## How can I use this document?

This document is a Subject Benchmark Statement for Agriculture, Horticulture, Forestry, Food, Nutrition and Consumer Sciences that defines what can be expected of a graduate in the subject, in terms of what they might know, do and understand at the end of their studies.

You may want to read this document if you are:

- involved in the design, delivery and review of programmes of study in agriculture, horticulture, forestry, food, nutrition and consumer sciences or related subjects
- a prospective student thinking about studying agriculture, horticulture, forestry, food, nutrition and consumer sciences or a current student of the subject, to find out what may be involved
- an employer, to find out about the knowledge and skills generally expected of a graduate in agriculture, horticulture, forestry, food, nutrition and consumer sciences.

Explanations of unfamiliar terms used in this Subject Benchmark Statement can be found in the Quality Assurance Agency for Higher Education's (QAA's) glossary.<sup>1</sup>

---

<sup>1</sup> The QAA glossary is available at: [www.qaa.ac.uk/about-us/glossary](http://www.qaa.ac.uk/about-us/glossary).

## About Subject Benchmark Statements

Subject Benchmark Statements form part of the UK Quality Code for Higher Education (Quality Code) which sets out the Expectations that all providers of UK higher education reviewed by QAA are required to meet.<sup>2</sup> They are a component of Part A: Setting and Maintaining Academic Standards, which includes the Expectation that higher education providers 'consider and take account of relevant Subject Benchmark Statements' in order to secure threshold academic standards.<sup>3</sup>

Subject Benchmark Statements describe the nature of study and the academic standards expected of graduates in specific subject areas, and in respect of particular qualifications. They provide a picture of what graduates in a particular subject might reasonably be expected to know, do and understand at the end of their programme of study.

Subject Benchmark Statements are used as reference points in the design, delivery and review of academic programmes. They provide general guidance for articulating the learning outcomes associated with the programme but are not intended to represent a national curriculum in a subject or to prescribe set approaches to teaching, learning or assessment. Instead, they allow for flexibility and innovation in programme design within a framework agreed by the subject community. Further guidance about programme design, development and approval, learning and teaching, assessment of students, and programme monitoring and review is available in Part B: Assuring and Enhancing Academic Quality of the Quality Code in the following Chapters:<sup>4</sup>

- *Chapter B1: Programme Design, Development and Approval*
- *Chapter B3: Learning and Teaching*
- *Chapter B6: Assessment of Students and the Recognition of Prior Learning*
- *Chapter B8: Programme Monitoring and Review.*

For some subject areas, higher education providers may need to consider other reference points in addition to the Subject Benchmark Statement in designing, delivering and reviewing programmes. These may include requirements set out by professional, statutory and regulatory bodies, national occupational standards and industry or employer expectations. In such cases, the Subject Benchmark Statement may provide additional guidance around academic standards not covered by these requirements.<sup>5</sup> The relationship between academic and professional or regulatory requirements is made clear within individual statements, but it is the responsibility of individual higher education providers to decide how they use this information. The responsibility for academic standards remains with the higher education provider who awards the degree.

Subject Benchmark Statements are written and maintained by subject specialists drawn from and acting on behalf of the subject community. The process is facilitated by QAA. In order to ensure the continuing currency of Subject Benchmark Statements, QAA initiates regular reviews of their content, five years after first publication, and every seven years subsequently.

---

<sup>2</sup> The Quality Code, available at [www.qaa.ac.uk/assuring-standards-and-quality/the-quality-code](http://www.qaa.ac.uk/assuring-standards-and-quality/the-quality-code), aligns with the *Standards and Guidelines for Quality Assurance in the European Higher Education Area*, available at: [www.engu.eu/wp-content/uploads/2015/05/ESG\\_endorsed-with-changed-foreword.pdf](http://www.engu.eu/wp-content/uploads/2015/05/ESG_endorsed-with-changed-foreword.pdf).

<sup>3</sup> Part A: Setting and Maintaining Academic Standards, available at: [www.qaa.ac.uk/assuring-standards-and-quality/the-quality-code/quality-code-part-a](http://www.qaa.ac.uk/assuring-standards-and-quality/the-quality-code/quality-code-part-a).

<sup>4</sup> Individual Chapters are available at: [www.qaa.ac.uk/assuring-standards-and-quality/the-quality-code/quality-code-part-b](http://www.qaa.ac.uk/assuring-standards-and-quality/the-quality-code/quality-code-part-b).

<sup>5</sup> See further Part A: Setting and Maintaining Academic Standards, available at: [www.qaa.ac.uk/assuring-standards-and-quality/the-quality-code/quality-code-part-a](http://www.qaa.ac.uk/assuring-standards-and-quality/the-quality-code/quality-code-part-a).

## **Relationship to legislation**

Higher education providers are responsible for meeting the requirements of legislation and any other regulatory requirements placed upon them, for example by funding bodies. The Quality Code does not interpret legislation nor does it incorporate statutory or regulatory requirements. Sources of information about other requirements and examples of guidance and good practice are signposted within the Subject Benchmark Statement where appropriate. Higher education providers are responsible for how they use these resources.<sup>6</sup>

## **Equality and diversity**

The Quality Code embeds consideration of equality and diversity matters throughout. Promoting equality involves treating everyone with equal dignity and worth, while also raising aspirations and supporting achievement for people with diverse requirements, entitlements and backgrounds. An inclusive environment for learning anticipates the varied requirements of learners, and aims to ensure that all students have equal access to educational opportunities. Higher education providers, staff and students all have a role in, and a responsibility for, promoting equality.

Equality of opportunity involves enabling access for people who have differing individual requirements as well as eliminating arbitrary and unnecessary barriers to learning. In addition, disabled students and non-disabled students are offered learning opportunities that are equally accessible to them, by means of inclusive design wherever possible and by means of reasonable individual adjustments wherever necessary.

## About this Subject Benchmark Statement

This Subject Benchmark Statement refers to bachelor's degrees with honours in Agriculture, Horticulture, Forestry, Food, Nutrition and Consumer Sciences.<sup>7</sup>

This version of the statement forms its third edition, following initial publication of the Subject Benchmark Statement in 2002 and review and revision in 2009.<sup>8</sup>

### Note on alignment with higher education sector coding systems

Programmes of study which use this Subject Benchmark Statement as a reference point are generally classified under the following codes in the Joint Academic Coding System (JACS).<sup>9</sup>

B400	(Nutrition)
C110	(Applied biology)
C150	(Environmental biology)
D300	(Animal science)
D320	(Animal health)
D327	(Animal nutrition)
D328	(Animal welfare)
D40A	(Integrated agricultural business management)
D400	(Agriculture)
D409	(Agriculture and crop science)
D412	(Crop physiology)
D413	(Crop nutrition)
D414	(Crop protection)
D415	(Crop production)
D417	(Amenity horticulture)
D420	(Agricultural and livestock science)
D422	(Equine studies)
D448	(Sustainable agricultural & landscape development)
D500	(Forestry and arboriculture)
D610	(Food science)
D700	(Agricultural sciences)
D703	(International agricultural science)
D730	(Agricultural botany)
F750	(Environmental sciences)
F770	(Soil science)
J700	(Biotechnology)
K341	(Garden horticulture)
N230	(Land and property management)
N231	(Land management)
N900	(Others in business and administrative studies)

---

<sup>7</sup> Bachelor's degrees are at level 6 in *The Framework for Higher Education Qualifications in England, Wales and Northern Ireland* and level 10 in *The Framework for Qualifications of Higher Education Institutions in Scotland*, as published in *The Frameworks for Higher Education Qualifications of UK Degree-Awarding Bodies*, available at: [www.qaa.ac.uk/assuring-standards-and-quality/the-quality-code/qualifications](http://www.qaa.ac.uk/assuring-standards-and-quality/the-quality-code/qualifications).

