Introduction

There are around 600 million adolescent girls living in developing countries.¹ Doubly marginalised because of their gender and age, many live a bleak existence – excluded from access to basic public services, unable to shape the decisions that affect their lives and vulnerable to violence at home and on the street. Their voices often go unheard.

Slowly, this is beginning to change. Over the past two decades, girls have become a growing priority for the international development community. Investing in their health, education and employment prospects is now widely considered to have an important ripple effect on other development outcomes such as economic growth and social equality. As a result, development assistance programmes that support girls' empowerment are now seen by many as not just the "right" thing to do, but a necessity.

Less well understood is where media fits into this equation. The interplay between media and gender norms has long been recognised and a substantial literature explores how media affects girls in the Global North. But against a backdrop of rapidly changing media landscapes – characterised by increasing competition for audiences, sensationalism and expanding access to new technologies – the role that media plays in girls' lives in the Global South demands further examination.

Drawing on expert interviews as well as insights from the media and development literature, this policy briefing seeks to fill this gap. It argues that media — whether

traditional or online — matters a great deal in the lives of girls in the developing world. It matters because it has the ability to be harmful to girls' interests and self-esteem, and it matters because it can also be so effective in playing a positive role in girls' lives. Specifically, media can influence girls' aspirations and behaviours around their health and livelihoods, open the door to greater participation in society and ensure that girls' issues move higher up the public agenda. If challenges around media access and control, and the extent to which media organisations value girls as part of their audience, are addressed head on, media can play a vital role in helping to advance the well-being of adolescent girls in regions of the world where their interests have traditionally been most neglected.

The paper is organised as follows:

Part 1 documents the high level of attention now paid to girls in international development circles.

Part 2 notes the limited consideration given to the role of media within that discourse, especially when compared with similar discussions in the Global North.

Part 3 explores the potentially positive ways in which media can shape girls' prospects in the Global South.

Part 4 highlights some of the systemic barriers that, unless addressed, may limit media's ability to improve girls' lives.

Part 5 concludes by suggesting ways in which media projects could better fulfil their developmental potential for girls.

PART I

The girl generation

Above Ahjatu Dawuda, Ghana, dropped out of school when she found out she was pregnant.

The 600 million adolescent girls living in developing countries make up the “largest girl generation in history”.² This diverse population – including girls who are married and unmarried, in and out of school, urban and rural, and from different religions and ethnicities – lives in challenging circumstances the world over.

Particularly when they come from the very poorest communities, adolescent girls tend to be socially isolated as a result of both their gender and their age. (See box: A girl's world.)

Historically, adolescence was a time in people's lives that, in the words of Jane Hobson, senior social development

A girl's world

- Around the world, 31 million girls are out of school.³ Across 47 out of 54 African countries, girls have a less than 50% chance of going to secondary school.⁴
- About 16 million girls aged 15–19 and some 1 million girls under 15 years old give birth every year, most in low- and middle-income countries.⁵ Complications linked to pregnancy and childbirth are the second greatest cause of death for 15–19-year-old girls globally.⁶
- Globally, some 30% of girls aged 15–19 experience violence from a partner,⁷ and in some

places as many as half of reported sexual assaults are perpetrated on girls younger than 15.⁸

- Some 11% of girls are married before they turn 15, jeopardising their rights to health, education and protection.⁹ Worldwide, more than 700 million women alive today were married before their 18th birthday.¹⁰
- In 29 countries in Africa and the Middle East where the practice is most common, more than 130 million girls and women have experienced some form of female genital mutilation/cutting (FGM/C).¹¹

advisor from the UK Department for International Development (DFID), simply “dropped off the agenda in international development”.¹² But in recent years, greater recognition of the sorts of challenges highlighted above (see box: A girl’s world) has led to intensive advocacy to ensure that girls see benefits from development programmes. The Report of the High-Level Panel of Eminent Persons on the Post-2015 Development Agenda, for instance, highlights the importance of girls’ access to financial services, infrastructure, health services, water and sanitation, and safe learning environments. This report also emphasises the need for girls’ land rights to be respected, for a culture of “zero tolerance of violence against and exploitation” of girls and to ensure that girls have “an equal voice in decision-making”.¹³

Over and above the moral justifications for investing in girls because it is “the right thing to do”, since the 1990s it has been argued that this investment can help to realise broader development goals. Indeed, the term “the girl effect”¹⁴ was coined more recently to describe a movement that focuses on “leveraging the unique potential of adolescent girls to end poverty for themselves, their families, their communities, their countries and the world”.¹⁵

Some commentators feel uneasy about the strength of the claims made by the “girl effect” movement and the implication that girls can “transform the entire world”.¹⁶ But data supports the idea that investment in adolescent girls can have a wider, positive impact on things like economic growth and social development:

- When a girl in the developing world receives seven or more years of education, she marries four years later and has two fewer children¹⁷
- Girls and young women delaying marriage and having fewer children offers a bigger chance of increasing per capita income, higher savings, and more rapid economic growth¹⁸
- Every extra year of primary schooling increases a girl’s individual eventual earnings by 10–20%¹⁹
- Statistics suggest that women-headed households reinvest 90% of their income into their families, compared with a 30–40% reinvestment rate for men²⁰
- Closing the “joblessness gap” between girls and their male counterparts would yield an increase in gross domestic product (GDP) of up to 1.2% each year²¹

Despite this growing recognition of the importance of adolescent girls within international development discourse, only a very small proportion of aid expenditure is spent meeting their specific needs. On the contrary, many youth assistance programmes bypass the very poorest girls altogether.²² A study conducted

in Burkina Faso, for example, found that only 19% of the population served by urban youth centres were girls. Younger girls – those aged 10–14 – accounted for only 3% of beneficiaries, whereas 36% of the “youth” served were men older than 20.²³

Efforts are now being made to redress this balance and to strengthen the reach and effectiveness of development assistance programmes for girls – moving from advocacy to action. As Judith Bruce, senior policy analyst at the Population Council put it, “There’s got to be a plan... there’s been a lot of emotion but there hasn’t been a plan.”²⁴ The rest of this briefing explores whether and how media should be part of “the plan” for adolescent girls.²⁵

“There’s got to be a plan... there’s been a lot of emotion but there hasn’t been a plan.”

PART 2

Media and girls: too much of a bad thing?

“There is nothing in the [Afghan media] for young people learning about life, learning about themselves... there is a big gap for 10–19 year olds.”

in technology in recent years, which have affected even the world's most fragile states. It is also remarkable, given the preoccupation with the impact of media on adolescent girls in richer parts of the world.

