Villet and harvesting of BioAcoustica data by GBIF. Biodiversity Data Journal 3: e5792. doi: [10.3897/BDJ.3.e5792](https://doi.org/10.3897/BDJ.3.e5792)

Abstract

Background

Sound collections for singing insects provide important repositories that underpin existing research (e.g. Price et al. 2007 at <http://bio.acousti.ca/node/11801>; Price et al. 2010) and make bioacoustic collections available for future work, including insect communication (Ordish 1992), systematics (e.g. David et al. 2003), and automated identification (Bennett et al. 2015). The BioAcoustica platform (Baker et al. 2015) is both a repository and analysis platform for bioacoustic collections: allowing collections to be available in perpetuity, and also facilitating complex analyses using the BioVeL cloud infrastructure (Vicario et al. 2011). The [Global Cicada Sound Collection](#) is a project to make recordings of the world's cicadas (Hemiptera: Cicadidae) available using open licences to maximise their potential for study and reuse. This first component of the Global Cicada Sound Collection comprises recordings made between 2006 and 2008 of Cicadidae in South Africa and Malawi.

New information

This collection of sounds includes 219 recordings of 133 voucher specimens, comprising 42 taxa (25 identified to species, all identified to genus) from South Africa and Malawi. The recordings have been used to underpin work on the species limits of cicadas in southern Africa, including Price et al. (2007) and Price et al. (2010). The specimens are deposited in the Albany Museum, Grahamstown, South Africa (AMGS).

The harvesting of acoustic data as occurrence records by GBIF has been implemented by the Scratchpads Team at the Natural History Museum, London. This link increases the value of individual recordings and the BioAcoustica platform within the global infrastructure of biodiversity informatics by making specimen/occurrence records from BioAcoustica available to a wider audience, and allowing their integration with other occurrence datasets that also contribute to GBIF.

Keywords

bioacoustics, BioAcoustica, Cicadidae, acoustic recording, Malawi, South Africa, GBIF

Introduction

BioAcoustica (Baker et al. 2015) is an online database and analysis platform for recorded wildlife sound and is based on the Scratchpads (Smith et al. 2011) virtual research environment.

Sound collections which include some Cicada recordings include the Macaulay Library, Cornell Lab of Ornithology (<http://macaulaylibrary.org/>: 148 recordings), the Animal Sound Archive of the Museum für Naturkunde in Berlin (<http://www.animalsoundarchive.org/>: 11 recordings) and Wikimedia Commons (https://commons.wikimedia.org/wiki/Category:Audio_files_of_Cicadidae: 13 recordings). In addition while region specific cicada sound collections do exist (Table 1), the aim of this resource is to provide a mechanism by which distributed collections of recordings can be made available in human and machine readable formats. The collection described in this paper with 219 recordings is the second largest collection of cicada songs made available.

General description

Purpose: We have used the BioAcoustica platform to start creating an online, freely accessible, openly licensed and global resource for anybody interested in the bioacoustics of cicadas: the Global Cicada Sound Collection (GCSC). The collection of recordings made by Price, Villet and collaborators of southern African Cicadidae is the first collection to be made available through the GCSC project. We are currently working with other collaborators internationally to make their collections available. As the GCSC will include multiple collections, made available over a long time period, individual collaborators will be publishing data papers on their contributions as they are made available (if they choose to do so). This method allows for the entire collection to be made available for research while preserving the credit of contributors through granular citation of contributions.

Additional information: The use of the BioAcoustica platform allows for recordings to be shared with the Encyclopedia of Life (Parr et al. 2014) using a DarwinCore Archive (Baker et al. 2014). BioAcoustica metadata is archived at the Natural History Museum's Data Portal (Baker et al. 2014a).

Project description

Title: Digitising Southern African Cicada Sounds for the Global Cicada Sound Collection

Personnel: Field recordings were made by Benjamin W. Price, M. H. Villet and others between 2006 and 2008. The collection was prepared for online availability by Ed Baker.

Funding: Funding for making the recordings available online was obtained by Price, Baker & Vincent S. Smith as part of the Natural History Museum Departmental Investment Fund (DIF) award SDF 14011. The recordings were made on fieldwork funded by Rhodes University (grant number 37201) and the National Research Foundation (NRF) of South Africa to Villet (grant number 65774) and Price (grant number 67389). Any opinion, findings and conclusions or recommendations expressed in this material are those of the author and do not necessarily reflect the views of the NRF.

