## Missouri 2005 Soybean Performance Tests

This report is a contribution of the Division of Plant Science, University of Missouri College of Agriculture, Food and Natural Resources. The work was supported by fees from companies and organizations submitting varieties for evaluation. Soybeans were first included in the University of Missouri's variety testing program in 1973. The number of entries in the program has increased from 51 in 1973 to 358 in 2005. The large number of varieties available makes selection of a superior variety difficult. To select intelligently, producers need a reliable, unbiased, up-to-date source of information that will permit valid comparisons among available varieties. The objective of the University of Missouri's performance testing program is to provide this information. The tests are conducted under as uniform conditions as possible. Small plots are used to reduce the chance of soil and climatic variations occurring between the variety plots. Results obtained should aid the individual grower in judging the relative merits of the commercial soybean varieties available in Missouri today.

### Comparing Varieties

The performance of a variety cannot be measured with absolute precision. Uncontrollable variability is involved in the determination of each yield average. This variability sometimes occurs because the soil is not uniform, but many other conditions may also contribute. Because variability exists in all field experimentation, statistics are used as a tool to assist in making decisions. The statistical tool used in these tests is the test of least significant difference (LSD). The LSD is quite simple to apply. When two entries are compared and the difference between them is greater than the LSD, the entries are judged to be significantly different. Differences smaller than the LSD may have occurred by chance and are judged to be not significant.

Variety performance may seem inconsistent across locations and from year to year because of differences in rainfall, temperature, soil fertility, diseases, insects, and other factors. To obtain an improved estimate of relative variety performance, readers should consider results from more than one location or year. In this publication, the authors have tried to facilitate comparisons across years and locations.

In each test, the "top yielding" varieties in each maturity group have been identified. These varieties are those that did not yield significantly less than the highest yielding variety in the same maturity group. They are denoted in the tables by an asterisk (\*) next to their yields. Thus, by going down a column, readers can readily identify the highest yielding varieties. By going across the page, readers can evaluate the relative performance of a variety during several years or at several locations. From the standpoint of yield, the most desirable varieties will be those which rank among the "top yielding" varieties (that is, have an asterisk) the greatest number of times.

Although yield usually receives first consideration, other agronomic characteristics may be equally important when selecting a soybean variety. Standability, maturity, herbicide tolerance and disease resistance are among the characteristics that deserve careful consideration. Several diseases prevalent in Missouri can be devastating to susceptible varieties. Lodging may reduce yields and slow harvest. Poor seed quality is often associated with varieties which mature while temperatures are still high. Late maturing varieties are occasionally killed by frost. Selection of varieties from several maturity groups can be helpful in spreading out harvest dates. Therefore, information presented on disease reaction, lodging, herbicide tolerance, and maturity should also be considered when selecting a variety.

The Missouri Variety Testing Program does not recommend specific varieties. Farmers growing a new variety for the first time should consider all available information and then grow a small acreage to determine adaptability. This should be the practice for all new varieties regardless of origin.

### The Authors

William J. Wiebold is a Professor of Agronomy and State Extension Specialist; Howard L. Mason is a Senior Research Specialist; Delbert Knerr, Richard W. Hasty, Eddie G. Adams, David M. Schwab, and Scotty L. Smothers are Research Specialists; Travis Belt is a Research Associate in Agronomy; and Bruce Burdick is the Superintendent of the Hundley-Whaley Research Center.

The authors recognize and express their appreciation to the following individuals for their part in making the 2005 soybean tests possible: Steve Cunningham, Craig; Bruce Burdick, Superintendent, Hundley-Whaley Research Center, Albany; Ron and Bud Beetsma, Mooresville; Bill Cason, Macon; Roger Tiemann, LaGrange; John Williams, Henrietta; Ryland and Fred Utlaut, Grand Pass; Tim Reinbott, Superintendent, Bradford Research and Extension Center, Columbia; Roy Cope, Truxton; Bob Burkemper, Annada; Doug Roth, Harrisonville; Darrel Tenholder, Adrian; Kurt Gretzinger, Urich; Steve Cabbage, Nevada; Wally Norton, Lamar; Glenn Nothdurft, Oran; Joe Sevic, Morely; Tom Jennings, Morehouse; and Jake Fisher, Superintendent, Delta Research Center, Portageville.

