Course Objectives

To provide a solid foundation for studying advanced topics in Programming Language Specification and Design.

Prerequisites CS 480/680 Comparative Languages

Course Description

This course introduces concepts related to the specification and design of high-level programming languages. It discusses different programming paradigms, algebraic specification and implementation of data types, and develops interpreters for specifying operationally the various programming language features/constructs. It also introduces attribute grammar formalism and axiomatic semantics briefly. The programming assignments will be coded in Scheme.

Course Load

The course load includes homeworks and programming assignments worth 30 points, a midterm exam worth 30 points, and a final exam worth 40 points.
