## DO YOU NEED BETTER RECORDS?

# Kenneth Becker, Gary Devino and Michael J. Scanlan

Does your record system provide information on:

- 1. The total net profit you made from your business last year.
- 2. The total amount spent on new equipment and on remodeling of the plant.
- 3. The total volume of business handled last year.
- 4. The profitability of different sectors of your business.
- 5. The volume of business you handle in each sector of your business.
- 6. The unit cost of performing different services.

If you are only getting answers to the first three, you will have only the information you need for income tax purposes. With a little more effort, you could get the additional information in items 4 through 6. With this information, you will be able to do a better job of managing in today's environment.

The purpose of this manual is to illustrate an accounting system for meat processing-locker plants which will provide financial information for both management and tax purposes.

# Results of the System

what the output will look like. The data presented in Table 1 are taken from the records on one of six firms analyzed with the system by Becker. The income statement allowed the manager to see which sector of the business was profitable and how much each sector contributed toward covering the common overhead. The manager of Firm A was able to see that the smoking and curing sector of his firm was not profitable. Furthermore, he was able to judge whether or not each sector of his firm was making the kind of contribution to profit that he believes is needed to maintain or expand his growth.

The total volume of business handled by each sector of the businesses in the study was determined. Thus, the unit cost for each department, based on the direct cost only, could be calculated for each firm. The unit cost and the contribution to common overhead of each department of the six firms are summarized

Kenneth Becker is a Research Assistant, Department of Agricultural Economics; Gary Devino is an Associate Professor, Department of Agricultural Economics; and Michael J. Scanlan is an Assistant Professor, Department of Accountancy, University of Missouri - Columbia.

Kenneth A. Becker, "Financial Analysis of Slaughter-Locker Firms" (Unpublished Master's thesis, the University of Missouri - Columbia, 1973).

Table 1

INCOME STATEMENT - FIRM A
Slaughter-Locker Firm, Missouri, 1970-71

	Slaughter	Processing	Smoking & Curing	Locker Rental	Retail Sales	Total

in Table 2. These firms slaughtered and processed approximately 500,000 pounds of meat. Their records provide a basis of compari-

son for your firm once you have established a managerial accounting system.

## ACCOUNTING FOR MANAGEMENT USE

The meat processing and locker plants of today are small manufacturing plants that provide services ranging from slaughtering to storage of frozen meat. An accounting system must be able to analyze each of these services to be useful for decision-making.

The system developed in this manual analyzes each of the services performed by the plant and assembles the data for tax figuring. It is set up to analyze five services which are typical in meat processing and locker plants: slaughtering, processing, curing and smoking, locker rental, and retail sales. The system

analyzes these services by determining the volume of business each department handles and by allocating the revenue and cost which is attributed to each.

From the analysis, monthly income statements, the end-ofthe-year income statement, and the unit cost for providing the
services are developed. Besides providing summary data for the
periods, this makes the next year's budgeting easier. Information that is useful in pricing and purchasing of meat and supplies
is also obtained.

Table 2

UNIT COSTS AND CONTRIBUTION TO COMMON OVERHEAD
Six Slaughter - Locker Firms, Missouri, 1970-71

Sector of Business	Firm A	Firm B	Firm C	Firm D	Firm E	Firm F
			dol	lars		
Slaughter:						1
Contribution to Common Overhead	5,825	809	(2,061)	5,694	1,410	5,161

Table 2 -- continued

Sector of Business	Firm A	Firm B	Firm C	Firm D	Firm E	Firm F
Locker Rental: Contribution to Common Overhead	4,162	2,471	4,049	2,550	5,620	c
Average Direct Cost Per Locker Box Based On: Total Locker Boxes Average Number Rented	3.73 5.32	4.30 7.17	3.46 3.63	6.45 7.01	4.56 5.63	c c
Retail Sales:  Contribution to Common Overhead  (Retail Sales Unit Cost Was Not Calculated)	5,583	10,296	7,135	19,378	14,967	1,498 <sup>d</sup>

<sup>&</sup>lt;sup>a</sup>Curing and smoking was contracted to another firm.

Note: 1. All six firms slaughtered and processed approximately 500,000 lbs. of meat.

2. All figures enclosed with parenthesis are negative.

Source: Kenneth A. Becker, "Financial Analysis of Slaughter-Locker Firm" (Unpublished Master's thesis, the University of Missouri, Columbia, 1973).

bError in allocation of labor expense made the unit cost too low.

<sup>&</sup>lt;sup>c</sup>Firm F did not rent locker boxes.

d Firm F considered retail sales as a break even service and was not trying to make a profit.

# Slaughter

This department includes the holding pens, the slaughter area, and the chill cooler. The chill cooler is allocated to slaughter because animals that are custom slaughtered and not processed are often cooled before customers pick up the carcasses. The revenue allocated to this department includes that which is received for custom slaughter, hide sales, offal sales, and a portion of retail sales.

## Processing

This department is allocated these processing functions and physical plant facilities: aging cooler, processing area, quick freeze, and lard rendering.

All cutting and wrapping of meat, even if it is cured and smoked, is considered part of processing. The quick freeze is included since meat is frozen regardless of whether it is put into rented locker boxes or awaits customer pick-up.

The total revenue of the department consists of all revenue from the services of cutting, lard rendering, grinding of beef and pork, and a portion of retail sales.

# Curing and Smoking

The facilities included in this department are the smoking facilities, curing cooler, and preparation area for curing and smoking. In the accounting system, the revenue from custom curing and smoking and a portion of retail sales are recorded under this department.