The critical role that media can play in shaping women's lives has long been recognised in international

development discourse. The Declaration from the first United Nations (UN) Conference for the Advancement of Women in 1975 argued that “media should regard as a high priority their responsibility for helping to remove the cultural and attitudinal factors that still inhibit the development of women.”²⁶ Twenty years later at the UN's Fourth World Conference on Women in 1995, the Beijing Platform for Action again highlighted the influence of media in women's lives, noting that “the media have a great potential to promote the advancement of women... by portraying women and men in a non-stereotypical, diverse and balanced manner.” But the platform further warned: “global communication networks have been used to spread stereotyped and demeaning images of women for narrow commercial and consumerist purposes.”²⁷

But what about girls? To date, the conversation about the effects of media on adolescent girls in the Global South has been quite limited, and the academic literature is scarce. Engaging with media has rarely been highlighted as a priority when girls' needs are discussed in development circles.

In some countries, there are no discernable media interventions for girls at all. Zarghuna Kargar, author and BBC journalist, complains that in Afghanistan, while there are cartoons for younger children and films and dramas for adults, “There is nothing in the middle for young people learning about life, learning about themselves. So there is a big gap for 10–19 year-olds... Afghan media has created a big hole in terms of teaching the younger generation.”²⁸

Even in India, where significant investments in media and communication for social change have been made, some believe that media can do much more. Anuradha Gupta of the Indian Ministry of Health and Family Welfare and Mission Director of the National Health Mission suggests: “It's something that deserves much, much greater attention and much more systematic effort within the government. Allocating more resources for media and communication strategies... is going to be very important.”²⁹

This is a surprising state of affairs, given the quantity and variety of media platforms that have emerged in the developing world over the past few decades. Since the 1990s, access to traditional broadcast media has boomed in developing countries, typified by the accelerating growth of satellite TV and other forms of independent media.³⁰ Mobile phone use has also mushroomed, with some estimates predicting near-universal mobile phone coverage by 2015.³¹ This increase in mobile phone use will invariably accelerate internet access. The leading sectoral organisation for mobile phone operators worldwide – The Groupe Speciale Mobile (GSM) Association – projects that as much as 80% of internet access in poor countries will take place via mobile phones in the coming years.³² Strikingly, the proportion of individuals with access to the internet in the developing world rose by 375% between 2005 and 2014, compared with 59% in Europe during the same period.³³ Girls' access to TV and radio in developing countries varies quite considerably (see Part 4) and data on adolescent girls' access to, and use of, information and communications technology (ICT) in these countries is minimal.³⁴ However, even if girls' media consumption is low when compared with other segments of the population, one can surmise that their exposure to different types of media is likely to increase in coming years as the cost of technical equipment declines.

Below Since the 1990s access to media has boomed in the Global South. Here television satellite dishes stand outside housing in an impoverished area of Bangalore, India.

And yet, very little has been done to explore what these transformed media landscapes mean for the ability of girls to realise the social, economic and political changes now seen as crucial to securing fairer societies and developmental success. In the Global North, both the academic literature and popular discourse tend to emphasise media's harmful effects, portraying media as a "cause" of societal problems, such as violence and bullying, early sexuality and body image issues that bring health and psychological risks for girls.³⁵ A report by the American Psychological Association, for example, found that "virtually every media form studied provides ample evidence of the sexualisation of women... These are the models of femininity presented for young girls to study and emulate." The report concludes that sexualisation by the media has negative effects on girls, including on their cognitive functioning, physical and mental health, and emerging sexuality.³⁶

Media is also seen to undermine girls' self-esteem and limit their perceptions of their own potential in the Global North. Research commissioned by the Geena Davis Institute on Gender in Media examines how women and girls are depicted in American films aimed at young people. A study of G-rated films (i.e. films rated suitable for a general audience) made between 2006 and 2009 found that more than 80% of all working characters portrayed in these were male. Furthermore, not a single female character was depicted as working in the field of medical science, business, law or politics. The study concludes that "... there is a shortage of diverse and exciting role models for girls and young women. Exposure to these types of depictions may have negative repercussions for some youth."³⁷ (See box: Young people critique the media.)

QUINN ROONEY/GETTY IMAGES

In short, by looking at available data and commentary about media's impact on girls, one would expect its impact to be detrimental in the Global South.

But that does not necessarily need to be the case. As Jane Hobson, a senior social development advisor at DFID, points out: "Traditional attitudes may not be created by the media but [they] are definitely perpetuated by it... But equally there's the opportunity for [media] to do something completely different."⁴¹

This briefing builds on interviews with experts, evidence from media programmes and insights from communication for development and social change literature to start reconsidering how best to employ media in girls' development. It will argue that today – perhaps more than ever – media offers a host of opportunities to affect girls' lives favourably in the developing world, provided that it is managed with care and sensitivity.

Above Sexualisation by the media can have negative effects on girls. Here, a girl in Australia protests against child beauty pageants.

“Virtually every media form studied provides ample evidence of the sexualisation of women... These are the models of femininity presented for young girls to study and emulate.”

Young people critique the media

What do young people from the Global South think about how the media portrays adolescent girls in their regions? Youth interviewed during research for this briefing felt that media can lead to dangerous stereotypes about girls.

Victor Moina, the 21-year-old chief executive officer of the Forum for the Development of Young People, a non-governmental organisation (NGO) in Sierra Leone, observed that media actively disempowers girls in his country by presenting them as lacking agency. As he notes: "They always show you that girls are a vulnerable group of people. Whenever they think about girls' issues, all they think about is that 'they are mothers, they are sisters, and we should help them'... they don't say what they are... doing to help themselves."³⁸

Others critiqued the narrow representation of girls in media in the Global South. Seher Ali, a young female student and SPARK blogger born in Oman (but now residing in Canada), for example, reflected on how the narrow range of images

of "girlhood" she encountered on TV and other media affected her own self-image: "As a young girl... I grew up not being able to identify – culturally, religiously, physically – with young girls that were on the screen, and sometimes that can create these real identity issues."³⁹

Finally, some expressed concern over the lack of media space devoted to girls' voices and addressing their needs in the developing world. Dee Putri, a student and SPARK blogger from Indonesia, confessed: "I don't even watch Indonesian TV..."

It would be lovely if a producer out there would make a programme for teenage girls. Just because we're female and young doesn't mean we do not have opinions."⁴⁰

“It would be lovely if a producer out there would make a programme for teenage girls. Just because we're female and young doesn't mean we do not have opinions.”

BBC MEDIA ACTION

PART 3

Girls 2.0 – from advocacy to action

Above Media can affect decisions about girls' reproductive health. BBC Media Action's health drama in Bangladesh *Ujan Ganger Naija* (Sailing Against the Tide) explores the effect of early marriage on its heroine Anika (pictured right) who wishes to continue her education.

