## FOREWORD

In its role as provider of technical information to the state's counties and municipalities, the Highway Extension and Research Project for Indiana Counties and Cities (HERPICC) makes periodic projections of revenue that would result from enactment of a Local Option Highway User Tax (LOHUT) by a County Council. [Note: The LOHUT is commonly referred to in the press as the *Wheel Tax*, but that is just one of a LOHUT's two major components.] The projected revenue values contained in the report are the product of computer programs developed by HERPICC staff members.

This guide is provided to explain the output generated by the computer programs, and to suggest ways in which the results can be adapted to specific LOHUT proposals before a County Council. HERPICC neither endorses nor opposes passage of a LOHUT. The revenue projections it provides are intended to be an aid to well-informed decision-making on the part of a county's citizens and its County Council.

Appendix C	C.1-C.23	Wheel Tax Revenue Projections
Appendix D	D.1-D.29	Estimated Allocations of LOHUT Revenue

## BACKGROUND

In 1980, the Indiana General Assembly passed legislation (IC 6-3.5-4 and IC 6-3.5-5) authorizing any county to adopt a Local Option Highway User Tax (LOHUT). LOHUT is actually two taxes that must be adopted at the same time:

1. A surtax placed on the vehicle excise tax paid annually at the time of registration by owners of automobiles, motorcycles, and trucks in the 11,000 pound weight class or lighter. This excise surtax may be either: (A) a rate between 2 and 10 percent of the excise tax values appearing in IC 6-3.5-4-7.3(b) or (B) one specific amount between \$7.50 and \$25.00. If version (A) is used, no vehicle subject to the excise tax would be charged a surtax less than \$7.50.
2. A "Wheel Tax" of between \$5 and \$40 per vehicle placed on all vehicles not subject to the Excise Surtax. The Wheel Tax vehicle categories are:
  - a. Buses (except church buses)
  - b. Recreational vehicles
  - c. Semi-Trailers
  - d. Tractors
  - e. Trailers
  - f. Trucks over the 11,000-lb. class

Each of these Wheel Tax categories above may be further subdivided by the County Council in establishing specific Wheel Tax rates, as long as the definitions of Indiana's standard vehicle weight classes are not violated. See the Registration Transmittal form in Appendix A at the end of this guide for these weight classes. Because it is now possible to register certain vehicles on a two- or five-year cycle and the registration fees have been changed, this particular form is now obsolete, but it is still the most convenient way to show which vehicles are subject to the excise surtax tax (\* in Appendix A) and which are subject to the wheel tax (triangle in Appendix A).

Except for the state license branch's 15 cents per vehicle collection fee, all revenues generated by a LOHUT must remain within the county for use on county and local highways and streets.

## GUIDE TO THE OUTPUT

Estimates of the revenue that could be generated by a LOHUT in any of Indiana's 92 counties in 1997 are contained in Appendices B through D at the end of this guide. Exhibits B through D in Figure 1 (see next page) are excerpts from Appendices B through D for a sample county.

Howard County was chosen as the sample county because its population, road mileage, and vehicle registrations are all fairly close to that of the "average Indiana county". The data used as input in this example were:

- 1 Population Census figures
- 2 Indiana Department of Transportation road and street mileage certification for 1995
- 3 Vehicle Registration totals on file at the Bureau of Motor Vehicles at the end of 1996
- 4 Vehicle Excise Tax rates now in effect.

[NOTE: The LOHUT revenue projections for the current year are based on the most recent data available at the time this report was assembled. If any data appear to be outdated or incorrect,

Figure 1. Using a sample county (Howard) as a guide to LOHUT output in Appendices B through D

please contact Jon Fricker at HERPICC (see the Foreword). The reader is reminded that, for each city and town that sits astride county lines, its population (for allocation formula purposes) has been assigned to those two counties in proportion to the road mileage it has in each county. Exact population figures for each part of the city or town were not available as this report was put together.]

The specific values pertaining to the first three input data items listed above, as appropriate, appear in the leftmost numerical columns of Appendices B through D.

**Exhibit B** reflects the revenue that Howard County could raise from an Excise Surtax rate of 10 percent, with a minimum surtax amount of \$7.50. Multiplying the Excise Tax paid by each of Howard County's 65,783 Excise Tax vehicles by 0.10 yields gross Excise Surtax revenues of \$1,022,090 (numerical column 5). License branch fees of 15 cents per vehicle amounts to \$9867 (column 6). If there were no \$7.50 minimum surtax, the net surtax revenues would be \$1,012,220 (column 8). But, in Howard County, 46.1 percent (column 7) of Excise Tax vehicles paid less than \$75 Excise Tax in 1996. Imposing the \$7.50 "floor" on these vehicles raises the expected Excise Surtax revenues to \$1,181,360 (column 9).

If the proposed Excise Surtax rate were something less than 10 percent, more vehicles would be subject to the \$7.50 minimum. For example, a 5 percent rate would have any vehicle paying an Excise Tax of \$150 or less paying the minimum Excise Surtax of \$7.50. This minimum would apply to a much larger percentage of Howard County's Excise Tax vehicles. Even with the \$7.50 minimum surtax, the 5 percent rate would raise much less net total revenue than the ten percent rate.

