Preface	ix
Notation and conventions	xiii
<b>I Introduction</b>	<b>1</b>
1 The risk process . . . . .	1
2 Claim size distributions . . . . .	6
3 The arrival process . . . . .	11
4 A summary of main results and methods . . . . .	13
<b>II Martingales and simple ruin calculations</b>	<b>21</b>
1 Wald martingales . . . . .	21
2 Gambler's ruin. Two-sided ruin. Brownian motion . . . . .	23
3 Further simple martingale calculations . . . . .	29
4 More advanced martingales . . . . .	30
<b>III Further general tools and results</b>	<b>39</b>
1 Likelihood ratios and change of measure . . . . .	39
2 Duality with other applied probability models . . . . .	45
3 Random walks in discrete or continuous time . . . . .	48
4 Markov additive processes . . . . .	54
5 The ladder height distribution . . . . .	62
<b>IV The compound Poisson model</b>	<b>71</b>
1 Introduction . . . . .	72
2 The Pollaczek-Khinchine formula . . . . .	75
3 Special cases of the Pollaczek-Khinchine formula . . . . .	77
4 Change of measure via exponential families . . . . .	82
5 Lundberg conjugation . . . . .	84
6 Further topics related to the adjustment coefficient . . . . .	91

7	Various approximations for the ruin probability . . . . .	95
8	Comparing the risks of different claim size distributions . . . .	100
9	Sensitivity estimates . . . . .	103
10	Estimation of the adjustment coefficient . . . . .	110
<b>V</b>	<b>The probability of ruin within finite time</b>	<b>115</b>
1	Exponential claims . . . . .	116
2	The ruin probability with no initial reserve . . . . .	121
3	Laplace transforms . . . . .	126
4	When does ruin occur? . . . . .	128
5	Diffusion approximations . . . . .	136
6	Corrected diffusion approximations . . . . .	139
7	How does ruin occur? . . . . .	146
<b>VI</b>	<b>Renewal arrivals</b>	<b>151</b>
1	Introduction . . . . .	151
2	Exponential claims. The compound Poisson model with negative claims . . . . .	154
3	Change of measure via exponential families . . . . .	157
4	The duality with queueing theory . . . . .	161
<b>VII</b>	<b>Risk theory in a Markovian environment</b>	<b>165</b>
1	Model and examples . . . . .	165
2	The ladder height distribution . . . . .	172
3	Change of measure via exponential families . . . . .	180
4	Comparisons with the compound Poisson model . . . . .	188
5	The Markovian arrival process . . . . .	194
6	Risk theory in a periodic environment . . . . .	196
7	Dual queueing models . . . . .	205
<b>VIII</b>	<b>Level-dependent risk processes</b>	<b>209</b>
1	Introduction . . . . .	209
2	The model with constant interest . . . . .	222
3	The local adjustment coefficient. Logarithmic asymptotics . .	227
4	The model with tax . . . . .	239
5	Discrete-time ruin problems with stochastic investment . . . .	242
6	Continuous-time ruin problems with stochastic investment . .	248

<b>IX</b>	<b>Matrix-analytic methods</b>	<b>253</b>
1	Definition and basic properties of phase-type distributions . . .	253
2	Renewal theory . . . . .	260
3	The compound Poisson model . . . . .	264
4	The renewal model . . . . .	266
5	Markov-modulated input . . . . .	271
6	Matrix-exponential distributions . . . . .	277
7	Reserve-dependent premiums . . . . .	281
8	Erlangization for the finite horizon case . . . . .	287
<b>X</b>	<b>Ruin probabilities in the presence of heavy tails</b>	<b>293</b>
1	Subexponential distributions . . . . .	293
2	The compound Poisson model . . . . .	302
3	The renewal model . . . . .	305
4	Finite-horizon ruin probabilities . . . . .	309
5	Reserve-dependent premiums . . . . .	318
6	Tail estimation . . . . .	320
<b>XI</b>	<b>Ruin probabilities for Lévy processes</b>	<b>329</b>
1	Preliminaries . . . . .	329
2	One-sided ruin theory . . . . .	336
3	The scale function and two-sided ruin problems . . . . .	340
4	Further topics . . . . .	345
5	The scale function for two-sided phase-type jumps . . . . .	353
<b>XII</b>	<b>Gerber-Shiu functions</b>	<b>357</b>
1	Introduction . . . . .	357
2	The compound Poisson model . . . . .	360
3	The renewal model . . . . .	374
4	Lévy risk models . . . . .	384
<b>XIII</b>	<b>Further models with dependence</b>	<b>397</b>
1	Large deviations . . . . .	398
2	Heavy-tailed risk models with dependent input . . . . .	410
3	Linear models . . . . .	417
4	Risk processes with shot-noise Cox intensities . . . . .	419
5	Causal dependency models . . . . .	424
6	Dependent Sparre Andersen models . . . . .	427
7	Gaussian models. Fractional Brownian motion . . . . .	428
8	Ordering of ruin probabilities . . . . .	433
9	Multi-dimensional risk processes . . . . .	435

<b>XIV</b>	<b>Stochastic control</b>	<b>445</b>
1	Introduction . . . . .	445
2	Stochastic dynamic programming . . . . .	447
3	The Hamilton-Jacobi-Bellman equation . . . . .	448
<b>XV</b>	<b>Simulation methodology</b>	<b>461</b>
1	Generalities . . . . .	461
2	Simulation via the Pollaczeck-Khinchine formula . . . . .	465
3	Static importance sampling via Lundberg conjugation . . . . .	470
4	Static importance sampling for the finite horizon case . . . . .	474
5	Dynamic importance sampling . . . . .	475
6	Regenerative simulation . . . . .	482
7	Sensitivity analysis . . . . .	484
<b>XVI</b>	<b>Miscellaneous topics</b>	<b>487</b>
1	More on discrete-time risk models . . . . .	487
2	The distribution of the aggregate claims . . . . .	493
3	Principles for premium calculation . . . . .	510
4	Reinsurance . . . . .	513
	<b>Appendix</b>	<b>517</b>
A1	Renewal theory . . . . .	517
A2	Wiener-Hopf factorization . . . . .	522
A3	Matrix-exponentials . . . . .	526
A4	Some linear algebra . . . . .	530
A5	Complements on phase-type distributions . . . . .	536
A6	Tauberian theorems . . . . .	548
	<b>Bibliography</b>	<b>549</b>
	<b>Index</b>	<b>597</b>
