Preface to the forty-fifth edition

The Nestlé Company (Australia) Limited, takes pleasure in presenting to the Medical Profession this 45th Edition of the Nestlé's Diary for 1969, which we hope will prove both interesting and useful.

All extracts of publications which have been included in this edition are gratefully acknowledged, and we wish to thank those members of the Medical Profession who have provided assistance.

Our wide range of infant feeding products includes Nestlé's Strained and Junior Baby Foods, Fruit Juice Drinks For Infants, Natural Fruit Gels and Ready-to-eat Cereals, in addition to our milk formulæ "Lactogen", "Liquid Lactogen", "Pelargon" and "Nestogen", and a number of dietetic products.

Nestlé's main wish is to be an extremely effective assistant to the medical profession in the field of dietetics, infant care and nutrition. The valued advice of the medical profession is therefore always welcome in our efforts to keep abreast of the latest developments in these areas.

With Compliments

Specialists in Infant Feeding

Preface to the forty-fifth

DIARY 1969 INDEX

All extracts of publications which have been included in this edition are gratefully acknowledged, and we wish to thank those members of the Medical Performine

the wide range of infast feeding products includes Neutle's Straight and Jamor Baby Foods, Frait Jame Detaks For Arlance, Natural Frait Gals and Reads to est Corrolls, In addition to one with formula "Lackgen", "Liquid Factories", "Pelargon" and "Neutoper", and a usuber of dietetic products.

Nextle's main with it to be an extremely effective assistant to the analient profession in the field of dictetics, infant care and antrition. The valued advice of the medical profession is therefore always welcome in our efforts to keep abreast of the latest developments in these areas.

With Compliments.

NESTLÉ'S INFANT FEEDING ADVISORY SERVICE

A staff of fully qualified Nursing Sisters operates from each State capital. Their services are available free to assist mothers whose infants are being fed any of the Nestlé range of infant feeding products and is a service designed to promote proper infant care.

Nestlé's also publish a Baby Book entitled "Your Baby" (with multi-lingual supplements in Italian, Greek and Maltese) which contains valuable information for expectant and nursing mothers. Should you desire copies of this publication for reference or presentation to patients, we will be pleased to supply them at your request.

"LACTOGEN"

DESCRIPTION

A milk formula for infant feeding, specially prepared from selected high grade cows' milk. The balanced formula of "Lactogen" Powder has been developed to conform with authoritative opinion on infant feeding in Australia.

The manufacturing process of "Lactogen" ensures a standardized pure product in powder form which is readily soluble and which produces an easily digested formula containing Vitamins A, B, C and D, and organic iron.

INDICATIONS

The normal feeding of infants from birth in the absence of breast-feeding, also as a complementary or supplementary feeding.

COMPOSITION

Powder	Di	luted 1 Scoop to 1 oz	. Water or 8 mls.	Powder	to 28.4 mls.	Water		
Protein 20.4%	2.76%	Vitamin A	70 I.U.	per 1	fl./oz. or	per	28.4	mls.
Fat 23.0%	3.12%	Vitamin B ₁	0.018 mg.	1	11 11		"	
Lactose 39.3%	5.33%	Vitamin B ₂	0.031 mg.		11 11	"	,,	
Sucrose 10.5%	1.43%	Vitamin B ₆	0.010 mg.		11 11	"	"	
Ash 4.3%	0.58%	Nicotinamide	0.18 mg.		11 11	"	"	
Calories		Vitamin C	4.00 mg.		11 11	11	"	
per oz. 142	20 per	Vitamin D	15 I.U.		11 11	111	"	
	fl./oz. or	Organic Iron	0.000					
	28.4 ml.	(expressed as Fe ₂ O ₃)	0.200 mg.		" " "	~	"	

MINERAL CONTENT (mg. per 100 G.) Sodium 310 Potassium 765 Calcium 715 Magnesium 61

One scoop 8 mls. of "Lactogen" Powder contains 4.5 gms. (0.157 oz.) when filled level.

One scoop of "Lactogen" Powder large end 8 mls. to 28.4 mls. water yields 20 calories.

One scoop 8 mls. of "Lactogen" Powder large end to 1 fl./oz. water yields 20 calories.

PROTEIN

The "Lactogen" formula and Feeding Table provide a protein intake of 2.7 G./Kg. per day initially, increasing to 4.5 G./Kg. per day at 6 months. This provides a *lower* protein than in unmodified milk to avoid excess urea formation with consequent high obligatory urinary excretion, and to reduce renal load connected with mineral salts, but a *higher* protein than in human milk to allow for the comparably lower efficiency of cows' milk protein.

As the infant adapts itself more slowly to increases in protein intake than to fat or carbohydrate, the composition and Feeding Table are designed to provide a gradually increasing protein intake.

FAT

Fat intake is close to that provided by $1\frac{1}{2}$ to 2 fl. oz. bottled milk per lb. body weight daily. This level is slightly below that of unmodified milks to obtain a greater margin of tolerance. Homogenization during processing ensures a small fat globule size for improved digestibility.

CARBOHYDRATE

Carbohydrate level is adjusted to give a caloric value of 17 cals./fl. oz. up to one month of age, and thence 20 cals./fl. oz. Inclusion of sucrose and lactose provides the benefit of 'mixed sugars', reducing the risk of carbohydrate dyspepsia.

VITAMINS

No vitamin additions are necessary as Vitamins A, B (Thiamine), B_2 , B_6 , Nicotinamide, C, and D and organic iron are provided in sufficient quantities to supply daily dietary requirements as recommended by the National Health and Medical Research Council of Australia, with provision of *extra* Vitamin C for added protection against scurvy. Laboratory tests have shown that adequate Vitamin C

stress B 0.1. Normal and D and organic iron are provided in sufficient quantities to employ dely distant requirements as recommended by the National Boalth and Medical Research Council of Australia, with provision of extra Vitamin C for added protection against scurvy. Laboratory tasts have shown that adequate Vitamin C levels are maintained after storage of the prepared Lactogen formula in a refrigerator for 24 hours. (See page xiii).

FLUID

Provision is for $2\frac{1}{2}$ fl. oz. per lb. or 155 ml. per Kg. body weight per day, with allowance for a little extra per feed if required.

METHOD OF PREPARATION

Measure required amount of warm (previously boiled) water, add sugar and dissolve. Place the required number of Scoops of "Lactogen" Powder on top of the water and stir briskly with a fork until dissolved.

PACKING

Packed in an inert atmosphere in hermetically sealed 1-lb. and $2\frac{1}{2}$ -lb. tins. Each tin contains a special "Lactogen" Scoop, and gives Feeding Table on the label.

DIGESTIBILITY OF "LACTOGEN" COMPARED WITH MODIFIED COWS' MILK

In the preparation of an easily digested milk food for infants, it is necessary to ensure that the protein is altered physically, so that in its reactions with gastric enzymes and acids a soft curd will result instead of the tough curd which cows' milk normally yields with rennin.

Pasteurization, essential to destroy pathogenic organisms, has relatively little effect on softening the rennin-formed curd, and heat treatment, to be effective, must be taken to the stage of boiling. Homogenization and heat treatment combined is still more effective, while the special spray process of drying (which is extremely rapid) used for "Lactogen" gives even better results than boiling modified fluid milk for ten minutes. The curds which will result on rennin coagulation are voluminous, easily disintegrated, soft and more readily permeable to gastric juices.

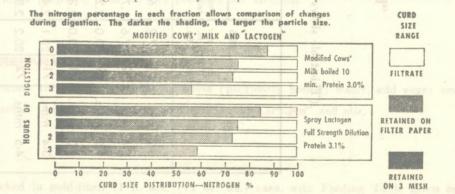

Using the technique evolved by Doan and Dizikes* the digestion of "Lactogen" as well as a modification of cows' milk was followed in the Nestlé Research Laboratory and from the results obtained the diagram was drawn (see below).

In the experiment, cows' milk modified to the protein content of "Lactogen" and then boiled 10 minutes is compared with "Lactogen".

The diagram shows, in terms of curd particle size measured hourly for 3 hours, progressive changes during digestion and also demonstrates curd characteristics.

Milk pasteurized but not boiled gave an even larger particle size than boiled milk.

Even boiling modified cows' milk for 10 minutes gives less satisfactorily digestibility than that of "Lactogen" produced by the special Nestlé process of manufacture.

"LIQUID LACTOGEN"

DESCRIPTION

An evaporated milk formula for infant feeding which was developed by Nestlé to provide the same balanced formula as "Lactogen" Powder in a convenient liquid form. When prepared according to the feeding tables, "Lactogen" Powder and "Liquid Lactogen" give identical formulæ making the two preparations interchangeable at will.

COMPOSITION

MINERAL CONTENT (mg. per 100 G.) Sodium 110 Potassium 190 Calcium 181 Magnesium 16

One fluid oz. of Liquid Lactogen + 1 fluid oz. of water or 100 ml. of Liquid Lactogen + 100 ml. of water provides a full strength 20 cals./oz. or 70 cals./ 100 ml. formula.

For details on nutritional balance, see under Lactogen Powder (Page vii) as the formulæ prepared from the two products are identical.

