I. INTRODUCTION

In 1968, the Governor of Minnesota asked that the state's use of computers be investigated in order to indicate future requirements and also asked that there be a strong attempt to coordinate future acquisitions. In 1970, a study entitled Computers and Information Systems in Minnesota 1970-1980 was published. The authors were Dr. Peter Roll and Dr. Peter Patton. This report predicted the state's computer needs for this decade and indicated that these needs should be satisfied by a comprehensive statewide plan. In particular, it suggested that timesharing should be discussed and planned within each system of education.

In 1971 the State Junior (now Community) College System and the University of Minnesota began discussing plans for jointly satisfying their timesharing needs. Until this time, both systems had been leasing services from outside sources. Timesharing needs had increased to a point where it seemed much more cost effective to lease and operate their own system.

II. JUNE 1971 - SEPTEMBER 1971

A. Management Agent

The University Computer Center was designated the management agent for the regional timesharing system (soon to be called MERITSS) by the Higher Education Coordinating Commission. The considerable amount of technical expertise at the Center made this choice a logical one.

B. Time Lines

A request for bid was sent out on June 1, 1971. On July 1, 1971, bids were returned. Control Data Corporation was awarded the contract based on an imaginative proposal to lease a 32 port system as a quarter system. An installation date of September 1, 1971, was set. On September 9, 1971, the system was running and serving users.

C. Initial Configuration

The 32 port system had a hardware configuration of 6415 central processor with 32K words memory, 6612 console, 841-3 multiple disk system with 96 million characters storage, 604 tape drive and controller, and one 64 port 6676 data set controller. The software consisted of the KRONOS 2.0 Level 4 operating system, TSRUN (CDC's in-core timesharing FORTRAN), RUN23 (Batch FORTRAN), COBOL, SORT/MERGE, BASIC, and the COMPASS assembler. Text editing capability was made available through EDIT. The first users to come on the system were from the University of Minnesota; the 18 State Junior Colleges; and the College of St. Thomas. Two state colleges followed shortly.

III. SEPTEMBER 1971 - JUNE 1972

A. Statistics

Figure IV-1 shows an almost steady increase in connect hours per month from 600 hours for September 1971 to 8700 hours in March 1972 with an expected drop during June 1972 due to the end of the academic year. Central processor time used is given in Figure IV-2. Note that the central processor time is not directly proportional to connect hours logged.

B. Configuration/Users

By June 30, 1972, MERITSS had expanded from 32 ports to 76 ports, serving all 18 State Junior Colleges, the Twin Cities and Morris campuses of the University of Minnesota, the College of St. Thomas, Winona State College, Moorhead State College, the University of Nebraska at Omaha, and the Fargo-Moorhead public secondary schools.

Associated with this increased load were several hardware changes. A second 6676 communications controller was added with a modification to handle both 10 and 30 character per second terminals. The 841-3 multiple disk system was replaced by a dual access fixed head 6638 with 128 million character capacity.

Many software enhancements were introduced during the first nine months of MERITSS' operations. MNF, the University of Minnesota FORTRAN compiler, was installed, giving timesharing users access to the well known capabilities of this University Computer Center product. An experimental version of APL was installed as a result of a joint project of the University

of Minnesota and CDC. An extended version of BASIC (XBASIC) which was more compatible with Dartmouth BASIC was released by CDC.

FIGURE IV - 1

MONTHLY CENTRAL PROCESSOR TIME

FIGURE IV - 2

IV. JULY 1972 - JUNE 1973

A. Growth

MERITSS continued to grow during the 1972-1973 fiscal year. The requirements were 60 ports during the summer, 84 ports in October 1972 and 108 ports from January 1973 through June 1973. This expansion can be seen to be more diametric by noting that 16 ports from Nebraska left the system in October to start their own MERITSS-like system.

B. Statistics

As with the 1971-72 operations, the monthly total connect time continued to grow, reaching a maximum of 13,600 hours during March 1973. Figure IV-1 indicated the connect hours per month for the first 22 months of MERITSS operation. Figure IV-2 showed the associated central processor time used.

Figure IV-3 gives the monthly use of FORTRAN (TSRUN and MNF) and BASIC (BASIC and XBASIC) in terms of number of runs. Notice that, excluding the summer months with its expected low totals, there was no large increase in number of runs for these languages. This is due to an increased use in other languages and CAI activities and, perhaps, also due to more programs running the first or second time. An interesting trend to notice from Figure IV-3 is the increased use of FORTRAN as the school year progressed, to the point where FORTRAN use dominated BASIC. This can be credited to the increase of student sophistication as the year progressed.

C. Users

The 108 port system had the following breakdown by system in

June 1973:

<u>System</u>	<u>Number of Ports</u>
Junior Colleges	15
State Colleges	18
Private Colleges	7 (included Wisconsin Colleges)
University of Minnesota	65
Secondary Schools	3

BASIC VS. FORTRAN

Figures are FORTRAN/BASIC ratio.

FIGURE IV - 3

V. JULY 1973 - JUNE 1974

A. Equipment

A new contract was negotiated with Control Data which called for an expansion from 108 ports to 160 ports on October 1, 1973, with a corresponding decrease in per port cost from \$187.50 to \$172.50. See Appendix G for the 1973-1974 budget. The 160 port configuration was 65K memory, 100,000₈ words of shared Extended Core Storage, a 604 tape drive, dual channel 6638 disk, 841-3 disk, and 3 6676 communication controllers.

B. Users

Although 160 ports were leased, there was a maximum demand for only 145 ports. The following is a breakdown of ports by system in October, 1973.

<u>System</u>	<u>Number of Ports</u>
Community Colleges	15
State Colleges	40
Private Colleges	7 (included Wisconsin Colleges)
Secondary Schools	3
University of Minnesota	70

The University of Minnesota ports were composed of 32 instructional lab ports, 35 instructional department dial-up ports, and 3 ports shared by low usage departments.

C. Statistics

The mix of usage of various languages remained much the same as for 1972-73. Again, FORTRAN usage was less than BASIC at the beginning of the academic year but dominated it by the end of the year. By the end of the year, XEDIT, a locally written text editor,

had thirty times the usage of Control Data's standard editor, EDIT. ALGOL and LISP were additions made available to MERITSS by University Computer Center staff. Appendix A summarizes some of these usage statistics.

Increased usage was reflected by the connect time figure. A maximum of 20,600 hours was attained in May, 1974. This compares with maximum figures also in May of 9,000 for 1971-1972 and 14,000 for 1972-1973. If we divide the connect time for May by the number of ports at that time (145) we will find an average usage of 140 hours per port. Since the user port cost was \$250 per month, the cost was less than \$2 per hour.

D. Communications Network

Figure V-1 shows the MERITSS communications arrangement as it existed in October, 1973. Multiplexed private lines were used as the main technique to serve multiple users. Approximately 35 campuses with 280 terminals were serviced by this star type network.

