

COTTON STATISTICS FOR TEXAS

Issued by

The Extension Service
Agricultural and Mechanical College of Texas and
The United States Department of Agriculture
Ide P. Trotter, Director, College Station, Texas

CONTENTS

	Page
Introduction	3
Acreage, Yield per Acre, Total Production, Price per Unit and Total Farm Value of Cotton and Cottonseed in Texas, 1880-1946.....	5
Cotton Lint—Table 1	4
Cottonseed—Table 2	5
Distribution of Acreage, 1944—Figure 1.....	6
Trend in Acreage and Production, 1880-1946—Figure 2.....	6
Trend in Price of Cotton and Cottonseed, 1890-1946—Figure 3.....	7
Acreage, Yield and Production of Cotton by Counties and Type-of- Farming Areas, 1928-1946.....	9
Type-of-Farming Areas in Texas—Figure 4.....	9
Trends in Acreage in Selected Areas—Figure 5.....	10
Acreage, Yield per Acre and Production by Counties and Type-of- Farming Areas—Table 3.....	11
Prices and Income	61
Average Lint Prices Received by Producers as of 15th of Month, 1908-1946—Table 4	61
Average Cottonseed Prices Received by Producers as of 15th of Month, 1910-1946—Table 5	62
Average Price of Middling Spot Cotton at Houston—Table 6.....	63
Average Price of Middling Spot Cotton at 10 Markets—Table 7....	64
Trends in the Percentage of Total Cash Receipts from the Sale of Cotton and Cottonseed, All Other Crops, and Livestock & Live- stock Products—Figure 6	65
Cash Receipts from Cotton Lint and Cottonseed with Comparisons, 1924-1944—Table 8	66
Miscellaneous Statistics	66
Estimated Percentage of Total Lint Sales Made by Farmers Each Month, 1928-1944—Table 9	66
Reduction from Full Yield from Stated Causes, 1928-1946—Table 10	67
Commercial Fertilizer Used on Cotton, 1928-1944—Table 11.....	67

Cotton Statistics for Texas

C. A. BONNEN, Professor of Farm Management, and
L. P. GABBARD, Head
Department of Agricultural Economics and Sociology

This circular is the first of a series of four which are planned to take the place of Circular No. 80, *Statistics of Texas Agriculture*, published by the Station in 1937. It deals with the statistics of cotton only. Later publications will revise, expand and bring up to date the statistics pertaining to all field crops other than cotton, fruits and vegetables, and livestock and livestock products.

The data pertaining to cotton were compiled from various reports issued by the U. S. Department of Agriculture. They are limited to established series which are published regularly and can be kept up to date. Unless otherwise indicated the data for the early years were taken from *Agricultural Statistics*, the statistical supplement of the USDA Yearbook of Agriculture, and for the late years from *Crops and Markets*, issued quarterly and current mimeographed reports, both published by the U. S. Department of Agriculture.

Included for the first time are statistics by counties and by type-of-farming areas showing the acreage, yield per acre and production of cotton. These are substituted for data showing the amount of cotton ginned by counties and type-of-farming areas published in Circular No. 80. Other additions are statistics showing estimated losses in yields owing to insects, plant disease and weather; the amounts of commercial fertilizers used on cotton; and the percentage of sales of lint by months.

An added feature which should help the reader to better interpret the data are maps and charts showing distribution of acreage and trends in acreage, production and price.