## Experimental Procedures for Soybean Tests

### Test Descriptions:

**Glyphosate Resistant Soybean Test:** This test includes glyphosate resistant varieties and receives a post emergence application of glyphosate.

**Non-Glyphosate / Special Traits Soybean Test:** This test is a combination of the non-glyphosate soybean test and the special traits soybean test. Examples of soybean lines with special traits include: tofu, natto, food grade, isoflavone, high oil, fatty acid profile, and high protein. Three high yield check varieties were included in these tests for comparison.

**Entries:** All producers of soybean varieties were eligible to enter the 2005 soybean evaluation tests. Participation was voluntary and the test coordinators exercised no control over which, or how many varieties were entered. To help finance the evaluation program, the participants paid \$100 per location for each variety entered.

**Plot Management:** All tests were planted and harvested with commercial equipment modified for small plot work. Row spacing for soybean tests in the North, Central and Southwest Regions was 15 inches. Row spacing for soybean tests in the Southeast Region was 30 inches. Seeding rate for the 15 inch and 30 inch row spacing was 174,200 seeds/Acre. Fertilizer was applied at each location at the discretion of the farmer or the station manager. Weed control was achieved with Roundup herbicide for the Glyphosate Resistant tests and various other herbicides for the Non-Glyphosate/Special Traits tests and additional hand weeding was done as required. Management details varied from location to location and are specified in the regional crop management summaries.

**Data Recorded:** Maturity group classification is provided by the entry sponsor. Maturity data is recorded when approximately 75 percent of the pods have turned color. Lodging and height are determined immediately before harvest. A scale of 1 to 5 is used to score lodging. Interpretation of the scale is as follows: 1 = all plants erect, 3 = all plants leaning moderately or 20 to 50% down, 5 = all plants down.

Data on maturity, plant height, lodging and yield are given for each entry and location. Yield is measured in bushels (60 pounds) per acre at a moisture content of 13.0 percent. An electronic moisture tester is used for all moisture readings.

All soybean locations were tested for the presence of SCN eggs in the soil prior to planting. Every effort was made to locate the test sites in fields of low to moderate levels of SCN. These numbers are given in the heading information of each table.

**Accessibility of Data:** The results of the 2005 Crop performance tests are also available online at <http://agebb.missouri.edu/cropperf/vartest> . If you need assistance in accessing the system; call 573-882-4827 for help.

**Field Plot Design.** Statistical designs used to analyze the field data included randomized lattice with 3 replications and randomized complete block with 4 replications, depending on the size of the test. Individual plots were four rows wide for the 15 inch row spacing and two rows wide for the 30 inch row spacing with a row length of 25 feet for both. All four rows of each plot were harvested for the 15 inch row spacing test and both rows of each plot were harvested for the 30 inch row spacing to determine yield.

**Locations:** On the basis of geographical characteristics, the state was divided into regions. Glyphosate Resistant and Non-Glyphosate Resistant/Special Traits soybean varieties were evaluated at twenty locations in all regions of the state. Test locations are shown on the adjacent map.

### North Missouri

1. Steve Cunningham farm, Craig (Holt Co.)
2. Hundley-Whaley Research Center, Albany (Gentry Co.)
3. Beetsma farm, Mooresville (Livingston Co.)
4. Bill Cason farm, Macon (Macon Co.)
5. Roger Tiemann farm, LaGrange (Lewis Co.)

