Titre Acquisition of new technology information for maintenance and replacement policies

Type de publication Article de revue

Auteur Nguyen, Khanh TP [1], Yeung, Thomas [2], Castanier, Bruno [3]

Pays Royaume-Uni

Editeur Taylor & Francis

Ville Londres

Type Article scientifique dans une revue à comité de lecture

Année 2017

Langue Anglais

Date 2017

Numéro 8

Pagination 2212-2231

Volume 55

Titre de la revue International Journal of Production Research

ISSN 0020-7543

Mots-clés information acquisition [4], maintenance management [5], Markov decision rules [6], Markov modelling [7], replacement policies [8], technology management [9]

In this paper, we propose the first model that considers the option to acquire information on the profitability of a new technology that is not yet available on the market for asset maintenance and replacement decisions. We consider the uncertainty of future asset characteristics by incorporating information acquisition decisions into a non-stationary Markov decision process framework. Using this framework, we optimise asset maintenance and replacement decisions as well as the optimal timing of new technology adoption. Through mathematical analyses, the monotone properties and convexity of the value function and optimal policy are deduced. Deeper numerical analyses highlight the importance of considering the acquisition of information on future technology when formulating a maintenance and replacement policy for the asset. We also deduce a non-intuitive result: an increase in the arrival probability of new technology does not necessarily make the acquisition of additional information more attractive.