It is a common experience of those who have occasion to use agricultural statistics to find that they do not have the proper reports on file or that their files are incomplete. This suggests the need of assembling the more important agricultural statistics in a single report. In short, it is the purpose of this publication to make the data on cotton published in the various government reports more readily available. It aims to provide a ready reference which should save a great many people much time. In addition, an elementary publication of this nature should encourage a greater use of such

Table 1. Acreage harvested, yield per acre, number of bales, price per pound, and total farm value of cotton in Texas, 1880-1946

Year	Harvested acreage	Yield per acre (lint, gross)	Number of bales ¹	Estimated farm price per lb. Dec. 1 ²	Total farm value
		(pounds)		(cents)	(dollars)
1880	2,473,000	237	1,274,000	9.00	57,330,000
1881	2,553,000	153	868,000	N.R.	N.R.
1882	2,501,000	249	1,325,000	9.00	59,625,000
1883	2,723,000	190	1,120,000		
1884	2,808,000	163	995,000	9.00	44,775,000
1885	3,115,000	198	1,332,000	8.20	54,613,000
1886	3,329,000	211	1,514,000		
1887	3,570,000	208	1,590,000	8.30	65,985,000
1888	3,783,000	201	1,594,000	8.40	66,948,000
1889	3,928,000	179	1,471,000	8.40	61,782,000
1890	4,177,000	226	1,996,000	8.40	83,832,000
1891	4,925,000	231	2,405,000	7.00	84,175,000
1892	4,521,000	236	2,246,000	8.00	89,840,000
1893	4,930,000	192	1,997,000	6.90	68,897,000
1894	5,612,000	277	3,212,000	4.50	72,270,000
1895	5,163,000	176	1,905,000	7.30	69,532,000
1896	6,329,000	160	2,123,000	6.50	68,997,000
1897	7,159,000	190	2,822,000	6.60	93,126,000
1898	7,084,000	234	3,390,000	5.80	98,310,000
1899	6,950,000	180	2,609,000	6.80	88,706,000
1900	7,363,000	224	3,438,000	8.90	152,991,000
1901	8,105,000	148	2,502,000	8.00	100,080,000
1902	8,206,000	146	2,498,000	8.20	102,419,000

1934	10,097,000	114	2,401,000	12.51	3150,181,000
1935	10,657,000	133	2,956,000	10.99	162,420,000
1936	11,597,000	121	2,933,000	11.83	173,498,000
1937	12,539,000	197	5,154,000	8.44	3217,490,000
1938	8,784,000	168	3,086,000	8.23	3126,994,000
1939	8,520,000	160	2,846,000	8.72	124,104,000
1940	8,472,000	184	3,234,000	9.97	161,228,000
1941	7,717,000	165	2,652,000	16.22	215,072,000
1942	8,044,000	182	3,038,000	17.99	273,226,000
1943	7,780,000	174	2,823,000	19.04	268,766,000
1944	6,950,000	183	2,646,000	19.74	261,112,000
1945	5,800,000	149	1,794,000	21.49	192,736,000
1946	6,000,000	134	1,669,000	32.20	268,772,000

¹ Running bales, estimated at 500 pounds average gross weight per bale, for all years from 1880 to 1898; 478-pound net weight or 500-pound gross weight bales beginning with 1899.

² Beginning in 1909 the price is the estimated average for the season.

³ Includes unredeemed loan cotton at average loan value.

information. The fact that statistics for the more important agricultural enterprises and commodities are assembled for a period of years should make it relatively easy for one interested in a particular commodity to supplement this report from the various current series and keep it up to date.

Acreage, Yield per Acre, Total Production, Price per Unit and Total Farm Value of Cotton and Cottonseed in Texas, 1880-1946

The accompanying tables and charts provide an over-all picture of the developments in cotton production in Texas since 1880. Reflected in these data are the effects of the changed position of the United States in world trade as well as scientific and technological developments in the production of cotton and competing farm enterprises.