### Central Missouri

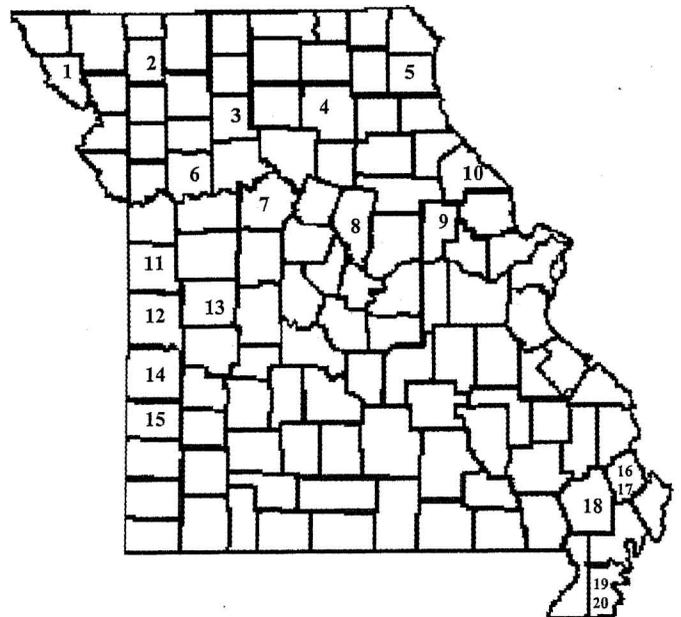

6. John Williams farm, Henrietta (Ray Co.)
7. Ryland and Fred Utlaut farm, Grand Pass (Saline Co.)
8. Bradford Research & Ext. Ctr. Columbia (Boone Co.)
9. Roy Cope farm, Truxton (Montgomery Co.)
10. Bob Burkemper farm, Annada (Pike Co.)

### Southwest Missouri

11. Roth farm, Harrisonville (Cass Co.)
12. Darrel Tenholder farm, Adrian (Bates Co.)
13. Kurt Gretzinger farm, Urich (Henry Co.)
14. Steve Cabbage farm, Nevada (Vernon Co.)
15. Wally Norton farm, Lamar (Barton Co.)

### Southeast Missouri

16. Glenn Nothdruff farm, Oran (Scott Co.)
17. Joe Sevic farm, Morely (Scott Co.)
18. Tom Jennings farm, Morehouse (Stoddard Co.)
19. Delta Research Center-Loam, Portageville (Pemiscot Co.)
20. Delta Research Center-Clay, Portageville (Pemiscot Co.)

## North Region Crop Management Summary

There are five locations in the northern region of Missouri for glyphosate resistant soybean tests. They are located in counties where a significant number of acres of soybean are grown according to the Missouri Agricultural Statistics Service. Cultural practices vary from location to location, but tend to reflect those followed by farmers in the area.

Planting dates ranged from May 9 to May 19 with soil conditions being good at all locations. Yields were good for the region with little variation between locations. Most northern counties received sufficient rainfall this summer except for a dry period in July and August that may have limited the plants ability to produce high yields. The LaGrange location was sprayed with Lorsban in August to control spider mites that invaded the field. Woods Flying Service of Memphis, MO was hired to fly on the insecticide.

Climatological information for the growing season for North Missouri (May 1 – September 30) is summarized below.

Average temperature = 72.0 degrees, 2.4 degrees above normal

Average precipitation = 16.9", 4.2" below normal

Table 1. North Region Crop Management Summary

Location	Planting date	Harvest date	Fertilizer			Tillage	Herbicide

\*\* Highest yielding variety in the maturity group.

\* Yield not significantly less than the highest yielding variety in the maturity group.

Note: To view seed treatments for these varieties refer to the location table or the characteristics chart.

## Central Region Crop Management Summary

There are five locations in the central region of Missouri for glyphosate resistant soybean tests. They are located in counties where a significant number of acres of soybean are grown according to the Missouri Agricultural Statistics Service. Cultural practices vary from location to location, but tend to reflect those followed by farmers in the area.

Planting dates ranged from May 6 to May 19 with soil conditions being good at all locations. Yields at the five central locations were good with little variability between locations. Spider mites were discovered at the Columbia, Truxton, and Annada sites this summer and Dimethoate was sprayed in late July to control them with a tractor mounted sprayer.

Climatological information for the growing season for Central Missouri (May 1 – September 30) is summarized below.

Average temperature = 72.8 degrees, 1.7 degrees above normal

Average precipitation = 17.3", 2.5" below normal

Table 8. Central Region Crop Management Summary

Location	Planting date	Harvest date	Fertilizer			Tillage	Herbicide			Insecticide
			N	P <sub>2</sub> O <sub>5</sub>	K <sub>2</sub> O		Pre	Post

\*\* Highest yielding variety in the maturity group.

\* Yield not significantly less than the highest yielding variety in the maturity group.

Note: To view seed treatments for these varieties refer to the location table or the characteristics chart.