An emerging body of practice and evidence suggests that media can play a powerful role in helping adolescent girls in the Global South achieve their potential. Media can empower girls by influencing behaviours that affect their lives, by expanding their ability to participate in social, civic and economic life, and by ensuring that their concerns are taken seriously within the public agenda. With its critical ability to operate at scale, media has the added value of simultaneously being able to influence girls' families, communities and their societies at large.

Shaping behaviour, changing lives

By providing information, influencing attitudes and shaping social norms, media can affect the actions

“Girls now know their human rights and are claiming them... Now when someone comes to marry them, they've got good arguments about their human right to education and... laws around age of marriage.”

girls take to improve their own lives and the actions of those around them. Media can affect everything from decisions about girls' reproductive health and marriage to expectations around girls' education and their place in the community alongside boys.

In many places, media can be a critical source of accurate information for girls on the issues that matter most to them. This can be particularly important when topics – such as personal health – are not discussed within the family or in schools. As the BBC's Zarghuna Kargar explains: “Information about periods and childbirth is critical for girls. I've done a lot of work campaigning for girls' education but we have to understand that education is not only coming from schools... in daily life, media should play a very important role in providing information for girls.”⁴² This opinion is supported by analysis showing that alongside age, education levels and place of residence, exposure to mass media is a significant predictor of adolescent girls' knowledge about reproductive health in rural Bangladesh.⁴³

Molly Melching, founder and chief executive officer of the Senegal-based human rights NGO Tostan, agrees. The feedback she has received about its radio programmes is that they provide information that has helped girls to defend themselves: “Radio... has been really critical in our work... Girls now know their human rights and are claiming them... Now when someone comes to marry them, they've got good arguments about their human right to education and [they] know the laws around age of marriage.”⁴⁴

Media can also present balanced information that helps parents make reasoned decisions for their daughters' future. Anuradha Gupta sees this public service function of media as critical to countering the growing discourse around child marriage in India as a "solution" to sexual violence against girls. As she notes: "I think the responsibility of media is to... present evidence on... the pitfalls of marrying off your daughter at the age of 12 because those pitfalls are not being brought to the attention of the parent. Whenever there is a debate and there is a skewed response, I think the media really has to shoulder the burden of putting out information very scientifically and very systematically."⁴⁵

Harmful attitudes that shape the way girls are seen and treated can be positively influenced by media. The Overseas Development Institute (ODI)'s recent review of the impact evaluations of 61 communication programmes, including mass media programmes, found "strong evidence... that communication programmes are an effective way to challenge gender-discriminatory attitudes" that affect adolescent girls.⁴⁶

In India, for example, listeners to the radio soap opera *Taru* (a girl's name meaning "small plant") were significantly more likely to support girls being allowed to continue studying as much as they want and to disagree that only boys should be sent to school when resources are scarce.⁴⁷ In Nepal, qualitative data suggests that the *Samajhdari* (Mutual Understanding) radio programme produced by the NGO Equal Access encouraged more accepting attitudes towards female children.⁴⁸ There is also evidence to indicate that radio and newspaper reports contributed to a change in attitudes towards female genital mutilation/cutting (FGM/C) in Senegal and Nigeria.⁴⁹ And young Nicaraguans with greater exposure to Puntos de Encuentro's radio and TV programmes demonstrated significantly more gender-equitable attitudes than those with less exposure.⁵⁰

Closely related to changing attitudes is media's effect in shaping the social norms affecting adolescent girls.⁵¹ Social norms – defined as practices that people follow "because they believe most others in their reference network do, and would disapprove if they don't"⁵² – vary by context but may include practices like keeping girls out of school or child marriage. Media can challenge harmful norms by addressing misconceptions about other people's behaviour or, as Margaret Greene, an expert on adolescent girls, phrased it: "introducing into people's minds the idea that, 'well maybe not everybody is doing it the way I'm doing it'... a kind of healthy doubt... so that people are more self-reflective or more questioning of norms that are taken for granted within the family and community."⁵³ Being aware of what other communities are doing is an important part of the collective change process where FGM/C is concerned. Tostan's Molly Melching notes that when public declarations to end

FGM/C are held in Senegal, "there are thousands of people who listen [via]... numerous radio stations, reaching beyond the direct communities affected."⁵⁴

In crowded media markets, even individual programmes can make a real difference by providing an alternative to mainstream media fodder. In Nicaragua, for example, a TV series produced by the NGO Puntos de Encuentro that focuses on gender and generational equality and respect for diversity only airs once or twice a week. But Amy Bank, its co-founder, notes that providing this kind of educational content in a recognised and attractive format offers an alternative to the typical pop culture fare available on other channels. She observes that those programmes can often objectify women, sexualise young girls and promote impossible standards of physical beauty: "Even if [our programme is] only a small wedge, we can see that a lot of things have changed over the years. Social gender norms have shifted, discourse is different. Imagine if there was nothing that provided an alternative."⁵⁵

Media's ability to shift social norms where girls are concerned is underscored in the recent ODI evidence review, which found that characters and "role models" in radio and TV dramas can influence real-life behaviour. An evaluation of Unicef's Meena Communication Initiative in South India, for example, found that animations broadcast on TV or shown in specially arranged film screenings had inspired girls to carry out activities seen as "masculine", such as repairing hand pumps. In addition, the films encouraged adult viewers to challenge norms

“Even if [our programme is] only a small wedge, we can see that a lot of things have changed over the years. Social gender norms have shifted, discourse is different. Imagine if there was nothing that provided an alternative.”

Below A girl in Ethiopia is interviewed for a family health radio programme produced by BBC Media Action, which helps give information about antenatal care and childbirth.

ANDREAS RENTZ/GETTY IMAGES

Above Girls' education activist Malala Yousafzai was shot by a Taliban gunman for defying a ban on girls attending school and is now a global advocate for girls' education. Here, she speaks to TV host Günther Jauch in Hürth near Cologne, Germany.

such as giving boys more or better food than girls.⁵⁶ And an evaluation of the radio soap opera *Taru* found that listening to the programme had led adolescent girls, previously confined to home, to challenge norms by talking to boys in public and engaging in community problem-solving.⁵⁷

Above all, one real advantage that media has over and above many other strategies for shaping behaviour change is its ability to operate at scale – and in a way that sidesteps interpersonal communication channels that can sometimes reinforce harmful social norms. Mandira Kalra Kalaan of the NGO Population Health India contends that: “Shifting attitudes and perceptions and beliefs – those related to social norms in particular – has to happen at a mass media level and in an entertainment education format. That’s where we can reach people at scale, in a way that isn’t preachy.”⁵⁸

You go, girl: amplifying voice and participation

Expanding opportunities for girls to play an active role in community, civic and economic life can be a critical step to improving their well-being. And elevating girls' voices in local, national and international dialogue and debate is vital if their needs are to be met. As a recent World Bank report on women and girls points out, “having a voice means having the capacity to speak up and be heard and being present to shape and share in discussions, discourse, and decisions.”⁵⁹

The role that media can play in getting girls' voices heard is widely acknowledged. As Margaret Greene notes, media can “play a role in making an invisible group visible and publicising their desires and preferences and dreams”.⁶⁰ The young Pakistani activist Malala Yousafzai – who was shot in the head because she persisted in defying a local ban on girls' education to attend middle school – is perhaps the most dramatic example in recent memory. She believes that media – blogs, interviews, news coverage – enabled her and her friends to advance their cause, not just in Pakistan but the world over: “Media was like a messenger, telling what we are saying to the world. We spoke, we wrote and raised our voices. We spoke, and we achieved our goal.”⁶¹

BBC Media Action has found that televised debate programmes designed to reach mass audiences can create a useful space for girls to express their needs, priorities and opinions.

