Performances collected on carcass traits and meat quality

This survey is open to all the partners of the CORE Organic 2-Org-Cows and Dairy Health Cow projects.

Its aim is:

- To decide which type of data would be available for the 2-Org-cows project, in order to compare performances on meat quality and carcass from data collected in the farms followed in the project (wp3)
- To have a global view on the data available on a larger scale, and on the level of harmonization within and between countries, in order to contribute to define, at the national and at the international levels, novel traits potentially interesting for genetic evaluations on meat quality and carcass performances of dual purpose breeds (prospective approach).

Don't hesitate to contact me if you have some difficulties with some questions.

Sophie Mattalia (France, Institut de l'Elevage, sophie.mattalia @idele.fr)

There are 63 questions in this survey