Acreage, Yield per Acre, Total Production, Price per Unit and Total Farm Value of Cotton and Cottonseed in Texas, 1880-1946

Year	Production ¹	Season average price per ton	Total value
	(tons)	(dollars)	(dollars)
1909	1,122,000	21.20	23,786,000
1910	1,356,000	22.88	31,025,000
1911	1,893,000	15.93	30,155,000
1912	2,171,000	16.74	36,343,000
1913	1,755,000	20.44	35,872,000
1914	2,042,000	13.91	28,404,000
1915	1,436,000	25.97	37,293,000
1916	1,658,000	40.75	67,564,000
1917	1,390,000	62.31	86,611,000
1918	1,200,000	60.58	72,696,000
1919	1,379,000	59.98	82,712,000
1920	1,934,000	23.15	44,772,000
1921	978,000	27.18	26,582,000
1922	1,433,000	28.24	40,468,000
1923	1,931,000	38.27	73,899,000
1924	2,201,000	31.31	68,913,000
1925	1,851,000	32.81	60,731,000
1926	2,505,000	21.33	53,432,000
1927	1,938,000	32.86	63,683,000
1928	2,112,000	32.64	68,936,000
1929	1,630,000	31.56	51,443,000
1930	1,621,000	23.12	37,478,000
1931	2,136,000	9.03	19,288,000
1932	1,945,000	9.05	17,602,000
1933	1,802,000	12.75	22,976,000
1934	993,000	33.22	32,987,000
1935	1,260,000	31.03	39,098,000
1936	1,261,000	30.60	38,587,000
1937	2,121,000	20.03	42,484,000
1938	1,264,000	20.96	26,493,000
1939	1,183,000	19.93	23,577,000
1940	1,318,000	21.95	28,930,000
1941	1,133,000	47.20	53,478,000
1942	1,238,000	44.02	54,497,000
1943	1,131,000	51.90	58,699,000
1944	1,068,000	55.10	58,847,000
1945	749,000	53.20	39,847,000
1946	694,000	73.30	50,870,000

¹Computed from lint production, assuming 65 pounds of cottonseed for each 35 net pounds of lint.

Figure 1. The areas of heaviest concentration of cotton acreage are on the dark prairie soils and the better drained alluvial soils in the eastern half of the State and on the more productive soils of the High Plains and Rolling Plains in the western part of the State.

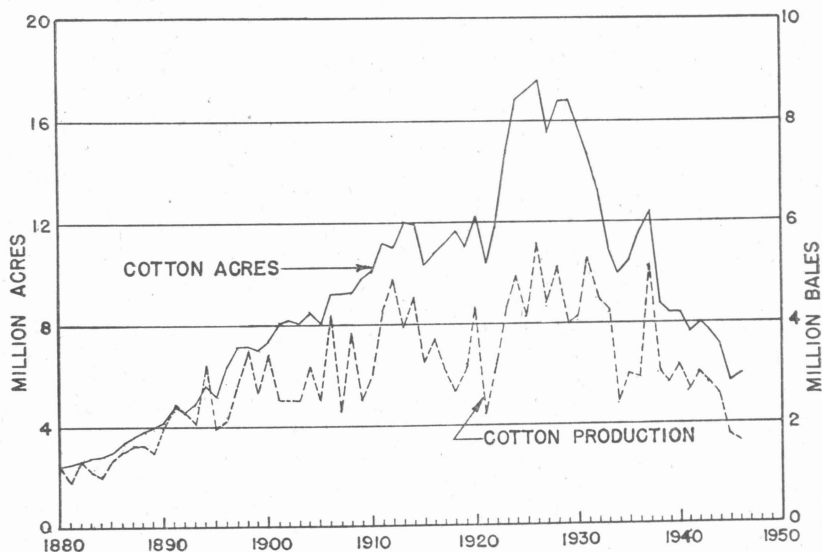

Figure 2. With the exception of a short period during World War I, the trend in the cotton acreage was steadily upward from about 2,500,000 in 1880 to a peak of 17,750,000 in 1926. The acreage has declined sharply since to approximately 6,000,000 in 1945 and 1946, the smallest since 1895.

Figure 3. Trend in the prices of cotton and cottonseed. Periods of high cotton prices coincide with war periods and immediate post-war periods during which abnormal production and trade conditions prevail. Cottonseed prices were relatively higher than lint prices during the two war periods and during the period of cotton acreage reduction programs, but relatively lower during the postwar period.