**Exhibit C** displays potential revenues from the Wheel Tax portion of LOHUT. Trailers and trucks subject to the Wheel Tax can be broken into subcategories by standard weight classes. (See the Registration Transmittal form in Appendix A.) Each weight class could be taxed at a separate rate, between \$5 and \$40, but the following arrangement was used in this report to simplify the calculation of Wheel Tax revenues:

Sample Vehicle Category	Weight Classes
Light Trailers	3K, 5K, 7K
Heavy Trailers	12K, 16K, 22K, 22K+
Medium Trucks	16K, 20K, 26K
Heavy Trucks	30K through 66K+

The first numerical column of Exhibit C shows the number of Howard County vehicles registered in each of eight Wheel Tax categories. These categories were chosen to illustrate how different Wheel Tax vehicle types and weight classes could be handled separately. Column 2 shows the revenues generated from the minimum Wheel Tax rate of \$5. Subtracting the license branch fee (15 cents per Wheel Tax vehicle, column 3) yields minimum net Wheel Tax revenues of \$41,337 (column 5). A \$40 Wheel Tax Rate would produce \$339,642 (column 6). The computer program that generated Exhibit C (and Appendix C) can use any combination of Wheel Tax rates for the eight vehicle categories shown. For a "chosen" rate of \$20 for each category (column 4), net revenues of \$169,182 will result (column 7).

Unlike the Excise Surtax (Exhibit B), variations on the Wheel Tax output (Exhibit C) are easy to do by hand. Simply choose a Wheel Tax rate between \$5 and \$40, then multiply that rate by the number of vehicles listed for a category (column 1). Multiply each category's chosen rate by its column 1 entry, then add the eight products that result. Subtract branch fees (column 3) to get the net Wheel Tax revenues from your combination of rates. In Exhibit C, the "chosen rate" is \$20 for each category. Our hand calculation would be

$$(64 \times 20) + \dots + 368 \times 20) - (8523 \times 0.15) = 169,182$$

which matches the value in column 7 generated by the computer.

If you desire more detail, or different Wheel Tax categories, request the most recent Registration Transmittal form prepared by the License Branch in your county. Note in Appendix A that only those vehicles marked with solid triangles are subject to the Wheel Tax.

**Exhibit D** deals with the distribution of LOHUT revenues among the cities, towns, and county governments within Howard County. Columns 1 and 2 show the population and road mileage for each local public agency (LPA) in Howard County. Column 3 shows the amount, *out of each \$1000 of revenue* coming to the county as a whole, that each LPA can expect to receive from the formula used to distribute fuel tax revenues collected by the state through the Local Road and Street Account (LRSA). These allocations are based on a combination of LPA population and road mileage. (See Figure 2.) Thus, Greentown would receive \$20.98 out of each \$1000 generated by a Howard County LOHUT (column 3). In other words, Greentown's combination of population and road mileage entitles it to 2.098 percent of the revenues. Kokomo, Russiaville, and the County would receive shares of 42.457, 0.736, and 54.710 percent, respectively.

Columns 5 and 6 show the minimum and maximum total revenues that could be realized under the current LOHUT legislation. The minimum revenues result when a 2 percent Excise Surtax and a \$5 Wheel Tax are imposed across the board. If a 10 percent surtax and a \$40 Wheel Tax are applied, then maximum revenues are produced. Column 4 indicates the revenues that result from the 10 percent surtax and \$20 uniform Wheel Tax "chosen" for this guide's Howard County example.

Again, manual adjustments based on your county's specific variations are not difficult. Let us say that the Howard County LOHUT ordinance would yield \$825,000 in net LOHUT revenues. This value would replace the \$1,350,545.62 that is the "County Total" entry in column 4 of Exhibit D. Multiplying this new total by each LPA's column 3 entry, then dividing by 1000, will provide a new column 4 entry for each LPA. For example, Greentown's allocation would become:

$$\$825,000 \times \frac{20.98}{1000.00} = \$17,308.50$$

The LOHUT revenue shares for the other LPAs can be computed in the same way.