<sup>8</sup> Further information is available in the *Recognition scheme for Subject Benchmark Statements*, available at: [www.qaa.ac.uk/publications/information-and-guidance/publication?PubID=190](http://www.qaa.ac.uk/publications/information-and-guidance/publication?PubID=190).

<sup>9</sup> Further information about JACS is available at: [www.hesa.ac.uk/content/view/1776/649](http://www.hesa.ac.uk/content/view/1776/649).

## **Summary of changes from the previous Subject Benchmark Statement (2009)**

Given that six years had passed since the revision of the Subject Benchmark Statement for Agriculture, Horticulture, Forestry, Food and Consumer Sciences, a review was carried out in order to consider any change of context or other factors that might prompt amendments to the 2009 version of the statement. The review group included a representative from the Chartered Institute of Ecology and Environmental Management (CIEEM), the Association for Nutrition, the Institute of Food Science and Technology, and representatives from a range of higher education providers.

The Statement has been revised and updated to take account of recent developments in agriculture, horticulture, forestry, food and consumer sciences, as well as wider developments across higher education. These developments include our increasing understanding of the impacts that climate change may have on terrestrial ecosystems, and of the benefits that humans derive from these ecosystems, collectively referred to as ecosystem services.

The more significant change to the Statement includes the coverage of programmes related to nutrition, which has been included in this Statement explicitly for the first time. This recognises the growth of the subject in its own right with distinct employment opportunities and addresses the absence of the subject in other related benchmark statements. The review group noted the rise in programmes that related to agriculture, food and nutrition and the growing importance of nutrition within the context of agricultural production and food security. It is recognised that aspects of the curriculum overlap with food science and technology, and other related benchmarks, and therefore the characteristics are grouped together giving programme providers and opportunity to develop food science programmes, nutrition programmes or a combined programme. Other changes made include minor editorial changes to the main text to give greater consistency and clarity to the Statement.

# 1 Introduction

1.1 The purpose of this Statement is to make explicit the nature and the standard of degree awards in the subject areas of the land-based industries and professions, related applied and social sciences, rural studies, and consumer sciences and studies. The Statement clarifies the boundaries of each subject area and the specific threshold, typical and excellent standards for the award of a bachelor's degree with honours.

1.2 The subjects covered by this Statement are grouped on the basis that all are concerned with production of food, and non-food products from land resources, consumer products and services, and ecosystem and other services for public benefit. Although the focus changes, each subject encompasses various aspects of production chains involving animals, crops and retail of consumer goods and services. They all involve consumer interactions with producers, service providers and other stakeholders. Sustainable and secure production, consumption and development are important areas of study in these subjects as scarcity of resources impacts on health and well-being of diverse animal and human populations on a global scale, highlighting the need to modify consumer attitudes and behaviour.

1.3 The review group endorses the view that benchmark statements do not constitute definitive regulatory criteria for individual programmes or awards. They provide valid frames of reference within which honours degrees in a subject are offered. They need to be used with particular care in interdisciplinary or multidisciplinary contexts, where simple or general application may be inappropriate.

1.4 This Statement assists:

- higher education providers to design and validate programmes of study
- external examiners and academic reviewers to compare and verify standards
- professional bodies (if and where appropriate) to review processes and content for the purpose of accreditation
- students and employers to obtain information on the purpose and content of degree programmes.

1.5 The programmes covered in this Statement are not taught by all higher education providers. Individual higher education providers may focus on, and have national and international recognition for, specialisms in teaching and research in these subject areas as well as constituent and cognate subjects.

1.6 In 'mapping the territory', the original benchmarking group aimed to identify the common substantive core of the main programme areas. Programmes in these subjects provide academically rigorous study of material of relevance that are applicable in the world of work and to society. Many programmes of study provide a period of work placement. A common feature of the programmes covered in this Statement is that they are applied academic subjects, often involving study across more than one subject, and often integrating aspects of chemical, physical, biological, economic and social sciences. The diversity of programmes and the extent of interdisciplinary work allow students entering higher education to choose a programme with an emphasis suited to their needs and aspirations. They develop the student's ability to understand, use and contribute to the further development of the subject. Many programmes are concerned with aspects of human use of the biosphere and with people in their role as managers and/or consumers of goods or services.

## **2 Nature and extent of Agriculture, Horticulture, Forestry, Food, Nutrition and Consumer Sciences**

2.1 The degree programmes covered by this Statement can be described under the following indicative headings:

### **Programmes broadly concerned with land-based industries**

2.2 **Agriculture and horticulture** are the science, occupations, businesses and industries involved with the sustainable generation of food and other products through the management and manipulation of the terrestrial biosphere. Other programmes may be broadly concerned with the husbandry, welfare and management requirements of companion animals and animals kept for their athletic abilities or the recreational and sporting interests of their owners. The subjects apply fundamental physical, biological, economic and sociological principles to sustainable production and land use and consider the global socio-economic and environmental impacts of such management systems.

### **Programmes broadly concerned with applied sciences**

2.3 **Agricultural sciences** are the fundamental sciences of plants, animals, fungi, microorganisms, soils and global processes, which underpin human usage of the biosphere, including the production or management of animals and plants for food and other products, and the sustainable management of productive resources for economic, social and environmental value.

2.4 **Food science, food technology and nutrition** is the understanding and application of a range of sciences, to satisfy the needs of society for a sustainable, safe, nutritious and secure food supply chain of adequate quality in relation to health and well-being.

### **Programmes broadly concerned with the rural environments and sciences**

2.5 **Rural environmental sciences** address the application of fundamental biological, economic and sociological principles to the sustainable management of the environment and countryside in the interests of society as a whole.

2.6 **Forestry** is the application of physical, biological, economic and sociological principles to the sustainable management of trees, woodlands and forests for the benefit of society.

### **Programmes broadly concerned with consumer sciences/studies**

2.7 **Consumer sciences/studies** are defined as interdisciplinary subjects that seek to understand the relationships between the consumer and the economic, legal, social, technical, ethical and environmental forces that influence the development, provision and consumption of goods and services.

## Defining principles

2.8 The subject group for this Statement is large and diverse. Rather than attempt to ensure that all possible aspects are covered, all interests represented and all nuances of the subjects detailed, the Statement seeks to provide a practical guide to the essential features of the range of degree programmes. All the degree programmes are application-orientated, broadly based and require some study across a spectrum of subjects from physics and chemistry through biology to the social sciences, policy, economics, management and consumer behaviour.

2.9 The study programmes covered by this Statement display distinctive features relating to the generation of 'products' (often originating from the terrestrial biosphere) and their subsequent processing, marketing and consumption. Studies of production processes, transformation processes, business environments, consumer behaviour and social values are apparent. The initial resources may be biological, environmental or social and be capable of being assigned an economic value. A product chain may be apparent, set in a business and economic framework for producers and consumers. The 'products' have to be safe for consumers, and so policy, legal, ethical, and health and safety issues are also apparent. Environmental impacts and sustainability also feature.

2.10 Degree programmes covered by this Statement are interdisciplinary, drawing on diverse subjects but each with a clear and integrated set of learning outcomes. The programmes include many elements that are subject-specific. Other elements relate to the context of the degree programme and give a broad appreciation of the relevant underpinning in physical, chemical, biological or nutritional principles, economic and business analysis, human behaviour, social and environmental context, and the linkages between these. Programmes often examine processes and their management, and have a clear focus of usage and application.