MERITSS NETWORK 10/73

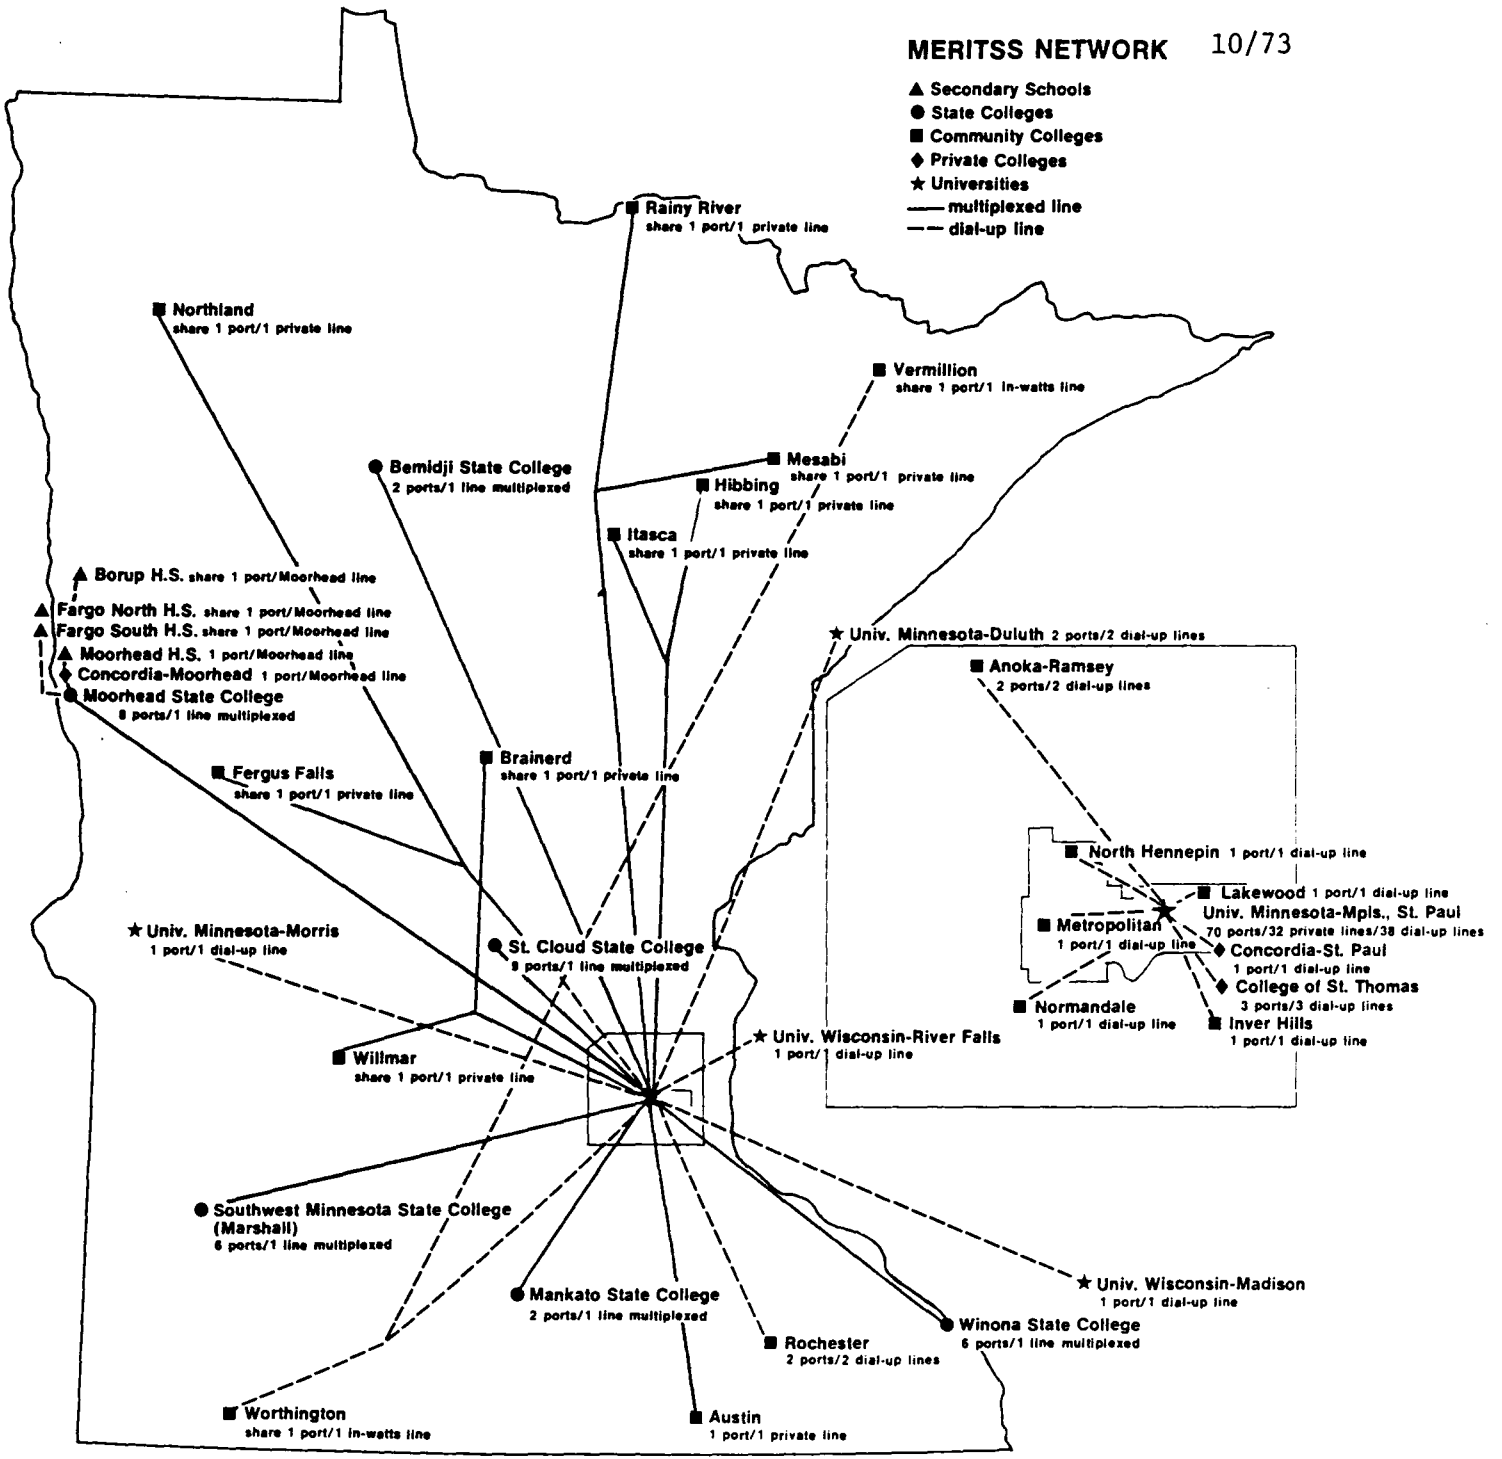

FIGURE V - 1

VI. JULY 1974 - JUNE 1975

A. MECC

The 1974-75 academic year was the first formal year of operation under the Minnesota Educational Computing Consortium (MECC). The role of UCC was changed to that of operation and consultation. MECC handled publications, some applications programming, and engaged in an enhanced training function directed mainly toward secondary schools, which became the largest of the educational systems using MERITSS. UCC provided a machine, and operating system maintenance , and system enhancement.

Coincident with this new philosophy of operation was the implementation of a communications network, and funding which made economical timesharing available to all elementary, secondary, and vocational schools in the state. The accompanying large increase in secondary school usage created a need for 455 ports to provide instructional timesharing for the state.

MERITSS supplied 256 of the 455 ports. The actual need was for approximately 275 Cyber style ports but this need reduced by implementing timesharing on the University's Cyber 74 and transferring some University of Minnesota activities to that machine.

B. EQUIPMENT

The increase from 160 ports to 256 ports was achieved by adding a fourth 6676 communications controller, using another 100,000₈ words of shared Extended Core Storage (ECS) and installing a DDP which allowed direct peripheral processor access to ECS,

replacing the 604 tape unit with two 607 tape units, and replacing the 841-3 with a two-drive 844 disk unit capable of storing 214 million characters.

The final configuration was:

- CDC 6400
- 65K Central Memory Words
- 10 PPU'S
- 2-607 tape units
- 6638 dual channel disk
- 2-844-21 disks
- DDP
- 200,000₈ words ECS
- 4-6676 Communication Controllers

C. COMMUNICATIONS

Two forms of communications were used. These were dial-up and multiplexed lines. The dial-up lines were split between 20 In Watts lines on a single rotary and 53 standard business lines on several rotaries. The remaining 183 ports were connected to 17 time division multiplexors.

D. USAGE

It was expected that the large increase in secondary school users would produce a substantial shift in type of usage. Appendix B is a comparison of some usage data for January and February, 1974 versus the same months of 1975. The percentage of BASIC runs increased from 36% in 1974 to over 60% in 1975. A corresponding percentage decrease in FORTRAN runs was also noted. The number of runs per terminal hour had increased slightly, possibly due to more runs necessary to debug, and less complex production runs. It is interesting to note that there was a dramatic decrease in the number of

CP seconds per terminal hour. The fact that secondary schools demanded less of the CPU is also borne out by the figures in appendix C, comparing various systems.

E. STATISTICS

MERITSS had become the largest single general purpose instructional timesharing system in the world. Appendix A gives a synopsis of usage from September 1974 through June 1975. The heaviest usage occurred during the month of April with over 39,000 terminal hours accumulated. The largest number of simultaneous users, 202, was attained on April 29. Figure VI-1 represents the number of users at a given time for that day. The shape of this curve is representative of most days during the year. There is a sharp increase in active users at start up time which levels off at 12 Noon, then a further increase near 3 P.M., when secondary school classes end. Usage decreases rapidly until around 7 P.M., at which time there is a gradual increase until 10 P.M., decreasing from then to the 2 A.M. end of operations. Figure VI-2 is a total of each command for that day.