## Locker Rental

The locker rental boxes and the locker room are considered to be the only physical facilities of locker rental. The total locker rental revenue is from the rental of cold storage locker boxes.

# Retail Sales

This analysis does not allocate any physical facilities to retail sales. Total retail sales revenue is the revenue received from the sales of meat less slaughtering, processing, and curing and smoking charges when these services are included in the mark-up of the meat sold. In these cases where services are included, the volume of business handled in each service department is used

to separate the revenue for the service from the revenue for the

meat itself.

#### HOW THE SYSTEM WORKS

This system centers on gathering and analyzing of three groups of data:

- 1. Volume of business
- 2. Revenue
- 3. Cost

Each of these three groups is analyzed to determine the volume of business, revenue, and cost associated with each of the service departments mentioned above.

Then the information is summarized and analyzed in three summary forms:

- 1. Monthly income statement.
- 2. Yearly income statement.
- Unit cost analysis.

#### VOLUME OF BUSINESS RECORDS

Accurate records of the volume of business handled in each service department have two important functions in this system. First, we need to know the volume of business handled in each department to analyze the total revenue received by the firm. This is due to methods used in charging customers for services performed by the plant. The use of volume data in revenue analysis will be shown in the revenue section. The second

important function of records on the volume of business handled in each service department is to enable unit cost analysis.

Three record forms have been prepared for organizing the data for this section of the system: Form V-1 is the "Schedule of Meat Volume," Form V-2 is "Purchased Carcasses and Cuts," and the summary form, Form V-3, is the "Monthly Volume of Business."

## FORM V-1: SCHEDULE OF MEAT VOLUME

Form V-1 is for scheduling live animals for slaughter and processing. One V-1 form is filled out in advance of each day of slaughtering for each type of meat to be slaughtered. At the end of the month, there are thus two sets of V-1 forms, one showing the total beef slaughtered and processed and one showing the total pork slaughtered and processed in the month.

When a customer calls and wants to schedule an animal for processing, the customer's name is entered on the form for the date of slaughter agreeable to the firm and the customer. If the firm purchases live animals, it will list the animal for slaughter under company live animals.

On the day of slaughter, Form V-1 is taken to the slaughter department. Here the person in charge checks the animals to be slaughtered to see that they have arrived. Then the live weight and/or dressed weight is entered on the form. After slaughtering, the form is transferred to the processing department where the amount of hamburger or sausage and pounds of meat to be cured and smoked are entered. One feature of Form V-1 is that after the meat has been processed, the sales ticket can be figured directly from the information on the form. The sales

ticket number can be written on the form for future crossreference.

Example: On November 15, Mr. L. W. Huthinson called the firm and asked when he could bring two hogs in for custom processing. The manager checked the Form V-1 for his next slaughter date, November 20, and found that it was filled. The November 27 V-1 form showed space for two hogs, but this date was not agreeable to Mr. Huthinson. December 4 was an agreeable date for both the manager and Mr. Huthinson and his name and the number of hogs, two, were entered on the Form V-1 for that date. On December 4, the two hogs were slaughtered. Their combined live weight was 460 pounds and combined dressed weight was 363 pounds.

On December 6, the two hogs were processed. The hogs yielded 27 pounds of sausage; 51 pounds of bacon, 49 pounds of ham, and 6 pounds of shoulder to be cured and smoked; and 26 pounds of lard.

December 8, the Form V-1 was sent to the sales desk where sales ticker #3207 was tallied.

Note that the column headings are typical. However, if you need more or less information, the form should be changed to meet your requirements.

# FORM V-2: PURCHASED CARCASSES & CUTS

Form V-2 is for analyzing the purchases of carcasses and the cuts of meat. When the meat is received from the supplier, the amount of meat and the name of the supplier are registered on this form. The amounts of hamburger, sausage, or other products made from the meat are recorded on the form when the meat is processed.

Example: The first purchase during the month of December was from Wilson and Company. The purchase consisted of 733 pounds of beef and 245 pounds of pork.

On December 6, the 733 pounds of beef was processed. The yield was 479 pounds of hamburger. The entire lot of beef was sold to one person, sales ticket #3108. On December 7, the 245 pounds of pork was processed. It yielded 61 pounds of bacon, 172 pounds of ham and 12 pounds of other meat to be cured and smoked. The pork was sold to many different customer, thus no one sales ticket could be listed for future cross-reference.

If more information or less is needed, the column headings should be changed to meet your needs.

S WILES - BARS EDWANY G7212 GREEN 7212 BUFF PAT, APPL FOR.

### FORM V-3: MONTHLY VOLUME OF BUSINESS

This form is for summarizing the information collected on Forms V-1 and V-2. All of the information on V-1 forms used for a particular month is added and listed on Form V-3. The information obtained from V-1 forms for beef and pork for a particular month is listed under custom and company live animals.

Totals from Form V-2 are listed under company purchased carcasses and cuts for the month.

Then, the total volume of business for the month is determined. The result is the total custom work performed and total purchased meat processed for a particular month. At the bottom of the form, the totals for the entire year are summarized for the firm.

manager collected all the V-1 forms for pork and beef. For beef, he collected four V-1 forms dated December 6, 13, 20, and 27, and added together all of the custom work performed, and all of the company live animal work performed. The same was done for pork:

The data was added together from four V-1 forms dated December 4, 11, 18, and 26. These totals were entered for the month of December under custom and company live animals on Form V-3.