METHOD OF PREPARATION

Measure the required amount of warm (previously boiled) water, add sugar and dissolve. Add the required amount of "Liquid Lactogen" and stir.

PACKING

Packed in gold-lined 11 fl. ozs. (12 oz. wt.) cans, with Feeding Table given on label.

NOTE:

1. This feeding table is a guide only based on average. The hungry or bigger baby may need to be advanced one or two steps ahead. Babies often get to a "full strength" mixture by 3 months or earlier.

2. Three level tablespoons (six 8 ml. scoops) of sugar of milk may be used instead of two level tablespoons (four 8 ml. scoops) of cane sugar.

3. The feeding guide for Liquid Lactogen is for a whole day's requirements, which must be stored in the refrigerator until required. xii.

VITAMIN C LEVELS IN RECONSTITUTED "LACTOGEN" AND "LIQUID LACTOGEN" FORMULÆ

A daily intake of 44 mg. of Vitamin C up to two weeks of age, rising gradually to 162 mg. per day at 6 months, is provided for the infant fed according to the feeding tables for "Lactogen" and "Liquid Lactogen". Exhaustive tests have been conducted in the Nestlé Research Laboratory to determine the extent of Vitamin C loss in reconstituted "Lactogen" and "Liquid Lactogen" formulæ under various conditions. (These tests were conducted with "Lactogen" and "Liquid Lactogen" containing a Vitamin C level of 3.00 mg./fl. oz. at full strength dilution.)

The results of these tests are summarised below.

A. Effects on Storage

Tests were conducted on opened tins of undiluted "Lactogen" and "Liquid Lactogen", and on full strength formulæ prepared from both products.

"LACTOGEN" POWDER

		Test	Initial Vitamin C content	Final Vitamin C	% Loss
	(1)	A tin was opened and stored for 10	Content	content	
		days with daily opening to simulate			
		normal conditions	23.1 mg./oz.	22.8 mg./oz.	1.3
	(2)	Full strength formula was prepared, bottled and stored in a refrigerator			
		for 24 hours	4.16 mg./oz.	3.86 mg./oz.	7.2
"LIQUID	LACTOGE	N"			
	LAGIOGI	leared to on 1			
	(1)	A tin with half the contents removed was stored in a refrigerator for 48			
		hours	6.54 mg./oz.	5.63 mg./oz.	13.9
	(2)	Full strength formula was prepared, bottled and stored in a refrigerator			
		for 24 hours		2,85 mg./oz.	11.5
	(3)	A tin was left open in a refrigerator			1.1
		for 24 hours, then full strength formula prepared and stored in			
		refrigerator a further 24 hours	3.09 mg,/oz.	2.73 mg./oz.	11.5
	(4)	Full strength formula prepared.			
		cooled for $\frac{3}{4}$ hour in an open jug,			
			and mode and		00.0
		tor for 24 hours	3.18 mg./oz.	2.47 mg./oz.	22.3

xiii.

To provide a comparison, tests were carried out using cows' milk with a multi-vitamin preparation added according to directions:

Test Test	Initial Vitamin C content	Final Vitamin C content	% Loss
16 drops of the multi-vitamin pre-			
paration were added to 30 fl. oz.			
boiled cows' milk, the mixture cooled			
for $\frac{3}{4}$ hour, then bottled and stored	y intake of 44 1		
in refrigerator for 24 hours	1.75 mg./oz.	1.03 mg./oz.	41.1

These tests show that although there is some loss of Vitamin C on storage, adequate intake of Vitamin C is assured when "Lactogen" or "Liquid Lactogen" are used. The lowest Vitamin C content recorded was 2.47 mg. per fluid ounce of formula, which compared very favourably with the figure of 1.03 mg. per fluid ounce using cows' milk with added multi-vitamin drops. A baby consuming 30 fluid ounces per day of a formula containing 2.47 mg. of Vitamin C per fluid ounce, will receive 74 mg. of Vitamin C per day.

"LIQUID LA

B. Effects of Heat

Further tests were conducted to determine the loss of Vitamin C when the prepared formula is heated.

days with daily opening to simulate

"LACTOGEN" POWDER

	Test	Initial Vitamin C content	Final Vitamin C content	% Loss
(1)	Full strength formula was prepared			
	and boiled for 3 minutes.			5.4
(2)	Full strength formula was prepared,			
	bottled and stored in a refrigerator			
	for 4 hours, then re-heated to 60° C.			
	(to simulate unintentional over-			
	heating for feeding)	3.30 mg./oz.	3.03 mg./oz.	8.2
CTOG	EN"beregeng eaw ah			
(1)				

(1)	and boiled for 3 minutes	3.87 mg./oz. 3.75 mg./oz.	3.1
(2)	Full strength formula was prepared.	(a) A the way left open	
	bottled and stored in a refrigerator		
	for 4 hours, then re-heated to 60° C.		
	(to simulate unintentional over-		
	heating for feeding)	3.96 mg./oz. 3.58 mg./oz.	9.6

These tests show that even when the formula is boiled, or is over-heated after storage, adequate levels of Vitamin C are still maintained.

xiv.

"PELARGON"

FOR 31 HOURS FEEDING FOR WEAK, HYPOTROPHIC INFANTS DESCRIPTION range to term 10 (telm 68) (and 8 and "conversion" to conversion 4

Selected high grade cows' milk which has been pasteurized and homogenized, then modified by the addition of dextrin-maltose, sucrose, pre-cooked maize starch and lactic acid, and which is then spray-dried.

> "Pelargon" has marked anti-dyspeptic properties; mild acidification with lactic acid ensures low buffering capacity with resulting excellent digestibility and ease of assimilation. Optimum utilization of fat and protein results in increased resistance to infection, excellent tissue turgor and muscle development.

"Acidified full cream powdered milk ("PELARGON") is incontestably the food of choice in the absence of breast-feeding, because of its richness, its well-balanced composition and its digestibility; it inspires a confidence that we have never known with other artificial foods. All writers are unanimous in this respect". wassers amount of provider on top of warm (previously bolled) water (it a fold or which migh thistonghly mixed.

Prof. P. Rohmer, Debre, Lesne and Rohmer, Infant Pathology, Vol. 1

INDICATIONS at another of filmets of the last been been at and I

For infant feeding where a rapid weight gain is indicated - weak and marasmic infants, premature infants, infants with digestive problems, etc.

May also be used for the routine feeding from birth of normal infants in the absence of breast-feeding.

AVERAGE ANALYSIS OF POWDER

Fat				17.0%	Pre-cooked Maize Starch	8.5%
Protein				16.5%	Lactic Acid	2.2%
Lactose	Gala		(. A	27.0%	Mineral Salts	
Sucrose	ficulti	b.c.	1.30	10.7%	Moisture

3rd-4th week	- to b	4	4	115	5
2nd month		5	5	140	5
3rd month		51	51	155	5
4th month	TOP	6	6	170	5
5th month	11111	61	63	185	5
6th-7th month	Samp?	7	7	200	5
8th month onwards	aca (n	8	8	230	4

The Quantities indicated above are a guide only and may be increased or decreased to suit the individual infant.

> Special Note: For the first few days, a weaker mixture of 2 measures to 3 fl. oz. (85 mls.) of water may be desirable.

STRONGER FEEDINGS

FOR 24 HOURS' FEEDING FOR WEAK, HYPOTROPHIC INFANTS, 4 measures of "Pelargon" to 3 fl. ozs. (85 mls.) of water may be given. The amount of formula given should be 1/10th the body weight in ozs. plus 7 fl. ozs., without exceeding 25 fl. ozs.

FOR ROUTINE FEEDING OF HEALTHY INFANTS, $3\frac{1}{2}$ measures of "Pelargon" to 3 fl. ozs. (85 mls.) may be given. The amount of formula given should be: up to the age of 3-4 months, 1/6th the body weight, then 1/7th the body weight, without ever exceeding 35 fl. ozs.

METHOD OF PREPARATION

Sprinkle the measured amount of powder on top of warm (previously boiled) water. Stir briskly with a fork or whisk until thoroughly mixed.

Should the prepared bottle be left standing, the fine curd in "PELARGON" will tend to settle. This is normal and the bottle should be shaken before feeding the infant.

NEVER BOIL "PELARGON".

PACKING

Packed in an inert atmosphere in hermetically sealed 1-lb. tins.

As early as 1919 Marriott (U.S.A.) successfully demonstrated the use of acidified milk in infant nutrition. However, the difficulties of acidifying milk in the home largely precluded its use until the introduction of "PELARGON" some years ago in Europe and elsewhere.

"PELARGON", now available in Australia, provides a valuable addition to the range of Nestlé infant feeding formulæ, particularly in those cases where a rapid weight gain is indicated.

"PELARGON" has marked anti-dyspeptic properties and offers the following advantages:---

- remarkable digestibility and case of assimilation due to low buffering capacity and resulting fine curd formation.
- optimum utilization of fat and protein with resulting increased resistance to infection, excellent tissue turgor and development of muscle.
- spaced absorption of sugars-mixed carbohydrates reduce fermentation and avoid too rapid absorption of sugar into the blood stream.
- bacteriological safety-acidification and care in manufacturing ensures this as well as excellent keeping properties.
- single dilution factor—except in a few instances the dilution of "Pelargon" may remain constant from birth throughout—1 level measure (supplied in tin) to 1 ounce of water.

