# **Metabolomics and Dereplication Strategies in Natural Products Discovery**

**by**  
**Ahmed Tawfike**

# Introduction

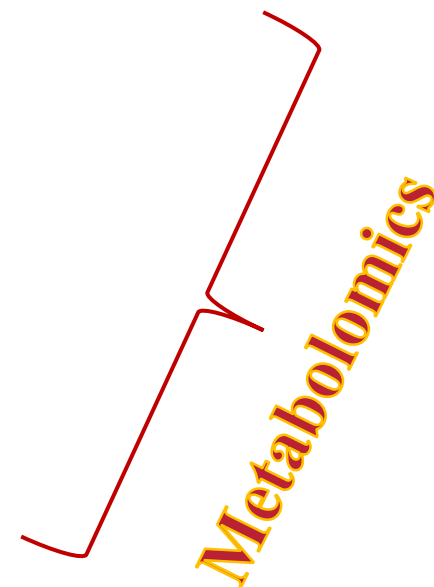

- **Challenges with NP discovery**

- › Long process separation → time consuming
- › Redundant isolation of known compounds
- › Interactions
- › Structure elucidation

- **Solutions**

- Rapid dereplication (metabolites annotation)**

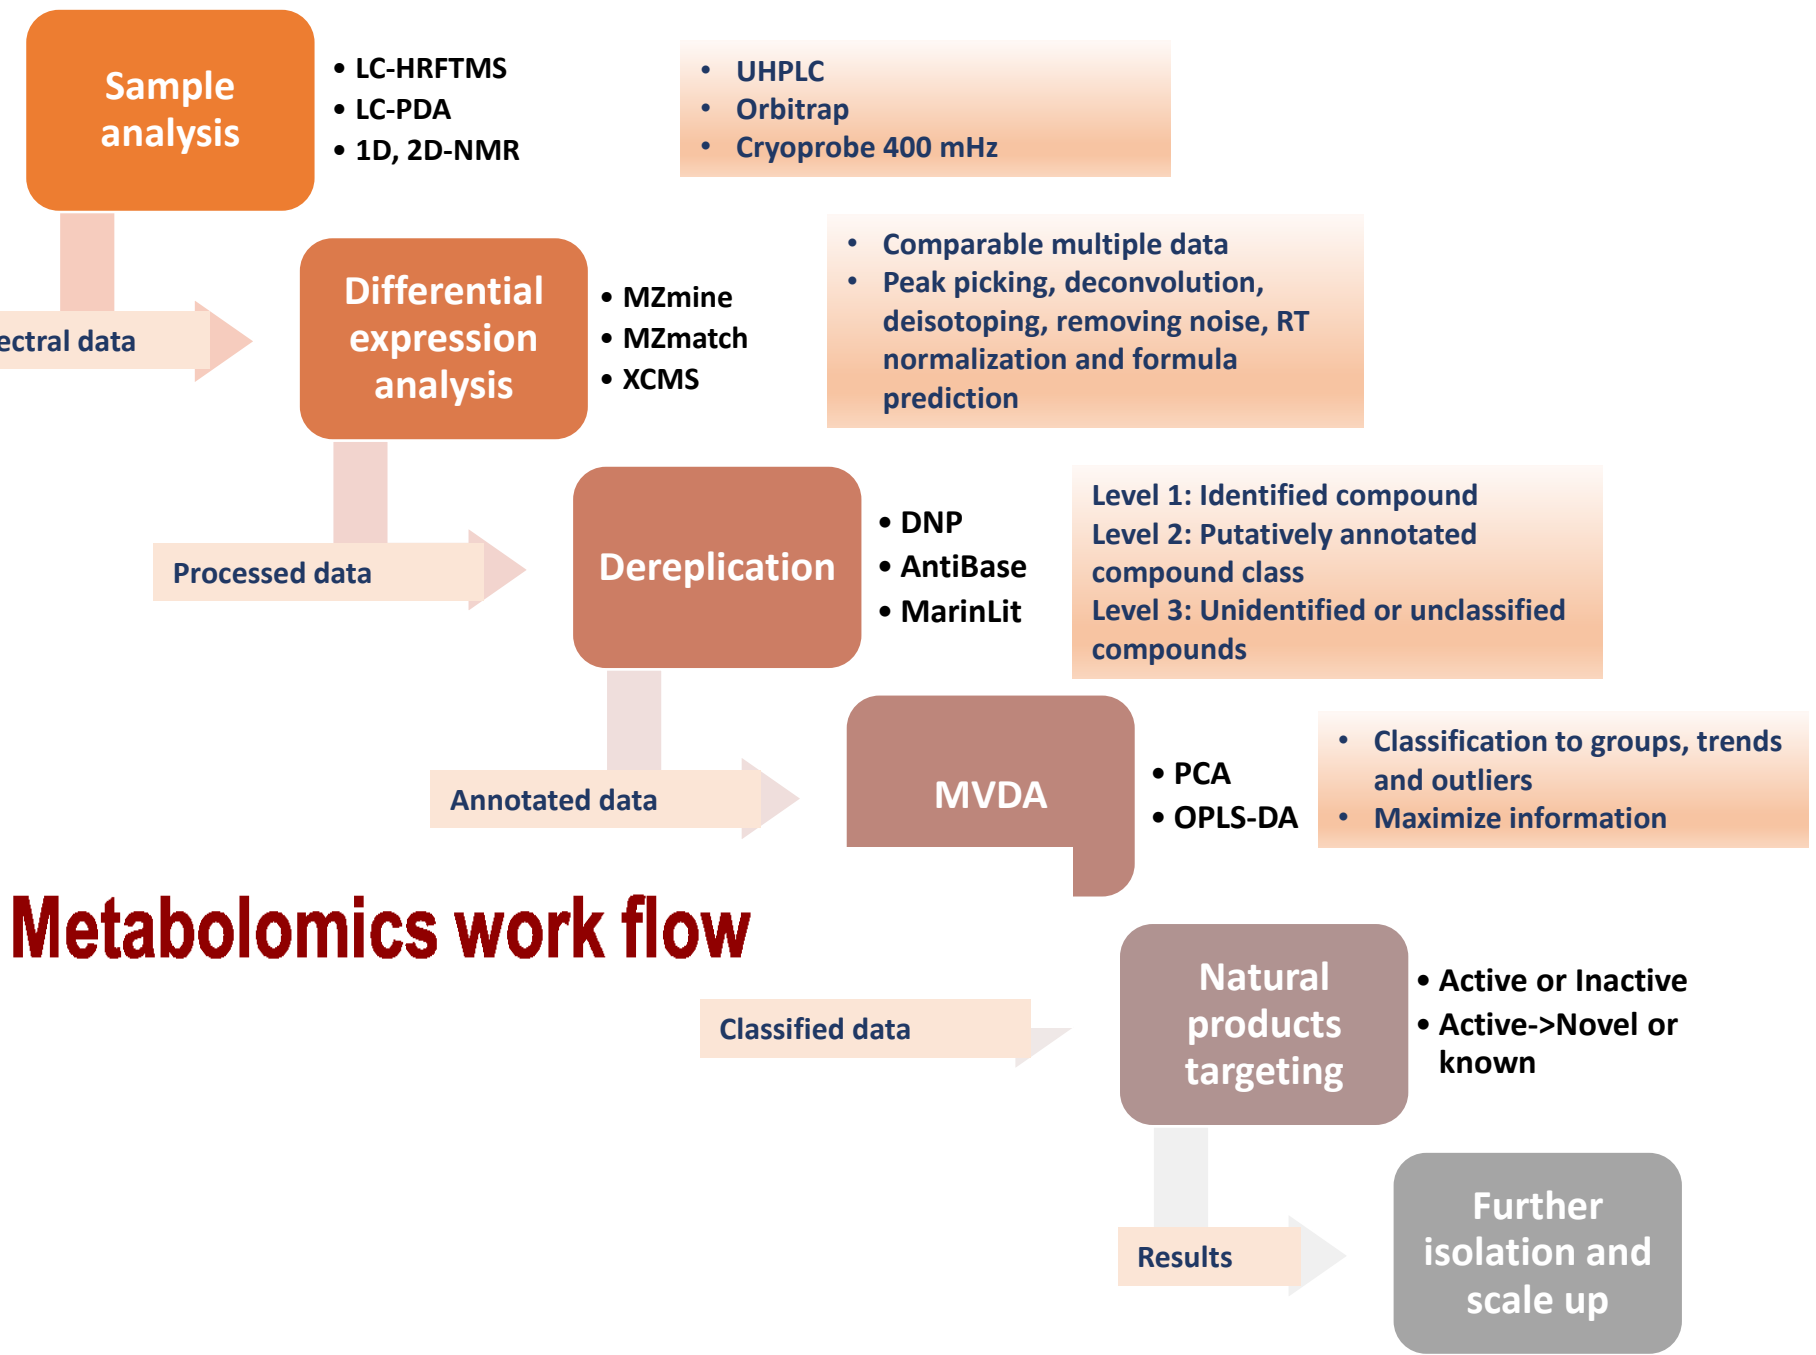

- › NP libraries e.g. DNP, AntiBase or MarineLit
    - › Bioassay guided fractionation
    - › Improvement of separation
    - › LC-HRMS, MS-MS and NMR
    - › Differential analysis software for data mining
    - › MVDA software

