Terrestrial Ecosystems & Land Use most commonly also addressed Biodiversity & Species Preservation (\$32.6 million); the secondary issues also included Fresh Water / Inland Water Ecosystems (\$10 million), Sustainable Communities (\$8.9 million), Coastal & Marine Ecosystems (\$8.3 million), and Climate & Atmosphere (\$6.4 million). This illustrates the Terrestrial Ecosystems & Land Use connection with both urban and natural habitats (see Figure 8).

Sustainable Agriculture & Food Systems had the largest range of secondary issue areas (11 total) in grants made by EGA members in 2009 (see Figure 9). Sustainable Agriculture & Food Systems grants most commonly intersected with Climate & Atmosphere (\$3.5 million), Sustainable Communities (\$2.7 million), Terrestrial Ecosystems & Land Use (\$2.2 million), and Biodiversity & Species Preservation (\$2 million), which could indicate its potential as a strategic entry point for crosssector or cross-cutting work.

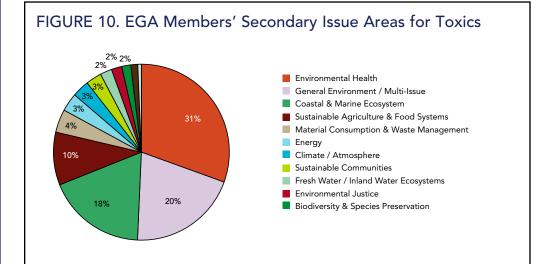

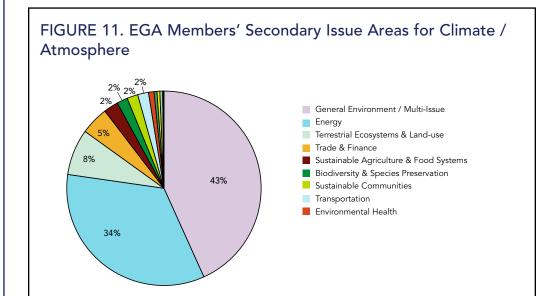

Secondary Issues, continued

Toxics grants made up a little more than 1% of EGA members' grantmaking (see Figure 10). Its \$9.4 million in funding was largely divided between grants related to Environmental Health (\$2.85 million), Coastal & Marine Ecosystems (\$1.88 million), and Sustainable Agriculture & Food Systems (\$1.7 million). This shows that foundations are approaching Toxics from different angles on this issue: from human health to pesticides and other sources, and ecosystem protection.

The largest portion of funding by EGA members went to Climate & Atmosphere (\$157.57 million), which had fewer secondary issues (see Figure 11). Energy was the secondary issue area more than one-third of the time, followed by Terrestrial Ecosystems & Land Use. The connections between the secondary issue areas of Trade & Finance and Terrestrial Ecosystems & Land Use grants, as they relate to the larger topic of Climate & Atmosphere, were particularly important in 2009 grantmaking, especially stemming from the December 2009 United Nations' Copenhagen Climate Change Conference (COP15), and the focus on the United Nations Collaborative Initiative on Reducing Emissions from Deforestation and Forest Degradation (REDD) in developing countries.

