1-Propanephosphonic Acid Cyclic Anhydride (T3P) as an Efficient Promoter for the Lossen Rearrangement: Application to the Synthesis of Urea and Carbamate Derivatives. — A convenient procedure is presented for the conversion of aromatic acids and amino acids into hydroxamates using T3P as activator. Subsequent T3P-mediated Lossen rearrangement results in formation of isocyanate intermediates which are trapped by various nucleophiles to afford ureas, carbamates and thiocarbamates. — (VASANTHA, B.; HEMANTHA, H. P.; SURESHBABU*, V. V.; Synthesis 2010, 17, 2990-2996, DOI:10.1055/s-0030-1258158 ; Dep. Stud. Chem., Cent. Coll., Bangalore Univ., Bangalore 560 001, India; Eng.) — Mair
