

# The CUAHSI Community Hydrologic Information System

David Tarboton, David Maidment, Ilya  
Zaslavsky, Dan Ames, Jon Goodall,  
Richard Hooper, Jeffrey Horsburgh

<http://his.cuahsi.org/>

# Hydrologic Data Challenges

- From dispersed federal agencies
- From investigators collected for different purposes
- Different formats
  - Points
  - Lines
  - Polygons
  - Fields
  - Time Series

## Data Heterogeneity

The way that data is organized can enhance or inhibit the analysis that can be done

Water quality

Water quantity

Rainfall and Meteorology

Soil water

GIS

Groundwater

# CUAHSI HIS

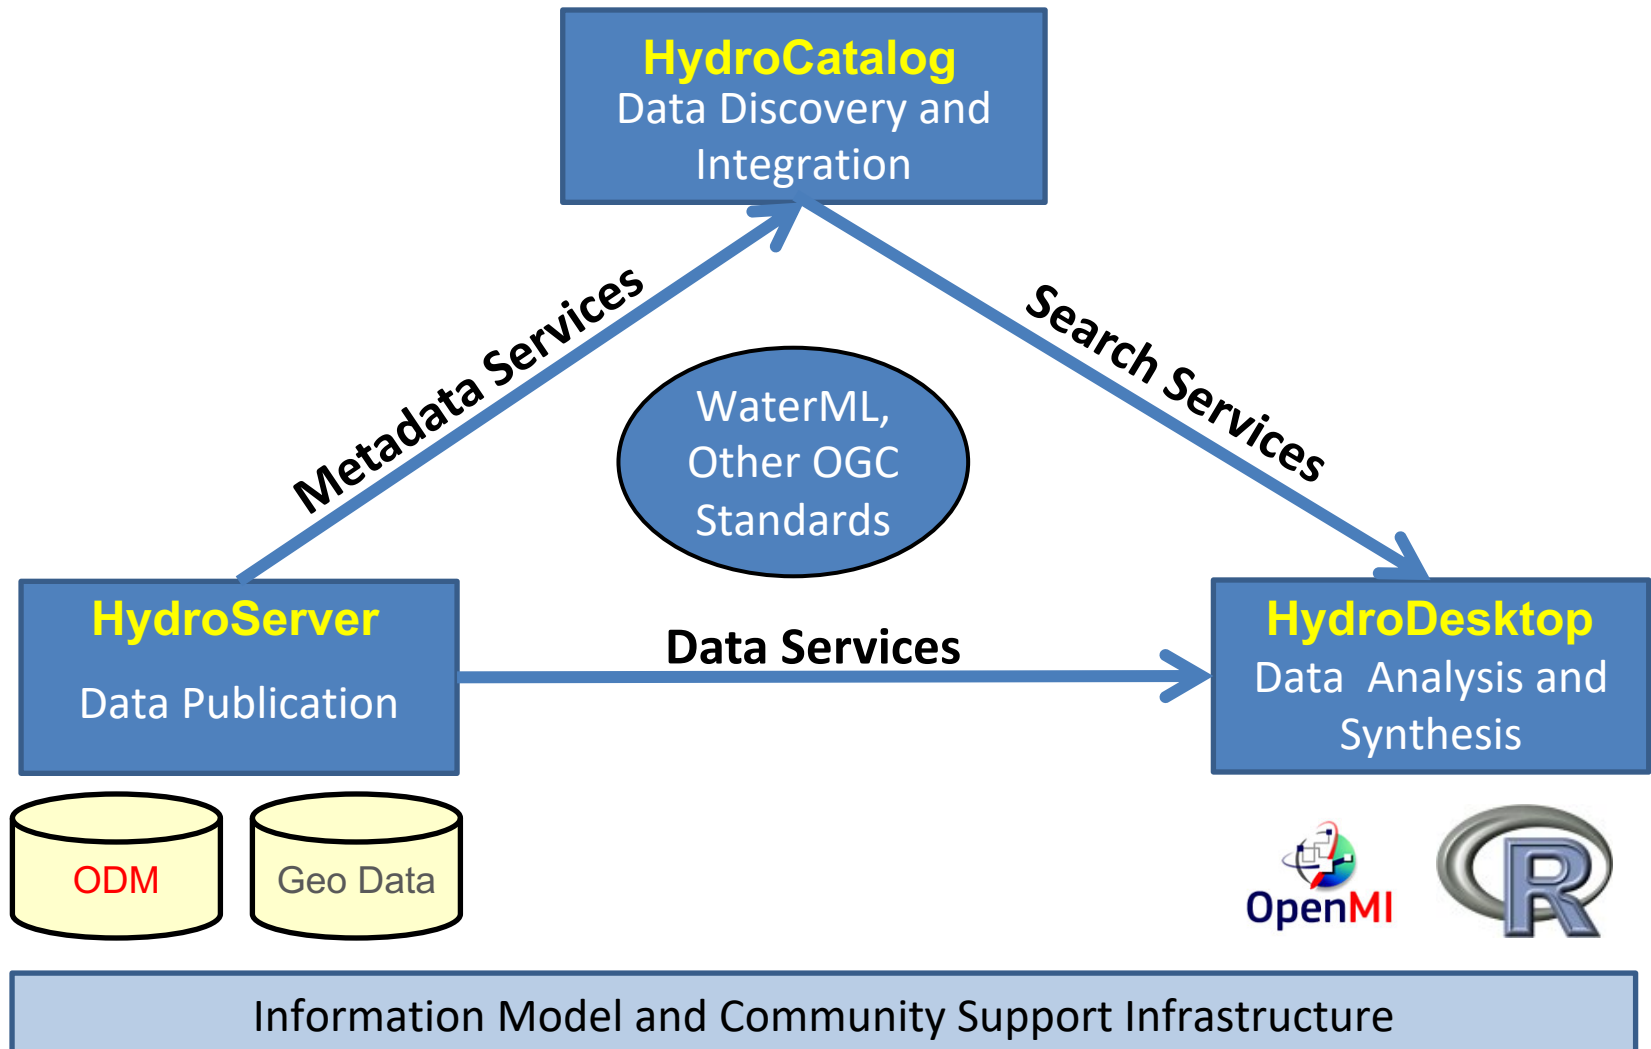

The CUAHSI Hydrologic Information System (HIS) is an internet based system to support the sharing of hydrologic data. It is comprised of hydrologic databases and servers connected through web services as well as software for data publication, discovery and access.

