International Seminar on Environmental Management for Industrialists

During 27–31 January 1975 the Centre d'Études Industrielles (CEI), Geneva, will be holding an 'International Environmental Management Seminar', with the object of bringing together decision-makers and environmental advisers from both the public and private sectors of government and industry, so that they can discover and discuss how best to deal with the problems posed by industry's impact on the environment. The participants will include project managers, corporate planners, and environmental coordinators, as well as national and international civil servants and managers of public enterprises, from a large number of different countries.

The seminar will consist of formal lectures which will deal with the methodologies of environmental impact assessment, conflict resolution, and strategy development, plus extensive working in small groups where participants can apply these techniques to specific cases of the impact of an industrial project on the environment. Working in

such groups and circumstances enables participants to draw on their diverse industrial and national backgrounds in solving the various problems posed, thus broadening their perspective of these problems and seeing the opportunity for developing new solutions.

The seminar is being coordinated by the undersigned, a British chemical engineer, who is the Faculty Member in Environmental Management at the CEI, in conjunction with Dr William H. Matthews of the Massachusetts Institute of Technology. Maurice Strong, Executive Director of the United Nations Environment Programme and Chairman of the Foundation Board of CEI, will give the Theme Speech, and other eminent personalities will be involved.

MICHAEL G. ROYSTON, *Programme Coordinator International Environmental Management Seminar Centre d'Études Industrielles*
