### THE AUTHORS

Harry C. Minor is an Associate Professor of Agronomy and State Extension Specialist, Carl G. Morris and Howard L. Mason are Senior Research Specialists, and Delbert R. Knerr and Eric E. Lawman are Research Specialists.

### ACKNOWLEDGEMENTS

The authors recognize and express their appreciation to the following individuals for their part in making the 1990 grain sorghum performance trials possible: David McAtee, Spickard; Clarence Phears, Mexico; Kenny Tevis, Hughesville; Gilbert Wilson, Nevada; Wally Norton, Lamar; Glenn Nothdurft, Oran; and Harley Bixler, Canalou.

Special recognition is given to Wendell Roberts, Agronomy Specialist at Sedalia; Pat Miller, Agronomy Specialist at Nevada; Wayne Prewitt, Farm Management Specialist at Nevada; and Steve Lankheit, Research Specialist at Portageville for their assistance with data collection.

## MISSOURI CROP PERFORMANCE

1990

### GRAIN SORGHUM

This report on Research Project 363 is a contribution of the Department of Agronomy, University of Missouri Agricultural Experiment Station. The work received significant support through fees paid by the companies submitting hybrids for evaluation.

The University of Missouri began its performance testing program for grain sorghum hybrids in 1958. The number of commercial entries in the program has grown from 40 in 1958 to 94 today.

The large number of commercial hybrids available makes selection of a superior hybrid difficult. To select intelligently, producers need a reliable, unbiased, up-to-date source of information that will permit valid comparisons among available hybrids. The objective of the University of Missouri's performance testing program is to provide this information. The tests are conducted under as uniform conditions as possible. Small plots are used to reduce the chance of soil and climatic variations occurring from one plot to another. Results obtained should aid the individual grower in judging the relative merits of many of the commercial grain sorghum hybrids available in Missouri today.

#### COMPARING HYBRIDS

The performance of a hybrid cannot be measured with absolute precision. Uncontrollable variability is involved in the determination of each yield average. This variability sometimes occurs because the soil isn't uniform, but many other conditions may contribute to it. Because variability exists in all field experimentation, statistics are used as a tool to assist in making decisions. The statistical tool used for these trials is the test of least significant difference (L.S.D.). The L.S.D. is quite simple to apply. When two entries are compared and the difference between them is greater than the L.S.D., the entries are judged to be significantly different. Differences smaller than the L.S.D. may have occurred by chance and are judged to be not significant.

Hybrid performance may seem inconsistent from location to location and from year to year because of differences in rainfall, temperature, soil fertility, diseases, insects and other factors. To obtain an improved estimate of relative hybrid performance, readers should consider results from more than one location or year. In this publication, the authors have tried to facilitate comparisons across years and locations.

In each trial, the "top yielding" hybrids have been identified. These hybrids are those that did not yield significantly less than the highest yielding hybrid in the test. They are denoted in the tables by an asterisk (\*) next to their yields. Thus, by going down a column, readers can readily identify the highest yielding hybrids in a trial. By going across, readers can evaluate the relative performance of a hybrid during several years or at several locations. From the standpoint of yield, the most desirable hybrids will be those among the "top yielding" hybrids (that is, those that have an asterisk) the greatest number of times.

Although yield usually receives first consideration, other agronomic characteristics may be equally important when selecting a grain sorghum hybrid. Moisture content at harvest, stalk strength and resistance to insects and diseases are among the hybrid characteristics that deserve careful consideration. High moisture content at harvest, whether due to later maturity or slow dry-down, may indicate an increased drying requirement. Poor stalk strength or susceptibility to pests may decrease harvestable yield because of lodging or stand loss. Therefore, when selecting a hybrid, producers should also consider the data presented on agronomic characteristics other than yield.

The Missouri Agricultural Experiment Station does not recommend specific hybrids. Farmers growing a new hybrid for the first time should consider the information contained in this report and then grow a small acreage to determine adaptability. This should be the practice for all new hybrids regardless of origin.