The total meat purchases in December from Form V-2 were carried forward to Form V-3 and listed under company purchased carcasses and cuts. The totals for the particular categories were added together to achieve the monthly total.

At the end of the month, the total number of locker boxes rented out was 302. This figure was placed in Column 12 for the month of December.

Since this was the end of the year, the monthly totals of meat processed were added together and put at the bottom of Form V-3. The monthly inventory of lockers rented were added together and divided by 12 to achieve the average number rented throughout the year. The total volume of business handled in each service department for the entire year was, thus, identified.

## REVENUE RECORDS

Accurate records of revenue collection have two primary functions in this system. First, accurate records are necessary for the collection and payment of sales tax. Second, accurate records are important for proper distribution of the total revenue to the service departments which generated the

#### revenue.

Three forms are provided for the handling of revenue in this system. Form R-1 is the "Sales Ticket;" Form R-2 is the "Daily Cash Receipts Record;" and Form R-3 is the "Monthly and Yearly Summary of Total Revenue."

## FORM R-1: SALES TICKET

The sales ticket, Form R-1, is organized for charging customers directly from Form V-1. It organizes the customer's charges into the service departments which performed the service for the customer.

Retail sales of meat are normally priced to customers by one of two methods: (1) The customers are charged separately for the meat and the processing, (2) The customers are charged one price which includes the meat and the processing. Either method can be used in this system.

Example: On December 4, Form V-1 dated November 27 was received at the office after all the animals listed on the Form V-1 were processed. The manager then filled out the sales ticket for Dave Johnson who had one hog custom processed by the firm. The live weight, dressed weight, pounds of sausage, and the pounds of meat to be cured and smoked was taken directly off of Form V-1. On the day the customer picked up the meat, he also rented a locker for six months. After the locker rental was added to the bill, the total amount due was calculated.

Form R-1

Misc. Sales  @ \$  TOTAL \$ 38.92

## FORM R-2: DAILY CASH RECEIPTS RECORD

The daily cash receipts record, Form R-2, is for keeping record of all sales for each day of business. At the end of each day, the sales for each service department are added together directly from the sales ticket and entered in the appropriate columns. The total for each department is added and entered in Column 6. The appropriate sales tax for that day is entered in Column 7. Columns 6 and 7 are added together to achieve the total cash receipts which should equal total cash received for that day. At the end of the month, the monthly total for each service department and entire operation can be figured. Column 10 is for miscellaneous income.

There are several types of revenue which may present a problem to the bookkeeper.

- 1. Revenue from the sale of hides and offal should be listed under slaughter on the date sold.
- 2. Retail sales of items other than meat should be listed under retail sales. This will be the case in most firms since the total amount of such sales for the year

is less than \$2,000. If the total of such sales becomes large in comparison to total revenue, another department should be formed for such sales. Such a department should be placed in the volume of business and expense sections of this system as well.

3. Collection for sales tax -- The rebate for collecting sales tax should be listed under miscellaneous sales as shown on Form R-2.

Example: The R-1 forms, sales tickets, for December 30, 1972, are added together by department and entered on Form R-2. Then, the sales in the five departments are added together and entered in Column 6. The total sales tax was entered in Column 7. Columns 6 and 7 were added together and the total cash receipts for the day were entered in Column 8.

Since it was the end of the month, Columns 1 through 8 and Column 10 were added to determine the total revenue received in each service department and the total revenue received for the month.

C WILSON JONES COMPANY G7212 GREEN 7212 BUFF PAT, APPL FOR

## FORM R-3: MONTHLY AND YEARLY SUMMARY OF TOTAL REVENUE

The monthly and yearly summary of total revenue, Form R-3, is for summarizing the total revenue received. At the end of the year, the form is used for adjusting the total revenue in service departments to reflect the volume of work performed in each.

At the end of each month, the totals from Form R-2 are transferred to Form R-3. At the end of each quarter, the revenue for the three months is totaled so that the sales tax can be reported. The check number for the sales tax is listed in Column 9. In the example shown, one check is written for the entire quarter. If a separate check is written for each month, the check number for each month is listed in Column 9. The collection fee the firm gets for collecting sales tax is listed under Miscellaneous Income on Form R-2.

At the end of the year, the total revenue for the year in each category on Form R-3 is calculated. Then, the revenue received by the retail sales department is adjusted to reflect the amount of work performed on retail sales meat processed by the other service departments. The volume of business data from Form V-3 is utilized in making the revenue adjustment. The adjusted total revenue then reflects the work performed in each service department.

Example: At the end of December, the total from Form R-2 was carried forward to Form R-3. The sales tax was paid with check number 2448 and the form for reporting the sales tax was filled out. The total for each column was then calculated to achieve the totals for the year.

Since it was the end of the taxable year, retail sales were adjusted. To adjust the retail sales revenue received, the manner in which the firm charges customers for its services must be understood:

## Slaughter:

Beef \$5 + hide

Pork 2¢/pound live weight

# Processing:

Processing both beef and pork 9¢/pound Grinding hamburger and sausage 4¢/pound Tenderizing beef steaks 2¢/pound

# Curing and Smoking:

Curing and smoking

10¢/pound

# Locker Rental:

Locker Rental

\$2/month \$10/six months \$18/twelve months

# Retail Sales:

Company live animals -- Processing and curing and smoking was charged separately from the sale price of the meat. However, the charge for slaughtering was included in the price of the meat.

