HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

1. Elliptic Curve Cryptography (ECC)

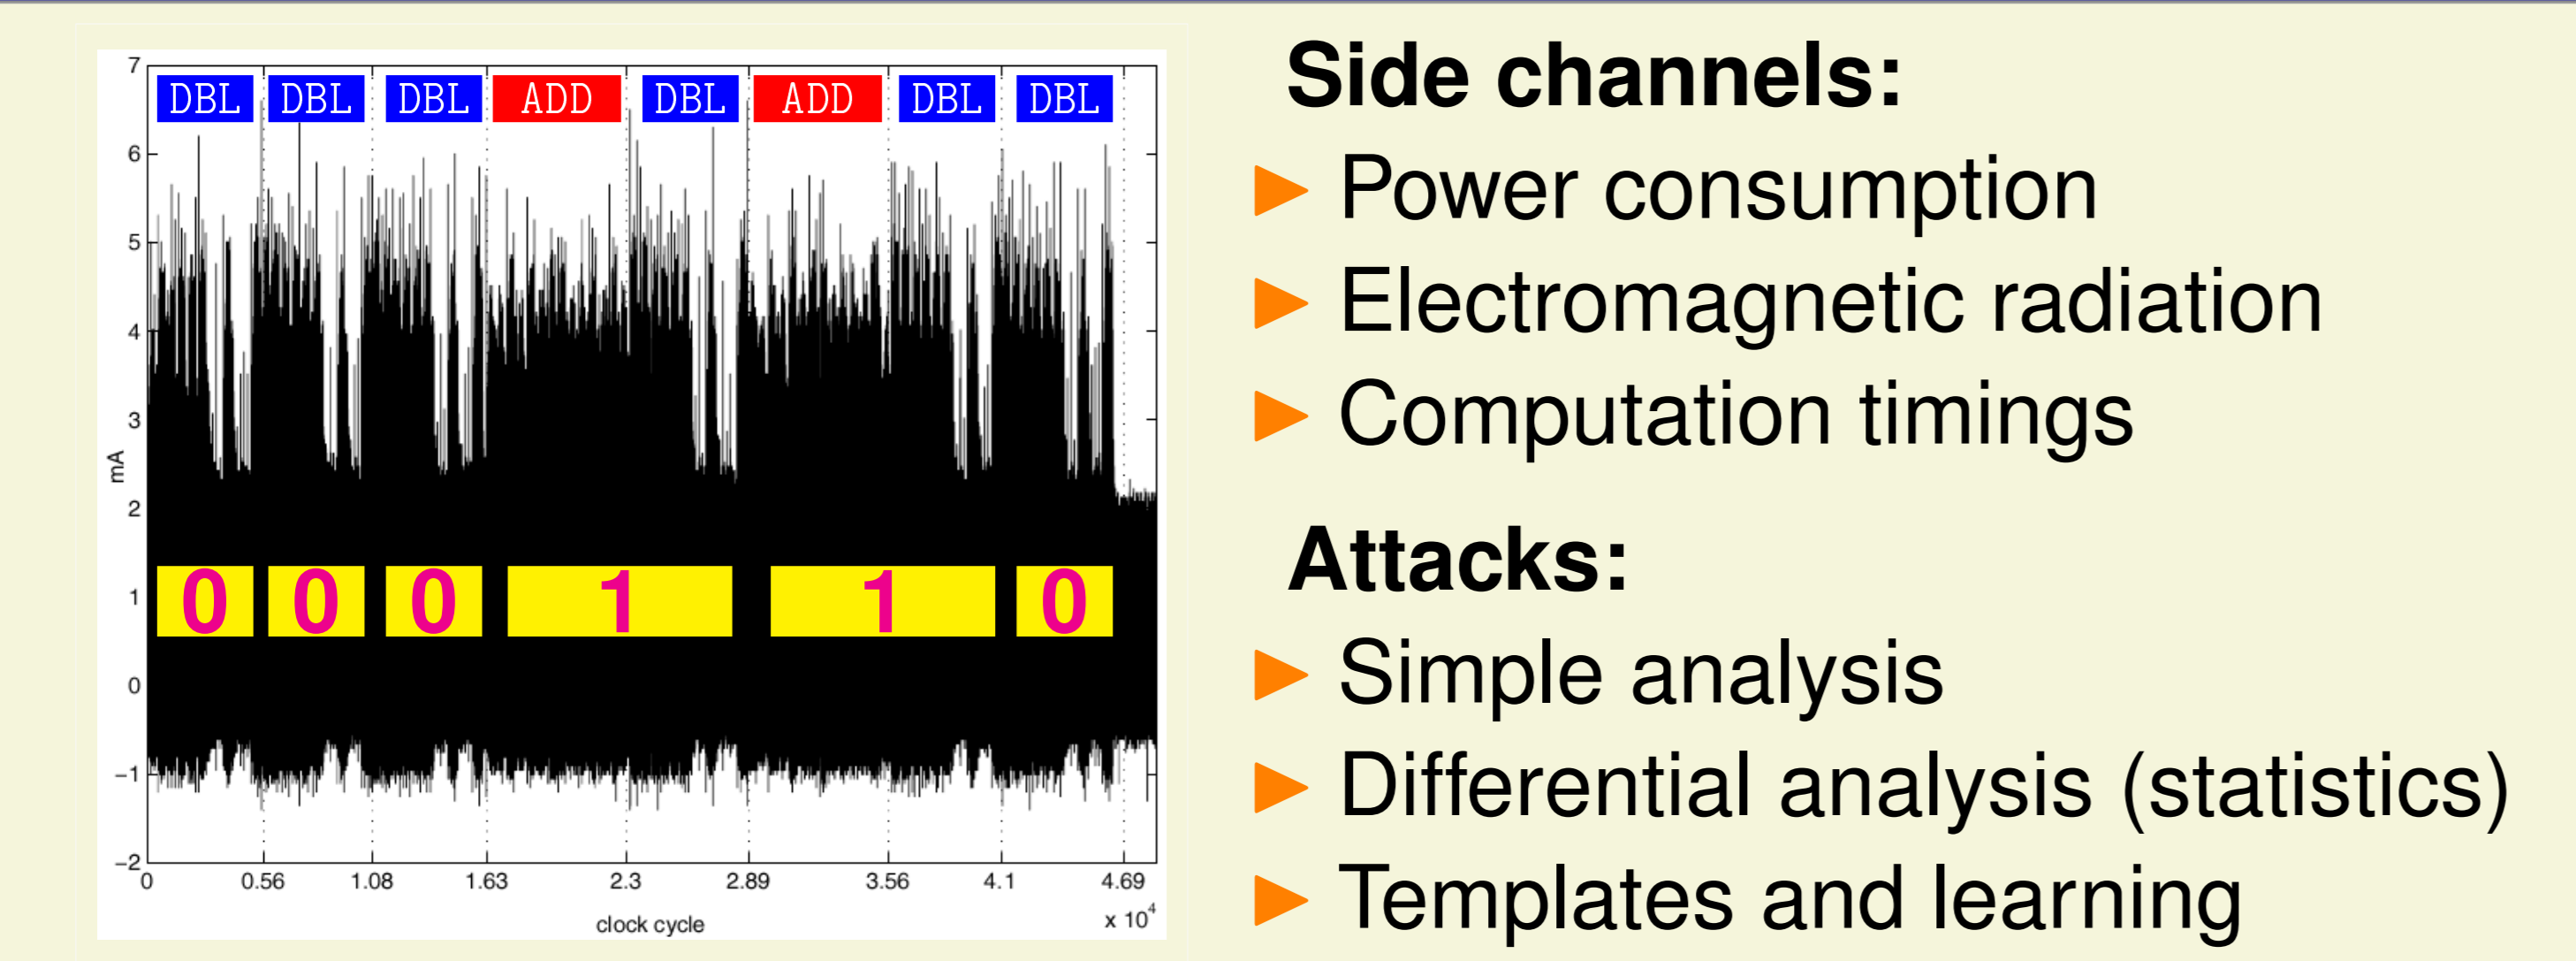

2. From ECC to HECC

	field size	ADD	DBL
ECC	ℓ bits	 Cost: 12M + 2S	 Cost: 6M + 5S
HECC	$\frac{\ell}{2}$ bits	 Cost: 47M + 4S	 Cost: 38M + 6S