"We are confident in stating that 'Pelargon', when used immediately following the sub-acute phase of diarrhæa, has brought very valuable assistance in re-establishing an ascending weight curve. We consider it an unquestionable asset and an *excellent* routine milk formula".

Prof. de la Broquerie Fontier (Quebec, Canada).

"NESTOGEN"

DESCRIPTION

A spray-dried half-cream milk with the addition of mixed sugars (dextrin-maltose and sucrose), Vitamins A and D and organic iron.

INDICATIONS

The above feeding table is intended as a guide only and may be modified according to baby's need. Press powder firmly in measure with a knife and level off.

METHOD OF PREPARATION

Sprinkle the measured amount of powder on top of warm (previously boiled) water. Stir briskly with a sterile fork or whisk until thoroughly mixed.

It is important always to use the special "Nestogen" scoop provided in every tin (large end 8 mls., small end 4 mls.).

PACKING

Packed in an inert atmosphere in hermetically sealed 1 lb. tins.

IMPORTANT NOTE

The label of the "Nestogen" tin is marked "Unsuitable for infants under six months except under medical direction". This statement is required by law. "Nestogen" is a half cream milk and the fat content does not conform with the standards laid down for an infant food in the regulations under the Pure Food Act.

"Nestogen" combines the anti-dyspeptic properties of mixed sugars with a reduced fat content to provide a food particularly suitable for the weaning of some infants, especially those exhibiting fat intolerance. "Nestogen" also contains minimum requirements of Vitamins A and D and organic iron to ensure adequate daily intake.

NESTLÉ STRAINED AND JUNIOR BABY FOODS

FRUIT DRINKS FOR INFANTS, NATURAL FRUIT GELS AND READY-TO-EAT CEREALS

In keeping with our policy of providing a wide range of infant feeding requirements, Nestlé introduced a range of Strained and Junior Baby Foods to the Australian market, to which are now added Fruit Juice Drinks for Infants, Natural Fruit Gels and Ready-to-eat Cereals.

These foods were developed after extensive Nestlé dietetic research both overseas and in Australia. Australian authorities were consulted throughout on the questions of texture, particle size and composition, and each variety was clinically tested for general acceptance.

NUTRITIONAL BALANCE

The range of Nestlé Strained and Junior Foods provides an "Educational Diet" meeting the infant's nutritional requirements and offering appetising variety. Compositions have been designed to minimise digestive problems, and specially designed cooking techniques preserve maximum vitamin content, original flavour and colour of all ingredients, which are largely purchased from local growers to avoid loss of quality in transit. All varieties are low in salt, most are gluten-free and many are egg-free and free of milk solids.

FLAVOURS AND TEXTURES

Taste, consistency and particle size have all been the subject of extensive research in arriving at a range of varieties most acceptable to infants, to mothers and to the Medical Profession.

> STRAINED FOODS have a smooth, uniform texture to help develop swallowing reflexes. Their bland flavours are readily accepted as first solids.

> JUNIOR FOODS have a larger particle size and slightly more "adult" flavour. The "chunky" particles encourage chewing, help promote development of healthy teeth and provide extra bulk for the maturing digestive system.

VARIETIES

"Nestogen" is standards laid The range of varieties in Nestlé Baby Foods has been designed to provide an adequate variety of new tastes to educate the infant without confronting the mother with a confusing multiplicity of varieties.

"Exotic" foods, which the vast majority of infants would be unlikely to receive during childhood, have been avoided.

PACKING

Nestlé's Baby Foods are packed in hygienic and convenient glass jars—Fruit Drinks for Infants in $5\frac{3}{4}$ fl. oz., Natural Fruit Gels in 4 oz., Ready-to-eat Cereals in 4 and 6 oz., Strained Foods in 4 oz. and Junior Foods in 6 oz. to provide for the older infant's increasing appetite. The jars are vacuum sealed and the "pry-off" lid is easily removed with a special "key-opener" available free at stores, or by using the back edge of a knife. The jar is then re-sealable for safe storage, provided the infant has not been fed direct from the jar.

ACCEPTANCE TRIALS

Clinical Acceptance Trials have been conducted at a number of leading Australian Hospitals. Reaction of Doctors, Nursing Staff and Mothers to appearance, flavour, consistency and the glass packing of the Baby Foods has been favourable in all cases.

Acceptance and tolerance of the food by infants has been exceptionally good.

nior (6 ox and 4 oz. jars)

SPECIAL DIETS

To provide for the cœliac infant, sorghum starch, which is gluten-free, has been used in preference to wheat starch in the majority of varieties.

Thus a wide range of gluten-free varieties is provided. These are marked with an asterisk in the list of varieties on Page xx.

In addition, many varieties are egg-free and others are free of milk solids. These are also marked on the list of varieties.

ANALYSIS CHART

A detailed Analysis Chart is available to the Medical Profession on application to our Infant and Dietetic Products Department at 17 Foveaux Street, Sydney, 2000. This Chart shows, for each variety of Strained and Junior Foods, list of ingredients, full percentage analysis, caloric content, vitamin and mineral content and codings for varieties which are gluten-free, free of milk solids and egg-free.

RANGE OF VARIETIES

See overleaf for full list of available varieties.

"IDEAL" EVAPORATED MILK

DESCRIPTION

"Ideal" Milk is prepared from finest quality pasteurised cow's milk by vacuum concentration. It is then homogenised and sterilised by autoclaving. A modification of the proteins, brought about by sterilisation, renders the protein curd flocculent, quite different from the tough leathery curd of bottled milk. Homogenisation reduces fat globule size for improved digestibility.

"Ideal" Milk is recommended for infant feeding where the preference is for an evaporated milk, and particularly in cases of milk allergy and infantile eczema.

SUGGESTED FEEDING GUIDE IN BOTH AVOIRDUPOIS AND METRIC FOR "IDEAL" EVAPORATED MILK

The above table is intended as a guide only and may be adjusted to suit the individual infant's need. It is necessary to add vitamins when feeding with Nestlé's "Ideal" Milk.

PACKING

Also in 6 oz. wt. = $5\frac{1}{2}$ fl. ozs.

As prescribed in the Regulations under the Pure Ford Act.

xxii.

NESTLÉ'S SWEETENED CONDENSED MILK

DESCRIPTION

High grade cows' milk with added sugar, sterilized in solution, is condensed under vacuum at low temperature (135° F. = 57° C.) until water content is reduced to 25.5 per cent. The resulting Nestlé's Sweetened Condensed Milk is free of pathogens due to the rigorous control methods employed, whilst the low temperature treatment ensures almost complete retention of the Vitamins A, B, C, D and E present in the fluid milk.

INDICATIONS

For the feeding of premature infants; also for infants and children suffering from fatty dyspepsia and gastric disturbances. Also for general household use.

AVERAGE ANALYSIS UNDILUTED

Fat	9.1%	Lactose	11.8%	Cane sugar	42.5%

SUGGESTED FEEDING GUIDE IN BOTH AVOIRDUPOIS AND METRIC FOR NESTLE'S SWEETENED CONDENSED MILK

AGE		Condense Medicinal	d Milk	Boiled Medicinal	2181	Calories	No. Feeds	
			Tea- spoons	MI.	Table- spoons	or MI.	per Feed	per Day
	1st week	Trinank	1	4	2	32	16	6
	2nd week	diath y	2	8	4	64	33	6
	3rd week		3 -	12	6	96	49	6
	4th week	Perkin	4	16	Color 7 allo	112	66	6
	6th week	· Marinetta	5	20	9	144	82 .	6

The above table is based on a 1 part Nestlé's Condensed Milk to 7 parts of water.

RECONSTITUTION FOR INFANT FEEDING

A recommended method for both premature and full term infants when breast milk is not available, is to begin by using one part Nestlé's Condensed Milk by volume, with 11 parts of boiled water, e.g., 8 mls. of Nestlé's Condensed Milk to 88 mls. of water, will give a mixture yielding of approximately 11 calories per fl. oz. (28.4 mls.). Then gradually increase strength to one part of Nestlé's Condensed Milk with 7 parts of boiled water, e.g., 16 mls. Nestlé's Sweetened Condensed Milk to 112 mls. of boiled water to give a mixture of approximately 16 calories per fl. oz. (28.4 mls.). The composition of this mixture is approximately 1.4% Protein, 1.5% Fat, 8.7% Carbohydrate (1.9% Lactose and 6.8% Cane Sugar). Daily fluid requirement for premature infants is usually about 3 fl. oz. per lb. or 188 mls. per kg. body wt. daily.

When using Nestlé's Sweetened Condensed Milk as the sole diet for an infant, care should be taken that the Vitamin A and D intake is adequate, due to the comparatively low fat content of Nestle's Sweetened Condensed Milk.

METHOD OF PREPARATION

Dilute with previously boiled water.

PACKING to be and encoded and been size ball, sloots beared, leaves of alasts

14 oz. hermetically sealed tins. It must save being has strail

Sweetened Condensed Milk does not undergo the same heat sterilization treatment as does "Ideal" Evaporated Milk, and relies on its high sugar content for conservation. It is essential therefore that the fresh milk used is of the highest quality and that manufacturing hygiene be strictly observed. The fact that colony counts of less than 17 organisms per gramme of Sweetened Condensed Milk are frequently recorded in our Research Laboratories is an indication of the efficacy of the methods of control adopted.