2.11 For the applied subjects covered by this Statement, a diversity of employer needs are reflected in the programme designs. This, and the interdisciplinary nature of this provision, enhance graduate employability.

2.12 There is a measure of diversity in the provision of programmes that reflect the individual higher education provider's strengths and programme aims in relation to specific sectors of the graduate labour market. Graduates generally gain employment in a wide range of industries and organisations ranging from small and medium-sized enterprises, international companies and organisations, government bodies, academic institutions, and non-governmental organisations.

2.13 Some higher education providers recognise this with a range of award titles. Others offer diversity through option choice and specialisation opportunities within programmes of study that may include work-based placements. Programme definition is a dynamic process and new configurations of component subjects emerge in response to developments in these subjects, changes in the needs and aspirations of society, and in response to opportunities in the graduate labour market.

2.14 Although individual degree programmes differ in their focus, this Statement covers broad indicative definitions of the various degree programme groups and of the capabilities of graduates.

## Programmes broadly concerned with land-based industries

2.15 Degree programmes in **agriculture** are designed to develop the knowledge, skills and application required by those who may go on to manage agricultural enterprises, agri-food businesses, and those who are involved in closely related commercial research and advisory work. Graduates with agricultural degrees have a thorough understanding of crop and animal production methods and of the underpinning scientific, economic and business principles. In particular, they are able to identify technological and economic problems encountered in current production systems; evaluate new techniques and, where appropriate, apply them to commercial practice; know how to organise and manage a business; identify, evaluate and alleviate public concerns over food production practices and the wider consequences of agricultural activities.

2.16 Degree programmes in **horticulture** are designed to develop the knowledge and skills required to integrate the challenges of food security, sustainable production, preservation of biodiversity, climate change and human well-being. Graduates may go on to manage horticultural enterprises and related businesses, operate in international trade and production systems, manage amenity landscapes or be involved in closely related official or commercial research and advisory work. Graduates with horticulture degrees have a thorough understanding of plant manipulation and production methods and of the underpinning scientific, economic and business principles. They are able to identify technological and economic problems encountered in current production systems, evaluate new techniques and, where appropriate, apply them to commercial practice. Graduates appreciate the social, rural and urban landscape values associated with horticulture and the dilemmas facing their current and future management; appreciate the underpinning global nature of production and supply chains; and evaluate the wider consequences of horticultural activities including public concerns over sustainable land use and production practices.

## Programmes broadly concerned with applied sciences

2.17 Degree programmes in the **agricultural sciences** are concerned with the scientific basis of agriculture, horticulture and related applied sciences. They include all the sciences underpinning the sustainable production and use of animals, fungi, plants and their products, including food and non-food materials. Graduates of agricultural science programmes have developed and integrated their knowledge and skills across areas of applied biology, physics and chemistry appropriate to the programme. The degree programmes develop students' appreciation of, and ability to apply, detailed scientific knowledge and understanding in key sub-subjects appropriate to the programme. These sub-subjects are likely to include soil science; animal and plant nutrition and husbandry; product quality; the biochemistry and physiology of animals and plants; genetics (including genetic engineering); endocrinology; reproductive and developmental biology; and weed, pest and disease control and animal welfare; together with aspects of management, economics, environmental interactions, sustainability and bioethics.

2.18 Degree programmes in **food science, food technology and nutrition** are designed to develop the knowledge and skills required by those who are involved in food supply, production processing, storage and sale, the nutritious qualities of food products and their production, translation and application of nutrition science, together with the associated regulatory and advisory work. Graduates with degrees in food science and technology have an understanding of the characteristics and composition of major food materials; the microbiology, nutritional quality, chemistry, physical properties and eating qualities of food; the impact of food storage and processing.

2.19 In particular, graduates are able to identify and respond to technological and economic challenges encountered in food chains, appraise current research in food-related areas and use this knowledge for the development of new food products or processes. They are able to evaluate innovative technologies and, where appropriate, apply them to commercial practice, understand appropriate legislation and regulations, identify and evaluate public interest in food safety and nutrition, evaluate the wider consequences of food chain activities and minimise any harmful effects on the environment and on people.

2.20 In addition, graduates with degrees in nutrition have knowledge and understanding of:

- the scientific basis of nutrition and nutritional requirements from molecular through to the population level, for human and/or animal systems
- the food chain and its impact on food choice
- food in a social or behavioural context, at all stages of the life course
- how to apply the scientific principles of nutrition for the promotion of health and wellbeing of individuals, groups and populations, recognising benefits and risks and communicate evidence to a variety of audiences
- codes of ethics and practice relevant to their profession.

## **Programmes broadly concerned with rural environments and sciences**

2.21 Degree programmes in **rural environmental sciences** are designed to develop the knowledge and skills of those who are involved in a range of environmental land use and management activities. Some degree programmes may have a primary concern with the economic structure of the agricultural, horticultural or forestry industries and their associated and ancillary enterprises. Others may address the physical, social and cultural aspects of the rural environment, while some may have a focus on the complex ecology of both managed and unmanaged landscapes. The degree programmes are multidisciplinary frameworks within which there are discrete specialisms. Graduates take an integrated and holistic approach within an analytical and evaluative framework. They view the countryside as a complex environmental and cultural resource of great national and global value. Graduates are able to address the issues of sustainability and the conflict between commercial production and the competing demands of society in a physically and culturally diverse landscape.

2.22 Degree programmes in **forestry** are designed to develop the knowledge and skills of those who go on to work in forestry and related professions. Graduates have a thorough understanding of the physical, biological, economic and sociological principles and processes that underpin forestry. They are able to apply such principles and processes to the sustainable management of trees, woodland and forests for multiple goods and ecosystem services (for example, production of wood and non-wood forest products, carbon sequestration, protection of soil and water, and recreation and other cultural services). They understand the commercial, social and environmental contexts in which forestry is practised and the consequences of forestry for the rural economy, society and the environment.

## **Programmes broadly concerned with consumer sciences/studies**

2.23 Programmes in **consumer sciences/studies** have a focus on the consumption of goods and services and on the behaviour of people as consumers. With the increasing importance of sustainable consumption and development, there is an interest in how consumer choices are made and can be modified. This includes critical analysis of the social, economic, legal, technological, ethical and environmental contexts within which consumer choices are made. There is also concern with the development, production and provision of goods and services in terms of quality, acceptability, value, safety and accessibility for consumers. All consumer sciences/studies programmes have strong vocational elements; many offer work-based learning or placements and some have projects designed to meet the needs of external organisations. The programmes are set in the appropriate theoretical frameworks with an emphasis on equipping students with the knowledge and skills required to make informed decisions. A graduate in consumer sciences/studies understands the social and psychological contexts of consumer behaviour. Graduates understand the economic, legal, scientific and technological principles underlying the production of, and access to, goods and services. They are able to select and apply concepts, theories and methods drawn from constituent subjects to the analysis of consumer issues and other factors affecting consumer choice.

## **3 Knowledge, understanding and skills**

### **Introduction**

3.1 Given the diversity of award titles (see Appendix 1) and differences in emphasis among individual programmes of study, it is not sensible to list all the subjects that might contribute to specific degree programmes. Thus, it is not possible to specify a precise core subject knowledge that is common to all the subjects covered by this Statement. Nevertheless, programmes in these subject areas share common features of structure, approach and pedagogic philosophy.

3.2 This section describes the general characteristics of the programmes under consideration, with the aim of facilitating and encouraging a diversity of provision across higher education. Each higher education provider is able to map its own provision within this general framework.

3.3 For individual degree programmes, the content depends on whether the objective is to produce a graduate who is a 'general practitioner' or a 'subject specialist', that is, a graduate who is skilled in a broad or a narrow range of subjects. The balance between breadth and depth of a graduate's knowledge is similarly variable.