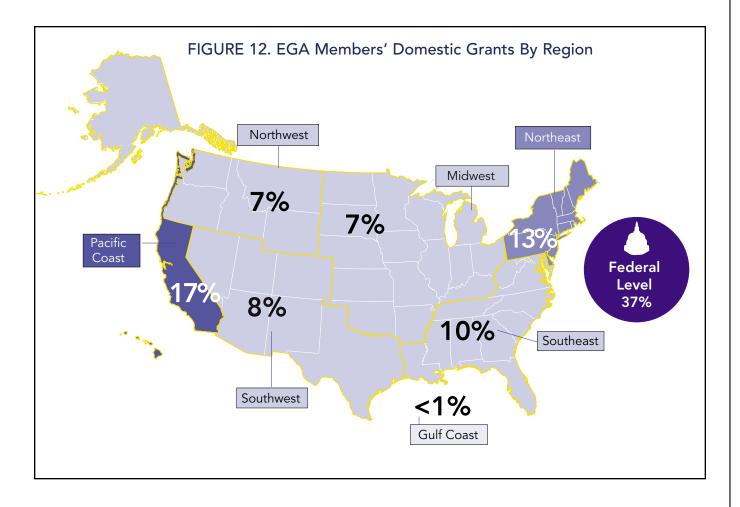

GEOGRAPHIC DISTRIBUTION

Geographic Distribution Key Findings

Domestic grantmaking made up 65% of total grantmaking by EGA members in 2009. This is consistent with 65% domestic grantmaking in 2007 by EGA members. Within the U.S., the Southeast saw the largest increase in funding, receiving \$26 million more in 2009 (91.5%) than it did in 2007 (see Table 6). Grants to the Southeast were generally focused on land, freshwater, and climate related issues (see Appendix C, p. 46). Grants to the federal level also experienced an increase that shows foundations focused more on grants that crossed multiple domestic regions. While funding to the Pacific Coast and Northeast regions decreased by about 50% in 2009, they still continued to receive the most environmental funding given to a specific region. While many EGA members grant beyond the state in which they are located, foundations frequently focus their funding locally. The trend in funding for Coastal & Marine Ecosystems is reflected in the map that illustrates the location of EGA members and general environmental foundations. The Gulf Coast continued to receive the least amount of domestic funding, receiving less than \$1.5 million dollars from EGA members in 2009.

Global grantmaking was not evenly distributed (see figure 12). Most of the money (\$147.87 million) went to "General," which included both participation at global conferences, such as the COPs, or grants to multiple regions. North America received \$49.42 million. Asia received \$41.19 million and other regions received considerably less.

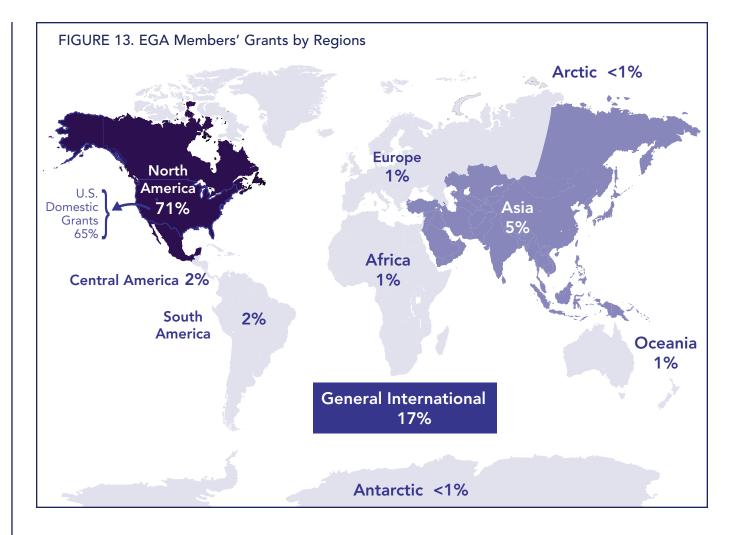

TABLE 6. EGA Members' 2009 Grant Distribution by Region 2007–2009

Region	No. of Grants 2007	Amount Given 2007	No. of Grants 2009	Amount Given 2009	Portion of Domestic Grants	Portion of Dollars Given	% Change 2007- 2009

TRACKING THE FIELD VOL. 3: Exploring Environmental Grantmaking

ENVIRONMENTAL GRANTMAKING STRATEGIES

This is the first volume of EGA's Tracking the Field where a grant's individual strategy was recorded, allowing us to analyze EGA members' principal grantmaking strategies for the first time. Advocacy / Organizing / Movement Building was the most commonly used strategy by EGA members (37%, or \$326.59 million). These grants were largely used to promote public support, strengthen networking and outreach, build or enhance constituency, generate momentum, build effective leadership, and increase collaboration among parties. Nineteen percent of members' grants were directed toward Capacity Building / General Operating, which only included non-program-specific grants and general

support. Stewardship / Acquisition / Preservation was the third most popular strategy, receiving 17% of grants (\$144.85 million); however, this ranks as the most common strategy for grants related to ecosystem issues (see Figure 15). While Public Policy grants only made up 9% of EGA's members' grantmaking, the grants related to this issue were almost twice the size of the average grant of the other strategies combined. Communications / Media and Litigation were the least common strategy used by EGA members in their grantmaking, making up only 4%, or \$135,220, of combined grants.