Company purchased carcasses and cuts -- There is no slaughtering function performed. The processing and curing and smoking was included in the retail price of the meat sold. Thus, processing, and curing and smoking should gain revenue which is presently shown under retail sales.

<u>Slaughter Department Adjustment</u>: This adjustment is only for company live animals sold.

Beef 69 head (Form V-3: total company live animals) \$\frac{5}{head}\$

Pork 2790 pounds (Form V-3: total company live animals) \$\\ .02/\text{pound} \\ \\$55.80

<u>Processing Department Adjustment:</u> This is made only for company purchased carcasses and cuts.

# Processing:

Beef 32,200 pounds (Form V-3: total company purchased carcasses & cuts)

\$ .09/pound \$2,898.00

Pork 9,800 pounds (Form V-3: total company purchased carcasses & cuts)

\$\frac{.09}{\$882.00}\$

# Hamburger and Sausage:

12,880 pounds hamburger (Form V-3: total company purchased carcasses & cuts)

Total 0 pound sausage 12,880 \$ .04/pound \$515.20

Tenderizing:

1,610 pounds (Form V-3: total company purchased carcasses & cuts)

\$\_\_.02/pound \$32.20

Total Processing Adjustment: \$2,898.00

882.00 515.20 32.20

\$4,327.40

Curing and Smoking Department Adjustment: This is made only for company purchased car-

casses and cuts.

1,932 pounds of bacon (Form V-3: total company purchased

4,863 pounds of ham carcasses and cuts)

214 pounds of shoulder

<u>141</u> pounds of other

7,150 pounds \$ .10/pound \$715.00

Total Curing and Smoking Adjustment: \$715.00

Thus, the following amounts are added to their respective service departments:

 Slaughter
 \$ 400.80

 Processing
 4,327.40

 Curing & Smoking
 715.00

 Total Adjustment
 \$5,443.20

The total adjustment of \$5,443.20 is subtracted from retail sales. The result is the adjusted total revenue per service

department which reflects the actual amount of work performed.

The proper collection of cost data has two primary roles in the system. First, accurate records are necessary for the reporting of expenses for state and federal taxes. Second, it is important to allocate expenses to the service department which incurred them.

The checkbook is the center for the handling of all disbursements, whether it is an expense, payment of sales tax collected, or a payment for capital expenditures. The check number for each check written is entered on the appropriate ledger form for which that disbursement of cash was necessary.

The recording of expenses is done primarily on two forms, the "Direct Expenses," Form E-1, and "Other Overhead Expenses," Form E-2. The study by Becker<sup>3</sup> found that 70 to 80 percent of the total expense could be allocated to a service department by

the analysis of only the major expense categories. Thus, the "Direct Expense" form is for the analysis of those expense categories. The remaining expense categories are handled in the "Other Overhead Expense" form.

Since the largest direct expense category is the labor expense, three forms were needed to analyze the labor payroll. They are:

Form L-1, "Payroll Time and Distribution Analysis" Form L-2, "Total Pay Per Employee"

Form L-3, 'Monthly Summary of Payroll Distribution"

The expenditure of money for new or used equipment is recorded on Form E-3, "Capital Expenditures." At the end of the year, these capital expenditures are transferred to Form E-4, the "Depreciation Schedule."

<sup>&</sup>lt;sup>3</sup>Ibid, p. 1.

## FORM L-1: PAYROLL TIME AND DISTRIBUTION ANALYSIS

Form L-1, "Payroll Time and Distribution Analysis," is for the recording of the total hours each employee worked and where that time was spent in the plant. Both the owners and the employees are to fill out the form each day.

Since the manager and some employees will work in different parts of the plant, it is recognized that the analysis of total hours worked will, in most cases, be approximate. But, by recording the hours each day, a minimum of error will result and a minimum of time will be consumed in recording the hours worked in the plant.

The total hours worked each day are split among the slaughter, processing, curing and smoking, and locker rental service departments. Hours not spent working in a service department are entered under general overhead. Retail sales are not listed because the retail sales department is only concerned with the purchase and sale of meat. Retail sales are therefore not allocated any type of operating expense except for the transportation and care of live animals before slaughter.

At the end of the month, the columns are totaled. Each employee then signs his name to verify that the hours shown are correct. The hours worked in each department are divided by the total hours worked by the owner and employee, and the result is a percent analysis of the time spent in each department.

Example: On December 1, John Smith worked eight hours and all eight hours were spent working in the processing department. He recorded his hours on Form L-1 at the end of the working day. At the end of the month, the columns were totaled. John worked a total of 168 hours, of which 155 hours were spent working in the processing department, five hours were spent in the locker rental department, and eight hours were allocated to general overhead.

John Smith signed the form to verify that the hours shown were correct. The bookkeeper did a percentage analysis and found that 92 percent of John Smith's time was spent processing, three percent was spent in locker rental, and five percent was general overhead.

## FORM L-2: TOTAL PAY PER EMPLOYEE

Form L-2, "Total Pay Per Employee," is for recording the employee's gross pay, payroll deductions, net pay, and the check number corresponding to the check written for the net pay. A copy of Form L-2 is filled out for both the employee and the owner. If the firm is not a corporate form of business, no deductions are made from the owner's gross pay. The Form L-2 illustrated shows a bi-weekly pay period. The form should be changed if the pay period is weekly.

At the end of a quarter, the three months are summarized so that the payroll deductions can be reported to the state and federal government for each employee. The total for the end of the year is shown so the W-2's can be filled out.

