Published in the *Physiology International*, Volume 103(3), pp. 377–391 (2016),

DOI: [10.1556/2060.103.2016.3.1](https://doi.org/10.1556/2060.103.2016.3.1)

On page 386, the equation in the third line under Fig. 6 should read:

$$\Delta\text{HCO}_3^- = 1.125 - 0.34[\exp(\text{fraction of } \text{VO}_{2\text{max}}/0.2915)]$$

The “ $\Delta$ ” indicates “change in  $\text{HCO}_3^-$ ” and “fraction” should replace “percent” to obtain the correct result. This computed quantity for  $\Delta\text{HCO}_3^-$  will be negative when the fraction of  $\text{VO}_{2\text{max}}$  exceeds 0.35. Absolute  $\text{HCO}_3^-$  is obtained by adding  $\Delta\text{HCO}_3^-$  to 24 mmol/L.

An abbreviation should have been inserted in the list as:

$\Delta\text{HCO}_3^-$  = change in concentration of bicarbonate ions in blood (mmol/L)