Geographic coverage

Description: This collection of sound recordings includes cicada sounds from across South Africa and Malawi.

Coordinates: -34.75 and -10.817 Latitude; 17.602 and 34.264 Longitude.

Taxonomic coverage

Description: The taxon list includes only those taxa identified to species present in the collection.

Taxa included:

Rank	Scientific Name
species	<i>Azanicada zuluensis</i>
species	<i>Brevisiana brevis</i>
species	<i>Ioba leopardina</i>
species	<i>Munza furva</i>
species	<i>Munza laticlavia</i>
species	<i>Orapa numa</i>
species	<i>Oxypleura lenihani</i>
species	<i>Platyleura argentata</i>
species	<i>Platyleura brunea</i>
species	<i>Platyleura capensis</i>
species	<i>Platyleura chalybaea</i>
species	<i>Platyleura deusta</i>

species	<i>Platypleura divisa</i>
species	<i>Platypleura haglundii</i>
species	<i>Platypleura hirta</i>
species	<i>Platypleura hirtipennis</i>
species	<i>Platypleura maytenophila</i>
species	<i>Platypleura mijburghii</i>
species	<i>Platypleura plumosa</i>
species	<i>Platypleura signifera</i>
species	<i>Platypleura stridula</i>
species	<i>Platypleura techowi</i>
species	<i>Platypleura wahlbergi</i>
species	<i>Pycna semiclara</i>
species	<i>Pycna sylvia</i>

Temporal coverage

Living time period: 2006-2008.

Collection data

Collection name: Albany Museum

Collection identifier: AMGS

Specimen preservation method: Pinned or 70% Ethanol

Curatorial unit: Species collecting event

Usage rights

Use license: Other

IP rights notes: Recordings and metadata are released under a Creative Commons Attribution (CC-BY) licence. BioAcoustica has a fine-grained licensing mechanism, where recordings are individually licenced. Other projects may have alternative licences. Copyright of the recordings belongs to the individual sound recordists.

Data resources

Data package title: Global Cicada Sounds Collection

Number of data sets: 1

Data set name: GCSC 1: South Africa and Malawi

Download URL: <http://bio.acousti.ca/project/620>

Description: This resource is a summary of the recordings included in this project. The full BioAcoustica dataset, including this and other projects, is available in DarwinCore Archive format (as described in Baker et al. 2014) at <http://bio.acousti.ca/dwca.zip> or from Baker et al. 2014a.

Column label	Column description
Recording	HTML link to BioAcoustica recording page
Specimen	HTML link to BioAcoustica specimen/observation page
Location	HTML link to BioAcoustica location page associated with Specimen

Additional information

Harvesting of occurrence records by the Global Biodiversity Informatics Facility (GBIF)

Each Scratchpad automatically registers itself with the GBIF registry as a dataset. These datasets are associated with two entities within the registry, an organization, and an installation. The organization is 'Scratchpads', and the installation is 'Scratchpads at Natural History Museum, London', which theoretically allows additional Scratchpad installations at different institutions. The Scratchpads organization is sponsored by the UK's National Biodiversity Network, a requirement of the GBIF infrastructure.

On top of this, if a Scratchpad has a web service capable of providing data, then it is added as an endpoint to the dataset. We use a Darwin Core Archive (DwC-A) file as an endpoint to provide GBIF with the data from the sounds database.

The BioAcoustica dataset can be accessed at: <http://www.gbif.org/dataset/30f55c63-a829-4cb2-9676-3b1b6f981567>.

Acknowledgements

We would like to thank Tim Robertson and Markus Döring (both GBIF) for their work on linking the Scratchpads platform to GBIF that allows BioAcoustica to contribute to the global informatics community.

Author contributions

Recordings were made by Price and Villet. Baker developed the BioAcoustica platform to accommodate the requirements of the Global Cicada Sound Collection, and made the recordings available through the platform. Rycroft developed the Scratchpads code to allow harvesting of BioAcoustica data by GBIF. All authors contributed to the manuscript.