HydroDesktop – Data Access and Analysis

HydroDesktop – Combining multiple data sources

# CUAHSI Hydrologic Information System Services-Oriented Architecture

# What are the basic attributes to be associated with each single data value and how can these best be organized?

DateTime
Interval (support)

Feature of interest

# Observations Data Model (ODM)

Provides a common persistence model for data storage

Streamflow

Groundwater levels

Precipitation & Climate

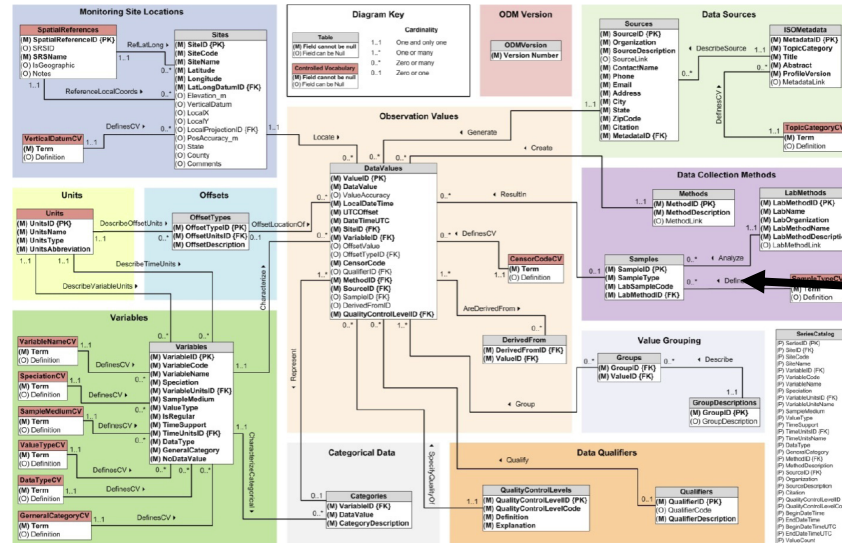

Water Quality

Soil moisture data

Flux tower data

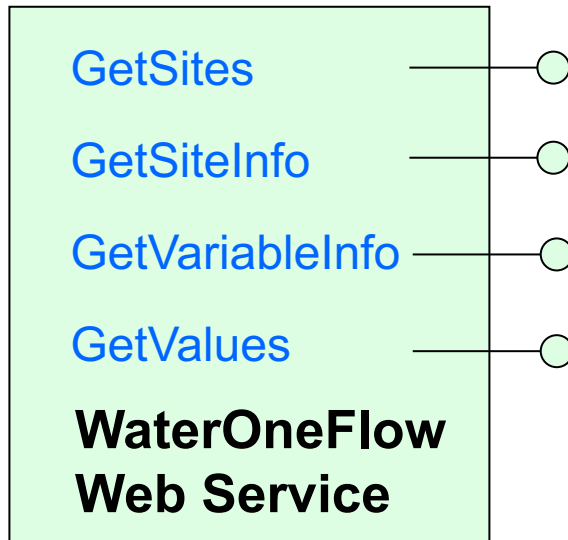

- A **relational database** at the single observation level
- Metadata for **unambiguous interpretation**
- Traceable heritage from **raw** measurements to **usable** information
- Promote **syntactic** and **semantic** consistency
- **Cross dimension** retrieval and analysis

