2005 Seat Belt Usage Survey

Introduction

During the spring and summer of 2005, two surveys were taken of motor vehicle drivers' and passengers' seat belt usage. These surveys are before and after parts of the "Click it or Ticket" education and enforcement campaign. The whole project starts with a pre-campaign survey followed by the four-week public information, education and enforcement campaign. Finally, the post-campaign survey is taken to test the effectiveness of the education and enforcement campaign. In the pre-campaign survey of seat belt usage, the usage/non-usage of 15,444 front seat occupants of cars, vans, SUVs and pickups were observed at 100 locations. In the post-campaign survey of seat belt usage, 15,731 observations were made of front seat occupants of cars, vans, SUVs and pickups. The day of the week and time of day the observations took place were selected for each site using a random number generation computer program.

Methodology and Methodological Changes Starting with This Survey

The methodology of these surveys follows that of prior surveys by using a sample of 100 observational sites that were selected on the basis of population, geographic location and statewide vehicle miles of travel by road system (see Charts 20 and 21). The surveys have been essentially conducted at the same sites since 1988 (some site modification occurs when construction closes a site or extensively changes traffic patterns or traffic volume). The development of the survey follows the specifications of the National Highway Traffic Safety Administration (NHTSA). The survey was conducted by the Iowa Department of Public Safety's State Patrol Officers, between the hours of 7 a.m. and 7 p.m., Monday through Sunday. Observations were made for approximately one hour at each site.

Starting with the 2005 survey, NHTSA has asked the State of Iowa to change the way the seat belt usage percentage is calculated for statewide reporting to NHTSA. Traditionally, the Annual Iowa Seat Belt Report calculated the percentage of seat belt usage by using the total observed front seat occupants. The new method would use only those occupants who were observed as belted or unbelted. Those whose seat belt use could not be determined would not be counted for the purpose of seat belt use reporting in Chart 1, the data reported for NHTSA's use. To preserve the integrity of the historical seat belt use data, the DOT will continue to calculate usage using all observed vehicle occupants for all other charts.

Chart 1
2005 Seat Belt Usage Survey--Summary

Road System	April Usage			July Usage			Change
	Observed	Used	Percentage	Observed	Used	Percentage	
Statewide Total	14,850	12,882	87.76%	15,167	13,395	89.01%	1.26%
Municipal	5,205	4,270	82.04%	5,140	4,325	84.14%	2.11%
Primary	5,746	5,136	89.38%	5,372	4,807	89.48%	0.10%
Secondary	1,086	976	89.87%	877	791	90.19%	0.32%
Interstate	2,813	2,500	88.87%	3,778	3,472	91.90%	3.03%

Estimated statewide total April survey usage weighted by vehicle miles of travel and 95% confidence intervals for the estimated variance are +/- 0.18%

Estimated statewide total July survey usage weighted by vehicle miles of travel and 95% confidence intervals for the estimated variance are +/- 0.17%

Statewide Data

In the survey taken before the seat belt usage campaign (April 2005 Survey), 87.8 percent were observed buckled up statewide. In the post-campaign survey (July 2005 Survey), 89 percent were observed buckled up (see Chart 1—Seat Belt Usage) that is a 1.2 percent increase over the pre-campaign survey in 2005. There were 12,882 occupants observed belted and 1,968 observed unbelted in the post-campaign survey. For 594 front seat occupants, belt usage or non-usage could

1 Iowa Department of Transportation, 1995 Iowa Crash Facts, Roadway and Environment Conditions, p. 71.

2 "Guidelines for State Observational Surveys of Safety Belt and Motorcycles Helmet Use, Federal Register," Vol 57 No. 125, June 29, 1992, p. 28903.

not be determined. These occupants were not included in the total observed count for Chart 1. The survey data for all of the charts that follow Chart 1 will include unknown seat belt use so that continuity can be maintained and the data can be compared with the data of past surveys. Charts 2 through 7 include data from past surveys and Charts 8 through 25 can be compared with comparable charts from past surveys by researchers.

