It has been accepted for inclusion in Computer Science & Engineering Syllabi by an authorized administrator of CORE Scholar. For more information, please contact library-corescholar@wright.edu.

CS 801 Advanced Database Systems

Spring Quarter, 2008

Description : Introduction of current trends and research issues in database systems.

Prerequisite : CS701 or an equivalent.

Instructor : Dr. Soon M. Chung
403 Russ Center, 937-775-5119
soon.chung@wright.edu, <http://www.cs.wright.edu/~schung>

Class : Tu. Th. 6:05-7:20 pm, 140 Health Science bldg.

Office hour : Tu. Th. 2:30-3:30 pm at 403 Russ or by appointment.
*use e-mail for short questions.

Course Material: Technical papers/chapters on the following topics:

- Object-Oriented Database
- Query Processing in Distributed Databases
- Replica Control in Distributed Databases
- Parallel Query Processing and Optimization
- Data Mining
- Spatial Databases
- Heterogeneous Multidatabases
- Multimedia Databases
- Multidimensional Hashing
- Data Warehouse

Reference Book : R. Elmasri and S. B. Navathe, Fundamentals of Database Systems, Addison Wesley Co., 2007.

Grading : A:[85,100], B:[75,85), C:[65,75), D:[55,65), F:[0,55)
Midterm 30% (5/6 Tu), Final 40% (6/12 Th, 8:00-10:00 pm) and Project 30%

Project is either writing a research proposal or design and implementation (select by 5/13)

Research proposal 30%

{ papers reviewed 6%, technical quality 8%,
written presentation 7%, originality 9% }

Design project 30%

{ design 8%, implementation and/or analysis 8%,
written presentation 6%, discussion 8% }

CS 801 Database Development Project

1. Design and implementation of a database or a database processing algorithm.
2. Possible topics are:
 - Object-Oriented database design and implementation, and then execute object-SQL queries or transactions on the database.
 - Design and implement a Web interface to your database (designed previously in CS605 or CS701). For example, Java applets can be implemented to accept user input, invoke queries/transactions on the DB, and return the result to the user.
 - Implement an algorithm and report the performance result. For example, a data mining algorithm or a parallel join algorithm can be implemented and executed on sample data.
3. Submit a description of your topic and a list of reference papers/documents. (due 5/13)
4. Detail description of design, implementation, result, and discussion must be included in the report.
5. Size of the final report is between 20 and 35 double-spaced pages. (due 6/12)

- ACM Computing Surveys
- ACM/Springer-Verlag Multimedia Systems
and Others

CS 801 Research Proposal Writing Project

1. Write a research proposal for design/implementation and/or performance analysis (based on deterministic modeling, analytical modeling, or simulation).
2. Submit a description of your topic and a list of reference papers. (due 5/13)
3. Description of a research topic, background and problem statement, existing solutions, your solution idea and/or approach with some justification, plans for design/implementation/performance analysis, expected outcome, etc. can be included in the proposal.
4. Size of the final report is between 20 and 35 double-spaced pages. (due 6/12)

Possible Topics

- Database models
- Database access mechanism (such as indexing, hashing, etc)
- Query optimization
- Concurrency control and recovery
- Parallel algorithms for query processing
- Performance evaluation of DBMS
- Distributed database
- Heterogeneous databases (Multidatabases)
- Expert database
- Logic and database
- Multimedia database (e.g. Image/video database)
- Object-Oriented database
- Engineering database
- CAD/CAM database
- Data mining
- Data warehouse
- Other relevant topics