ALIM CERTIFIC "AROBON" IN THE RELITION

DESCRIPTION and the second and the second second and the second s

A natural anti-diarrhœic, in powder and tablet form, prepared from the pulp of the Carob bean.

INDICATIONS

Arobon Powder

For the treatment of diarrhea of infants, children and adults. For diarrheas of infectious origins "Arobon" may be used together with a specific antibiotic or chemotherapeutic agent.

Arobon Tablets-are of especial convenience and value for the mobile patient.

AVERAGE ANALYSIS

 190 mg.

(Each tablet contains the equivalent of 5 G. Arobon powder.)

MODE OF ACTION

The anti-diarrhœic property of "Arobon" and its de-toxicating property is due primarily to its content of lignin, hemicelluloses, etc.

"Arobon" stops diarrhea and controls dehydration by converting loose watery stools to normal, formed stools. Bacteria and their toxins are adsorbed by the lignin, and carried away from the intestinal tract.

"Arobon" plays an important role in the prevention of diarrhœa-induced acidosis because of its high buffering capacity and content of soluble carbohydrates. The high content of potassium, sodium, phosphorus and chloride ions of "Arobon" helps to replace lost electrolytes and to normalize mineral metabolism.

DOSAGE AND DIRECTIONS

The measure enclosed in each tin contains 1 G. of "Arobon" powder.

and acid hydrolysis of casein (40%).

INFANTS

Mild Diarrhœa — 1 measure to each fl. oz. (28.4 ml.) of the formula.

Severe cases: Administer an "Arobon" decoction during the first 24 hours in place of the feeding formula as follows:--

From birth to six months - $2\frac{1}{2}$ to 4 measures of "Arobon" to each $2\frac{1}{2}$ to 3 fl. ozs. (70 to 95 mls.) of water.

From the 6th month onwards — 4 to 8 measures of "Arobon" to each $2\frac{1}{2}$ to 3 fl. ozs. (70 to 95 mls.) of water.

Then introduce gradually increasing quantities of Nestlé's Sweetened Condensed Milk, or "Nestogen" to the "Arobon" preparation. Once the cure is assured, return progressively to the routine diet.

> Prophylaxis of Diarrhea - When the possibility of diarrhea by cross infection exists: routine addition of 3 measures of "Arobon" to 5 fl. ozs. (145 mls.) of formula (i.e., 2% "Arobon") has proved efficacious.

CHILDREN AND ADULTS

Amino Nitrogra 6.0 c Two medicinal tablespoons (32 ml.) of "Arobon" Powder taken 2 to 4 times a day in ½ glass of milk or water. Dr.0004; East Abdy O'hids a proved that protein may be seen

"AROBON" TABLETS

Usually 3 to 6 tablets daily. Chew the tablet then drink a little water or tea. and one and a state contained total corresponds to 02.5% protects - none water continue with the protein

MINERAL CONTENT (mp. per 100 G.) Sodium 83 Patasalam 180 Calcium 1,200 Magnesium 53

PACKING

150 G. hermetically sealed tins, with a 1 G. measure supplied.

Tubes of 10 x 5 G. Tablets. Greine maniparte autori, Signa To and a training of the second se

"Arobon" is widely accepted as the simple dietetic method of rapidly controlling diarrhea. "Arobon" is convenient, effective and palatable. "Arobon" Tablets are now available in tubes of 10 x 5 G. tablets-particularly convenient for the traveller.

XXV.

"NESMIDA" PHOTOSRIC CHA SPAROC

DESCRIPTION was and the contains 1 G, of Academ' production

A protein hydrolysate prepared by the enzymic hydrolysis of lactal bumin (60%) and acid hydrolysis of casein (40%).

"Nesmida" provides amino acids, including all those considered "essential", in their natural proportions and in a readily soluble form for oral administration.

INDICATIONS

- 1. Where it is necessary to substantially and quickly increase rate of protein intake.
- 2. Where there is a disturbance of the digestion and the assimilation of normal protein foods.

Specific conditions for which "Nesmida" is of proven value include:-

The nephrotic syndrome, ulcerative colitis, severe burns with plasma loss, prematurity and placental insufficiency of infants, cystic fibrosis of the pancreas.

DOSAGE

(a) CHILDREN AND ADULTS

10-30 grammes "Nesmida" per day. In special cases as much as 1 gramme per kilogram body weight per day may be given.

(b) INFANTS

0.5% to 1.0% "Nesmida" (1 to 2 grammes of "Nesmida" to each 7 fl. oz. (200 mls.) of liquid). The dose may be increased to 2% if necessary.

The measure supplied with each jar of "Nesmida" holds, level, 1 gramme of powder.

INSTRUCTIONS FOR USE

(a) CHILDREN AND ADULTS

Dissolve the powder in some cold water. It may then be mixed with soup, iced tomato juice or other foods. If preferred, it may be taken in a small volume of water as a "medicine". It is preferable to administer large doses by tube.

(b) INFANTS

Dissolve "Nesmida" in the water used to mix the milk formula and boil for 2-3 minutes; after cooling, prepare milk formula in normal way.

PACKING

Jars of 100 G. with a 1 G. measure attached. DOSAGE AND DIRECTIONS FOR USE

THE SIGNIFICANCE OF AMINO ACIDS

In 1904, Emil Abderhalden proved that protein may be completely replaced by the amino acids contained therein. Dogs were nourished for periods up to one year with casein or meat hydrolized by enzymes. Growing dogs developed as rapidly as those fed on ordinary meat, and starving animals regained weight losses. It is only in recent years, however, that these facts have received their deserved attention and that suitable preparations of amino acids have become available to the medical profession.

The Essential Amino Acids-Many thousands of different protein materials exist, but there are only approximately 10 amino acids of which these materials are composed. The organism is capable of synthesizing some of these acids, but approximately 10 of them cannot be synthesized by the body and these are known as "essential" amino acids. Such essential amino acids are: lysine, arginine, histidine, tryptophan, phenylalanine, leucine, and isoleucine, valine, threonine and methionine-the last two containing sulphur.

"Nesmida" contains all these essential amino acids, which together with the "non-essential" amino acids, are directly absorbed through the alimentary canal into the blood stream. For children and adults "Nesmida" is useful in alimentary disturbances, gastric and peptic ulcers, colitis, enteritis, nephritis, debility, malnutrition, loss of appetite, loss of weight, convalescence and in pre- and post-operative surgery-increasing resistance to infection and encouraging the healing of wounds.

> "Nesmida" is also valuable for feeding premature infants which begin life with a considerable protein deficiency.

"NESTARGEL"

DESCRIPTION

"Nestargel" is a dietetic preparation for the control of vomiting in infants. It is prepared from the seed of the Carob bean (Ceratonia seliqua).

"Nestargel" has the property of increasing the viscosity of the feeding formula without affecting either caloric value or nutritive balance. This eliminates excessive ærophagy and maintains a thickened consistency of food in the stomach.

INDICATIONS 1. Jord., shiel "shimes?" to sai that belows more

- (a) The dietetic treatment of infants (artificially or breast fed) suffering from habitual vomiting when not directly due to organic disease; e.g. œsophageal regurgitation, rumination, dyspeptic vomiting and emetic coughing, such as whooping cough.
- (b) For the dietetic control of obesity by use of a "thickened" meal.
 - (c) For the incoercible vomiting of pregnancy.
 - (d) Improving the suspension of barium for radiological examinations.

MINERAL CONTENT (mg. per 100 G.) Sodium 18 Potassium 320 Calcium 600 Magnesium 30 DOSAGE AND DIRECTIONS FOR USE

INFANTS

(a) Breast fed infants:-

A thick pap, prepared from 3 measures of "Nestargel" to 31 fl. ozs. (100 mls.) and and boiled for 1 to 2 minutes) should be given before an vibiger as boundary or during the course of each feed. (The measure supplied with each jar of "Nestargel" holds, level, 1 G. of "Nestargel".)

Mix the "Nestargel" in cold water or milk formula and boil for 1 to 2 minutes. (Slightly enlarge the hole in the teat.) Normally, an addition of teres elandary man I measure of "Nestargel" to each 7 fl. ozs. of formula is sufficient. However, this may be increased if necessary to 2 or even 4 measures to each 7 fl. ozs. (200 mls.) of formula. (1 G. measure "Nestargel" to 7 fl. ozs. of formula awould are send the provides a $\frac{1}{2}\%$ solution.) of tenter mode to the variantizority

ADULTS ADULTS

Treatment of vomiting in pregnancy. A boiled mixture of "Nestargel", one measure in 8 fluid ozs. (230 mls.) of water, half an hour before meals.

Radiography: Normally a 1% "Nestargel" mixture (1 measure to $3\frac{1}{2}$ fl. ozs. forme realization of the suffice. The state of the state

NOTE

The thickening properties of "Nestargel" are unaffected by temperature or by digestive gastric enzymes.

PACKING

Jars of 100 G. with a 1 G. measure attached.

"Nestargel" is a safe, simple and effective method of controlling vomiting in infants.