**Metabolomics**

# Definitions

- **Metabolome:** The complete set of small molecules found in a cell, tissue or organism at a certain point in time
- **Metabolomics:** Comprehensive qualitative and quantitative analysis of all metabolites contained in an organism, tissue or cell at a specific time and under specific condition
  - **Metabolites Fingerprinting:** Rapid classifications of samples. The purpose is not identify each individual metabolite but to compare patterns or fingerprints of metabolites. Untargeted
  - **Metabolites Profiling:** Extensive identification and quantitation of metabolites either related to a specific pathway or class of compounds. More targeted
  - Dereplication:** Testing sample mixtures that are active in screening in order to differentiate the novel compounds from the active substances that have already been studied
  - **Metabolites Target Analysis:** Investigation of metabolites that are related to a specific pathway to observe the specific metabolic modifications that may be related to a particular change e.g. genetic modification

# Metabolomics work flow

# Example

## Fungal endophyte from *Terminalia laxiflora*

*Terminalia laxiflora* leaves  
Combretaceae

*Aspergillus aculeatus*  
on MA plate

### Uses:

#### Bark Medicines:

yaws

Leaf, root Medicines:  
diarrhoea, dysentery

#### Plant Medicines:

pulmonary troubles

Liquid culture in  
Wickerham medium

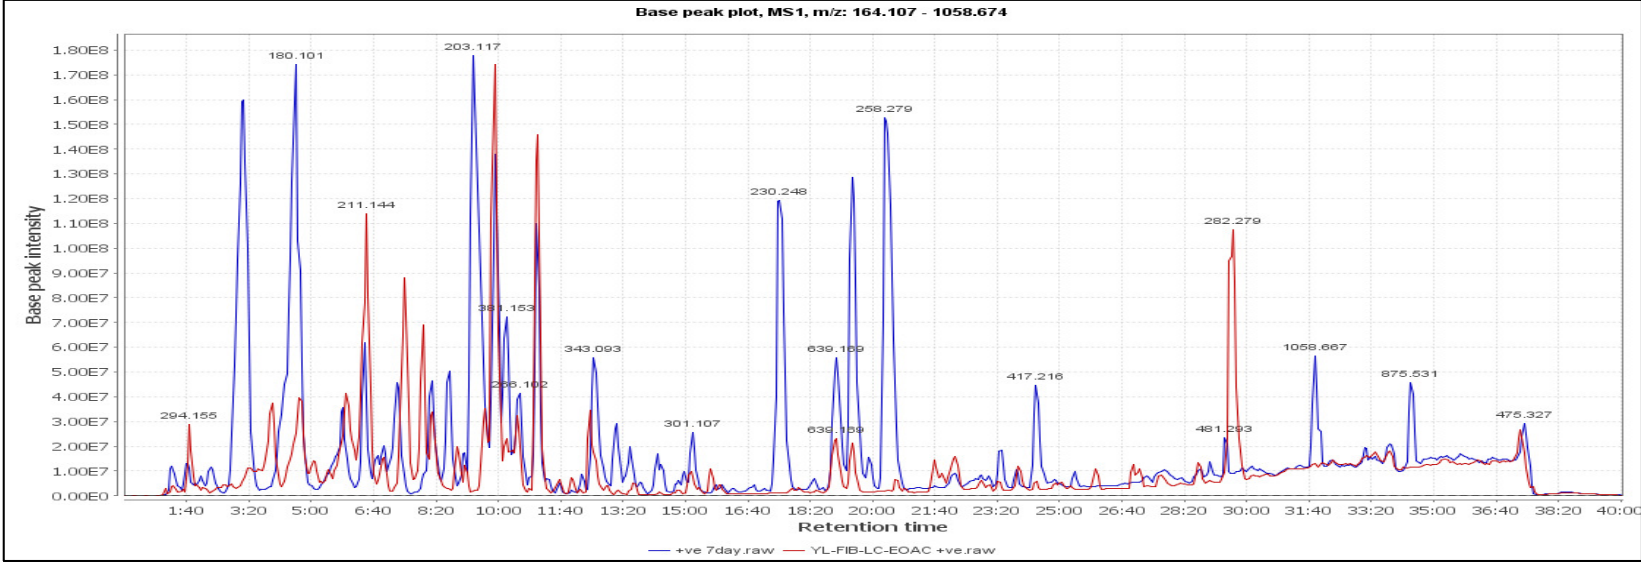

Solid rice culture

# Metabolites fingerprinting of different culture extracts

## Dereplication study by NMR spectroscopy

# Metabolites profiling using HR-MS by Mzmine

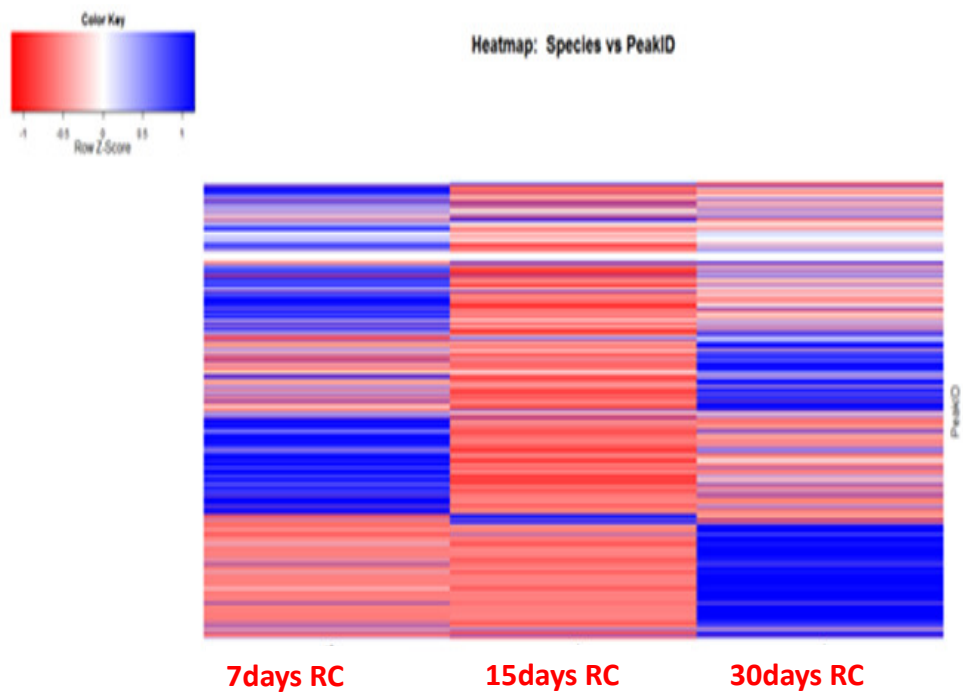

● RC ● LC

# Metabolites fingerprinting using R software

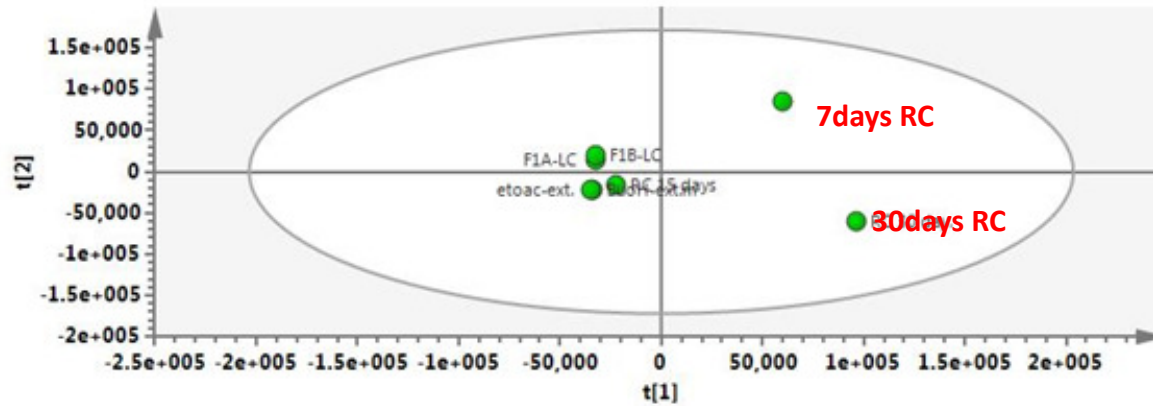

Heat Map for different rice culture extracts

# Dereplication Table

**From sea-bed to test-bed: harvesting the potential of marine biodiversity for industrial biotechnology**

# Conclusion

## Applications of metabolomics

- Improve identification and dereplication steps
  - › Optimization of fermentation and cultivation media
  - › Early prediction of the active compounds
  - › Prioritizing the fractions subjected to fractionation
  - › Metabolomics can be used to detect biomarkers and/or precursors to dereplicate the biosynthesis of the natural product at different development stages of their biological source as well as simultaneously screen for the bioactivity
  - › Highlighting seasonal variation in the produced secondary metabolites
  - › Link chemical profile and bioactivity pattern of phytomedicines
- Quality control of phytomedicine
- Proof of efficacy and mode of action
- Bioavailability and toxicity assessment of NP
