# WOODY PLANTS FOR TEXAS

A. F. DEWERTH, *Head*

*Department of Floriculture and Landscape Architecture*

Texas A. & M. College System

**T**HE PLANTS LISTED are suitable for landscape plantings in the various climatic areas of Texas. Careful attention should be given to the map on page 4 to determine what these areas encompass. Moisture and temperature, as well as the prevalence of injurious insects and diseases, vary considerably in different localities. These factors should be considered as bases for modification of the list when necessary.

An arbitrary classification of woody plants in definite size groups has been made to broaden the appreciation of the need and use of plant materials and to restrict the number of plants selected. Many of our woody plants are so nearly alike in texture, color of foliage and in form of growth, that one could be substituted for another without changing to any extent the landscape composition. This being true, more attention should be focused on growth habits, soil and environmental requirements and freedom from injurious insects and diseases. Their ability to withstand drouth and possible crowding and to hold their lower branches also has been considered.

Selection was based on the characters already mentioned, together with interesting stems, foliage, fruit and flowers. Too often undue emphasis is placed on the flowers of a woody plant. Foliage and fruit are usually more important. Year-round effect should be obtained whenever possible.

This list should be revised and modifications made as additional information becomes available. When new plants are found, or modifications made, they should be substituted for plants now on the list, not added to this listing.