3.4 Nevertheless, graduates possess an appreciation of the interacting nature of a range of elements growing out of a more specialist understanding of some of them. Generally, students develop an ability to synthesise concepts and ideas across subjects and to take a holistic view appropriate to their particular subject.

### **Subject-specific knowledge and understanding**

3.5 Despite the diversity, the subject areas being considered share a number of important features:

- the relevance and application of the subject
- the development of integrated, multidisciplinary and interdisciplinary and interprofessional approaches
- integration of theory, experiment, investigation and fieldwork, and the development of principles into practice
- quantitative and qualitative approaches to information
- an understanding of the importance of entrepreneurship and innovation
- awareness of risks of exploitation and the requirement for sustainable solutions
- consideration of rapid and continuing change and development of the subject.

3.6 Each degree programme addresses:

- the underlying principles of the subject
- its relevant defining concepts, theories and methods
- the current knowledge and development of the subject
- identification of current gaps in knowledge or understanding and current issues of wider concern to society and the world
- the global, regional and local contexts of the topic
- the location of resources, and the management, exploitation and pattern of utilisation of resources within socio-economic, policy and legal frameworks
- subject-specific and generic skills, problem solving and a professional approach to study and lifelong learning
- an understanding of issues of sustainability and environmental impact.

## Abilities and skills

3.7 Honours graduates of programmes covered by this Statement:

- demonstrate familiarity with a wide range of subject-specific facts and principles in combination with an awareness of the current limits of theory and applied knowledge
- understand the provisional nature of information and allow for competing and alternative explanations within their subject
- exhibit ownership of the defining elements of the subject as a result of in-depth study or research
- tackle problems by collecting, analysing and evaluating appropriate qualitative and quantitative information, and using it creatively and imaginatively to solve problems, introduce and develop innovations, and make decisions
- plan and execute research or development work, evaluate the outcomes and draw valid conclusions
- display skills in evaluating and interpreting, in a balanced manner, new information provided by others from a range of fields of study
- display generic skills and demonstrate the ability to acquire new competencies required for career progression
- assess the ethical consequences of human activities to optimise community and environmental sustainability.

3.8 The abilities and skills developed during the course of degree programmes covered by this Statement are subdivided into:

- intellectual
- practical
- analytical and data interpretation
- communication
- digital literacy and social media
- interpersonal and teamwork
- self-management and professional development skills.

3.9 These skills are generally developed in a subject-specific context, but have wider applications for continuing personal development and in the world of work. The subject skills encompass technical knowledge and abilities specific and appropriate to the focus of the degree programme. In addition, each individual programme develops a capacity for holistic and lateral thinking and an appreciation of both inductive and deductive reasoning.

## **Intellectual skills**

3.10 Honours graduates of programmes covered by this Statement:

- critically analyse, synthesise and summarise information from a variety of sources
- recognise and use appropriate theories, concepts and principles from a range of subjects
- collect, analyse and integrate several lines of evidence to develop balanced arguments demonstrating critical thinking and synthesis
- design an experiment, investigation, survey or other means to test a hypothesis or proposition
- apply knowledge and understanding to address multidisciplinary problems within a global context
- demonstrate creativity and innovation
- demonstrate awareness of the provisional nature of the facts and principles associated with a field of study
- make decisions in complex and unpredictable contexts
- understand the importance of academic integrity.

## **Practical skills**

3.11 Honours graduates of programmes covered by this Statement:

- plan, conduct and report on investigations, including those using secondary data
- collect and record diverse types of information generated by a wide range of methodologies and summarise it using appropriate qualitative and/or quantitative techniques
- devise, plan and undertake field, laboratory or other investigations in a responsible, sensitive and safe manner, paying due diligence to risk assessment, ethical and data protection issues, rights of access, and relevant health and safety issues
- take account of safety regulations, legal requirements, and the impact of investigations on the environment
- appreciate and analyse financial and other management information and use it in decision making
- acquire subject-specific practical and professional competencies.

## **Analytical and data interpretation skills**

3.12 Honours graduates of programmes covered by this Statement:

- appreciate issues of sample selection, accuracy, precision and uncertainty during collection, recording and analysis of data in the field, laboratory or collated from secondary sources
- appreciate the difficulties of having incomplete information on which to base decisions
- understand the nature of risk
- prepare, process, interpret and present data, using appropriate qualitative and quantitative techniques and packages
- solve numerical problems using computer-based and other techniques.

## **Communication skills**

3.13 Honours graduates of programmes covered by this Statement:

- receive, evaluate and respond to a variety of information sources for example electronic, textual, numerical, verbal, graphical, and digital
- communicate accurately, clearly, concisely, confidently and appropriately to a variety of audiences using a range of formats and employing appropriate scientific language
- contribute constructively to group discussions
- consider, appreciate and evaluate the views of others.

## **Digital literacy and social media skills**

3.14 Honours graduates of programmes covered by this Statement:

- use the internet critically as a means of communication and a source of information
- demonstrate competence in the use of electronic information handling and data processing and analysis software and applications
- use a range of IT platforms (for example desktop, server, tablet and mobile) and social media to communicate information to a range of audiences effectively
- demonstrate an awareness of legal, effective and safe use of digital and social media
- use and interpret digital data and information to inform decision making.

## **Interpersonal and teamwork skills**

3.15 Honours graduates of programmes covered by this Statement:

- organise teamwork and participate effectively in a team
- set realistic targets
- identify individual and collective goals and responsibilities
- plan, allocate and evaluate the work of self, individuals and teams
- perform in a manner appropriate to allocated roles and responsibilities
- recognise and respect the views and opinions of other team members
- show positive intent
- reflect on and evaluate own performance as an individual or as a team member.

## **Self-management and professional development skills**

3.16 Honours graduates of programmes covered by this Statement:

- appreciate the need for professional codes of conduct where applicable
- recognise the moral, ethical and social issues related to the subject
- assume responsibility for their own actions
- identify and work towards targets for personal, academic and career development
- develop an adaptable and flexible approach to study and work
- develop the skills necessary for self-managed and lifelong learning (that is, working independently, time-management and organisational skills)
- demonstrate the competence, behaviour and attitude required in professional working life, including initiative, reflection, leadership and team skills
- behave in a responsible manner to ensure the rights of others are protected
- understand the importance of academic and research integrity.

## 4 Teaching, learning and assessment

### Teaching and learning

4.1 The ultimate goal of student learning is the considered application of knowledge and skills together with an appreciation of the integrative nature of the subject areas in an appropriate context.

4.2 As students progress through a degree programme, there is an increasing reliance on student-centred modes of learning, which fosters the development of a professional approach to lifelong learning.

4.3 Graduates in these subjects have wide employment prospects. They are adaptable and have subject-specific knowledge and abilities, and generic skills. Many different formats for teaching and learning aid the development of these attributes. Programmes incorporate a research project or other self-motivated individual study leading to a thesis, dissertation or report. Programmes also contain most, but not necessarily all, of:

- lectures
- tutorials and seminars
- student-led seminars
- specialist external lectures
- practical classes in and outside the laboratory (defined broadly and including the computing laboratory and other specialist facilities)
- literature-based research
- e-learning technologies including the use of virtual learning environments
- case studies
- problem solving
- problem-based learning
- working in groups on realistic/live projects with external organisations
- other exercises which require students to integrate information and techniques
- directed self-study
- visits to commercial and industrial businesses, consumer organisations, public services, policy-making bodies and research organisations
- opportunities for work experience, for example a managed placement or work-based learning.