Type-of-Farming Areas in Texas

AREA:

1. PANHANDLE WHEAT AREA.
 - 1a. Sandy soils; grain sorghums, corn, beef cattle.
 - 1b. Large-scale specialized wheat production; dark, heavy soils; smooth land.
 - 1c. Similar to (b) except more grain sorghums, cotton, and livestock; less specialized.
2. CANADIAN RIVER GRAZING AREA—beef cattle; rough, broken lands of the Canadian River basin.
3. HIGH PLAINS COTTON AREA—cotton and grain sorghums; cattle grazing in the less developed parts of the area; smooth, level plains; light, sandy soils; large-scale methods.
4. ROLLING PLAINS—mixed types; cotton and grain sorghums; cattle ranching; rolling topography; wide variations in soil types; numerous grazing and farming areas alternating.
 - 4a. Farming predominates; extensive grazing areas.
 - 4b. Grazing predominates.
 - 4c. Farming predominates.
5. HIGH PLAINS AND TRANS-PECOS CATTLE GRAZING AREA.
 - 5a. High Plains. Dry, level plains; sandy soils; little farming; large ranches.
 - 5b. Trans-Pecos. Dry and mountainous; small amount of irrigated farming; large ranches.
6. UPPER RIO GRANDE VALLEY IRRIGATED AREA—cotton and alfalfa.

7. EDWARDS PLATEAU GRAZING AREA—cattle, sheep, and goats; shallow, stony soils; rough, broken topography; live-oak and shin-oak brush.
- 7a. Large ranches; practically no farming.
- 7b. Small ranches; some farming.
- 7c. Central Basin. Mostly cattle grazing; some farming.
8. RIO GRANDE PLAINS AREA—mixed types; cattle grazing; some cotton; vegetable growing, largely under irrigation.
- 8a. Cattle grazing; vegetables.
- 8b. Corn, small grain, cotton; some grazing.
- 8c. Cotton, corn, vegetables; some grazing.
- 8d. Cotton, vegetables, and grazing.
9. LOWER RIO GRANDE VALLEY AREA—winter vegetables, citrus, and cotton; some grazing.
- 9a. Dry farming; cotton, vegetables, and grazing.
- 9b. Irrigation farming; citrus, vegetables, and cotton.
10. CORPUS CHRISTI COTTON AREA—cotton and vegetables; dark, rich soils; level topography; large-scale methods.
11. NORTH-CENTRAL GRAZING AREA—cattle grazing; small amount of farming, similar in nature to that in surrounding areas.
12. WESTERN CROSS TIMBERS FARMING AREA—cotton, grain sorghums, corn, peanuts, and watermelons; sandy soils.
13. GRAND PRAIRIE AREA—cotton, small grains, and corn; ranching; dark soils varying greatly in depth; rolling topography.
- 13a. Cotton, wheat, oats, corn; some ranching.
- 13b. Cotton, oats, wheat, corn; ranching.
- 13c. Ranching—cattle, sheep, and goats; cotton, small grains.
14. BLACK PRAIRIE AREA—cotton, corn, and small grains; deep, black, fertile soils; level to rolling topography.
- 14a. Cotton, corn, and small grains.
- 14b. Cotton and corn.
- 14c. Cotton, corn, and livestock.
15. NORTHEAST SANDY LANDS AREA—cotton, corn, vegetables, and fruits; sandy soils; rolling topography; small farms, small irregular-shaped fields, small tools.
- 15a. Pine-covered.
- 15b. Oak-covered.
16. PINEY WOODS LUMBERING AREA—lumber, cotton, corn, range cattle, and hogs; self-sufficing farming.
17. POST-OAK AREA—cotton, corn, truck crops, and beef cattle; sandy soils; farming mostly on interior prairies and bottom lands.
18. COAST PRAIRIE AREA—mixed types—cotton and corn; rice; fruits and vegetables; cattle grazing; widely varying soils; level topography and poor drainage.
- 18a. Cattle ranching.
- 18b. Cotton, cattle ranching, and rice.
- 18c. Rice, cattle ranching, and cotton.