If the firm using this accounting system does not have a corporate form of business, then it is necessary for the firm to set a labor dollar value on the owner's time spent working in the plant. This is necessary because many owners work in only one protion of the plant. Without a labor charge on the work the owner performs, the unit cost calculated on his

services may be much lower than if hired labor is used in that department. In the study by Becker<sup>4</sup>, the owner was allocated a gross pay equivalent to that of the top paid employee. If an owner worked part time, the owner received a percent of gross pay equivalent to the time spent working at the plant. Other methods may be used to set a pay figure which the owner feels is justifiable for his time. However, it is recommended that the pay level reflect his labor time only. The net profit figure achieved at the end of this year will reflect the returns he made on his management ability and on his investment.

Example: The month of December had three pay periods. On the third pay period, John Smith's gross pay was \$300. His deductions were \$25.84 federal income tax, \$4.67 state income tax, and \$17.55 FICA. The net pay was \$251.94 which was paid for by check number 2343. The months of October, November, and December were then summarized. Since it was the end of the year, the yearly totals for gross pay deductions, and net pay were calculated and a W-2 for John Smith was filled out.

## FORM L-3: MONTHLY SUMMARY OF PAYROLL DISTRIBUTION

Form L-3, "Monthly Summary of Payroll Distribution," is for summarizing the payroll, allocating the total payroll to the service departments and providing a record of payment of deductions. The total gross pay for each owner and employee for a month is carried forward from the L-2 forms and Listed on Form L-3. The owner's and employees' gross pay and deductions are totaled; then these totals are added together.

Since the firm must match the FICA paid by the employee, Columns 1 and 4 are added together and entered in Column 6.

Thus, the total in Column 6 reflects the gross wages paid and the employer's amount of FICA. The percent each owner and employee spent in each service department was carried forward from Form L-1 and entered in Columns 7, 8, 9, 10 and 11. The total in Column 6 is then multiplied by the percentage which reflects the amount of time the owner or employee spent in the different departments. The result is the amount of payroll expense which the department has incurred. The owners' and employees' wages allocated to each department are then added to achieve the total owner's and total employees' wages per department.

The deduction summary is at the bottom of Form L-3. Total federal income tax withheld, Column 2, and total state income tax

withheld, Column 3, are entered and the numbers of the checks used to pay the withholdings are shown. The FICA withholdings, Column 4, are added together and the number of the check used to pay the FICA is shown. Any other deduction, such as health insurance, is shown here and the number of the check use to pay it.

Example: John Smith's total gross pay and deductions for December were carried forward from Form L-2 and entered in Columns 1, 2, 3, 4, and 5. The total gross pay, \$900,000, and FICA, \$52.65, were added and entered in Column 6. The percentage analysis of Smith's time was entered from Form L-1 in Columns 7, 8, 9, 10 and 11. The total in Column 6, \$952.65, was then multiplied by 92 percent, 3 percent and 5 percent. This resulted in allocation of \$876.44 to processing, \$28.58 to locker rental, and \$47.63 to general overhead.

All eleven columns were totaled for the owners and employees. Next, the total owner and employee deductions, Columns 2 through 5, were entered in the deduction summary section. The total federal income tax withheld, \$189.54, the total state income tax, \$32.49, and the total FICA, \$298.36 were paid by check. The check numbers for these checks were entered next to the amounts shown on Form L-3. The check numbers were 2402, 2403, and 2404.

Year 1972

MONTHLY SUMMARY OF PAYROLL DISTRIBUTION

December Month Allocations Deductions (monthly totals) Total Gross Pay Overhead Slaughter | Processing Cure & Locker (Column (monthly Fed. State Name of Person Rental Income Tax Income Tax FICA Other 1 + 4)totals) Owners: 9 8/100 90000 45000 Mary Vantage 23850 135000 Employees: 7752 90000 6/32 4140 60000 255000 Total Employees 3249 (Carry total dollar amounts of columns 390000 Total Owner & Employee for owners and employees forward to Direct Expense Ledger ) (Columns 1 through 5) Check No Deduction Summary: Fed. income tax (total - column 2) State income tax (total - column 3) FICA A) Employees Part (total col. 4) B) Employers Part (total col. 4) Total FICA (total of A + B) Other: (total col. 5)

## FORM E-1: DIRECT EXPENSES

Form E-1, "Direct Expenses," is for allocation of those expenses which can be allocated among the service departments or to direct overhead. Each expense that can be allocated is listed under the word "accounts." When a check is written for an expense item listed on Form E-1, the check number is listed in Column 1 and the expense is allocated to the service departments or to direct overhead, Columns 2 through 7.

At the end of the month, all of the expenses are added and entered in Column 8. The previous total to date for the year, Column 9, is then added to Column 8 to achieve the new total to date, Column 10, which is transferred to Column 9 of the Form E-1 for the next month. Next, each column is added to achieve the total expense. The total expense in Columns 2 through 8 is added to the previous total to date which results in the new total to date. The total to date at the bottom of Form E-1 is then transferred to the Form E-1 for the next month and entered on the line which is labeled "previous total to date."

Each expense category is defined below so the expenses can be allocated. Note that in this accounting system no expense is allocated to retail sales except purchased meat.

Owner's Payrolls and Employee's Payroll - These expenses are carried forward from Form L-3 and entered on Form E-1.

