

Quantum Serre theorem as a duality between quantum D-modules

Submitted by Etienne Mann on Thu, 06/22/2017 - 16:10

Titre	Quantum Serre theorem as a duality between quantum D-modules
Type de publication	Article de revue
Auteur	Iritani, Hiroshi [1], Mann, Etienne [2], Mignon, Thierry [3]
Editeur	Oxford University Press (OUP)
Type	Article scientifique dans une revue à comité de lecture
Année	2016
Langue	Anglais
Date	2016
Numéro	9
Pagination	2828-2888
Titre de la revue	International mathematics research notices
ISSN	1073-7928
Mots-clés	frobenius manifold [4], Gromow-Witten invariant [5], mirror symmetry [6], quantum cohomology [7], singularity theory [8]
Résumé en anglais	<p>We give an interpretation of quantum Serre of Coates and Givental as a duality of twisted quantum D-modules. This interpretation admits a non-equivariant limit, and we obtain a precise relationship among (1) the quantum D-module of X twisted by a convex vector bundle E and the Euler class, (2) the quantum D-module of the total space of the dual bundle $E^* \rightarrow X$, and (3) the quantum D-module of a submanifold $Z \subset X$ cut out by a regular section of E. When E is the anticanonical line bundle K^{-1}, we identify these twisted quantum D-modules with second structure connections with different parameters, which arise as Fourier-Laplace transforms of the quantum D-module of X. In this case, we show that the duality pairing is identified with Dubrovin's second metric. CONTENTS</p>