### Assessment

4.4 Assessments are formative as well as summative and are likely to take a number of forms, including examinations (written, electronic, oral or practical; closed or open book), and to incorporate continuous assessment. The style of assessment varies between subjects and higher education providers, but is linked to clearly defined goals and anticipated learning outcomes. Assessment is managed to promote deep rather than surface learning. Assessments based on real-life problems, with employer involvement and with effective feedback, are valuable and are included where they are compatible with the assurance of academic standards.

## 5 Benchmark standards

5.1 In this section, standards of attainment are expressed as statements of learning outcomes. These describe what a student should be able to demonstrate on completion of an honours degree in the range of subjects covered by this statement. The outcomes are demonstrable through appropriate assessment strategies. It is recognised, however, that not all learning outcomes can be objectively assessed. Preceding sections have emphasised the diversity of degree programmes covered by this statement. Many of the degree programmes involve study in more than one subject area and may cover a relatively broad or narrow range of topics. This needs to be considered when evaluating levels of student performance. It is important that standards of attainment reflect the shared values of the academic community as moderated internally and externally by academic quality procedures, including the external examiner system.

5.2 Tables 1 and 2 articulate standards at three levels: 'threshold', 'typical' and 'excellent'. These are defined as:

- **threshold standard:** the minimum required to gain an honours degree; graduates at this level demonstrate an acceptable level of ability and skills
- **typical standard:** the level of attainment expected of the majority of honours graduates; such graduates demonstrate definite competence and skills
- **excellent standard:** graduates achieving this standard have a range of competencies and skills at an enhanced level.

5.3 The benchmark standards defined in Table 1 are for the seven main categories of abilities and skills outlined in section 4.2, and in Table 2 for subject-specific skills. These categories do not constitute a checklist, nor does the list imply any particular weighting. Programmes include the full range of abilities and skills, but their point of introduction and the level of engagement is decided by curriculum designers.

5.4 To reach a given standard at the point of completion of an honours degree in the subjects covered by this Statement, students demonstrate achievement across the main categories of abilities and skills in Tables 1 and 2, interpreted for the particular degree programme. However, a lower performance in one category may be compensated for by a higher performance in another.

5.5 The standards in these tables should be read in conjunction with Sections 3 and 4, and paragraphs 5.1 to 5.4.

**Table 1: Benchmark standards - Generic skills: on graduating with an honours degree in agriculture, forestry, food, nutrition and consumer sciences graduates should be able to:**

	<b>Threshold</b>	<b>Typical</b>	<b>Excellent</b>
<b>5.6.1 Intellectual skills</b>	<ul style="list-style-type: none"> <li>i recall knowledge based on the directly taught programme</li> <li>ii demonstrate some understanding of subject-specific theories, paradigms, concepts and principles</li> <li>iii demonstrate ability to define and solve routine problems</li> <li>iv collate, summarise and analyse information</li> <li>v integrate lines of evidence from a limited range of sources to support findings and hypotheses</li> <li>vi demonstrate some ability to consider issues from a range of multidisciplinary and interdisciplinary perspectives</li> <li>vii source academic literature and extract relevant points.</li> </ul>	<ul style="list-style-type: none"> <li>i recall knowledge based on the directly taught programme with some evidence of wider enquiry</li> <li>ii demonstrate understanding of subject-specific theories, paradigms, concepts and principles, as well as some understanding of more specialised areas</li> <li>iii demonstrate ability to define problems, and devise and evaluate solutions to both routine and unfamiliar problems</li> <li>iv analyse, synthesise, summarise and evaluate information</li> <li>v integrate lines of evidence from a range of sources to formulate and test hypotheses</li> <li>vi demonstrate the ability to consider issues from a range of multidisciplinary and interdisciplinary perspectives and to draw on appropriate concepts and values in arriving at a critical assessment</li> <li>vii critically appraise academic literature and other sources of information.</li> </ul>	<ul style="list-style-type: none"> <li>i recall knowledge based well beyond the directly taught programme</li> <li>ii demonstrate thorough understanding of subject-specific theories, paradigms, concepts and principles as well as in-depth understanding of more specialised areas</li> <li>iii demonstrate the ability to define problems, devise and evaluate possible solutions, and to solve both routine and unfamiliar problems confidently</li> <li>iv seek out, analyse, synthesise, summarise and critically evaluate information</li> <li>v show a well-developed ability to integrate lines of evidence from a wide range of sources to formulate and test hypotheses</li> <li>vi demonstrate the ability to consider issues from a wide range of multidisciplinary and interdisciplinary perspectives and to draw on appropriate concepts and values in arriving at a critical assessment</li> <li>vii demonstrate a highly developed ability for critical appraisal of</li> </ul>

	Threshold	Typical	Excellent
			academic literature and other sources of information.
<b>5.6.2 Practical skills</b>	<ul style="list-style-type: none"> <li>i plan, conduct and present an independent investigation with significant guidance</li> <li>ii relate investigations to some prior work and reference it appropriately</li> <li>iii use appropriate laboratory and field equipment safely</li> <li>iv apply a range of methods to solve problems</li> <li>v use technologies to address problems</li> <li>vi describe and record in the field and laboratory</li> <li>vii interpret practical results with guidance</li> <li>viii present results of investigations in a number of formats.</li> </ul>	<ul style="list-style-type: none"> <li>i plan, conduct and present an independent investigation with some reliance on guidance</li> <li>ii relate investigations to prior work and reference it appropriately; recognise when information is incomplete</li> <li>iii use appropriate laboratory and field equipment competently and safely select and apply a range of appropriate methods to solve problems</li> <li>iv use appropriate technology to address problems efficiently</li> <li>v describe adequately and record accurately in the field and laboratory</li> <li>vi interpret practical results in a logical manner</li> <li>vii present research findings effectively and appropriately in a number of formats.</li> </ul>	<ul style="list-style-type: none"> <li>i suggest, plan, conduct and present an independent investigation with limited reliance on guidance</li> <li>ii relate investigations to prior work, be aware of recent research developments and reference it appropriately</li> <li>iii use appropriate laboratory and field equipment highly competently and safely</li> <li>iv select, justify and apply a range of appropriate methods to solve challenging problems</li> <li>v select and use appropriate technology to address problems effectively</li> <li>vi describe clearly and record accurately in the field and laboratory</li> <li>vii interpret practical results perceptively</li> <li>viii present research findings perceptively and effectively in a number of formats.</li> </ul>

	<b>Threshold</b>	<b>Typical</b>	<b>Excellent</b>
<b>5.6.3 Analytical and data interpretation skills</b>	<ul style="list-style-type: none"> <li>i select an appropriate sampling procedure</li> <li>ii recognise when information is incomplete</li> <li>iii appreciate risk</li> <li>iv process and interpret data</li> <li>v solve basic numerical problems using appropriate techniques.</li> </ul>	<ul style="list-style-type: none"> <li>i define a suitable and effective sampling procedure</li> <li>ii recognise incomplete sets of information and propose appropriate solutions</li> <li>iii understand risk</li> <li>iv process and interpret data effectively</li> <li>v solve a range of numerical problems using appropriate techniques.</li> </ul>	<ul style="list-style-type: none"> <li>i define a suitable and efficient sampling procedure</li> <li>ii recognise incomplete sets of information and suggest solutions</li> <li>iii understand and quantify risk</li> <li>iv choose appropriate techniques to process data and interpret them effectively</li> <li>v solve challenging numerical problems using appropriate techniques.</li> </ul>
<b>5.6.4 Communication skills</b>	<ul style="list-style-type: none"> <li>i communicate to a variety of audiences in written, graphical, electronic and verbal forms</li> <li>ii make contributions to group discussions</li> <li>iii listen and respond to others.</li> </ul>	<ul style="list-style-type: none"> <li>i communicate effectively to audiences in written, graphical and verbal forms</li> <li>iv contribute coherently to group discussions</li> <li>v listen attentively and respond to others.</li> </ul>	<ul style="list-style-type: none"> <li>i communicate effectively and engagingly to a variety of audiences in written, graphical and verbal forms</li> <li>ii contribute constructively to group discussions</li> <li>iii listen to, evaluate and respond effectively to the views of others.</li> </ul>