The use of "Nestargel" can also assist the continuation of breast feeding of infants suffering from habitual vomiting. al sol translogue black entrat

"MALTOGEN"

DESCRIPTION

Malt sugars with Vitamin B (Thiamine), for infants and adults.

"Maltogen" is a dried extract of malt sugars prepared by the enzymic action of malt diastase on barley malt, and other cereals. Not only are the natural vitamins and mineral salts retained, but these are fortified further by the addition of Vitamin B (Thiamine).

INDICATIONS and that to describe entropy while "should "should "should be seen a set

Constipation in infants;

Anorexia;

Additional carbohydrate intake in infant feeding.

"Maltogen" helps to correct constipation in infants. It improves appetite due to its malt flavour and richness in Vitamin B (Thiamine). For adults the malt flavour provides a refreshing variety in the diet, necessary in cases of anorexia.

"Maltogen" is also useful when a high or a mixed carbohydrate diet is indicated, since malt sugars are readily absorbed, better tolerated than other sugars, and less liable to ferment or to cause development acidosis.

DOSAGE

Infants: For constipation and anorexia, $\frac{1}{2}$ to 1 teaspoon (2 to 4 ml.) added to the feeding bottle is usually effective.

Children and Adults: 1-3 teaspoons (4 to 12 ml.) to $\frac{1}{2}$ pint (28.4 ml.) "Lactogen" or milk. May be used dry on breakfast foods and puddings, or in place of sugar in cooking.

PACKING

12 oz. hermetically sealed tins.

As a valuable carbohydrate for the modification of "Lactogen" or other milk in infant feeding, the following table will be of use:---

"MALTOGEN"	DILUTED "LACTOGEN" Mls. or Fl. ozs.		INCREASE IN CARBOHYDRATE

"MILO"

DESCRIPTION

A concentrated tonic food, chocolate flavoured. It is prepared from milk and extracts of malted cereals and contains their naturally occurring vitamins and minerals. It is a source of vitamins A, D, B (Thiamine) and of mineral iron.

INDICATIONS

As a general "tonic" food, "Milo" supplies elements of high nutritive value in an easily digestible form, pleasant to take.

As a complementary food, "Milo" is particularly indicated for insomnia and nervous debility; during pregnancy; for the nursing mother; in geriatric and post-operative diets, and during convalescence

DIRECTIONS FOR USE

HOT "MILO"

Place two or more teaspoons of "Milo" in a cup and add hot milk. Stir to dissolve and sweeten to taste.

ICED "MILO"

Place required amount of "Milo" in a cup and add a little hot water to dissolve. Sugar to taste. Fill glass with iced milk, and if desired, a spoonful of ice cream.

PACKING

8 oz. (227 G.) and 14 oz. (398 G.) hermetically sealed tins.

Special bulk 3-lb. (1.814 Kgs.) hermetically sealed tins for Hospitals and Institutions.

"Milo" provides a source of essential minerals and vitamins in a pleasingly palatable form acceptable to all age groups.

NERVOUS DISORDERS

"Milo" is a valuable anti-neuritic tonic food.

PREGNANCY

"Milo" is of particular value during pregnancy as it increases the calciumphosphorus intake.

NURSING MOTHERS

"Milo" offers the supplementary nourishment required during this period and in particular supplies vitamins required to maintain the general health of the mother and guard against possible deficiencies in the infant.

CONVALESCENTS, POST-OPERATIVE CASES, ETC.

"Milo" may be usefully prescribed in all cases requiring an easily digested tonic food.

"Milo" has excellent keeping qualities and is extremely convenient in use-it can be taken with either hot or cold milk.

"Milo" may also be used in place of cane sugar on cereals and puddings.

NESTLÉ'S MALTED MILK CONTAINING VITAMIN B (Thiamine)

DESCRIPTION

A preparation of milk and malt solids (in the ratio of 1:2) dried to a powder under vacuum. The malt solids are prepared by the enzymic action of diastase on malted barley and other cereals, the whole of the starch being completely converted into soluble malt sugars.

INDICATIONS

Particularly useful in convalescent and post-operative diets where easy digestion and rapid assimilation are essential.

AVERAGE ANALYSIS OF POWDER

"Fat" ni novo :	9.4%	Mineral salts 2.7%

MINERAL CONTENT (mg. per 100 G.) Sodium 600 Potassium 680 Calcium 329 Magnesium 92

DIRECTIONS FOR USE

Three or more teaspoons in hot or cold milk makes a tasty and nourishing beverage.

The preen collec brans are subjected to an elaborate solvent treating NIXAAA

mort analy add 1-lb. hermetically sealed tins. The particulation adds of introjdue

Nestlé's Malted Milk provides a valuable dietary supplement, rich in Vitamin B (Thiamine), for the alleviation of mental and physical fatigue and for stimulation of the appetite. Since Vitamin B (Thiamine) is not stored in the body adequate daily intake is essential.

XXXI.

STERILIZED REDUCED CREAM

Water	Fat	Solids— not fat	Wt. oz. 1 med. tablespoon	Calories in 1 med. tablespoon
68.0	25.5	6.5	.50	38.0

Percentage Composition:

Sterilized Reduced Cream is manufactured in a similar way to "Ideal" Milk except that concentration is not required. Although absolutely free from preservatives, Nestlé's Sterilized Reduced Cream will keep indefinitely in the unopened tin.

Cream, on account of its high percentage of butterfat, is a source of Vitamins A and D and according to authorities the method of manufacture we use does not appreciably affect these vitamins.

OMMATHOO "NESCAFÉ" AM PRIMA

Nestlé's "Nescafé" is a Pure Coffee Extract in powder form, made by an exclusive process from a selected blend of coffee beans.

These beans are roasted to the correct degree, ground and then, by percolation, the soluble coffee solids are extracted under carefully controlled conditions.

In this way, all the aroma, flavour and wholesomeness of first quality, freshly ground coffee beans is retained in the percolated liquor.

The coffee liquor so obtained is dried without any additions at all by means of a special Nestlé patented process, to produce "Nescafé". It is made from 100 per cent. pure coffee.

For ease, speed and convenience in preparing a cup of excellent coffee, either black or white, "Nescafé" cannot be surpassed.

"Nescafé" dissolves instantly in hot water or milk; even in cold water or milk it dissolves rapidly and completely, leaving no grounds. It truly is an INSTANT coffee.

"NESCAFÉ"-DECAFFEINATED

MINERAL CONTENT (mg. per 100 G.) Sadium 600 Patasium 680 Calcium 329

This product has been prepared to meet the needs of those people who like coffee but are unable to tolerate caffeine.

The green coffee beans are subjected to an elaborate solvent treatment which removes not less than 95 per cent. of their caffeine content, and thereafter are subjected to the same roasting, extraction and drying processes as the beans from which normal "Nescafé" is made.

As a result, Decaffeinated "Nescafé" has the same flavour and drinking qualities as normal "Nescafé"—in fact, it is "Nescafé" without its caffeine content.

"MAGGI" SOUPS

A range of easily prepared pre-cooked "Maggi" Soups is now available in small packets, in a dry form. Protected by modern packaging material, by virtue of their low moisture content, they retain their quality and flavour for a relatively long period of time.

These soups reconstitute readily and require a minimum of cooking. Varieties are Chicken Noodle, Creme of Chicken, Mushroom, Pea with Ham, Tomato, Thick Vegetable, Spring Vegetable, Beef Noodle, Curry & Vegetable, Creme of Vegetable, Chicken & Mushroom, Vegetable Romana, Beef Stock and Chicken Stock.

"Maggi" Soups are made under strict supervision and will be found useful in adding variety to invalid and convalescent diets.

"MAGGI" SAUCES

A range of easily prepared pre-cooked "Maggi" Sauces is now available in small packets, in a dry form. Protected by modern packaging material, by virtue of their low moisture content, they retain their quality and flavour for a relatively long period of time.

These sauces reconstitute readily and require a minimum of cooking. Varieties are: Savoury Mushroom, Brown Onion, Curry, White, Bolognaise, Cheese, and White Mushroom.

NESTLÉ'S MILK CHOCOLATE

Nestlé's Milk Chocolate supplies, in a concentrated form, the solid constituents of full-cream milk, finely ground cocoa beans and sugar. Due to its richness in fats and carbohydrates, calcium and iron, it is a highly nutritious food.

The eating quality of chocolate is to a great extent dependent on its smoothness on the palate, and this is related to the size to which the refining process during manufacture reduces the particles of cocoa and sugar. Limiting size is about 25 microns for complete absence of perception of grittiness and this is achieved by prolonged and carefully regulated grinding.

During the entire process of manufacture, Nestlé's Milk Chocolate is under careful laboratory control, thereby ensuring at all times a pure and wholesome product of constant quality and composition.

xxxiii.

THE PROCESS OF MANUFACTURE OF "LACTOGEN" POWDER AND flama ni sfdaliava won si aqu

"LIQUID LACTOGEN"

The preparation of Nestlé milk products commences even before the milk is collected.

Each factory has its staff of qualified farm inspectors, responsible for maintaining the high standard of dairy hygiene demanded of all Nestlé's suppliers. They examine cattle for disease, ensure cleanliness of dairy premises and see that the Company's "Regulations under which Milk is Received for Condensation at Nestlé

Factories" are observed. All milk cans after emptying are washed and sterilized with live steam in automatic can-washing machines by Nestlé employees.