## EXPERIMENTAL PROCEDURES

Entries. All producers of hybrid seed were eligible to enter hybrids in the 1990 evaluation trials. Participation was voluntary. The researchers exercised no control over which hybrid or how many hybrids were entered. However, to help finance the evaluation program, a fee of \$90 per location was charged for each hybrid entered by the seed producer. Identification of widely grown hybrids was made through a telephone survey of companies that market commercial hybrids in Missouri.

Locations. On the basis of geographical characteristics, the state is divided into regions. Grain Sorghum hybrid evaluation trials are located in the north-central, southwestern, and southeastern regions of the state. In 1990, the locations for these trials were the North Missouri Center near Spickard in Grundy County, the Clarence Phears farm near Mexico in Audrain County, the Kenny Tevis farm near Hughesville in Pettis County, the Gilbert Wilson farm near Nevada in Vernon County, the Wally Norton farm near Lamar in Barton County, the Glenn Nothdurft farm near Oran in Scott County and the Harley Bixler farm near Canalou in New Madrid County. The test near Mexico was abandoned due to disuniformity. Trial locations are shown on the adjacent map.

Field Plot Design. Each test was arranged in a lattice field plot design with three replications. All plots were four rows wide and 20 feet long. The between-row spacing was 30 inches at all locations. Only the center two rows were harvested to determine yield.

Plot Management. The tests were planted and harvested with commercial equipment modified for small-plot work. Fertilizer applied at each site was equal to, or above, that recommended by the University of Missouri's Soil Testing Laboratory. Herbicides and cultivation were used for weed control and plots were hand weeded as necessary. Management details varied from location to location and are specified on individual yield tables.

Data Recorded. Bloom date was recorded when 50 percent of the plants in a plot were shedding pollen. The other agronomic characteristics were evaluated at harvest. Head compactness was scored on a scale of 1 to 5. A score of 1 indicates the most compact or tight head, while 5 indicates the most lax or loose head. Lodging was determined by counting the number of culms inclined more than 30 degrees from vertical. This value was converted to a percentage of the total number of culms in each plot. Yield was measured in number of bushels per acre at a moisture content of 12.5 percent. An electronic moisture tester was used for all moisture readings. To convert yield to pounds/acre, multiply bushels/acre by 56.

Electronic Accessibility of Data. Results of the Missouri Crop Performance Trials are now available in two forms: this printed Special Report and Missouri's Agricultural Electronic Bulletin Board (AgEBB). Variety test information is accessible from the MAIN MENU of the AgEBB under "CROP PERFORMANCE TESTING". The system number is 314/882-8289. If you need assistance in accessing the system call 314/882-4827 for the system staff's help.

## SUMMARY OF RESULTS

Results for each location include data on plant height, head compactness, percent off-type heads, lodging, grain moisture at harvest, and yield adjusted to 12.5 percent moisture.

Yield results are presented for each location. Significant variation among hybrids was observed at each location. Individual hybrid performance across the two north-central, two southwest and two southwestern locations are summarized in Table 4, 7, and 10.

Grain Sorghum Locations.

The differences between the lowest and highest yielding hybrids for each trial are summarized in Table 1. Because environmental conditions influence the performance of hybrid sorghums, the reader is encouraged to give more weight to results from several locations or years than to those from a single test.

The Mexico trial was not reported because poor emergence and unfavorable weather caused extensive variation within the trial.

TABLE 1. 1990 YIELD SUMMARY

LOCATION	NUMBER OF ENTRIES	IRRIGATED	YIELD (BU/ACRE)		DATA TABLE
			RANGE	AVERAGE	
SPICKARD	52	NO	106-146	126	2
HUGHESVILLE	52	NO	104-139	119	3
NEVADA	56	NO	62- 82	72	5
LAMAR	56	NO	84-123	106	6
ORAN	56	YES	98-161	132	8
CANALOU	56	NO	54- 96	79	9

An indication of hybrid maturity is moisture content of the grain at harvest. At times a hybrid may have a noticeably higher or lower moisture content in relation to the other hybrids in the same maturity grouping. Any large variation in moisture content may suggest a difference in maturity or dry down rate.

