

A redox active binder for electrochemical capacitor electrodes

Submitted by Charles Cougnon on Thu, 03/09/2017 - 14:03

Titre	A redox active binder for electrochemical capacitor electrodes
Type de publication	Article de revue
Auteur	Benoit, Corentin [1], Demeter, Dora [2], Bélanger, Daniel [3], Cougnon, Charles [4]
Editeur	Wiley
Type	Article scientifique dans une revue à comité de lecture
Année	2016
Langue	Anglais
Date	2016
Numéro	17
Pagination	5304-5407
Volume	128
Titre de la revue	Angewandte Chemie International Edition
ISSN	1521-3773
Résumé en anglais	<p>A promising strategy for increasing the performance of supercapacitors is proposed. Until now, a popular strategy for increasing the specific capacity of the electrode consists of grafting redox molecules onto a high surface area carbon structure to add a faradaic contribution to the charge storage. Unfortunately, the grafting of molecules to the carbon surface leads to a dramatic decrease of the electrochemical performances of the composite material. Herein, we used the organic binder as an active material in the charge/discharge process. Redox molecules were attached onto its polymeric skeleton to obtain a redox binder with the dual functionalities of both the binder and the active material. In this way, the electrochemical performance was improved without detrimentally affecting the properties of the porous carbon. Results showed that the use of a redox binder is promising for enhancing both energy and power densities.</p>