Right The BBC Media Action youth-focused radio show and TV programme *Loy9* in Cambodia tried to boost civic participation among young women and men.

BBC MEDIA ACTION

In Nepal, for instance, adolescent girls are invited to attend recordings of the TV programme *Sajha Sawal* (Common Questions), a nationally broadcast debate programme. Providing a public platform for adolescent girls to ask tough questions of public officials, alongside men and older women in their community, can help role-model the sort of political discussion and inclusive civic engagement that is so crucial to social equality. In the Palestinian Territories, debate programmes that have involved girls through pre-recorded videos or Facebook messages have achieved unexpected levels of audience reach among adolescent girls and helped to raise girls' voices and opinions to a wider public.⁶² In Cambodia, BBC Media Action's *Loy9* project – a youth programme aimed at boosting civic participation, which involves TV, radio, online and mobile content as well as live events – reached 62% of 15–19-year-old girls in the country. Some 96% of these girls agreed that *Loy9* “shows youth how to express their ideas and opinions” and 95% agreed that the project made “young people like me more confident to participate in their community”.⁶³

Mass media projects can also drive greater “off-air” participation by girls, according to Kate Wedgwood, GirlHub's country director for Rwanda.⁶⁴ Wedgwood recounts the story of an employee from the country's labour minister's office who saw a story in GirlHub's *Ni Nyampinga* magazine about a girl who ran carpentry workshops.⁶⁵ Inspired by her story, the employee subsequently invited this girl to speak at a regional conference on employment creation. “That was exactly the kind of thing we want really... to give girls a real voice... out there and in the ministers' minds.”⁶⁶ GirlHub is working to bring girls' voices into the process of revising government policies. Kecia Bertermann, senior monitoring, learning and results manager at GirlHub Rwanda, is hopeful that “we may find that people are more amenable to the policy shifts we're proposing because of the *Ni Nyampinga* [media] platform.”⁶⁷

Participatory media projects can help girls get more involved in influencing how their communities are run. Linda Raftree, an expert in girls, community development and ICT, explains how Plan International's Youth Empowerment through Technology, Arts and Media project in West Africa involved young people identifying what they wanted to talk about in their communities and then creating different types of media to explore these priorities. The young people then used their productions to make decision-makers “better aware of young people's thoughts, needs and rights”.⁶⁸ Community leaders agreed that the project enabled young people to have a healthy communication channel with them.⁶⁹

Another way in which media supports girls' greater social and economic participation is by helping them aspire to different futures. Many experts believe that seeing or hearing either fictional stories or real-life testimonies

BBC MEDIA ACTION

of other people “like me” can be an important driver of change in girls' lives. Shakuntala Banaji, lecturer and programme director of the masters' programme in media, communication and development at the London School of Economics and Political Science (LSE), has conducted extensive research with children across India.⁷⁰ Arguing that this is a neglected area across much of the Global South, Banaji claims that fictional programming in particular can “enliven and open up imaginaries for children and younger girls, and support them in their learning and everyday life”.⁷¹ Indeed, Santosh Desai, managing director and chief executive officer of the Indian marketing firm futurebrands, recognises this as a key role played by the feted Bollywood film, *Queen*. Desai comments: “It allows for people to imagine or reimagine a new kind of possibility that would otherwise have been excluded because of the invisible force field that surrounds and circumscribes the lives of girls in India.”⁷²

This view is corroborated by evidence from GirlHub's work in Rwanda, which challenges preconceptions of set pathways for girls: “Time and time again... we heard girls talk of how the ‘electrician girl’ or the ‘girl motorcycle taxi driver’ had opened their eyes to different opportunities available to them in the future.”⁷³

The rise of social media heralds a new opportunity for adolescent girls to build social networks and connect and take action with their peers.⁷⁴ Online networking can enable girls to advance their interests by participating in local, national and global movements for change. Girls from as far afield as Indonesia, Georgia, Jamaica and the United States have collaborated online as part of SPARK – a ‘girl-fuelled activist movement to demand an end to the sexualisation of women and girls in media’.⁷⁵ The girls communicate and organise via a private Facebook group,

Above *Sajha Sawal* (Common Questions), a nationally broadcast debate programme, provides a public platform for adolescent girls to ask tough questions of public officials.

“Time and time again... we heard girls talk of how the ‘electrician girl’ or the ‘girl motorcycle taxi driver’ [in the magazine] had opened their eyes to different opportunities available to them in the future.”

Right The rise of social media heralds a new opportunity for adolescent girls to build social networks. Here, a girl in a Cambodian cyber-café checks Facebook.

OMAR HAVANAGETTY IMAGES

“Social media has enabled [girls] to forge links with global movements... there is a sense of solidarity and empowerment that comes out of that.”

weekly online chats and monthly seminars, working together to write blogs and run campaigns. One successful project involved collecting 80,000 signatures for a petition to Seventeen magazine in the US, lobbying it to stop using photo-editing software to manipulate images of girls and to increase diversity within the images it uses. Dana Edell, executive director of SPARK, notes: “Girls are taking action. In the last five years or so with online communities... girls... who are geographically isolated are able to organise online.”⁷⁶

While limited ICT access among poorer adolescent girls in the Global South remains a real issue, this too is likely to change with the gradual proliferation of inexpensive media and communication tools. Sabina Basi of the NGO Restless Development explains that training and access to ICT equipment has “really opened up the world” for girls from the poor rural communities involved with the *Mabinti Tushike Hatamu!* (Girls Let’s Be Leaders!) programme in Tanzania. “Social media has enabled them to forge links with global movements like the Bring Back Our Girls Campaign for Nigeria and... there is a sense of solidarity and empowerment that comes out of that,” Basi notes.⁷⁷

Girls in the spotlight

Finally, media can play a significant role in increasing the attention paid to issues affecting adolescent girls, and also influence the policies that affect their lives.