TABLE 2. PERFORMANCE OF GRAIN SORGHUM HYBRIDS EVALUATED NEAR SPICKARD (GRUNDY COUNTY) ON THE NORTH MISSOURI CENTER DURING 1989-90 AND NEAR JAMESPORT (DAVIESS COUNTY) ON THE KIME FARM DURING 1988.

PLANTED: 4 JUNE 1990.

FERTILIZER: N = 120; P2O5 = 0; K2O = 95.

HARVESTED: 12 OCTOBER 1990.

HERBICIDES: RAMROD + ATRAZINE.

PLANTED POPULATION: 104,500 SEEDS/A.

INSECTICIDE: NONE.

ROW SPACING: 30 INCHES.

GROWING SEASON RAINFALL: 21.53"; IRRIGATION: 0.00".

## WIDELY GROWN HYBRID.

NS NOT SIGNIFICANT.

TABLE 8. PERFORMANCE OF GRAIN SORGHUM HYBRIDS EVALUATED NEAR ORAN (SCOTT COUNTY) ON THE GLENN NOTHDURFT FARM DURING 1988-90.

PLANTED: 1 JUNE 1990.

FERTILIZER: N = 140; P2O5 = 45; K2O = 60.

HARVESTED: 5 OCTOBER 1990.

HERBICIDES: RAMROD + ATRAZINE.

PLANTED POPULATION: 104,500 SEEDS/A.

INSECTICIDE: NONE.

ROW SPACING: 30 INCHES.

GROWING SEASON RAINFALL: 9.34"; IRRIGATION: 6.00".

## WIDELY GROWN HYBRID.

NS NOT SIGNIFICANT.

TABLE 9. PERFORMANCE OF GRAIN SORGHUM HYBRIDS EVALUATED NEAR CANALOU (NEW MADRID COUNTY) ON THE HARLEY BIXLER FARM DURING 1990, THE ALEX FOWLER FARM NEAR KEWANEE DURING 1988 AND THE PAUL CROUTHERS FARM NEAR LIBOURN DURING 1987.

PLANTED: 7 JUNE 1990.  
HARVESTED: 6 OCTOBER 1989.  
PLANTED POPULATION: 104,500 SEEDS/A.  
ROW SPACING: 30 INCHES.

FERTILIZER: N = 100; P2O5 = 0; K2O = 0.  
HERBICIDES: RAMROD + ATRAZINE.  
INSECTICIDE: NONE.  
GROWING SEASON RAINFALL: 13.00"; IRRIGATION: 0.00".

\* DESCRIPTIONS FOR COMMERCIAL HYBRIDS WERE PROVIDED BY THE COMPANIES SUBMITTING THEM FOR EVALUATION.  
 - DATA NOT PROVIDED BY THE COMPANIES.

COLOR CODES	ENDOSPERM TYPE CODE	DISEASE REACTION CODE
HY - HETEROYELLOW	HW - HETEROWAXY	S - SUSCEPTIBLE
W - WHITE	N - NON-WAXY	T - TOLERANT
Y - YELLOW	W - WAXY	R - RESISTANT
R - RED		
BZ - BRONZE		

TABLE 12. NAMES OF GRAIN SORGHUM ENTRIES EVALUATED IN 1990 AND THEIR COMPANY'S ADDRESS.