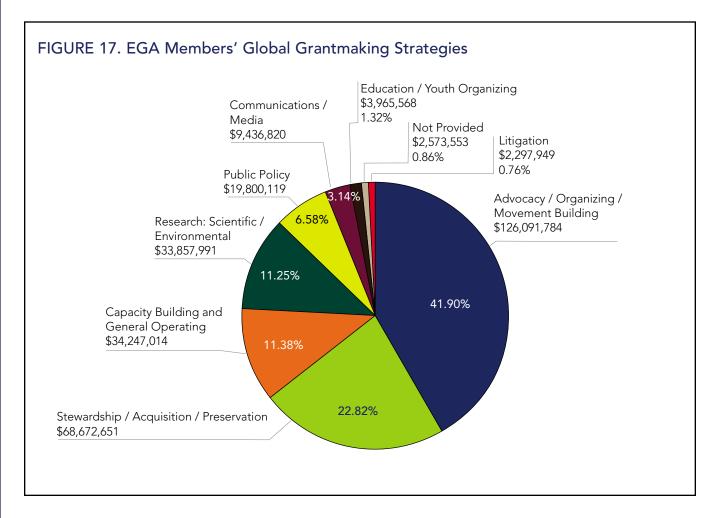

Strategies, continued

Different strategies emerge as the most commonly used when looking at specific issue areas. When examining climate related grants, EGA members continue to strategically grant primarily to Advocacy / Organizing / Movement Building (44%), with Public Policy rising to the second most popular strategy at 19% (see Figure 16). Eighty percent of all grants utilizing Public Policy as a strategy were for a climate related issue. The category of Research: Scientific / Environmental also increases when focusing on climate related issues, with 45% of all EGA members' grants going to research focused on Climate & Atmosphere, Energy, and Transportation.

Three top strategies comprised 86% of ecosystem grants (see Figure 14): Stewardship / Acquisition / Preservation

(1,223 grants), Advocacy / Organizing / Movement Building (919), and Capacity Building / General Operating (801). Litigation also continues to be the least funded strategy. Not surprisingly, 80% of the ecosystem grants used the Stewardship / Acquisition / Preservation strategy.

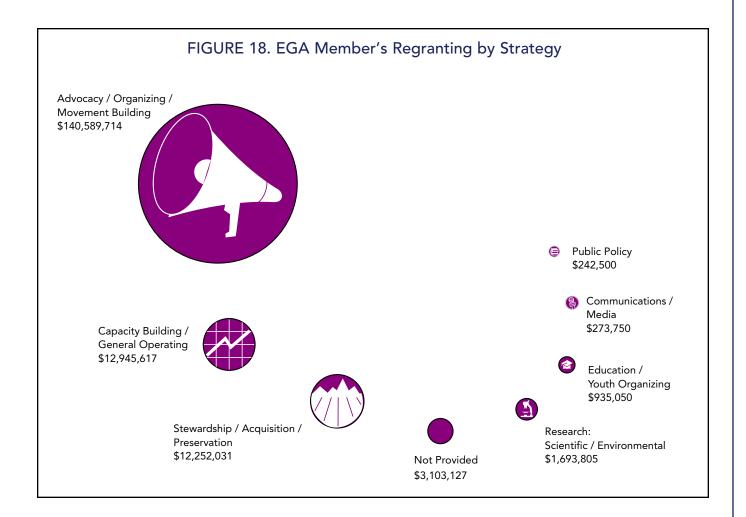

The strategies EGA members used domestically were largely the same for internationally focused grants but with slightly different prioritization. Outside the U.S, the leading strategies are Advocacy / Organizing / Movement Building (\$126.09 million), Stewardship / Acquisition / Preservation (\$68 million); Capacity Building / General Operating (\$32.86 million); Research: Scientific / Environmental (\$33.24 million); and Public Policy (\$19.80 million).