In India, for instance, stories about gender-based violence and harassment are appearing more frequently in the

press, drawing public attention to these major challenges for girls. Sonali Khan of the NGO Breakthrough India observes: “There is a sustained interest in how to report on these issues, how to be more sensitive... [the media] want to talk about it and their role in accountability.” Following training and long-term engagement by Breakthrough, she notes that media have “become increasingly interested in the issue of early marriage... willing to discuss the data and the problem in all its facets”.⁷⁸

Media coverage of girls’ issues can help to bring about tangible, positive change. Safeer Ullah Khan, programme development and communication manager with the Pakistani NGO Bedari, observes that when the issue of marrying girls to settle disputes was taken up by the media, it helped to reduce politicians’ denial of the practice: “When media started highlighting the issue it became really easy to convince the policy-makers that we needed to ban such marriages.”⁷⁹ A ban is now in place in Pakistan.

Internationally, the BBC’s Zarghuna Kargar highlights the contribution of the documentary film *Girl Rising* to the campaign for girls’ education. The film has helped raise the profile of girls’ education globally and is now being included as part of school curricula in India and Nigeria. According to Kargar, it is the emotional appeal of the film that has really made a difference – “it makes a big impression... when a person has been through something and is willing to tell their story.”⁸⁰

PART 4

Representation, access and control

Despite media's potential, certain constraints can affect whether it actually fulfils a positive role in girls' lives in the Global South. Barriers include limits on how freely girls can access different forms of media, who shapes media content and the extent to which girls are considered to be an audience "worth serving" by media organisations. Where these constraints have been acknowledged, it has sometimes been possible to overcome them through well-designed programming.

Media access and literacy

Before even considering media's potential as a driver of change, the extent to which girls can access media channels and choose what they watch, listen to and

engage with must be honestly assessed. Levels of media access vary greatly around the world. In some cases, media is an effective platform for reaching girls. In Bangladesh, for example, 94% of 15–19-year-old girls have access to TV.⁸¹ Elsewhere, the picture is less promising. For instance, only 26% of 15–19-year-old girls in Ethiopia say they listen to the radio at least once a week, with TV viewership even lower.⁸² LSE scholar Shakuntala Banaji highlights that, in addition to poor levels of access, the amount of time that girls have available for media consumption can be limited by their other responsibilities and activities.⁸³

“We need to better understand issues of control in certain contexts, particularly the more rural, more closed and more ‘watched’.”

Left Girls in Tanzania watch a soap opera on a communal television – for many girls, access to media is constrained by a number of economic and social factors.

“There is a real lack of robust data around media consumption in the markets we are operating in, particularly related to girls’ access and consumption patterns. This necessitates commissioning new research and baselines, impacting on costs and timings.”

For many girls, viewing and listening habits are constrained by their parents. Kerry Smith of Plan UK notes that in Egypt and Pakistan, if there is a TV in the house, young

girls are told to watch the religious channels: “They don’t have control over what they are watching. And controls are placed on their internet usage. We need to better understand issues of control in certain contexts, particularly the more rural, more closed and more ‘watched’.”⁸⁴ Shakuntala Banaji’s research in Bombay reveals that children’s TV viewing was generally viewed by parents as “a waste of time or even dangerous”, competing with doing homework and housework, looking after

younger children and playing outside.⁸⁵ These cultural factors limiting girls’ access must be properly understood and taken into account by those hoping to work with media as a way to empower girls.

Where girls’ access to media is severely constrained, efforts can be made to expand it, for example through public screenings of films, explicitly encouraging girls to listen to radio programmes on their mobile phones (if they have them) or by providing equipment to groups working with girls. Amy Bank notes how the provision of cheap DVD players to established community groups had “a huge multiplier effect”, dramatically expanding girls’ access to Puntos de Encuentro’s TV programmes in Nicaragua.⁸⁶

Listeners’ groups, set up with local partner organisations, can help reach girls who might not normally have

access to mass media. In Madhya Pradesh in India, BBC Media Action is distributing its radio drama *Khirki Mehendiwali* (Mehendi Opens a Window) to more than 500 girls’ schools and hostels. Working with the Rajya Shiksha Kendra (RSK, the state education council), this project supports weekly listeners’ groups so that girls can talk about reproductive health issues raised in the programme. Dr Tanuja Shrivastava, State Gender Coordinator in the RSK, notes that “the initiative has received a phenomenal response.”⁸⁷ Ruchi, a 13-year-old listener, explains how the programme is motivating girls “to know and develop our understanding of issues like age at marriage, basic and reproductive health and personal hygiene.”⁸⁸

Elsewhere, it may help to employ specific strategies to ensure that programming for girls also appeals to parents and/or educates parents about the benefits of allowing girls to engage with certain media outputs. In situations where cultural constraints on girls’ consumption of media is highly constrained, mass media may be an effective way of reaching adult decision-makers, but perhaps not adolescent girls themselves.

Above all, it is critical that careful formative research exploring media habits and media access is carried out before embarking on media projects for girls. Mark Sanderson from GirlHub argues: “There is a real lack of robust data around media consumption in the markets we are operating in, particularly related to girls’ access and consumption patterns. This necessitates commissioning new research and baselines, impacting on costs and timings.”⁸⁹

In many cases, it will be necessary to go beyond reporting simply whether or not girls “have access” to traditional media (as much existing research does) and conduct bespoke analysis that factors in the diverse platforms through which girls access content in today’s rapidly changing media landscapes. George Ferguson, country director for BBC Media Action in Sierra Leone, notes that girls probably consume a lot more media than we think, but not through traditional channels: “If you’ve got a mobile phone you can go and buy content. And music videos, Nigerian movies, local movies, Mexican soap operas are all available on illegally produced DVDs.”⁹⁰

But even once access issues have been properly addressed, levels of media and information literacy can still affect how girls consume and “make sense” of the media to which they are exposed.⁹¹ Girls’ ability to take a critical view of media content – and, as Unesco’s Alton Grizzle puts it, to “offer counter-narratives to how they are being represented”⁹² – will affect whether social norms and girls’ self-esteem are positively or negatively influenced by media content. Media literacy training in the US, for instance, has been found to influence how

Right Ruchi, 13, is a listener to the BBC Media Action radio drama *Khirki Mehendiwali* (Mehendi Opens a Window).

Left Gender imbalance in newsgathering affects the stories that are told. In this image, a female journalist in Burma/Myanmar undertakes an interview at the country's parliament.

“the media form images of health and body image”.⁹³ Media literacy programmes like those run by the Arab Women Media Center in Jordan, Ek Lavya in India and the IREX are reaching girls in the Global South and could potentially serve as models for similar initiatives.