 TTYO Number of characters output to terminal (thousands)

VII. UNIVERSITY OF MINNESOTA PARTICIPATION

A. Instructional Labs

The experience by the University of Minnesota during the first 10 months on MERITSS indicated a need for student-only facilities for instructional timesharing. Too often, the department terminals were not available due to offices being locked or terminals being used for either class preparation or research projects. At other times, one department would be experiencing heavy student usage on its terminal while another had little or no usage. The desired goal was to combine resources at an all University level to better serve student's needs in an economical fashion.

The instructional timesharing laboratories commenced operations in October 1972 with a block of 16 ports. They were centrally controlled and financed by University Computer Services. The result was a considerable shifting of timesharing use from the department level to all University level. Currently, there are 32 ports and 61 terminals designated for the instructional labs. These labs are located in Mechanical Engineering, Vincent Hall, Elliott Hall, Experimental Engineering, Social Science Tower, Classroom Office Building on the St. Paul Campus, and the Middlebrook, Territorial, and Centennial dormitories. Each lab has from 1 to 11 terminals to be used for timesharing computing. In addition, an off-line teletype is available for paper tape preparation. See Figure VII-1 for a schematic of the instructional lab system as it existed in 1973.

The convenient locations and the combination of resources caused the instructional lab ports to become the most heavily used ports on MERITSS. Figure VII - 2 indicates the monthly connect time totals accumulated by the instructional labs during 1972-1973.

B. Computer Aided Instruction

The Instructional Design Group of the Center for Research in Human Learning under the direction of Dr. Russell Burris completed work on the author language, MIL (Minnesota Instructional Language). Burris' work in this area has gained University, state, and national acceptance. Courses now running on MERITSS are in the areas of German, Greek, Italian, Swedish, Spanish, Pediatric Cardiology, Hematology, Law, and Logic, with others soon to follow.

C. Agricultural Extension Service

The Farm Management Extension Specialists, who are also faculty members of the Department of Agricultural and Applied Economics, provided development and training leadership during 1972-73 through the use of the MERITSS system throughout the Agricultural Extension Service. Their objectives were to make this system accessible to other Extension educators wherever they serve people in the state of Minnesota. They also had as their objective the development of computer decision aids so designed to be educationally sound and able to enhance the capacity of the Extension educators to teach whatever subject matter is their specialty. In order for a computer decision aid (CDA) to be educationally sound, it must (1) help decision

makers to clarify their problem during the acquisition and assimilation of data as input into the CDA, (2) clarify and enhance the underlying principles, relationships, and empirical evidence of the underlying analysis and, also, (3) encourage modification of the previously conceived problem and/or speak to the real world problems associated with risk and uncertainty through an interactive process of analytic reruns.

The Farm Management Specialists group developed materials primarily in the areas of operations research or similar quantitative analysis. These specifically included enterprise selection analysis procedures, linear programming type optimizations, financial planning, and capital budgeting procedures. Use was made during 1972-73 in at least 100 different workshops, seminars or other classroom settings by this group and their area agent counterparts alone. Such usage included running participant's data, dealing with case problem situations, or enhancing lecture presentation and developing classroom illustrations. All training of field personnel continues, though the awareness phase of exposure of field personnel is drawing to a close.

Terminals have been placed in five area offices, in addition to the three in St. Paul. Limited access by Extension faculty members in other outstate locations also exists.

Training efforts included not only other agricultural specialists, but also Home Economics Extension specialists and resident faculty members. The former led to development of a beef cattle breeding program now being used throughout the state and a developing interest on the part of both plant and animal scientists in the use of the CDA approach.

The work with the Home Economics faculty has, in turn, produced additional field staff training sessions, plus a pilot project involving Home Economists at North Dakota State University, Moorhead State, and Concordia, as well as the Nash Fince Company. This project included putting terminals in four supermarkets in the Fargo/Moorhead area for the month of April in 1973. Over 300 consumers input their weekly shopping list and received an analysis of its nutritional adequacy, as well as its budget feasibility. Other programs in the area of housing, nutrition and house design are in various stages of use or development.

D. Simulation

Dr. Tom Hummel of the Student Personnel Bureau developed a program which simulates client behavior in an initial counseling interview. Through interaction with a counselor, a programmed client progresses toward a goal of verbalizing a specific problem statement. This type of simulation is valuable as a means of training and evaluation in counselor education.

E. Graphics

The Applied Statistics Department purchased a Tektronix 4013 graphics terminal with associated software. Programs have been written to utilize the graphics capability in order to aid the teaching of various topics of statistics and numerical analysis.

F. MINITEX

A number of Community Colleges had access to MINITEX (Minnesota Interlibrary Teletype Exchange). MINITEX is a Minnesota Higher Education Coordinating Commission program that shares University library resources

with other academic institutions through a teletype custom service network. Faculty and students who have information needs that cannot be met by their own campus library were assisted by having their requests transmitted through MERITSS terminals on their campus. The requests were briefly stored on the CDC 6400 until they were retrieved by the MINITEX staff.

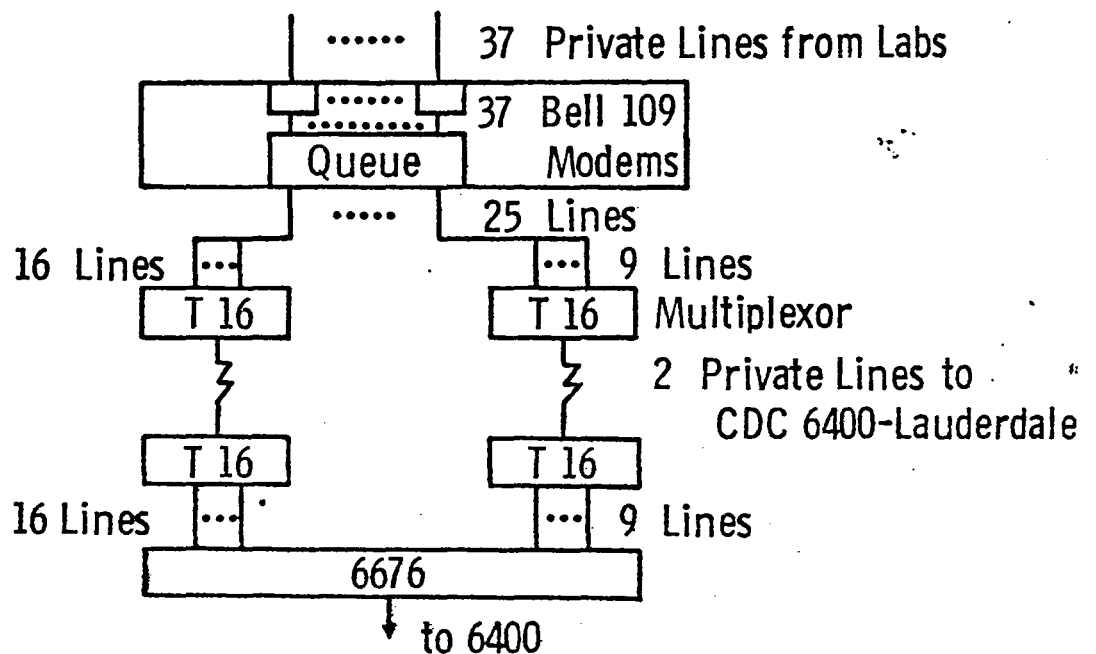

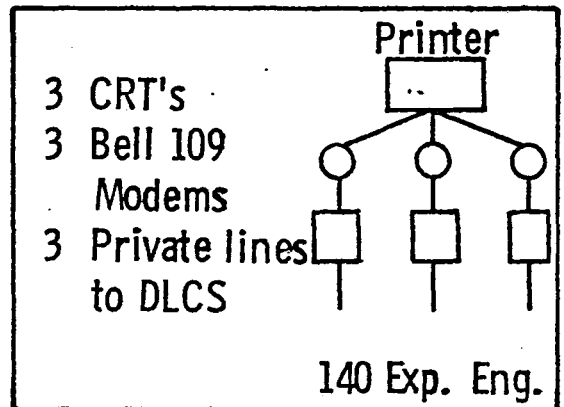

FIGURE VII - 1

INSTRUCTIONAL LAB MONTHLY CONNECT TIME

FIGURE VII - 2

VIII. SERVICES

A. System Availability

MERITSS is available to its users 110 hours per week. The operation schedule is given below. The staggered weekly up-times are a result of preventive maintenance on Tuesday and Thursday.