## Southwest Region Crop Management Summary

There are five locations in the southwestern region of Missouri for glyphosate resistant and non-glyphosate resistant / special trait soybean tests. They are located in counties where a significant number of acres of soybean are grown according to the Missouri Agricultural Statistics Service. Cultural practices vary from location to location, but tend to reflect those followed by farmers in the area.

Planting dates were May 4 to May 12 with soil conditions being very good at all locations. Growing season rainfall was below normal and temperatures were above normal for the season. Yields at four of the southwest locations were normal or above normal depending on rainfall and irrigation. The Lamar location suffered more than the others from low rainfall and high temperatures and yields there were far below normal, averaging only 22 bushels per acre. The maturity group 5 glyphosate resistant and non-glyphosate/special trait soybeans at Harrisonville were accidentally bulk harvested so no data is available at that location for those varieties.

Climatological information for the growing season for Southwest Missouri (May 1 – September 30) is summarized below.

Average temperature = 74.6 degrees, 2.4 degrees above normal

Average precipitation = 20.7", 2.3" below normal

## Southeast Region Crop Management Summary

There are five locations in the southeastern region of Missouri for glyphosate resistant and non-glyphosate resistant / special trait soybean tests. They are located in counties where a significant number of acres of soybean are grown according to the Missouri Agricultural Statistics Service. Cultural practices vary from location to location, but tend to reflect those followed by farmers in the area.

Planting dates were from May 3 to May 16 at the five locations with soil conditions being good at all locations. Rainfall was below normal for southeastern Missouri and temperatures were above normal providing challenging growing conditions for the soybean crop. Yields at Morley were low because the sandy soil there couldn't hold enough water to sustain the soybeans between irrigations and rainfall. Yields at the other 4 sites were about normal for the year. Maturity dates for some of the later maturing varieties at Morely and Morehouse were inadvertently missed. The plots were harvested before we realized the omission. Please refer to the maturity dates at the other 3 locations.

Climatological information for the growing season for Southeast Missouri (May 1 – September 30) is summarized below.

Average temperature = 75.2 degrees, 1.1 degrees above normal

Average precipitation = 16.5", 2.6" below normal

## Maturity group III soybean variety entered in the maturity group IV test.

-- Data not available.

\*\* Highest yielding variety in the maturity group.

\* Yield not significantly less than the highest yielding variety in the maturity group.

+ Seed Treatments: 1= Allegiance (Metalaxyl); 2= Apron Maxx (Mefenoxam, Fludioxonil); 3= Apron XL (Mefenoxam); 4= Cruiser (Thiamethoxam); 5= Cruiser Maxx (Thiamethoxam, Fludioxonil, Mefenoxam); 6= Molybdenum; 7= Maxim (Fludioxonil); 8= Rival (Captan, Pentachloronitrobenzene, Thiabendazole); 9= Soygard (Metalaxyl, Azoxystrobin); 10= Stiletto (Carboxin, Thiram, Metalaxyl)

## Maturity group III soybean variety entered in the maturity group IV test.

-- Data not available.

\*\* Highest yielding variety in the maturity group.

\* Yield not significantly less than the highest yielding variety in the maturity group.

+ Seed Treatments: 1= Allegiance (Metalaxyl); 2= Apron Maxx (Mefenoxam, Fludioxonil); 3= Apron XL (Mefenoxam); 4= Cruiser (Thiamethoxam); 5= Cruiser Maxx (Thiamethoxam, Fludioxonil, Mefenoxam); 6= Molybdenum; 7= Maxim (Fludioxonil); 8= Rival (Captan, Pentachloronitrobenzene, Thiabendazole); 9= Soygard (Metalaxyl, Azoxystrobin); 10= Stiletto (Carboxin, Thiram, Metalaxyl)

**TABLE 31. Glyphosate Resistant Soybean Test**

Southeast Region: Portageville (Loam), MO (Pemiscot County)

Soil Type: Tiptonville Silt Loam Soil Test: pH=6.3; OM=1.5%; P=107; K=294

Cyst Nematode Population at Planting: 828 Eggs/250cc of Soil

Rainfall: May=0.6, June=2.3, July=4.4, Aug.=6.2, Sept.=2.2 Total=15.7 in.

