## The Balance Point Altmetrics: Rethinking the Way We Measure

Finbar Galligan<sup>b</sup>, Sharon Dyas-Correia<sup>a,\*</sup>

<sup>a</sup> University of Toronto Libraries, 369 Huron Street, Toronto, Ontario Canada M5S 1A5  
<sup>b</sup> Swets Information Services, Inc., Swan House, Wynndyke Furlong, Abingdon Business Park

### ABSTRACT

Altmetrics is the focus for gaining considerable knowledge, their importance concludes that altmetrics revolutionize the analysis

### 1. Introduction

This installment of the "Balance Point" examines the relatively new area of metrics called "altmetrics." When researching this topic, the column editor was struck by how much of the dialog around altmetrics is found in non-traditional places for academic discourse like blogs, wikis, Twitter, and various Web sites. It seemed fitting to ask someone actively involved in the dialog to participate in writing this column and therefore the column editor invited Finbar Galligan, who works for Swets Information Services and blogs about industry topics, to co-author the article. Galligan has written several thought-provoking blogs on altmetrics and related subjects and has developed considerable

### Collection Management Matters from page 79

I finished with the list, I gave it to the Special Collections Librarian for review and she turned those books and others she thought should be transferred downward on the shelves, so that they would be easy to identify. The Senior Library Assistant in Collection Management agreed to remove the books from the shelves, but before she took them to cataloging, she verified them against the list created by the Systems Librarian. Although the area had been inventoried about three years ago, there were still items on the shelves that did not appear on the pull list.

As we got further along in the project, the Head of Special Collections became a woman possessed. She could not weed enough books! After the first round, she requested that I come up to the area for an evaluation. We did a walk-through of every shelf, and agreed on additional titles that were more aptly suited for other areas of the library. We did a second and third round where we weeded the science, photography, literature, performing arts, religion, sociology, psychology, business, criminal justice, and political science books.

When the dust settled, and there were many, many dusty books on those shelves, we had actually transferred 3,900 books, which went to Circulation, Reference, the Youth Collection, and the library on our **Avon Williams Campus**. Since I had made the effort to weed the E, F, and G sections before the transferred books started coming out of Cataloging, the Circulation Supervisor and the Stack Supervisor said nothing to me about not having space to shove them. The Special Collections Librarian was able to bring some of her most popularly requested items out of the storage rooms and on to the shelves in her area.

This project was not successful just because we changed the semantics. All of the concerns of the stakeholders were taken into consideration and systematically addressed. Since this is my seventeenth year at the library, I think I have a pretty good feel for the motives and attitudes of the personalities involved, as well as a history of how past library projects had been facilitated. At bottom, everyone knew that there was a problem that needed to be fixed in the best interests of the students, but agreeing on a way forward was the sticking point. Some

## Analyze This Collection — Development

by **Andrea Michalek** (Plum <andrea@plumanalytics.com>)

Column Editor: **Kathleen M** <KMcfEvoy@ebsco.com>

When there were only manuals, managing your content was much simpler; you just subscribed to, who checked it, and requested new journals. When you went online, the world became more complex. Often, the journals were part of the databases came from several all had their own way — or no way — of managing your content. In 2002, an initiative as **COUNTER (Counting Online Networked Electronic Resources)** standardized library usage statistics, and intermediaries could report on this initiative and created standard reporting usage. Now, over ten years later, COUNTER statistics are still a challenge for librarians in managing the data.

Citation counts are another way to measure research and research decisions. In the 1960s, publishers developed a methodology to measure the impact of research based on citation counts. From this approach, the most popular being Journal Impact Factor or JIF. The complaints about statistics based on citations, including self-citation counts. However, the biggest issue is that in today's research landscape they are lagging indicators.

The world keeps changing. Over a decade ago, the great shift from print to online had been going on for some years and everyone was getting comfortable managing and purchasing online content. Now, there are other new great

## New Opportunities for Repositories in the Age of Altmetrics

by Stacy Konkiel and Dave Scherer

### EDITORS' SUMMARY

For institutional repositories, alternative metrics reflecting online activity present valuable indicators of interest in their holdings that can supplement traditional usage statistics. A variable mix of built-in metrics is available through popular repository platforms: Digital Commons, DSpace and EPrints. These may include download counts at the collection and/or item level, search terms, total and unique visitors, page views and social media and bookmarking metrics; additional data may be available with special plug-ins. Data provide different types of information valuable for repository managers, university administrators and authors. They can reflect both scholarly and popular impact, show readership, reflect an institution's output, justify tenure and promotion and indicate direction for collection management. Practical considerations for implementing altmetrics include service costs, technical support, platform integration and user interest. Altmetrics should not be used for author ranking or comparison, and altmetrics sources should be regularly reevaluated for relevance.

