# The Demographics of Social Media Users - 2012 

Young adults are more likely than older adults to use social media. Women, AfricanAmericans, and Latinos show high interest in sites like Twitter, Instagram, and Pinterest.

## The State of Social Media Users

A late 2012 survey by the Pew Research Center's Internet \& American Life Project shows that young adults are more likely than others to use major social media. At the same time, other groups are interested in different sites and services. In the case of Pinterest, Instagram, and Tumblr, these are the first reportable survey readings by Pew Research allowing comparison of whites, African-Americans, and Latinos.

The Landscape of Social Media Users

|  | \% of internet <br> users who... | The service is especially appealing to ... |
| :--- | :---: | :---: |
| Use Any Social Networking Site | $67 \%$ | Adults ages 18-29, women |
| Use Facebook | 67 | Women, adults ages 18-29 |
| Use Twitter | 16 | Adults ages 18-29, African-Americans, <br> urban residents |
| Use Pinterest | 13 | Women, adults under 50, whites, those <br> with some college education |
| Use Instagram | 6 | Latinos, women, urban residents |
| Use Tumblr | Adults ages 18-29 |  |

Source: Pew Research Center's Internet \& American Life Project Post-Election Survey, November 14 December 09, 2012. N=1,802 internet users. Interviews were conducted in English and Spanish and on landline and cell phones. Margin of error is +/- 2.6 percentage points for results based on internet users. Facebook figures are based on Pew Research Center's Internet \& American Life Project Omnibus Survey, December 13-16, 2012. Margin of error for Facebook data is $+/-2.9$ percentage points for results based on internet users ( $n=860$ ).

These readings come from a national survey conducted between November 14 and December 9, 2012 on landline and cell phones and in English and in Spanish. The results reported here come from the 1,802 respondents who are internet users and the margin of error is $+/-2.6$ percentage points.

Figures on Facebook usage are taken from a separate Pew Research Center survey conducted in December 2012. For more in-depth information about Americans' Facebook habits, see our recent report "Coming and Going on Facebook."

## Social Networking Site Users

Internet users under 50 are particularly likely to use a social networking site of any kind, and those 18-29 are the most likely of any demographic cohort to do so (83\%). Women are more likely than men to be on these sites. Those living in urban settings are also significantly more likely than rural internet users to use social networking.

Social Networking Sites
\% of internet users who use social networking sites

|  |  | Use Social Networking Sites |
| :---: | :---: | :---: |
| All internet users ( $\mathrm{n}=1,802$ ) |  | 67\% |
| a | Men ( $\mathrm{n}=846$ ) | 62 |
| b | Women ( $\mathrm{n}=956$ ) | $71^{\text {a }}$ |
| Race/ethnicity |  |  |
| a | White, Non-Hispanic ( $\mathrm{n}=1,332$ ) | 65 |
| b | Black, Non-Hispanic ( $\mathrm{n}=178$ ) | 68 |
| c | Hispanic ( $\mathrm{n}=154$ ) | 72 |
| Age |  |  |
| a | 18-29 ( $\mathrm{n}=318$ ) | $83^{\text {bcd }}$ |
| b | 30-49 ( $\mathrm{n}=532$ ) | $77^{\text {cd }}$ |
| c | 50-64 ( $\mathrm{n}=551$ ) | $52^{\text {d }}$ |
| d | 65+ ( $\mathrm{n}=368$ ) | 32 |
| Education attainment |  |  |
| a | Less than high school/high school grad ( $\mathrm{n}=549$ ) | 66 |
| b | Some College ( $\mathrm{n}=519$ ) | 69 |
| c | College + ( $\mathrm{n}=721$ ) | 65 |
| Household income |  |  |
| a | Less than \$30,000/yr ( $\mathrm{n}=409$ ) | 72 |
| b | \$30,000-\$49,999 (n=330) | 65 |
| c | \$50,000-\$74,999 (n=283) | 66 |
| d | \$75,000+ (n=504) | 66 |
| Urbanity |  |  |
| a | Urban ( $\mathrm{n}=561$ ) | $70^{\text {c }}$ |
| b | Suburban ( $\mathrm{n}=905$ ) | 67 |
| c | Rural ( $\mathrm{n}=336$ ) | 61 |

Interviews were conducted in English and Spanish and on landline and cell phones. Margin of error is +/- 2.6 percentage points for results based on internet users.