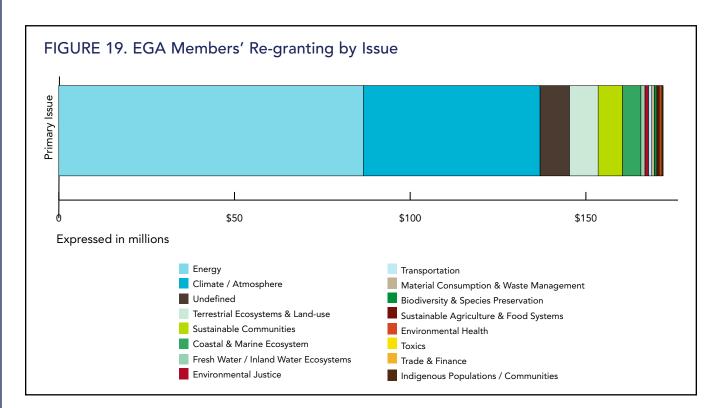

Environmental Re-granting

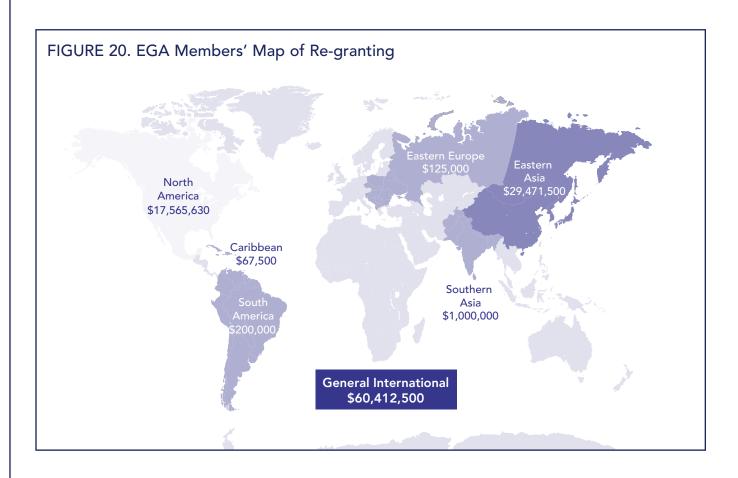

Re-granting is defined in this report as a grant from one EGA member to another EGA member. EGA members re-granted \$172 million dollars in 2009; and of that total, \$108.84 million was for global work. Grants between members were not collected in the 2007 data, prohibiting a year-to-year comparison of the totals.

The general trend toward an increase in re-granting could exhibit a greater need for foundations to work together strategically and pool resources based on the decrease in total grants given. This can be attributed to the emergence of key institutions that are designed to combine resources from various sources and distribute them using a coordinated strategy. These entities focus on Climate & Atmosphere and Energy issues, with 48% (\$82.45 million) of all EGA members' re-granting going to the Energy Foundation. Terrestrial Ecosystems & Land Use (\$8.17 million), Sustainable Communities (\$6.93 million), and Coastal & Marine Ecosystems (\$5.2 million) were the next largest issue recipients of regranting, receiving 11% combined (see Figure 19). Of these re-grants, 82% used the Advocacy / Organizing / Movement Building strategy (see Figure 18). This indicates a very significant trend regarding the types of strategic grants, for which members are pooling their assets. Re-grants were more than six-and-a-half times larger than the average environmental grant in 2009.