- <u>Supplies</u> Supplies are allocated to the service department or direct overhead, based upon their intended use.
- <u>Purchased Meat</u> Live animals purchased and purchased carcasses and cuts plus transportation are entered under the retail sales department.
- Electricity Horsepower ratings of equipment are used to allocate this expense among the different departments. Analysis of equipment is done only once and can be used year after year until more equipment is added or equipment of different horsepower ratings is used. The percent the horsepower of each department is of the horsepower used in the entire plant is determined. This percent is multiplied times the electrical bill each month to determine how much electric expense to allocate to each. The analysis of six plants yielded the percentage breakdown of electrical usage shown in Table 3.
- Natural Gas By analyzing the plant's equipment and by observing the amount of time it is in use, the owner can make a reasonable allocation of the natural gas usage. This allocation by six firm managers is shown in Table 3.
- Water Charges and Sewage Disposal Charge The owner's judgment is used in the allocation of these expense categories.

  Water and sewage disposal by six firms is shown in Table 3.
- <u>Unemployment Insurance</u> The dollar distribution of labor payroll among the service departments and direct overhead can be used to allocate unemployment insurance.
- Laundry Expense The owner's judgment is used to determine allocations that reflect the use of the items laundered.

- The allocation determined by six firm managers is shown Table 3.
- <u>Automotive Expense</u> The owner's judgment is used in determining the percent allocations among departments.
- <u>Insurance</u> The only insurance shown in Form E-1 is for locker rental liability. Any other type of insurance which can be allocated should be included on the E-1 form.
- Workman's Compensation The dollar distribution of labor payroll among the service departments and direct overhead. can be used to allocate workman's compensation.
- Repairs & Maintenance Repair and maintenance expenses are allocated to the department requiring the service.

Source: Kenneth A. Becker, "Financial Analysis of Slaughter-Locker Firms" (Unpublished Master's thesis, the University of Missouri, Columbia, 1973), p. 39 and p. 43. Example: At the end of December, the bookkeeper carried forward the owner's and employee's payroll from Form L-3 to

Form E-1. During the month, the supplies expenditures were allocated to the department for which the supplies were purchased. Purchased meat was allocated to retail sales. The electrical bill was allocated on the basis of the percentages shown in Table 4.

The natural gas bill and the water bill were allocated according to the percentages shown in Table 4. Sewage disposal expense was included in the water bill. Unemployment insurance was allocated on the basis of the employee payroll expense incurred by the service departments and direct overhead. The laundry bill was allocated by the percentages in Table 4. The firm manager allocated all of the automotive expense to direct overhead since the vehicle was used only for management.

The repair and maintenance bills were allocated to the departments incurring the service.

Table 4

ALLOCATION OF ELECTRICAL, NATURAL GAS,
WATER AND LAUNDRY EXPENSES

Department	Electrical	Gas	Water	Laundry		
	percent					
Slaughter	21	33	65	5		
Processing	52	25	15	90		
Curing and Smoking	6	33	15	5		
Locker Rental	15	0	0	0		
Direct Overhead	6	9	5	0		
TOTAL	100	100	100	100		

At the end of the month, each expense category was totaled and entered into Column 8. It was then added to the previous total to date, Column 9, and entered in Column 10. Following this, each column was totaled. For Columns 2 through 8, the total expense was added to the previous total to date to find the present total to date. Since this was the last month of the accounting period, the total to date was not carried forward to Form E-1 for January, 1973.

DIRECT EXPENSES Form E-1 Year ' 1972 Month December Total Previous Total Each Total to Retail Locker Direct Slaughter Processing Curing & Check Accounts to Date Overhead Category Date Smoking Sales Rental Nos. 1197800 40500 585A 45900 23850 Owner's payroll 2.958 295 32 215459 Employee's payroll Supplies: 6391 35328 2237 234 80 2372 5209 Purchased meat: 11 : Live animals: 52570 22.13 39260 Purchased carcasses & cuts: 77262 2214 24174 2232 27492 2344 12 25751M2 Electricity 48465 4751 532/6 Natural gas 25 283/4 Water Sewage disposal 27 1953/2 26414 Unemployment insurance 4796 24 Laundry expense Automotive expense 2247 49563 53684 32 Insurance: 14200 Locker rental 54600 Workmen's compensation 6842 223 Repairs & maintenance: 54087 15513 371490 Total Expense 104086 336690 48/89 86 821975 3130086 Previous Total to Date 390777 119679 682219 10804623 923834 3497638 Total to Date

- WILSON JONES COMPANY 57212 SPEEN 7212 BUPY PAT, APPL POR

The "Other Overhead Expenses" form is for expenses which could not be allocated. All remaining expense categories that are not listed on Form E-1 are listed on Form E-2, except depreciation which is handled on Form E-4.

When a check is written for an expense item, the check number is listed in Column 1 and the total amount of the expense in Column 2. Often small items are paid in cash. To record these, the words "Petty Cash" are listed in Column 1 and the amount is entered in Column 2.

At the end of the month, all of the expenses under each expense category are added together and entered in Column 3. The previous total to date for the year, Column 4, is added to Column 3 to gain the present total to date, Column 5. The totals in Column 5 are transferred to the Form E-2 for the following month and entered in Column 4. Next, each column is added to find the total other overhead expense. The total expense in Column 2 is added to the previous total to date which results in the present total to date. The present total to date is transferred to Form E-2 for the following month and entered on the line which is labeled "previous total to date."

At the bottom of Form E-2, the personal withdrawals made by the owner can be listed. The check number and the amount of the check is listed in Columns 1 and 2. The total to date is also calculated to keep tract of the total amount of withdrawals made during the course of the year.