Operation Schedule

Monday	7:30 AM - 2:00 AM
Tuesday	8:30 AM - 2:00 AM
Wednesday	7:30 AM - 2:00 AM
Thursday	8:30 AM - 2:00 AM
Friday	7:30 AM - 11:00 PM
Saturday	7:30 AM - 12:00 Midnight
Sunday	6:00 PM - 12:00 Midnight

B. Consulting

Consulting is available from 8:30 AM to 4:30 PM weekdays in 230 Experimental Engineering or by telephone at 373-5753 during these hours. A recorded message at 373-1798 will give the machine status also during these hours.

C. Newsletter

A newsletter was prepared monthly for MERITSS users. This contained announcements of meetings, new applications, and program and system changes. Articles written by MERITSS staff members on programming techniques and the use of new features were included.

D. MERITSS HANDBOOK

Work was completed on the new MERITSS HANDBOOK during the summer of 1972. The HANDBOOK was a joint effort of the Junior College System

and the MERITSS staff. This contains sections on BASIC, XBASIC, FORTRAN, KRONOS timesharing commands, and operation of the Teletype model 33. The MERITSS HANDBOOK has proven to be an excellent introduction to timesharing on MERITSS, but is now out of print.

E. User Association

The MERITSS Users Association was established in the spring of 1972. Since then, by means of its semi-yearly meetings, it has established an intra- and inter-system arrangement by which all systems on MERITSS can share ideas and locally developed programs.

F. Operating System/System Staff

All MERITSS systems programming staff members were previously associated with the University's CDC 6600 operation. This made it possible to begin MERITSS operations with a note of optimism when considering the multitude of problems that were bound to occur with a quickly expanding timesharing system. The members of the systems programming group indeed performed according to the great expectations of them.

Since the group is a product of the University Computer Center environment, its duties are not only system maintenance, but also systems development. Many modifications were made to the initial system to make it easier to use and greater in capability. One of the many enhancements to the system was software allowing MERITSS users to submit jobs to be run on the CDC 6600. This joint effort utilized common extended core storage as the transmission medium.

There are many features in the MERITSS system that evolved as a result of the staff associated with the Center's CDC 6600. Because of the similarity of the CDC 6400 and the CDC 6600, many projects on the CDC 6600 resulted in MERITSS obtaining such languages as MNF, COBOL, ALGOL, SNOBOL, and PASCAL.

MERITSS would have been a much lesser system without the high level of expertise available at the University Computer Center.

IX. SOFTWARE

A. Programming Languages

(1) BASIC and XBASIC

BASIC (Beginners All-purpose Symbolic Instruction Code) is an extension of the original BASIC language which was designed and implemented at the Dartmouth College Computation Center. This easy to learn language enables a person with little or no computer experience to solve numerical problems.

(2) FORTRAN (TSRUN, MNF, and RUN23)

FORTRAN (FORmula TRANslating system) is a problem oriented language whose source language statements closely resemble the algebraic notation used to solve scientific and engineering problems. This language is widely used in the United States. There are three FORTRANs available on MERITSS: TSRUN, RUN23, and MNF. TSRUN is CDC's standard timesharing FORTRAN compiler. RUN23, also a CDC product, is an extended version of TSRUN which does not allow line numbers. MNF is the University of Minnesota FORTRAN which compares favorably with RUN23 in Batch and TSRUN in timesharing. Because of diagnostics, debugging aids, and generalized statements, MNF is recommended for the majority of MERITSS FORTRAN users.

(3) COBOL

COBOL (COmmon Business Oriented Language) is a programming language resembling English which is designed to simplify the programming of business data processing operations. The development of this language begin in 1959 and it is now being used on almost all large scale computers. The MERITSS version is the University Computer Center adaptation of CDC COBOL 3.0. 30,000 modification cards were necessary. This modified version facilitates use from a timesharing terminal.

(4) APL

APL, which is based on the notation defined by Kenneth E. Iverson in A Programming Language (Wiley, 1962) basically agrees with the APL/360 version, with some deletions and some extensions. APL on MERITSS was developed jointly by the University Computer Center and the Department of Computer, Information, and Control Sciences of the University of Minnesota. CDC has used this experimental interpreter as a basis for its new APL*CYBER interpreter. APL effectively combines the power of Iverson's language with the convenience of timesharing.

(5) ALGOL

ALGOL (ALGOrithmic Language) is a problem oriented language intended, at its definition, to be the international programming language. This language allows expression of problem solutions as precise procedures. The power of the language lies in its great flexibility in allowing many variations of each of its few instructional forms. This language is commonly used to relate computer algorithms in publications since it is understandable for reading but still suitable for machine translation. The MERITSS version of ALGOL was modified slightly by University Computer Center staff to facilitate timesharing use.

(6) SNOBOL

SNOBOL (StriNg Oriented symBolic Language) is a computer programming language containing many features not commonly found in other programming languages. The basic data element is a string of characters. The language has operations for joining and separating strings, listing

their contents, and for making replacements in them. This language can be used in such areas as compilation techniques, machine simulation, natural language translations, and music analysis. The SNOBOL interpreter was obtained from the University of California, Berkeley, and was extensively modified and enhanced by University Computer Center staff to allow interactive processing.

(7) COMPASS

COMPASS (COMprehensive ASsembly System) enables a program to write CDC 6000 series machine language through use of mnemonic instructions and symbolic addresses.

(8) LISP

LISP (LISt Processor) is an interpretive processor obtained from the University of Texas at Austin, useful for symbol manipulation and recursive programming. It has application in artificial intelligence and natural language analysis.

(9) PASCAL

PASCAL is an ALGOL-like language which facilitates structured programming. This is a general purpose language with fast compilation. PASCAL was obtained from ETH in Zurich, Switzerland, and modified by the University Computer Center to enable interactive processing.

B. Applications Programs and Subprograms

A majority of the routines on the MERITSS subroutine libraries were taken from the CDC 6600 library. In addition, there are permanent file manipulation routines which allow the FORTRAN programmer to GET, ATTACH, APPEND, PURGE, SAVE, and REPLACE files. There is a common library of general purpose application programs available to all users (see Appendix F). These programs are useful in the areas of Statistics,

Engineering, Business, Chemistry, Physics, Biology, Mathematics, Political Science, and Art, to list a few. These programs, written in BASIC, FORTRAN, SNOBOL, and COMPASS, compose a superset of programs received from CDC at Bethesda, University of Colorado, the Huntington II project, and the MERITSS users. Documentation is available by means of the MERITSS developed program, INFORM, which allows a user to index and selectively retrieve information on the program of his choice.

Some of the larger packages are listed below:

ISIS - Interactive statistics package from Florida State University and modified by the University Computer Center to allow greater file flexibility and additional statistical analysis.

IMSL - A library of FORTRAN-callable subroutines developed by International Mathematical and Statistical Libraries, Inc.

TYPESET - An English text preparation program written by a student at the University of Minnesota.

TEKLIB - A library of FORTRAN-callable subroutines used for driving the Tektronix graphics terminal. This was modified slightly from the original Tektronix version by the Applied Statistics department at the University of Minnesota.

NOTIFY - A program which allows master users to send messages to all or specified users under their control. These messages are received at log-in time.

SYSTEM 2000 - A general purpose data management system.

MIL - A FORTRAN-like CAI author language written by the Consulting Group on Instructional Design at the University of Minnesota.

XEDIT - An interactive text editor originally written by a student at the University of Minnesota and now maintained by the University Computer Center. XEDIT is designed to make changes more quickly, easily, and accurately than the KRONOS text editor.

CDC 6400 USAGE SUMMARY 1975-1976

Comparison of low (1974) vs. high (1975)
Secondary School Usage

APPENDIX C

Monthly Usage Statistics by System

The following pages are monthly usage statistics for July, 1972 through June 1975. These figures are useful in comparing usage and utilization by each system of education as well as indicating the general growth in usage during this period. Similar figures for September 1971 through June 1972 are not readily available but do exist in a raw form. The column 'UOFMINN LABS' is blank for the first three months

Other months have rows of data that are blank. Accounting errors produced incorrect data during these months and these data were not used.

The abbreviations follow.

