

# Manipulation of the electronic and photovoltaic properties of materials based on small push-pull molecules by substitution of the arylamine donor block by aliphatic groups

Submitted by Clément Cabanetos on Thu, 03/09/2017 - 08:43

Titre	Manipulation of the electronic and photovoltaic properties of materials based on small push-pull molecules by substitution of the arylamine donor block by aliphatic groups
Type de publication	Article de revue
Auteur	Jiang, Yue [1], Cabanetos, Clément [2], Allain, Magali [3], Jungsuttiwong, Siriporn [4], Roncali, Jean [5]
Pays	Pays-Bas
Editeur	Elsevier
Ville	Amsterdam
Type	Article scientifique dans une revue à comité de lecture
Année	2016
Langue	Anglais
Date	Octobre 2016
Pagination	294-304
Volume	37
Titre de la revue	Organic Electronics
ISSN	1566-1199
Mots-clés	donor-acceptor [6], Organic solar cells [7], Thin films [8], Triarylamine [9] Push-pull molecules with an arylamine donor block connected to a dicyanovinyl acceptor via a thiényl π-conjugating spacer have been synthesized in order to analyze the effects of replacing an outer phenyl ring of the triphenylamine (TPA) block of a reference compound by methyl, hexyl, heptafluoropentyl and dioxaooctyl groups. Optical, electrochemical and X-ray diffraction data show that these substitutions have minor influence on the energy levels of the molecule but exert a considerable effect on the structure, optical, electrical and photovoltaic properties of the resulting materials.