BRAND	HYBRID	SEED SOURCE
AGRATECH	GK 712 G, GK 802 G, 805 WG	AGRATECH SEEDS, INC., 5559 N. 500 W., McCORDSVILLE, IN 46055
AGRIPRO	AP 9250	AGRIPRO SEEDS, RT.2, EAST HWY 30, AMES, IA 50010
ASGROW SEED	OSAGE, TOPAZ, GS 712, XP5049, XP5128	ASGROW SEED COMPANY, BOX 1945, PLAINVIEW, TX 79072
CAPEHART	CHALLENGER, CHAMPION, CONTENDER, CREAM	CAPEHART SEED SERVICE, BOX 10, HWY 615, HOLLAND, MO 63853
CARGILL	70, 575, 607E, 618Y, 630, 847, X15277	CARGILL HYBRID SEEDS, BOX 5645, MINNEAPOLIS, MN 55440
DEKALB	DK-41Y, DK-48, DK-56, DK-60, DK-66	DEKALB Plant Genetics, RT.2, BOX 56, LUBBOCK, TX 79415
DELTA PINE	G-522A, G-522DR, G-1616, G-1711, 6012XS	DELTA AND PINE LAND COMPANY, 1301 E. 50TH ST., LUBBOCK, TX 79404
FONTANELLE	W-5000, GE-5571, G-5590	FONTANELLE HYBRIDS, RT.1, BOX 18, NICKERSON, NE 68044
FUNK'S	G 1607, G 1616, G XSG 6006, G 1655	CIBA-GEIGY SEED DIV., BOX 18300. GREENSBORO, NC 27419
GARRISON	SG-822, SGX-850, SG-932, SG-950	GARRISON SEED CO., INC., DRAWER 2420, HEREFORD, TX 79045
GOLDEN HARVEST	H-444W, H-520	THE J.C. ROBINSON SEED CO., 100 J.C. ROBINSON BLVD., WATERLOO, NE 68069
GROAGRI	GSA 1310A, GSC 3146	GROAGRI SEED CO., BOX 1656, LUBBOCK, TX 79408
HYPERFORMER	1225DR, 1330DR, HSC 1289C, HSC CHEROKEE, HSC WINGS	HYPERFORMER SEED COMPANY, 5100 POPLAR, SUITE 3200, MEMPHIS, TN 38137
JACQUES	411, 477-W, 606E	JACQUES SEED COMPANY, 720 SAINT CROIX ST., PRESCOTT, WI 54021
JMS HORIZON	45G, 103G	J.M. SCHULTZ SEED CO., 105 PINE ST., DIETERICH, IL 62424
McCURDY	M650W, M737, M757	McCURDY SEED COMPANY, 522 E. MAIN STREET, FREMONT, IA 52561
MFA	645, 650, GS-10, GS-301A	MFA INC., 615 LOCUST, COLUMBIA, MO 65201
NC+	472, 7B81	NC+ HYBRIDS, 3820 N. 56TH ST., BOX 4408, LINCOLN, NE 68504
NORTHRUP KING	KS710, KS714Y, KS737	THE NEW NORTHRUP KING CO., RT.2, BOX 200, HIGHLAND, IL 62249
ORO	BARON, G XTRA, XTRA	ORO HYBRIDS, 624 27TH ST., LUBBOCK, TX 79404
PIONEER HYBRID	8230, 8260, 8313, 8333, 8358, 8379, 8500	PIONEER HI-BRED INTERNATIONAL, INC., 1000 W. JEFFERSON ST., TIPTON, IN 46072
S-BRAND	SM69, SM74, EXP 46-89	SCHECHINGER SEED COMPANY, RT.1, BOX 149, HARLAN, IA 51537
SUPER CROST	SC30, SC40, SC43, SC46	EDWARD J. FUNK & SONS, INC., 601 FUNK PARKWAY, BOX 67, KENTLAND, IN 47951
TAYLOR-EVANS T-E	Y-75, 76, 77-E, X490, DINERO	TAYLOR-EVANS SEED COMPANY, BOX 68, TULIA, TX 79088
TRIUMPH	TWO 64yG, TWO 66yG, TR 74CR	TRIUMPH SEED COMPANY, INC., BOX 1050, RALLS, TX 79357
WARNER	W-744DR, W-917-E	GEORGE WARNER SEED CO. INC, BOX 1448, HERFORD, TX 79045