> Milking times for each supplier and timetables for collecting vehicles are synchronised to ensure minimum delay in processing. (Fluid milk for city consumption often is 24 to 48 hours old before delivery and older still when consumed.)

> Milk received at the Company's factories is thoroughly tested in the factory laboratory and only if satisfactory is it manufactured into "Lactogen".

The composition of liquid milk varies considerably even from day to day, so samples and visiting of each batch for manufacture are immediately analysed in the factory laboratory. The milk components are then adjusted so that "Lactogen", when reconstituted, has a reduced protein and fat and increased carbohydrate content, thus complying more closely with the requirements of the average baby.

PASTEURIZATION. Having correctly adjusted the composition of the raw milk, it is pasteurized to ensure complete destruction of all pathogenic organisms.

HOMOGENIZATION. The milk is forced through a valve under high pressure, breaking up large fat globules and making the milk homogenous. The fat globules of both human and cows' milk vary in diameter from between 1/1,000 and 1/100 mm., though there are more of the larger globules in cows' milk. Homogenization reduces to a size even smaller than that of human milk.

The advantages of homogenization are:---

(i) Small fat globules present a large surface area to lypolytic enzymes.

(ii) Unhomogenized milk tends to form a tougher coagulum during digestion.

SUCROSE. Some sucrose is incorporated in the formula to provide the benefit of mixed sugars. This is added after the final process of spray-drying for "Lactogen" to bread of Powder and before the evaporation for "Liquid Lactogen".

> SPRAY-DRYING ("LACTOGEN" POWDER). The milk is spray-dried by a special Nestlé process. The milk is forced through small jets as a fine mist into a current of warm air. The water is immediately evaporated from the milk droplets, leaving behind particles of milk powder which are collected automatically at the bottom of the drving chamber by a continuous process.

xxxiv.

VITAMIN

This drying action is gentle, producing a readily soluble powder, which when reconstituted with water, compares very favourably with fluid milk. The powder so produced is subjected to check analyses before being packed by automatic machines into tins. "Lactogen" is untouched by human hand at any time during manufacture or packing. Packed in inert atmosphere and hermetically sealed.

EVAPORATION ("LIQUID LACTOGEN"). The formula is concentrated by evaporation under vacuum, packed into tins, sealed, and is heat-sterilized to ensure bacteriological purity.

VITAMIN AND IRON CONTENT

The vitamin content of the milk is conserved in the process of manufacture, since the milk is only exposed for a limited period to a temperature sufficient to ensure destruction of all pathogens. However, the vitamin content of fluid milk is dependent largely on the food of the cow, and, in the case of Vitamin D, exposure to sunshine. Milk in Australia is produced under very nearly ideal conditions.

To ensure the provision of minimum daily requirements, vitamin additions are made to both "Lactogen" Powder and "Liquid Lactogen" to provide the following vitamin content in a full strength 20 cals./oz. formula:—

Vitamin A	70 I.U. per fluid	oz. or 28.4 mls.
Vitamin B (Thiamine)	0.018 mg. "	Include marging
VILAIIIIII Do	0.031 mg. ",	"
Vitamin B ₆	0.010 mg. "	53
Niaotinomico	0.18 mg. ,,	>>
	4.00 mg. "	35
Vitamin D	15 I.U. "	32

See page xiii for details on maintenance of Vitamin C levels in reconstituted "Lactogen" Powder and "Liquid Lactogen" formulæ.

Since cows' milk is lower in iron than human milk, sufficient Ferri et Ammonii Citras, B.P., is added to give 0.2 mg. of organic iron, expressed as Fe_2O_3 , per fluid ounce of reconstituted formula.

MAINTENANCE OF FRESH STOCK

The date of manufacture is shown on the bottom of every tin of "Lactogen" Powder and "Liquid Lactogen". Periodic checking of all stock in the trade by Nestlé representatives ensures that fresh stock is always available, as any stock over nine months old is withdrawn and replaced.

"Lactogen" Powder and "Liquid Lactogen" are entirely Australian products manufactured by the Nestlé Company in factories situated at Smithtown, North Coast of New South Wales; Dennington, Western District of Victoria; Maffra, South East Victoria; and Gympie, Queensland. Milk supplies are drawn from some of the world's richest pastures.

XXXV

VITAMIN

VITAMIN A

(The anti-ophthalmic anti-infective vitamin-Oil soluble-Heat-stable, cooking or drying at usual temperature has little effect-Oxidises at higher temperatures).

Prevents infections (especially of eye and respiratory system), promotes growth and long life, appetite and digestion, and maintains vigour.

It is essential for normal reproduction and lactation and for maintaining the integrity of epithelial tissue. Deficiency may result in gland and sinus infection, kidney, ureter and bladder calculi, diarrhœa, physical weakness, etc. The International Unit is 0.6 $_{\mu g}$ of International Standard β Carotene.

THIAMINE (Vitamin B)

(The anti-neuritic vitamin-Water- and Alcohol-soluble-Heat-labile, especially in alkaline solutions).

Promotes appetite and digestion, as well as growth, by improving metabolism, and also tonicity of the digestive tract.

It protects against nerve disease, e.g. polyneuritis and beri-beri, in association with other B vitamins and is necessary to the mother for normal lactation.

Deficiency may result in impaired digestion and growth, loss of weight and vigour, subnormal temperature, fatigue, loss of muscle co-ordination, paralysis of limbs, indigestion, constipation and colitis.

Necessary for normal reproduction, influencing normal maturation of germ cell in male and normal placental function in the female. Deficiency leads to death and resorption of the foctus.

The International Unit is 0.003 mg (approx.) of Aneurine hydrochloride. (1 mg = 320 I.U., formerly 333 I.U.)

RIBOFLAVINE (Vitamin B₂)

(Growth promoting-yellow coloured-slightly water-soluble-heat-stable except in alkaline solutions).

Acts as part of enzyme system regulating metabolism of fats, carbohydrates and amino acids-sparing action on B₁.

Avitaminosis causes cessation of growth in young and sudden death in adults, decreases resistance to infection, probably causes alopecia and cataract, cheilosis, seborrhœa, ocular symptoms, corneal opacity, pellagra, black tongue and beri-beri.

There is no International Unit-most recent figure is:-1 Bourquin-Sherman Unit = 2.19_{μ} g.

NOO OP P P P R

NNN

(Pellagra preventive vitamin)

No known clinical symptoms for mild deficiency but general deficiency symptoms are summarised as pellagra, although this is not caused solely by Nicotinamide deficiency. Lack causes lesions of mucous membranes and a dermatitis on parts exposed to sunlight.

International Unit-None has been fixed.

ASCORBIC ACID (Vitamin C)

(The anti-scorbutic vitamin-Water soluble-Readily oxidised at higher temperatures).

Protects against scurvy. Also necessary for the proper metabolism of bones and normal tooth development and maintenance. Deficiency leads to scurvy, hæmorrhages of mucous membrane, skin, joints, and bone marrow; spongy gums, painful swelling of joints, bone fragility, decalcification, caries, fatigue, etc.

The International Unit is 0.05 mg of Ascorbic Acid.

VITAMIN D

(The anti-rachitic vitamin-Oil soluble-Heat-stable-Fairly resistant to oxidation).

Regulates absorption and metabolism of the calcium and phosphorus needed for bone formation. Similarly regulates mineral metabolism of teeth and bones. It is necessary to the pregnant mother to prevent rickets in the young.

Deficiency results in rickets and bone deformity, enlargement of the joints, beading of ribs, softening of cranial bones, etc., as well as muscular weakness, nervous instability, dental caries and so on.

The International Unit is 0.025 µg of the International Standard preparation of crystalline D₁.

VITAMIN E

(The anti-sterility vitamin—Oil-soluble—Heat-stable, cooking, drying or sterilizing has little effect—Susceptible to oxidation). Not yet settled whether E avitaminosis occurs in man. Considerable evidence exists that it may exert beneficial influence on habitual abortion and possibly threatened abortion, toxæmias of pregnancy, sterility and muscular dystrophy, also peripheral vascular diseases and capillary permeability.

The International Unit is 1 mg synthetic racemic a tocopherol acetate.

Calories		

Other vitamins for example, fat-soluble D, E and K are present in appreciable quantities, also water-soluble Vitamin B₁₂. Vitamin C approximates 44 milligrammes.

Milk is an excellent source of calcium and phosphorus and contains sodium, potassium, magnesium, chlorine and sulphur as well as the "trace" minerals.

DIETARY ALLOWANCES FOR AUSTRALIANS (1965 REVISION)

At the Sixtieth Session of the National Health and Medical Research Council held in Canberra on October 29, 1965, the Council adopted a revision of the Dietary Allowances for Australians, prepared by its Nutrition Committee. This revision is published as Appendix I to the Report of the Sixtieth Session. It is also published as a Special Report in the N.H. & M.R.C. series. This latter is available free on application to the National Health and Medical Research Council, P.O. Box 93, Canberra.