## Altmetrics: What, Why and Where?

University administrators are increasingly trying to find new ways to measure the impact of the scholarly output of their faculty, students and researchers through quantitative means. By reporting altmetrics (alternative metrics based on online activity) for their content, institutional repositories can add value to existing metrics — and prove their relevance and importance in an age of growing cutbacks to library services. This article will discuss the metrics that repositories currently deliver and how altmetrics can supplement existing usage statistics to provide a broader interpretation of research-output impact for the benefit of authors, library-based publishers and repository managers, and university administrators alike.

### Metrics Repositories Currently Deliver

Many repository platforms measure usage statistics such as download counts and page views. Less often, repositories report citation counts and altmetrics culled from the social web for their holdings. Here, we will look at usage statistics that are commonly reported on the three most popular repository platforms in use today: Digital Commons, DSpace and EPrints. Digital Commons is a proprietary institutional repository and journal-publishing platform run by BePress. Relying on proprietary, COUNTER-compliant download counts [1] and Google Analytics as a source for metrics on access, the platform records download counts, search terms and referral links for all content held in each repository. These metrics are communicated to repository managers, series administrators and authors via email. The platform provides metrics on publications available to date in each repository, downloads to date, and downloads during the lifetime of the repository. Authors also receive statistics on their deposits through a private Author Dashboard interface.

The platform also operates a federated search and discovery mechanism,

understanding of what the researchers at your institution need.

Looking at alternative metrics can help your collection. By knowing in which journals your faculty publishes, you can ensure that you subscribe to these journals. Not only will your faculty be appreciative of this, but also

# Survey Design

- Survey of **13,436 librarians** at 150 Carnegie-classified “R1” institutions in the US
  - Direct email (manually collected)
  - 707 respondents (5.3% response rate)
- Collected answers via Qualtrics
- Data analysis via Qualtrics and SPSS

# Demographics

# Years on the job

What sort of duties do you perform regularly (1x/month or more) for your job? Check all that apply. (n=511)

# Familiarity with Metrics

Among scholarly communication librarians as compared to other academic librarians

# How familiar are you with the Journal Impact Factor (JIF) and the following measures of article-level impact? (all librarians)

# How familiar are you with...?

## Journal Impact Factor (JIF)

## Citation Counts

## Usage Statistics

## Altmetrics

# Use of Metrics

How are scholarly communication librarians using metrics compared to other academic librarians?

Use of the  
*Journal Impact Factor*

Have you ever used journal impact factors for any of the following purposes?  
(all librarians)

