

Team-up crop diversification and weed management

PRODIVA project

Better utilization of crop diversification for weed management in North European organic arable cropping systems

Gerowitt B¹, Hofmeijer MAJ¹, Melander B², Krawczyk R³, Salonen J⁴, Verwijst T⁵, Zarina L⁶

Introduction

The research-network PRODIVA focuses on a better utilization of crop diversification for weed management in North European organic arable cropping systems. The goal is to maintain diverse arable weed vegetation that is manageable in the long-term and could fulfill other necessary system-functions including support of beneficial organisms.

The partners in PRODIVA will:

- Synthesize knowledge from existing literature, previous and new experiments on cover crops, variety mixtures and crop mixtures.
- Survey regional fields for weeds to safeguard relevance of the experimental research.
- Involve and interact with relevant stakeholders and extension services in agriculture from the participating countries to assist in the research.

Objectives

- To strengthen the scientific foundation for utilization of crop diversification.
- To survey the weed flora regionally.
- To link the weed situation to the applied agronomic measures in farms.
- To bridge the information from surveys with the scientific groundwork.
- To disseminate important results and recommendations to extension services and growers. Active communication about the experiences on both sides.

Hypotheses

Weed management can be improved with:

- Pertinent crop sequencing, mitigating noxious weed species.
- Selected competitive cover crop species.
- Improved cover crop establishment.
- Better utilization of growth resources with crop mixtures.
- Stronger pressure on weeds with variety mixtures.

Project details

Work package 0: Project coordination

Location: *Denmark*. Responsible: Bo Melander

WP1: Weed dynamics in crop rotations with cover crops

Location: *Finland, Latvia, Denmark*. Responsible: Jukka Salonen
Theme: Characteristics and relative competitiveness of cover crops

WP2: Crop mixtures for weed suppression

Location: *Sweden, Poland*. Responsible: Anneli Lundkvist
Theme: Ecophysiological traits which determine crop-weed interactions

WP3: Variety mixtures for weed suppression

Location: *Denmark, Poland, Latvia*. Responsible: Bo Melander
Theme: Variety mixtures of spring barley and oat competing with weeds

WP4: Crop diversification applications and weed flora on farms

Location: *Germany, Denmark, Sweden, Finland, Latvia*. Resp.: Bärbel Gerowitt
Theme: Identifying the potential of crop diversification for weed management

WP5: Project dissemination

Location: *Germany, Denmark, Sweden, Finland, Latvia, Poland*
Responsible: Bärbel Gerowitt

Time frame

This project has a duration of three years: **01.03.2015-28.02.2018**.
Annual partner meetings and stakeholder meetings will be organized.

Funding

This project is funded by Core Organic Plus (ERA-NET funding). Project ID: 1381