Acreage, Yield and Production of Cotton by Counties and Type-of-Farming Areas, 1928-1946

Complete data by counties and by type-of-farming areas are given on the following pages. These data are taken from special reports issued by the Bureau of Agricultural Economics. A map showing the type-of-farming areas of the State is shown below and a brief characterization of each area follows on the opposite page.

Figure 4. Type-of-farming areas in Texas. The State may be subdivided into 18 type-of-farming areas in each of which the operation of natural and economic factors has resulted in a high degree of similarity in the farm enterprises maintained, in their proportionate combination on the bulk of the farms, and in the production practices used. Eleven of the major type-of-farming areas are further subdivided into 30 sub-areas because of differences within these areas sufficiently significant to indicate a break in the general type of farming. The designations of the areas and sub-areas are shown on the preceding pages.

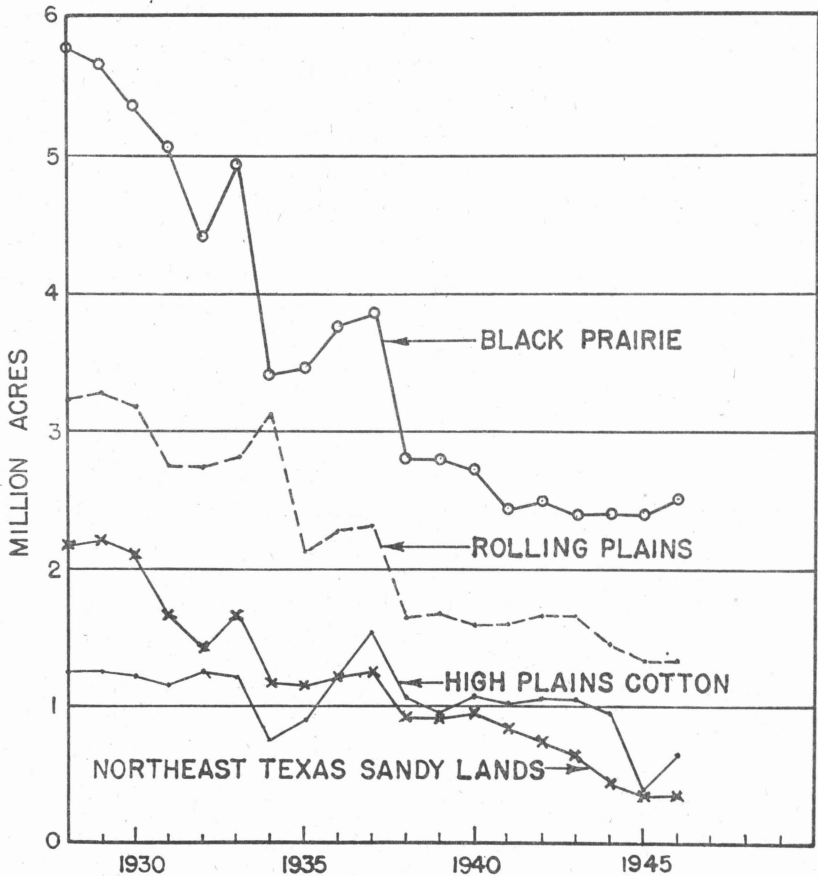

Figure 5. Trends in the acreage of cotton harvested in selected areas, 1928-1946. The decline in the acreage of cotton harvested has been most pronounced in the timbered portions of the State. For example, in the Northeast Texas Sandy Lands the decrease was more than 85 percent between 1928 and 1946, but in the Black Prairie and Rolling Plains it was less than 60 percent and on the High Plains less than 50 percent, despite spring drouths which prevented the carrying out of planting intentions in that area during 1945 and 1946. In some of the minor areas the differences in trends are even more extreme. Almost as much cotton was harvested in the Lower Rio Grande Valley in 1946 as was harvested in 1928, while in the Piney Woods Lumbering Area the acreage harvested was only 12 percent of 1928.