NL	Number of Sessions
CT	Connect time (terminal hours)
CP	Central Processor time (hours)
CPCM	Proportional to field length x time
MS	Number of 640 character disk blocks transferred (thousands)
TI	Number of characters typed in at terminal (thousands)
TO	Number of characters typed out at terminal (thousands)
SL	Average session length (hours)
S/H	Central processor seconds per terminal hour
CM/H	Proportional to field length x time per terminal hour (CPCM x 100/CT)
MS/H	Number of 640 disk blocks transferred per terminal hour (MS x 1000/CT)
TI/H	Number of characters typed in at terminal per hour (TI x 1000/CT)
TO/H	Number of characters typed out at terminal per hour (TO x 1000/CT)

APPENDIX F

MERITSS LIBRARY ENTRIES

- ACPL0T - PLOTTING SUBROUTINE FOR BASIC OR XBASIC
- ALPHBTZ - FILE SORTING
- ANNUIT - CALCULATES 4 ITEMS OF AN ANNUITY SAVINGS PLAN
- AN0VA1 - ANALYSIS OF VARIANCE FOR A TWO-WAY CLASSIFICATION
- APDERV - DERIVATIVE OF A POLYNOMIAL
- APINTG - POLYNOMIAL INTEGRATION
- BANDIT - SLOT MACHINE GAME (GAME,BANDIT)
- BEMDES - RECOMMENDS THE CORRECT STILL BEAM FOR AN APPLICATION
- BESSEL - VALUE OF BESSEL FUNCTION OF FIRST KIND WITH REAL ARGUMENTS.
- BICONF - CONFIDENCE LIMITS FOR A POPULATION PROPORTION BASED ON EXACT BINOMIAL DISTRIBUTION.
- BLCKJCK - BLACKJACK GAME (GAME,BLCKJCK)
- BLKJCK - BLACKJACK GAME (GAME,BLKJCK)
- BR - CONVERSION PROGRAM FOR BRAILLE OUTPUT ON TTY
- BURAL - ALLOCATES OVERHEAD DEPARTMENT OR ACCOUNT COSTS TO DIRECT DEPARTMENTS OR PRODUCTS
- C TO USE KR0N0S 'CALL' COMMAND IN EXECUTE SUBSYSTEM
- CALIB - BINARY VERSIONS OF CONCWTW AND COMCWTB FOR I/O WORK
- CAL0T - FITS UNWEIGHTED LEAST-SQUARES LINE TO AVERAGE LABOR HOURS
- CAPR0 - COMPUTES PROJECTED VALUES UNDER THE CUMMULATIVE AVERAGE CURVE THEORY WHEN THE PERCENTAGE OF SLOPE AND THE VALUE OF ONE LOT ARE KNOWN
- CAT - MORE EXTENSIVE CATLIST GIVING LENGTHS AND TYPES OF FILES
- CATG - CATLISTS GROUP PROJECT FILES
- CAUNI - FITS LEAST-SQUARES LINE UNDER THE CUMMULATIVE AVERAGE CURVE THEORY TO UNIT HOUR OR COST.
- CBIN0RM - COMPUTES THE PROBABILITY $PR(A \leq X \leq B)$ WHERE X IS THE NUMBER OF SUCCESSES IN N TRIALS USING NORMAL APPROX.
- CCDETER - COMPLEX DETERMINATE EVALUATOR USING CR0UT METHOD
- CCHISQ - PROBABILITY OF A CHI-SQUARE VALUE
- CCORREL - COMPUTES CORRELATION COEFFICIENT FOR N SETS OF PAIRED DATA
- CDETER - COMPLEX DETERMINANT SOLVER USING CR0UT METHOD
- CGE0MEN - COMPUTES GEOMETRIC MEAN AND STANDARD DEVIATION
- CINVERS - INVERTS A MATRIX USING THE EXCHANGE METHOD.
- CHARGE - MILLIKAN OIL DROP SIMULATION
- CLINFIT - BEST LINEAR FIT FOR A SET OF INDEPENDENT VARIABLES TO A DEPENDENT VARIABLE
- CLSCF - LEAST SQUARES POLYNOMIAL FIT
- CMDFILE - USED BY THE 'HELP' COMMAND
- COMPIN - COMPOUND INTEREST CALCULATOR
- CONDIF - CONFIDENCE LIMITS FOR A DIFFERENCE BETWEEN TWO POPULATION MEANS.
- CONLIM - CONFIDENCE LIMITS FOR AN UNKNOWN POPULATION MEAN.
- CORE - DETERMINE FIELD LENGTH NEEDED FOR AN MNF PROGRAM.
- CORE1 - DETERMINE FIELD LENGTH NEEDED FOR AN MNF PROGRAM.
- CORREL - CORRELATIVE COEFFICIENTS FOR TWO SETS OF DATA HAVING EQUAL NUMBERS OF ELEMENTS
- CSTATNW - COMPUTES 34 STATISTICAL MEASURES ON A STRING OF UNWEIGHTED NUMBERS

- CSTATWE - COMPUTES 34 STATISTICAL MEASURES ON A STRING OF WEIGHTED NUMBERS
- CSTAT01 - COMPUTES MEAN, VARIANCE, STANDARD DEVIATION, AND STANDARD ERROR
- CSTAT02 - COMPUTES MEANS, VARIANCES, AND T-RATIOS FOR TWO GROUPS OF UN-PAIRED DATA
- CSTAT03 - MEANS, VARIANCES, AND T-RATIOS FOR TWO GROUPS OF UNPAIRED DATA
- CSTAT04 - CHI-SQUARE STATISTICS FOR 2 BY 2 CONTINGENCY TABLES.
- CSTAT05 - CHI-SQUARE STATISTICS FOR ANY NUMBER OF M BY N CONTINGENCY TABLES
- CSTAT06 - SIGN TEST CONFIDENCE INTERVAL USING FRACTIONAL COUNTS.
- CSTAT07 - CONFIDENCE LIMITS FOR A SET OF DATA USING THE WILCOXON SIGNED RANK SUM PROCEDURE WITH FRACTIONAL COUNTS.
- CSTAT08 - COMPARES TWO GROUPS OF DATA ITEMS USING THE MEDIAN TEST
- CSTAT09 - COMPARES TWO GROUPS OF DATA ITEMS USING THE MANN-WHITNEY TWO SAMPLE RANK SUM TEST
- CSTAT10 - COMPUTES SLOPE, Y-INTERCEPTS, AND OTHER STATISTICAL MEASURES FOR A SIMPLE LINEAR REGRESSION WITH ONE INDEPENDENT VARIABLE
- CSTAT11 - SPEARMAN RANK COEFFICIENT FOR TWO SERIES OF DATA
- CSTAT12 - COMPUTES THE CORRELATION MATRIX FOR N SERIES OF DATA
- CSTAT13 - ANALYSIS OF VARIANCE FOR A ONE-WAY COMPLETELY RANDOMIZED DESIGN.
- CSTAT14 - ANALYSIS OF VARIANCE TABLE AND F-RATIOS FOR TREATMENTS AND BLOCKS OF A RANDOMIZED COMPLETE BLOCK DESIGN.
- CSTAT15 - ANALYSIS OF VARIANCE TABLE FOR A SIMPLE LATIN SQUARE DESIGN
- CSTAT16 - ANALYSIS OF VARIANCE TABLE FOR A SIMPLE GRAECO-LATIN SQUARE DESIGN
- CSTAT17 - ANOVA TABLE OF A BALANCE INCOMPLETE BLOCK DESIGN AND F-RATIO FOR TREATMENTS.
- CSTAT18 - ANALYSIS OF VARIANCE TABLE AND THE F-RATIO FOR TREATMENTS FOR A YODEN SQUARE DESIGN.
- CSTAT20 - MULTIPLE LINEAR REGRESSION ACCORDING TO EFRØYNSØN'S ALGORITHM
- CSTAT21 - ONE OR MORE MULTIPLE LINEAR REGRESSIONS ON A BATCH OF DATA
- CURVFIT - FITS TWO VARIABLES TO LEAST SQUARES LINES USING THE EQUATIONS FOR SIX DIFFERENT CURVES.
- DEPCAL - DEPRECIATION CALCULATION BY ONE OF FOUR DIFFERENT METHODS
- DICE - GAME OF 'CRAPS' (GAME, DICE)
- DISCNT - CALCULATES PRESENT VALUE OF A FUTURE SUM, RATE OF DISCOUNT, OR PERIOD OF DISCOUNT.
- ECMESS - MESSAGE FILE USED BY COMMUNITY COLLEGES
- EIGVAL - EIGENVALUES OF A REAL SYMMETRIC MATRIX
- EIGVEC - EIGENVECTORS OF A REAL SYMMETRIC MATRIX
- FETCH - RETRIEVE DIAGNOSTICS FROM AN MNF, RUN 23, OR COMPASS LISTING