	<b>Threshold</b>	<b>Typical</b>	<b>Excellent</b>
<b>5.6.5 Digital literacy and social media skills</b>	<ul style="list-style-type: none"> <li>i use the internet for communication and information retrieval</li> <li>ii handle electronic information with guidance, using appropriate techniques, software and applications</li> <li>iii have an awareness of effective and safe use of digital media</li> <li>iv use social media for communication.</li> </ul>	<ul style="list-style-type: none"> <li>i use the internet critically for communication and information retrieval</li> <li>ii handle electronic information using appropriate techniques, software and applications</li> <li>iii demonstrate the effective and safe use of digital media</li> <li>iv communicate effectively using social media.</li> </ul>	<ul style="list-style-type: none"> <li>i use digital sources critically and imaginatively for communication and information retrieval</li> <li>ii handle electronic information confidently and competently using appropriate techniques, custom interfaces, software and applications</li> <li>iii develop effective and safe use of digital media</li> <li>iv actively use social media for effective communication and respond appropriately to feedback.</li> </ul>
<b>5.6.6 Interpersonal and teamwork skills</b>	<ul style="list-style-type: none"> <li>i make some contribution to teamwork and goals</li> <li>ii recognise and respect the views of others</li> <li>iii reflect on team performance.</li> </ul>	<ul style="list-style-type: none"> <li>i organise a team effectively</li> <li>ii contribute effectively to teamwork</li> <li>iii identify individual and collective goals</li> <li>iv recognise and respect the views of others</li> <li>v evaluate performance as an individual and team member.</li> </ul>	<ul style="list-style-type: none"> <li>i organise, lead and motivate a team effectively</li> <li>ii contribute effectively and enthusiastically to teamwork</li> <li>iii identify individual and collective goals and responsibilities</li> <li>iv recognise and respect the views of others</li> <li>v evaluate performance as an individual and team member, and learn for the future.</li> </ul>

	Threshold	Typical	Excellent
<b>5.6.7</b> <b>Self-management and professional development skills</b>	<ul style="list-style-type: none"> <li>i recognise the existence of moral and ethical issues associated with the subject</li> <li>ii appreciate the need for professional codes of conduct</li> <li>iii accept some responsibility for their own learning</li> <li>iv identify targets for personal, career and academic development</li> <li>v be adaptable and have a flexible approach to study and work</li> <li>vi develop some skills necessary for self-managed and lifelong learning (that is, independent study, time management, organisational skills)</li> <li>vii recognise personal strengths and weaknesses.</li> </ul>	<ul style="list-style-type: none"> <li>i recognise and be able to comment on the moral and ethical issues associated with the subject</li> <li>ii understand and be able to apply professional codes of conduct</li> <li>iii accept responsibility for their own learning</li> <li>iv identify and work towards targets for personal, career and academic development</li> <li>v take a responsible, adaptable and flexible approach to study and work</li> <li>vi develop the skills necessary for self-managed and lifelong learning (that is, independent study, time management, organisational skills)</li> <li>vii analyse personal strengths and weaknesses.</li> </ul>	<ul style="list-style-type: none"> <li>i recognise, explain and evaluate the moral and ethical issues associated with the subject</li> <li>ii understand and be able to apply professional codes of conduct</li> <li>iii assume responsibility for their own learning</li> <li>iv identify and work towards ambitious targets for personal, career and academic development</li> <li>v manage a responsible, adaptable and flexible approach to study and work</li> <li>vi develop the skills necessary for self-managed and lifelong learning (that is, independent study, time management, organisational skills) to an enhanced level</li> <li>vii analyse personal strengths and weaknesses and take account of them.</li> </ul>

**Table 2: Benchmark Standards - Subject-specific knowledge and understanding: on graduating with an honours degree in agriculture, forestry, food, nutrition and consumer sciences**

	<b>Threshold</b>	<b>Typical</b>	<b>Excellent</b>
<p><b>5.6.8.a</b></p> <p><b>Subject-specific knowledge and understanding in agriculture and horticulture</b></p>	<p>Graduates have some familiarity with the science and management of sustainable production systems that comprise the broad agricultural or horticultural industries within the global socio-economic and environmental contexts required by society.</p> <p>Graduates will be able to:</p> <ul style="list-style-type: none"> <li>i demonstrate some understanding of the scientific factors affecting production</li> <li>ii describe the changing policy and socio-economic factors which form and influence systems</li> <li>iii understand how production systems can be manipulated and managed sustainably</li> <li>iv recognise the ethical implications of production systems</li> <li>v recognise the needs and requirements of society with specific reference to food security and sustainable intensification</li> <li>vi apply this knowledge to a range of routine real-life situations.</li> </ul>	<p>Graduates have a well-grounded understanding of the science and management of sustainable production systems that comprise the broad agricultural or horticultural industries within the global socio-economic and environmental contexts required by society.</p> <p>Graduates will be able to:</p> <ul style="list-style-type: none"> <li>i demonstrate understanding of the scientific factors limiting production</li> <li>ii understand the national and international policy and socio-economic factors which form and influence systems</li> <li>iii understand how production systems can be improved by manipulation and management</li> <li>iv recognise and address the ethical implications of production systems</li> <li>v appreciate the needs and requirements of society with specific reference to food security and sustainable intensification</li> <li>vi apply this knowledge to a wide range of real-life situations.</li> </ul>	<p>Graduates have a comprehensive understanding of the biology and management of sustainable production systems that comprise the broad agricultural or horticultural industries within the global socio-economic and environmental contexts required by society. They demonstrate both excellent knowledge of the literature and creative application of the material.</p> <p>This distinguishes the manner in which graduates will be able to:</p> <ul style="list-style-type: none"> <li>i demonstrate understanding of the scientific factors limiting production and their interactions including climate change</li> <li>ii understand the national and international policy and socio-economic factors which form and influence systems</li> <li>iii propose improved systems through manipulation and management</li> <li>iv recognise, anticipate and address the ethical implications</li> <li>v understand, anticipate and address the needs and requirements of society with specific reference to</li> </ul>

	Threshold	Typical	Excellent
			<p>food security and sustainable intensification</p> <p>vi apply this knowledge creatively to a wide range of real-life situations.</p>
<p><b>5.6.8.b</b></p> <p><b>Subject-specific knowledge and understanding in agriculture and horticulture</b></p>	<p>Graduates have some familiarity with the social, environmental, economic, legal, scientific and technological principles underlying the business management of farm or horticultural enterprises.</p> <p>Graduates will be able to:</p> <ul style="list-style-type: none"> <li>i demonstrate limited familiarity with a range of economic and business management theory and techniques</li> <li>ii demonstrate familiarity with relevant policy</li> <li>iii describe some features of the legal, environmental and ethical framework applicable to production systems</li> <li>iv apply a limited range of specific scientific and technological processes</li> <li>v appraise the roles and responsibilities of regulatory and advisory bodies.</li> </ul>	<p>Graduates have a well-grounded understanding of the social, environmental, economic, legal, scientific and technological principles underlying the business management of farm or horticultural enterprises.</p> <p>Graduates will be able to:</p> <ul style="list-style-type: none"> <li>i describe and evaluate a wide range of economic and business management theory and techniques</li> <li>ii demonstrate familiarity with relevant policy and understand its aims</li> <li>iii describe and evaluate features of the legal, environmental and ethical framework applicable to production systems</li> <li>iv apply and evaluate a range of specific scientific and technological processes</li> <li>v appraise and evaluate the roles and responsibilities of regulatory and advisory bodies.</li> </ul>	<p>Graduates have a well-grounded understanding of the social, environmental, economic, legal, scientific and technological principles underlying the business management of farm or horticultural enterprises. They demonstrate both excellent knowledge of theory and techniques and creative application of the material.</p> <p>This distinguishes the manner in which graduates will be able to:</p> <ul style="list-style-type: none"> <li>i describe, evaluate and apply a wide range of economic and business management theory and techniques</li> <li>ii demonstrate familiarity with relevant policy and understand its origins and aims</li> <li>iii describe and evaluate features of the legal, environmental and ethical framework applicable to production systems</li> <li>iv apply and evaluate a range of specific scientific and technological processes</li> </ul>