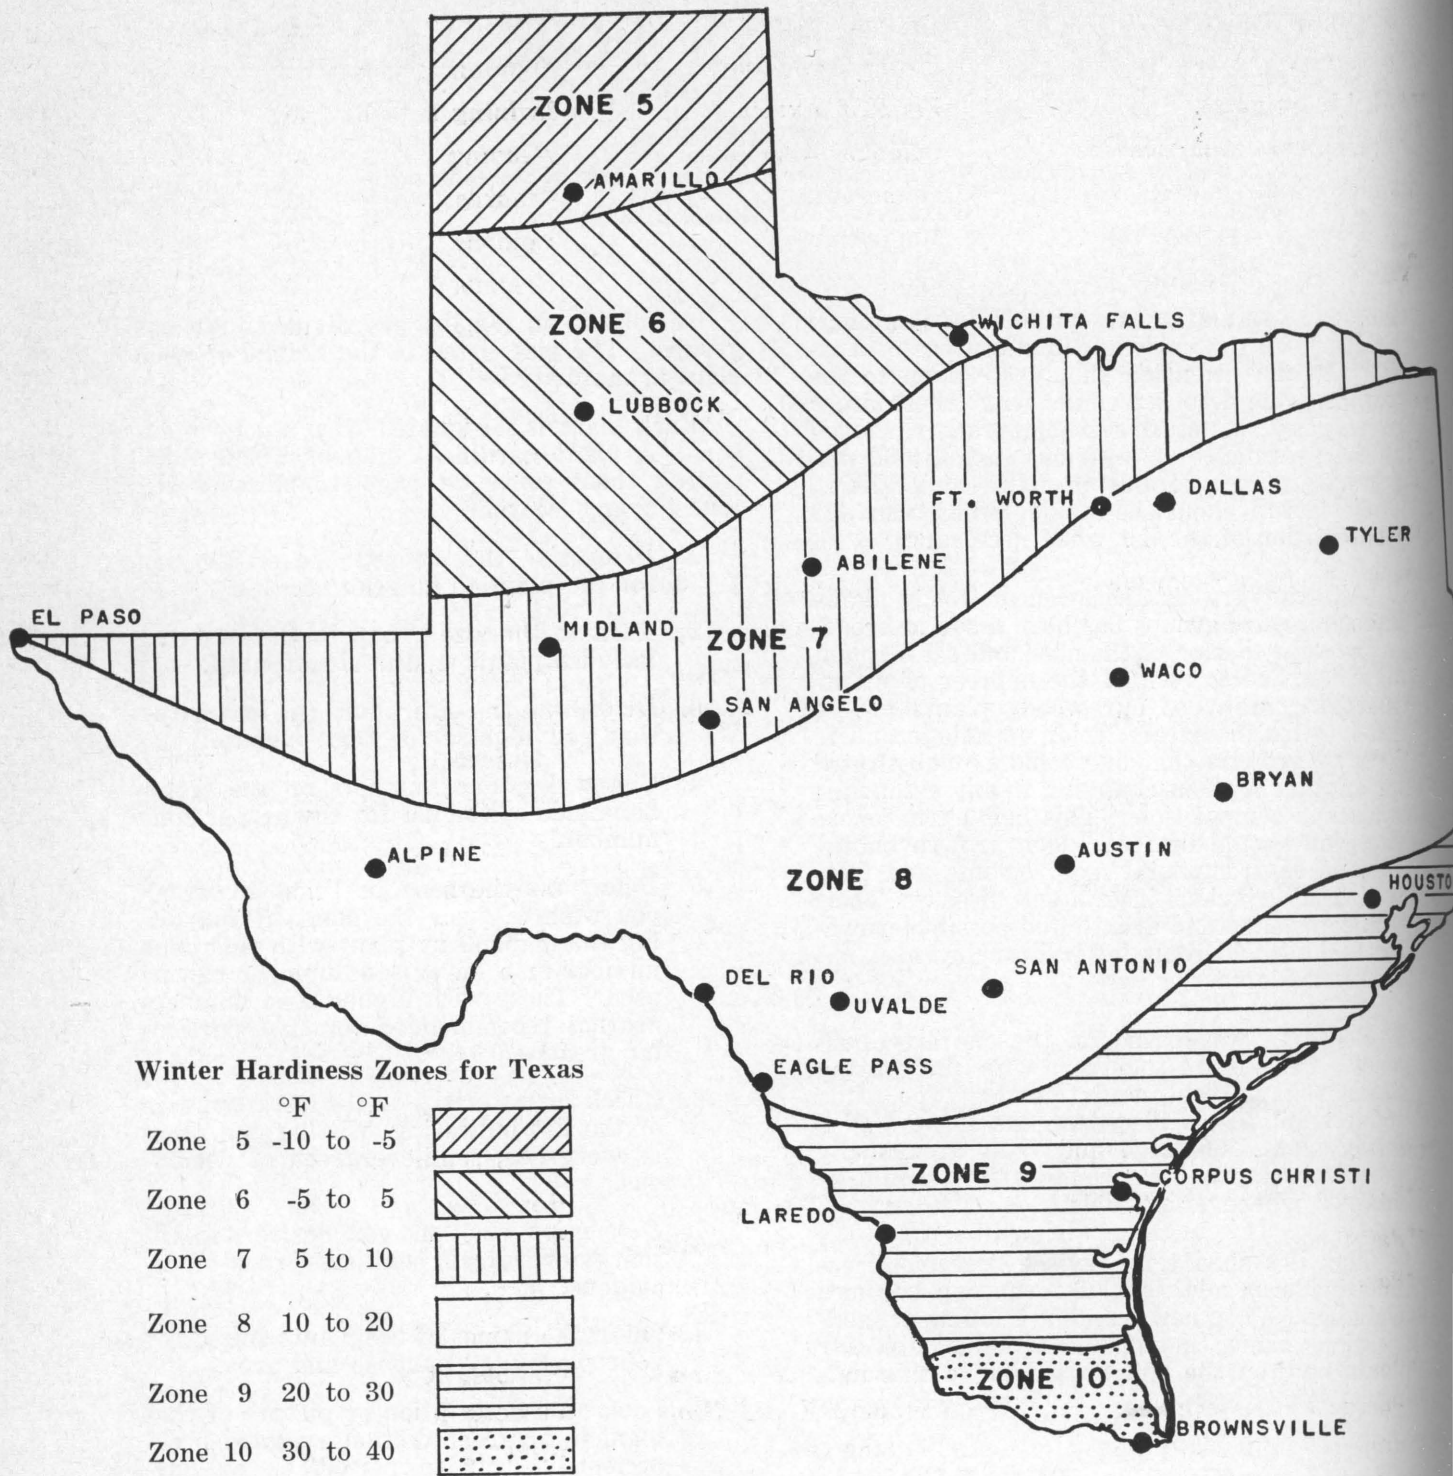

## *How To Use This List*

Each plant is preceded by one, two or three asterisks designating whether the plant is deciduous, semi-evergreen or evergreen.

All plants on the list are divided into size groups. The size listed is the height of each plant at maturity.

Each plant is designated with a zone number. A plant hardiness map of Texas illustrating these zones on page 4, indicates the zone for any location.

1. *Determine* the desired use or location for the plant to be selected.
2. Turn to the size group in the list that includes plants in the size desired.
3. *Determine* the size plant (at maturity) that you require for that purpose.
4. Check the zone numbers on the right-hand side of the list for the proper zone number.
5. *Determine* the zone in Texas in which you wish to grow the plant by consulting the map. (Any plant with that zone number or a lower zone number can be used. Those with higher zone numbers are not recommended for that particular area.)
6. Check the asterisks on the left-hand side of the list indicating whether the plant is evergreen, semi-evergreen or deciduous.
7. *Determine* whether you desire a plant that is evergreen, semi-evergreen or deciduous.
8. Select the names of the plants suited for your particular purpose and area.
9. Look up a description or picture of that plant in a garden dictionary, garden encyclopedia, garden periodical, or nursery catalog.
10. Select the plant you like best from the group you have found suitable for your use and area.

# Have You Met . . . . .

. . . . YOUR COUNTY EXTENSION AGENTS? If not, drop by to see them soon. They represent both the United States Department of Agriculture and The Texas A. & M. College System in your county and they can furnish the latest information on farming, ranching and homemaking.

Most county extension agents have their offices in the county courthouse or agriculture building. Get to know them and take advantage of their services.

This publication is one of many prepared by the Texas Agricultural Extension Service to present up-to-date, authoritative information, based on results of research. Extension publications are available from your local agents or from the Agricultural Information Office, College Station, Texas.