MERITSS LIBRARY ENTRIES AS OF 74/3/14

FOOTBAL - FOOTBALL GAME FOR TWO PLAYERS (GAME, FOOTBAL)
 FOURIE - FOURIER COEFFICIENTS AND PHASE ANGLES FOR PERIODIC DATA
 GAUSS1 - THREE POINT GAUSS INTEGRATION FOR FINITE LIMITS.
 GENE1 - GENETIC TRAIT INHERITANCE SIMULATION
 GEOMEN - GEOMETRIC MEAN AND GEOMETRIC STANDARD DEVIATION FOR
 A GEOMETRICALLY NORMAL SERIES OF DATA
 GOLFER - GOLF GAME (GAME, GOLFER)
 HRACES - HORSE RACE GAME (GAME, HRACES)
 ICL0T - FITS A UNIT CURVE TO AVERAGE LABOR HOURS OR COST FOR
 UP TO 200 LOTS
 ICPRO - COMPUTES PROJECTED VALUES ON A UNIT CURVE WHEN THE
 PERCENTAGE OF SLOPE AND THE VALUE OF ONE LOT OR UNIT ARE
 KNOWN.
 ICUNI - FITS A UNIT CURVE TO LABOR HOURS OR COST FOR UP TO 1000
 UNITS.
 IMSL - DIRECT ACCESS FILE CONTAINING A GROUP OF MATHEMATICAL
 SUBROUTINES IN ULIB FORM.
 INDEXN - A BUSINESS INDICES NUMBER PROGRAM.
 INFO - DIRECT ACCESS FILE USED BY 'INFORM'
 INSTAL - CALCULATES PRINCIPAL, PAYMENT AMOUNT, MONTHLY INTEREST
 RATE, OR NUMBER OF PAYMENTS WHEN THE OTHERS ARE GIVEN.
 ISIS - INTERACTIVE STATISTICS PACKAGE
 ISISINS - MANUAL FOR ISIS FORMATTED FOR LINE PRINTER
 LBINDX - PART OF A PACKAGE OF PROGRAMS THAT TEACH BASIC
 LBIT04 - PART OF A PACKAGE OF PROGRAMS THAT TEACH BASIC
 LB140N - PART OF A PACKAGE OF PROGRAMS THAT TEACH BASIC
 LB5T08 - PART OF A PACKAGE OF PROGRAMS THAT TEACH BASIC
 LB9T13 - PART OF A PACKAGE OF PROGRAMS THAT TEACH BASIC
 LIBLIST - FILE CONTAINING A SHORT DESCRIPTION OF EACH FILE ON
 'LIBRARY' OR 'GAME'
 LISINFO - UT LISP VERSION 3 INFORMATION FILE - 4 PAGES.
 LISPEX - LISP EXAMPLE PROGRAM
 LINFIT - BEST LINEAR FIT AND CORRELATIONS FOR A SET OF DATA
 LINPRO - SOLVES LINEAR PROGRAMMING PROBLEMS BY MAXIMIZING AN
 OBJECTIVE FUNCTION USING THE TWO-PHASE METHOD
 LNH15 - ALLOWS CRT USERS TO GET LISTINGS OF FILES ACCORDING
 TO SCREEN SIZE AVAILABLE. A STOP FOR EXAMINATION IS
 INCLUDED AND THE END OF EACH SCREEN-FULL.
 LOAN - LOAN AMORTIZATION PROGRAM.
 LOANAM - WILL CALCULATE PRINCIPLE, PAYMENT AMOUNT, INTEREST RATE,
 OR PERIOD WHEN THE OTHERS ARE GIVEN
 LOCKEY - SIMULATION OF LOCK AND KEY MODEL OF ENZYME SPECIFICITY
 LRNBAS - PROGRAM TO TEACH BASIC
 LSCFTC - POLYNOMIAL CURVE FITTING
 LSFITW - LEAST SQUARES WEIGHTED POLYNOMIAL CURVE FIT
 MALAR - SIMULATION OF A MALARIA EPIDEMIC AND CONTROL
 MARKET - GAME OF COMPETITION BETWEEN TWO COMPANIES SELLING
 THE SAME PRODUCT
 MOVEAVE - COMPUTES ANY NUMBER OF MOVING AVERAGES FOR UP TO 600
 OBSERVATIONS WITH ANY NUMBER OF AVERAGE SIZE

MERITSS LIBRARY ENTRIES AS OF 74/3/14

- FOOTBAL - FOOTBALL GAME FOR TWO PLAYERS (GAME, FOOTBAL)
- FOURIE - FOURIER COEFFICIENTS AND PHASE ANGLES FOR PERIODIC DATA
- GAUSS1 - THREE POINT GAUSS INTEGRATION FOR FINITE LIMITS.
- GENE1 - GENETIC TRAIT INHERITANCE SIMULATION
- GEOMEN - GEOMETRIC MEAN AND GEOMETRIC STANDARD DEVIATION FOR
A GEOMETRICALLY NORMAL SERIES OF DATA
- GOLFER - GOLF GAME (GAME, GOLFER)
- HRACES - HORSE RACE GAME (GAME, HRACES)
- ICLOT - FITS A UNIT CURVE TO AVERAGE LABOR HOURS OR COST FOR
UP TO 200 LOTS
- ICPRO - COMPUTES PROJECTED VALUES ON A UNIT CURVE WHEN THE
PERCENTAGE OF SLOPE AND THE VALUE OF ONE LOT OR UNIT ARE
KNOWN.
- ICUNI - FITS A UNIT CURVE TO LABOR HOURS OR COST FOR UP TO 1000
UNITS.
- IMSL - DIRECT ACCESS FILE CONTAINING A GROUP OF MATHEMATICAL
SUBROUTINES IN ULIB FORM.
- INDEXN - A BUSINESS INDICES NUMBER PROGRAM.
- INFO - DIRECT ACCESS FILE USED BY 'INFO'
- INSTAL - CALCULATES PRINCIPAL, PAYMENT AMOUNT, MONTHLY INTEREST
RATE, OR NUMBER OF PAYMENTS WHEN THE OTHERS ARE GIVEN.
- ISIS - INTERACTIVE STATISTICS PACKAGE
- ISISINS - MANUAL FOR ISIS FORMATTED FOR LINE PRINTER
- LBINDX - PART OF A PACKAGE OF PROGRAMS THAT TEACH BASIC
- LB1T04 - PART OF A PACKAGE OF PROGRAMS THAT TEACH BASIC
- LB140N - PART OF A PACKAGE OF PROGRAMS THAT TEACH BASIC
- LB5T08 - PART OF A PACKAGE OF PROGRAMS THAT TEACH BASIC
- LB9T13 - PART OF A PACKAGE OF PROGRAMS THAT TEACH BASIC
- LIBLIST - FILE CONTAINING A SHORT DESCRIPTION OF EACH FILE ON
'LIBRARY' OR 'GAME'
- LISINFO - UT LISP VERSION 3 INFORMATION FILE - 4 PAGES.
- LISPEX - LISP EXAMPLE PROGRAM
- LINFIT - BEST LINEAR FIT AND CORRELATIONS FOR A SET OF DATA
- LINPRO - SOLVES LINEAR PROGRAMMING PROBLEMS BY MAXIMIZING AN
OBJECTIVE FUNCTION USING THE TWO-PHASE METHOD
- LNH15 - ALLOWS CRT USERS TO GET LISTINGS OF FILES ACCORDING
TO SCREEN SIZE AVAILABLE. A STOP FOR EXAMINATION IS
INCLUDED AND THE END OF EACH SCREEN-FULL.
- LOAN - LOAN AMORTIZATION PROGRAM.
- LOANAM - WILL CALCULATE PRINCIPLE, PAYMENT AMOUNT, INTEREST RATE,
OR PERIOD WHEN THE OTHERS ARE GIVEN
- LOCKEY - SIMULATION OF LOCK AND KEY MODEL OF ENZYME SPECIFICITY
- LRNBAS - PROGRAM TO TEACH BASIC
- LSCFTC - POLYNOMIAL CURVE FITTING
- LSFITW - LEAST SQUARES WEIGHTED POLYNOMIAL CURVE FIT
- MALAR - SIMULATION OF A MALARIA EPIDEMIC AND CONTROL
- MARKET - GAME OF COMPETITION BETWEEN TWO COMPANIES SELLING
THE SAME PRODUCT
- MOVE - COMPUTES ANY NUMBER OF MOVING AVERAGES FOR UP TO 600
OBSERVATIONS WITH ANY NUMBER OF AVERAGE SIZE