Usage by Roadway System

The news for this year is mixed. Seat belt usage increased on two of the four road systems studied in 2005. The highest seat belt usage was recorded on the interstate system. Interstate usage and municipal roads usage increased between the April survey and July survey. Secondary and primary road systems decreased in usage by amounts that could fall within statistical variance. Usage was higher in the post-campaign survey for secondary and interstate roadways than in the 2004 post-campaign survey.

Interstate Highway System

In 2005, seat belt usage increased by more than 3.6 percent between the April (84.6 percent) and July (88.2 percent) surveys. This gave interstate usage the highest percentage of any road system. There was also an increase in interstate seat belt use (0.5 percent) between the post-campaign survey of 2004 (87.7 percent) and 2005 (88.2 percent). This is the third year in a row that usage on the interstate system has been the highest of all the roadway systems after trailing primary highways for two years. Seat belt usage has been historically highest on these roads because people travel longer distance at higher speeds on these roads (see Charts 2 and 7 for historical usage rates for this system). Even though the interstate system roads have the lowest crash rate because of their design, drivers often perceive them to be more dangerous because of high traffic density and higher travel speeds.

Primary Road System

Seat belt usage on the Primary Road System (U.S. and state highways) remained essentially the same between the April (86.7 percent) and July (86.3 percent) surveys in 2005. The post-campaign usage is 1 percent lower in 2005, compared to the post-campaign usage in 2004 (87.3 percent). That is very near the margin of error. The usage on the Primary Road System ranks third behind interstates and the Secondary Road System (see Charts 2 and 5 for historical data). Increasing the usage on these roads is a goal to safety specialists because almost half of the traffic fatalities (47 percent) occur on the Primary Road System.

Secondary Road System

Seat belt usage on the Secondary Road System (county roads) in the July 2005 survey (87.4 percent) dropped 1.2 percent from the 88.6 percent registered in the April 2005 survey. However, there was a 1 percent increase in the number of occupants buckled up in the post-campaign survey in 2005 compared to 2004 (see Charts 2 and 6 for historical data). Over 30 percent of all motor vehicle fatalities occur on the Secondary Road System.

Jul 05	86%	81%	86%	87%	88%

Municipal Road System

Seat belt use on the Municipal Road System (city streets) increased 3.1 percent between the April (78.2 percent) and July (81.3 percent) surveys. However, there was also a 2.4 percent decrease in seat belt usage between the July survey (81.3 percent) in 2005 and July survey (83.7 percent) in 2004 (see Charts 2 and 4 for historical data). More than 45 percent of all motor vehicle crashes occur on city streets and seat belt usage on the Municipal Road System has been traditionally the lowest of the road systems studied.

Seat Belt Law Historical Background

The Iowa law mandating seat belt usage went into effect July 1, 1986. A fine of \$10, plus court costs, was effective January 1, 1987. The fine was increased to \$25, plus court costs, effective July 1, 2001. The original law required all front seat occupants over the age of six to wear the seat belt meeting federal motor vehicle standards. The law allows primary enforcement (i.e. law enforcement officers can stop a vehicle when non-use of seat belts is observed). Medical exemptions and other limited exemptions are allowed. Children under the age of six are covered by the child restraint law, which went into effect January 1, 1985. Children, under the age of three, seated anywhere in the car, must be secured in an approved child safety seat. Children between the ages of three and six must be secured in a child safety seat or the vehicle's seat belt. Effective July 1, 2004, the child restraint law was changed to include children up to age 11, and requirements for the use of rear-facing safety seats for children under the age of one and weighing less than 20 pounds. Children under the age of six are required to be secured in a child restraint system. Children over the age of six, but under the age of 11, are required to be secured in an approved child restraint system or an approved seat belt or safety harness. Copies of the annual child restraint survey results are also available from the Governor's Traffic Safety Bureau.

Enforcement

The seat belt law continues to be enforced in the state. There were 51,440 seat belt violation convictions and 2,230 child restraint violation convictions in 2004, for a total of 53,670 convictions. This was a decrease from the 68,713 convictions in 2003. Iowa's seat belt usage rates followed trends similar to other states, showing a large increase after fines were first imposed, increasing from 27 percent in June 1986, to 63 percent in April 1987. In September 1987, usage dropped to 56 percent, but enforcement and public education has steadily increased usage to the current rate at approximately 86 percent.