Example: Checks were written for expenses and entered on the Form E-2 for December, 1972. At the end of the month, the purchases made in cash were listed on Form E-2; the words "Petty Cash" were listed in Column 1 and the total amount of the cash purchases was listed in Column 2. Each expense category was then totaled. For example, under general supplies, the amounts of \$8.10, \$4.36, and \$7.82 were added and entered in Column 3. Column 3 was then added to Column 4, previous total to date, and the resulting total to date was entered in Column 5. The columns were summed to find the total other overhead expense. Column 2, total overhead expense for December, was then added to the previous total to date to arrive at the present total to date.

The amounts entered for the three personal withdrawals were added together and then added to the previous total to date to arrive at the present total to date of \$9,473.24.

# FORM E-3: CAPITAL EXPENDITURES

Form E-3, "Capital Expenditures," is for recording those items of expense which should be depreciated over the course of the next few years. When an item is purchased, a description of the item and the check number are entered under the column labeled property and check number. The date of purchase is listed in Column 1 and the cost of the capital expenditure is listed in Column 2. At the end of the year, each capital expenditure is transferred to the depreciation schedule, Form E-4. A check mark is entered in Column 3 as the item is transferred

to Form E-4. The total capital expenditure is calculated by adding the cost of each item listed, Column 2.

Example: In 1972, the firm purchased a split saw for \$460.00, paved the parking lot at a cost of \$914.35, replaced a 5-hp motor at a trade-in cost to them of \$117.50, and purchased an adding machine for \$128.40. The total capital expenditure for 1972 was \$1,620.25. As each capital expenditure was transferred to the depreciation schedule, Form E-4, a check mark was placed in Column 3.

#### FORM E-4: DEPRECIATION SCHEDULE

Form E-4 is the "Depreciation Schedule." This form is for the depreciation of capital expenditures. At the end of the accounting period, the depreciation is calculated for each item of property listed on the form. The new capital expenditures for the past year are transferred onto Form E-4 and the amount of depreciation is calculated for each new item of property. The amount of depreciation for each item is then added to achieve the total depreciation expense for that year.

Example: In December, 1972, the amount of depreciation was calculated on each item listed on Form E-4. The four new capital expenditures for 1972 were listed and the depreciation was calculated. The date the item was acquired was entered in Column 1, the cost in Column 2, the method of depreciation and the rate of life in Column 3, the remaining cost in Column 4, and the amount of depreciation for 1972 in Column 5. Column 5 was totaled to arrive at the total depreciation expense for 1972, \$6,342.78.

#### SUMMARY STATEMENTS

This accounting system uses three forms to summarize and analyze the data for the firm manager. The three summary forms are:

Form S-1: Monthly Income Statement

Form S-2: Yearly Income Statement

Form S-3: Unit Cost Analysis.

### FORM S-1: MONTHLY INCOME STATEMENT

The "Monthly Income Statement," Form S-1, is for the manager of the firm to use in the month to month control of expenditures. It provides a method by which he can compare expenditures in dollar terms and as a percent of the total monthly revenue received.

At the end of the month, the total revenue received, Column 6 of Form R-3, is entered on Form S-1 for the appropriate month. The total direct expense, Column 8 of Form E-1, less the total direct overhead for that month, Column 7 of Form E-1, is entered on Form S-1. The total direct expense is then subtracted from total revenue, and the result is the contribution to common overhead.

Next, the total overhead expense for the firm is calculated. The total overhead is calculated by entering and adding the total direct overhead for that month, Column 7 of Form E-1, the total other overhead for the month, Column 2 of Form E-2, and the estimated monthly depreciation is calculated at the beginning of the

year by estimating the total depreciation for the year and dividing it by twelve.

The total overhead is subtracted from the contribution to overhead to arrive at the net profit or loss for the month.

Each dollar figure for the month is then divided by total revenue to determine its percent of total revenue. This percentage is entered in the column next to the dollar figure.

At the end of a quarter, the dollar figures for the three months are added together to develop the quarterly income statement. At the end of six months, the two quarterly income statements are combined to arrive at the income statements for the first and second half of the year.

Example: At the end of December, the firm manager calculated his monthly income statement. First, he entered the total revenue on Form S-1, see Example 1. He then subtracted the monthly total direct overhead from the total direct expense.

\$9,849.51 Column 8 on Form E-1 743.79 Column 7 on Form E-1 \$9,105.81

The total direct expense less the total direct overhead was entered on Form S-1. He then subtracted \$9,105.81 from \$11,078.42, the result being the contribution to common overhead of \$1,972.61. Next, he calculated the total overhead for December. The estimated depreciation for the entire year was \$6,400.00. When divided by 12 (\$6,400 ÷ 12), this became \$533.33, the estimated monthly depreciation. The total overhead, \$2,054.85 was then subtracted from the contribution to overhead figure, \$1,972.61 to arrive at a net loss for December of \$82.24. The total revenue, \$11,078.42, was divided into each of the expense figures and the net profit figure. The result was a negative one percent for net profit as a percent of total revenue. Example 1 is taken from the Form S-1.

This was the end of the fourth quarter and the end of the second half of the year. The monthly income statements for October, November, and December were combined to arrive at the fourth quarter income statement. The third quarter and fourth quarter income statements were combined to form the second half of the year income statement.

Example 1

#### FORM S-2: INCOME STATEMENT

Form S-2, "Income Statement," is the income statement for the entire year. In this income statement, each service department's contribution to profit is analyzed.