Note: Percentages marked with a superscript letter (e.g., ${ }^{\text {a }}$ ) indicate a statistically significant difference between that row and the row designated by that superscript letter, among categories of each demographic characteristic (e.g. age).

## Twitter users

The percentage of internet users who are on Twitter has doubled since November 2010, currently standing at $16 \%$. Those under 50 , and especially those 18-29, are the most likely to use Twitter. Urbandwellers are significantly more likely than both suburban and rural residents to be on Twitter.

## Twitter

## Pinterest users

Pinterest, the online pinboard, has attracted $15 \%$ of internet users to its virtual scrapbooking. Whites, young people, the well-educated, those with higher income, and women are particularly likely to use the site. Pinterest is equally popular among those 18-29 and 30-49 (19\%). Women are about five times as likely to be on the site as men, the largest difference in gender of any site featured in this report.

## Facebook users

Facebook remains the most-used social networking platform, as two-thirds of online adults say that they are Facebook users. Women are more likely than men to be Facebook users, and Facebook use is especially common among younger adults.

# About the Pew Research Center's Internet \& American Life Project 

The Pew Research Center's Internet \& American Life Project is one of seven projects that make up the Pew Research Center, a nonpartisan, nonprofit "fact tank" that provides information on the issues, attitudes and trends shaping America and the world. The Project produces reports exploring the impact of the internet on families, communities, work and home, daily life, education, health care, and civic and political life. The Pew Internet Project takes no positions on policy issues related to the internet or other communications technologies. It does not endorse technologies, industry sectors, companies, nonprofit organizations, or individuals.

## Methodology

This report is based on the findings of a survey on Americans' use of the Internet. The results in this report are based on data from telephone interviews conducted by Princeton Survey Research Associates International from November 14 to December 9, 2012, among a sample of 2,261 adults, age 18 and older. Telephone interviews were conducted in English and Spanish by landline $(1,353)$ and cell phone ( 908 , including 471 without a landline phone). For results based on the total sample, one can say with $95 \%$ confidence that the error attributable to sampling is plus or minus 2.3 percentage points. For results based on Internet users ${ }^{4}(n=1,802)$, the margin of sampling error is plus or minus 2.6 percentage points. In addition to sampling error, question wording and practical difficulties in conducting telephone surveys may introduce some error or bias into the findings of opinion polls.

A combination of landline and cellular random digit dial (RDD) samples was used to represent all adults in the United States who have access to either a landline or cellular telephone. Both samples were provided by Survey Sampling International, LLC (SSI) according to PSRAI specifications. Numbers for the landline sample were selected with probabilities in proportion to their share of listed telephone households from active blocks (area code + exchange + two-digit block number) that contained three or more residential directory listings. The cellular sample was not list-assisted, but was drawn through a systematic sampling from dedicated wireless 100-blocks and shared service 100 -blocks with no directory-listed landline numbers.

New sample was released daily and was kept in the field for at least five days. The sample was released in replicates, which are representative subsamples of the larger population. This ensures that complete call procedures were followed for the entire sample. At least 7 attempts were made to complete an interview at a sampled telephone number. The calls were staggered over times of day and days of the week to maximize the chances of making contact with a potential respondent. Each number received at least one daytime call in an attempt to find someone available. For the landline sample, interviewers asked to speak with the youngest adult male or female currently at home based on a random rotation. If no male/female was available, interviewers asked to speak with the youngest adult of the other gender. For the cellular sample, interviews were conducted with the person who answered the phone. Interviewers verified that the person was an adult and in a safe place before administering the survey. Cellular sample respondents were offered a post-paid cash incentive for their participation. All interviews completed on any given day were considered to be the final sample for that day.

[^2]Weighting is generally used in survey analysis to compensate for sample designs and patterns of nonresponse that might bias results. A two-stage weighting procedure was used to weight this dual-frame sample. The first-stage corrected for different probabilities of selection associated with the number of adults in each household and each respondent's telephone usage patterns. ${ }^{5}$ This weighting also adjusts for the overlapping landline and cell sample frames and the relative sizes of each frame and each sample.

