Introduction

Measurement Technologies has been contracted by True Geothermal Energy Company to conduct an air quality and meteorological monitoring program to support incremental exploration and development of the Kilauea Middle East Rift Zone Geothermal Resources Subzone (GRS), Puna District, Island of Hawaii. The data gathered in the monitoring program is being used in support of the exploration and possible development of the geothermal resource.

The monitoring program consists of two (2) monitoring sites. The first site (Site 1) is located in the Kaohe Homesteads area and the second site (Site 2) is located at the geothermal drilling and staging area D-1. The monitored parameters for each site are contained in Table 1-1. The sites are being operated consistent with the guidelines and requirements as outlined in the following documents:

- o "Ambient Monitoring Guidelines for Prevention of Significant Deterioration (PSD)," U.S. EPA-450/4-80-012, November 1980.
- o "Quality Assurance Handbook for Air Pollution Measurement Systems: Volume IV. Meteorological Measurements," U.S. EPA-600/4-82-060, February 1983.
- o "Quality Assurance Handbook for Air Pollution Measurement Systems, Volume II," Ambient Air Specific Methods, U.S. EPA-600/4-77-027a, May 1977.

As part of the monitoring program, Measurement will submit monthly and quarterly reports to True Geothermal Energy Company. The reports will contain the monitoring data, results of the quarterly quality assurance audits and results of quality control activities such as SO<sub>2</sub> and H<sub>2</sub>S gas analyzer precision checks, level 1 and 2 checks and multipoint calibration results.

TABLE 1-1 Monitored Parameters

METALS (ATMOSPHERIC PARTICULATE	X	
TOTAL SUSPENDED PARTICULATE (TSP)	X	
INHALEABLE PARTICULATES (PM-10)	X	
RADON		X

Section 2.0 of this report contains a operations narrative of significant events and activities that occurred during the month of July. Section 3.0 of this report contains the data collected during the month with graphical presentations and data capture summaries. The data is presented by site numbers and may also be referred to by name. Site 1 and 2 names are Air Quality/Met and Met Site, respectively.

2.0        Operations Summary

This section discusses the operations of the two monitoring sites and any significant events that may affect data quality. A downtime summary is also provided.

2.1        Monthly Operations Summary

Site 1 and 2 operations were routine for the month of July. Results of the radon samples exposed for the July period indicated radon levels below the detectable limit.

Due to insufficient rain water amounts, all of the rainwater samples collected during the month were combined for analyses. The samples had to be combined in order to obtain enough sample to analyze in the detection limit necessary. The duplicate quality control sample is designated as True 11-(1-3)-2. The results of the analysis are contained in Section 3.0, Table 3-8 of this report.

The filter analyses for metals and particulate in July show insignificant concentrations and loadings for the compounds of interest in the program. The results are contained in Section 3.0, Tables 3-9 thru 3-14.

The continuous H<sub>2</sub>S analyzer at Site 1 detected low levels of H<sub>2</sub>S during July. The levels, however, were 5 parts per billion or less. In addition, the H<sub>2</sub>S dosimeter badges located at the Drill site 2 show no concentrations of H<sub>2</sub>S during July. Low levels of SO<sub>2</sub> data were measured on July 6, 1990 for the hours of 0700 thru 0900. The highest hourly value was 23 ppb for the 0800 hour.

It might be noted that wind direction data showing zero's as a value, may correlate with a wind speed of zero. The wind direction is a vector average and if the wind speed is zero

the wind direction is not calculated. The wind's are considered calm in these conditions and pollutants are in a stagnet condition, (not being transported).

## 2.2        Downtime Summary

This section presents the down time summary by site. Down time is considered any time an analyzer or sensor is not collecting valid data. Down time includes calibration time, data lost due to data validation criteria such as insufficient data samples, sensors or analyzers operating outside of allowable limits, etc. Calibration and audit time and time lost due to maintenance and malfunctions is also considered down time.

Data capture at Site 1 was excellent in July, with all parameters exceeding 99 percent data capture. Site 2 also had excellent data capture in July with all parameters having 100 percent data capture for the fourth straight month.

## 2.3        Major Activities

No major activities were noted during the month of July.

Data Summary

Section 3.0 contains monthly summary reports and statistic tables for all of the major monitored parameters. In addition, graphical wind rose plots, rain water analyses results, total suspended (TSP) and inhaleable (PM-10) particulate loading and metals analyses are also contained in this section. The data and associated graphical presentations are presented by site. Each sites data is organized and presented as follows:

- Monthly Summary Report containing the hourly values for each day of the month. Dashes contained in the place of any data signifies that the data falls into a down time category previously discussed in Section 2.0. An asterisk sign in the wind sigma theta signifies calm wind conditions.
- A graphical wind rose presentation will immediately follow the Monthly Summary Report. The wind rose displays a graphical presentation of the wind speed and direction at each site.
- Summary Statistic Tables containing the highest and second highest measured values, lowest value, arithmetic mean and standard deviation, data recovery rates and percentile breakdowns of measured values.
- TSP and PM-10 particulate data showing loading of each filter along with the elemental analyses of each metals filter (Site 1 only).
- Rain water analyses results showing each sample collected and the results of the metals elemental and anion analyses (Site 1 only).

Table 3-7. Hydrogen Sulfide Monthly Summary Site 1

HECO ENVIRONMENTAL LABORATORY  
ENVIRONMENTAL DEPARTMENT  
Rainwater Analysis Report

Report Date: August 15, 1990

Site: True/Geothermal  
Pahoa, Hawaii

Sample Date: 07/01/90 - 08/01/90  
(Received 08/03/90)

Parameter	Conc. (ug/l)	Per Cent Recovery
pH	4.35	
Aluminum	<10.0	100.2
Arsenic	<5.0	111.0
Barium	<20.0	97.9
Cadmium	<1.0	109.5
Chromium	<4.0	85.0
Copper	<10.0	94.5
Iron	<10.0	112.0
Lead	<5.0	107.0
Magnesium	180	96.0
Manganese	<2.0	100.6
Mercury	<0.50	92.0
Selenium	<5.0	107.5
Silver	<2.0	107.8
Sodium	1,360	90.0
Zinc	<10.0	95.0
Bromide	<50	
Chloride	2,830	
Fluoride	49	95.0
Phosphate	<61	
Nitrite	<4	
Nitrate	<13	97.4
Sulfate	1,050	94.9
Sulfite	<150	

Analyzed by: CK DK  
C. Kishimoto/G. Kitsuwa

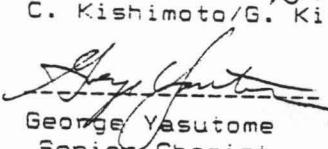

Approved by:  
  
George Yasutome  
Senior Chemist