	Threshold	Typical	Excellent
			v describe and evaluate the roles and responsibilities of regulatory and advisory bodies.
<b>5.6.8.c</b> <b>Subject-specific knowledge and understanding in agriculture and horticulture</b>	<p>Graduates select and apply a limited range of concepts, theories and methods drawn from the constituent subjects of their degree programme to agricultural or horticultural enterprises. They:</p> <ul style="list-style-type: none"> <li>i identify appropriate knowledge bases and some theoretical perspectives</li> <li>ii apply limited range of methods to problem evaluation and amelioration.</li> </ul> <p>In addition to the acquisition of generic skills, graduates will be able to:</p> <ul style="list-style-type: none"> <li>i communicate on a limited range of agricultural or horticultural issues</li> <li>ii describe and apply professional standards and responsibilities in relation to the agricultural or horticultural industry.</li> </ul>	<p>Graduates select, apply and evaluate a wide range of concepts, theories and methods drawn from the constituent subjects of their degree programme to agricultural or horticultural enterprises. They:</p> <ul style="list-style-type: none"> <li>i identify and evaluate appropriate knowledge bases and a range of theoretical perspectives</li> <li>ii apply a range of methods to problem evaluation and amelioration.</li> </ul> <p>In addition to the acquisition of generic skills, graduates will be able to:</p> <ul style="list-style-type: none"> <li>i communicate effectively on a wide range of agricultural or horticultural issues and review their performance critically</li> <li>ii describe, apply and evaluate professional standards and responsibilities in relation to the agricultural or horticultural industry.</li> </ul>	<p>Graduates select, apply and evaluate a wide range of concepts, theories and methods drawn from the constituent subjects of their degree programme to agricultural or horticultural enterprises. They demonstrate both an excellent knowledge of the literature and creative application of the material. This distinguishes the manner in which graduates will be able to:</p> <ul style="list-style-type: none"> <li>i identify and evaluate appropriate knowledge bases and a full range of theoretical perspectives</li> <li>ii justify, apply and evaluate a range of methods for problem evaluation and amelioration.</li> </ul> <p>Graduates demonstrate mastery of generic skills. Additionally, performance is distinguished by excellence in their knowledge of the literature and the creative application of the material.</p> <p>Graduates will be able to:</p> <ul style="list-style-type: none"> <li>i communicate effectively on a wide range of agricultural or horticultural</li> </ul>

	Threshold	Typical	Excellent
			<ul style="list-style-type: none"> <li>issues and review their performance critically</li> <li>ii interact effectively with and guide professionals from a wide range of cognate subjects in solving multidisciplinary problems in agriculture and horticulture</li> <li>iii describe, apply and evaluate professional standards and responsibilities in relation to the broader agricultural or horticultural industry</li> <li>iv mentor their peers in the concepts, theories and practice of agriculture and horticulture, and its improvement.</li> </ul>
<p><b>5.6.9.a</b></p> <p><b>Subject-specific knowledge and understanding in the agricultural sciences</b></p>	<p>In addition to possessing the knowledge, understanding and expertise described on the following page, graduates are familiar with one or more of the following subdivisions of applied science:</p> <ul style="list-style-type: none"> <li>i applied plant science</li> <li>ii applied animal science</li> <li>iii applied microbial science</li> <li>iv soil science</li> <li>v agricultural systems</li> <li>vi environmental science.</li> </ul> <p>Studies in each of these subdivisions draws on subject material from one or several parent subjects and reflect it in a manner relevant to applications in agricultural and cognate areas. The content of individual programmes is defined according to local expertise, knowledge, reputation and research interests but programmes are designed to provide graduates with a balanced awareness of their subject. Expected levels of achievement in the specialism are in the table for this section on page 27.</p>		

	<b>Threshold</b>	<b>Typical</b>	<b>Excellent</b>
<b>5.6.9.a</b>  <b>Subject-specific knowledge and understanding in the agricultural sciences</b>	Graduates have some familiarity and awareness of ethical issues related to agricultural practice, and:	Graduates have a well-grounded understanding of ethical issues related to the use and exploitation of biological entities, and:	Graduates have a deep and comprehensive understanding of ethical issues related to the use and exploitation of biological entities, and:
	i the physical and chemical processes of the biosphere ii the biochemical processes of life iii the flow of energy and cycling of materials within the biosphere iv the organisation of the biosphere and classification of organisms v evolutionary process and its genetic basis vi the relevance and application of their subject to the agricultural industry vii the environmental impact and sustainability of agricultural practices viii agricultural production systems ix physiological and nutritional principles of crops and livestock x global issues in the production, distribution and use of agricultural products xi food quality, safety and security xii the impacts of agriculture on climate change xiii the socio-economic, legal and policy framework for the agricultural industry xiv risk assessment, and health and safety issues in agricultural practice.		
<b>5.6.9.b</b>  <b>Subject-specific knowledge and understanding in the agricultural sciences</b>	Graduates should: <ul style="list-style-type: none"> <li>i have achieved a level of specialist knowledge and understanding, allowing them to work adaptably to apply their subject within the broad agricultural industry or a cognate field of activity</li> <li>ii be able to follow current practice, and adapt to future developments</li> <li>iii be able to comment on the local and global environmental impact</li> </ul>	With extended knowledge in some areas  Graduates should: <ul style="list-style-type: none"> <li>i have achieved a level of specialist knowledge and understanding, allowing them to work as subject specialists within the broad agricultural industry or a cognate field of activity</li> </ul>	With significantly extended knowledge in some areas  Graduates should: <ul style="list-style-type: none"> <li>i have achieved an outstanding level of specialist knowledge and understanding, allowing them to work as subject specialists within the broad agricultural industry or a cognate field of activity</li> </ul>

