## Introduction

This second annex to the study on “ACP-EU Water Facility – Partnerships Initiative” contains 33 tables in support of Section 5. ACP-EU Water Partnerships: Expected impact. The tables quantify the expected impact of selected applications in terms of population expected to benefit from capacity development in the 16 themes or impact areas identifying eligible actions under the Partnerships Initiative. Data on the population benefitted and on the themes addressed by the selected applications is derived from 32 Project Summaries contained in Annex III. These are summaries of the Full Application Forms selected by the ACP-EU Water Facility in 2011.

The 33 tables below quantify the expected impact in each of the themes, differentiating between three sub-sectors: water supply, sanitation, and water resources. The themes or impact areas identifying eligible actions under the Partnerships Initiative are the following: good water governance; integrated water resources management; system maintenance and improvement; leakage reduction; water quality testing; water resources protection; pollution prevention; assessing the state of water resources; assessing the need for infrastructure development; improving efficiency in management practices; labour management tools; accessing investment finance; expanding access to the poor; participatory governance; awareness raising; institutional support.<sup>1</sup>