Regranting, continued

CONCLUSION

While 2009 was generally a difficult year for philanthropy, environmental philanthropy experienced a smaller decline than other issue areas. Nonetheless, reductions in giving by EGA member foundations had a larger impact on traditional environmental ecosystem NGOs that focus on land, water, and species preservation. These organizations were impacted by both the decrease in total environmental funding and a shifting focus of environmental foundations. ²⁶ On the other hand, climate-focused NGOs continued to see growth in funding despite foundations' shrinking endowments. Looking to 2010 reporting, the Foundation Center has calculated that U.S. foundations total giving remained almost unchanged at \$45.7 billion.²⁷ For 2011, they expect that giving will increase slightly.

The Great Recession has also greatly impacted many foundations' grantmaking strategies. Since fall 2008, there has been an increased focus in program-related investments (PRIs).²⁸ While EGA members' top strategy in 2009 was Advocacy / Organizing / Movement Building, followed by Capacity Building / General Operating, a number of funders have reported that the recession has influenced them to increase their general support grantmaking.²⁹ As exhibited by the diverse EGA membership, there continues to be no formula to the size and numbers of grants foundations give, with differing strategic approaches among foundations.

EGA continues to make the examination of trends within environmental philanthropy a priority. Since releasing Tracking the Field, Volume 2: A Closer Look at Environmental Grantmaking, EGA has been working on publishing even more in-depth reports, including The Broader U.S. Environmental Movement: Composition and Funding Insights in collaboration with the National Center for Charitable Statistics at the Urban Institute, the JMG Foundation, and the UK Environmental Funders Network. EGA also published a special report for the Ford Foundation titled Road to Rio+20: EGA Members' Global Grantmaking. As we look ahead, EGA's new searchable database will provide members with a resource for sharing up-to-date environmental grantmaking, as well as allowing members to do their own searches on individual grants. We hope to continue to build this report and website to further two of EGA's strategic goals: improving the quality of communications and relationships among EGA and its members, and increasing the knowledge and resources available to EGA members and other funders regarding environmental philanthropy.

Customized Reports

EGA is eager to dive deeper into many of the interesting issues and questions that this report begins to address. Please contact EGA staff if you would like to explore the possibility for customized research into an issue area, geographic region, or some other interest that this report sparked for you. We hope you will take advantage of this great resource.

APPENDIX A: Taxonomy

Environmental Issue Areas Taxonomy³⁰

The following 13 categories have been used to analyze grants in this report and past *Tracking the Field* reports. Each grant is coded against the category it fits most closely. This categorization has been developed in discussion with other environmental funding networks internationally, allowing easier comparison between research and publications on different continents. These issue descriptions were directly taken from the Environmental Funders Network (EFN) 2012 report *Where The Green Grants Went 5: Patterns of UK Funding for Environmental and Conservation Work*.

* Starred issue areas were not included in the U.K. report

BIODIVERSITY & SPECIES PRESERVATION

This is also a broad category, focused on work that protects particular species. It includes: botanic gardens and arboretums; research on botany and zoology; protection of birds and their habitats; marine wildlife such as whales, dolphins and sharks; protection of endangered species, such as rhinos and elephants; and protection of globally important biodiversity hotspots, including the use of refuges, reserves and other habitat conservation projects; and wildlife trusts.

CLIMATE & ATMOSPHERE

Most of the money in this category is given to work on climate change, with a much smaller sum to ozone depletion. Also included in this category are acid rain, air pollution and local air quality.

COASTAL & MARINE ECOSYSTEMS

This category includes: fisheries; aquaculture; coastal lands and estuaries; marine protected areas; and marine pollution (such as marine dumping).

ENERGY

This category covers: alternative and renewable energy sources; energy efficiency and conservation; fossil fuels; hydroelectric schemes; the oil and gas industries; and nuclear power.

ENVIRONMENTAL HEALTH*

Grants tagged Environmental Health encompass grants that work toward an environment that supports public health. While many of these issues areas impact health, these grants are more specifically controlling these environmental factors with a health lens.

ENVIRONMENTAL JUSTICE*

Environmental Justice grants are grants for the "fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies."³¹

FRESH WATER / INLAND WATER ECOSYSTEMS

This category covers: lakes and rivers; canals and other inland water systems; groundwater contamination and water conservation; and wetlands.