Table 3. Estimated acreage, yield, and production by counties and type-of-farming areas, 1928-1946

¹Ten designated markets: Norfolk, Augusta, Savannah, Montgomery, New Orleans, Memphis, Little Rock, Dallas, Houston and Galveston.

²From 1915 to 1931, prices are for 7/8 inch middling and from 1932 to 1946 for 15/16 inch middling.

³Year begins with August 1 of one year and extends through July 31 of the following year.

⁴Includes prices at Norfolk, Va., Aug. 1 to 5, inclusive. Thereafter, Charleston, S. C. replaced Norfolk as one of the 10 designated markets.

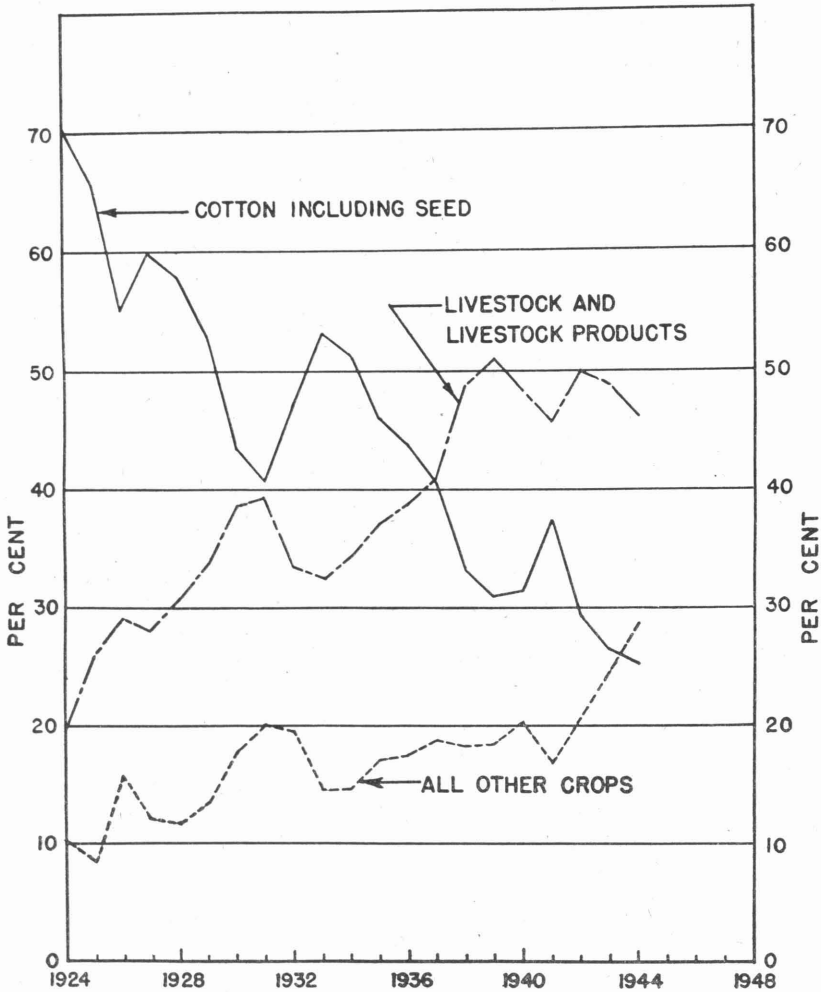

Figure 6. Trends in the percentage of total cash receipts from the sale of cotton and cottonseed, all other crops, and livestock and livestock products. The relative importance of cotton as a source of cash income on Texas farms declined from about 70 percent in 1924 to about 25 percent in 1944. During the same period, receipts from the sale of livestock and livestock products increased from 20 percent (of all cash receipts) to 46 percent in 1944. Sales of crops other than cotton also increased in relative importance.

Table 8. Cash receipts from cotton lint and cottonseed and comparisons—Texas, 1924-1944¹