# WaterML and WaterOneFlow

WaterML is an XML language for communicating water data

WaterOneFlow is a set of web services based on WaterML

- Set of **query** functions

- Returns data in **WaterML**

```

## Dry Creek Experimental Watershed (DCEW) (28 km<sup>2</sup> semi-arid steep topography, Boise Front)

68 Sites  
24 Variables  
4,700,000+ values

Published by Jim  
McNamara, Boise  
State University

# Open Development Model

• <http://hydrodesktop.codeplex.com>

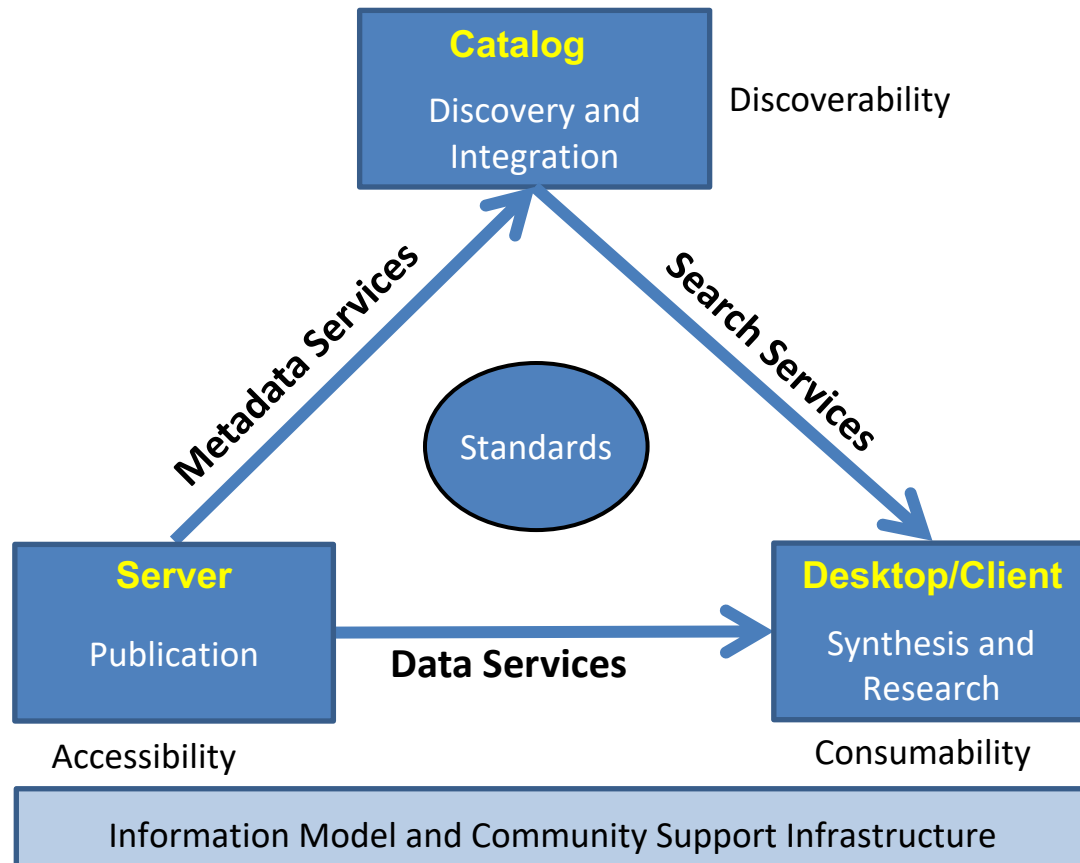

• <http://hydroserver.codeplex.com>

• <http://hydrocatalog.codeplex.com>

# General aspects of the approach

- **Storage** in a community data model
- **Publication** from a server
- Data **access** through internet-based services using consistent language and format
- Tools for **access and analysis**
- **Discovery** through thematic and geographic search functionality
- **Integrated modeling and analysis** combining information from multiple sources

## Common functional components

# Looking to the Future

- Move from prototype to operations
  - Operational support of software and systems
  - User support and training
  - Repositories
  - CUAHSI Data Center (**User Support Specialist**)
  - NSF Data Management Requirements
- Research and development of new functionality
  - data and model sharing “hub” to enhance interactive collaboration (**pending**)
- Community
  - HIS has become bigger than one project (**emerging software ecosystem**)
  - Open Development Model (**inspire, enable and incorporate broad contributions**)
  - The community is the infrastructure that persists (**is sustainable**)
