This bibliography lists reports produced as a result of the Great Lakes Water Quality Agreements of 1972, 1978 and the Protocol amending the 1978 Agreement. It is intended to assist researchers, librarians and others interested in Great Lakes water quality.

Article VII, Section 3 charges the Commission to "make a full report ... no less frequently than biennially concerning progress toward the achievement of the General and Specific Objectives including, as appropriate, matters related to Annexes to [the] Agreement. [The] report shall include an assessment of the effectiveness of the programs and other measures undertaken pursuant to [the] Agreement, and advice and recommendations." In alternate years, the Commission may at any time make special reports to the Parties, to the State and Provincial Governments and to the public concerning any problem of water quality in the Great Lakes system.

The Commission may at its discretion publish any report, statement or other document prepared by it in the discharge of its functions.

Further reports are prepared by the boards and groups as necessary; these are published as are the proceedings of workshops and symposia. The Great Lakes Regional Office coordinates the publication of all reports.

INTERNATIONAL JOINT COMMISSION

The Boundary Waters Treaty of 1909 between the United States and Canada established the International Joint Commission, a binational body with three members appointed by each country, which acts as a single unit, reaching decisions by simple majority. Though the Treaty was entered into primarily to prevent disputes regarding the use of boundary waters and to provide for the adjustment and settlement of questions arising between the two countries along their common frontier, it has provided the framework for cooperation on questions relating to air and water pollution and the regulation of water levels and flows.

The Commission issues Orders of Approval in response to Applications for the use, obstruction or diversion of waters that flow along, and in certain cases across, the boundary if such uses would affect the natural water levels or flows on the other side.

The Commission also undertakes investigations of specific issues, or monitors situations, when requested by Governments. Implementation of IJC recommendations made under such References is at the discretion of the two Governments. The Commissioners act as a single body seeking common solutions rather than as separate national delegates representing the positions of their Governments.

Experts from both countries serve on technical boards for the Commission and carry out the required studies and field work. Boards of Control are appointed by the IJC to report on compliance with Orders of Approval, while study or advisory boards assist in References. Public hearings and other opportunities for input by interested citizens are organized when Applications and References are considered.

The IJC recommendations were generally accepted by the Governments, and a principal outcome was the Great Lakes Water Quality Agreement which was signed by the Prime Minister of Canada and the President of the United States on April 15th, 1972.

Six years later, on November 22, 1978, a revision to the 1972 Agreement was signed. It provided new programs and more stringent goals. The concept of a Great Lakes Basin Ecosystem was adopted, recognizing that water quality depends on the interplay of air, land, water and living organisms, including man, within the system. This action led to more comprehensive assessments of the Great Lakes clean up effort.

In 1987, at the Commission's Biennial Meeting, the Governments signed a Protocol to the 1978 Agreement, which essentially aims to strengthen the programs, practices and technology described in the 1978 Agreement and to increase accountability for their implementation. Timetables are set for implementation of specific programs. The Parties will meet biennially to discuss progress and report periodically to the

IJC. New annexes address atmospheric deposition of toxic pollutants, contaminated sediments, groundwater and nonpoint sources of pollution. Annexes are also added to incorporate the development and implementation of remedial action plans for Areas of Concern and lakewide management plans to control critical pollutants.

GREAT LAKES WATER QUALITY BOARD

The Agreement specified the establishment of a Great Lakes Water Quality Board to assist the IJC. The Board is the principal advisor to the Commission in matters of Great Lakes water quality and consists of an equal number of members from the United States and Canada, including representatives from the Parties and each of the State and Provincial Governments.

Assessment of Contaminated Sediments in the Great Lakes. Report to the Great
Lakes Water Quality Board, Windsor, Ontario, December 1982, 140 pp.

A Review of Lake Ontario Water Quality with Emphasis on the 1981-1982
Winter Season. Report to the Surveillance Subcommittee of the Great Lakes
Water Quality Board, Robert J. Stevens, Windsor, Ontario, October 1982,
300 pp.

PROCEEDINGS

Great Lakes Surveillance and Monitoring. Proceedings of a Workshop held in
Windsor, Ontario, January 20-21, 1982. Sponsored by the Surveillance
Subcommittee of the Great Lakes Water Quality Board, N. Clifton MacDonald,
Windsor, Ontario, March 1982, 150 pp.

Workshop on Great Lakes Assessment. Proceedings of a Workshop held in Ann Arbor,
Michigan, April 9-11, 1982. Sponsored by the Great Lakes Water Quality Board,
M.L. Bratzel, Jr. and Windsor, Ontario, Windsor, Ontario, December 1982, 225 pp.

GREAT LAKES SCIENCE ADVISORY BOARD

The Science Advisory Board provides advice on research to the Commission and to the Water Quality Board and provides advice on scientific matters referred to it by the Commission, or by the Water Quality Board in consultation with the Commission.

Members of the Science Advisory Board are appointed by the Commission after consultation with the government or governments concerned and are selected on the basis of prominence in their field of science and participate as individuals regardless of agency, academic or industrial affiliation.

In November 1978, the Research Advisory Board was renamed the SCIENCE ADVISORY BOARD.

Mass Balancing of Toxic Chemicals in the Great Lakes: The Role of Atmospheric Deposition. Report to the Great Lakes Science Advisory Board, Great Lakes Water Quality Board and International Air Quality Advisory Board by W.M.J. Strachan and S.J. Eisenreich. Appendix I from the Workshop on the Estimation of Atmospheric Loadings of Toxic Chemicals to the Great Lakes basin held at Scarborough, Ontario October 29-31, 1986. Windsor, Ontario, released May 1988, 113 pp.