Dietary Allowances for Australians (1965 Revision—Abridged)

Purposes and Intended Uses

These Tables of Dietary Allowances for Australians are intended as a guide for compiling diets from foodstuffs. When a diet is designed to contain the nutrients listed, it is likely to contain all other dietary factors necessary for health but which have not been listed, such as the bulk factor, pantothenic acid, folacin, Vitamin E, magnesium, etc.

The understanding of the many aspects of good nutrition is by no means complete, but it is known that fundamental defects in the overall pattern of a diet cannot be corrected with a few vitamin/mineral supplements. A balanced diet providing an adequate amount of each essential nutrient from foodstuffs should be planned for optimal nutritional health.

Specific Uses of Dietary Allowances

The dietary allowances may be used:

(i) As a guide to planning menus for individuals, and groups.

(ii) As a guide to planning therapeutic diets. Although the Tables are designed for normal healthy people they can help in planning diets for specific therapeutic purposes.

xxxviii.

(iii) For a first assessment of the adequacy of the diet of a group or individual. The use in this respect is limited because of the wide "margin for safety" incorporated in values allowed for some nutrients, variations in the needs of individuals, and the need to consider sociological factors.

MAN

Annex A: Definition of a Reference Man and a Reference Woman

The reference man is twenty-five years of age. He is healthy, that is, he is free from disease and exhibits a "normal" degree of physical fitness. He weighs 70 kilograms (154 pounds) and lives in the warm temperate zone at a mean external annual temperature of 18° C. (64° F.).¹ He consumes an adequate, well-balanced diet; he neither gains nor loses weight. His activity is exemplified by the following average weekly schedule on each working day, eight hours of physical work of the type referred to below, four hours of "sedentary" activity (for example, reading, writing), walking slowly on the level for two hours, and at least two hours out of doors; on each non-working day, the active pursuit of exercise and sport not of the extremely strenuous variety. The degree of activity involved in occupation in light industry or general laboratory work would represent approximately his working activity.

WOMAN

The reference woman is a similarly healthy woman, aged twenty-five years, weighing 58 kilograms (128 pounds). She lives in the same environment as the reference man and is engaged in general household duties, including the care of small children, or light industrial work. Non-working activities include slow walking for two hours, and two hours spent out of doors. At times she engages in activities such as gardening and non-strenuous sports.

TABLE 1 Dietary Allowances for Australians (1965 Revision)

Method of Use____

- A. Allowances for a "reference man" and "reference woman" (Annex A) of the appropriate age, sex and physiological state are given in Table 1.
- B. Allowances for calories for adults other than a "reference man" and "reference woman" are found by selecting the appropriate value from Table 2 plus the appropriate adjustment taken from Table 3.
- Allowances for B vitamins for other than for a "reference man" and a "reference woman" are found by entering Table 4 at the Allowance for Calories given by B above, and reading off the corresponding values. (See footnote 1 on previous page.) Ľ

¹ Protein—Adults. For adults in the older age bracket, because of reduced activity and consequently lower calories requirements, the protein intake and requirements may well be below the selected figure. Adults with compartively large calorie intakes (e.g., 4000+) within the Australian dietary pattern may have protein intakes appreciably above this figure. It is suggested that, in both these circumstances, a practical protein allowance be calculated on the basis of 10 to 12 per cent. of the calories being derived from protein. For this purpose a ready reckoner is provided in Table 4.

Children. The allowance for protein for an individual or a group can be expected to be between these two figures, and, because of the character of the Australian dietary pattern, closer to the upper than the lower.

Calorie Allowances for Body-Weight and Age

Note.—An adjustment will also be required for individuals whose activity differs from that of a "reference man" and "reference woman". For example, the activity level usually declines after age 25. At age 65 this would be Grade 0 in most cases. The appropriate adjustments are given in Table 3.

and a set of the set o

	81 to		178 to 199	830	0	+440	+990	

Note.—Estimates of adjustments for energy requirements for different levels of activity (Table 3) were influenced by the results of the Medical Research Council Report on Studies of Expenditure of Energy and Consumption of Food by Miners and Clerks, Fyfe, Scotland, 1952 (Special Report Series No. 289).

It was found that the average daily expenditure of energy by 10 male clerks of average body weight of 64.6 kg. was 2800 Calories, compared with an average daily expenditure of energy by 20 miners of average body weight of 65.9 kg. of 3660 Calories. These figures were adjusted to the body weight of a "reference man" of 70 kg. on the assumption that the energy expenditure will vary at a rate equal to 0.75 power of body weight, as has been suggested by Kleiber (1947) for the basal metabolism component. The adjusted figures are 2900 Calories for clerks and 3800 for miners. It is assumed that the energy expenditure of clerks corresponds with that of a "reference man" (see definition in Table 3 and Annex A). This has been designated Grade 1 activity, and that of the miners Grade 3 activity. It was considered that in modern industry few activities would exceed the energy expenditure by miners.

Grade 2 activity has been arbitrarily interpolated. Some people today have a level of activity significantly less than that of a reference individual. Such a level has been arbitrarily set at a maintenance level == basal metabolism $\pm 1/3$ basal metabolism. It is designated Grade 0.

TABLE 4

Ready Reckoner for Allowances for Protein, Thiamine, Riboflavin and Niacin Equivalents Related to Calories Allowances

Calories	Equiv	Protein g. alent to a Percent of Calories	age	Thiamine (a)	Riboflavin (b)	Niacin Equivalents (c)

Eric Pritchard, M.A., M.D., F.R.C.P.

"The time-honoured belief in the virtues of raw milk for feeding of infants still survives in certain quarters, in spite of all the scientific evidence which proves that such virtues are quite illusory. It is, perhaps, unnecessary to point out that since dried milks, which are, of course, cooked milks, have largely superseded dairy milkfor the most part raw-in the feeding of infants, the Infant Mortality Rate in this country has steadily fallen. There are naturally many other factors besides the mere cooking of milk concerned in this highly satisfactory result, but it is quite certain that if the heating of milk seriously impaired its nutritive qualities this result would never have been achieved. The effect of heat on the nutritive properties of the various elements contained in the milk is insignificant, excepting in the case of Vitamin C, the anti-scorbutic element, which undoubtedly deteriorates under the influence of heat and oxidation, but since an independent supply of this vitamin is invariably provided in all cases of artificial feeding, this is no argument against the use of sterilized milk if sterilization has independent advantages. As regards this latter point there cannot be two opinions. The greatest danger that exists for young infants is infection, and there can be no question that raw milk is the most prolific medium for the conveyance of infection."

(c) the difficulty encountered because of language barriers in attempting to educate

RECENT ADVANCES IN DISEASES OF CHILDREN Wilfred J. Pearson, D.S.O., M.C., D.M., F.R.C.P., and W. G. Wyllie, M.D., M.R.C.P.

they do not appreciate that by so doing, they have reduced the infant's accordic acid

"There are advantages in the use of dried milks instead of the fresh variety. They are practically sterile, and are certainly to be preferred to contaminated fresh milk. The percentage of ingredients is known within reasonable limits. The nutritive value seems to be uninjured; indeed, it is probably improved, both because of the alteration in the protein, the casein being divided into minute particles during the process, and because the size of the fat globules is reduced during manufacture. The keeping qualities also are excellent. It is claimed that none of the Vitamins (A, D, B, or C) is impaired in the process."

VITAMINS C AND D redenity of the bound of the

SCURVY IN AUSTRALIA

Rendle-Short, T. J.-Medical Journal of Australia, September 29th, 1962 given ocally in a douge of 3.000 unit.

"Scurvy is a great deal more common in Australia than in Great Britain. In one year I have seen about 18 cases in Brisbane, compared with about 10 cases in males and a 15 years in various parts of England.

Both on the grounds of expense and certainty of action, it is apparent that fresh orange juice is a poor way of giving Vitamin C. The multi-vitamin compounds are expensive, the ascorbic acid content is not very high, and they deteriorate rapidly under unfavourable conditions.", nimetir out ni nothing and a

INFANTILE SCURVY IN RELATION TO INFANT WELFARE WORK

Medical Journal of Australia, 21st June, 1958

An investigation was undertaken to discover why, with improved standards of living and improved knowledge of nutritional requirements, the disease not only still occurred but was apparently on the increase.

No patient had been breast-fed beyond the age of three months. Thirty-four of the thirty-eight infants did not receive orange juice for various reasons. Only four infants received adequate supplementary vitamin preparations. Of the mothers of those four children, one boiled the vitamins in the milk. One took the supplement from a bottle that had been partly used and then stored for many months; analysis showed it almost devoid of ascorbic acid. The other two babies who were said to have received adequate ascorbic acid, recovered rapidly when it was given by mouth, and the mother's account was regarded as not acceptable.

SCURVY YESTERDAY AND TODAY

Australian Medical Journal (August 22nd, 1959)-Elizabeth Turner, David Pitt, Roderick Thomson

It is believed that the increasing incidence of scurvy in Victoria is a real one, and may be due to many factors, chief among these being:---

- (a) profound ignorance by the parents of the importance of fresh foods or vitamin supplements in the infant's diet;
- (b) a tendency to carelessness and neglect in the management of feeding of children occurring later in the family;
- (c) the difficulty encountered because of language barriers in attempting to educate New Australians in the proper use of new infant food habits.