At the end of the year, the adjusted total revenue from Form R-3 is entered in the appropriate columns on Form S-2. The direct cost for each service department is then transferred from Form E-1 and entered on Form S-2. Next, the direct expense is subtracted from the revenue for each service department; this figure is called the contribution to overhead. The contribution to overhead indicates the profitability of each one of the service departments. The total direct overhead from Form E-1, the total other overhead expenses from Form E-2, and the total depreciation expense from Form E-4 are then entered on Form S-2 and added together. The total overhead is then subtracted from the total contribution

to overhead to arrive at the net profit or loss of the operation.

Next, other income is added to the net profit or loss from the operation. Other income includes the total miscellaneous income from Form R-3 and the total owner's payroll from the appropriate L-2 forms, if the firm is not a corporate form of business. If the firm is a corporation, the owner's payroll should not be added back in as other income. The total income is then added to net profit or loss of operation to arrive at the total net profit or loss before taxes.

Finally, the total revenue is divided into the total direct expense, contribution to overhead, direct overhead, other overhead expense, depreciation, total overhead, and net profit in Column 11 to calculate the percent of total revenue each figure represents. The percentages are entered in Column 12.

entered the adjusted total revenue figures from Form R-3, Columns 1 through 5, on Form S-2. Then he entered the direct expense from Form E-1, Columns 2 through 6, on Form S-2. Next, he subtracted the direct expense from the revenue for each department and arrived at the contribution to overhead made by each service department. The total overhead was then calculated by adding together the total direct overhead, \$6,822.19 from Column 7 of Form E-1, the total other overhead expense, \$4,865.80 from Column 2 of Form E-2, and total depreciation expense, \$6,342.78 from Column 5 of Form E-4. The total overhead was subtracted from the total contribution to overhead which resulted in a net profit for the operation

of \$15,916.95. The miscellaneous income, \$896.38 from Form R-3, and the owner's payroll, \$11,478.00 from Forms L-2 for the two owners, were added together to form the total other income. The total net profit before taxes was then calculated by adding the total of other income to the net profit of the operation. The total net profit before taxes was \$28,291.33.

The total revenue was then divided into the total direct expense, contribution to overhead, direct overhead, other overhead expense, depreciation, total overhead, and net profit in Column 11 to calculate the percent of total revenue each figure represented. These results illustrated to the owner that the net profit of the operation represented 12 percent of total revenue.

### FORM S-3: UNIT COST ANALYSIS

The "Unit Cost Analysis" form, Form S-3, is for the analysis of each service department to arrive at the unit cost of performing the service. The direct expense from Form S-2 is entered on Line 1 of Form S-3. Next. the volume of business handled in each service department is entered on Line 2 of Form S-2. For the slaughter department, the total volume of business handled is the total dressed weight of beef and pork slaughtered during the year. The total volume of business in the processing department is the total dressed weight of all the beef and pork processed. The total volume of business in curing and smoking is the total volume of meat cured and smoked. The total volume of business in the retail sales department is the total number of pounds of meat purchased. For the locker rental department, the volume of business is the average number of boxes rented during the year. The total direct expense in each department is then divided by volume of business handled in each department. The result is the unit cost of performing the service in each service department, Line 3.

For the slaughter department, the average cost to slaughter a beef or pork animal is developed. First, the total dressed weight of beef animals slaughtered is divided by the number of animals slaughtered to arrive at the average dressed weight per

beef animal. The same is done for pork. The average dressed weight for beef and pork is then entered on Line 4. Next, the average dressed weight for beef and pork, Line 4, is multiplied by Line 3 to arrive at the average unit cost per beef and pork animal slaughtered, Line 5.

Example: At the end of the year, the direct expense, from Form S-2, for each department, was entered on Line 2 of Form S-3. Then, the total volume of business handled in each department was calculated from Form V-3.

### Slaughter

406,800		custom	beef		
109,200		custom	pork		
32,700		company	beef	live	animals
2,120		company	pork	live	animals
550,820	pounds	TOTAL			

## Processing

592,820 poun	ds TOTAL

## Curing and Smoking

16,960	bacon
20,448	ham
3,554	shoulder
1,057	other
42,019 pounds	TOTAL

### Retail Sales

32,700 2,120 <b>3</b> 2,200	company beef live animals company pork live animals company beef purchased cuts
9,800	company pork purchased cuts
76,820 pounds	TOTAL

## Locker Rental

Average monthly inventory of lockers rented was 287.

These figures were then entered on Line 2 of Form S-3. Next, the direct expense, Line 1, was divided by the volume of business handled in that department, Line 2, during the year to arrive at the unit cost for each service department. This figure was entered on Line 3.

For the slaughter department only, the unit cost per animal was then calculated. First, the average dressed weight per animal slaughtered was calculated

Beef	Pounds	No. of Head
Custom beef	406,800	864
Company beef - live animals	32,700	69
TOTAL	439,500	933
439,500 lbs. ÷ 933	= 471.1 1bs	
Pork		
Custom pork	109,200	586
Company pork - live animals	2,120	12
TOTAL	111,320	598
111,320 lbs. ÷ 598	= 186.2 lbs	i.

The average dressed weights were then entered on Line 4 of Form S-3. The unit cost, Line 3, was then multiplied by the average dressed weight of a beef and pork animal to arrive at the average unit cost per beef animal slaughtered, \$8.01, and the average unit cost per pork animal slaughtered, \$3.17. These figures were entered on Line 5 of Form S-3.