Male-dominated media

Male domination of media organisations – whether in programming, technical or management roles – can be another constraint on media’s ability to help realise girls’ potential. In 2008 the Eastern Africa Journalists’ Association reported that fewer than 20% of editorial posts in the region were held by women.⁹⁴ Research carried out in 2010 in 108 countries, including in Africa and Asia, found that top positions within media and communication industries were predominantly held by men, and that such gender inequalities affected the content of women’s work roles and the career opportunities available to them.⁹⁵

Oisika Chakrabarti, senior communications and media specialist at UN Women, worked as a journalist in India for many years and observes that gender imbalance in newsrooms defines the content that is produced: “Having seen the line-up each day and which stories get dropped... it’s definitely to do with fewer women’s voices in making those decisions. Even at the grassroots level... [community] radio is dominated by men producers, and the space for women’s and girls’ issues and their inputs remains limited.”⁹⁶ UN Women is supporting a number of media development initiatives to address this imbalance.

Focused attention by media houses can enhance the provision of content that meets girls’ needs by fostering

gender equality at an organisational level. Strategies may involve workplace training on issues ranging from gender sensitivity and equal pay to how to create a safe working environment for men and women alike. A survey conducted by the Southern African Broadcasters Association (SABA) and United Nations Educational, Scientific and Cultural Organization (Unesco), for example, revealed the positive impact of gender mainstreaming efforts at the South African Broadcasting Corporation (SABC). SABC is one of only four broadcasters in the Southern African Development Community region with a gender policy, which is strongly supported by its senior management and board. At SABC, 44% of senior managers are women, compared with 17% at the state broadcaster in neighbouring Namibia. Gender mainstreaming forms part of SABC’s performance management and budgeting systems, helping to shape gender balance in content.⁹⁷

Improving gender balance in the media more broadly can also be achieved by working with women-focused media organisations. In Sierra Leone, BBC Media Action supports the Voices of Women radio station in Bonthe District. Training focuses on programme-making as well as working with the community to develop inclusive and engaging content. Developing the skills of female journalists is a particular priority. Voices of Women staff felt the new radio programme they produced as part of the training, *Skirt n’ Trousers* (Skirt and Trousers), successfully challenged gender stereotypes within their community: “People’s

“Gender imbalance in newsrooms defines the content that is produced... Community radio is dominated by men producers and the space for women and girls’ issues and their inputs remains limited.”

perceptions about 'woman' and 'gender' have changed because of our programmes. Even the paramount chief now has a positive idea about women.”⁹⁸

International efforts to support gender equality within media institutions are gathering momentum. These include the Global Alliance on Media and Gender established by

“There is... no turning to girls for their voice, their thoughts and their opinion on this issue. I don't think people see girls as having a story to tell.”

Unesco. According to Unesco's Alton Grizzle, the alliance involves 400 stakeholder organisations working on gender and media issues, including a number of organisations focused on youth.⁹⁹ Unesco's Gender Sensitive Indicators for Media are a useful tool for those working to address structural issues in relation to the

media and adolescent girls.¹⁰⁰ Covering issues of gender equality both within media organisations and media content, these indicators have been adopted by about 20 broadcasters around the world since their development in 2012.¹⁰¹

Finally, approaches that amplify girls' voices within the mainstream media can be extended to ensure that girls are featured as contributors in news and other programming. Laura Dickinson from the global civil society partnership Girls Not Brides notes that news coverage on child marriage rarely gives the girls any agency in the story: “There is... no turning to girls for their voice, their thoughts and their opinion on this issue. I don't think people see girls as having a story to tell.”¹⁰²

Making girls visible: media priorities, advertising and regulation

Several of those interviewed for this briefing suggested that in many places, meeting girls' needs is simply not a priority for the media.

In some cases, representing girls fairly in the media may be a low priority compared with selling newspapers or attracting viewers to a TV station. Susan Ajok of the Straight Talk Foundation notes that in Uganda, media is very interested in covering sensational issues: “The screaming headline is what they will go for... people will buy it.”¹⁰³ Another real constraint is that young male viewers or listeners are often “worth more” to advertisers in commercial terms than girls, influencing the nature of content produced. In some contexts, public service broadcasters with explicit remits to reflect social diversity in their programming and/or targeted donor funding for girls' empowerment programmes may be critical if media is to really fulfil its potential for girls.

However, efforts to support gender balance in commercial media production may also furnish useful models. The Geena Davis Institute on Gender in Media has worked closely with commercial entertainment organisations in the US to build understanding of the impact of their work on women and girls. Following workshops with the institute, content creators in film and TV have begun shifting their projects to improve gender balance, reduce stereotypes and create a wider variety of female characters.¹⁰⁴ Given how much content from the US dominates global media markets, targeting media players as far afield as Hollywood may have a significant ripple effect on girls' lives in the Global South.¹⁰⁵

Commercial content that purports to empower women and girls – such as advertising campaigns for the soap brand Dove – is becoming something of a trend in the US and Europe.¹⁰⁶ DFID's Barbara Hewitt notes how something like the feminine hygiene company Always's #LikeAGirl campaign – which seeks to promote girls' confidence through puberty and beyond – has the ability to “drill into the psychology and expose the issues [of girls' socialisation] beautifully... that's what the commercial sector does really well.”¹⁰⁷ Whether these approaches take hold and have real impact in the Global South remains to be seen, but they certainly expand the toolkit available for those interested in reaching girls via commercial media.

NGO-led public advocacy campaigns to support improved media programming for children in Latin America also have some interesting lessons for addressing how girls are portrayed in media in the Global South. Since the

Right The radio station Voice of Women in Bonthe District, Sierra Leone, produces programmes that challenge gender stereotypes. Pictured, station manager Sarah Rogers.