These people often readily abandon old food customs and discontinue breast feeding; although they readily co-operate in sterilizing the milk formula and other foods, they do not appreciate that by so doing, they have reduced the infant's ascorbic acid intake.

The authors suggest that it may be necessary to provide free orange juice, as is the practice in Great Britain and also put forward two further steps that may help to reduce the high incidence of scurvy;

- (i) making scurvy a notifiable disease;
- (ii) placing multi-vitamin preparations and ascorbic acid on the "free list" (Commonwealth Pharmaceutical Benefits).

RICKETS IN IMMIGRANT CHILDREN IN LONDON

Benson, P. F., Stroud, C. E., Mitchell, N. J., and Nicolaide, A .- British Medical Journal, April 20th, 1963

"The prompt healing on administration of Vitamin D, which in the majority was given orally in a dosage of 3,000 units daily, confirmed the nutritional ætiology. In the remainder, who were given an initial dose of Vitamin D by injection, failure to relapse on a normal diet excluded any Vitamin D resistance.

In the dietary history of these children there were two outstanding features: (1) prolonged feeding with breast or cows' milk, and (2) failure to give either vitamin supplements or dried cows' milk fortified with Vitamin D....

In the Cypriot and West Indian children prolonged feeding with cows' milk or breast milk was usual and led to gross dietary deficiency of Vitamin D. There is a large variation in the vitamin content of milk."

SEVERE TYPE OF INFANTILE HYPERCALCÆMIA

B. E. Schlesinger, M.D., F.R.C.P., N. R. Butler, M.D., M.R.C.P., D.C.H., J. A. Black, M.D., M.R.C.P.—British Medical Journal, 21st January, 1956, pp. 127

Infantile hypercalcæmia has only recently been recognised.⁽¹⁾

There are two varieties of the disease. A simple or benign form with good prognosis. A more severe type with a definite mortality can be recognized by a characteristic facies, present from an early age. All survivors so far followed have been mentally retarded. of stude of participation participation of the second participation of the

Naturally the key to the whole problem would be the discovery of the cause of the hypercalcæmia. There has been no evidence of hyperparathyroidism. Neither bone destruction nor immobilization plays any part in the production of the hypercalcæmia. We have been unable to find any evidence of an abnormally high intake of Vitamin D by the infants under discussion, nor by their mothers during pregnancy in the four cases we were able to investigate fully. Four of our infants had been fed on dried milk-700 I.U. of Vitamin D per reconstituted pint (1,232 I.U. per litre)-for some months before the development of symptoms, with the addition of vitamin supplements in normal amount.

Overdosage with Vitamin D having been excluded, the possibility of hypersensitivity to the vitamin must be carefully considered. It is known that the amount of Vitamin D required to prevent rickets varies enormously from individual to this is a similarly wide range in the amount all has not which will produce hypercalcæmia.

SUMMARY. Excessive Vitamin D intake was regarded as a possible cause, but no evidence of this could be found. An abnormal sensitivity to Vitamin D, determined by individual metabolic requirements or by growth disturbance, is suggested.

PROPHYLACTIC USE OF "AROBON"

A. Vianello et al.-La Clinica Pediatrica, 1958, 40, pp. 532-544

The authors report on the results obtained over a ten-year period with "Arobon" given prophylactically to 738 infants in an orphanage. After a brief review of the product's therapeutic characteristics and possible drawbacks, they consider the following prophylactic indications :---

1) Newborn babies bottle-fed from birth or almost, and prone to dyspeptic stools.

- 2) Breast-fed infants suffering from fermentative dyspepsia.
- 3) Diathetic infants.
- 4) Children weaned normally.
 - 5) Infants suffering from chronic otitis.
 - 6) Children submitted to prolonged antibiotic therapy.
- 7) Lastly, all young bottle-fed infants during the summer or during a viral or gastro-enteric type of epidemic, in conjunction with specific therapy directed at the cause of the complaint.

Parenteral forms were found to be more refractory to prophylactic treatment and improvement and ultimate care were obtained only in association with suitable anti-infection therapy.

The authors concluded that "Arobon" is of undoubted efficacy in the prophylaxis of diarrhœa, modern picture and one of the reaction of the test of the reaction of the

(1) Lightwood, 1952a, Payne, 1952.

TESTIMONIAL-BY DR. ALBERT SCHWEITZER

From the numerous references available on the excellent results obtained with "Arobon" we single out this particularly interesting statement by Dr. Albert Schweitzer, who uses a great deal of "Arobon" at his Lambaréné Hospital (French Equatorial Africa).

"We use 'AROBON' with unfailing success in all cases of infantile diarrhoea. It greatly simplifies the nursing of the children in our hospital. We also use it regularly in the numerous cases of diarrhea occurring in adults, both white and native. It is much used in cases of amœbic dysentery. Patients accept it willingly. It keeps well in the hot-damp, equatorial climate. There can be no doubt that it has enabled us in the hot-damp, equatorial climate. There can be no doubt that it has enabled u to save many babies' lives."

"NESTARGEL" HABITUAL VOMITING IN INFANTS

Paupe, J.-Le medicine infantile, 1957, 64, pp. 5

Habitual vomiting in infants is vomiting of functional origin without organic cause, occurring in a non-infected child fed a suitable diet. This vomiting appears at birth or in the first few days of life. It is irregular. The stools do not alter, and the general state of health is rarely affected. Diagnosis is arrived at by a process of elimination.

> Secondary vomiting, particularly emetic coughing, and vomiting caused by improper feeding must first be ruled out.

> The work of M. Lelong shed considerable light on the physiopathology of the disturbance.

During a meal the infant swallows a quantity of air proportional to the speed of sucking and to the fluidity of the meal. In the infant, the evacuation of air is poor and stomach distention causes the vomiting. Efficient treatment should lead to a complete cure. The people around the child must be soothed, changes of diet must be avoided and the meal made to last at least 15 minutes.

> The author advocates the use of thickening powder at 1 or 2 per cent. concentration and mentions "Nestargel".

USE OF THE THICKENED BARIUM MEAL IN THE X-RAY EXAMINATION OF THE DIGESTIVE TRACT OF INFANTS

M. A. Solans, R. Midon Layra Arch. Fac. Med. Zaragoza, 1959, 7, No. 5 Spain Monthly Documentation Bulletin, Vol. 17-Nr. 196

In this preliminary note, the authors mention the advantages of adding 1 to 1.5% of "Nestargel" to the barium meal for the X-ray examination of the digestive tract in infants, who take this mixture willingly. The meal with added "Nestargel" takes much longer to sediment than the ordinary barium meal which makes it easy, for example, to X-ray the œsophagus.

Moreover, the meal with added "Nestargel" clings perfectly to the walls of the digestive tract so that extremely clear pictures are obtained and the duration of the examination is shortened. Lastly, the authors noticed that in a great many cases the meal filled the appendix spontaneously.

"NESMIDA"

AMINO ACID SUPPLEMENT FOR INFANTS FAILING TO THRIVE

Ros Lavin, L., et al.-Arch. Facult. Med. Zaragoza, 1958, 6 pp. 941-55

These authors reported on the effect of adding amino acids ("NESMIDA"-Nestlé) to the diet of a group of six prematures and thirteen children failing to thrive. Weight increases were observed, sometimes in excess of expectation, and there was also an increase in total protein in the blood serum.

Amino acids were administered as follows:---

"NESMIDA" was mixed with the feeds without changing the diet. The infants failing to thrive were not given any specific drug.

The "NESMIDA" was given at the rate of 1-2 grammes per kilogramme body weight per day.

Concerning "NESMIDA" tolerance, the authors wrote:-

"We adopted a technique of progressive administration by dividing the total dose between the day's meals and gradually increasing the dose. In this way every child was able to take the necessary quantity after a very short initial period. Far from being refused, the food was usually eagerly accepted. In a few cases there was some resistance initially, but it was easily overcome after which no further difficulty was encountered. We think it worthwhile stressing the perfect tolerance by the digestive tract..."

They also found excellent tolerance in prematures fed 1 gramme per kilo body weight per day, without any undesirable side effects.

FEEDING, PREVENTION OF INFECTIONS AND UTILIZATION OF OXYGEN IN PREMATURE INFANTS

Tobler, W. (1959)-Pediatria internazionale, 9, pp. 215

The first part of this article on care of prematures in hospitals is devoted to feeding. The writer recommends half-skimmed breast milk from the age of one day in prematures whose birthweight is over 1,500 G. (approximately 3 lb. 4 oz.); babies whose birthweights are below 1,500 G. will be given a 5% glucose solution from the age of 24 hours, and half-skimmed breast milk from the third day only. The addition of $\frac{1}{2}$ % "NESMIDA" to the diet is recommended, so as to provide for the high protein requirements of the premature baby.

Over-feeding, which promotes the onset of respiratory troubles, vomiting and diarrhœa, should be avoided. Diarrhœa itself may be prevented by adding $\frac{1}{2}\%$ "AROBON" to the food.

The author then deals with the prevention of infections and stresses the advantages of nltra-violet irradiation of premature infants. The dangers of indiscriminate oxygen therapy are recalled, and the author states that nowadays he tends more and more to dispense with this therapy whenever possible.
