For a stronger, cleaner, fairer world economy

International Migration Outlook 2010 SOPEMI

July 2010, 358pp, 978-92-64-08601-2

This annual publication analyses recent developments in migration movements and policies in OECD countries. It looks at the contribution of immigration to changes in the working-age population in the past decade, and the role of migration inflows at projected levels in driving growth of the working-age population in the next decade.

Perspectives on Global Development 2010: Shifting Wealth

August 2010, 124pp, 978-92-64-08465-0

"A landmark report about the biggest economic story of our era! It describes and analyses the new economic world we live in, where countries in Asia, Africa and Latin America provide the dynamism for future growth. It shows how this shift in the economic centre of gravity is cause for optimism, rather than consternation."
Alan Hirsch, Deputy Director General: Policy, South African Presidency

Shifting Wealth examines the changing dynamics of the global economy over the last 20 years, and in particular the impact of the economic rise of large developing countries, such as China and India, on the poor. It details new patterns in assets and flows within the global economy and highlights the strengthening of "south-south" links – the increasing interactions between developing countries through trade, aid and foreign direct investment.

OECD Territorial Reviews: Guangdong, China 2010

October 2010, 260pp, 978-92-64-09007-1

Guangdong is China's most populous (94.9 million inhabitants) and richest province (one eighth of the national GDP). A key development feature of Guangdong has been – "processing trade", which has allowed companies to benefit from paper-thin profit margins from importing, assembling, and exporting via Hong Kong. Increasing labour costs and strain on land availability have increasingly challenged this model of development, with new competitors in China and abroad.

The Territorial Review of Guangdong is integrated into a series of thematic reviews on metropolitan regions undertaken by the OECD Territorial Development Policy Committee. The overall aim of these case studies is to draw and disseminate horizontal policy recommendations for regional and national governments.

Science Translational Medicine

ScienceTranslationalMedicine.org

Focusing on personalized diagnosis and treatment

“There is an increasing recognition that classical medical diagnoses—prostate cancer, diabetes, atherosclerosis—hide the true heterogeneity of these diseases from patient to patient. Once we can study subgroups of similar patients, the strength of our experimental results will increase and development costs will decrease.”

Chief Scientific Adviser,
Elias A. Zerhouni, M.D.

Despite 50 years of advances in our fundamental understanding of human biology and the emergence of powerful new technologies, the rapid transformation of this knowledge into effective health measures continues to elude biomedical scientists.

Science Translational Medicine provides a forum for interdisciplinary idea exchange between basic scientists and clinical researchers to help advance the discovery of cures and improve patient care worldwide.