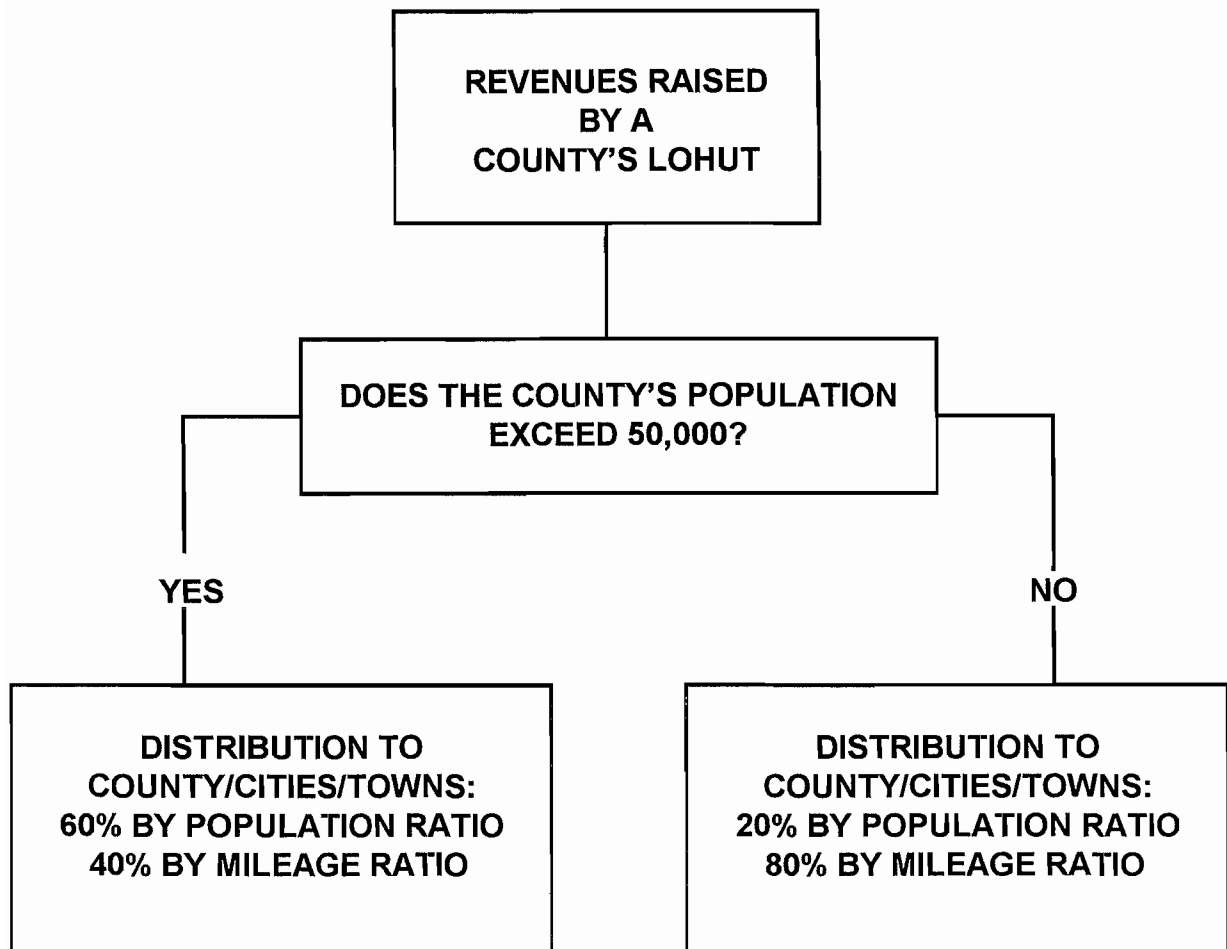

Figure 2. The Local Road and Street Account (LRSA) Formula

### ACKNOWLEDGMENTS

Each year, this report is assembled from materials gathered from a variety of sources, relying on the assistance -- past and present -- of several individuals, in roughly the following sequence.

1. Acquire a tape of previous year's vehicle registrations for each county (Report No. RBP99) from Ken Ballinger, Registration Analyst, Bureau of Motor Vehicles.
2. Kevin Hurley of the Engineering Computer Network reads the BMV tape into a file usable by the various HERPICC programs to perform the desired revenue and allocation calculations.
3. David Moffett has developed a family of computer programs that extract from the BMV Report No. RBP99 those data needed by the HERPICC programs. As the format of the data files change, he has been indispensable in modifying these programs.
4. Obtain from Eric Conklin, Supervisor, Road Inventory, Division of Roadway Management, Indiana Department of Transportation, the annual certified road and street mileage for Indiana counties and incorporated cities and towns.
5. In years when official population data have been updated, purchase from the State Library Data Center a copy of the census data compiled by the Indiana Business Research Center, Indiana University School of Business.
6. The HERPICC secretary (for this report, it was Lisa Holeman) enters the population and road-mile data into a file (about 676 lines long) for use by the HERPICC computer programs mentioned above.
7. For any town that has been incorporated since the last census and/or the last LOHUT report, contact the appropriate town or county office for a population estimate for that town.
8. In years in which legislation is introduced in the Indiana legislature that may affect the LOHUT, James Sperlik, Office of Fiscal and Management Analysis, Indiana Legislative Council, is called upon to keep HERPICC informed of the status and exact provisions of the legislation.
9. The HERPICC computer programs are the result of the efforts of several programmers over several years. The original programs were written by Charles Oliva and Huel-sheng Tsay. In recent years, they have been modified and refined by David Moffett. The data are actually passed through a series of programs, ending with a final printout on the Engineering Computer Network at Purdue.

The assistance of each of these individuals and offices has been and continues to be essential to the completion of this report. The author is grateful to each of them for their contributions.
