About ScholarsArchive@OSU

ScholarsArchive@OSU is Oregon State University's digital service for gathering, indexing, making available and storing the scholarly work of the Oregon State University community. It also includes materials from outside the institution in support of the university's land, sun, sea and space grant missions and other research interests.

Requirements analysis results

UI/UX, reporting, linkages a regular disappointment

determine potential pathogens in two coral diseases, White Plaque disease (WP), and Growth Anomalies (GAs).

First, I set to determine whether viruses may be involved in WP disease from a 2010 outbreak in the US Virgin

Islands (USVI). In chapter 2, I compared viromes from 21 Montastraea annularis samples (7= Diseased, 7=

Diseased=Bleached, 5= Bleached, 2= Healthy) and surrounding seawater (n=2). After comparing the viromes, I

found that small circular REP- encoding eukaryotic ssDNA viruses (SCSDv) similar to circo and nano viruses were associated with WP diseased tissue, and thus notential nathogens. Flectron microscopy confirmed the presence of

So, the next platform should...

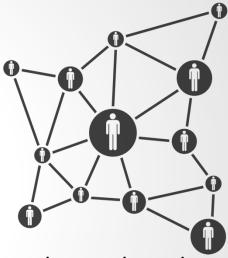

improved UI & UX

extendable & customizable

have a broad community of developers & users

Pros

easy to maintain

Cons

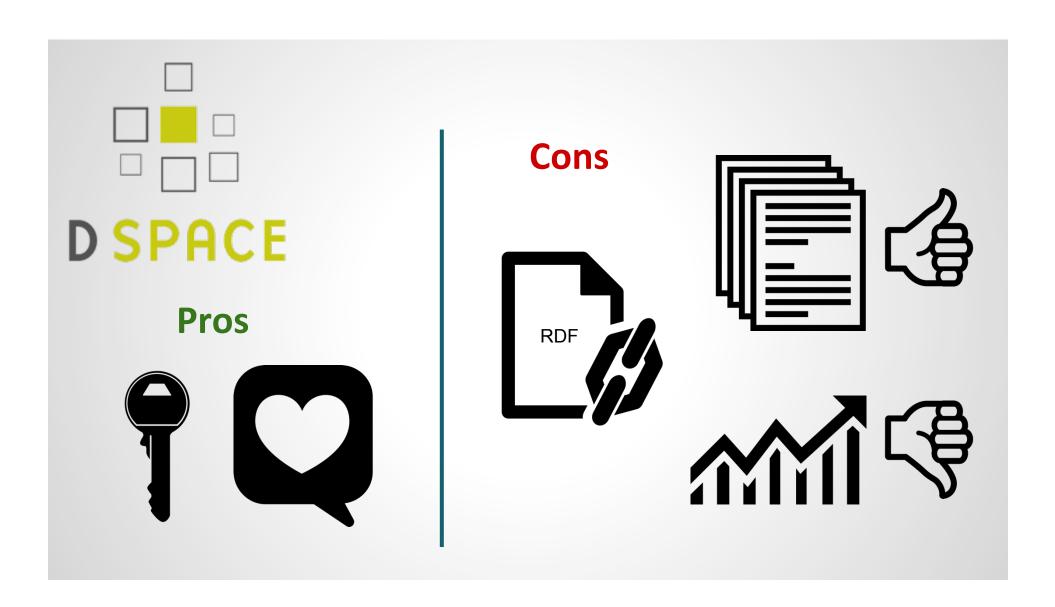

difficult (impossible?) to extend & customize

not flexible

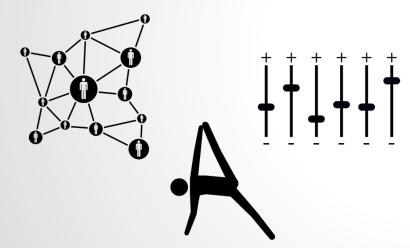

lack of features to support data

Pros

flexible, customizable supported by broad community

Cons

requires substantial development work

And, our decision is...

Sufia, a Hydra platform

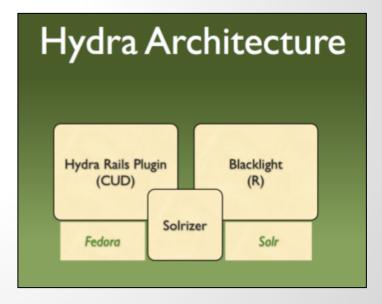

The decision is made on:

- functionalities
- long-term sustainability
- development resources

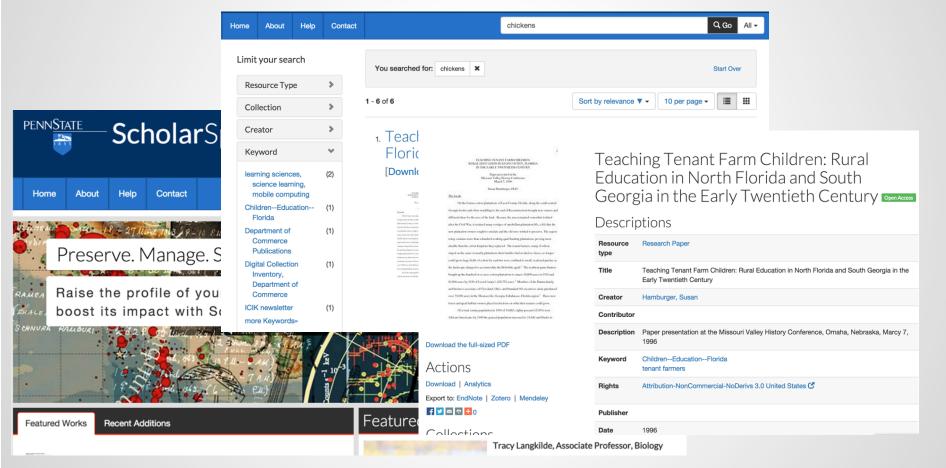

Development resources

- local: OSU Libraries developers
- Hydra community: development interest aligns with our needs

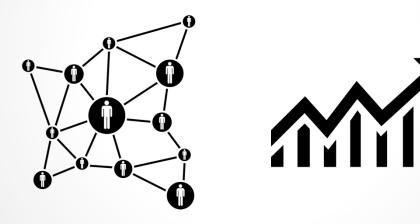

And, our decision is...

solutions

how does this move solve our exemplar problem?

Next Steps

- phased approach for project this large
- phase I
 - implement all functions we need for support research data
 - migrate data collections to new repository
- phase II
 - implement mediated deposit
 - train library staff
 - migrate all collections to new repository