Left The Always #LikeAGirl advertising campaign sought to improve girls' confidence during puberty by showing powerful images of girls in action.

early 1990s, for example, the Brazilian organisation ANDI and its partners have worked with newsrooms across Latin America to improve coverage of social issues, including children's rights.¹⁰⁸ Strategies employed by ANDI include emailing journalists with daily news story suggestions, developing partnerships with universities to integrate children's issues into media and communication courses and conducting regular reviews of how media covers children's rights issues. Analysis shows that news stories on children and adolescents in Brazil rose steadily from 1996–2004.¹⁰⁹

Building broad-based movements to lobby for better programming for marginalised groups has proved effective too. In Colombia, media's mandate to produce quality content for children is enshrined within the constitution. But between 1998 and 2004, the way in which journalistic coverage of conflict was affecting children – including adolescent girls – led to a national debate about media's role in their lives. Decision-makers from media, national and local governments, parents' associations, civil society organisations and academia came together to develop a *Compromiso Nacional de Televisión de Calidad para la Infancia* (national commitment for quality TV for children). According to Adelaida Trujillo, co-founder of Citura Producciones/Imaginario, this initiative paid dividends in terms of yielding quality public service broadcasting for children: "You can see the results in terms of the level of funding allocated and the amount of programming being produced with a rights-based approach."¹¹⁰

Another potentially useful approach is the regulatory route. Veet Vivarta, former executive secretary of ANDI, believes that child-friendly regulation targeting advertising, ratings and so-called "watershed" systems can improve media content targeted at adolescent girls.¹¹¹ ANDI's work in Brazil, for example, has helped to promote more balanced regulatory debates around children and media by providing technical expertise alongside examples of international best practice. Successes include working with the Ministry of Justice to develop and implement a new ratings system to protect children from harmful content. ANDI has also tried to support new legislation around how girls are portrayed in advertisements and the underlying messages that accompany them. Results from this work have been slower to materialise, partly due to the powerful media lobby within the Brazilian Congress. Nonetheless, Vivarta argues: "We need to be patient. Even if [these issues] are not moving forward in the legislature, they are not invisible anymore and that is very important."¹¹²

PART 5

Donor strategies and the girl agenda

This policy briefing has argued that engagement with the media can be a critical tool for those working to empower adolescent girls in the developing world.

Through a careful review of existing programmatic work and extensive interviews with experts, this briefing has shown that strategic, considered engagement with the media can help secure positive outcomes for girls. Media

can shape how girls and their communities think, what they believe and how they behave – for good and bad. It can have profound implications for how girls' identities and aspirations are formed. Media can also play a role ensuring that girls' voices are heard and can help open the doors for them to participate more widely in society. As it takes hold in the Global South, social media may increasingly play a key role in enabling girls to network with each other and take action together to change their worlds for the better.

At present, however, media is not sufficiently integrated into development strategies seeking to enhance girls' well-being across the developing world, and levels of activity remain low. This

is potentially dangerous, as there is evidence from the Global North to suggest that, without concerted effort, media can be harmful for adolescent girls.

At the same time, structural challenges around access to, and control of, media need to be acknowledged and addressed. More work also needs to be done to prioritise girls as an audience for commercial media organisations. These challenges make it all the more critical for those working on girls' empowerment to engage with the media.

Even if donors recognise the benefits of making media a core part of their strategies for women's and girls' development in the future, there is still scope for considerable improvement in terms of the kind of interventions they fund and how these fold into broader empowerment programmes. This briefing concludes with several additional observations about how to make media part of tangible, effective action on the ground to help adolescent girls achieve their potential.

Focus on girls

When investing in media interventions, funders must critically examine whether programmes purporting to influence girls are actually prioritising them as an audience. As the work of Nicaragua's Puntos de Encuentro illustrates, broader approaches focused on gender equity or youth can indeed influence girls' lives. However, careful questions need to be posed about the types of media interventions likely to have the most impact within a given context. For example, there is a risk that projects focused on broader audiences may subsume girls' needs beneath those of young men or older women.

Generate more evidence

In addition to funding programmes that seek to achieve immediate impact, new investment could usefully focus on generating a stronger body of evidence around how media affects girls' lives in the Global South. As DFID's Jane Hobson puts it: "This whole area around media and communications at scale is one that we really need to get better at, but that's not going to happen unless we are able to say 'this is the impact'."¹³

“This whole area around media and communications at scale is one that we really need to get better at, but that's not going to happen unless we are able to say 'this is the impact'.”

The authors of the recent ODI review note that while there is evidence that mass media programmes do shape the social norms that affect girls' lives, few research evaluations have directly involved girls.¹¹⁴ The ODI paper also cites evidence gaps around the impact of different levels of exposure to media programming, the effectiveness of standalone communication programmes versus those integrated into broader development programmes, and the relative effectiveness of different media approaches. Because so little detail in evaluations covers the nature of programmes that were being assessed, the study concludes that these evaluations actually offer "very little insight into the process by which change occurs".¹¹⁵

Broaden the scope

In addition to the dearth of interventions in some countries, it is striking how many of the girl-focused media programmes that do exist focus on issues of sexual and reproductive health, teenage pregnancy and, increasingly, child marriage. Given the impact of these issues on girls' lives – and on broader societal development – this investment is not unjustified. However, as Part I of this briefing sets out, girls' needs are far broader than this. As Judith Bruce of the Population Council argues, when speaking about girls' interventions more broadly, "the – sometimes exclusive – focus on health really narrows [girls'] identity and undermines the effectiveness of programming."¹¹⁶ Some media projects do address education and schooling. But it is striking how little current programming addresses other critical issues for girls, such as economic empowerment, financial literacy or social and civic participation.¹¹⁷ Other potentially critical aspects of media that could receive more attention from the donor community include media's ability to elevate girls' voices (particularly beyond their own peers) and its ability to enable girls to network with and support one another. Finally, current media initiatives focus more on prompting behaviour change than on expanding opportunities for girls' participation in public life.

Integrate for impact

With some notable exceptions, media interventions too often fail to make the most of the impact – and sustainability – that could be achieved by forming links with other girls' development and empowerment programmes. Several case studies suggest, for example, that integrating media programmes with community mobilisation work can have greater impact for girls on the ground. Despite the success of her own organisation in offering alternative media content for girls, Amy Bank of Puntos de Encuentro acknowledges that "just watching television once a week is not going to change the world."¹¹⁸ She describes how her organisation brings about change by combining TV drama series, public service announcements (PSAs) and radio programmes alongside community activities like cast tours, educational sessions in schools, local discussion groups and links with service providers on the ground.¹¹⁹

Citurna Producciones in Colombia similarly combines media work with strengthening the capacity of youth groups "to act as a watchdog" over local public centres providing health services for youth and adolescents. In addition, this organisation supports and trains adolescent girl "Youtubers", who have a strong following in the country, to facilitate online hangouts. These girls also establish peer-to-peer conversations with children during visits to schools to tackle difficult conversations about sexual and reproductive health.¹²⁰ These multi-pronged strategies are consistent with ODI's finding that approaches that stimulate discussion within a peer group are more likely to have positive results than those that do not.¹²¹

Shoot for sustainability

Integrating media interventions for girls with other, broader development and empowerment programmes may lead to stronger cross-sectoral support for media interventions. Reflecting on the processes involved with developing the *Revela2* (Revealed) "edutainment" platform in Colombia, Adelaida Trujillo tells how both the Ministry of Health and the President's Office funded the bulk of the project's baseline, formative research and intervention itself, while the Ministry of Education developed a complementary programme for use in public schools. The intervention is now integrated into the work of the government's Intersectoral Commission on Sexual and Reproductive Health Rights and Teen Pregnancy Prevention programme and has "become a central tool for the Commission".¹²² While public sector funding to support this kind of intervention may be more restricted in poorer developing countries, this model of embedding media work for girls into a broader public policy platform may bear fruit elsewhere. In addition, it may increase the organisational and financial sustainability of media programming for girls.