The second stage of weighting balances sample demographics to population parameters. The sample is balanced to match national population parameters for sex, age, education, race, Hispanic origin, region (U.S. Census definitions), population density, and telephone usage. The Hispanic origin was split out based on nativity; U.S born and non-U.S. born. The White, non-Hispanic subgroup is also balanced on age, education and region. The basic weighting parameters came from a special analysis of the Census Bureau's 2011 Annual Social and Economic Supplement (ASEC) that included all households in the United States. The population density parameter was derived from Census data. The cell phone usage parameter came from an analysis of the July-December 2011 National Health Interview Survey. ${ }^{6}$

Following is the full disposition of all sampled telephone numbers:

| Sample Disposition |  |  |
| :--- | :--- | :--- |
| Landline | Cell |  |
| 33,785 | 19,800 | Total Numbers Dialed |
|  |  |  |
| 1,465 | 345 | Non-residential |
| 1,421 | 69 | Computer/Fax |
| 14 | --- | Cell phone |
| 16,896 | 7,758 | Other not working |
| 1,655 | 125 | Additional projected not working |
| 12,335 | 11,504 | Working numbers |
| $36.5 \%$ | $58.1 \%$ | Working Rate |
|  |  |  |
| 552 | 42 | No Answer / Busy |
| 3,347 | 2,843 | Voice Mail |
| 37 | 7 | Other Non-Contact |
| 8,399 | 8,612 | Contacted numbers |
| $68.1 \%$ | $74.9 \%$ | Contact Rate |
| 483 | 1,137 | Callback |
| 6,446 | 5,956 | Refusal |
| 1,470 | 1,519 | Cooperating numbers |
| $17.5 \%$ | $17.6 \%$ | Cooperation Rate |
| 58 | 48 |  |
| --- | 518 | Language Barrier |

[^3]| 1,412 | 953 | Eligible numbers |
| :--- | :--- | :--- |
| $96.1 \%$ | $62.7 \%$ | Eligibility Rate |
| 59 | 45 | Break-off |
| 1,353 | 908 | Completes |
| $95.8 \%$ | $95.3 \%$ | Completion Rate |
| $11.4 \%$ | $12.6 \%$ | Response Rate |

The disposition reports all of the sampled telephone numbers ever dialed from the original telephone number samples. The response rate estimates the fraction of all eligible respondents in the sample that were ultimately interviewed. At PSRAI it is calculated by taking the product of three component rates:

- Contact rate - the proportion of working numbers where a request for interview was made
- Cooperation rate - the proportion of contacted numbers where a consent for interview was at least initially obtained, versus those refused
- Completion rate - the proportion of initially cooperating and eligible interviews that were completed

Thus the response rate for the landline sample was 11 percent. The response rate for the cellular sample was 13 percent.

[^0]:    ${ }^{1}$ The definition of an internet user varies from survey to survey. From January 2005 thru February 2012, an internet user is someone who uses the internet at least occasionally or sends/receives email at least occasionally (two-part definition with question wording "Do you use the internet, at least occasionally?" OR "Do you send or receive email, at least occasionally?"). Prior to January 2005, an internet user is someone who goes online to access the internet or to send and receive email (question wording "Do you ever go online to access the Internet or World Wide Web or to send and receive email?").

[^1]:    ${ }^{2}$ Prior to January 2005, question wording was "Please tell me if you ever do any of the following when you go online. Do you ever...?" Unless otherwise noted, trends are based on all internet users for that survey.
    ${ }^{3}$ From April 2009 thru August 2011, item wording was "Use a social networking site like MySpace, Facebook or LinkedIn." In December 2008, item wording was "Use a social networking site like MySpace or Facebook." In August 2006, item wording was "Use an online social networking site like MySpace, Facebook or Friendster". Prior to August 2006, item wording was "Use online social or professional networking sites like Friendster or LinkedIn"

[^2]:    ${ }^{4}$ Internet user definition includes those who access the internet on their cell phones or other mobile handheld device.

[^3]:    ${ }^{5}$ i.e., whether respondents have only a landline telephone, only a cell phone, or both kinds of telephone.