PROCEEDINGS

Proceedings of the Workshop on the Compatibility of Great Lakes Basin Cancer Registries held in Windsor, Ontario, March 19-20, 1981. Sponsored by the Great Lakes Water Quality Board and Great Lakes Science Advisory Board Through Their Committee on the Assessment of Human Health Effects of Great Lakes Water Quality. [Windsor, Ontario], November 1981, 118 pp.

Proceedings of the Roundtable on the Surveillance and Monitoring Requirements for Assessing Human Health Hazards Posed by Contaminants in the Great Lakes Basin Ecosystem held in East Lansing, Michigan, March 17-18, 1982. Sponsored by the Great Lakes Water Quality Board and Great Lakes Science Advisory Board Through Their Committee on the Assessment of Human Health Effects of Great Lakes Water Quality. Windsor, Ontario, November 1982, 72 pp.

INTERNATIONAL REFERENCE GROUP ON UPPER LAKES POLLUTION

The Commission in 1972 formed a fourteen member binational body to conduct a study of water quality in Lake Huron-Georgian Bay and Lake Superior. The International Reference Group on Upper Lakes pollution was asked to respond to four questions which the two Governments had referred to the Commission:

1. Are lakes Superior and Huron being polluted?
2. If so, to what extent, by what causes, and where?
3. What measures would be most practicable to restore and protect water quality and what would such measures probably cost?
4. If pollution is taking place, what preventive actions should be taken to preclude future pollution and what would be the probable cost?

Four working groups assisted the Reference Group by undertaking studies of: nearshore problems; lakewide trends of physical, chemical, biological, bacteriological and geological characteristics; materials input; and background information on hydrology, climate, geology, population, land use and water use. Toward the close of 1975 the studies were completed and authors began preparing the three-volume report presented to the Commission in mid-1976. Volume I is a summary report, Volume II contains details regarding Lake Huron and Georgian Bay, and Volume III relates to Lake Superior.

ANNUAL REPORTS

International Reference Group on Upper Lakes Pollution. Third Semi-annual Report to the Great Lakes Water Quality Board. [Windsor, Ontario], March 1974, 13 pp.

International Reference Group on Upper Lakes Pollution. Fourth Semi-annual Report to the Great Lakes Water Quality Board. [Windsor, Ontario], September 1974.

V.II Part A Lake Huron, Georgian Bay, and the North Channel. 1977.

V.II Part B Lake Huron, Georgian Bay, and the North Channel. 1977.

V.III Part A Lake Superior. 1977.

V.III Part B Lake Superior. 1977.

INTERNATIONAL REFERENCE GROUP ON GREAT LAKES POLLUTION FROM LAND USE ACTIVITIES (PLUARG)

In 1972 the Commission established the International Reference Group on Pollution from Land Use Activities (PLUARG) to carry out studies required to answer the following questions:

1. Are the boundary waters of the Great Lakes system being polluted by land drainage from man-made and natural sources?
2. If the answer to (1) is yes, to what extent, by what causes and in what localities is the pollution occurring?
3. What remedial measures would be most practicable and what would be their costs?

The eighteen member Reference Group had an equal number of United States and Canadian members. Four task groups, their technical advisors and expert committees assisted the Group.

The studies were designed to:

1. Assess problems, management programs and research on the effects of land use activities on water quality in boundary waters of the Great Lakes.
2. Inventory land use and land use practices for trends and projections to 1980 and 2020.
3. Study intensively a small number of representative watersheds to enable some extrapolation of data to the entire Great Lakes basin and relate specific land uses and practices to contamination of water quality by Great Lakes streams.
4. Diagnose degree of impairment of water quality in the Great Lakes resulting from land use activities.

Since PLUARG's recommendations could provide guidance for land use planning efforts and water usage well into the future, late in 1976 the Group began an extensive public information/participation program which was carried out through the rest of its studies and concluded with the Commission's public hearings. PLUARG's final report was presented to the Commission in July 1978.

International Reference Group on Great Lakes Pollution from Land Use Activities. Annotated Bibliography of PLUARG Reports. [Windsor, Ontario], 1979, 121 pp. (PLUARG 79-122)

Copies of the PLUARG bibliography are available from the International Joint Commission, Great Lakes Regional Office, 100 Ouellette Avenue, 8th Floor, Windsor, Ontario N9A 6T3, or P.O. Box 32869, Detroit, Michigan 48232-2869.

Information Services

Under the 1972 Agreement the International Joint Commission was given authority to establish a regional office to assist the Commission and the two Boards in the discharge of the functions of providing administrative support and technical assistance for the Water Quality Board and the Science Advisory Board and their sub-organizations. A public information service for the programs, including public hearings, is also undertaken by the Commission and its Boards.

Under the 1978 Agreement, the Regional Office, on behalf of organizations, continues to compile and disseminate data; prepare and distribute reports; provide library services; organize and staff workshops and conferences; perform liaison with media, organizations and citizens; provide information to the public; perform special studies and provide secretariat support.

The Office coordinates the Biennial Meeting at which the Agreement bodies formally report to the Commission. This meeting is open to the public. The office publication Focus on International Joint Commission Activities is available three times per year and deals primarily with the ecosystem quality of the Great Lakes.

SPECIAL REPORT

Great Lakes Regional Office. Municipal Phosphorus Loadings to Lake Erie, An Evaluation Study Prepared for the Great Lakes Water Quality Board. [Windsor, Ontario], December 1975, 35 pp.