MERITSS LIBRARY ENTRIES AS OF 74/3/14

- MULFI - MULTIPLE LINEAR FIT ON UP TO SIX VARIABLES WITH TRANSFORMATIONS
- NAGS - COMPUTERIZED HORSE RACE (GAME, NAGS)
- NEWRAP - LOCATES A ROOT OF A FUNCTION WHOSE DERIVATIVE IS KNOWN USING THE NEWTON-RAPHSON METHOD
- NORDEV - GENERATES RANDOM NORMAL DEVIATES WITH A MEAN OF ZERO AND VARIANCE OF ONE.
- PAGES - FORMATS A DATA FILE INTO LL INCH PAGES WITH 58 LINES WITH A HEADER LINE AND PAGE NUMBER
- PLTTY - BASIC SUBROUTINE WHICH WILL PLOT ONE OR MORE CURVES ON THE SAME SET OF COORDINATE AXES
- POLICY - SIMULATION GAME CONSISTING OF A SOCIO - ECONOMIC MODEL OF THE AMERICAN SOCIETY
- POLSYS - SIMULATION OF THE PROCESS WHICH INDIVIDUALS AND GROUPS UNDERGO WHEN THEY ATTEMPT TO INFLUENCE CITY HALL
- POLUT - SIMULATION OF THE INTERACTION BETWEEN WATER AND WASTE
- POP - USED TO EXPLORE SIMPLE MATHEMATICAL MODELS OF POPULATION GROWTH
- POSTER - POSTER GENERATION (GAME, POSTER)
- QUBIC - THREE DIMENSIONAL TIC-TAC-TOE (GAME, QUBIC)
- RANUM - GENERATES UP TO 600 DIFFERENT RANDOM NUMBERS, PRINTING IN ASCENDING ORDER.
- RASEQ - GENERATES SETS OF RANDOM NUMBERS WITHIN RANGES SPECIFIED BY THE USER.
- REFORM1 - REFORMATS A FILE BY REMOVING THE BLANKS AND REPLACING THE LEADING BLANK IN A STRING BY A COMMA. ALL CHARACTERS EXCEPT DIGITS, DECIMAL POINTS, COMMAS, PLUS, AND MINUS SIGNS ARE REMOVED
- REFORM2 - REFORMATS A FILE BY REMOVING THE BLANKS AND REPLACING THE FIRST BLANK WITH A COMMA. ALL NON-BLANK CHARACTERS ARE PRESERVED.
- REFORM3 - REFORMATS A FILE BY REMOVING THE BLANKS AND REPLACING THE FIRST BLANK WITH A COMMA. ONLY THE CHARACTERS THE USER WISHES WILL BE RETAINED
- REFORM4 - REFORMATS A FILE BY REMOVING UNWANTED BLANKS AND LEADING COMMAS. THE FIRST BLANK IN A STRING IS REPLACED BY A COMMA. NUMERIC CHARACTERS PLUS THOSE CHARACTERS THE USER DESIRES ARE RETAINED.
- REFORM5 - REFORMATS A FORTRAN PROGRAM WITH LINE NUMBERS TO ONE IN STANDARD FORM.
- RLETTE - ROULETTE GAME FOR ONE PERSON (GAME, RLETTE)
- RNUMBER - CONVERTS STANDARD FORTRAN PROGRAM TO ONE WITH LINE NUMBERS.
- RROOTBW - FINDS ROOTS OF POLYNOMIALS USING BAIRSTON'S METHOD
- RROOTWG - FINDS THE ROOTS OR FIXED POINTS OF A NON-LINEAR FUNCTION USING WEGSTEIN'S ACCELERATION OF THE STANDARD ITERATION PROCEDURE.
- RUNGE2 - SOLVES TWO SIMULTANEOUS FIRST ORDER DIFFERENTIAL EQUATIONS BY THE FOURTH ORDER RUNGE-KUTTA METHOD
- SAMDAT1 - SET OF SAMPLE DATA FOR THE ISIS STATISTICAL PACKAGE

- SAMDAT2 - SET OF SAMPLE DATA FOR THE ISIS STATISTICAL PACKAGE
- SAMDAT3 - SET OF SAMPLE DATA FOR THE ISIS STATISTICAL PACKAGE
- SCALEX - BASIC SUBROUTINE WHICH SIMULATES NINE DIGIT FLOATING POINT PRINTOUT
- SCHEME - PLOTS UP TO NINE CURVES ON THE SAME SET OF COORDINATE AXES.
- SIMDIS - CALCULATES DISCOUNTED OR PRESENT VALUE OF A FUTURE SUM, DISCOUNT RATE, NUMBER OF PERIODS, OR THE FUTURE SUM WHEN ALL OR SOME OF THE OTHERS ARE KNOWN.
- SIMEX1 - SOLVES N SIMULTANEOUS LINEAR EQUATIONS IN N VARIABLES
- SIMFI - SIMPLE LINEAR REGRESSION
- SIMPIN - CALCULATES PRINCIPLE, PAYMENT AMOUNT, INTEREST RATE, OR NUMBER OF PAYMENTS WHEN THE OTHERS ARE KNOWN.
- SLITS - SIMULATION OF INTERFERENCE PATTERNS FOR LIGHT
- SLTMCHN - SLOT MACHINE GAME (GAME, SLTMCHN)
- SMPSON - NUMERICAL INTEGRATION USING SIMPSON'S RULE
- SN0INF0 - CAL SN0B0L ON MERITSS INFORMATION FILE - 19 PAGES.
- SN0LIB - 20 UTILITY SN0B0L FUNCTIONS USED TO MAKE UP THE DEFICIENCIES IN CAL SN0B0L. (SEE SN0INF0)
- SN0PIG - SN0B0L EXAMPLE PROGRAM
- STARTRK - STAR TREK GAME (GAME, STARTRK)
- STATFR - FREQUENCY DISTRIBUTION ANALYSIS PROGRAM WHICH COMPUTES 15 STATISTICAL MEASURES.
- STATNW - COMPUTES 31 STATISTICAL MEASURES OF A STRING OF NON-WEIGHTED NUMBERS
- STATSR - SIMPLE REGRESSION ANALYSIS PROGRAM TO DESCRIBE THE PRIMARY PROPERTIES OF A LEAST-SQUARES REGRESSION PROBLEM
- STATWE - COMPUTES 36 STATISTICAL MEASURES ON WEIGHTED OR UNWEIGHTED STRINGS OR SETS OF PAIRS OF DATA.
- STAT01 - COMPUTES THE MEAN, VARIANCE, STANDARD DEVIATION, AND STANDARD ERROR OF THE MEAN FOR ONE OR MORE SETS OF DATA
- STAT02 - COMPUTES THE MEANS, VARIANCES, AND T-RATIO FOR TWO GROUPS OF UNPAIRED DATA ASSUMING AN EQUAL VARIANCE MODEL
- STAT03 - COMPUTES THE MEANS, VARIANCES, AND THE VALUE OF A T-LIKE STATISTIC FOR TWO GROUPS OF UNPAIRED DATA, ASSUMING AN UNEQUAL VARIANCE MODEL.
- STAT04 - COMPUTES CHI-SQUARES FOR A 2 BY 2 TABLE.
- STAT05 - COMPUTES ANY NUMBER OF M BY N CONTINGENCY TABLES.
- STAT06 - CALCULATES THE SIGN TEST CONFIDENCE INTERVAL USING FRACTIONAL COUNT.
- STAT07 - CALCULATES THE CONFIDENCE LIMITS USING THE WILCOXON SIGNED RANK SUM PROCEDURE WITH FRACTIONAL COUNTS.
- STAT08 - COMPARES TWO GROUPS OF DATA USING THE MEDIAN TEST. THE CHI-SQUARE VALUE OF A 2 BY 2 TABLE ON 1 DEGREE OF FREEDOM IS PRINTED
- STAT09 - COMPARES TWO GROUPS OF DATA BY MEANS OF THE MANN-WHITNEY TWO SAMPLE RANK TEST.
- STAT1A - COMPUTES THE MEANS, STANDARD ERROR OF THE MEANS, MEAN DIFFERENCE, STANDARD ERROR OF THE DIFFERENCE, AND T-RATIO