Examples of computation expressions for projective coordinates

3. Side Channel Attacks (SCAs)

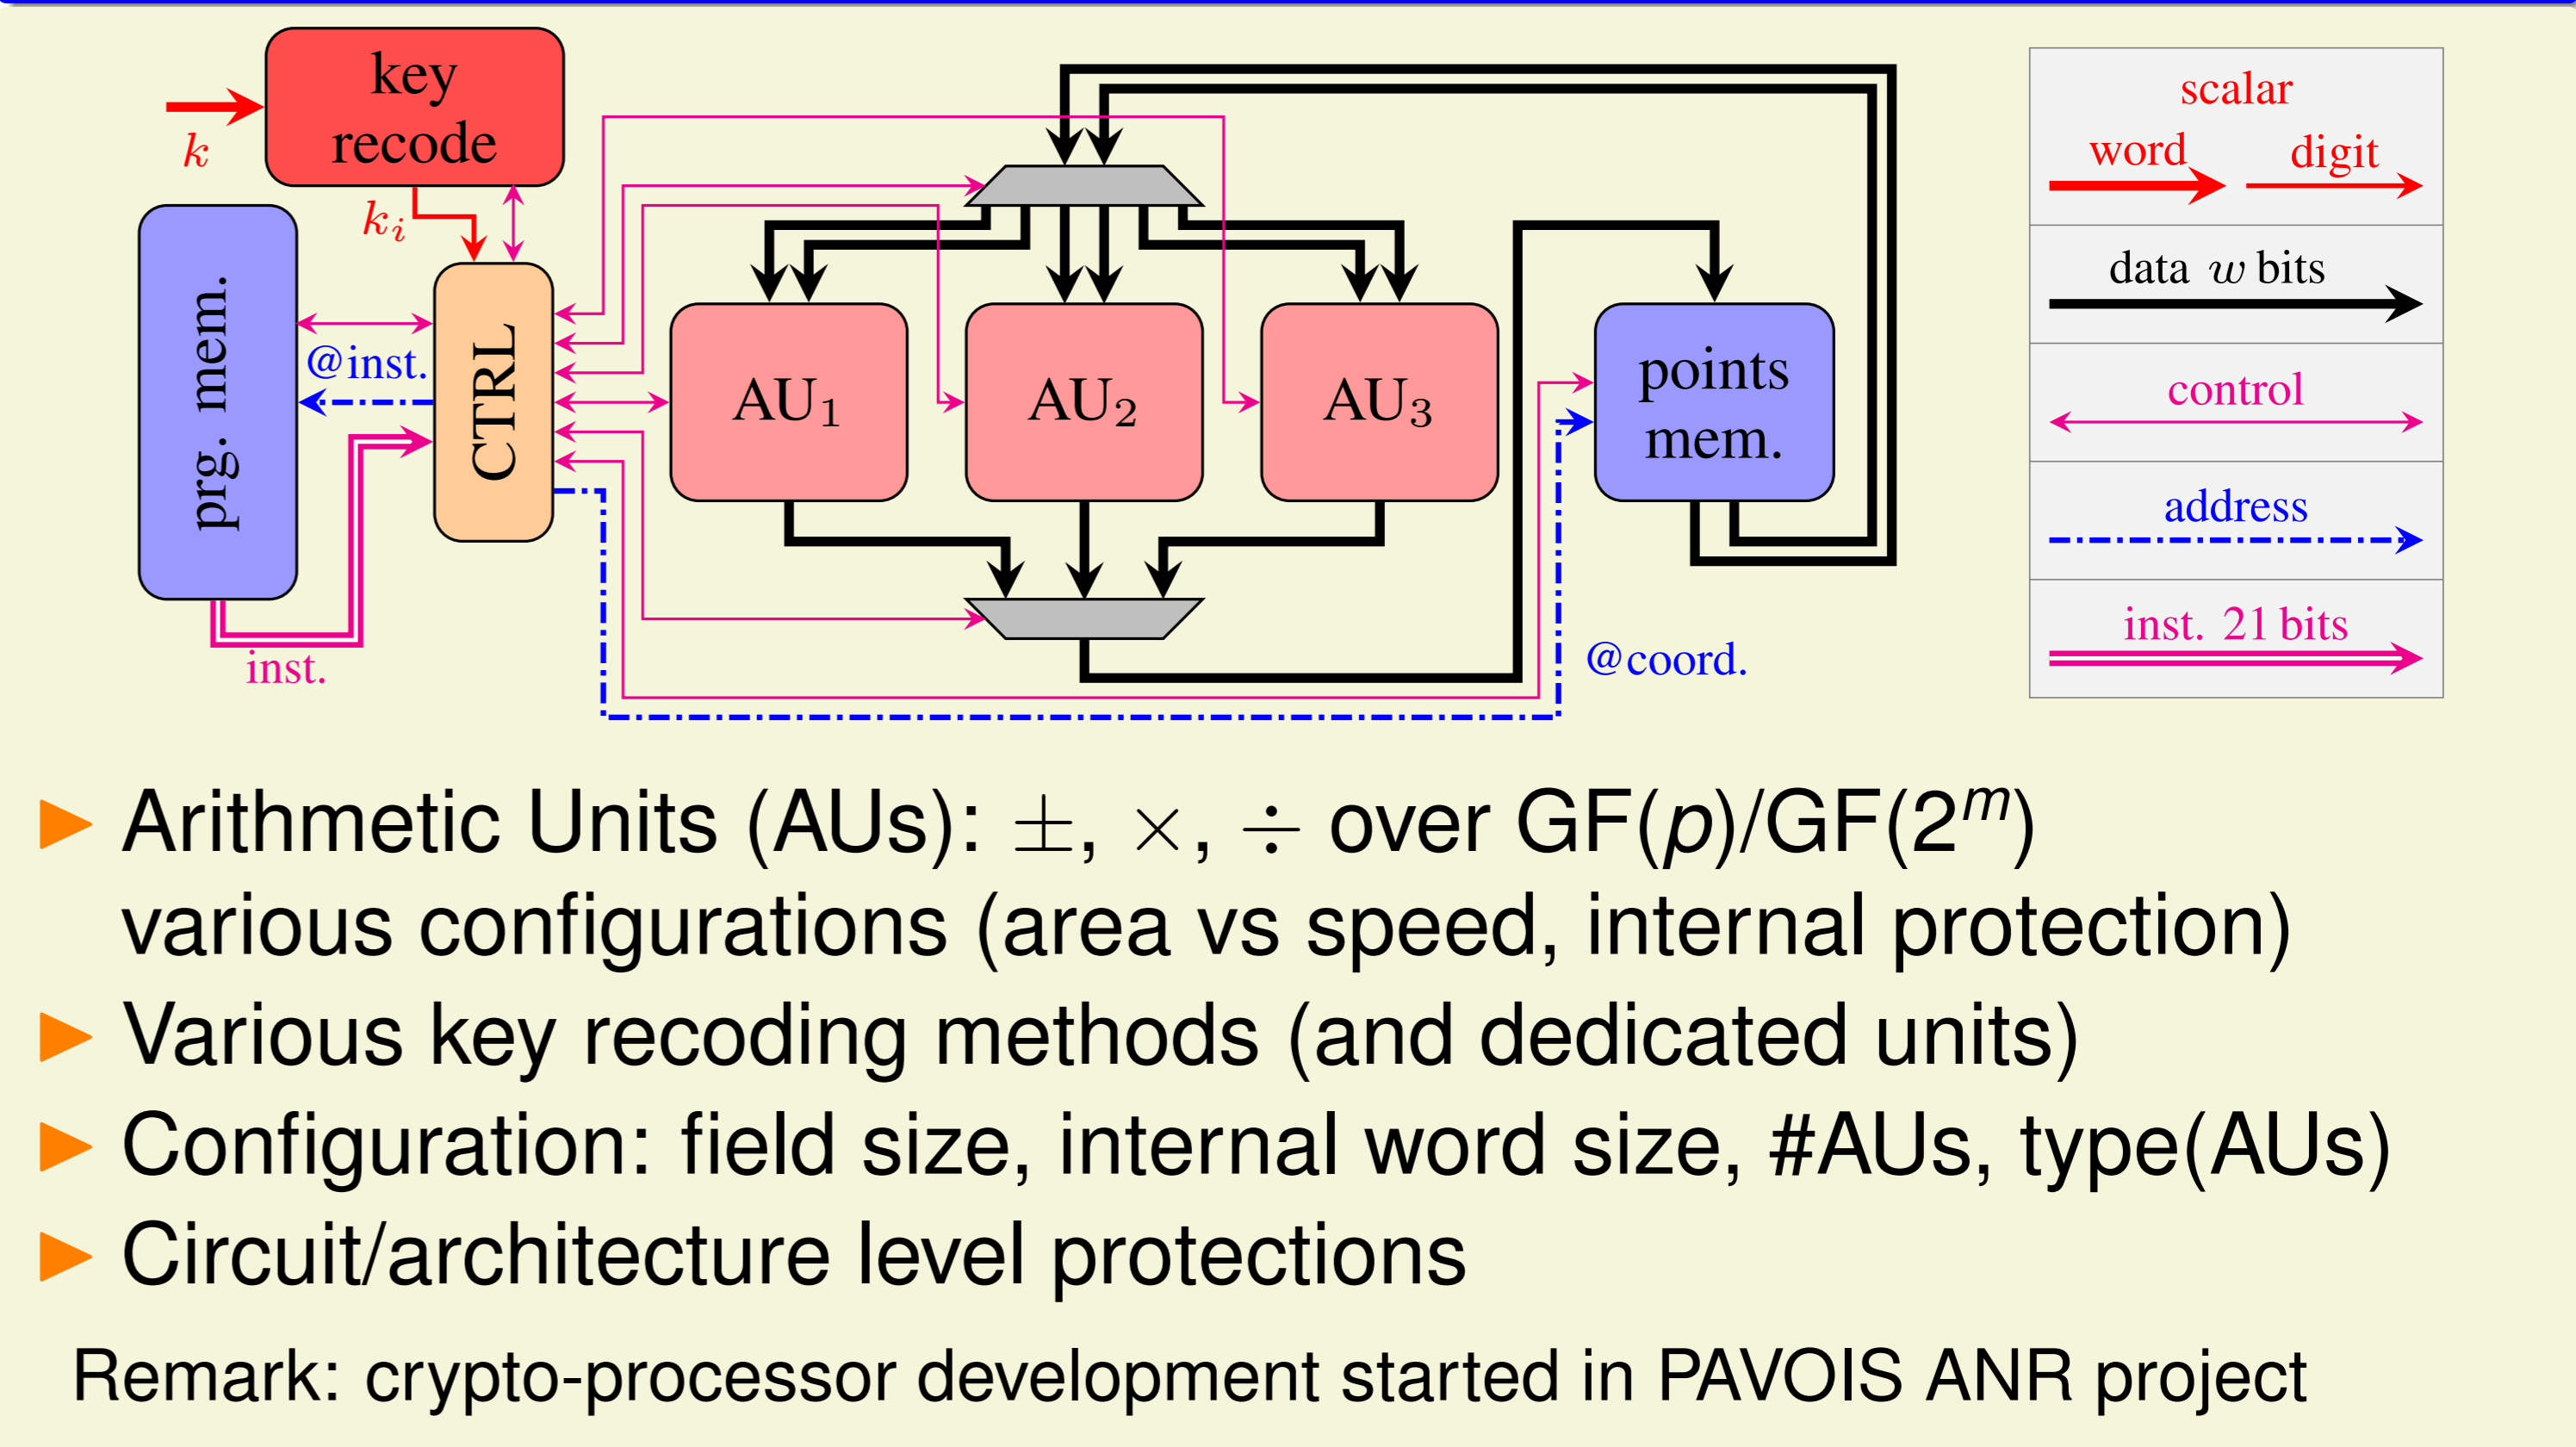

4. Protections & Counter-Measures Against SCAs

- ▶ Uniform comp. durations
 - ▶ Uniform power/EM profile
 - ▶ Random behavior
 - ▶ Circuit reconfiguration
 - ▶ detection/correction codes
 - ▶ Add noise (!)
- Example: use redundant number systems
- k
 $R_1(k), R_2(k), R_3(k), R_4(k), R_5(k), R_6(k), \dots$
 $[R_1(k)]P, [R_2(k)]P, [R_3(k)]P, [R_4(k)]P, [R_5(k)]P, [R_6(k)]P, \dots$
 Random recoding: $\forall i, [R_i(k)]P = [k]P$

