# DNA BARCODING

Ratnasingham, S. & Hebert, P. D. N.  
(2007). BOLD: The Barcode of Life  
Data System([www.barcodinglife.org](http://www.barcodinglife.org)).  
Molecular Ecology Notes 7, 355-364.  
[DOI: 10.1111/j.1471-8286.2006.01678.x](https://doi.org/10.1111/j.1471-8286.2006.01678.x)

Target gene segment:  
mitochondrial cox1

the BOLD system integrates taxonomy and occurrence data with DNA barcodes. <http://www.boldsystems.org/>

# A DNA-Based Registry for All Animal Species: The Barcode Index Number (BIN) System

Sujeewan Ratnasingham<sup>1\*</sup>, Paul D. N. Hebert<sup>1,2</sup><sup>1</sup> Biodiversity Institute of Ontario, University of Guelph, Guelph, Ontario, Canada, <sup>2</sup> Department of Integrative Biology, University of Guelph, Guelph, Ontario, Canada

“BINs will aid revisionary taxonomy by flagging possible cases of synonymy, and by collating geographical information, descriptive metadata, and images for specimens that are *likely to belong to the same species*, even if it is undescribed”

Ratnasingham &amp; Hebert 2013

## Overview

## BIN Database

A searchable database of Barcode Index Numbers (BINs), sequence clusters that closely approximate species. This system allows for rapid validation and use of barcode data where taxonomic data are lacking or unverified.

Data Selected: **475** Records    **351** Records with BINs    Representing **114** BINs

## Breakdown of Data:

Taxonomically Discordant:

**14** BINs

**43** Records

Taxonomically Concordant:

**68** BINs

**276** Records

Singletons:

**32** BINs

**32** Records

## BINs with Taxonomic Discordance

### Record Search

| Process ID  | Identification         | Conflicting Taxon in BIN | Rank of Conflict | BIN          | BIN Total Members | BIN Tax Variation              |

## Identification Request

### Animal Identification [COI]

### Fungal Identification [ITS]

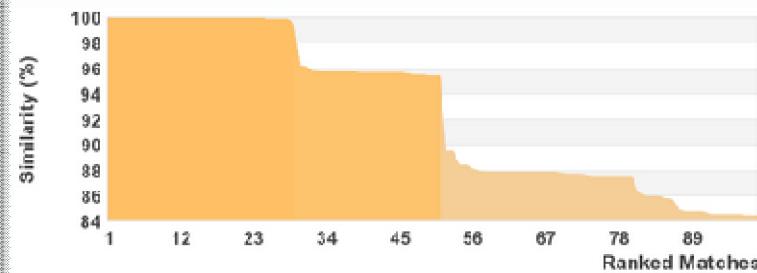

The BOLD Identification System (IDS) for COI accepts sequence identification when one is possible. Further validation will be done by the user.

Historical Databases: Jul-2013 Jul-2012 Jul-2011 Jul-2010

Search Databases:

- All Barcode Records on BOLD (2,843,744 Sequences) Every COI barcode record on BOLD with a minimum similarity of 80%. This includes many species represented by only one barcode sequence and does not provide a probability of placement.
- Species Level Barcode Records (1,761,975 Sequences) Every COI barcode record with a species level identification. This includes all specimens as well as all species with interim taxonomy.
- Public Record Barcode Database (563,322 Sequences) A subset of individual records from the BOLD Public Record Barcode Database.

### Similarity scores of the top 99 matches:

## Sin number two: inadequate a priori identification of specimens

OPINION

### The seven deadly sins of DNA barcoding

R. A. COLLINS\* and R. H. CRUICKSHANK†

\*Bio-Protection Research Centre, Lincoln University, PO Box 84, Lincoln, 7647, Canterbury, New Zealand, †Department of Ecology, Faculty of Agriculture and Life Sciences, Lincoln University, Lincoln, 7647, Canterbury, New Zealand

In ornamental cyprinid fishes:

- “ 35 % of the BINS contained more than one species name.
- “ The number rose to 53 % in 5-6 months

# Our sequencing of *Ethusa* failed

# Brachyura cytochrome oxidase subunit I (COI) gene, partial cds; mitochondrial.

PopSet: 197260937

[GenBank](#) [FASTA](#)

## Study Details

**Phylogeny of Dorippoidea (Crustacea, Decapoda, Brachyura) inferred from three mitochondrial genes**

Sin,Y.W., Lai,J.C.Y., Ng,P.K.L. and Chu,K.H.