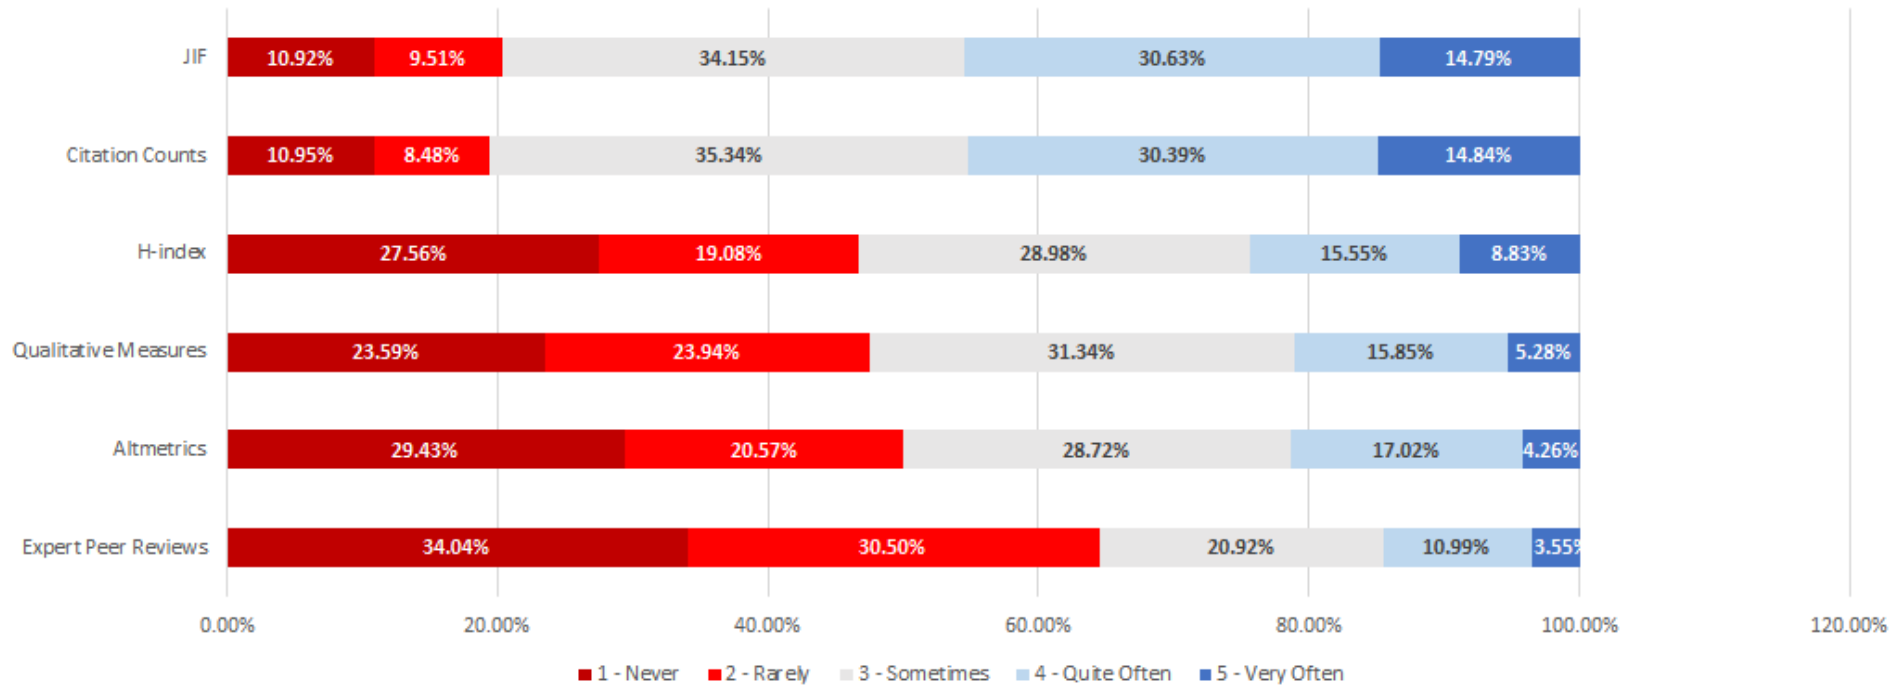

## Use of the JIF: Comparison between Scholarly Communication Librarians and All Librarians

# Use of Metrics

during consultations with faculty concerning  
*publishing issues*

## When offering one-on-one consultations on publishing issues, how often do you address the following indicators of research impact with faculty?

## Addressing **altmetrics** when offering one-on-one consultations on publishing issues with faculty

# Use of Metrics

during consultations with faculty when understanding research impact for *tenure, promotion, and grants*

When offering one-on-one consultations on measuring and understanding research impact for tenure, promotion, and grants, how often do you address the following indicators of research impact with faculty?

# Academic Librarians' Use of Metrics *for professional advancement*

# Tenure and Promotion

*Dossiers:* what metrics to include,  
what metrics have been included, and  
what metrics have been used to evaluate a  
colleague's work

## Types of research indicators included or used for tenure and promotion dossiers

### Types of research indicators included in tenure and promotion dossiers

# Publishing

What metrics are used to track articles/books/chapters and why

## Which of the following types of impact metrics did you track for your article/book/chapter?

### What did you use that information for? (N=289)

# Conclusions and Takeaways - Familiarity & Usage

- **Familiarity** with the JIF and article-level metrics is affected by having regular ***scholarly communication support*** duties.
- Overall, the **use of metrics** is affected by having regular ***scholarly communication support*** duties.
- **Use of metrics** for professional advancement
  - Tenure & Promotion (T&P)
    - Metrics more likely to be used to evaluate a colleague's work than for own dossier
    - "Intent to include" metrics is greater than "have included"
      - **Altmetrics** emphasized
  - Publishing - Use of Metrics
    - Curiosity trumps other reasons

# Conclusions and Takeaways – Faculty Consultations

- ***One-on-one consultations with faculty for publishing and T&P***
  - Citation Counts and the JIF *most likely* to be addressed
  - H-index, altmetrics, and qualitative measures *not as likely* to be addressed.
  - Expert peer reviews *least likely* to be addressed.
  - Altmetrics more likely to be addressed by ***scholarly communication support*** librarians in ***publishing consultations***.
  - All metrics more likely to be addressed by ***scholarly communication support*** librarians in all instances of faculty consultations.

# Conclusions & Takeaways - Altmetrics

- Overall, little usage and reliance on altmetrics
- Librarians with *scholarly communication duties* using altmetrics more
- “New” librarians may have more interest in using altmetrics in T&P dossier

# A Look to the Future

- Investigate *liaison librarians'* familiarity and usage of metrics
- Additional international survey & interviews with U.S. librarians
- Interview faculty members from other disciplines
- Investigate relationships between Open Access (OA) and altmetrics
- Examine T&P documents

# Thank you!