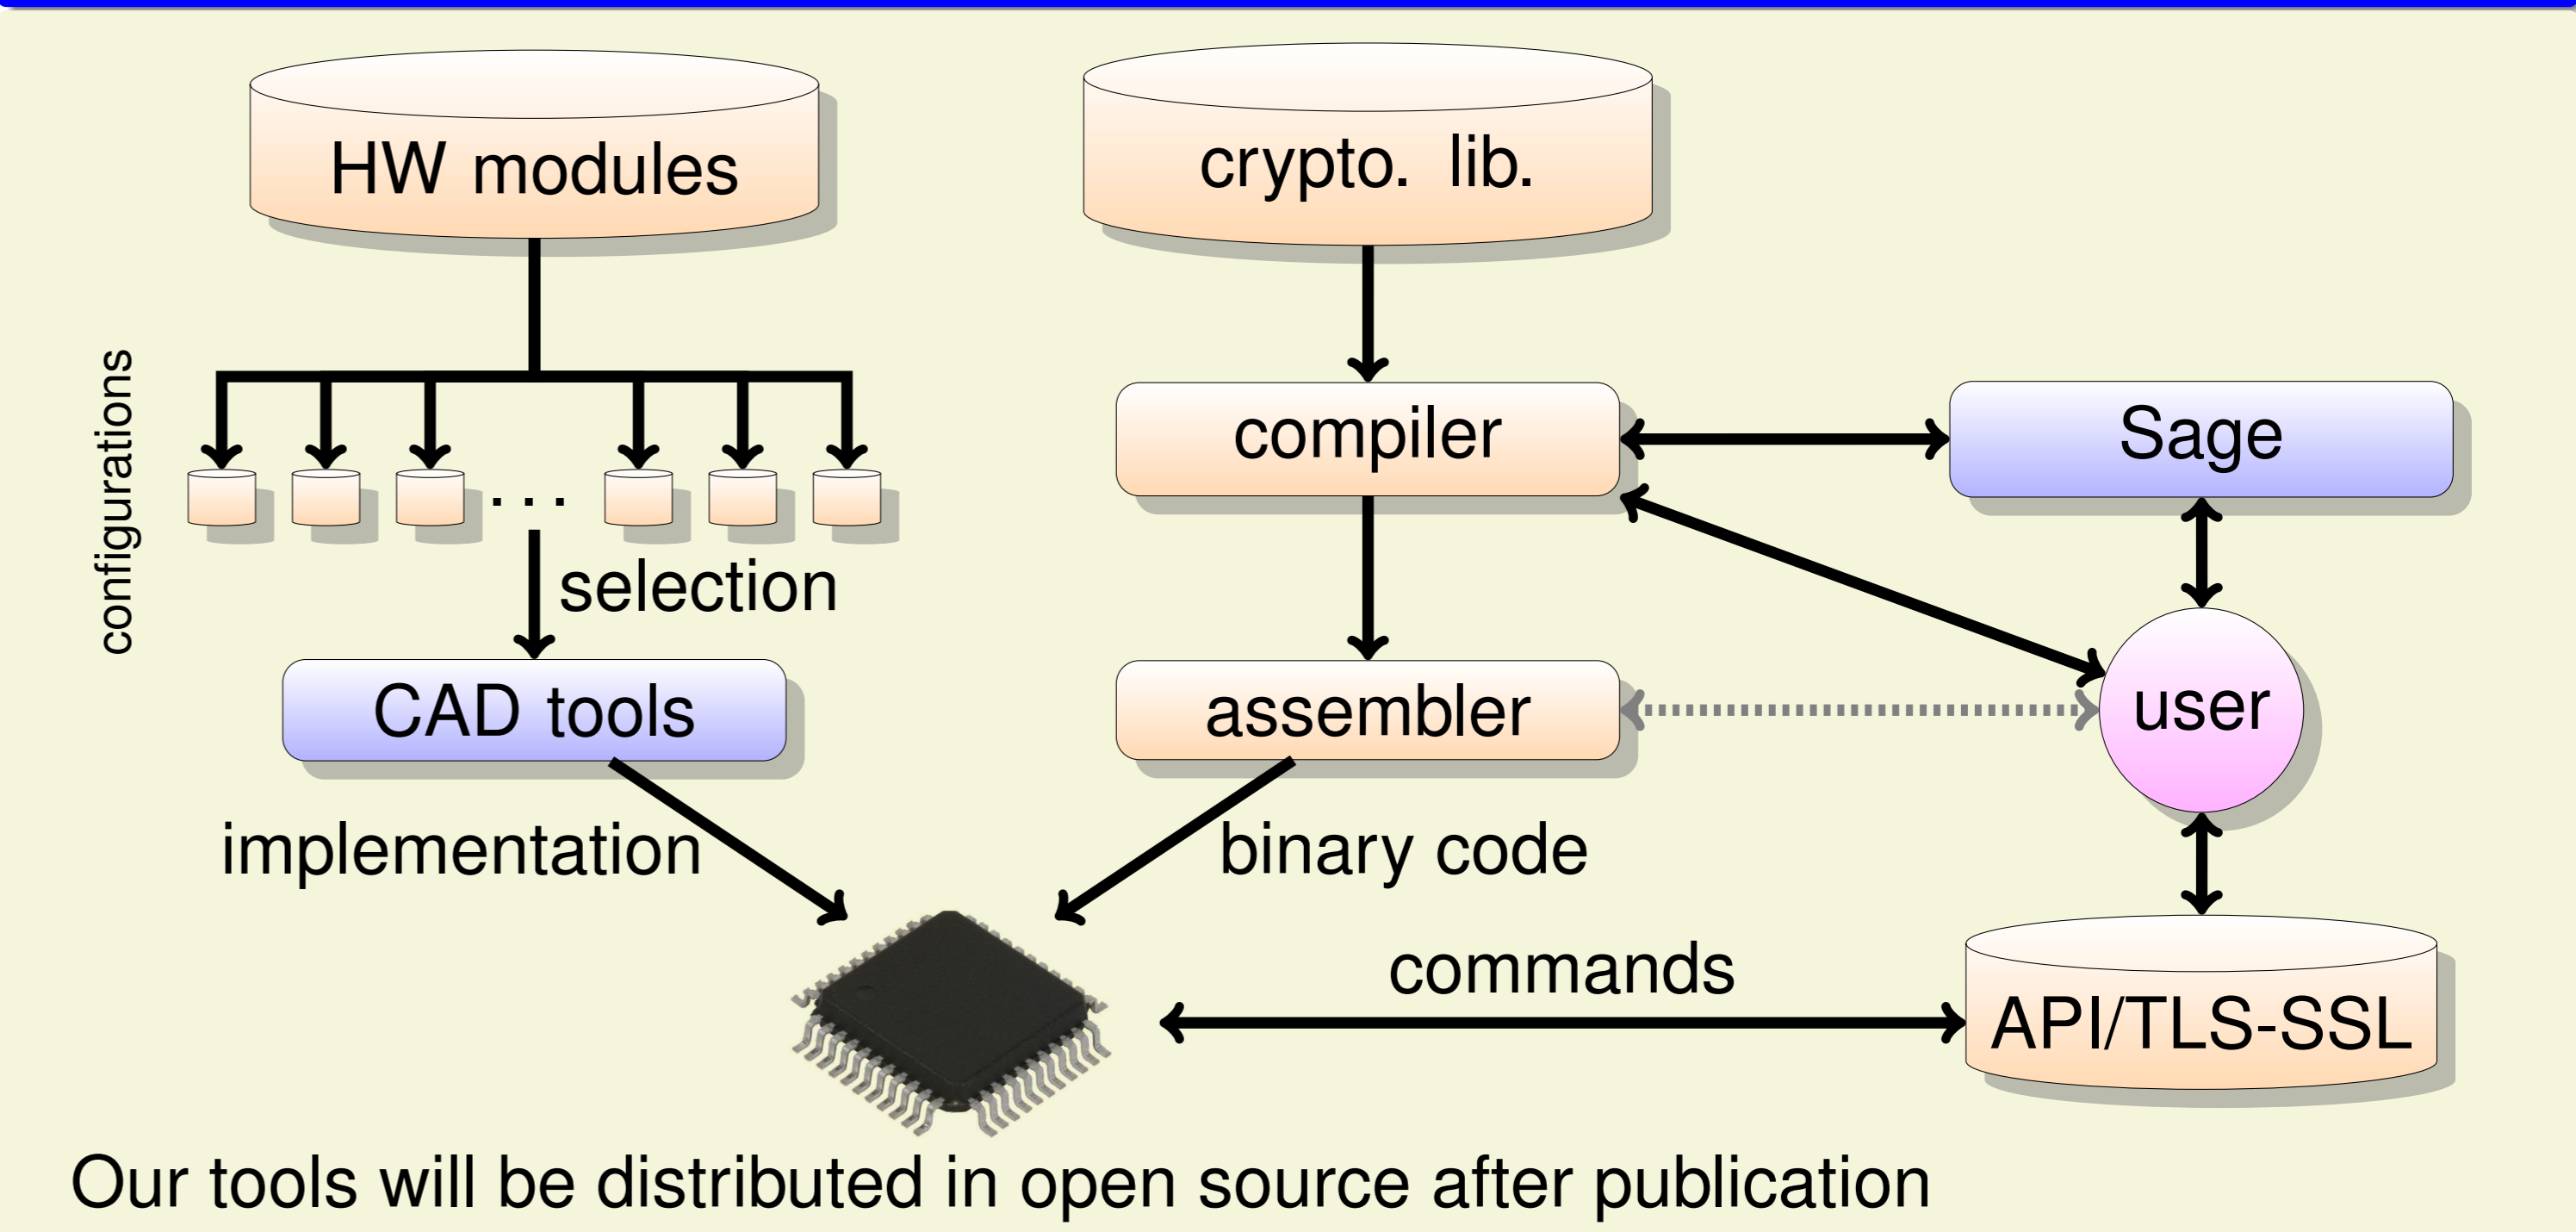

5. HAH Project Objectives

- ▶ Efficient algorithms and representations for HECC
- ▶ HECC protections against SCAs (passive and active)
- ▶ Fast, low-power and secure hardware implementations (open source hardware code and programming tools)
- ▶ Intensive security evaluation using our SCA setup

6. Developed Crypto-Processor(s)

7. Programming Tools for Our Crypto-Processor(s)

8. Implementation Results on FPGA