Irrigation: 12 in.

## Maturity group III soybean variety entered in the maturity group IV test.

-- Data not available.

\*\* Highest yielding variety in the maturity group.

\* Yield not significantly less than the highest yielding variety in the maturity group.

+ Seed Treatments: 1= Allegiance (Metalaxyl); 2= Apron Maxx (Mefenoxam, Fludioxonil); 3= Apron XL (Mefenoxam); 4= Cruiser (Thiamethoxam); 5= Cruiser Maxx (Thiamethoxam, Fludioxonil, Mefenoxam); 6= Molybdenum; 7= Maxim (Fludioxonil); 8= Rival (Captan, Pentachloronitrobenzene, Thiabendazole); 9= Soygard (Metalaxyl, Azoxystrobin); 10= Stiletto (Carboxin, Thiram, Metalaxyl)

TABLE 32. **Glyphosate Resistant Soybean Test**

Southeast Region: Portageville (Clay), MO (Pemiscot County)

Soil Type: Portageville Clay Soil Test: pH=6.6; OM=2.8%; P=86; K=349

Cyst Nematode Population at Planting: 998 Eggs/250cc of Soil

Rainfall: May=0.6, June=2.3, July=4.4, Aug.=6.2, Sept.=2.2 Total=15.7 in.

Irrigation: 12 in.

## Maturity group III soybean variety entered in the maturity group IV test.

-- Data not available.

\*\* Highest yielding variety in the maturity group.

\* Yield not significantly less than the highest yielding variety in the maturity group.

+ Seed Treatments: 1= Allegiance (Metalaxyl); 2= Apron Maxx (Mefenoxam, Fludioxonil); 3= Apron XL (Mefenoxam); 4= Cruiser (Thiamethoxam); 5= Cruiser Maxx (Thiamethoxam, Fludioxonil, Mefenoxam); 6= Molybdenum; 7= Maxim (Fludioxonil); 8= Rival (Captan, Pentachloronitrobenzene, Thiabendazole); 9= Soygard (Metalaxyl, Azoxystrobin); 10= Stiletto (Carboxin, Thiram, Metalaxyl)

TABLE 33. Performance Summary for Glyphosate Resistant Varieties evaluated at Five Southeast Missouri locations (Oran, Morely, Morehouse, Portageville (Loam), Portageville (Clay)) during 2005.

<u>Oran</u> Planted: 05-13 Harvested: 10-13,10-19 Growing Season Rainfall: 20.0 in. Irrigation: 0 in.	<u>Morely</u> Planted: 05-11, 05-12 Harvested: 09-30, 10-14 Growing Season Rainfall: 20.0 in. Irrigation: 2.2 in.	<u>Morehouse</u> Planted: 05-16 Harvested: 10-11 Growing Season Rainfall: 14.3 in. Irrigation: 0 in.
<u>Portageville (Loam)</u> Planted: 05-03 Harvested: 09-27, 10-06 Growing Season Rainfall: 15.7 in. Irrigation: 12 in.	<u>Portageville (Clay)</u> Planted: 05-06 Harvested: 09-28, 10-05 Growing Season Rainfall: 15.7 in. Irrigation: 12 in.

## Maturity group III soybean variety entered in the maturity group IV test.

\*\* Highest yielding variety in the maturity group.

\* Yield not significantly less than the highest yielding variety in the maturity group.

Note: To view seed treatments for these varieties refer to the location table or the characteristics chart.

NA – Information Not Available

Seed Treatment: 1= Allegiance (Metalaxyl); 2= Apron Maxx (Mefenoxam, Fludioxonil); 3= Apron XL (Mefenoxam);

4= Cruiser (Thiamethoxam); 5= Cruiser Maxx (Thiamethoxam, Fludioxonil, Mefenoxam);

6= Molybdenum; 7= Maxim (Fludioxonil); 8= Rival (Captan, Pentachloronitrobenzene, Thiabendazole));

9= Soygard (Metalaxyl, Azoxystrobin); 10= Stiletto (Carboxin, Thiram, Metalaxyl)

Variety/ Brand: V for variety, BR for brand

Maturity Group: Relative Maturity Group

Phytophthora Field Tolerance: Scale 1-9 (1 = excel, 9 = poor)