Address structural constraints

While content matters greatly, programmes that address the constraints to media working effectively for girls are critical. With some notable exceptions, current interventions tend to concentrate on the production of media content – not addressing the systemic issues set out above.

There is certainly much more work to be done to improve the lives of adolescent girls in the Global South. This is not only because their needs are so great, but because what is good for girls is also good for society at large. As Judith Bruce argues: "When we effectively reach and build the assets of the poorest girls, we will set in motion a virtuous cycle that will speed the realisation of core health, justice, and poverty alleviation goals."¹²³ As we begin to understand more about how media affects girls' lives, strategic and practical action will help the largest girl generation in history truly flourish.

“It is striking how little current programming addresses other critical issues for girls, such as economic empowerment, financial literacy or social and civic participation.”

APPENDIX

Interviews conducted

1. Susan Ajok, executive director, Straight Talk Foundation
2. Seher Ali, student and SPARK blogger
3. Shakuntala Banaji, lecturer, programme director: MSc in Media, Communication & Development, London School of Economics & Political Science
4. Amy Bank, co-founder, Puntos de Encuentro and executive producer, *Sexto Sentido* (Sixth Sense) and *Contracorriente* (Turning the Tide)
5. Kriss Barker, vice president for international programmes, Population Media Center
6. Sabina Basi, trust and foundation partnerships coordinator, and Rebecca Dove, senior manager, investment & partnerships Africa, Restless Development
7. Walid Batrawi, country director, Palestinian Territories, BBC Media Action
8. Judith Bruce, senior policy analyst, Population Council
9. Oisika Chakrabarti, senior communications & media specialist, UN Women
10. Tiseke Lizineth Chilima, youth volunteer, Plan Malawi
11. Sarah Cornish, senior gender advisor, impact, innovation and evidence team, Save the Children
12. Laura Dickinson, communications officer, and Lakshmi Sundaram, global coordinator, Girls Not Brides
13. Dana Edell, executive director, SPARK
14. Madeline Di Nonno, chief executive officer, Geena Davis Institute on Gender in Media
15. Rebecca Emerson Keller, project manager, Middle East, BBC Media Action
16. George Ferguson, country director, Sierra Leone, BBC Media Action
17. Alton Grizzle, programme specialist in communication and information, Unesco
18. Margaret Greene, independent consultant, author and expert on adolescent girls and gender
19. Anuradha Gupta, additional secretary in the Ministry of Health and Family Welfare and Mission Director of National Health Mission, India
20. Jane Hobson, senior social development adviser, Barbara Hewitt, policy adviser, behaviour change, and Lindsay Mgbor #YouthForChange team leader, DFID
21. Mandira Kalra Kalaan, senior manager, advocacy and communication, Population Foundation of India
22. Zarghuna Kargar, broadcast journalist, BBC, Afghanistan expert and author of the book, *Dear Zari: Hidden Stories from Women of Afghanistan*
23. Farwa Khalil, youth volunteer, Plan Pakistan
24. Safeer Ullah Khan, manager, programme development and communication, Bedari
25. Sonali Khan, vice president, Breakthrough India
26. Ofra Koffman, fellow, Department of Media and Communications, London School of Economics and Political Science
27. Lauren Kogen, assistant professor, Temple University, Department of Media Studies & Production
28. Rachel Marcus, research associate, and Ella Page, research consultant, Overseas Development Institute
29. Victor Moïna, chief executive officer and founder, Forum for the Development of Young People, Sierra Leone
30. Molly Melching, founder and chief executive officer, Tostan
31. Ncare Nkang Cherifa, youth volunteer, International Planned Parenthood Federation (IPPF) Cameroon
32. Dee Putri, student and SPARK blogger
33. Linda Raftree, principal, Kurante
34. Mity Roy, youth volunteer, BRAC (Bangladesh)
35. Mark Sanderson, global initiatives senior manager, GirlHub
36. Ye Sheng, senior program officer, and Randal Mason, director of strategic partnerships, IREX
37. Kerry Smith, head of advocacy, campaigns and research, Plan UK
38. Rafick Tawakali, youth volunteer, Plan Malawi
39. Adelaida Trujillo, co-founder, Citura Producciones/Imaginario
40. Veet Vivarta, journalist and former executive secretary, ANDI
41. Kate Wedgwood, country director, and Kecia Bertermann, senior monitoring, learning and results manager, GirlHub Rwanda

- ⁵¹ Marcus, R. and Page, E. (2014) *Changing discriminatory norms affecting adolescent girls through communication activities: Insights for policy and practice from an evidence review*. The report found that, between attitude and practice, change was greater for media-based interventions than for other communication approaches that incorporated dialogue. The report suggests that this “should not be taken as evidence that mass media approaches are ineffective, as this is clearly not the case. Rather... the effectiveness of media- or IEC-based approaches can be increased through inclusion of activities that encourage discussion, whether through audience participation (eg radio phone-ins) or in a community setting, such as media listener groups.”

- ⁶² In some country contexts, social restrictions can prevent girls from travelling to studios or debate locations. Teams have explored alternative ways to facilitate adolescent girls' participation in live debates, such as going “on the road” with shows, recording special debates in schools and covering the costs for chaperones to accompany female audience participants.

- ¹⁰⁵ This ripple effect is not always positive. One consequence of globalisation is the shocking effect that western pornography is having in parts of the developing world. See <http://www.theguardian.com/commentisfree/2009/aug/30/pornography-corporate-responsibility-developing-world> [Accessed 10 October 2014].
- ¹⁰⁶ See for instance the Always #LikeAGirl campaign [online]. Available at: <http://www.always.com/en-us/likeagirl.aspx> [Accessed August 2014]. Or see Dove's Patch campaign [online]. Available at: http://www.dove.co.uk/en/Tips-Topics-and-Tools/Latest-Topics/dove-patches.aspx?utm_source=youtube&utm_medium=instream&utm_campaign=GB-Patches-09_04_2014-PPC-CoreVideo-FALSE&gclid=CNK79rTLs8ACFa7KtAodXR0A2A [Accessed August 2014]. There are mixed views about what these branded media campaigns actually accomplish for girls and women, with questions being asked about whether they distract attention from the deeper, structural causes of gender discrimination or help to alter deep-seated societal attitudes, perceptions, behaviours and practices around gender.
- ¹⁰⁷ Interview with the author, London, 16 September 2014.