GENERAL ENVIRONMENT / MULTI-ISSUE WORK

There remain grants that are hard to allocate to specific categories, generally because they take the form of core funding to an organization that works on a range of different issues, or because the grant supports environmental media titles (e.g. *The Ecologist, Resurgence*) or environmental education projects covering a wide range of issues. Some grants provided to generalist re-granting organizations are included in this category as it is not possible to identify which issues will be supported when the funds are re-granted.

INDIGENOUS POPULATIONS / COMMUNITIES*

Indigenous Populations / Communities grants focus on protecting the environment for indigenous population, both within the U.S. and abroad.

MATERIAL CONSUMPTION & WASTE MANAGEMENT

This category covers: reducing consumption levels; redefining economic growth; waste reduction, sustainable design and sustainable production; recycling and composting; and all aspects of waste disposal, including incinerators and landfills.

POPULATION*

This category if for grants related to awareness and debate surrounding global population growth and lowering the rate of human population growth as it connects with protecting the environment.

SUSTAINABLE AGRICULTURE & FOOD SYSTEMS

This remains a very broad category. It includes: organic and other forms of sustainable farming; training and research to help farmers in developing countries; control of the food chain; initiatives opposed to factory farming; horticultural organizations and projects; education on agriculture for children and adults (e.g. city farms); opposition to the use of genetically modified crops and food irradiation; food safety and the genetic diversity of agriculture (including seed banks); and soil conservation.

SUSTAINABLE COMMUNITIES

Grants included in this category support: urban green spaces and parks; community gardens; built environment projects; and community-based sustainability work.

TERRESTRIAL ECOSYSTEMS & LAND USE

As with "agriculture" and "biodiversity and species preservation", this is a broad category encompassing: land purchases and stewardship; national or regional parks; landscape restoration and landscape scale conservation efforts; land use planning; tree planting, forestry and stopping deforestation; and the impacts of mining.

TOXICS

This category covers all the main categories of toxics impacting on the environment and human health: hazardous waste; heavy metals; pesticides; herbicides; radioactive wastes; persistent organic pollutants; household chemicals; other industrial pollutants; and noise pollution.

TRADE & FINANCE

The Trade & Finance category encompasses: work on corporate-led globalization and international trade policy; efforts to reform public financial institutions (such as the World Bank, International Monetary Fund, and Export Credit Agencies); similar work directed at the lending policies of private banks; initiatives around the reduction of developing country debt; and local economic development projects and economic re-localization.

TRANSPORTATION

Transportation includes: all aspects of transportation, including public transport systems; transport planning; policy on aviation; freight; road-building; shipping; alternatives to car use and initiatives like car pools and car clubs; the promotion of cycling and walking; and work on vehicle fuel economy.

Environmental Grantmaking Strategies

EGA introduced strategies to *Tracking the Field*, *Volume 3*, for the first time. The following 8 categories have been used to analyze grants. Each grant is coded against the category it fits most closely or marked as undefined. This categorization has been developed in discussion with other environmental funding networks internationally, however, because these discussions did not lead to a confirmed list, this final list and definitions are unique to this report.

ADVOCACY / ORGANIZING / MOVEMENT BUILDING

This is a broad category that is the combination of related strategies. Advocacy / Organizing / Movement Building is used for activities that promote public support, strengthen networking and outreach, build or enhance constituency, generate momentum, build effective leadership, or increase collaboration amongst parties.

CAPACITY BUILDING / GENERAL OPERATING

This category is only for general support grants or grants are that are given to strengthen the grantee as an organization. Grants to enhance a specific program do not fall under this category.

COMMUNICATIONS / MEDIA

Grants that were tagged in this category cover work targeted specifically at generating or influencing media coverage. They also include the creation of a grantees communication tools, such as webcasts or interactive websites.

EDUCATION / YOUTH ORGANIZING

Education grants included both public education and environmental education for children. This category is for coaching or training services of educators, the public, etc. It also includes informational services and experiences for the public and youth specifically, such as science or environmental camps.