MERITSS LIBRARY ENTRIES AS OF 74/3/14

- FOR TWO GROUPS OF PAIRED DATA
- STAT10 - COMPUTES THE SLOPE AND Y-INTERCEPT FOR A SIMPLE LINEAR REGRESSION WITH ONE INDEPENDENT VARIABLE
 - STAT11 - COMPUTES THE SPEARMAN RANK CORRELATION COEFFICIENT FOR TWO SERIES OF DATA
 - STAT12 - COMPUTES THE CORRELATION MATRIX FOR N SERIES OF DATA
 - STAT13 - PRODUCES AN ANALYSIS OF VARIANCE TABLE AND THE F-RATION TO TEST THE SIGNIFICANCE OF THE DIFFERENCE BETWEEN TREATMENT MEANS FOR A ONE-WAY COMPLETELY RANDOMIZED EXPERIMENT.
 - STAT14 - PRODUCES THE ANALYSIS OF VARIANCE AND F-RATIOS FOR TREATMENTS AND BLOCKS OF A RANDOMIZED COMPLETE BLOCK DESIGN
 - STAT15 - COMPUTES THE ANALYSIS OF VARIANCE TABLE AND F-RATIO FOR A SIMPLE LATIN SQUARE DESIGN.
 - STAT16 - COMPUTES THE ANALYSIS OF VARIANCE TABLE AND F-RATIO FOR A SIMPLE GRAECO-LATIN SQUARE DESIGN
 - STAT17 - PRODUCES THE ANOVA TABLE OF A BALANCED INCOMPLETE BLOCK DESIGN AND F-RATIOS FOR TREATMENTS.
 - STAT18 - PRODUCES THE ANALYSIS TABLE OF A YODEN SQUARE DESIGN AND F-RATIOS FOR TREATMENTS.
 - STAT20 - PERFORMS MULTIPLE LINEAR REGRESSION ACCORDING TO EFRØYMSØN'S ALGORITHM
 - STAT21 - PERFORMS ONE OR MORE LINEAR REGRESSIONS ON A BATCH OF DATA.
 - STAT22 - THIS IS A GENERALIZED ANALYSIS OF VARIANCE PROGRAM WHICH CAN BE USED TO PARTITION SUMS-OF-SQUARES FOR MANY TYPES OF COMPLETE BLOCK EXPERIMENTAL DESIGNS.
 - STAT23 - COMPUTES BINOMIAL, POISSON, AND HYPERGEOMETRIC DISTRIBUTION PROBABILITIES.
 - STAT9A - COMPUTES THE SLOPE AND Y-INTERCEPT FOR A LINEAR REGRESSION WITH SEVERAL Y VALUES FOR EACH X VALUE. SEVERAL STATISTICAL MEASURES ARE PRINTED.
 - STERL - SIMULATION OF TWO METHODS OF PEST CONTROL
 - STRINFØ - INFORMATION PROGRAM FOR STARTRK (GAME, STRINFØ)
 - SYSNØTE - A MESSAGE FILE USED TO PASS GENERAL INFORMATION TO THE USERS FROM MERITSS STAFF.
 - SYSWARN - A MESSAGE FILE USED TO RELAY INFORMATION OF A TRANSIENT NATURE TO THE USERS.
 - TABIN - PROCESSES DATA INPUT AND RE-ALIGNS ITEMS INPUT IN COLUMN FORMAT.
 - TAPE99 - FILE USED BY THE PØSTER PROGRAM.
 - TICTAC - TIC-TAC-TOE (GAME, TICTAC)
 - TX98 - FILE USED BY THE LIBRARY PROGRAM 'BR'
 - TYPEINF - INFORMATION FILE FOR TYPESET WRITTEN TO BE PROCESSED BY TYPESET
 - TYPESET - REFORMATS A FILE CONTAINING DIRECTIVES. IT DOES PAGING WITH HEADERS, PARAGRAPHING AND BLOCKING OF TEXT(ASCII IS ALLOWED) AND MORE
 - WILLERD - FILE USED FOR COMMUNITY COLLEGE COMMUNICATION

MERITSS LIBRARY ENTRIES AS OF 74/3/14

- XYPLOT - WILL PLOT A SINGLE VALUED FUNCTION OF X WITH X ON THE VERTICAL AXIS
- YAHTZEE - THE GAME OF YAHTZEE (GAME, YAHTZEE)
- ZERØES - LOCATES THE ROOTS, TURNING POINTS, AND POINTS OF DISCONTINUITY FOR MOST SINGLE-VALUED FUNCTIONS OF A SINGLE VARIABLE.
- SRØW - A FIVE IN A ROW GAME (GAME, SRØW)

APPENDIX G

1973-1974

MERITSS BUDGET

Ports Committed 1973-1974

	July	Oct.	Jan.	Apr.
U of Minn.	63 [17-30cps]	70 [17-30cps]	70 [17-30cps]	70 [17-30cps]
St. Colleges	22 [1-30cps]	32 [1-30cps]	32 [1-30cps]	41 [1-30cps]
Jr. Colleges	15	15	15	15
Secondary		3	3	3
Other	7 [2-30cps]	7 [2-30cps]	7 [2-30cps]	7 [2-30cps]
	107 [20-30cps]	127 [20-30cps]	127 [20-30cps]	136 [20-30cps]

These figures are based on verbal commitments and represent the minimum number of ports that will be sold. Various plans for expansion are based on these port figures as the sole source of income, that being \$250/port or \$350/port excluding communication charges.

INCOME

An income of \$396,750 is generated if the above port numbers are used. In actuality, a larger income is expected since only minimum commitments are given. All surcharges received for 30 cps ports and excess permanent file storage during 1972-1973 should be added, giving an operating base of \$416,750 (the \$20,000 in surcharges should be used for premature expansion costs).

PLANS FOR EXPANSION

Control Data's bid response was 128 ports starting July 1, 1973 at \$180/port. Additional memory and disk storage would be supplied if there were a commitment to 160 ports at \$172.50/port or 192 ports at \$165/port by December 1, 1973.

Using these restrictions on growth increments and their associated lease costs, there exist the following alternatives for expansion during 1973-1974.

- A. Lease 128 ports starting July 1, 1973 and expand to 160 ports January 1, 1974.
- B. Lease 128 ports starting July 1, 1973 and expand to 160 ports October 1, 1973.
- C. Lease 128 ports for the entire year, allowing a maximum of 132 ports (overselling on a rotary principle) to be sold. The result would be a heavily loaded system with a closed door policy.
- D. Lease 108 ports starting July 1, 1973 with a commitment to 160 ports on October 1, 1973. Although this is a departure from Control Data's bid, there are strong indications that they will agree to rates of \$187.50/port and \$172.50/port for 108 and 160 ports respectively.

The financial implications of these approaches to expansion are indicated below.

<u>PLAN</u>	<u>LEASE</u>	<u>MANAGEMENT COST</u>	<u>TOTAL OPERATION COST</u>	<u>INCOME</u>
A	303,840	111,764	415,604	416,750
B	317,520	111,764	429,284	416,750
C	276,480	111,764	388,244	415,250*
D	309,150	111,764	420,914	416,750

* Reflects a limitation of 132 ports to be sold.

MERITSS Management Costs 1973-1974

Salaries and Fringe Benefits	95,764
Bell Telephone	2,000
ECS - 6600	12,000
Misc.	<u>2,000</u>
	\$111,764

Management

Manager	-	1 FTE
Consulting - Users Services	-	1 FTE
Systems - Operations	-	4 FTE
Applications	-	3/4 FTE
Office Services	-	<u>1 1/3 FTE</u>
	~	8 FTE

MERITSS RATES

effective 7/1/73

30 cps: \$350.00/mo + \$20.00/mo Communication charge (unlimited CPU and connect time)

10 cps: \$250.00/mo + \$20.00/mo Communications charge (unlimited CPU and connect time)

or \$25.00/mo + \$5.00/connect hour (10 cps only) (unlimited CPU time)

The above rates include .5 million characters permanent file storage. Additional storage is available at \$1.00/day/.5 million characters or fraction thereof.

Exceptions:

1. Out of state users - add \$10.00/month
2. U of M users doing purely instructional work are funded by University Computer Services at a level of \$100.00/month
3. U of M users doing mixed instructional and research work are funded by University Computer Services at a level proportional to the fraction of instruction to a maximum of \$100.00/month.
4. Users supplying their own communication equipment at the Central Computer do not pay the communication charge.

APPENDIX H

Summary Balance Sheets 1972-1975

	<u>72-73</u>	<u>73-74</u>	<u>74-75</u>	<u>75-76 Est.</u>
Ports Maximum	108	145	256	160
Ports Average	90	134	256	150
Lease Plus Maintenance	\$203,000	\$321,000	\$413,000	\$192,000**
Salaries Plus Fringe Benefits	\$60,000	\$99,000	\$84,000	\$76,000
Other Costs	\$4,000	\$8,000	\$17,000	\$5,000
Port Cost/Momth	\$250-10cps \$350-30cps	\$250-10cps \$350-30cps	\$168*	\$150

*During 1974-1975 all 256 ports were leased to MECC. MECC users, including the University, paid \$200 per month for these ports.

**The CDC 6400 was purchased July 1, 1975. This figure reflects a payment of the purchase cost, plus financing and maintenance costs.