Phytophthora Gene: (Rps 1a, Rps 1c, Rps 1k, Rps 3a, S = None)

Cyst Nematode Source: CystX, Peking, PI88788, Hartwig, or S=Susceptible

SDS Rating: Scale 1-9 (1 = excel, 9 = poor)

Herbicide Resistance: GR (glyphosate), STS, or None

## Sources of Soybean Seed Entered in the 2005 Missouri Soybean Tests

Brand	Firm and Address	Phone Number
Armor	Armor Seed Co., 1 Pennsylvania, Waldenburg, AR 72475	870-579-2286
Asgrow	Monsanto Seed Co., 800 N. Lindbergh Blvd., St. Louis, MO 63167	815-754-4809
Bio Gene	Bio Gene Seeds 5477 Tri County Hwy, Sardinia, OH 45171	937-444-6422
Croplan Gen.	Land O'Lakes, P.O. Box 64281-MS, St. Paul, MN 55164	620-223-3803
Croplan Gen.	Croplan Genetics, 298 Taylor Road, Clinton, KY 42031	270-207-0190
Crow 's	Crow's Hybrid Corn CO., 14575 University Ave., Waukee, IA 50263	515-314-1003
Dekalb	Monsanto Seed Co., 800 N. Lindbergh Blvd., St. Louis, MO 63167	815-754-4809
Delta Grow	Delta Grow Seed Co., P.O. Box 219, 220 NW 2nd, England, AR 72046	501-842-2572
Delta King	Delta King Seed Co., 522 Poplar Ave., Box 970, McCrary, AR 72101	870-731-2992
Deltapine	Delta & Pine Land Co., 1301 E. 50th St. , Lubbock, TX 79404	806-740-1600
Dyna-Gro	UAP-MidSouth, 57 Germantown Crt., Suite 200, Cordova, TN 38018	318-372-3457
Dyna-Gro	UAP, 4900 S. 13th Street, Leavenworth, KS 66048	913-250-0200
Excel Brand	Excel Brand, 116 E. State St., Camp Point, IL 62320	800-593-7708
FFR	FFR Seed, 969 Cloverleaf Dr., Southaven, MS 38671	901-652-0903
Garst	Garst Seed Company, 2369 330th Street, Slater, IA 50244	515-685-5234
Gateway	Gateway Seed Co., 5517 Van Buren Rd., Nashville, IL 62263	618-327-8000
Golden Harvest	Golden Harvest Seeds, Inc., PO Box 248, Pekin, IL 61555	563-320-7461
Hornbeck	Hornbeck Seed Co. Inc., Box 472, 210 Drier Rd., DeWitt, AR 72042	870-946-2087
Kruger	Kruger Seed Co., Hwy 20 E, Box A, Dike, IA 50624	800-772-2721
Lewis	Lewis Hybrids, Inc., 530 W. Maple St., Ursa, IL 62376	217-964-2131
LG Seeds	LG Seeds, 22827 Shissler Rd, Elmwood, IL 61529	309-369-2872
Merschman	Merschman Seed Inc., 103 Ave. D., West Point, IA 52656	319-837-6111
MFA Morsoy	MFA Inc., 201 Ray Young Dr., Columbia, MO 65201	573-876-5363
Midland	Midland Genetics Group L.L.C., 1906 Kingman Rd., Ottawa, KS 66067	785-242-3598
Midwest	Midwest Seed Genetics, 14575 University AVE, Waukee, IA 50263	515-314-1003
MO Crop Improvement	Missouri Crop Improvement Association, 3211 Lemone Ind. BLVD., Columbia, MO 65201	573-449-0586
Morsoy	Cache River Valley Seed LLC., 12470 Hwy 226, PO Box 10, Cash, AR 72421	870-477-5427
MPride/MPV	Midwest Premium Genetics, 523 S. Main, Concordia, MO 64020	660-463-7333
NC+	NC+ Hybrids, 3820 N. 56th St. , Lincoln, NE 68504	620-694-7400

<b>Brand</b>	<b>Firm and Address</b>	<b>Phone Number</b>
NK Brand	Syngenta Seeds, 340 Southside Drive, Henderson, KY 42420	270-827-5787