	<b>Threshold</b>	<b>Typical</b>	<b>Excellent</b>
	and sustainability of agricultural practices.	<ul style="list-style-type: none"> <li>ii be able to apply their subject to solve problems in the agricultural industry</li> <li>iii be able to advise on current practice and engage in discourse at a detailed level</li> <li>iv be able to assess the value and application of new research and developments from an informed perspective</li> <li>v be potentially able to lead developments in their area of specialist knowledge</li> <li>vi be able to evaluate the local and global environmental impact and sustainability of agricultural practices.</li> </ul>	<ul style="list-style-type: none"> <li>ii be able to apply their subject to solve problems in the agricultural industry</li> <li>iii be able to advise on current practice and engage in discourse at a detailed level</li> <li>iv be able to assess the value and application of new research and developments from an informed perspective</li> <li>v be able to lead research and developments in their area of specialist knowledge</li> <li>vi be able to evaluate the local and global environmental impact and sustainability of agricultural practices.</li> </ul>
<b>5.6.10.a</b> <b>Subject-specific knowledge and understanding in food science, food technology and nutrition</b>	<p>Graduates have some familiarity with relevant key scientific subjects.</p> <p>Graduates will be able to:</p> <ul style="list-style-type: none"> <li>i demonstrate an understanding of the physiology, biochemistry, genetics and immunology relevant to the study of food and nutrition science and which form the biological basis of food and nutrition science</li> <li>ii demonstrate some understanding of the chemistry underpinning molecular interactions associated with foods and food production</li> </ul>	<p>Graduates have a well-grounded understanding of the relevant key scientific subjects.</p> <p>Graduates have an integrated understanding of food, nutrients and nutrition in relation to its science and methodologies for investigation and its communication and practice in health and disease.</p> <p>Graduates will be able to:</p> <ul style="list-style-type: none"> <li>i demonstrate a good understanding of the physiology, biochemistry, genetics and immunology relevant</li> </ul>	<p>Graduates have a comprehensive understanding of the relevant key scientific subjects.</p> <p>Graduates have an excellent integrated understanding of food, nutrients and nutrition in relation to its science and methodologies for its understanding and investigation and its communication and practice in health and disease.</p> <p>Graduates will be able to:</p> <ul style="list-style-type: none"> <li>i demonstrate an excellent understanding of the physiology,</li> </ul>

	Threshold	Typical	Excellent
	<ul style="list-style-type: none"> <li>iii describe key biochemical, chemical, physical and biological factors underlying the synthesis and metabolism of food materials</li> <li>iv describe a limited range of physical properties of food</li> <li>v describe nutrients and non-nutrient components of food and drinks including alcohol and experimentally determine their values</li> <li>vi explain the role of key nutrients and non-nutrients in health.</li> </ul>	<ul style="list-style-type: none"> <li>to the study of food and nutrition science and which form the biological basis of food and nutrition science</li> <li>ii demonstrate understanding of the chemistry underpinning molecular interactions and the behaviour of components in food materials during processing and storage</li> <li>iii explain biochemical, chemical, physical and biological factors underlying the synthesis and metabolism of food materials</li> <li>iv describe physical properties of food and experimentally determine their values.</li> </ul>	<ul style="list-style-type: none"> <li>biochemistry, genetics and immunology relevant to the study of food and nutrition science and which form the biological basis of food and nutrition science</li> <li>ii demonstrate an excellent knowledge of current scientific developments relevant to food and nutrition science.</li> </ul>

## Appendix 1: Indicative programme titles

The lists below give indicative programme titles that are (a) likely to fall completely or substantially within this statement, or (b) may fall at the interface with another statement. The lists are not intended to be exhaustive of the range of degree titles that currently exists.

### (a) Completely or substantially within this statement

Agricultural botany	Agricultural business management
Agricultural economics	Agricultural sciences
Agriculture	Agriculture with business management
Agroforestry	Agronomy
Animal care	Animal health
Animal health and welfare	Animal nutrition
Animal science	Arboriculture
Arboriculture and urban forestry	Consumer behaviour
Consumer science	Consumer studies
Consumer studies and hospitality	Consumer studies and management
Consumer studies and marketing	Consumer studies and retailing
Countryside and environmental management	Countryside management
Crop protection	Crop science
Equine management	Equine science
Equine studies	Food and consumer sciences
Food and consumer studies	Food and nutrition
Food supply	Food biotechnology
Food design and technology	Food marketing economics
Food microbiology	Food, nutrition and health
Food production	Food production and quality
Food science	Food science and technology
Food studies	Food technology
Food with marketing	Forest and woodland management
Forest management	Forest sciences
Forestry	Forestry and conservation
Horticulture	Human nutrition
Nutrition	Organic agriculture
Rural environmental protection	Rural studies
Soil science	

**(b) At the interface with another statement**

Agricultural engineering	Agricultural technology
Agri-food marketing and business studies	Applied biology
Biotechnology	Brewing
Business management and marketing for the agricultural industry	Business management and marketing for the food industry
Consumer and management studies (home economics)	Countryside business and development
Ecological agriculture	Economics
Environmental biology	Environmental science
Equine and human sports science	Equine business management and marketing
Food and hospitality management	Food quality and safety management
Food quality with product development and nutrition	International agri-business management
Land and estate management	Landscape management
Natural sciences	Nutritional biochemistry
Nutritional sciences	Plant science
Pre-veterinary science	Public health nutrition
Rural enterprise and land management	Rural environmental sciences
Rural resource management	Woodland ecology and conservation

## **Appendix 2: Membership of the benchmarking and review groups for the Subject Benchmark Statement for agriculture, horticulture, forestry, food, nutrition and consumer sciences**

### **Membership of the review group for the Subject Benchmark Statement for Agriculture, Horticulture, Forestry, Food, Nutrition and Consumer Sciences (2016)**

Dr Sue Bailey	London Metropolitan University
Dr Christine Cahalan	Bangor University
Professor Ian Connerton	University of Nottingham
Professor Basma Ellahi	University of Chester
Dr Peter Glaves	Chartered Institute of Ecology and Environmental Management (CIEEM)
Professor Mike Gooding	Aberystwyth University
Dr Phil Lyon	Queen Margaret University Edinburgh
Ms Leonie Milliner	Association for Nutrition
Alison Murray	SRUC (Scotland's Rural College)
Professor Julian Park (Chair)	University of Reading
Dr Anya Perara	Writtle College
Professor Carol Phillips	Institute of Food Science and Technology
Nigel Warner	Royal Agricultural University
Dr Andy Wilcox	Harper Adams University
Professor Paul Wilson	University of Nottingham

#### **Student reader**

Anne Carpenter University of Reading

#### **QAA officer**

Helen Kealy Quality Assurance Agency for Higher Education

## **Membership of the review group for the Subject Benchmarking Statement for Agriculture, Horticulture, Forestry, Food and Consumer Sciences (2009)**

Details provided below are as published in the second edition of the Subject Benchmark Statement.

Mrs Carol Brennan	Queen Margaret University
Dr Christine Cahalan	University of Wales, Bangor
Professor Ian Connerton	University of Nottingham
Professor Richard Ellis	University of Reading
Professor Phil Garnsworthy	University of Nottingham
Mr Mike Kitson	Independent, formerly London Metropolitan University
Mrs Chris Leggate	Scottish Agricultural College
Dr Phil Lyon	University of Umeå, Sweden
Mr Nigel Warner	Royal Agricultural College
Dr Andy Wilcox	Harper Adams University College
Dr Alan Younger	University of Newcastle

## **Membership of the original benchmarking group for Agriculture, Forestry, Agricultural Sciences, Food Sciences and Consumer Sciences (2002)**

Details below are as published in the original Subject Benchmark.

Dr Christine Cahalan	University of Wales, Bangor
Mr Alan Costley	Harper Adams University College
Dr David Gray	University of Nottingham
Dr William Hutcheon	Scottish Agricultural College, Aberdeen
Ms Margaret Jepson	Liverpool John Moores University
Professor Philip John	University of Reading
Dr David Jukes	University of Reading
Dr Ara Kanekanian	University of Wales Institute, Cardiff
Dr Karen King	The Queen's University of Belfast
Dr Martin Luck	University of Nottingham
Dr Phil Lyon	University of Dundee
Professor Richard Moore-Colyer	University of Wales, Aberystwyth
Professor Robert Naylor (Chair)	University of Aberdeen
Dr Iwan Owen	University of Wales, Aberystwyth
Dr Chris Strugnell	University of Ulster
Mr Nigel Warner	Royal Agricultural College