(2009) Invertebr. Syst. 23(3):223-230

# Species data are fuzzy products of human minds

## Taxonomy users:

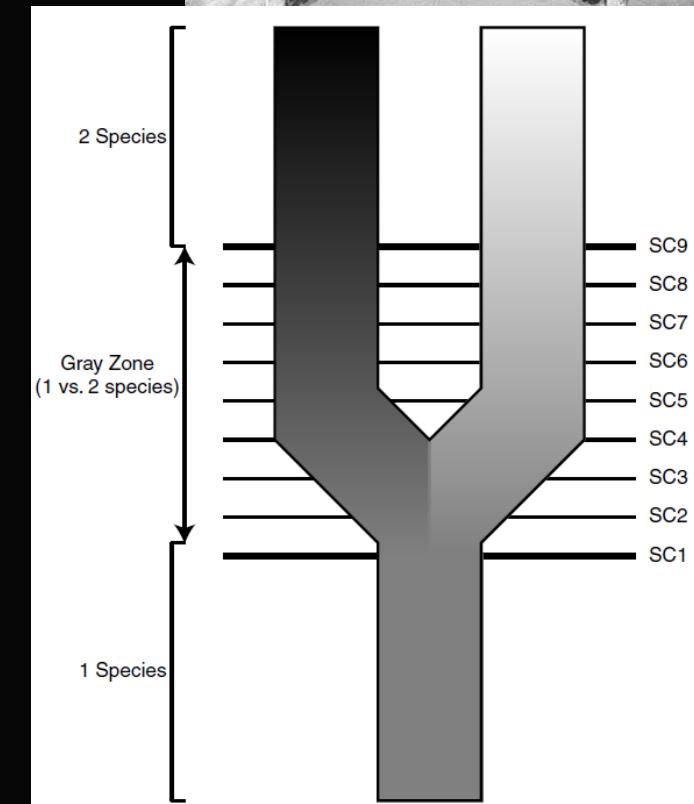

local vs global perspectives  
regional knowledge cultures  
literature language / access  
fidelity to «authoritative specialists»

Don't  
want to  
hear!

## Taxonomy producers:

different species concepts  
author idiosyncrasies (split / lump)  
slow turnover rates of revisions

