On-line Suppl. Fig. 1. Results from QuasiPoisson (a) and Poisson (b) regression; the effect of landscape variables (HASL, DIS2H, NofHT and shape index) on specialist species. HASL – height above sea level; SHAPE – shape index; NofHT – number of bordering habitat types, DIS2H – distance from the settlements/houses, SE – standard error. *** <0.001, ** <0.01, * <0.05, “.” represent marginal statistical significance.