LITIGATION

Grants marked litigation focused on legal support and assistance for expert legal counsel.

PUBLIC POLICY

This category is most for grants aimed at the development of standards, improving policy management practices, reforming policy at any level, support for an international agreements, and participation in regulatory processes.

RESEARCH: SCIENTIFIC / ENVIRONMENTAL

This category is used for grants that build a base of knowledge or develop a device. This includes: conducting a study; assessment; investigation; or developing information and jumps in technology.

STEWARDSHIP / ACQUISITION / PRESERVATION

This category is for purchasing space (land, estuaries, etc.) or rights of use to protect land, improve management, restore ecosystems, or eradicate invasive species.

- Source: The Foundation Center, 2011. Based on grants of 16 \$10,000 or more awarded by a national sample of 1,384 larger U.S. foundations. For community foundations, only discretionary grants are included. Grants to individuals are not included in the file. Giving for the "environment" is based on EGA subject categories.
- 17 Ibid.
- 18 The Bill and Melinda Gates Foundation gave a very large multi-year grant related to Sustainable Agriculture & Food Systems in Africa in 2007.
- Ibid. 19
- 20 Ibid.
- Ibid. 21
- 22 While the Green Tech Action Fund is affiliated with the Energy Foundation, grants to the organization were not combined with grants to the Energy Foundation and were not considered re-granting under the EGA's definition.
- When analyzing grants, EGA grouped organizations with local 23 chapters or regional locations together under the larger organization; for example, Nature Conservancy of Alaska became Nature Conservancy. The Foundation Center did not remove or collapse data in this way.
- 24 Ibid.
- 25 Ibid.
- The number of EGA member foundations funding Climate 26 & Atmosphere, Energy, and Transportation increased by 27% between 2007 and 2009 while the number of Foundations funding Biodiversity & Species Preservation, Fresh Water / Inland Water Ecosystems, Coastal & Marine Ecosystems, and Terrestrial Ecosystems & Land Use stayed consistent. Funding for climate issues by EGA members increased by 92% between 2007 and 2009 while funding for "traditional" ecosystem issues decreased by 37%.

ACKNOWLEDGEMENTS

We gratefully acknowledge the essential support provided by EGA members that makes this report possible. Special thanks are due to the foundations who have supported this effort: Ford Foundation, Brainerd Foundation, Charles Stewart Mott Foundation and Wilburforce Foundation; and to all our members for assisting us with the collection of data, and for utilizing the new interactive tool on our website. By working together, we can continue to build on the advances made in this report and generate the kind of high-quality resources that enable us to examine our individual and collective grantmaking strategies in new ways.

EGA is also grateful for the continued partnership with the Foundation Center to generate data on the broader field of environmental philanthropy, and we look forward to future coordination and collaboration, and to the continued evolution of this data.

We would like to thank Jason Babbie for writing the public Executive Summary, analyzing data, and building creative ways to visualize data for this report. His leadership on *Tracking the Field* made this report possible.

Finally, we would not have been able to write this report without the hard work of the research team. Their many hours of data entry and attention to detail is fundamental to our success.

EGA Staff:

Franny Chiles, Knowledge and Program Manager, wrote the report, directed the data collection process, led the creation of a searchable database and analyzed the data.

Mafruza Khan, Enhancing the Field Director, edited the report and analyzed international data.

Rachel Leon, Executive Director, oversaw the entire process and edited the report.

Research Team:

Adam Fishman Manna Hara Liv Pommer Jensen Than Htut Phoo Benjamin Thompson

Production Editor: Franny Chiles, EGA

Copy Editor: Christopher Barry

Data Architect: Steven Canfield

Data Analyst: Jason K. Babbie

Designer: Nadia Khastagir, Design Action Collective

Produced by the Environmental Grantmakers Association in 2012.

Printed with vegetable-oil-based inks on 100% Recycled, 50% post-consumer waste paper , processed chlorine free

Environmental Grantmakers Association

The mission of EGA is to help member organizations become more effective environmental grantmakers through information sharing, collaboration and networking.