# Taxonomic feed-back loops\* (integrative)

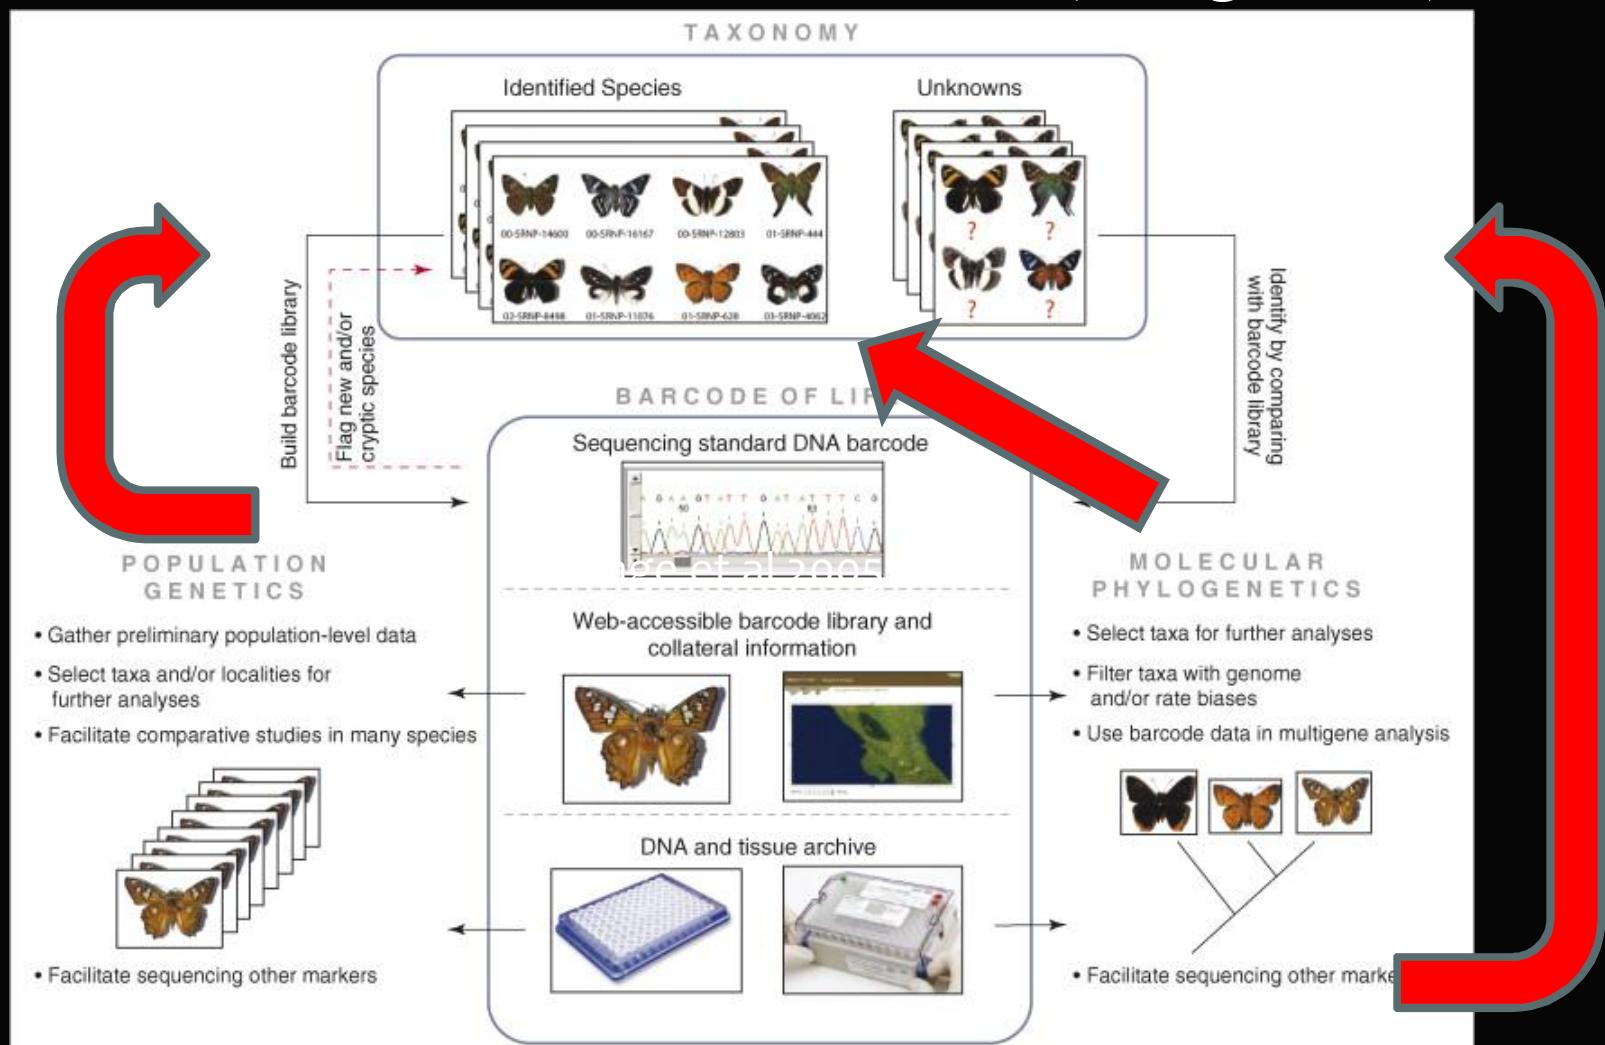

Figure from: Mehrdad Hajibabaei et al 2007

\*Page et al 2005
